Generally speaking, the frontier Chinese can be divided into the following groups: the descendants of those who were exiled and ostracized for political reasons during the Mancho period, further on, the descendants of criminals who were sent to the frontier areas as workmen, and last but not least, the colonist-(the overwhelming majority), partly adventurers and desperados and partly surplus population of China proper and finally descendants of former garrison troops and merchants from China proper who were condemned to frontier service, desperately looking for new cultivable land.

Among the Chinese of the Northwest, those living in Shensi and Kansu belong to the oldest settlers. Detached and severed from his old homeland, the frontier Chinese is more versatile and more open-minded towards unusual and unaccustomed situations. The old Confucian ethics in regard to family life and relationship with neighbors is still very strong.

The frontier Chinese is possessed by a romantic feeling for his old country. His position at an outpost in a remote area makes him see the old homeland in an euphemistic light.

The frontier Chinese has to prove true and to stand the test more than the Chinese of China proper, which creates a healthy measure of self criticism without falling into the neurotic error of self-laceration. The frontier Chinese is difficult to influence since he is more unrestricted and less bound to his environment than the Chinese of China proper.

The obvious propagandistic success of the Communists in the Northwest does not contradict the above-mentioned phenomena, because the Communistic propaganda proceeds in an atmosphere of terror and the Chinese, as a born realist and opportunist, inclines to rationalize his pretended acceptance of propaganda.

22

HISTORICAL SETTING

1. General History of Relations with China

Northwest China, once a major administrative region of Communist China, is an arbitrary political union of widely dissimilar geographical areas inhabited by a conglomeration of diverse ethnic groups. At the eastern end of this vast wedge-shaped region is Shensi, which has been an integral part of China Proper throughout history and is inhabited almost exclusively by Chinese. Although it is only one-seventeenth of the total area, this single province holds almost half of the population of the Northwest. Sian, the provincial seat of Shensi, has been in centuries past and still is today China's political and military base for the control of the Northwest and has been the center for the diffusion of Chinese culture in the Northwest in the past and of Communist ideology in the present.

At the western end of the Northwest region of China is the province of Sinkiang or Chinese Turkestan. Its territory occupies half the area of the Northwest but its population is only a seventh of the total. Three-quarters of the inhabitants are Uighurs, a people Turkic in speech and Moslem in religion. The rest is divided among thirteen nationalities.

In the north is the now-abolished province of Ningheia, inhabited largely by Mongols. In the south is Chinghai (also known as Kukonor) with a heterogeneous population of Mongols, Chinese and Tibetans. The Gobi Desert, which pushes south to Ninghsia, and the highlands of Chinghai constrict the habitable area into an hourglass shape, forming a corridor connecting Shensi in the east and Sinkiang in the west. This is the province of Kansu.

A. The Role of the Kansu Panhandle

All traffic between China Proper and Turkestan has been funnelled through the narrow confines of this corridor. The ancient Silk Road started from its terminus at Sian (known in the past as Ch'ang-an) and wound its way, via the Kansu Corridor, into Chinese Turkestan where it branched into the northern and southern routes to bypass the towering Tienshan Mountains. The conquering armies of Han, T'ang and Ch'ing had marched out through the narrow passageway to assert the political rule of China over the desert wastes and oasis towns of Turkestan. Hordes of nomads, lured by the lush plains and opulent cities of China, have poured through this funnel to raid and pillage and, when successful, to found militaristic kingdoms. This was the route worn deep by the trudging feet of camel caravans bearing the tea and silk and porcelain of China to bazaars in the Near East and even to the markets of Byzantium and Rome. In the train of these caravans travellers have come into China from the Buddhist missionary, Komarajiva,

24

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

Most of the magistrates' yamens throughout Northern and North-Eastern Kansu were dreadfully dilapidated, but the one here was about the worst we saw, being scarcely habitable, and in keeping with the rest of this ruined little city. The magistrate complained that the inhabitants of his district were poor to the verge of starvation.

I was told that the road across the Liupan Shan was made by General Tso to facilitate communications during the campaigns against the Mahomedans, the former route, which is still used to a limited extent, passing from Wat'ing to Kuyuan, and thence *via* Haich'eng and Chingyuan to Lanchou.

From Lungtê to Chingning Chou is a march of 90 li down the valley, which is cultivated but very arid-looking, and dotted with wretched farms and hamlets. There are no trees except those which line the road. The arid climate of North China is often ascribed to the destruction of the forests by the Chinese in ancient days, but it is doubtful whether the loess was ever covered by trees owing to its peculiar consistency; it is certainly quite unsuited for the growth of trees nowadays. Further on the valley becomes quite barren, the ground being covered with a white alkaline efflorescence, and 15 li from Chingning it narrows to a gorge with the path ledged in the hillside, eventually debouching on to a more fertile valley where irrigation is practised. Chingning, a considerable market town, lies in this valley.

On the following march the road turns up a side ravine, climbs a long steep hill to a pass in the loess, and descends through a maze of loess hills to a valley which leads down to the village of Kaochia P'u (45 li); it continues to follow this valley for another hour's march and then turns north-west up a long narrow defile in the loess, a weary trek with repeated little steep descents and ascents in and out of side nullahs, for the rest of the way to Ch'ingchia Yi, 90 li from Chingning, a walled village and former posting stage and fort. These posting stages, with which we became so familiar on the main roads of Kansu, are mostly provided with official rest-houses called *hsingt'ai*, in which we were usually quartered; though very dilapidated they provided quite good accommodation in the summer, being usually uninhabited and therefore free from smells. The

with the goods of the Mahomedan merchants of Ho Chou.

We passed the night at Ch'ingshui, where we met a military officer sent up to escort us down into China Proper who calmly informed us with little apparent interest that China and Japan were at war. This news afterwards turned out to be a local echo of the crisis existing between the two countries two months previously, and the incident shows that even today momentous events on the coast have comparatively little interest for the inhabitants of the far interior. Below Ch'ingshui the path continues through winding gorges with the foaming torrent hemmed in by forest-clad mountains for 20 li to the likin barrier of T'ung-men Kuan, where the gorges debouch on to an open cultivated valley. This is one of the numerous "Gates" leading into and out of China Proper on her western and northern frontiers. There is a bit of an old wall to be seen, perhaps a portion of the Kokonor loop of the Great Wall. From here to Ho Chou, a distance of 60 li, a good highway runs down the fertile valley past numerous Mahomedan villages. We did not see the valley at its best, because it poured with rain during the whole march, and the clay soil was turned into a slippery morass; at one place, crossing a nullah by a narrow causeway, one of our mule litters containing a cook was overturned into the ditch, and remained literally upside down with the eight legs of the two mules pointing skywards for some time, till they were hauled out in that position, no damage being done.

Ho Chou (new name T'aoho Hsien) is a pleasant little city lying in a most delightful valley plain, from five to six thousand feet above the sea, sheltered by high mountains, and as fertile as a garden. The mountains to the west and south-west (T'aitzu Shan) are very bold and rocky, and carried a good deal of snow at the time of our visit (middle of July). Ho Chou itself consists of a small Chinese town with large and busy Mahomedan suburbs, containing many fine mosques and seminaries. It is the centre of Mahomedan power and influence in the province, and General Ma An-liang, who actually lives a day's journey or so away near the Yellow River, has a fine residence in the suburb. The Chinese magistrate in the city seems to have little to do

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

with the Mahomedan population of the district. At the time of our visit there was also a Chinese General with a few hundred old-fashioned Chinese troops in the city, the Mahomedan troops, of whom there are many thousands in the neighbourhood, being quartered in the surrounding Mahomedan districts. We spent a day in Ho Chou, which I thought a delightful place, feasting and receiving callers.

The Chinese differentiate between two kinds of Mahomedans in Kansu, the Sala, the descendants of a Turkish tribe which came from the neighbourhood of Samarcand some five or six hundred years ago and settled on the upper Yellow River round Ho Chou and Hsünhua, and the original Mahomedan population of the province, which also came from Turkestan, but at a much earlier period. The former are really Chinese Turks, while the latter are probably so mixed with early Chinese colonists who adopted Islam as to merit the title of Mahomedan Chinese. The Chinese look upon all the Moslems as being of a different race to themselves, and they are assigned one of the five colours of the republican flag, which symbolises the union of the five Mongoloid races of the former Chinese Empire. They are locally known as Hui Hui, or Hsiao Chiao Jen; the origin of the former name is still occupying the attention of scholars, and has been explained in various far-fetched and unsatisfactory ways; the latter means People of the Lesser Religion. The Mahomedan religion itself is known as Ch'ing Chen Chiao (Pure and True Religion). The Sala, who are considered by the Chinese to be the more fanatical and dangerous, show their comparatively recent Turkish origin in their long narrow faces, large eyes, and strong beards, and a Turkish dialect of some kind still survives amongst them.

There are two large sects amongst the Mahomedans of Kansu, those who follow the Lao Chiao (Old Religion) and those who follow the Hsin Chiao (New Religion), which I have heard compared by the Chinese to the Catholic and Protestant Churches of Christianity. These two sects are bitterly hostile to one another, and generally speaking the Mahomedans are always quarrelling amongst themselves about religious matters. But, in spite of these apparent internal dissensions, they present on the whole a united

front towards the Chinese and the rest of the world, and in this unity (as also in the case of the unity of the Catholic Church) lies their amazing strength today. I have heard the Chinese compare both Islam and the Catholic Church to vast world-wide secret societies bound together for purposes of mutual benefit and protection against the rest of mankind. At present the Moslems of North West China, though unsupported by the Treaties of any Foreign Powers, and in spite of the terrible set back after the rebellion, have acquired by their own efforts a privileged and independent position, and indeed are now the principal power in the province.

The various sects and classes seem to differ a good deal in the strictness of their observance of the tenets of their religion. Abstention from pork seems universal, and many abstain also from wine, opium, and even tobacco. The Ramadan fast is carefully kept by the upper classes, but not so strictly by the lower. Every Moslem appears to have an Arabic as well as a Chinese name, but a knowledge of the former language is confined to a few Ahongs and scholars. The Koran is read in Arabic. All classes hold keenly to their religion, and their religious centres are visited from time to time by priests from Turkey, Arabia, and Central Asia. They keep aloof from the Chinese, whom they consider unclean, and do not usually frequent the Government schools. They occasionally take Chinese wives, but the latter have to be cleansed before marriage externally and internally by a course of baths and water drinking. The veiling of their women is not, I believe, practised in other parts of China, but in Kansu we saw veiled women on two or three occasions, each time travelling on the road. The superiority of the Moslems over the Chinese in regard to housing, food, personal cleanliness, and general standard of living is marked, and their spotlessly clean and well-kept mosques (*Lipai Ssu*) are in striking contrast to the dirty and dilapidated temples of the Chinese. These mosques are Chinese-style buildings, and in this respect as in most others they have created a Chinese Mahomedan Church. Though the magistrates in the Mahomedan districts are Chinese, they usually refrain from any interference with the Mahomedans, who appear to manage their own affairs through a sort of local government.

li out cultivation and houses are reached at Kaochia Ta Men, the beginning of the large Chenfan oasis, and for the rest of the stage the road runs through rich irrigated lands with occasional excursions into sand dunes.

Chenfan Hsien is a prosperous little district city in a highly fertile oasis. Immediately round the town is a belt of rich cultivation, and patches of irrigated land occur in the desert for 200 li to the north. There are no villages in these oases, the people living entirely in walled farms. Wheat is the main crop raised, and the abundant water supply from the snow-fed streams for irrigation purposes, combined with an almost rainless climate, appears to assure good crops with machine-like regularity. Chenfan compares favourably with most towns in Kansu, the streets are clean and well kept, there is a noticeable absence of ruins, and the shops display a surprising variety of goods. At the time of our visit the district enjoyed the services of one of the best territorial officials we met throughout the North West, a young man who really appeared to have the interests of the people at heart, and to devote himself as far as lay in his power to improve their lot. He remarked that the post, though so isolated, was pleasant enough in the summer, but that in the winter the north winds from the Alashan desert were terrible, much worse than the severest winter sand-storms ever experienced at Peking. The inhabitants of the surrounding oases seem entirely cut off from the rest of China, and form little self-supporting communities. Chenfan itself, however, is, strange to say, in direct communication with Tientsin and the coast by means of a much frequented camel route from Kueihua Ch'eng to Liangchou across the Mongolian grass country and the Alashan desert. This road, which debouches from the desert at Chenfan, enables the Mahomedans of the Ho Chou and Hsining neighbourhood to communicate with the coast without passing through Chinese Kansu at all.

From Chenfan we had to proceed to Hsining, the frontier town on the high road to the Kokonor and Tibet. Enquiries showed that we had the choice of two roads, to the north or south of the snow mountains behind Liangchou respectively. As the latter would have meant retracing our steps to Kulang, we decided to follow the former, which entailed going due

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

west until we had got behind the Liangchou mountains, and then dropping south to Hsining along the Kokonor border. There is a shorter trail south-west from Liangchou, passing apparently more or less directly over the snow-range, but we were told that it was very difficult, seldom used, and probably impassable for loaded mules. There are only a limited number of trails leading up from the plains of Mongolia through the Nan Shan to the Kokonor plateau, and the route we followed, though little known to foreigners, is probably one of the most important of these tracks. It reaches the plateau by means of a famous gorge known as the Pien Tu K'ou (meaning Passage across the Frontier), and the section of our route from Chenfan, in the Alashan desert, to Êpo, in the Kokonor, is probably a portion of an important trail connecting Urga with Lassa, placing these two capitals of Lamaism in communication without the necessity of passing through settled Chinese territory. Our first few days' march lay across a portion of the Alashan desert to regain the Great West Road at Yungch'ang, a very trying experience, since the season of the year was the end of July, when nobody travels in the desert if he can possibly avoid it.

The first stage on this road being a very long one of 100 li across the desert, the magistrate had kindly arranged for us to break it into two by sending on tents to some wells 30 li out. Leaving Chenfan the road runs south through the oasis for 15 li, crosses the main branch of the Chenfan River by a ford, and then turns west into the desert. Two hours' march further on we reached the wells of Sha Ching, where we found a luxurious camp established for us by the forethought of the magistrate. The water from the wells is evil-looking and very brackish, but we had arranged to bring sweet water with us. The contrast between these rich oases, such as Chenfan, and the absolutely lifeless desert, lying side by side so that one passes in one stride from the one to the other, is most striking. The great wealth of the irrigated land is evidenced by the fact that the district of Chenfan, though containing so much desert, offers a highly lucrative post to its magistrate; that is to say the land-tax receipts, consisting of grain, are large; the grain collected in this fashion by the magistrate is remitted by him to the

provincial treasury in silver at an old-established rate much below the market price, permitting a considerable profit to be made on the transaction. The productiveness of the land is of course entirely dependent on the irrigation streams from the snows of the Nan Shan, the magistrate informing us that he had been nine months at his post and only seen rain fall on two occasions.

The following day's march of 70 li to the oasis of Shehsia Kou would have been easy enough had we not lost our way. We started at 3 a.m. in order to try and reach the wells of T'ou Ching, 40 li out, before the sun got too hot. The trail led across a waste of sand hills and soon ceased to exist. The desert is devoid of all vegetation and lifeless except for antelope, which were constantly in view; what they find to eat I cannot imagine. After we had been marching for some hours the soldier from Chenfan who was acting as guide announced that he had lost the way. Looking for the wells where we were to have our midday halt was like searching for a needle in a haystack, and the position was unpleasant enough. Altogether we wandered round, steering more or less west, for some seven or eight hours, suffering greatly from thirst, with the sand often over the ponies fetlocks. Our only landmark was an ancient ruined tower, the remains of some old fortification in this region, perhaps a part of the Great Wall. At last one of the soldiers sent out to reconnoitre from a rise descried the tents pitched at the wells in pretty well the opposite direction to that in which we were then trekking, and an hour later men and animals were satisfying their thirst. Another three hours' march across the desert brought us to the oasis of Shehsia Kou, where we were comfortably lodged in the interior of one of the fortified farms so common in this region.

The next stage is another desert march of 80 li to the village of Ningyuan P'u, but there is an oasis, Tung Wan, half-way, the going is better, and we took care not to lose our way. Ningyuan P'u is a walled village at the mouth of an irrigated gorge where the mountains meet the desert plain. From here to Yungch'ang is a distance of 75 li. The trail follows up the irrigated valley for 35 li to the hamlet of Tsungchia Chai, where it turns up a barren stony ravine, crosses a low pass, and descends across an arid sloping

accompanied us that in crossing it we passed again from the Kokonor territory into Kansu.

From the pass the track drops steeply into a rough stony ravine, the stream in which is followed in a south-easterly direction for the remaining 70 li to Yungan Ch'eng. For the first half of the way the track is very bad, lying down the bed of a stream which is apt to rise in wet weather and render the road impassable; further on the going improves, the gorge opening out on to a flat grassy valley, and the last hour's march is over prairie, spoilt for riding, however, by the countless holes of a small rat-like rodent; in places the ground is alive with these little animals, dodging in and out of their holes like miniature marmots. The bed of the stream flowing down from the pass is apparently rich in gold, and Mahomedan gold washers were at work at various points when we passed. They live in tiny tents and appear to pass a very hard life for small returns. The industry is under the patronage of the leading Mahomedan Generals. We followed the washing in several spots and always saw a few grains of gold dust produced; nuggets are, we were told, occasionally found. We had descended this stream almost from its source, so that in this case the gold-bearing rocks from which the gold has been washed cannot be far off. Very large profits can be made in ordinary times by buying this gold on the Kokonor and selling it in Shanghai.

Just before reaching Yungan we passed some Mongol tents, identical in appearance with the felt yurts to be seen in the grass country north of Kalgan, and it seemed strange to come across these people here, whom one associates with summer trips to the north of Peking. The Kokonor territory is the meeting-point of the Tibetan and Mongol races, and here, as elsewhere, the black rectangular tents of the former may be seen almost side by side with the round grey tents of the latter. It appears that the Mongols, who originally occupied the country far to the south, are gradually retreating northwards before the encroachments of the more virile Tibetans. Unlike the Tibetans, who are in these parts all robbers by nature, the Mongols are peaceful and inoffensive herdsmen, who give the Chinese authorities no trouble. They are organized into Banners under their own Princes,

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

nominally responsible to the Chinese officials at Hsining. Mongol tribes are found living in the bend of the Yellow River, near the Golok country, and even as far south as the country between Jyekundo and Nagchuka towards Lassa, but appear to have become completely Tibetanised, and to retain only the tradition of their origin.

Yungan is a replica of Êpo, only poorer, an old walled post with the interior almost entirely in ruins. It lies not far from the Tatung River, surrounded by grassy downs and overlooked by rocky snow-capped ranges. One is here on the reverse side of the outer barrier range of the Nan Shan, the snows of which provide the water for the streams which fertilize the Liangchou oases. This portion of the Kokonor border is the meeting-point of the four widely-spread races of High Asia, Chinese, Mahomedans, Tibetans, and Mongols.

From Yungan to Pei Tatung is another long march of over 100 li. The trail runs east and then south-east across undulating grass prairies dotted with herds of yak for 45 li to a solitary inn or ranch known as Paishui Ho, whence it continues across a plain, gradually approaching the Tatung River, to reach Pei Tatung. The going is excellent across grass all the way. Pei Tatung, lying on the left bank of the Tatung River, is another walled village mostly in ruins. Barley is grown in the neighbourhood, the first cultivation met with since entering the Pien Tu K'ou from Maying Tung. The valley of the Tatung River in this neighbourhood consists of a rich grass prairie bounded on either side by rocky snow-capped ranges; to the south the mountains approach close to the river; to the north they rise on the other side of the plain. Between Kueitê on the Yellow River and Kanchou in Western Kansu the Nan Shan consist of three huge parallel ranges, dividing off the valleys of the Tatung, Hsining, and Yellow rivers. We were now between the two highest and most northern of these ranges.

The following day's march occupied us from dawn till eight o'clock at night, the distance being called 100 li but entailing the passage of the Tatung River and of a high pass known as the Tapan Shan. The river, some eighty yards wide (in August), deep, and very rapid, has to be crossed immediately on leaving Pei Tatung. Men and loads

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

bridge has replaced the old bridge-of-boats, which until quite recently spanned the great flood. Green sedan-chairs, we found, were still used by the officials, and the Yamens still retained the grand style which had existed under the Manchu Government—a pomp which entirely vanished from Shansi with the entry of the Republic, and has also since passed from Kansu, with the arrival of Marshal Feng's armies. We spent three weeks in Lanchow, staying most of the time in the central China Inland Mission compound, but paying visits to the Borden Hospital on the further bank of the river, and to the large boys' school at the foot of the Blue Lotus Hills, both of which are under the auspices of the China Inland Mission, which is the only society working in Lanchow. The whole visit was brimful of interest, and we were particularly struck with the way in which the Christian community had impressed itself on the civic life of the town.

The great Yellow River, during summer months, supplies a waterway by which the journey to Peking may be accomplished in about thirty days by raft. These rafts are floated by means of inflated goat and bullock skins, which are roped together and carried very swiftly down-stream. Though the journey is popular, being quicker and easier than if taken by road, yet the element of danger is always present, and Dr. George King, at whose hospital we stayed when in Lanchow, was drowned in May 1927 when travelling by this route. His raft caught on a sandbank, and in helping the men to release it, he fell into the water and was swept away.

During the winter months the river is frozen over and can be crossed on foot. When the stream is freezing, and while it is thawing, the toll of accidents is always heavy. During the whole of our stay the surface of the

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

which a tiny spring kept overflowing. Green mosses lined the bed of the crystalline rivulet, and the diamond drops reflected the sunshine. The wheel turned with a subdued creak, which seemed almost like the murmuring of the prayer inscribed on its lines of chamfered edges—Om mani padme hum—'Hail thou jewel in the lotus flower'—the offering of a blinded people to its undiscerned god.

A mile apart from each other stand two walled cities, the more imposing of the two being the Manchu town formerly occupied by the pensioners of the ruling dynasty, but which now consists of a great enclosure of uninhabited or ruined houses, so that in a space equal to the area of a large town, at the present hour only six or eight families are living. Of the remaining former inhabitants many have been massacred, others have fled, and the ranks of the beggars have been replenished by these truly unfortunate people. The Chinese city consists of quiet streets busy only on market days, the shops of which being so poorly provided with the necessities of life that vegetables are brought a three days' journey to be sold here. Its western wall is flanked by a suburban thoroughfare composed of inns, wheelwrights' and blacksmiths' shops, which, together with food-vendors, supply all the necessities of traveller, carter, and muleteer. Some very fine temples crown the summits of the surrounding hills, and parties of Tibetans riding to and fro on the Sining road, leave offerings of silken *khada*[1] hanging to the idols, before which their obeisance has been made.

In the first home which we visited in Pingfan we met a man who was courier to a woman-magistrate of the aboriginal tribes. Her residence was in Liencheng—Lotus City—but she constantly visited Pingfan on

[1] Votive scarves.

[1] [Valley of Pingfan -- Analyst]

civilization. The former provinces of Ninghsia, Chinghai, and Sinkiang are China's frontier dependencies. While Ninghsia was part of Inner Mongolia and Sinkiang is the homeland of the Turkic peoples, Chinghai forms a transitional area between the Tibetans and Mongols on the southwest and northeast as well as between the Chinese and Uighurs in the southeast and northwest repsectively. Although these borderlands were first brought under China's political control during the Han Dynasty at the beginning of the Christian Era, their political ties to China were not consolidated until recently.

In order to check Tzarist Russia's aggression towards Chinese Turkestan (Sinkiang) after her occupation of the Ili valley, China sent an expedition under General Tso Tsung-t'ang in 1871 to reconquer the region and to make it a province under the name of Sinkiang (literally "New Dominion") in 1881.

In view of Russia's continued southward encroachment from Siberia upon Outer Mongolia and Britain's from India northward to Tibet during the Chinese Revolution at the end of the Manchu Dynasty in 1910-1912, China carved Ninghsia out of Inner Mongolia and Chinghai out of greater Tibet, thereby creating two special districts with Yin-chuan and Hsi-ning as their centers under the provincial administration of Kansu in 1913. By 1928, they were made into two separate provinces. However, quite unexpectedly, following the formation of the Inner Mongolian Autonomy, the province of Ninghsia was abolished and has been added to Kansu province in 1955. (In May 1956 the Alashan and Edsingol regions have been detached from Kansu province and incorporated into the Inner Mongolian Autonomous Region. Precise boundary demarcations are not yet known.) Although the political control over these frontier dependencies of Sinkiang, Chinhai, and Ninghsia has been strengthened gradually by the subsequent changes of their administrative status in relation to China, they still remain as "pale" areas in the distribution of Chinese population and culture. That is, the inhabitants of these borderlands are essentially ethnic minority peoples such as Mongols, Tibetans, Uighurs, Monguors, Khirgiz, Kazakhs, etc. They are non-han Chinese peoples with an increasing touch of Chinese cultural influence and an increasing number of Chinese elements among the various native groups.

The annexation of these frontier territories to China has brought about an artificial connection between the Chinese and the non-Han Chinese minority peoples, both nomads and settlers. Until now, the natives do not seem to have been influenced much by administrative unity. Not much sympathy is exchanged between the Chinese and Lamaist Tibetan or Mongol; even less

S N 635 186 between the Moslems and the Lamaists.

As a result of the aforesaid complexity of its geographic basis as well as its intricate historical and political background, the Northwest's population problems are as complicated as its intermingling ethnic composition. For many years, the extreme S 635 648 northwestern province of Sinkiang suffered from continual conflict between China and Russia, although with the introduction of the Communist regime, the conflict seems at least temporarily resolved.

N 47 361 178 The development of industrialization in present day China is concentrated in the Northwest. New towns have been emerging in barren mountains and in deserts, such as Shih-yu-ho (near Yü-men), Tu-shan-tzu, (south of Wu-su) and Shih-ho-tzu on the western highway of Urumchi between the towns of Manas (Sui-lai) and Ulan-Wusu. The first two sprang up because of the drilling of promising oil wells in the Chi-lien and Tien-shan mountains.

N 647 816 The China Academy of Sciences announced in December, 1955, that in 1956 a number of new research divisions will be established in the Northwest: a Petroleum Research Bureau in Lanchow of Kansu, an Agro-biology Bureau in Wu-kung, Shensi, an Archaeological Research Bureau in Sian, a Geo-physical Research Bureau and a Veterinary Research Bureau. (Jen-min jih-pao Dec. 16, 1955, NCNA. May 11, 1956).

N 816 185 435 [648] Last November, the Northwest Branch of the China Academy of Sciences held a meeting at which, with the assistance of the Russian Korshekov an ambitious plan was formulated for the economic development of the Northwest in the coming fifteen years, with emphasis on survey of natural resources, study of petroleum and rare metals, exploitation of non-ferrous metals, agronomy, soil science and animal husbandry. In these N [893] discussions, the professors of three schools of higher education, the Northwest University, the Northwest Industrial College, and the Northwest Agricultural College, took an active part. (Kuang-ming jih-pao Dec. 13, 1955; NCNA. May 11, 1956).

N 161 B. General Distribution and Regional Characteristics.

The Northwest Region has an average density of 28.6 persons per square mile, as compared with the average density of 160 per square miles for the whole country. It has the smallest number in population among all the major regions of China, as the following shows:

Major Regions	Population (1953 Census)
North China	55, 749, 000
Northeast China	41, 732, 000
East China	162, 682, 000
Central and South China	176, 331, 000

provinces of Northwest China. How much resulted from natural increase and how much is due to recent immigration, is hard to say, because there are no available data. Nevertheless, judged by some current information, the large increase of population of Shensi and Kansu is probably due more to natural increase than to immigration, while the cause for the relatively small increase of Chinghai and Sinkiang is perhaps just the opposite.

D. Distribution of Population by Provinces, Ethnic Groups, Occupation, and Urban Centers

(See Table XIV.)

Before the abolition of Ninghsia in 1955, its population was less than 800,000 living in an area of about 90,000 square miles with a density of about eight persons per square mile. At that time, the density of former Kansu Province was eighty per square mile. Thus the average population density of Chinghai, Sinkiang, and former Ninghsia would be about the same, seven to eight persons per square mile.

Shensi: The population of Shensi Province is predominantly Chinese, concentrated in the Han-chung Basin and the Wei-ho Valley Plain. The former is in the southern part of the Province, drained by the upper Han River flowing into the Yangtze at Kankow. The latter is in the east central part of the Province, drained by the Wei-ho which enters the Yellow River above Tung-kuan. The Han-chung Basin and Wei-ho Plain are the two most densely peopled areas of the province of Shensi and the whole Northwest Region. Northern Shensi is hilly and mountainous. It is more thinly populated. There are about four million Mohammedans or Chinese Moslems known as Dungans. They are distributed more in the northwestern part of the province. In addition, a small number of Mongols are found near the Ordos in the north.

Kansu: The former province of Kansu is fairly populated and known as the "Secondary Homeland" of the Moslems in China. The number of Dungans amounts to nearly one third, while the true or Han-Chinese account for about one half of the total population of the province. The rest are Mongols and "Fan" natives. The Mongols are distributed mostly in the former Ninghsia Province; there are the Alashan Mongols scattered in the desert of Alashan in the east, and the Ölöt (Oirat) Mongols along the Ta-hei-ho or Jo-shui or the Edsin River in the west. The "Fan" natives are found in the southwest close to Chinghai Province. They are related to the Tibetan family. Thus they are often called Hsi-Fan or Western Fan or Tsang-fan, the Tibetan natives. The Shero-Yögur, Sarigh-Uighur and Monguor form smaller minority groups.

N
635
162 Chinghai: The total population of Chinghai province is just over one and a half million. Althoug it is the smallest in number it is the most varied in composition, and it is the most unevenly distributed. About two thirds of the total population live in the few counties of the Hsi-ning district along the Huang-shui (Hsi-ning-ho) and Ta-tung and the main upper Yellow River in the eastern part of the province. These counties originally belonged to Kansu and were added to Chinghai when the province was formed in 1928. The remaining third is widely scattered. As a result of the territorial shift in provincial administration, the population of Chinghai is predominantly Chinese. The Chinese and Dungans plus some Moslems (Salars) are distributed mainly in the eastern portion of the province. According to a questionable report some 25,000 Salars have recently moved from Sinkiang into the province of Chinghai. Also a small group of Kazakh have recently migrated into Chinghai. Some of them are found in the extreme Northwestern part of the province, bordering Sinkiang.

The next important elements are the "Fan" or Tibetans and Mongols. The Tibetan "Fan" are found in the higher parts of the province, such as the Nan-shan Mountain Belt in the north and the Ta-chi-shih massif in the southeast and Yu-shu district, or open plateau areas south of the Baian Khara divide, drained by the upper Yangtze River. The Mongols, Monguors (Tu-jen) and Oirats are found essentially in the upland basins of Tsaidam and Koko Nor.

S
635
162 Sinkiang: Sinkiang is the largest province in size, covering one sixth of the country-s total area. It is twelve times larger than the province of Hopei. It has the smallest population among all the provinces except Chinghai . Apart from the north and southwest part of the Dzungarian Basin and the Ili Valley where they are more evenly spread, the people are concentrated in isolated clusters of oases scattered around the Takla Makan Desert in the Tarim Basin. The main portion of the population of Kashgaria or the Tarim Basin is concentrated in these oases at the edge of the desert and along the foot of the encircling mountains. The valleys of the surrounding mountains are occupied by nomads and semi-settled natives leading a pastoral life.

The composition of the 4.8 million population of Sinkiang is most complicated. Sinkiang is known as a "Natural Museum of Ethnology of the World." Here one finds Chinese, Manchus, Mongols, Turks, as well as some Indo-Europeans living side by side. As Pevtsov has said: "From the ethnological point of view the natives of Kashgaria resemble a mixture of ancient
S Aryans of the Iranian branch with Turco-Mongols. By religion
[illegible] they are Sunn- Moslems; they are very friendly toward foreigners.

done in public welfare. The information about the situation in the Northwest has to be inferred mostly from what is available to us about China proper, keeping in mind that Chinese policies in Sinkiang have never achieved a fulfillment comparable with the fulfillment they have achieved in China proper.

It was only during the Sino-Japanese War (1937-1945) that the Nationalist Government established a Ministry of Social Affairs. This Ministry organized in each province, including Sinkiang, a Bureau of Social Affairs for relief and welfare works. Institutions were set up to take care of the aged, orphans, the disabled, disabled veterans and beggars.

The relief organs in the Northwest sponsored by the Ministry of Social Affairs were restricted to free medical service centers; organs maintained by provincial governments were mainly experimental relief stations, which were responsible for a variety of relief work. Municipal and district governments maintained, in addition to general relief organs (90 for the entire Northwest; 57 of these were located in the provinces Chinghai and Ninghsia, which had Moslem governors), children's relief centers (37) and a sprinkling of other institutions. There were several dozens of private Chinese Charity Associations active in the Northwest during the war.

Furthermore, the National Government joined efforts with some religious and humanitarian bodies and organized the National Relief Commission. During the war, this Commission was particularly active in disaster relief. Large appropriations were earmarked for the famine in Shensi in the years 1943 and 1944. Contributions to this province as well as to the provinces of Kansu and Ninghsia were largely used for the resettlement of and the starting of reclamation projects by disaster victims of Shensi as well as of Honan province.

The activities of the National Relief Commission included care for war orphans and refugee children. Five hundred of them were sent to Sinkiang and one thousand were resettled in Chinghai. Furthermore, a Juvenile Northwest War Area Service Corps was organized to accommodate graduates from War Refugee Children's Schools.

The National Child Welfare Association, founded by H. H. Kung, also maintained a Child Welfare Camp at Hei-hsien, Shensi.

Among the service corps operated by the Friends of the Wounded Society, organized under the New Life Movement Association; one had a base in Shensi. These corps worked in hospitals and convalescent camps. They provided delousing, laundry and sewing services etc. and special dieting.

The welfare work of Christian missions contributed to alleviate much distress. There were few large Protestant missionary

THE CONSTITUTIONAL SYSTEM

I. The Historical Background

When the Communists conquered Northwest China, they created a Northwestern administrative area, which included the five provinces of Shensi, Kansu, Ninghsia, Chinghai and Sinkiang. In 1954, the Communist Government abolished Ninghsia Province and put it under the jurisdiction of Kansu. In 1955 it changed Sinkiang Province into the Sinkiang Uighur Autonomous Region. So now, Northwest China includes three provinces, namely, Shensi, Kansu, Chinghai, and one autonomous region, Sinkiang.

Historically speaking, Shensi and Kansu were under one governor-general during the Manchu Dynasty. For many purposes, such as provincial examinations, the two provinces were handled as a unit. At that time, part of Chinghai and Ninghsia were considered to belong to Kansu. While most of Sinkiang was administered under a special military government system, its eastern strip, from Tihua (Urumchi) to Hami, was under the jurisdiction of the governor-general of Shen-Kan. When Sinkiang later was made a province, it absorbed all the territory west of Hami.

Under the Nationalist Government, the Kokonor area was separated from Kansu. It became the nucleus of the Province of Chinghai, which was established in 1928. During the same year the Nationalist Government also established Ninghsia Province by uniting the northern counties of Kansu along the Yellow River with the two Mongolian Banners, Alashan and Edsin. Thus, when the Communist Government abolished Ninghsia as a province by combining it with Kansu, it merely reestablished part of the old border line.

During most of the Manchu Dynasty, Sinkiang was a special area. The local people retained a high degree of self-government. Even after the area was established as a province, the Chinese government let the local leaders handle most of the business of their own people. Thus, the establishment of an autonomous region in Sinkiang also had a historical basis.

II. The Constitutional Systems

A. Constitution of the Chinese Soviet Republic

In October of 1927, Mao Tse-tung retreated to the border area of Hunan and Kiangsi. There he established the "Hunan-Kiangsi Border Region Worker-Peasant Government". This was the beginning of the Chinese Soviet Government. After the Communists had consolidated their position, they established a "Constitution of the Chinese Soviet Republic". This was a Communist constitution for a Communist government. After suffering severe losses from Nationalist attacks, the Chinese Communists were no longer able

Administrative Council was not completed until January 27, 1953. P'eng Te-huai was released from his post as chairman of the Northwest Military and Administrative Council with a new assignment to command the Chinese Volunteer Corps in Korea, with the title of vice-premier of the Government Administration Council.

After this, the final step in abolishing the whole system of the administrative regions and their administrative bodies became almost insignificant. By a resolution in the thirty-second meeting of the central People's Government Council, formal abolition was achieved on June 19, 1954.

II. The Provincial and Other Lower Level Governments

A. Relationship to Regional Government

The provincial governments traditionally have been important links in the Chinese governmental system. During the decades prior to the Communist victory, when the regional power groups had become extremely influential, this fact was even more true. After the Communists took over, however, the power of the provincial government was temporarily weakened by the establishment of the administrative regions. When the Government Administration Council passed the Organizational Regulations of the Provincial People's Governments on January 6, 1950, the provincial governments were reduced almost to instruments of the Military and Administrative Councils of the administrative regions. The first article of these regulations mentioned that the people of a province would execute their political power through the provincial people's congress. The second article promised that the provincial government, including the governor, would be elected by the provincial people's congress. However, the second section of Article 2, had most significance. It stated:

"In the first stage of liberation, for the sake of a speedy establishment of a revolutionary order, the provincial People's Government Council should be nominated by the government Administration Council, subject to the approval and appointment of the Central People's Government Council; or by the People's Government Council of the administrative region... subject to the approval and appointment of the Central People's Government Council."

The appointed term of the provincial People's Government Council was two years. But through reappointments, the same provincial People's Government Council could be continued indefinitely.

1. authority

In the same regulations, the provincial People's Government Councils were given authority similar to that of the Military and Administrative Council of the administrative regions. For instance,

1: Washington S-4 (no date) 1956 AF13 Northwest China AF13 ●
Sinkiang AII

I. Introduction

Linguistic principles, rather than racial aspects, are used as the standard for the division and description of the various ethnic groups of the Northwest. The Communists also use a linguistic division in their census. It would be impossible to deal with many of these minorities in terms of race, since most represent racial mixtures, e.g. the New-Uighurs, the Mongols, the Monguors, etc.

The Northwest Region includes the four former provinces of

(1) Sinkiang with a total population of 4,873,608
(2) Kansu with a total population of 12,938,102
(3) Chinghai with a total population of 1,676,534
(4) Shensi with a total population of 15,881,281 (according to 1953 census).

(Although Shensi is included in the Northwest region it has not been considered in the following pages, since it has an exclusively Chinese population.)

A. The Ethnic Groups of Sinkiang

1. The Turkic peoples

The main racial group in the former Chinese province Sinkiang is Turkic and is composed of the following tribes:

1) New Uighur (or Eastern Turks)	3,600,000	people
2) Kazakhs	300,000	"
3) Kirghiz	70,000	"
4) Taranchi	43,000	"
5) Uzbeks	8,000	"
6) Tatars	5,000	"
	3,426,000	

It should be noted that the Taranchi are listed separately in Communist sources although they are in no way different from the New Uighur. Taranchi means "inhabitant of the country" in contrast to the New Uighurs seventy per cent of whom live in towns and cities.

2. The Chinese Peoples

In terms of the population figures, the second racial group is Chinese:

1) Chinese	about 210,000	people
2) Dungans	about 100,000	" (Chinese Moslems, whose total figure for China as a whole is 3,599,350)

3. The Mongols

The third racial group is composed of Mongols who consist of the following tribes:

1) Olots	15,000	people
2) Torguts	18,000	"
3) Khoshuts	21,000	"
4) Chahar	8,000	"

Table 5

Sinkiang AII

they were to forward orders from above to the lower level governments; to make decisions or suggestions concerning the personnel, laws, and financial arrangements of the province; and to coordinate and supervise work in the area. There were, however, some new points. They were required "to execute the decisions of the provincial people's congresses."

a. limitations on authority

The significance of this requirement was lessened by the qualification: "provided that these decisions have been approved by the Government Administrative Council or the Military and Administrative Council of the administrative regions." Thus, nothing could be done on the provincial level that was not acceptable to the officials of higher levels. Second, the provincial councils were to "annul or revise the decisions and orders of the municipal and county people's government councils, or the municipal and county people's congresses under its jurisdiction, whenever these decisions and orders are contradictory to those of the higher level people's government." The higher government officials could over-ride the local interests.

b. increased authority

Under this system, the provincial governments of Shensi, Kansu, Ninghsia, Chinghai, and Sinkiang actually were branch offices of the Northwest Military and Administrative Council, until the power of the latter was weakened in 1952. With the abolition of the Northwest Military and Administrative Council in June, 1954, the traditional importance and position of the provincial governments was fully restored. However, primarily they still are instruments of the central government.

B. People's Congress and People's Councils

The day after the First National People's Congress passed the new Chinese Communist Constitution, on September 21, 1954, the same congress passed the organic law for local governments. Taken at face value, this law gives more power to the local governments as well as to the people. From the town level up to the province, each is supposed to have a people's congress and a people's council, the congress representing the people, and the council acting as the executive body. Their position and interrelation can be seen in the following excerpts from the law:

1. Role of peoples' congress

Local people's congresses at all levels are the organs of government authority in their respective localities. (The Organic Law of People's Congresses and People's Councils at all Local levels in Chinese Peoples' Republic, p. 1, Article 3.)

a. election of deputies

Deputies to the people's congresses of provinces, municipalities directly under the central authority, counties, and municipalities divided into districts are elected by the people's congresses

almost every phase of their lives.

The functions of the people's councils, reveal the contradictory character of the Communist system of local government. The Councils are responsible for carrying out decisions of the people's congresses at their corresponding levels, but they also have to carry out all decisions and orders from higher level government organs. The people's councils are the servants of the people, but they also are entrusted with stopping the execution of inappropriate decisions of people's congresses at the next lowest level. This power is especially significant since the higher people's councils must decide what decisions are inappropriate.

c. bureaus, offices and commissions

The Organic Law for local governments states that the provincial people's councils may establish the following bureaus, offices, or commissions according to local needs:

(1) Civil Affairs;
(2) Public Security;
(3) Justice;
(4) Supervision;
(5) Planning;
(6) Finance;
(7) Food;
(8) Industry;
(9) Commerce;
(10) Transportation and Communications;
(11) Agriculture and Forestry;
(12) Water Conservancy;
(13) Labor;
(14) Culture;
(15) Education;
(16) Public Health;
(17) Physical Culture;
(18) Administrative Office.

In areas where there are minority groups, the councils may also add a Commission on Nationalities Affairs.

So far, no material is available concerning the actual structure of the northwestern provinces under the new law. However, it is known that the Committee on Financial and Economic Affairs and the Committee on Cultural and Educational Affairs have been abolished.

Under the new law, the municipal people's council may establish the following bureaus, offices, or commissions:

(1) Civil Affairs;
(2) Public Safety;
(3) Justice;
(4) Supervision;
(5) Planning;

(6) Finance;
(7) Food;
(8) Taxation;
(9) Industry;
(10) Commerce;
(11) Labor;
(12) Culture;
(13) Education;
(14) Public Health;
(15) Physical Culture;
(16) Municipal Construction;
(17) Public Utilities;
(18) Administrative Office.

In areas where there are minority groups they may also establish a Commission on Nationalities Affairs.

The county people's councils may establish, according to need, the following divisions or bureaus:

(1) Civil Affairs;
(2) Public Security;
(3) Finance;
(4) Food;
(5) Taxation;
(6) Industry and Commerce;
(7) Agriculture and Forestry;
(8) Transportation and Communications;
(9) Culture and Education;
(10) Public Health;
(11) Administrative Office.

The people's councils of the hsiang, nationality hsiang, and towns may establish, according to need, the following working committees:

(1) Civil Affairs
(2) Public Security;
(3) Armed Forces;
(4) Production and Cooperation;
(5) Finance and Taxation;
(6) Culture and Education;
(7) Mediation.

Members of the local people's congresses and other suitable individuals are encouraged to serve on these working committees.

D. Comparison with Nationalist Organization

If this system is compared with the system of local governments under the Nationalists, the following differences can be noted:

(1) The Nationalists adopted the council system only at the provincial level.

(2) Under the Nationalists, the heads of the provincial bureaus and

Administration Units in Shensi, Kansu, and Chinghai

NAME	CAPITAL	ADMINISTRATIVE UNITS
Shensi province	Sian	4 municipalities 4 counties under direct supervision of the provincial government 8 special districts having a total of 91 counties and 2 districts
Kansu province	Lanchow	6 municipalities 1 county under direct supervision of the provincial government 1 mining district under direct supervision of the provincial government 9 special districts 4 autonomous chou (special districts); under these and the special districts there are altogether 80 counties, 9 autonomous hsien (counties), and 1 banner
Chinghai province	Sining	1 municipality 5 counties under direct supervision of the provincial government 4 autonomous hsien (counties) 6 autonomous chou (special districts) having a total of 21 counties and 3 autonomous districts at the county level.

POLITICAL DYNAMICS

I. Historical Background

Political life in China's Northwest, a region which in area comprises one-third of China but with a population that comes to less than six per cent of China's population, is complicated by the dissimilitudes of the geographical components and diversity of its population. Joined by the narrow neck of Kansu province, it is virtually two widely divergent regions. Historically, the problem and basic cause of conflict have been the attempts of the eastern or Chinese end of the vast region to dominate the western or non-Chinese end, and the resistance and struggle for autonomy of the non-Chinese peoples in the west against the domination of the Chinese in the east.

East of the narrow passage of Kansu is Shensi and southern Kansu, a region densely populated by Chinese, forming an integral part of China and subject to all the political vicissitudes of China. This region was the base of strong dynasties in the past not only for the conquest of China but also for the extension of power to the west. The Chinese Communists, who had a nucleus in this region since 1931, considerably expanded their control since 1935 when they established their Shensi-Kansu-Ninghsia Border Region with headquarters at Yenan. From 1935 to 1947 this region was the center of the Communist revolution, and the laboratory of Communist experiments in government and in the mobilization of the people. After 1949, when the Communists moved their capital to Peiping, the Shensi-Kansu-Ninghsia Border Region became one of their many "old liberation areas," and their base for their domination of the Northwest. The headquarters of the Northwest Military and Administrative Council (later the Northwest Administrative Council) as well as the Northwest Bureau of the Central Committee of the CCP were located at Sian.

Westward, beyond the Kansu Corridor is Sinkiang, a huge dominion which, in accessibility and in economic ties is more closely oriented to Soviet Central Asia than to China. During the past century, the province had been the amphitheater for a three-way tug-o'war among China, Russia and Britain, and for a time in the 1930's, this was further complicated by the machinations of the Japanese. The conglomeration of the inhabitants of Chinese Turkestan, three-quarters of whom are Uighurs, a Moslem Turkic people, are split along racial, regional, religious, cultural and political lines and disunited by historical and traditional antipathy, present wide differences of interests and aspiration. Even in their opposition to Chinese domination and in their striving for self-rule, which they share in common, they rarely presented a united front. The history of the Northwest is thus a prolix story of attempts of the Chinese to assert their political dominance and the

N
*668 offices were usually members of the Provincial Council. The
• 635 people in the Council also ran the administrative organs; under the Communists, however, most of the members of the People's Councils have no part in the bureaus and offices where real power lies.

(3) Under the Nationalists, the chairman of the Provincial Council had effective control. Under the Communists the chairman of the provincial People's Government in the past, or the governor of the provincial People's Council at present, may or may not have control. For instance, the chairman of Kansu in 1950, Tent Pao-san, was merely a figurehead, and the newly-elected governor of Shensi, Chao Shou-shan, looks like another. But Ma Ming-fan, chairman of Shensi in 1950, definitely held power. In brief, the influence and power of a local official under the Communists does not depend on his official position in the government, but on his relations with the party. Ma Ming-fang was important because he was also the Deputy Secretary-General of the Northwest Bureau of the Chinese Communist Party.

(4) Under the Nationalists, when a minority leader such as Ma Hung-k'uei was appointed provincial chairman in the Northwest, he had authority in fact as well as in name. The Communists publicize the northwest local government members who belong to minority groups, but in practice what matters is the assignment given to the member by the Party. If a trusted party member - be he Chinese or Muslim - is assigned to run the office he is the actual head, even if he has a low rank. However, he is only a wheel in the party machinery, and has very little freedom to act on his own.

N
[631] (5) Under the Communists, the local governments at every level are much larger and more powerful than under the Nationalists. See Tables 2, 3, 4, and 5 for the structure and personnel of the provincial governments in Shensi, Kansu, Chinghai, and Sinkiang in 1950, and Table 6 for the relationships between local governments in the present stage.

N
*668 The specific structure of each provincial government in
635 Northwest China and of the Sinkiang Uighur Autonomous Region,
S as of 1955, is not yet available. Except for the abolition of the
668 Committee on Economic and Financial Affairs and the Committee
635 on Cultural and Educational Affairs, one may assume that the present structure of these provinces and of the Sinkiang Uughur Autonomous Region are approximately the same as in 1950.

N
*668 Sian was a municipality directly under the central government
633 authority from late in 1949 until 1954. The people's government of the city had thirteen different bureaus and offices, and the area was divided into twelve districts. In 1950, the mayor was Chia T'o-fu and the deputy mayors were Fang Chung-ju and Chang Feng-po. In 1952 the mayor was Fang, with Chang Feng-po and

Ch'en Shih-yü deputy mayors. All were appointed by the central People's Government. After the abolition of the administrative region in 1954, the Communist Government made these major changes in Northwest China:

(1) Sian was changed from a municipality under central authority to a municipality under the authority of Shensi province.

(2) Ninghsia was made part of Kansu on September 27, 1954.

(3) Sinkiang province was made the Sinkiang Uighur autonomous region on October 1, 1955.

Thus, in 1955 the administrative units of Northwest China were quite different from those of 1950. The units under Shensi, Kansu, and Chinghai are summarized in Table 7. The units under Sinkiang in early 1955 are shown in Table 8, while those after October 1, 1955, are shown in Table 9.

After the promulgation of the Chinese Communist constitution in 1954, elections were held and People's Congresses and People's Councils were organized. There were some personnel changes, but the general structure and control of the government remained about the same.

III. Government of the Autonomous Districts

A. Earlier Systems

In the past, although the Chinese government gave little publicity to them, autonomous governments existed among the minorities in Northwest China. As late as the 1880's, when the proposal to transform Sinkiang into a regular province was presented to the Court, it met with strong opposition on the grounds that the minorities who differed from the Chinese in tradition, language, religion, and customs would be difficult to govern. Before then, the minorities had been governed by their own leaders. Even after the area became a province, the life of the minorities was not greatly disturbed.

B. The Communist System

The Communists have a definite program for changing the social and economic order. Knowing that cooperation is necessary to attain their aims, the Communists intend to lessen the friction between racial groups under their regime. On the surface, they grant autonomous governments to the minorities; in fact, they control them from within through hand-picked Party members. So far there is no evidence to show that the structure of these autonomous local governments is essentially different from that of the regular local governments. The government of the Sinkiang Uighur Autonomous Region, as well as of the local governments under it, superficially is the same as under the former Sinkiang province. A complete list of all autonomous districts in Northwest China,

attempts of the native peoples to throw off the Chinese yoke and to set up their own government, a story of intrigue and bloodshed, set against the backdrop of international rivalry.

In the past thirty years, superimposed on the political and international complex of Sinkiang were the new ideas that have added fuel to the discords and discontent in Sinkiang. Generally, the more important of the new ideologies injected into the political life of Sinkiang were the following:

1. Policy of assimilation, generally denounced by its enemies as the Great Hanism (Ta-Han chu-i), in which the border peoples were regarded as descendants of an ancient Great Chinese race and should be reabsorbed into the Chinese race. This concept was pushed by the Kuomintang extremists.
2. Program of cultural diversity and cultural autonomy. This idea was pushed by men such as Sheng Shih-ts'ai and Chang Chih-chung, as an alternative to the policy of compulsory assimilation.
3. Pan-Turkestanism and Pan-Islamism, promoted by the native people, especially by the Uighurs and their Kazakh allies, stressed the fact that the majority of people of Sinkiang speak Turkic language and belong to the Moslem faith. The exponents of this concept belong to many shades of political opinion, from the moderates such as Maksud Sabri, Burkhan Shahidi, and Mehmet Emin Bughra, to the more radical faction which included Akhmejan Kasimi, Saifuddin Azizi, and the members of the Kulja coalition.
4. Territorial and cultural autonomy under the principle of federalism based on ideas derived from the Soviet policy towards the minority nationalities. This policy was actively propagandized by the Chinese Communists and served to inflame the native peoples as well as to embarrass the Nationalist authorities.

These divergent views, in substance, were the expressions of nationalism on the part of the Chinese and on the part of the native peoples of Chinese Turkestan, especially among the educated classes. As in many other parts of the Orient, the game of politics was not a popular one. The people, downtrodden and persecuted, desired only to be left alone, and they rose in revolt only when tyranny and injustice became intolerable, and they would then follow the cue of their leaders in wholesale uprisings. In the wars of the Oirats against the Ch'ing government two hundred years ago, the leaders were the tribal chieftains; and in the rebellion of the Khojas and the Dungan rebellion in the last century, the leaders were religious prelates. But in republican times, there were few of the hereditary tribal princes or religious leaders taking a part. Instead, the leaders were drawn from the ranks of the bandits, officers in the Chinese army, or young intellectuals who had studied in China or abroad. On the part of the Chinese, the men in political life in the Northwest were either local civil and military officials, or officials sent out by the central government.

S
175 alities and classes to participate in the governments; and third,
668 to establish people's democratic United Front of democratic nationalities under the leadership of the people's provincial governments and various branches of the CCP committees." (JMJP Oct. 1, 1950).

In response, the people's council of Sinkiang passed a resolution urging the establishment of a people's democratic dictatorship based on a union of all democratic classes and all nationalities, built around the alliance of workers and farmers. This was to be achieved by the establishment and consolidation of the united front, by the annihilation of reactionary elements, by the re-education and reform of former government functionaries and by the absorption of progressive elements into the government.

The extent to which the Chinese Communists succeeded in implementing their policy of a United Front in Northwest China may be seen in (1), the alignment of the top ranking officials and the parties, (2) the mobilization of the people, and (3) the building of an army of trained men - the cadres - to serve as instruments of Communist policy.

N
*175 A. Top Echelon Officials
*668 The men in power in the northwestern provinces at the time
554 of the Communist takeover belonged to an assortment of political
• 635 factions and held to a hodge-podge of views and interests. There were the Communists, many of whom had held official positions
S in the Shensi-Kansu-Ninghsia Border Region, who were immedi-
175 ately summoned to take charge. There were the members of the
668 Democratic League, which had thrown in their lot with the Com-
554 munists and which maintained branch offices in Sian and Lanchou.
635 The Nationalist officials in China Proper who defected formed themselves into the Kuomintang Revolutionary Committee and they were joined by the Nationalist officials in the Northwest. Among the national minorities, there were those who held responsible positions under the Nationalists and who, as prominent men among the national minorities, were carefully preserved by the Communists. Another group of native leaders who rose to power were the former participants of the Ili revolt.

The administrative structure formed from these varied political groups was a cunning piece of assembly. The non-Communist figures had to be given conspicuous display in order to give the impression of a coalition government, but their line had to be stiffened by Communist officials so that it would answer to the dictates of Peking. Each of the top-ranking officials held three or more concurrent positions in one or more places.
Political: in the Central People's Government, in the regional Military and Administrative Council (later the Administrative Council), in the provincial or the municipal governments.

N Military: In the People's Revolutionary Military Council, the
175 Northwest Military District, or the provincial sub-districts.
668 Party: In the Central Committee of the CCP, in the Northwest
554 Bureau of the Central Committee and the Sinkiang Sub-bureau, and
635 in the provincial committees.
S Mass organizations: In the national committee and in regional
175 committees.
668
554 The positions held were either vertical, from Peking down to
635 the provincial level, or horizontal, in more than one collateral agencies. The system of interlocking political positions may be seen in the cases of the following men, chosen at random as illustrations. The positions they held were as of 1952:

Hsi Chung-hsün: In Peking, he was a member of the Government Administration Council, member of the People's Revolutionary Military Council, and a member of the Sino-Soviet Friendship Association. In the Northwest, he was vice-chairman of the Military Administrative Council, director of the Commission of Land Reform, deputy director of the Commission on Culture and Education, and political commissar of the Northwest Military District. In the Party, he was an alternate member of the Central Committee, and first secretary of the Northwest Bureau.

Ma Wen-jui is primarily concerned with party work. In the Northwest Military and Administrative Council, in which he is a member of the council, he was chairman of the People's Supervisory Commission and member of the Commission on Political and Legal Affairs. In the party, he was concurrently director of the Organization Department of the Northwest Bureau of the Central Committee and director of the Committee on Women's Work.

S Saifuddin Azizi, chairman of the Sinkiang People's Democratic
175 League, was also a member of the Northwest Military and Admin-
668 istrative Council and a member of its Political and Legal Commis-
554 sion and its Nationality Affairs Commission, which have offices in
635 Sian. In Sinkiang he was vice-chairman of the Provincial People's Government and fourth secretary of the Sinkiang Sub-bureau of the CCP. In Peking, he was a member of the Central Peoples Government Council, a member of the Political and Legal Commission and vice-chairman of the Nationality Affairs Commission. He was also reportedly commander of the 5th Army in Sinkiang.

S Among the non-Communists, the men who had climbed the
N highest in the Communist hierarchy were the members of the
175 Democratic League. One of these was Han Chao-e who, in Peking,
554 was a member of the Central Committee of the Democratic League,
635 a member of the Central Committee of the China Farmers' and Workers' Democratic Party, and a member of the People's Supervisory Commission in the Central People's Government. In the Northwest Military and Administrative Council, he was a member of the Political and Legal Commission and vice-chairman of the Land Reform Commission.

000

N
#175 Land Reform Commission. In the Shensi Provincial People's
635 Government, he was vice chairman and director of the People's
554 Supervisory Commission.

In the case of Yang Ming-hsüan, one can see the tie-in between
N
#175 the Democratic League and the Chinese Communists. Before the
554 rise to power of the Chinese Communists on the mainland, he was
635 a vice chairman of the Communist-controlled Shensi-Kansu-Ninghsia
#668 Border Regional Government which had its headquarters at Yenan. Later, he became chairman of the Northwest branch of the China Democratic League, with headquarters at Sian and thus helped to prepare the way for the take-over by the Communists in 1949. In the Northwest Military and Administrative Council, in which he was a member, he was director of the Cultural and Educational Commission and a member of the Commission on Nationalities Affairs.

It would be tedious to list the concurrent posts held by other key figures in the Northwest. Table 1. shows the number of responsible positions (director, chairman, secretary, member of councils and committees, military command and head of mass organization and minority party branches) held by a few of the members of the Northwest Military and Administrative Council, in Peking and in the Northwest provinces in 1952.

S
175
668 B. Parties

Having integrated the leaders of non-Communist political bodies into the government, the next step was to reorganize them and to utilize them as arms of the Communist Party. The Sinkiang League for the Defense of Peace and Democracy, headed by Saifuddin, was reorganized into the Sinkiang People's Democratic League (not to be confused with the China Democratic League). It brought over 17,000 trained cadres, veterans of the Ili revolt, to the Communist cause. The official announcement of the reorganization, in 1950, stated that the Sinkiang League was to be guided by the CCP and would base its work on the Common Program of the Chinese People's Political Consultative Conference. It was to be established in parts of Sinkiang as part of the democratic United Front.

N
#175 In December, 1953, the Northwest branch committee of the
#668 China Democratic League held a conference at Sian, to hear Yang Ming-hsüan, chairman of the branch committee, and other League leaders report on the work of organization, propaganda, and education. Yang exhorted the members of the league to unite and educate the intellectual masses to take part in building the economy, national defense, and culture of the Northwest. Responding to the resolution of its parent body in the spring of 1953, the Northwest branch committee called upon its membership to concentrate its efforts in mobilizing and organizing the students and teachers in

of the cadres had a corroding effect on the party and endangered the party cause." (NCNA July 21, 1954). But, said the leaders, "the main obstacle to party unity in Sinkiang district at present is the survival of the tendency of Great Hanism and the sentiment of local nationalism among a section of the cadres." (NCNA April 25, 1954).

The demoralisation of the government personnel in the Northwest was so widespread that in March, 1954, when the residents of thirty-two villages in the Hu-chu county in Chinghai were told that they were free to voice their grievances, they made a total of 3,800 complaints in the hsiang people's representative assembly against the "bureaucratic work style of the leadership cadres." (NCNA March 20, 1954).

V. Political Structure and Political Progress

A. The Northwest Military and Administrative Council and People's Governments

Early in 1950, the Northwest Military and Administrative Council was established at Sian, which also became the location of the Northwest Bureau of the Communist Party and of the headquarters of the Northwest Military District. In the months that followed, provincial and municipal people's governments were also established in the five provinces then comprising the Northwest: Shensi, Kansu, Chinghai, Ninghsia, and Sinkiang.

While the members of the Military and Administrative Council were appointed by the Central People's Government in Peking, the members of the provincial and municipal people's governments were, according to Communist pronouncements, elected by conventions of representatives of all circles and all nationalities. Since no machinery of election was set up and the people were not instructed, these conventions were actually meetings of Communists and fellow travellers who were invited to attend, in the manner non-Communists were invited to attend the Chinese People's Political Consultative Conference in Peking in September, 1949.

Since the officials were those on the panels who were approved by the Communists, there was little for the representatives to do except to endorse the selection, and then to devote the rest of their time to other unrelated items of the agenda. The first conference of the people's representatives of all circles and all nationalities in Sinkiang, which met April 19 to May 10, 1951, was primarily devoted to the purpose of propaganda, the discussion of means of popularizing the Resist-America and Aid-Korea Campaign, the campaign to suppress counter-revolutionaries and the land reform. The meeting of representatives in Chinghai, held in October, 1950, discussed these items on the agenda plus the means of collecting the grain tax.

Table 3. CHINESE AND NON-CHINESE IN REGIONAL, PROVINCIAL, AND LOCAL GOVERNMENTS

	total	Han Chinese	From the National Minorities	Unknown
Regional: Top level (in 1952)				
NW MAC	43	35	8	--
Provincial: Second level (in 1950)				
Shensi People's Government Council	39	37	2	-
Kansu " " "	29	21	8	-
Chinghai " " "	22	12	7	1
Sinkiang " " "	31	13	15	3
Total	121	85	32	4
(Total in 1951)	133	78	55	-)

County Magistrates: Third level (in 1951)

Shensi:	Chinese, head of all municipalities and counties
Kansu:	in the Linhsia Administrative District, 6 counties: 3 Chinese, 3 from the minority nationalities
Chinghai and Ninghsia:	in 35 counties: 13 Chinese, 22 from the minority nationalities
Sinkiang:	80 counties, 13 Chinese, 67 from the minority nationalities.

The line-up of the Northwest Military and Administrative Council and the provincial people's governments in 1951 shows that the responsible officials were either Communists or hold-overs from the previous governments who were approved by the Communists. In cases where the former governors were retained, as in Kansu and Sinkiang, one or two of the vice-governors were Communists.

To cater to the desire of the minority peoples for a voice in government, many of the native representatives were elected to be members of the people's councils. But they were mainly permitted to serve in the lower levels of the administrations, the Chinese practically monopolized the upper levels of government. Table 3 shows the number of chairmen, vice-chairmen, and the members of the councils.

It should be noted that the term "Chinese" refers to those of the Han race and that the term "national minority" includes also the Chinese Moslems, a people once known as Dungan and now as the Hui, or Moslems. In the Linhsia Administrative District in Kansu, for example, although the number of Chinese and Hui county magistrates were the same, the Chinese still predominate. Numbering 52 per cent of the population, they had 56 per cent of the seats in the district people's council, while the Hui, who numbered 48 per cent of the population had only 55 per cent of the seats.

These local people's governments or people's councils had little authority. Their principal responsibility was the transmission of the decisions and orders of the Government Administration Council in Peking. Military and financial matters were subject to the decisions of the Central Government (cf. Organic Law of Regional Governments, December 16, 1949).

B. Regional Autonomous Areas

The training of an army of national minority cadres had as its basic purpose, not only the staffing of the lower levels of the administration, but also the preparation of the ground for the establishment of regional autonomy for the minority peoples in the outlying regions of the Northwest. "The nucleus of work in the promotion of nationality regional autonomy and nationalities democratic coalition governments," stated the Jen-min jih-pao in an editorial (March 22, 1951), "lies in the universal and large-scale training of the nationalities' own cadres. It is only after the nationalities are provided with their own revolutionary cadres that their political, economic and cultural development can be further assured."

The nationality autonomous governments which were first set up in the provinces of Kansu, Ninghsia and Chinghai, were prepared by "the construction work of political and military cadres," (NCNA, May 17, 1953), who did the work of propaganda and organization of the people. (NCNA December 19, 1953). For example, the establishment

going to the polls, but in Chinghai where it was reported that 95 per cent of the people went to the polls, the election was only one-fourth completed.

In Sinkiang, the Communist authorities were more cautious. The experimental elections began in May, 1953, in 17 basic election units (hsiang) selected from the ten administrative districts, then in 36 basic election units. In these experimental elections, 80-95 per cent of the electorate turned out. With the successful conclusion of the experiments, the real basic level elections began in September in 665 basic level areas in Sinkiang, followed in December by the second group of 860 basic level area elections. By April, 1954, the basic level election in Sinkiang was concluded, having been held in 2,424 basic units in 83 counties and municipalities. In urban areas, 89 per cent of the voters turned out, while in southern Sinkiang, the turnout by the Uighur population was 95 per cent. The elections during 1953 had been supervised by 1,127 cadres who formed 144 election courts and 98 mobile investigation teams, which uncovered 204 cases of irregularities and nonconformity.

The fruit of the efforts of the election cadres was the election of large numbers of cadres and party members. Sixty-three per cent of the 619 new party members employed in the Sinkiang provincial and Urumchi municipal governments were elected as delegates. In 312 hsiang in Sinkiang, out of the 7,088 of the delegates elected, 5,248 were Communist Party cadres, and the bulk were Chinese. In Ninghsia, only 25 per cent of the 9,700 deputies elected in the basic level elections were Chinese Moslems (Hui).

Moreover, the elections in the Northwest, as in the rest of China, were by no means universal. Vice-premier Teng Hsiao-p'ing, one of the top officials in charge of the nationwide elections, revealed that basic level elections were not held in a quarter of the regions inhabited by national minorities, and the number of national minority people who were not given a chance to vote came to 8,708,169. The reason for defranchising these minority people, he said, was due to the "lack of requisite conditions," which were (1) the native cadres were unsatisfactory and (2) the people failed to appreciate the nationality policy of the government. (NCNA June 19, 1954).

In contrast to the publicity given to the basic level elections in the Northwest, the elections in the higher levels were conducted quietly and, in many cases, the results were not published. However, from scattered information gleaned from the Communist press, the following picture emerges: in Shensi, Kansu, and Sinkiang, the incumbent governors were re-elected. Only in Chinghai, was there a change in the governor. In these four provinces, three of the governors are Chinese. In the three provinces of Shensi, Kansu and Chinghai, about half of the thirteen vice-

governors were holdovers from the past, and of these thirteen, nine were Chinese. The provincial people's congresses also showed a greater proportion of Chinese. In Kansu, 20 of the 25 elected members of the people's congress were Chinese, and in Chinghai, 12 of the 23 were Chinese.

A word must be said about the representation of national minorities in the National People's Congress in Peking in the fall of 1954. The number of national minorities in China, according to the 1953 census, was 35,320,360, and they elected a total of 150 delegates. This comes to one delegate for every 235,470 persons, which compares unfavorably with the residents of municipalities and industrial centers where the ratio was one to 800,000. In the 1226-seat National People's Assembly, 177 national minority delegates (150 elected, 27 appointed) representing six per cent of the total population, occupy 14 per cent of the seats.

The seats allocated to the minorities of the Northwest were as follows: Kansu 6, Chinghai 6, and Sinkiang 18, or a total of 32. Geographically, the distribution of seats were: Sian municipality 8, Shensi 19, Kansu 25, Chinghai 9, Sinkiang 20, or a total of 82. It was not explained whether the 32 minority delegates were added to the 82 or were part of the 82. If the total number of seats was 82 for the 35,358,000 people of the Northwest, it would come to one delegate for every 431,200 people. At any rate, the number of seats is unimportant, except as window-dressing. The delegates were all Communist officials, fellow travellers, labor heroes, military commanders, religious leaders, and educational and technical workers, who, having been screened and processed in the elections of successive levels, were not men who would entertain nonconformist thoughts.

Moreover, the formation of people's congresses, like the establishment of regional autonomous governments, does not mean that the people have been given the right to govern themselves. According to the Organic Law on the Local People's Congresses and Local People's Councils adopted by the National People's Congress in September, 1954, the functions and powers of the people's congresses was "to ensure the observance and execution of the laws, decrees, and resolutions of the people's congresses of higher levels," (art. 6), and the functions and powers of the people's councils (or people's governments) was "to promote and carry out the decisions of the governments of higher level" (art. 27).

VI. Further Consolidation of Communist Control

In the fall of 1954, as the elections were approaching their final stage, there were structural changes in the administration of the Northwest which gave the impression that Peking was relaxing its grip over the Northwest. Following the decisions of the

PUBLIC ORDER AND SAFETY

I. Introduction

A. Historical Administration of Area

1. Ch'ing Dynasty

During the Ch'ing dynasty, Shensi and Kansu were two of the eighteen provinces which formed China proper. The police system and the problems of public order and safety were similar to those of the other provinces. (See Section on Public Order and Safety in General Handbook.) However, in the Chinghai area, the maintenance of order was mainly entrusted to the native local chiefs. In Sinkiang, a network of military garrisons under the rule of Manchu military officers was established. Its main purpose was to suppress possible rebellions by the minority groups. The daily administration and maintenance of order among the minorities at the lower local level, however, here also rested with the minority chiefs and local leaders. The efficiency of this system is illustrated by the record of the riots. Periodically, at intervals of roughly thirty to fifty years, a major rebellion broke out. Numerous small riots occurred between the big conflicts. As a whole, however, the Ch'ing dynasty's maintenance of public order in the northwest was considered to be successful.

2. Post 1911

When the revolution came in 1911, the situations varied in the different provinces. The weakness of the central government in Peking helped further the development of local forces. In Shensi, Kansu (and Ninghsia) and Ch'inghai, there were various warlords who occupied and dominated a certain portion of the land at various times. The purpose of the police forces under the warlords was to maintain their dominant position. Their police forces were efficient or less so, depending on the personalities of the leaders. Often they were backward and cruel, but usually they followed the traditional pattern of the Chinese bureaucracy. Most of the warlords adopted the "closed-door" policy. Outsiders, especially those viewed as potential trouble-makers, were not too free to travel around. This simplified police work since the local population was comparatively less educated and, except for the Moslems, more submissive than the outsiders.

In Sinkiang, the situation was complicated by two factors. First, it was exposed to foreign agitation, particularly from Russia and Great Britain. Second, it had a mixed population with the Chinese in the minority. Therefore, the purpose and mission of the police forces in Sinkiang were traditionally difficult. Maintaining the leader's power involved dealing with foreign influences and with the various local peoples. These constant challenges made the police forces in Sinkiang more alert and efficient than in other

the "Four Ma of Islam" in the Northwest. When he was twenty-one years old, Ma Hung-pin started his military career by serving as commanding officer of the cavalry corps in charge of the Sining mines in Chinghai Province, and at the same time he was a member of the reclamation commission and mining commission of that province. In 1911, he became commanding officer of the cavalry batallion in charge of the patrol of the western region of Kansu. His first military merit was achieved when he pacified the disturbances of the two Mongol banners in western Suiyuan who were stirred to revolt by the independence achieved by Outer Mongolia in the first years of the Chinese Republic. In 1914, he was the commanding officer of the Seventh Cavalry Batallion and stationed in western Suiyuan guarding the Yellow River Bend and keeping a watchful eye against the Outer Mongols. Because of his meritorious record in the pacification of bandits in his area, he was awarded several medals and was promoted to lieutenant general by President Li Yüan-hung of the Peking Government. Later he also received a medal from the government of Belgium for his excellent work in protecting Belgian missionaries. In 1920 he was appointed as Defense Commissioner for Ninghsia (not a province at that time) and was charged with the duty of defending the frontier areas. In 1926 he was given the post of Pacification Commander of the Shensi-Kansu border regions. In 1927, when the Northern Expedition began, he was the commander of the 24th Division of the Second Army Group of which General Feng Yu-hsiang (the Christian General) was the commander-in-chief. In 1928 he was transferred as the commander of the Seventh Division.

When the Nationalist Government was established in Nanking, Ma Hung-pin was appointed the first governor of the newly organized province of Ninghsia. This was, so far, the first political assignment for Ma. In 1930 he was also made acting governor of Kansu Province. His political life ended in 1933 when his cousin, Ma Hung-k'uei, succeeded him as governor of Ninghsia. From 1934-1936, his main task was to pacify the remaining bandits in the eastern region of Kansu. Because his policy in suppressing bandits was to win them over rather than annihalate them, he had won for himself the nickname of "Ma the Kind Man." In 1937, as commander of the 81st Division and, concurrently, defense commissioner for the western region of Suiyuan, he led his troops in fighting the Japanese invaders in that area. In 1940 he became commander-in-chief for the defense of Etokuchi, a Mongol Banner in western Suiyuan.

When the Communists started their campaign in the Northwest, Ma Hung-pin surrendered Ninghsia Province to the People's Liberation Army on September 16, 1949. Because of this drastic move, the whole Northwest was soon lost to the Communists.

159 munists. In recognition of his help the Communist regime in
*668 Peking appointed him a member of the Military and Adminis-
631 trative Council of the Northwest in 1950, and in 1953, when the council was reorganized as the Northwest Administrative Council, he was one of the vice-chairmen. He was a member of the Land Reform Commission and the Political and Legal Commission and vice-chairman of the Nationality Affairs Commission. Concurrently, he was vice-chairman of the People's Government of Kansu, a post he continued to hold after the election of 1954, and in the People's Government he was director of the commission on Nationality Affairs. He also became a member of the National Defense Council. Of the Four Ma of China's Northwest, Ma Hung-pin is the only one who shifted his loyalty to the Communist regime.

Ma Ming-fang (1904-): Communist, government official

A native of Shensi Province, born in 1904. Joined the Communist Party in 1925, took part in the 1925-27 Northern Expedition; 1931, director of the Department of Propaganda for northern Shensi; later, chairman of the Workers and Farmers Democratic Government of northern Shensi region; secretary of the Provincial Committee of the Party, 1941, jailed in Sinkiang by the Nationalists when he came back from Soviet Russia; 1946, returned to Yenan; 1949, delegate to the CPPCC; 1949-51, member of the National Committee of the CPPCC.

From 1950 to 1952, he was a member of the Northwest Military and Administrative Council, in which he was also a member of the Financial and Economic Commission. He was governor of Shensi and concurrently director of the Commission on Financial and Economic Affairs in the Shensi People's Government. In the Party, he was a reserve member of the Central Committee and second secretary of the Northwest Bureau. In Peking, too, he was a member of the Board of Directors of the Sino-Soviet Friendship Association, and in 1955, a member of the Standing Committee of the National People's Congress.

159 Ma's influence in the Northwest as well as his position in the
*668 local administration in the Northwest have been very great. He is a life-long member of the Communist Party and has played a rather important role for the Communist cause. He is one of the few from the Northwest who had ever visited the Soviet Union, which enhanced his prestige in the Communist hierarchy.

Ma Pu-fang (1903-)

159 Before the Communists took over Northwest China, this
614 area had been ruled by the famous Ma clan. As Ma Hung-k'uei
● 635 and Ma Hung-pin ruled Ninghsia and Kansu, so did Ma Pu-fang and Ma Pu-ch'ing rule Chinghai (Kokonor). The administration

159 under the Ma family in Chinghai Province started with their
614 father, Ma Lin, who devoted his efforts toward the promotion
● 635 of education within the province. After Ma Lin died, his brother, Ma Ch'i, took over the administration. But when the war with
[648] Japan began in 1937, Ma Pu-fang was given the position of governor of Chinghai, and at the same time he shouldered the tasks of leading the Kuomintang and commanding the troops within that province.

159 Ma Pu-fang was a career army officer. He started as a
[701] commanding officer of a batallion, and gradually climbed up to the post of commander of an army. When his uncle, Ma Ch'i,
[635] was governor of Chinghai before the Sino-Japanese War, he became a member of the provincial government. When he finally took over the administrative job in Chinghai in 1937, he was one of the youngest governors in China.

159 For more than thirteen years, 1937-1950, he held the posi-
635 tion of governorship. During his administration, particularly
185 during the war years, he aimed at the following six main tasks: First, he organized the Pao-chia system not only among the Chinese and Moslems, but also among the Mongols and Tibetans in his province. Second, he trained the local militia for the
[206] purpose of maintaining local order. Third, he was very strict in carrying out the policy of elimination of opium. Fourth, he
[891] conducted the movement of compulsory education aiming at the total elimination of illiteracy within Chinghai. As a result of his policy, in a single year more than a hundred thousand people learned to read. In addition, there were 8 middle normal schools, 131 primary schools and 805 grade schools in that
[499] province. The fifth task was to construct highways, and during his administration, more than two thousand kilometers of highways were constructed. The sixth point was afforestation. Every person was compelled to plant five to ten trees a year, and as a result, more than seven million trees had been planted during those war years.

159 Being a Moslem himself and realizing the complexity of
77 religions in Chinghai, Ma Pu-fang was cautious in his handling
641 of different religious groups. On the whole he worked toward
635 religious harmony, and his policy was one of equal treatment toward all tribes. He chose his personnel regardless of religion or race, on the basis of capacity and personality. Thus he was generally trusted by all religious groups in his province.

159 When the Communists began their campaign in 1949, they
669 pushed their way to the Northwest. Ma Pu-fang was appointed director of the Administrative Headquarters of the Northwest, succeeding General Chang Chih-chung. Joining forces with Ma Hung-k'uei, he directed the defense of the Northwest. Unfortunately, all his attempts failed and by October, 1949, the

159 provincial capital of Chinghai, Sining, fell to the Communists.
669 He was asked by the Communist authorities to serve on their Military Control Board, but when the Nationalist Government moved to Formosa, he managed to leave China. He now lives in Cairo, Egypt.

Ma Pu-ch'ing (1898-)

159 Born in 1898 in the district of Lin-hsia in Kansu Province, Ma Pu-ch'ing was the elder brother of Ma Pu-feng, governor of Chinghai Province from 1937 to 1949, and the oldest son of the late governor of Chinghai, Ma Lin. The youngest son, Ma Pu-ying, did not enter public life, but chose to be a farmer. After
159 he was graduated from the First Middle School of Kansu, Ma
701 Pu-ch'ing entered military life. In 1922 he was commander of the Fourth Regional Garrison. Next year he was promoted as commanding officer of the Cavalry Regiment of the Fifth Mixed Brigade of the Army. In 1928 he became commanding officer of the 77th Brigade of the 28th Division of the Nationalist Revolutionary Army. In 1929 he was transferred to commanding officer of the 65th Brigade of the 22nd Division of the 4th Route of the 2nd Army Group of the Revolutionary Army. In 1930, he was given commandership of the Loyang Garrison. By next year he became commanding officer of the 26th Division of the 4th Route of the 2nd Region of the Nationalist Army. In 1932 he was promoted as commanding officer of the First Cavalry Division of Kansu Province. In the same year, he was transferred as commanding officer of the Second Cavalry Division of the Nationalist Army. In 1936 he became commanding officer of the Fifth
159 Cavalry Division of the Army. When the Sino-Japanese War
701 broke out, he was appointed as the Commissioner of Highways
631 in Kansu Province. Later he was given the position as Reclamation Commissioner of Tsaidam region in Chinghai Province, and concurrently commanding officer of the Fifth Cavalry Division. In 1943 he became deputy commander-in-chief of the Fortieth Army Group.

159 His appointment as Reclamation Commissioner of Tsaidam
631 region in Chinghai Province by the Central Government came at
• 635 the time his brother, Ma Pu-fang, was governor of that province. Thus the two brothers were often mentioned together as administrative heads of Chinghai. At that time China was engaged in the war against the Japanese invaders, and the whole coastal region had been lost to the enemy. To deal with the urgent need to continue the war, the Central Government then adopted a policy of developing the border regions. Ma's appointment as Reclamation Commissioner of Tsaidam was therefore considered a very important step. Tsaidam region is situated in the northwestern part of Chinghai Province, between the

159 Ch'ilien and Chishih Mountains. In the Tsaidam River valley,
631 comprised of six districts, there were nearly a hundred thou-
• 635 sand Mongols, who were Buddhists by religion and nomads economically, and twenty-five thousand Kazakhs, with some Moslems and Chinese. When Ma Pu-ch'ing took over this re-
[185] gion he directed his reclamation program along the following lines: to inspire patriotism among the border peoples, to promote education, to develop the uncultivated lands by settlements of people, and to increase production by encouraging industrial programs, to improve the transportation facilities to ship needed goods to the interior, and finally to open mines in that region for the needs of both the border area and the interior.

159 His public life, like that of his younger brother, was finally
669 ended by the arrival of the Communists. When the Northwest was lost to the People's Liberation Army, he fled from Chinghai and followed the Nationalist Government to Formosa.

Ma T'eng-ai

159 Background and dates unknown. 1953-, member of the North-
631 west Administrative Council and vice-chairman of the People's
635 Government of Ninghsia Province until 1954.

Ma Wen-jui: Communist Party member

159 A native of Shensi Province. He had served as secretary to
*668 the Communist Headquarters in eastern Kansu under the Shensi-
631 Kansu-Ninghsia Border Government. When the Military and Administrative Council for the Northwest was formed in 1950, he was appointed as a member of that council, in which he was chairman of the People's Supervisory Commission and a member in the Political and Legal Commission, positions which he retained when the council was reorganized as the Northwest Administrative Council in 1953. In the party, he has been since 1950, director of the Department of Organization and director of the Commission on Women's Work in the Northwest Bureau of the CCP. In 1955, he was transferred to Peking as Minister of Labor.

159 The main responsibility of Ma Wen-jui was to push the United
*668 Front work in the Northwest in 1950. His Department of Organization was active, months before the formation of the MAC and the People's Governments, in the induction of former Nationalist Government functionaries and students into the governments of the Communists. Later, he was responsible for pushing the ideological reforms of the cadres and the purges in 1952, and the job of Communist Party expansion in the Northwest.

S
159 tseng, the deputy-director of the Central Bureau of Investiga-
tions and Statistics (the FBI of the Chinese government), flew to Chungking, and thus ended his dictatorship of Sinkiang.

S
[645] His position as Minister of Agriculture and Forestry lasted only a year. In July 1945 his political life came to an end. When the Nationalist Government was forced to move to Taiwan, he followed, but, although he still holds some office in the Nationalist Government, his name has not appeared in the China Who's Who since 1951.

N
159 Shih Tze-ching: Member of the Democratic League
631 Of Shensi Province. Dates unknown. When the Northwest Military and Administrative Council was formed at the end of 1949, he was appointed a member of that council and also chairman of the People's Supervisory Commission; in 1953 the council was reorganized into the Northwest Administrative Council, and Shih was retained as a member. He also served as its vice-chairman of the People's Supervisory Commission.

N
Sun Tien-ts'ai: Communist Party member

159 A native of Ninghsia Province, for a long time secretary to
*668 the Operational Committee of the Communist Party in Ninghsia.
631 Since 1949, a member of the Military and Administrative Council for the Northwest, and one of the vice-chairmen of the People's Government of Ninghsia Province. Since 1953, holds the same position except that the council has been reorganized into the Northwest Administrative Council.

With the abolition of Ninghsia in 1954, Sun was elected one of the vice-chairmen of the People's Government of Kansu.

The fact that the Communists use their party members to control local administration is shown clearly in the case of Sun Tien-ts'ai and others in the Northwest.

N
Sun, Tso-pin

159 In 1950, Sun was deputy secretary of the Kansu Committee of
631 the CCP, and a member of the Kansu People's Government
• [635] Council. In 1954 he was elected governor of Chinghai.

Ta-li-cha-ya: Mongol leader

A Mongol of Ninghsia Province. Dates and background unknown. Since 1949 he served as a member of the Northwest Military and Administrative Council, vice-chairman of the Political and Legal Commission, and member of the Commission on Nationalities Affairs. From 1953, member of the Northwest Administrative Council, member of its Committee on Nationalities Affairs, and concurrently a vice-chairman of the People's Government of Ninghsia Province until 1954. In 1955 he was elected one of the vice-chairmen of the Kansu PPCC.

than that of Kansu. The details are shown in the following table:

Table IV: The Exports and Imports of Ninghsia, 1933

Description	Value (yüan)	
A. Exports:		4,040,000
opium	2,400,000	
sheep's pelts	900,000	
medical herbs	450,000	
wool	240,000	
hair-like weeds	50,000	
B. Imports:		2,270,000
cotton piece goods	1,400,000	
silk, woolen cloth, cosmetics	300,000	
sundries	120,000	
cotton	150,000	
grain	300,000	
Grand Total		6,310,000

D. Chinghai

Trade in Chinghai is centered around Hsi-ning, the provincial capital. Aside from the two routes which connect Hsi-ning and Lanchou, there is another route leading to Tibet and still another to Sinkiang. The main exports were fur, hide, grain, salt, lumber and medical herbs, among which fur and hide, the staples, are mostly shipped to Tientsin for re-export. The main imports are cotton piece goods and silk. Trade statistics are not available. It is also known that there was considerable trade between Chinghai and India, but details are lacking.

E. Sinkiang

Trade in Sinkiang is a little more complicated, because Sinkiang trades not only with agricultural China, but also with Soviet Russia, India and Afghanistan. So far as the trade with agricultural China is concerned, there are three main trade routes. One runs from Urumchi to Tientsin via Kobdo, Urga and Pao-t'ou, generally known as the Outer Mongolia Great Grass Route. Another runs from Urumchi to Tientsin via Qomul (Hami), Darkhan League, Kuei-sui and Pao-t'ou, generally known as the Inner Mongolia Lesser Grass Route. And still another is the historical Great Northwest Highway which leads to Sian via Qomul (Hami) and Lanchou. The Outer Mongolian route had been out of use since the independence of Outer Mongolia. The Inner Mongolia route was priginally a caravan route. But since 1933, the section between Urumchi and Kuei-sui has been open to motor traffic under the name of Sinkiang-Suiyuan highway.

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

content at the present day to put up with the prehistoric means of communication which are still the only ones in existence throughout Shensi and Kansu. This absence of proper means of communication is an absolute hindrance to any real progress, and the speedy construction of more railways in China would seem to be of more importance than all the other contemplated reforms thrown together. Road building seems to be past praying for in these days of railways, but it is not at all certain that a portion of the enormous sums spent in railway construction would not be more profitably expended in the construction of a few trunk roads; the latter could at any rate be built by the Chinese themselves without incurring loans.

From Weinan to Lint'ung is a distance of 80 li, the latter being another important wheat and cotton-growing centre. It is not necessary to make these district cities the stages, as villages with inns are numerous all the way from T'ungkuan, and travellers can regulate the length of their marches according to their choice. The following is a list of the usual stopping places, which lie at intervals of 20 to 30 li one from another; T'ungkuan, Huayin Miao, Fushui Chen, Liutzu, Hua Chou, Ch'ihshui Chen, Weinan, Linkou, Lint'ung.

Lint'ung lies close under an outlying spur of the Ch'inling Shan, whence issues a hot medicinal spring. Over these springs is built an elaborate rest-house to accommodate the guests who come to take the baths, and it is thus a popular resort for the rank and fashion of Hsian. The establishment, or rather previous constructions, date from the time when Hsian was the capital of China, Lint'ung having been a pleasure resort for the Emperors of those days. The Emperor who designed the Great Wall and destroyed the scholars and their books (about B.C. 200), and whose name is therefore supposed to be execrated by literary men, is buried in the neighbourhood. We revelled in the baths, after having been smothered in dust for ten days.

On the following day a long half stage of 50 li brings one to Hsian Fu, now officially known by its old name of Ch'angan Hsien, the capital of the province. It is an immense city, of the Tartar type, comparable only to Peking before the introduction of modern improvements. In size

and importance, political, commercial, and military, it entirely overshadows all the other towns in Shensi and Kansu, and is altogether the metropolis of the great agricultural North West, the land of loess and wheat.

Hsian is a backward place as regards the improvements of modern civilization, no macadamized roads, no electric light, no foreign carriages. Amongst other conveniences waterworks are required, as the water from most of the wells in the city is very brackish; good water could easily be brought from one of the many clear streams which emerge from the Ch'inling Shan a few miles to the south. There should be a boom in big contracts in Hsian when the railway gets there, or before.

We were too busy during our short stay to do much sight-seeing, but felt constrained to visit the Pei Lin ("forest of stone tablets") where the Nestorian Tablet now is. A large rubbing industry has sprung up (or perhaps it has existed for centuries or thousands of years) and almost every other stone has its attendant Chinese busy taking an impression. One would imagine that the more important inscriptions would get seriously damaged by this incessant rubbing, and indeed such appears to be the case. Outside is a shop where these myriad rubbings are busily sold, and their export from Shensi is quite a trade. The Chinese are, of course, great amateurs of ancient curios, inscriptions, and other historical records, and Hsian and Central Shensi is for them a happy hunting ground in this respect. It seems curious that this region has not received more attention from European scholars interested in these matters, since it contains the beginnings of everything as far as Chinese history is concerned, and the latter is hard to beat for an early start; sand-buried cities in the heart of the deserts of Central Asia are ransacked at great difficulty and expense by scholars of various nations, but it does not appear that much if any excavating has been done on the Hsian plain, which contained the capital of ancient dynasties which flourished three to four thousand years ago. The Nestorian Tablet, which dates back eleven to twelve hundred years, records the propagation of Christianity in China by Nestorian missionaries from Western Asia in those days. It is curious that this faith should have so completely disappeared, while Maho-

medanism, an equally alien religion, has become so firmly rooted in many parts of the country. The Chinese show more interest in the inscriptions relating to their classic works in the Pei Lin than in the famous Nestorian Tablet, and indeed the latter was only moved into that select enclosure recently because of an alleged attempt by a foreigner to remove the original stone under the pretext of having a copy made for a foreign museum.

We stayed in Hsian twice in the course of our journeys, an interval of two years elapsing between the two visits. On the first occasion, which was during Yuan Shih-k'ai's regime as President-Dictator, the city and province were in the hands of one of the Northern Generals supported by a Northern army; two years later the situation had completely changed, the province was enjoying a kind of home rule under native officials of its own choice, and was practically independent of Peking. In the interval Yuan Shih-k'ai had been dragged under in the collapse of his monarchical scheme, and with him had vanished, it would seem, all hope of a stable government in China. Many provincial capitals have had a rough time during the years which have elapsed since the Revolution of 1911, but few or none have suffered more than Hsian Fu. The history of events in Shensi during these years is interesting and not uninstructive for those concerned with the future of the Republic, and is here briefly related.

The Revolution of 1911 took a particularly violent form in Shensi, largely owing to the fact that it was engineered by the local members of the notorious secret society known as the Ko Lao Hui, and was ushered in by an outbreak at Hsian, in which the Manchu inhabitants of the Manchu city were massacred, and some missionaries murdered by the uncontrollable mob. For some months afterwards a state of chaos reigned everywhere, and to make matters worse the province was for a considerable time threatened by an invasion of Mahomedan troops from Kansu, under Sheng Yün, the ex-Viceroy of the North West, and Ma An-liang, the leader of the Kansu moslems, both of whom refused to acknowledge the Republic even after the abdication of the Emperor. These Mahomedan troops did in fact cross the border and sacked a few cities in Shensi, but were

province soon became critical. The crisis was eventually precipitated by the action of a young military officer of high rank, a native of the province, who revolted with the troops under his command, and having collected a large force from amongst the brigands and secret society men in hiding in the north of the province, marched on Hsian Fu as a supporter of the Republic. The Governor, who was not as staunch an individual as many of Yuan Shih-k'ai's other Northern Generals, promptly threw up the sponge and surrendered the city to save his own life. Shortly afterwards Yuan Shih-k'ai died, and Shensi thus reverted to the state of independent home rule existing after the Revolution of 1911, under the leadership of the young General who had successfully headed the rebellion.

Shensi is in rather a peculiar position. Though geographically it is one of the Northern provinces like Chihli, Shantung, Honan, and Anhui, from which the Northern Military Party draw their power and their troops, it has yet of recent years always exhibited a strong revolutionary and republican spirit. The proximity of Szechuan, a Southern province, may have something to do with this. But the main reason is probably not so much a feeling of sympathy with the Southern republicans, as the independent and somewhat turbulent nature of the population, strongly infected with Ko Lao Hui influence, which renders them impatient of Central Government control and desirous of managing their own affairs[1]. This desire for provincial independence is natural and laudable, being perhaps a preliminary step towards a spirit of true patriotism in which the Chinese are as a people, with a few exceptions, so extraordinarily lacking. But the actual results of provincial home rule are altogether bad, and consist in increased brigandage, a corrupt and inefficient administration, an uncontrolled soldiery preying on the people, and other evils too numerous to mention. The problem now facing the country is how to unite a truly republican form of government with a strong central administration.

[1] Shensi has since nominally joined the North, remaining, however, to all intents and purposes independent.

pictures on the walls, in practically every district city throughout China (of which there are nearly 2000) evidences the excellence of the principles governing the administration of the country. In the middle schools English, the official "foreign" language, is taught. Unfortunately in too many cases the local school does little more than represent the principle of education. The Chinese have a well-known saying *Yu Ming Wu Shih*, which means "theory without practice"; this saying holds good of most things in China, especially those connected with the Government of the country.

The magistrate of Shang Chou at the time of our visit was rather a remarkable character, and a "Ta Ko" (lodge-master) in the notorious secret society called the Ko Lao Hui. It is improbable that any foreigner knows much about the secrets, the history, doings, and aims of the Ko Lao Hui, but during and since the Revolution it has been the great power in Western China, particularly in Shensi and Szechuan. Originally anti-dynastic, it worked very much in the dark in the days of the Manchus, and for a magistrate then to have been a member would have been an unheard-of scandal. With the overthrow of the Manchus the Ko Lao Hui came out more into the open. The revolution in the West was largely their work, and the bands of the T'ung Chih Hui who rose in Szechuan against Chao Erh-feng in August 1911, and whose rising brought about the military revolt at Hankow which ultimately swept away the Manchu Dynasty, were Ko Lao Hui partisans under another name. On the coast the revolution was to a large extent a matter of hoisting republican flags, and whole provinces joined the republican cause with their Generals and Governors at their heads. In the West, thanks to the Ko Lao Hui, the revolution was a real rising of the people, led by some of their least desirable representatives, against their rulers, and was accompanied by much more bloodshed, including the terrible massacre of the Manchus at Hsian Fu.

After the fall of the Manchus the Ko Lao Hui reckoned Yuan Shih-k'ai as their chief enemy, and perhaps this was not the least of the latter's many admirable qualities. After his death their power and influence rose almost unchallenged, and at present they are in many parts an absolute curse to

TRADE

I. The Pre-Communist Period

Trade in the Northwest before the Communist conquest may be discussed by provinces.

A. Shensi

438 491 Trade between Shensi and the rest of the country was carried out mainly through the historical Great Northwest Highway, which links this province with Hankow and Tientsin on the one hand, and Kansu and Sinkiang on the other. Since 1937, the National government has undertaken to extend the Lunghai Railway [496] to the Northwest, and before the Communists took over it had reached T'ien-shui, Kansu. In addition, the northern part of [487] this province was closely connected with Shansi through three regional highways, and the southern part was linked with Hankow through the Han River, and with Szechwan through the Szechwan-Shensi bridle pass.

366 635 The commercial centers of this province are as follows: (1) Sian, the provincial capital, which not only commands the trade of the whole province, but also carries considerable transit trade; (2) T'ung-kuan, which is a transportation center between the three provinces of Shensi, Shansi and Honan; (3) An-k'ang, also known as Hsin-an, a commercial center of the Han River drainage area; (4) San-yuan, the commercial center of the so-called North Shensi Plain; and (5) Han-chung, also known as Nan-cheng, a trade center between Shensi and Szechwan.

439 435 *175 According to statistics of 1934, a normal year in pre-war times, the total value of imports and exports of this province, including foreign trade, amounted to 57,168,455 yüan, most of which were carried out through Tientsin and Hankow. The details are shown in the following table:

Table I: The Exports and Imports of Shensi, 1934

Description	Value (yüan)	
A. Exports:		19,087,221
raw cotton	16,250,000	
hemp	200,000	
raw silk	300,000	
wool	160,000	
fur and hide	757,221	
tung oil	900,000	
raw paints and paint oil	250,000	
fungs-in-trees	270,000	

B. Imports			38,081,234
textiles	22,209,861		
sundries	6,968,868		
medical herbs and drugs	2,232,542		
apparels	1,704,563

cosmetics	572,751		
paper	527,235		
vehicles and transportation equipment	76,235		
Grand Total			57,168,455

Source: Shina Shōbetsū Zenshi, 1943 ed., Vol. 6, pp. 805-15.

B. Kansu

Aside from the historical Great Northwest Highway, trade between Kansu and the rest of the country was carried out through the following routes: (1) the Yellow River, including its tributary, the Huang River or Hsi-ning-Ho, which is navigable between Hsi-ning and Pao-t'ou, the latter being the terminal of the Peking-Pao-t'ou Railway; (2) the caravan route between Hsi-ning and Ninghsia via Lanchou; and (3) the highway between Kansu and Szechwan.

The commercial cities of this province are as follows: (1) Lanchou (also known as Kao-lan), the provincial capital of Kansu and the commercial center of not only Kansu, but also Chinghai and Ninghsia; (2) Ping-liang, the commercial center of east Kansu; (3) T'ien-shui, the commercial center of south Kansu; (4) Lin-hsia, the commercial center of the area to the west of the T'ao River; and (5) Chang-yeh, the commercial center of the Ho-hsi Corridor.

According to 1933 statistics, the total value of imports and exports of Kansu amounted to 7,933,554 yüan, about one eighth of that of Shensi. The details are shown on the following table:

Table II: The Exports and Imports of Kansu, 1933

Description	Value (yüan)	
A. Exports:		1,536,832
fur and hide	714,105	
medical herbs	605,319	
tobacco	217,408	

the more respectable inhabitants. At the time of writing nearly all the soldiers and brigands in Shensi, as well as many civil and military officials, and in certain districts a high proportion of the entire adult male population, are members, and the administration of the province is largely in their hands. There may be some good in the Ko Lao Hui, but the writer, who has seen their pernicious influence at work throughout Szechuan, Shensi, and parts of Kansu, has never heard of it. To the ordinary observer the society appears to exist for the purpose of practising blackmail and terrorism, and securing mutual protection in the commission of every variety of crime. Amongst its members are special bands expert in gambling, kidnapping, piracy, highway robbery, and similar pursuits. Others join merely in order to secure immunity from the depredations of more active members. Offences against the rules of the society[1] are drastically dealt with by punishments such as death, mutilation, gouging out of eyes, etc., carried into effect by members specially told off for that purpose; while should these avenging angels fall by some mischance into the grips of the law, the society will see to it that they do not come to any harm and are well supplied with wine and opium while in prison. The Ko Lao Hui has many aliases, Chiang Hu Hui, Hu Kuo Chun, etc., and they are brigands one day, patriot rebels the next, regular soldiers the next, and so on. One of the first reforms to be carried into effect by a strong administration in Western China is to extirpate them root and branch, as the Manchus were always endeavouring to do.

The next stage in our journey southwards to the Han valley was the district city of Shanyang, distant 140 li, two days' march. The trail leaves the valley of the Tan Chiang and strikes into the mountains to the south. For half a day we marched up a winding gorge, and then crossing three sandstone ridges one after the other, the highest about 4000 feet, descended to the market village of Heishan Chieh, 70 li from Shang Chou, where we halted for the night. The mountains in this neighbourhood are most intricate, with streams flowing in all directions, but the general feature seems to be a series of ridges trending from N.W. to S.E. The scenery is very agreeable, red sandy

1 [Ko Lao Hui secret society--ANALYST]

but the products are wretched. In any case all these enterprises suffer from the blight of Chinese official management. Lanchou is also at a great disadvantage in this respect owing to the immense difficulties involved in transporting foreign machinery and all kinds of foreign goods across the many hundreds of miles of intervening mountains from the coast. The foreign resident can import a case of beer, drink the contents, and then sell the bottles for more than the original cost of the beer; but this does not represent a new method of getting rich quick, as the cost of transport is likely to be greatly in excess of the value of either the beer or the bottles. There is, however, one really flourishing native industry in Lanchou, independent of foreign machinery, and that is the cultivation and manufacture of water pipe tobacco, which is exported to all parts of China.

The time of our visit to Lanchou coincided with the period of Yuan Shih-k'ai's power, and the Governor was one of the latter's Northern Generals. He was an excellent representative of the type of Northern soldier, and was universally acknowledged to be one of the best rulers Kansu has ever enjoyed. Owing to the geographical isolation of the province and the conservative nature of its Mahomedan population, the rebellion of 1916 had but little effect locally, and the Governor maintained his position after the fall and death of Yuan Shih-k'ai; and had we again visited Lanchou two years later we should have found him still ruling only under a different title. After the Revolution the Governors of provinces were styled Tutu[1]; Yuan Shih-k'ai abolished this name with its republican associations, and revived the old title of Chiangchün[2]; after the compromise which followed the rebellion and Yuan Shih-k'ai's death, the title of Governor was also compromised in true Chinese style into Tuchün[3]. The Governor was a native of Hofei Hsien in Anhui, and consequently not a few civil and military officials throughout the province at the time of our visit wrote Hofei on their cards. It is extraordinary what a number of prominent Chinese in recent years have been natives of this obscure little district in Anhui, ever since

[3] Literally "Army Manager," i.e. Military Governor.

missionaries holding these strange beliefs should be the only vehicle for the propagation of Christianity amongst the Kokonor tribesmen does not seem to be fair either to Christianity or to the tribesmen.

Having outlined the history of recent events in Shensi since the Revolution in a preceding chapter, with the Ko Lao Hui in the leading rôle, it may be of interest to recount the history of the same period in Kansu, assigning the principal part to the Mahomedans.

Kansu only played a small part in the Revolution of 1911, and, as was to be expected in so backward and isolated a province, there was little sympathy with the republican cause. The troops in the province at that time consisted still of the old style *Hsün Fang Tui* who were in the course of being modernised into the new regular army known as *Lu Chün*, and of Mahomedan soldiers peculiar to the province called *Hsi Chün*. After the Revolution the *Hsün Fang Tui* and the *Lu Chün* melted away together with the provincial government, and the attitude of the province towards things in general was governed by the action of the Mahomedan leaders and the Mahomedan troops, who, true to their recent traditions, remained loyal to the Manchu throne. Ma An-liang, the famous leader of the Kansu Mahomedans, who thus found himself at the head of the province, together with Sheng Yün, ex-Viceroy of the North West and one of the Manchu die-hards, despatched Moslem troops across the border into Shensi to fight the revolutionary forces of the Ko Lao Hui, but were eventually induced by the wise statesmanship of Yuan Shih-k'ai to withdraw them and accept the republic in name. Had Yuan Shih-k'ai not been at the head of affairs at that time, and had the Manchus been able to rally themselves to the Mahomedans of the North West, the settlement of 1912 might have been much delayed.

The result of the Revolution was therefore to give the Mahomedans what they had failed to obtain by rebellion in the past, namely complete autonomy and control of the province under General Ma An-liang, who moved into Lanchou from his residence near Hochou. There was a republican Tutu at the same time, but he seems to have been a mere figure-head. General Ma's management of the

635 563

affairs of the province during those critical times appears to have been admirable, and Kansu was spared many of the troubles which were afflicting the rest of China during that period. Early in 1914, however, Yuan Shih-k'ai, who was then engaged in centralising his power by replacing the republican Tutus by his own nominees, sent one of his Northern Generals to Lanchou as Governor, accompanied by a bodyguard of a couple of thousand good Northern soldiers. To avoid friction the latter travelled up to Kansu as Commissioner for the Kokonor, his appointment as Governor only being announced by telegraph when he was within a few days of the capital. For some months there was a period of great tension between the Mahomedans and the new Governor, but the latter was a true Northern soldier, strong and reliable, and the Mahomedans, under wise leadership, eventually accepted the situation, and General Ma retired again to Hochou.

669 563

In the summer of 1914 the southern portion of the province suffered greatly from the incursion made by the so-called White Wolf rebels, who, after ravaging parts of Anhui, Honan and Shensi, made a sudden raid into Kansu by the Ch'inchou road, being attracted probably by the stocks of opium in those parts. A year after their passage we could trace their route by ruined towns and villages and burnt out yamens. After looting the rich cities of Ch'inchou and Fuchiang and other towns in that neighbourhood, they struck west through the mountains to Minchou and T'aochou on the Kokonor border. At Old T'aochou they encountered the Mahomedans for the first time and met with a fierce resistance from the Moslem population of that district. This so infuriated the rebels that when, by sheer weight of numbers, they eventually captured the city they massacred the inhabitants and literally razed the town to the ground. At the time of our visit a year later the four walls of the city enclosed a mass of ruins, not a single house being left intact. The destruction of T'aochou proved, however, the turning-point in the career of that terrible horde. So far they had ranged, pillaging, murdering, and burning, right across China practically unchecked. But here they had been severely handled by the Mahomedans, who were not accustomed to take that kind of thing lying

public works set on foot for the unemployed. Suchow was transformed! But still Dr. Kao's imprisonment dragged on.

Finally, on June 1st, the trial of our patience came to an end. A student arrived in our court at dawn, saying that Dr. Kao was under orders to leave that morning for Lanchow, there to stand his trial. In spite of final delays and procrastinations, that same afternoon he left on foot for the eighteen days' tramp to the provincial capital. Here he spent some months, during the greater part of which he was able to live with his own friends. When the trial finally took place, he was declared innocent, and acquitted on all charges.

Many had been the orders and counter-orders, the subterfuge, and the conflicting motives at work, under the shifty régime of Chinese officialdom. On his release General Feng appointed him to the position of Medical Officer in charge of Red Cross work at his own Military Hospital, and his return to the far North-West has been temporarily delayed.

636 DEPENDENCIES--political organization of dependent regions not organized as provinces (e. g., a colony, a protectorate, a dependent territory); governmental personnel (e.g., executive, advisory, administrative, legislative); mode of selection (e. g., appointment, election, hereditary succession); jurisdiction, authority, prerogatives, functions, and activities associated with each position. Information on relations of dependency with colonial powers will be filed in category 648. See also:

Culture contact	170	Administration of dependent ethnic groups	697

Wall: if this is so, the old gate and wall at T'ungmen Kuan, between Labrang and Ho Chou, is probably a portion of the same loop, which must have been constructed to protect the Hsining region against the incursions of Tibetans or Mongols from the Kokonor, and the course and history of which it would be interesting to trace. The road eventually debouches on to the city of Haining, lying in a small cultivated plain of loess formed by the junction of three valleys, the Pei Ch'uan from Taqu, Hsien, the Hsi Ch'uan from Tanko T'ing, and the Nan Ch'uan from T'a-erh Ssu (Kumbum), the combined streams going to make up the Hsining River.

Hsining is one of the chief cities of Kansu, being the centre of a region of fertile corn-growing valleys, producing wheat, barley, and particularly beans. Its commercial importance arises from its position near the Kokonor border, and together with Tanko T'ing, a day's journey further west, it commands the bulk of the valuable Kokonor trade in skins, furs, deer horns, musk, gold, and particularly wool. A state of passive hostility has reigned between China and Tibet since the collapse of Chinese power in Lassa consequent on the revolution, and the Szechuan-Tibetan trade through Tachienlu has suffered greatly thereby; the Hsining and Tanko trade, on the other hand, has continued uninterruptedly throughout these troubles, and has perhaps even increased. As elsewhere on this border this trade is largely in the hands of the Mahomedans. Before the Mahomedan rebellion of 1860–70 the Hsining-Kokonor road to Lassa was the most frequented route between China and Tibet, but was then replaced by the Szechuan road through Tachienlu; now it is coming into its own again. The interior of the city is fairly prosperous in appearance as far as Kansu towns go, but by no means indicative of the commercial and political importance of the place. The east suburb, the former Mahomedan quarter, is still completely in ruins, a relic of the last Mahomedan rebellion in 1895, when the city successfully withstood a siege by the rebels. The walls are particularly formidable and well built.

Hsining, as well as being the seat of a Taoyin and a Mahomedan General, has always been the residence of the high Chinese official controlling the immense territory of

the Kokonor (in Chinese Ch'ing Hai, meaning, like the Mongol name, "Azure Lake"), who used to be known by the Tibetan or Mongol term of "Amban," but who at the time of our visit was styled in the republican manner *Ch'ing Hai Pan Shih Chang Kuan* ("Chief Authority in charge of the Affairs of the Kokonor Territory"). Soon afterwards the post and its occupant, an old Manchu, were abolished by Yuan Shih-k'ai's Government, and the control of the Kokonor territory handed over to the Mahomedan General of Hsining. This control is of the usual vague and shadowy nature, such as has been exercised for so long by the Chinese over her outlying dependencies. The Mongol inhabitants are ruled by their own princes under China's overlordship; the Tibetans wander pretty well at will over the territory, robbing one another, the Mongols, and the Chinese, and generally pay but little respect to their nominal Chinese masters. It is possible that the Mahomedans will now take measures to bring them more under control[1].

We remained some days at Hsining, but unfortunately had no leisure to visit either the Kokonor Lake or the famous monastery of T'a-erh Ssu. In the intervals of official business we were hospitably entertained by the Mahomedan General, the Manchu Amban, the Taoyin, and other officials. The former, like most of the Mahomedan leaders we met, was a bluff, hearty soldier and a delightful companion; he had served under T'ung Fu-hsiang at Peking in 1900.

Tanko and Hsining are the headquarters of the great Kokonor wool trade, which has been going on for twenty years or more and is now the chief industry in this region. This wool is produced on the grass lands of the Kokonor border, and is carried by raft and boat down the Yellow River and by camel caravan across the desert to Tientsin, whence it is exported to America. The trade is largely in the hands of the foreign export firms in Tientsin who, through their compradores, maintain buying agencies at various collecting centres such as Hsining, Tanko, Kuei-te, Hochow, Hsinhua, Tatung, Yungan, and Épo on the

[1] Such measures have since been taken, with the result that the Tibetans and more especially the lamas, have on several occasions risen in arms against the Mahomedans, and the peace of the Kokonor border has been seriously disturbed.

641 CITIZENSHIP--conception of the relationship of the individual to the state; territorial versus genetic affiliation; distinctions between citizens and residents, and between different categories of citizens; duty versus liberty in relation to state; liability to military service); acquisition of citizenship (e. g., naturalization); loss of citizenship (e.g., through serious crime); notions of civic virtues, etc. See also:

The Chinese, fully aware of their old culture and history, continued up to our times to consider Mongols, Turks and Tibetans if not as barbarians, at least as inferior peoples. This attitude of the Chinese caused, perhaps as an understandably psychological reaction, the superiority-complex behaviour of some minorities. In addition, the higher efficiency and diligence of the average Chinese peasant in comparison with the average non-Chinese did not help mutual understanding and esteem.

Constitutionally, for the first time in centuries, the minorities are not only considered by the present Communistic regime as absolutely equal to any other racial or ethnic group but they are provided with organization. The Communists do everything in order to avoid hurting the nationalistic feeling of the minorities. The price the minorities have to pay for a certain degree of local self-determination, independence and self-government is the thorough acceptance of the party line with all its consequences, above all, collectivisation, which certainly means an incredible change of the traditional economic pattern, because eight ninths of the total population are peasants and only the remaining one ninth are pastoral nomads, whose livestock - collectivisation is yet to come.

Since the overwhelming majority of the population of the Northwest consists of Chinese, the attitude toward the state in general is positive. Natural recognition of the government lies in the traditional line of Chinese behavior. The deep-rooted respect for "magistracy" and officialdom implies this basic recognition.

The relationship between Chinese Communist rulers and ruled Chinese (whether Communist or not) might be described as less frictional than that between the non-Chinese minorities and the Chinese Communist rulers, that is, a certain tension and uneasiness between the Uighur Autonomous Region and the government has occurred several times during the last five years, and also between the Tibetans of Chinghai and the Communist authorities, and the recent uprisings of Tibetans (July 1956) seem to be of major significance.

Generally speaking, the average Chinese in the Northwest has neither a sense of common destiny or any sense of mission. The average Chinese peasant's life is concerned with one main and urgent problem; livelihood. Quite different is the situation among the intelligentsia, who are culture-conscious to such a degree that it often results in a feeling of superiority over other peoples. Among these intellectuals there is a strong feeling and conviction that China has a grand mission in Asia - cultural and political leadership.

at the counter-revolutionaries and not to coerce the people to become converts. In this article, Ma Chien skillfully diverted the attention of the people from Islam to the United States as the enemy of the nation, saying that it was American imperialism, not Islam, which aimed at the conquest of Asia and the enslavement of the Asians. This line was immediately adopted. On May 16, 1951, the Jen-min jih-pao carried an article entitled, "The American Imperialists are the Deadly Enemies of the Moslems of the World." On April 16, 1951, another article appeared in the Jen-min jih-pao, signed by forty-nine prominent Moslem leaders in Peking, entitled "Moslem Brethren of the World, Rise up to Halt the Crimes of the American Imperialists." The cry was re-echoed by Moslem leaders in the Northwest. Ma Liang-chih, imam of the Chinese Moslems in Sinkiang, issued a proclamation under the title "Moslem Believers, Take Positive Action and Struggle to Crush the Germ Warfare of the United States." (Sinkiang jih-pao, March 13, 1952.)

Thus, by joining the Resist United States and Aid Korea Movement, which was raging at a frenzied pitch in 1950–52, the Moslem leaders in China were able to deflect attacks on Islam launched by some of the Communist publicists. But with the conclusion of hostilities in Korea, the Chinese Communists began to re-evaluate and to revise their policy toward the Moslems in the Northwest. Moreover, by 1954, when Communist China had gained ascendency in Chinese Turkestan and political domination over the Moslem population in that region, there was less need to pacify them by promises. The year 1954 also marked the end of the period of New Democracy, which called for a United Front of all the peoples, and the commencement of socialism, in which the CCP would emerge paramount.

The change of Communist policy toward the Moslem peoples of the Northwest as in other parts of China is seen in the official documents of the Chinese Communists. In contrast to the Common Program of the CPPCC, the blue print for the period of New Democracy, in which, in Article 51, the national minorities were promised freedom to develop their languages and to preserve or reform their cultures and religions, the Constitution of the People's Republic of China (adopted in September, 1954,) pointedly omits the freedom of religion for the national minorities. Article 3, which discusses the rights of the national minorities, states that "all the nationalities have freedom to use and foster the growth of their spoken and written languages and to preserve or reform their own customs and ways." Only in Article 88 was there the provision that the "citizens of the People's Republic of China enjoy freedom of religious belief," and, according to Mao Tse-tung's definition (in his People's

than the Mahomedan leaders of Kansu. But, unlike some of the Manchu irreconcilables, General Ma Fu-hsiang moves with the times, and was later on one of the staunchest supporters of Yuan Shih-k'ai and the Peking Government. He is looked upon in some quarters as a likely successor to General Ma An-liang as leader of the Kansu Mahomedans, a position which it is generally agreed he is well qualified to fill.

Ninghsia was one of the few places in Kansu which had a rough time during the Revolution of 1911 owing to the city being seized by the Ko Lao Hui, and matters seem to have been very bad until the arrival of Mahomedan troops under one of Ma An-liang's Generals, when many Ko Lao Hui heads rolled in the dust and order was speedily restored. It is only in the extreme north and south of Kansu, for instance at Ninghsia and Chieh Chou (Kai Chou), where there is a considerable extra-provincial element in the population, that the Ko Lao Hui are formidable, owing apparently to the counter-influence of the Mahomedans, who will never have any dealings with secret societies.

Immediately west of the Ninghsia plains rises the barrier range usually known to foreigners as the Alashan, and three days' distant in these mountains lies Tingyuan Ying, or Wangyeh Fu, the residence of the Mongol Prince of the State of Alashan. It was to this place that Prince Tuan, the Boxer leader and father of the then Heir Apparent, retired after the events of 1900, though he was supposed to have been exiled to Turkestan. After the Mahomedans had occupied Ninghsia during the Revolution of 1911, he came down and lived there for some time awaiting the issue, but on the abdication of the Manchus he appears to have retired west into Turkestan, together with the famous old Manchu die-hard, Sheng Yün.

At Ninghsia we received what then seemed the incredible news of Yuan Shih-k'ai's intention to make himself Emperor. Kansu and its Mahomedans probably welcomed the event, since they were never particularly enthusiastic about the Republic, but it was a terrible blow to the young men of the student class who believed in the *Min Kuo*[1]. I have heard Yuan Shih-k'ai's opponents allege that his ambition was always fixed on the Throne, and that in the days when

[1] "People's Country," i.e. Republic.

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

being refused all opportunity for clearing themselves, although the whole populace declared them to be innocent. Dr. Kao was actually with us at distant Suchow when the incident occurred. Subsequently, however, he made an open enemy of the Kanchow Official by peremptorily refusing to consider the case on a suggested compromise basis, *i.e.* that as a life had been sacrificed on either side, and honour was satisfied, it only remained for the parties concerned to seal their agreement by feasting!

The circle of those bound together to wreak vengeance on the Christians and their leader was growing, and they were now joined by an influential man of whom Dr. Kao had made an enemy by refusing his donation of several hundred dollars towards the hospital work, a gift which had been offered on the tacit understanding that having accepted it the doctor would cease his open denunciation of the opium traffic.

During the winter months of 1925 the Provinces of the North-West Frontier were placed under the jurisdiction of Marshal Feng, and the city walls were covered with excellent proclamations, forbidding soldiers to oppress the people, and promising adequate protection to farmers bringing in their produce, it being the custom of the local battalions to ill-treat persons and seize goods at their pleasure. These proclamations were received with acclamation by the people, but were obviously *not* liked by the officials or the soldiers.

One day in January 1926, Dr. Kao, walking along the street, met a crowd running towards a back alley, where on following them, he found five men beating a young villager so severely as to endanger his life. Several of the assailants were soldiers, and one, armed with a hammer, was proceeding to break the youth's skull when, without a moment's hesitation, the Doctor

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

flung himself on the victim so as to receive the blows on his own body. This so startled the assailants that they desisted; he then took possession of a young soldier's cap, for purposes of identification, saying, 'This is a matter for judicial investigation. If this boy has done anything wrong, take him to the Mandarin.' This the soldiers refused to consider, and followed the Doctor to the Mission House, finally begging him to drop the matter, and not to report them to their officers. To this he consented. A few days later our own carter was sent out to a village near by to bring in grain for the mules. A band of soldiers, acting in accordance with their irregular custom, commandeered the cart and animals for their own use. The carter questioned their right, whereupon he was beaten, and filth of the worst description was rubbed into the wound. The soldiers then moved away, leaving him semi-conscious by the roadside, to which place our small scouts soon fetched some of the students, as well as Dr. Kao, who indignantly called attention to General Feng's placard above his head. This happened close to the residence of the Minister of Defence, who, hearing what had occurred, came out himself and saw the man still lying wounded near his own gate. He ordered the offender to be brought before him, whereupon one of his own soldiers was produced, and by his order was stripped of his uniform and handed over to the civil authorities for punishment. The Commanding Officer was likewise degraded, and the Minister himself called at the Mission Compound to apologise for the insult offered, expressing himself as exceedingly angry that we, who were his friends, should have been exposed to a public insult. Meanwhile, the carter developed a severe form of blood-poisoning, and his life was despaired of; and in the civil prison lay the soldier, whose life was to be taken

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

the same hour as the carter died—a life for a life, while the local garrison was most indignant at the suggestion that one of their number should be executed on such a trivial charge as the death of a common carter, and swore vengeance. However, after forty-eight hours of extreme anxiety, our relief knew no bounds when a slight improvement, following on a severe operation, showed itself in the patient, and he eventually recovered, the two lives being saved, as the soldier was released.

The New Year festivities were at this juncture in full swing, and the friendliness on all sides was such that we greatly hoped the ill-feeling produced by this incident had passed over. Our guest-rooms were daily crowded with visitors, and the tent would barely hold the congregation which gathered each evening.

It came like a bolt from the blue when one day Dr. Kao walked into our sitting-room with the startling announcement:

'The compound is surrounded by men sent to arrest me!'

'To arrest you!' we exclaimed. 'Impossible! On what plea?'

'I am accused,' he quietly said, 'of leading an armed mob to break open the city gaol in order to release a certain Moslem prisoner. The man, as we all know, has been living in his own home for months, nor have I been inside their prison. The accusation is futile, but the power of the accusers is tremendous; and chief among them is the Governor of the prison himself, *the master of the little slave whose foot I amputated.*" Then, showing a visiting-card, he added: 'This card has just reached me from the Judge, who is a patient of mine, and who asks for a visit from me. I know he never sent it, and it is but a trap to get me quietly into the Yamen and arrest me there, for they fear a hubbub among the

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

people. I expect you agree with me; I had better go; and so I just came in to say good-bye. Our life and death are in God's hands, as also the reputation of His Church. He will vindicate His Name.'

Commending each other to the care of God we parted, and he proceeded in company with Mr. Chang to the Yamen. As the two men left the house and walked down the streets, knots of Yamen runners, who had been placed at various points from which they watched the doors of the compound, closed in behind them, so that, as they reached the Yamen gate, they were completely surrounded by soldiers. As they entered the courtyard, the Civil Magistrate appeared, who shouted angrily: 'Seize that fellow Kao!' Immediately a dozen hands took hold of him, and thrust him into the Black Hole of the inner prison, reserved only for condemned criminals.

CHAPTER XXVII

THE STORM

DR. KAO's arrest took place on February 17th, 1926, and it was June 1st of the same year before he left Suchow for Lanchow, to be present at the enquiry into his case. For forty-two days he was incarcerated in the Black Hole, which is an inner apartment of the prison, without any window; it contains, however, a small aperture in the roof to admit a little air and light. The cell was so unspeakably filthy that the Doctor's first request was for some quicklime to scatter on the floor and under the boards of the *kang*, on account of the numerous rats, and other even worse vermin. The only door was the one by which the gaoler entered,

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

One or two there were who vowed to know no rest until this system of bribery and corruption should be overturned, which made it possible to incarcerate innocent men, sometimes for life, without trial and without appeal.

Kansu was at this time in a political ferment. Some months previously General Feng's troops had assumed authority in Lanchow, and were gradually making their power felt throughout the province. His appointment of his own men to positions of importance caused the greatest excitement and apprehension among the local authorities, and the city walls were posted with the announcement that anyone spreading reports on political or military matters would be shot.

The first we saw of Marshal Feng's officers was one Sunday morning at the early Communion Service, when two finely-grown, well-set-up soldiers, in spotless uniform, walked in, taking their place among the little group of believers, thus openly associating themselves with Christianity. They only stayed a few days, however, but were soon followed by recruiting officers, and lecturers, who addressed themselves to the populace and preached equality and the rights of the proletariat, and when the city walls were covered with anti-British posters. It was all very chaotic. But the recruiting fell off, because the people said, 'Under Feng you *must* fight, so what's the use of his good pay if you die?' Then the posters quietly disappeared, but the authorities left ours up intact—one did not know what to expect! At last an officer appeared, sent by Feng, under whose superintendence the city was entirely transformed in only a few weeks. The main streets were widened and levelled; a market-place was erected where the peasants might sell their goods unmolested; industrial institutions were opened for the poor children, and other

tion comes to an end, and the fertile plain gives way to a sandy waste. Eventually, after some twenty-seven to thirty hours of actual drifting down stream from Chungwei, exclusive of halts, we reached the walled fort of Hung Ch'eng, which is, so to speak, the port of Ninghsia, lying on the right bank at the point where the Great Wall and the main trail from T'aiyuan *via* Suitê to Ninghsia strike the Yellow River. Behind it the land rises in sandy uninhabited downs, the beginning of the Ordos desert. The river is here about three-quarters of a mile wide and is crossed by a ferry. Ninghsia lies 40 li inland on the opposite side.

As our ponies had not yet turned up on their overland journey from Chungwei we found ourselves stranded on the river bank opposite Hung Ch'eng, until the Ninghsia authorities, learning of our arrival, sent some animals down to meet us. The trail to Ninghsia leads across a strip of waste land five li in extent stretching along the river, and then runs for the rest of the way through irrigated fields, mostly under rice, traversing several large irrigation channels. There is probably more rice (though of an inferior kind) grown on the Yellow River plains between Ninghsia and Chungwei than anywhere else in China north of the Ch'inling Shan; but also this was the only region in Kansu where we were troubled by mosquitoes, the elevation being under 4000 feet. We spent a few days in Ninghsia, being hospitably entertained by the Mahomedan General and other officials. It is a large town, and a political and commercial centre of some importance, but the interior is very dilapidated and poor-looking. It is the centre of trade with the Mongols of the Ordos and the Alashan (the latter really the name of a Mongol state rather than a mountain range), chiefly in wool and sheep and goat skins; a particularly fine lamb-skin, called *t'anyang p'i* is a noted local product, as well as felts and carpets. An old Ninghsia rug is of considerable value anywhere. The local Mahomedan General, Ma Fu-hsiang, who is also a sort of Military Governor of North-Eastern Kansu, is one of the leading Mahomedans of the Province, and represents a fine soldierly type of Chinese Moslem. He served under T'ung Fu-hsiang in Peking in 1900 and commanded the Dowager Empress' escort on the retreat to Hsian. The Manchus had no more loyal servants

795 Democratic Dictatorship, 1949), the term "citizen" is restricted
• 641 to certain select classes of people, not all the people.
* 668 Moreover, as the Communist officials have frankly stated,
179 toleration would be granted to only religious faiths which (1)
795 have been purified of foreign influences and "feudal superstitions," (2) contribute toward the increase of production, and
798 (3) do not conflict with the teachings of Marx, Lenin and Mao
* 668 Tse-tung. In other words, the Chinese Communists sanction
179 only religions that have been tamed, domesticated, and cleansed of political coloration.

In the implementation of this policy of the Central People's Government, Burkhan, governor of Sinkiang, announced in February, 1955, that only "legal religious activities would be permitted by the people's government," because, he said, "individual counter-revolutionary elements have infiltrated into Islam and, under the cloak of religion, are carrying on counter-revolutionary activities." (Sinkiang jih-pao, February 25, 1955.)

The stiffening of Chinese Communist policy toward the adherents of Islam represented, actually, no radical change but rather the shedding of the pretense of benevolence toward the nationality minorities whose attachment to their religion was stronger than their allegiance to the state. It represented, too, a recognition by the Chinese Communists of the fundamental differences between Islam and Communism and of the impossibility of rationalizing these differences. Islam, with its strong social principles for the regulation of state and homelife, conflicts with the totalitarianism of Communism. As Moslem
795 leaders of Asian countries have pointed out, Communism advo-
* 668 cates the use of force against those who would not readily
179 accede to it; Islam teaches men to bring others to follow the way of God by peaceful means. Communism does not respect the sanctity of human life, but teaches violence and favors the organization of society based upon atheism and anti-religion; Islam provides for individual rights and freedom, and encourages humanitarian services, compassionate feeling toward all living beings, apart from devotion to God.

795 Besides being a religion, Islam in Chinese Turkestan has
182 also been a strong political force welding the multi-racial groups together in their struggle for self-rule and their resis-
[669] tance to oppression. The insurrections of the Moslems against the Chinese in the beginning of the nineteenth century have been led by religious leaders, the Khojas; the widespread uprisings of the Moslems in the 1860's were led by Ma Hua-lung, the leader of the New Sect, in Kansu, and by Yakub Beg, who bore the title of Commander of the Faithful, in Kashgaria.

000 The demands of the natives of Sinkiang for independence were

C
641 in the Constitution of the People's Republic of China. There are
668 many followers of religions in China. It would be unwise, the
771 spokesman argued, to offend them all. He repeatedly emphasized,
829 however, that the world outlook of the Marxists is in every way contradictory to that of religious believers. The solution is, "the religious believers must abide by the Constitution and the law. The policy of freedom of worship must not be allowed to be used as a pretext for carrying out counter-revolutionary activities,... We must publicize among the masses of the Youth the materialistic world outlook... The youths should thus be given an ideological founcation... to make them into...atheists and the heroic fighters of the Socialist construction undertaking." (Ibid., p. 28).

C
641 The Communists believe that by turning the young people
668 against religion, all religion will eventually be eliminated when
771 the present believers die. However, the Communists will tolerate or even participate in religious activities for reasons of expediency.

N
• 641 In Northwest China where the influence of Islam and Lama-
* 668 ism is great, the Communists have gone all out to woo the Mos-
771 lems and the lamas. For instance, when the Communist army
795 marched into Ninghsia and Kansu, the commander of their First Field Army, Pleng Te-huai, issued a special order to the whole field army to honor the Moslem religious habits. Not only were the Mosques not to be damaged, but the order even demanded that every soldier wash his hands before he drew water from a well. In numerous cases, the Communists spent much money to repair the mosques and the lama temples. In the Soviet China stage the Communists had disqualified every monk as a citizen. (see above).

N
641 Obviously, the general civil rights promise in the Communist
642 Constitution are restricted. Mao Tes-tung's statements in his
* 668 "On People's Democratic Dictatorship" leave no doubt about this
C point.
641
642
668

E. Practices

N Some instances of infractions of these rights may serve as
* 668 examples. In 1951 some faculty members of the Provincial First
423 Middle School at Sian, Shensi, grumbled in private talks about the
578 "land reform." They said, "In the country, if you have two bowls
803 of rice to eat, you will not have peace." Because of this, Vice-Commissioner Lu Ch'in-liang of the Bureau of Culture and Education of Shensi Province wrote a special article and published it in the local newspaper. He severely criticized the tolerance of the administrators and accused the school of being a hiding place for counter-revolutionary ideas and opinions. Special groups were organized by the Northwest People's Supervisory Committee and the Northwest Department of Education to investigate the school. A special criticism was published in the nation-wide Party magazine, Hsüeh-hsi. As usual, this would indicate that a serious purge took place.

S

Chinese-owned companies. Although Soviet and Eastern European experts were retained as salaried technicians, the move was made to appear that Soviet Russia was withdrawing from Sinkiang in favor of Communist China.

583

In addition to these conditions, there was a whole plethora of other factors which made the Communist authorities reluctant to grant regional autonomy to the people of Sinkiang. However, as they had in repeated pronouncements promised autonomy to the non-Chinese inhabitants of this province, they found that they could not procrastinate any longer, and in the late summer of 1953 they finally agreed to the establishment of the first autonomous people's governments in Sinkiang, but on an experimental basis. The three experimental autonomous governments were: one for the Sibo on the hsiang level, one for the Chinese Moslems on the county level, and one for the Mongols on the district (ch'ü)level. In December, 1953, Saifuddin urged "that a good job must be done to guarantee that the various national autonomies in the province may be established." (Ch'ün-chung jih-pao, January 6, 1954).

The experiments proved successful and by May, 1954, the green light was given for the establishment of autonomous people's governments in Sinkiang for other concentrations of national minorities in the province. There were thirty-three autonomous areas below the level of district in Sinkiang in August (NCNA, August 7, 1954). However, in proportion to its population of non-

Table 5. COMPARISON OF ELECTION PROCEDURES

Chinese Communists in 1937	Chinese Communists in 1953	Soviet Russia in 1936
Universal, direct, equal	Restricted to certain groups; direct at lowest level and indirect at upper levels, unequal	Restricted, indirect, unequal
Secret ballot	Show of hands at lower level, secret ballot at higher levels	Show of hands
All men and women over 18 including landlords and capitalists	All over 18 except landlords, counter-revolutionaries, lunatics, and those deprived of civil rights	Limited to workers, farmers, and petty bourgeoisie.
Voters vote as many times as there are levels, in county and regional elections	System pyramidal. Voters vote only at lowest levels for delegates who in turn elect delegates to higher levels	Pyramidal. Voters vote for delegates to local soviets, who in turn vote for upper soviets
Ballots of citizens in all walks of life counted without discrimination	Different proportions for urban, rural, Chinese, non-Chinese, army and overseas Chinese	Segregation of farmers, workers votes. Disproportionate representation.

The sections on Chinese Communists in 1937 and Soviet Russia in 1936 are based on Chu Yun, Factual Account of a Shensi Trip (Hankow, 1938), pp. 11-12, quoted in Hsu Yung-ying, A Survey of the Shensi-Kansu-Ninghsia Border Region (IPR, 1945), I, p. 43.
The section on Chinese Communists in 1953 is based on the Electoral Law of 1953.

515

175 171 168 166 161

tion of their representatives. In February, the Central People's Government in Peking passed the Election Law which provided for suffrage for adults over 18 years of age with the exclusion of all those whom the Communist authorities had classified as landlords, counter-revolutionaries, and lunatics and those who were deprived of the right to vote or to run for election. The certified voters vote only once, at the lowest or basic levels, and by a show of hands (art. 55). The system is pyramidal. The representatives chosen by the people at the basic election elect their representatives to people's congresses of a higher level, and these in turn elect representatives for peoples of still higher level, and so on up, through the levels of county and district people's congresses to municipal and provincial congresses, and through the level of municipal and provincial congresses to the National People's Congress. Only at high levels was the balloting secret. The candidates running for election were Communist or men approved by the

going to the polls, but in Chinghai where it was reported that 95 per cent of the people went to the polls, the election was only one-fourth completed.

In Sinkiang, the Communist authorities were more cautious. The experimental elections began in May, 1953, in 17 basic election units (hsiang) selected from the ten administrative districts, then in 36 basic election units. In these experimental elections, 80-95 per cent of the electorate turned out. With the successful conclusion of the experiments, the real basic level elections began in September in 665 basic level areas in Sinkiang, followed in December by the second group of 860 basic level area elections. By April, 1954, the basic level election in Sinkiang was concluded, having been held in 2,424 basic units in 83 counties and municipalities. In urban areas, 89 per cent of the voters turned out, while in southern Sinkiang, the turnout by the Uighur population was 95 per cent. The elections during 1953 had been supervised by 1,127 cadres who formed 144 election courts and 98 mobile investigation teams, which uncovered 204 cases of irregularities and nonconformity.

The fruit of the efforts of the election cadres was the election of large numbers of cadres and party members. Sixty-three per cent of the 619 new party members employed in the Sinkiang provincial and Urumchi municipal governments were elected as delegates. In 312 hsiang in Sinkiang, out of the 7,088 of the delegates elected, 5,248 were Communist Party cadres, and the bulk were Chinese. In Ninghsia, only 25 per cent of the 9,700 deputies elected in the basic level elections were Chinese Moslems (Hui).

Moreover, the elections in the Northwest, as in the rest of China, were by no means universal. Vice-premier Teng Hsiao-p'ing, one of the top officials in charge of the nationwide elections, revealed that basic level elections were not held in a quarter of the regions inhabited by national minorities, and the number of national minority people who were not given a chance to vote came to 8,708,169. The reason for defranchising these minority people, he said, was due to the "lack of requisite conditions," which were (1) the native cadres were unsatisfactory and (2) the people failed to appreciate the nationality policy of the government. (NCNA June 19, 1954).

In contrast to the publicity given to the basic level elections in the Northwest, the elections in the higher levels were conducted quietly and, in many cases, the results were not published. However, from scattered information gleaned from the Communist press, the following picture emerges: in Shensi, Kansu, and Sinkiang, the incumbent governors were re-elected. Only in Chinghai, was there a change in the governor. In these four provinces, three of the governors are Chinese. In the three provinces of Shensi, Kansu and Chinghai, about half of the thirteen vice -

under the Ma family in Chinghai Province started with their father, Ma Lin, who devoted his efforts toward the promotion of education within the province. After Ma Lin died, his brother, Ma Ch'i, took over the administration. But when the war with Japan began in 1937, Ma Pu-fang was given the position of governor of Chinghai, and at the same time he shouldered the tasks of leading the Kuomintang and commanding the troops within that province.

Ma Pu-fang was a career army officer. He started as a commanding officer of a batallion, and gradually climbed up to the post of commander of an army. When his uncle, Ma Ch'i, was governor of Chinghai before the Sino-Japanese War, he became a member of the provincial government. When he finally took over the administrative job in Chinghai in 1937, he was one of the youngest governors in China.

For more than thirteen years, 1937-1950, he held the position of governorship. During his administration, particularly during the war years, he aimed at the following six main tasks: First, he organized the Pao-chia system not only among the Chinese and Moslems, but also among the Mongols and Tibetans in his province. Second, he trained the local militia for the purpose of maintaining local order. Third, he was very strict in carrying out the policy of elimination of opium. Fourth, he conducted the movement of compulsory education aiming at the total elimination of illiteracy within Chinghai. As a result of his policy, in a single year more than a hundred thousand people learned to read. In addition, there were 8 middle normal schools, 131 primary schools and 805 grade schools in that province. The fifth task was to construct highways, and during his administration, more than two thousand kilometers of highways were constructed. The sixth point was afforestation. Every person was compelled to plant five to ten trees a year, and as a result, more than seven million trees had been planted during those war years.

Being a Moslem himself and realizing the complexity of religions in Chinghai, Ma Pu-fang was cautious in his handling of different religious groups. On the whole he worked toward religious harmony, and his policy was one of equal treatment toward all tribes. He chose his personnel regardless of religion or race, on the basis of capacity and personality. Thus he was generally trusted by all religious groups in his province.

When the Communists began their campaign in 1949, they pushed their way to the Northwest. Ma Pu-fang was appointed director of the Administrative Headquarters of the Northwest, succeeding General Chang Chih-chung. Joining forces with Ma Hung-k'uei, he directed the defense of the Northwest. Unfortunately, all his attempts failed and by October, 1949, the

642

642 CONSTITUTION--prevailing system governing the distribution of political power and authority; extent of agreement or disagreement between formal constitutional provisions and actual practice; rights, privileges, and powers assigned or delegated to each organ of government, including the power to alter their distribution; centralization and diffusion of power; constitutional principles (e.g., separation of powers); temporary relaxations or extensions of political authority (e.g., interregnums, war powers); form of the state (e.g., empire, union, federal republic, U.N. trusteeships, colony protectorate); form of rule (e.g., autocratic, oligarchic, aristocratic, theocratic, democratic); type of constitution (e.g., written, unwritten); framing and amending of constitutions; constitutional law; etc. See also:

Family authority	59	Hierarchy of political officials	631
Authority within kin groups	61	Political parties	665
Authority in the community	62	Judicial authority	692
Law	67	Political theory	829

The newest development, found in the Northwest, especially in Sinkiang, is the partial industrialization of those areas which are the sources of coal, oil, gold, iron, alum, quarts, gypsum, nitrates, salt, and as recently reported, uranium.

The non-Chinese peoples of the Northwest are not only outnumbered b ut also outweighed in economic and political respects. For more than two thousand years, the Chinese have been ruling those areas (with short interruptions as far as Sinkiang and Chinghai are concerned), even though they never had more than a few garrisons stationed in frontier areas. Those garrisons made it possible for a thin stratum of Chinese officials to rule the areas on the top level. On the lower level, the indigenous peoples and tribes governed themselves - under the supervision of the Chinese viceroys or governors and their bureaucracy.

The general policy of the Chinese government in Peking was to make use of the existing form of governmental institutions of frontier areas like Sinkiang, Chinghai, and Inner-Mongolia. In Sinkiang (prior to 1884 it was called "Hui-chiang," i.e., Muslimic Dominion), two types of local government had existed: the Muslimic type and the Mongolian type. The Northern and Northeastern part of Sinkiang, where the Mongols were the dominant inhabitants, had the same governmental institutions as Outer and Inner-Mongolia, namely,banners ruled by dzasaks, who were appointees of the Emperor in Peking. The Republic of China tacitly recognized their ranks and interfered very little with their functions. Only Communist China deprived the nomad aristocracy of their titles and rights.

The Muslimic communities were fuled by Bäks with various ranks: the Ak'im Bäk,"local governor"; the Ishkhan Bäk, "assistant governor"; the Shang Bäk, "collector of revenue"; the Qazi, "judge"; the Kukbashi or Mirabu Bäk, "superintendant of agriculture"; Yüzbashi, "hundred-men-leader"; Onbashi, "ten-men-leader"; etc. All the local Bäks were appointed by the emperor or later on by the president of the Republic upon the recommendation of the Imperial or Republican governor, although it must be stated that some governors of Sinkiang, Chin Shu-jen and Sheng Shih-ts'ai, ruled and governed the province without asking Peking for the consent of appointments.

Besides the Chinese civil service there existed Chinese military staffs and detachments, centered in Ili, Urumchi, Kulja, Chuguchak, Kashghar, Sining, Su-chou, Lan-chou, etc. Relay stations provided communication between the government in Peking and the frontier areas. Maintaining the effectiveness of the means of communications was an important duty of Chinese officials. Only since 1930 have some automobile highways been built, and the Communist regime, in cooperation

state as they may prefer." (point 14, Ibid. p. 22.)

Coming to the second state, the Yenan period, the Communists retreated to an almost amiable position. The differences were summarized by a friendly observer as follows: "The basic structural change which distinguishes the Border Region from its predecessor lies in the broadening of the electorate. As contrasted with the Soviet election system which was restricted, indirect and unequal, the present system is characterized as universal, direct and equal, and to insure this change the secret ballot is substituted for the hitherto open ballot hand-raising. This means that whereas under the Soviets franchise was limited to workers, farmers and a section of the 'petty bourgeoisie', the new system extends the right to vote to all men or women over eighteen years of age, including landlords and capitalists, except when a person is insane or his political rights have been specifically suspended by court action. The Soviet election was also pyramidal. This means that a voter under the Soviets voted only for delegates to a local soviet, while delegates to an upper Soviet were chosen by the lower Soviets but not by the voter. The new system allows the voter to vote as many times as there are local, county or regional elections for members to the representative body of each grade of geographical division. The segregation of farmer and worker voters and their disproportionate representation under the Soviets are abolished under the new regime and secret or unsigned ballots of citizens of all walks of life in the same territorial unit are counted together without discrimination." (Ch'u Yun, Factual Account of a Shensi Trip, or Shen-hsing Chi-shih, Hankow, 1938, pp. 11-12 as quoted in Hsü Yung-ying: A Survey of Shensi-Kansu-Ninghsia Border Region, Part I, p. 43.)

Judging by western standards, this was progress toward democracy. But from the Communists' point of view, it was a temporary necessity.

When the Communists conquered the Northwest in 1949, they found themselves in a much more favorable position than during the war. Hence their "common program" of this stage brought back a lot of the characteristics of the old Soviet Constitution. The Communists made the following points very clear:

1) The People's Republic of China is a country led by the Communists. Those who refuse to follow this leadership will be crushed and denied all rights (Articles 1 and 7).
2) The Communists are ready to continue the war to the last, at least until Formosa is occupied (Article 2).
3) The Communists will protect the private property only of qualified people, and at any time they can disqualify anybody (Article 3).
4) China must be tied to the U.S.S.R. now and in the future (Article 11).

With these basic premises, one may understand the real meaning of the "struggle for the independence, democracy, peace, unification and prosperity of China" (Article 1). They also help one to understand the following analysis.

In the constitution of 1954, the same premise presented in the Common Program is restated. Under this general premise, the study of the constitutional system in northwest China can be carried out under four sub-headings, namely, the general civil rights, the economic rights, the political rights, and the rights of the minority groups.

The Communists always make a great effort to promote their programs. Before and after the establishment of their Constitution, they mobilized all people available to study the Constitution. To do this, study groups were organized everywhere. Discussions were insisted upon. Millions of copies of the draft constitution were distributed.

In Northwest China, the Communists' effort to publicize the constitution can be seen in their publications. To reach the minority groups, the Constitution was translated into various languages. It is available in Kazakh, Tibetan, Mongolian and Uighur. So are the organic laws of the National People's Congress, the State Council and the Local People's Congresses and Councils.

III. Practices Regarding General Civil Rights

A. Pledges and Exclusions

According to the Common Program of 1949, "the people of the People's Republic of China shall have freedom of thought, speech, publication, assembly, association, correspondence, person, domicile, change of domicile, religious belief and the freedom of holding processions and demonstrations." (Article 5). This, however, does not mean that all will have these rights. The Communist Party may disqualify anyone. Moreover, since the standard of selection changes according to the ebb and flow of political tides inside the Communist Party, it is hard to guarantee that anybody, including Mao Tse-tung himself, always will enjoy these rights.

In the Constitution of 1954, this fact is even more clear. In Article 19 it is stated: "The People's Republic of China safeguards the people's democratic system, suppresses all treasonable and counter-revolutionary activities and punishes all traitors and counter-revolutionaries.

"The state deprives feudal landlords and bureaucrat-capitalists of political rights for a specific period of time according to law; at the same time it provides them with a way to earn a living, in order to enable them to perform thorough work and become citizens who earn their livelihood by their own labour."

In this article the first part refers to traitors and counter-

The success, however, is not so complete as it is indicated in these reports. While there are minority groups which cooperate with the Communists, others do not. A good example is Hsiang Ch'ien, a Tibetan chief in Chinghai, who fought against the Communists from the beginning of the Communists' rule till he exhausted his supplies. For more than two years, the Communists wooed him to no avail. In 1952, he suffered big losses, and even his family was captured by the Communists. The Communists mobilized numerous local leaders to talk terms with him and finally brought him to surrender. This case was publicized because it had a "happy ending" for the Communists. It nevertheless indicates that not all goes as well in the Northwest as the Communists might like.

D. Minority Languages

Besides these general practices of the Communist minority policy, a special point of interest is the promise in article 3 of the Communist constitution: "All the nationalities have freedom to use and foster the growth of their spoken and written languages." In fact, the Communists even intended to create new written languages for those nationalities who had not had a written language of their own. (A resolution at the 217th meeting of the Government Administration Council on May 20, 1954, in K'e-hsüeh t'ung-pao, 1954, July issue p. 24), After consultation with experts a compromise was reached in 1954. It was decided to try one or two new written languages first. After reviewing the whole situation, Lo Ch'ang-p'ei, head of the Institute of Linguistics of China Science Academy, drew that conclusion: "Not only may the minority groups learn written and spoken Chinese before their own written language is created, but even after they have a written language, it is still necessary for them to learn Chinese." (Lo Ch'ang-p'ei, "Following the direction of the Government Administration Council to help the various nationalities in their language to create their own," in K'e-hsüeh t'ung-pao, July, 1954, pp. 24-26.)

The language policy is apparently two-fold. On the one hand, the minority groups may retain their own languages; on the other hand, they are encouraged, if not required, to learn the Chinese language. This second policy has to be seen in the light of the drive to promote the national language and to eliminate all local dialects. Judging by the trend in the Soviet Union, the minority groups at least will be required to learn and to use the Chinese language, regardless of the fate of their own.

A step to investigate the minority languages in Sinkiang was organized and sent to the field by the Institute of Linguistics of the China Science Academy. Ma Hsüeh-liang stayed in Sinkiang for over fifty days recording and collecting material concerning the local

governors were holdovers from the past, and of these thirteen, nine were Chinese. The provincial people's congresses also showed a greater proportion of Chinese. In Kansu, 20 of the 25 elected members of the people's congress were Chinese, and in Chinghai, 12 of the 23 were Chinese.

A word must be said about the representation of national minorities in the National People's Congress in Peking in the fall of 1954. The number of national minorities in China, according to the 1953 census, was 35,320,360, and they elected a total of 150 delegates. This comes to one delegate for every 235, 470 persons, which compares unfavorably with the residents of municipalities and industrial centers where the ratio was one to 800,000. In the 1228-seat National People's Assembly, 177 national minority delegates (150 elected, 27 appointed) representing six per cent of the total population, occupy 14 per cent of the seats.

The seats allocated to the minorities of the Northwest were as follows: Kansu 8, Chinghai 6, and Sinkiang 18, or a total of 32. Geographically, the distribution of seats were: Sian municipality 8, Shensi 19, Kansu 25, Chinghai 9, Sinkiang 20, or a total of 82. It was not explained why these thirteen of the 32 minority delegates were added to the 82 or were part of the 82. If the total number of seats was 82 for the 35,358,000 people of the Northwest, it will come to one delegate for every 431,200 people. At any rate, the number of seats is unimportant, except as window-dressing. The delegates were all Communist officials, fellow travellers, labor heroes, military commanders, religious leaders, and educational and technical workers, who, having been elevated or increased in the elections of successive levels, were not men who would maintain nonconformist thoughts.

Moreover, the formation of people's congresses, like the establishment of regional autonomous governments, does not mean that the people have been given the right to govern themselves. According to the Organic Law on the Local People's Congresses and Local People's Councils adopted by the National People's Congress in September, 1954, the functions and powers of the people's congresses was "to ensure the observance and execution of the laws, decrees, and resolutions of the people's congresses of higher levels," (art. 6), and the functions and powers of the people's councils (or people's governments) was "to promote and carry out the decisions of the governments of higher level" (art. 27).

VI. Further Consolidation of Communist Control

In the fall of 1954, as the elections were approaching their final stage, there were structural changes in the administration of the Northwest which gave the impression that Peking was relaxing its grip over the Northwest. Following the decisions of the

643

Our new encampment stood in a brook bed filled with mighty granite boulders, bordered by high poplars and willow shrubs (Plate LXXVII). Here we were overtaken by an emissary of the dzasak (banner-leader) of Baran who presented me with a khadar and requested me to visit the dzasak in the place, in Barun Kurā, where he was staying for a month to recite prayers. I promised to go. But since I had been warned on all sides not to go down into the hot, mosquito-filled plain with my yak bulloads, I first marched south for a whole day, up the Wulasetā Valley, (1) at the end of which stood our

1. Ulāsutā, meaning "region of poplars." The "poplar and willow oasis" just before the river emerges into the plain has given it its name. Rockhill, Diary, p. 166; footnote 1.

precious camp. The region offered little that was attractive or inviting. Barren, desolate rubble terraces were to be seen everywhere, and only after we were a dozen kilometers from the Tsaidam Plain in the mountains was there finally a most growth of grass. The cattle herds of the Mongols were able to find somewhat adequate amounts of grass only above 4,700 meters, just about the place where we camped upon about twenty years of the dzasak nomads. I decided to stay here and give my caravan animals a somewhat longer rest. The bullocks were at the end of their strength, in fact, on the last few marches I had lost four more. Two of them had to be left behind in our last camp at the mouth of the Wulasetā Valley. (643) / When we were ready to finish them, we found only their footprints together with those of a horde's bandit, leading out into the Tsaidam Plain. They had been stolen and I never saw them again. (1)

1. Dyoba Dyentsen, the dzasak himself had had them removed.

On the day after our arrival in the camp, the dzasak of Barun visited me in person, to my great astonishment. First a mounted courier came dashing up, behind him came the dzasak in the midst of ten horsemen. A clumsy figure, somewhat over 1.65 meters tall, an unsouth Calibar as one could see from a distance, stopped 100 centimeters in front of my tent, was assisted by two from his horse, and came toward me. He had just reached the age of 45, he, as well as his escort, wore the Tibetan gaily-colored cafton, except

that it hung down below their knees. They all had silver-mounted swords made in Lhasa in their belts and almost all of them wore red and blue mandarin buttons and pheasant feathers on their Manchu hats. I served my guests tea, tsamba and mutton in my tent. My Mohammedan Hasi had to act as my interpreter, for the dzasak pretended he understood only Mongolian. After the customary preambles, he came out with the purpose of his visit. He had heard that I had come through infested areas and he was afraid his yak herds would become infected if I traveled farther up the valley with my caravan. He also imagined me not to hunt in his territory. He said his people had taken a vow not to harm any wild animal for two years. They hoped in this way to win the favor of the local spirits. For this he promised to give me barley and wheat flour inexpensively in his village and to transport a part of my collections back to Hsining fu. After his call, the dzasak rode off over the stony path, to his home in the plain 40 kilometers distant.

I had obviously gained prestige through the dzasak's visit. He had been accompanied by a young Mongol named Dyoba Dyentsen (Plate LXXVI) whose yurt stood only a short hour's distance from me and who now invited me to visit him, as did his neighbor. I warded my rounds of visits at the yurt of my nearest neighbor. As I approached, the whole family came bursting out of their round, dirty-white beehive. We greeted each other before the door very deliberately with low bows, until finally at the first person, toothless though, the wide open narrow, double-winged wooden door common to all Mongol yurts, and over the high threshold into the dim room. There the wife and the grown daughter served me a peaked mound of tsamba decorated with flecks of butter and arranged with loving care on gaily-trimmed wooden plates and bowls. I was also given flat-glass tschäes, the ones the wife was proudly displaying, unasked, and the tail piece of the most-recently killed mutton, with the bristly tail attached, - in short, I was entertained like a high-ranking lama. When I was ready to leave, all the members of the family dashed out of the yurt, then came my servants, and I had to be the last to leave the tent-house. This is ancient Mongolian etiquette.

But I was even more elaborately received by Dyoba Dyentsen. He was /347/ a young unmarried man in his late twenties, who was able to read and write Mongolian and Tibetan. He was a wanda, a priest who had not taken his examination, and the son of a family who, according to local standards, was considered wealthy. When I rode to his yurt, a sheep was killed in my honor. Dyoca had a

entire body of the yak cattle is covered with a thick mat of hair which, on the belly, becomes a foot long and changes to rather stiff hairs. The wool as well as the beitles are always pitch-black in wild yaks and usually so in domestic ones. But after the hairs have been plucked out and exposed to the weather and to moisture, they quickly turn a reddish-brown and then resemble old mammoth-hairs such as one finds in the ice of Siberia; the mammoths were undoubtedly all raven-black at one time like the wild yaks.

After a few days of rest three of us, Han, Tsch'eng and I rode toward Barun kurā with only mules and horses. We again traveled down the stony and pathless Wulasetā Valley and then, as a result of a misunderstanding, set out from the mouth of the valley in a north-northwest direction into the plain. Thus it happened that when we again met human beings we were in Dun, that is, in the territory of the banner-dzasak of Dun which was west of Baron. Behind a 10 kilometer-wide, barren belt of rubble known as the schāla, which embraces the foot of the mountain, there is a zone of dunes scarcely one kilometer wide following the southern border of Tsaidam; then there is a more or less wooded zone consisting of tamarisk, and finally, beyond this, the pasture land, the zone where /348/ the water that flows down from the mountains and is absorbed by the schāla, gushes out again, irrigating and making the ground fertile once more before it loses itself in sterile salt swamps toward the middle of the Tsaidam basin.

Here in Dun I again tried to add to my herd of sheep, but no one had the courage to do business with me. It is the custom in all five dominions of the Tsaidam Mongols that the rulers have a sort of business monopoly in their territory. Their subjects may carry on business with a stranger only when the ruler has covered his needs or if he expressly permits it. Dyoba Dyentsen, too, first had to get permission from the dzasak to sell me his animals.

Because the dzasak of Dun lived too far off my route, I myself did not visit him. He is said to live in a large estate in the middle of his country. His domain is about 40 kilometers long and 5 kilometers wide and consists of fertile pasture land. Belonging to it is also an area of wasteland extending over many days' marches. The Dun (140 families with one squadron) graze their herds only in the plains, in the narrow zone between the dunes on the edge of the Piedmont gravel and the salt swamps north of this.

they are considered man and wife, and the woman then gets a dowry from her family. If the is no longer satisfied with the union, she may choose a new spouse at any time. The children who immediately after birth are given some animals from the herd, remain with the wife. Often the women change husbands so frequently or have so many lovers at once that one is tempted to speak of polyandry or pangamy.

The town of Barun kurā lies between swamps and in the middle of a scrubby wood. It consists of a few miserable huts, and crumbled gazer of which there is just enough left so that one can see they are Chinese in style, and chiefly of the dzasak's house enclosed by an expansive courtyard. (1) The buildings of the town serve the Baron

1. Rockhill, Diary, p. 165, discovered that the town was built as late at 1846 and was largely destroyed around 1886 at the command of the one-time major domo of the dzasak, Dowe, because the house owners refused to pay taxes to the dzasak.

chiefly as storage places for everything which they cannot take along on their frequent journeys. Among the permanent residents, there are only a lot of old women as well as old men who no longer care to live with their families, besides Chinese merchants who are in Dun, and orphans who have been forgotten by their parents.

We did not visit the dzasak's court, either. After we had set up our tent and got settled, we were invited to have tea in the dzasak's reception room. This was a low room measuring three by four meters. The dzasak sat down on a thick cushion on the rear wall, while at his right sat an elderly lama from the Gum bum lamastry, a Mongol from East Mongolia, who was the priest of the house. The rest of them sat in a circle around the coal brazier which stood in the middle of the room. I was seated alongside the lama. To the left of the dzasak sat his brother who was also a lamaistic priest, beside him sat the wife of the dzasak, and farther down, near the door, my companions and the prince's retinue. The room was more than simple. The walls, like those of all the houses of the village, consisted of unbaked loess-loam and dried bricks, and the furnishings consisted of a few cupboards of the most slovenly kind of Chinese workmanship and dirty, pulo-canvas-covered pillows that served as seats. The room was lighted by the door opening and a small latticed opening without a paper window, high up over the

After I had had my presents handed over, the conversation turned to 643
European weapons and the diassak who already had a number of Russian 574
and English repeater guns, made every effort to buy some of my
weapons. When I showed no inclination to comply with his wishes,
the atmosphere became strained and I hurried to take my leave. /350/
The Barun diassak (Plate LXXV), like all Dam Mongols, cannot 252
be relied upon. The flour for which I had paid him up in the Wulaseii
Valley, was still not ground when I came to Barun kurā, and I was
obliged to wait two days before I could get it. It was ground in hand-
mills by old women and widows.
There were a great many beggars and cripples loafing about in 735
the diassak's courtyard. They mumbled their Om mani padme hung
and plucked at their rosaries without ceasing. There were people 644
coming and going all the time who paid tribute to the diassak, and
my companions were always amazed at how obsequious the Mongols
were toward their ruler. Whereas the tent Tibetan shows very little
respect toward his chieftain, the ordinary Mongol is bound by strict
etiquette. He may never sit down with crossed legs before his prince,
he must bend his right knee and remain in a half squatting, half
kneeling position. If he is not invited to sit down he remains stand-
ing with his legs together. He must take his sword in his left hand
and may not leave it sticking diagonally in his belt as he usually does.
The Mongol princes have incomparably greater prestige than the 643
chieftains of the Tibetan nomads. I have already spoken of the
princes' right of preemption. Besides that, the diassak owns his en- [423]
tire country, he annually apportions the pastures and also the arable
land among his subjects and for this he receives his tithe in the form
of animals and grain. Moreover, he demands several days of [651]
gratuitous service from each family, which the wealthier ones may
pay off in the form of added taxes. On his part he feels himself re-
sponsible only toward the priests, he always supports a few lamas and [772]
gives large gifts to the monasteries. In many things he is the only
source of supply for his subjects. He had large supplies stored in his
warehouses in Barunkurī. In them I saw pulo from Shigatse, lamb-
skins from Lhasa, Nepalese amulet boxes, peacock feathers from
India, saffron from Kashmir, Indian dates and cocoanut, Tibetan stag-
antlers and pouches of musk, as well as American cotton materials,
boots from Dankar, tea and the many little things with which the
Chinese furnish the nomads of the highlands.
While I was staying there a huge felt yurt was erected in the court- 792
yard of the diassak, measuring 10 meters in diameter. The tribal 346

792 lamas gathered in it, in order to read the Kandyur. (Plate LXXIX).
346 Beside the yurt there were deep holes dug, in which bucketsful of
tea and thick, glutinous barley soup were cooked for the lamas and
the many visitors who came for these prayer recitations.
000 Among the visitors was Dowe who had accompanied Rockhill to
K'am in 1889. His eye disease which had set in shortly after his
journey with Rockhill had in the meantime become so bad that he
was almost blind. Two men who accompanied Kozlov on his jour-
ney to K'am also visited me and offered me their services. But they
demanded such a high salary that I was unable to take them along.
They boastfully told of the attack on Kozlov's caravan not far from
Tsiamdo, in which 22 Tibetans were supposed to have fallen, and
they spoke as though they had been the deliverers. (1) In the year

1. See in this connection, Kozlov, Mongolia i Kam,
St. Petersburg, 1905, Vol. II.

1909 this same courtyard of the Barun diassak /351/ formed the base
of Colonel Kozlov's expedition. Two Cossacks guarded the camel
caravan while Kozlov journeyed to K'am. The traces of this ex-
pedition were still clearly visible. In the room next to the reception-
room the diassak showed me, with a shake of his head, the place
where the large Russian stove which the Cossacks built, had stood.
Even the wooden tower for astronomological observations was still in-
tact. The people were unable to quite fathom the diassak
observed, and in their feverish activity they opened the large well
shaft in the courtyard. (1) However, today this well yields only

1. I was told apropos of the attack on the two Cossacks,
that they had seen ghosts one night and shot blindly in
to the darkness. But there was no enemy. Perhaps the
Mongols themselves wanted to steal?

brackish, polluted water. One finds good, salt-free drinking water
only a good quarter-hour from Kurā. A solitary rooster had mean-
while made his home in the wooden meteorological tower. The
diassak had brought him along only as an alarm-clock in the morn-
ing. He and his fellow-tribesmen, like the Tibetans, never ate eggs.
So the hens had been left behind in China. (2)

2. The banner of the Barun diassak has only one squadron

643

and consists mainly of Khoshot. The family of the 643
diassak stems from Tseren Khatan Batur, the younger
brother of Gushi Khan. The incumbents of the office of
diassak became taidshi of the first class for the first
time in 1725 and the office is hereditary since 1782.
Nineteen of the twenty-one Khoshot banners of the Koko
Nor belong to descendants of Gushi Khan, one (Taidschin)
to the descendants of the older brother of Gushi, one
(Barun) to the descendants of the younger brother.

Very near to the diassak's houses lived a brother and a cousin of 167
my servant Han. They were two Dungan who had fled here in 1896
from the Hsining territory when the rebellion was quelled and the
Dungan emigrated en masse. They had lost their fortunes during the 000
war and became subjects of the Barun diassak. Both of them had now
taken Mongolian wives and established a household. We stayed a
night with one of them, and I was shocked to see how Han, at the re-
quest of his clan and all the Bamba Mohammedans, tried to persuade
the brother and cousin to return home. In our honor a sheep had been
picked out of the herd and my Han was entrusted with killing it ac-
cording to Mohammedan rites. Everything Buddhistic had been re-
moved from the yurt in our honor. The two pseudo-Mongols had at
the first unsuspected meeting, shamefully removed the amulets which
they wore around their throats according to lamaistic custom, and
put them in their pockets. The Mongolian wife made no effort to
hide her displeasure at her husband's conduct and at his sudden shame
before his Mohammedan brother, as though their Buddhistic gods
were not as good as the god of Islam. She sat idly in her tent beside
me and made a sullen face, letting her husband take care of all the
hospitality, alone. She was naked to the waist because of the heat.
A half dozen small leather pouches and a small bronze Buddha shrine
hung down to her ample breasts. Her small, four-year-old son was
her only comfort in her anger. He kept running up to slake his thirst
at his mother's breast.

My servant Han spoke Chinese which the Mongol woman did not
understand and /352/ tried all his powers of persuasion. "You are
living in wedlock here with a dirty Fan po, we Mohammedans shall
get you a clean woman from among our people in the lowlands." -
"The Mongolian woman presented me with a lovely little boy whom
I do not like to leave." - "When you die they will expose your body

134 697 done in public welfare. The information about the situation in
the Northwest has to be inferred mostly from what is available
to us about China proper, keeping in mind that Chinese policies
in Sinkiang have never achieved a fulfillment comparable with
the fulfilment they have achieved in China proper.
635 It was only during the Sino-Japanese War (1937-1945) that
696 the National-ist Government established a Ministry of Social
697 Affairs. This Ministry organized in each province, including
Sinkiang, a Bureau of Social Affairs for relief and welfare
works. Institutions were set up to take care of the aged, or-
phans, the disabled, disabled veterans and beggars.
635 The relief organs in the Northwest sponsored by the Ministry
697 of Social Affairs were restricted to free medical service centers;
organs maintained by provincial governments were mainly ex-
perimental relief stations, which were responsible for a variety
of relief work. The Municipal and district governments, in addition to general relief organs (90 for the entire Northwest;
57 of these were located in the provinces Chinghai and Ninghsia,
which had Moslem governors), children's relief centers (17)
and a sprinkling of other institutions. There were several
dozens of private Chinese Charity Associations active in the
Northwest during the war.
659 Furthermore, the National Government joined efforts with
691 some religious and humanitarian bodies, particularly the
781 National Relief Commission. During the war, this Commission
was particularly active in disaster relief. Large appropriations
were earmarked for the famine in Shensi in the years 1943 and
1944. Contributions to this province as well as to the provinces of
Kansu and Ninghsia were largely used for the resettlement of
and the staking of reclamation projects by disaster victims of
Shensi as well as of Honan province.
659 The activities of the National Relief Commission included
694 care for war orphans and refugee children. Five hundred of them
696 were sent to Sinkiang and one thousand were resettled in Ching-
781 hai. Furthermore, a Juvenile Northwest War Area Service
1727 Corps was organized to accommodate evacuees from War
Refugee Children's Schools.
The National Child Welfare Association, founded by H. H.
Kung, also maintained a Child Welfare Camp at Hei-hsien,
Shensi.
Among the service corps operated by the Friends of the Wounded
Society, organized under the New Life Movement Association;
one had a base in Shensi. These corps worked in hospitals and con-
valescent camps. They provided delousing, laundry and sewing
services etc. and special dieting.
747 The wide work of Christian missions contributed to alleviate
747 much distress. There were few large Protestant missionary

C 641 668 771 829

in the Constitution of the People's Republic of China. There are many followers of religions in China. It would be unwise, the spokesman argued, to offend them all. He repeatedly emphasized, however, that the world outlook of the Marxists is in every way contradictory to that of religious believers. The solution is , "the religious believers must abide by the Constitution and the law. The policy of freedom of worship must not be allowed to be used as a pretext for carrying out counter-revolutionary activities,... We must publicize among the masses of the Youth the materialistic world outlook... The youths should thus be given an ideological founcation... to make them into...atheists and the heroic fighters of the Socialist construction undertaking." (Ibid., p. 28).

C 641 668 771

The Communists believe that by turning the young people against religion, all religion will eventually be eliminated when the present believers die. However, the Communists will tolerate or even participate in religious activities for reasons of expediency. In Northwest China where the influence of Islam and Lamaism is great, the Communists have gone all out to woo the Moslems and the lamas. For instance, when the Communist army marched into Ninghsia and Kansu, the commander of their First Field Army, Pleng Te-huai, issued a special order to the whole field army to honor the Moslem religious habits. Not only were the Mosques not to be damaged, but the order even demanded that every soldier wash his hands before he drew water from a well. In numerous cases, the Communists spent much money to repair the mosques and the lama temples. In the Soviet China stage the Communists had disqualified every monk as a citizen. (see above).

N 641 642 668

Obviously, the general civil rights promise in the Communist Constitution are restricted. Mao Tes-tung's statements in his "On People's Democratic Dictatorship" leave no doubt about this point.

C 641 642 668

E. Practices

N 668 423 578 823

Some instances of infractions of these rights may serve as examples. In 1951 some faculty members of the Provincial First Middle School at Sian, Shensi, grumbled in private talks about the "land reform." They said, "In the country, if you have two bowls of rice to eat, you will not have peace." Because of this, Vice-Commissioner Lu Ch'in-liang of the Bureau of Culture and Education of Shensi Province wrote a special article and published it in the local newspaper. He severely criticized the tolerance of the administrators and accused the school of being a hiding place for counter-revolutionary ideas and opinions. Special groups were organized by the Northwest People's Supervisory Committee and the Northwest Department of Education to investigate the school. A special criticism was published in the nation-wide Party magazine, Hsüeh-hsi. As usual, this would indicate that a serious purge took place.

*668 625

1. The secret service

The command of the police system on mainland China rests with the national headquarters of the Chinese Communist Party. Nominally it is the Chinese Communist Party Central Committee, but the real power is in the hands of the small group which forms the Political Bureau. In turn this bureau is influenced greatly by the Secretariat and the secretary-general. When the secretary-general is strong he may even dominate the bureau. It usually makes the decisions on policy. The secret police service's executive body is centered around the Social Department of the Central Committee of the Party. This Department has a direct system of organization within the Party. In large areas (such as the former northwest region) or in special areas (such as Sinkiang Uighur Autonomous Region), there is a Social Department subordinate to the Party's "Central Committee Sub-bureau." From this level down, like the Party local organization, there is a social department or social secretary at each level to take charge of the secret service in the corresponding area.

*668 625 647

*668 625

2. Other police systems

Built around this Party secret service system, are numerous other separate, but not entirely independent, systems of police forces. The most important is the regular police. Organizationally, this is a branch of the People's government. Its central headquarters is the Ministry of Public Security under the Government Administration Council. From this level down there is a branch office of the department at every level of the People's government. This branch commands the regular police forces.

[645] [647]

The United Front Department system which extends to the provincial and municipal levels, is designed for two purposes. Negatively, it infiltrates into the organizations of the people and watches their functions. Positively, it dominates and utilizes the people's organizations to promote the Party program.

The system of People's control is similar. Here, people are used as spies for the Party. The People's Procurator system is slightly different. It is a prosecuting government organ. Since prosecution needs the investigation of facts, inevitably this sytem is involved in the police system.

The spy system under the Ministry of Foreign Affairs also has a dual purpose. Positively, this system infiltrates into foreign territories to conspire for future conquests. Negatively, it is used to detect and prevent possible agitations which may disturb public order in mainland China.

[645] [648]

*668 625 708 726

The police and spy system among the military forces can be divided into two parts. The system of political defense is used to weed out potential political enemies inside the army, while the scout and spy system is mainly used to detect military enemies. Both of these systems have branches in the field army and the army areas.

governors were holdovers from the past, and of these thirteen, nine were Chinese. The provincial people's congresses also showed a greater proportion of Chinese. In Kansu, 20 of the 25 elected members of the people's congress were Chinese, and in Chinghai, 12 of the 23 were Chinese.

A word must be said about the representation of national minorities in the National People's Congress in Peking in the fall of 1954. The number of national minorities in China, according to the 1953 census, was 35,320,360, and they elected a total of 150 delegates. This comes to one delegate for every 235,470 persons, which compares unfavorably with the residents of municipalities and industrial centers where the ratio was one to 800,000. In the 1226-seat National People's Assembly, 177 national minority delegates (150 elected, 27 appointed) representing six per cent of the total population, occupy 14 per cent of the seats.

The seats allocated to the minorities of the Northwest were as follows: Kansu 8, Chinghai 6, and Sinkiang 18, or a total of 32. Geographically, the distribution of seats were: Sian municipality 8, Shensi 19, Kansu 25, Chinghai 9, Sinkiang 20, or a total of 82. It was not explained whether the 32 minority delegates were added to the 82 or were part of the 82. If the total number of seats was 82 for the 35,358,000 people of the Northwest, it would come to one delegate for every 431,200 people. At any rate, the number of seats is unimportant, except as window-dressing. The delegates were all Communist officials, fellow travellers, labor heroes, military commanders, religious leaders, and educational and technical workers, who, having been screened and processed in the elections of successive levels, were not men who would entertain nonconformist thoughts.

Moreover, the formation of people's congresses, like the establishment of regional autonomous governments, does not mean that the people have been given the right to govern themselves. According to the Organic Law on the Local People's Congresses and Local People's Councils adopted by the National People's Congress in September, 1954, the functions and powers of the people's congresses was "to ensure the observance and execution of the laws, decrees, and resolutions of the people's congresses of higher levels," (art. 6), and the functions and powers of the people's councils (or people's governments) was "to promote and carry out the decisions of the governments of higher level" (art. 27).

VI. Further Consolidation of Communist Control

In the fall of 1954, as the elections were approaching their final stage, there were structural changes in the administration of the Northwest which gave the impression that Peking was relaxing its grip over the Northwest. Following the decisions of the

Administrative law 671

The newest development, found in the Northwest, especially in Sinkiang, is the partial industrialization of those areas which are the sources of coal, oil, gold, iron, alum, quartz, gypsum, nitrates, salt, and, as recently reported, uranium.

The non-Chinese peoples of the Northwest are not only outnumbered b ut also outweighed in economic and political respects. For more than two thousand years, the Chinese have been ruling those areas (with short interruptions as far as Sinkiang and Chinghai are concerned), even though they never had more than a few garrisons stationed in frontier areas. Those garrisons made it possible for a thin stratum of Chinese officials to rule the areas on the top level. On the lower level, the indigenous peoples and tribes governed themselves - under the supervision of the Chinese viceroys or governors and their bureaucracy.

The general policy of the Chinese government in Peking was to make use of the existing form of governmental institutions of frontier areas like Sinkiang, Chinghai, and Inner-Mongolia. In Sinkiang (prior to 1884 it was called "Hui-chiang," i.e., Muslimic Dominion), two types of local government had existed: the Muslimic type and the Mongolian type. The Northern and Northeastern part of Sinkiang, where the Mongols were the dominant inhabitants, had the same governmental institutions as Outer and Inner-Mongolia, namely,banners ruled by dzasaks, who were appointees of the Emperor in Peking. The Republic of China tacitly recognized their ranks and interfered very little with their functions. Only Communist China deprived the nomad aristocracy of their titles and rights.

The Muslimic communities were fuled by Bäks with various ranks: the Ak'im Bäk,"local governor"; the Ishkhan Bäk, "assistant governor"; the Shang Bäk, "collector of revenue"; the Qazi, "judge"; the Kukbashi or Mirabu Bäk, "superintendant of agriculture"; Yüzbashi, "hundred-men-leader"; Onbashi, "ten-men-leader"; etc. All the local Bäks were appointed by the emperor or later on by the president of the Republic upon the recommendation of the Imperial or Republican governor, although it must be stated that some governors of Sinkiang, Chin Shu-jen and Sheng Shih-ts'ai, ruled and governed the province without asking Peking for the consent of appointments.

Besides the Chinese civil service there existed Chinese military staffs and detachments, centered in Ili, Urumchi, Kulja, Chuguchak, Kashghar, Sining, Su-chou, Lan-chou, etc. Relay stations provided communication between the government in Peking and the frontier areas. Maintaining the effectiveness of the means of communications was an important duty of Chinese officials. Only since 1930 have some automobile highways been built, and the Communist regime, in cooperation

d. drawbacks

With the gradual consolidation of the central government, the all-powerful Military and Administrative Council of the administrative regions became less and less desirable, and the traditional conflict between the central and the regional forces became more and more significant. This situation reached a climax on November 15, 1952, when the Central People's Government Council passed a resolution to change the structure and the function of the Military and Administrative Councils. It was stated that the change was necessary for strengthening the leadership of the Central People's Government in its new responsibilities of nation-wide economic and cultural reconstruction. The power of the provincial and municipal governments was to be strengthened, while that of the Military and Administrative Councils of the administrative regions was to be curtailed. At that time these decisions were made:

C. Reorganization

(1) to organize all the People's Government Councils (or the Military and Administrative Councils) of the administrative regions into Administrative Councils. Each council was to function as an agent representing the central People's Government to guide and check the local governments.

(2) to preserve the Administrative Office and the four committees on Political and Legal Affairs, Financial and Economic Affairs, Cultural and Educational Affairs, and People's Control under the People's Government Councils (or the Military and Administrative Councils) of the administrative regions.

(3) to reduce the original departments to bureaus and offices. Some of these new bureaus and offices were to be put under the direct control of the related ministries of the central People's Government.

This reorganization was to be accomplished before the end of 1952, but the actual reorganization of the Northwest Military and

Administrative Council was not completed until January 27, 1953. P'eng Te-huai was released from his post as chairman of the Northwest Military and Administrative Council with a new assignment to command the Chinese Volunteer Corps in Korea, with the title of vice-premier of the Government Administration Council.

After this, the final step in abolishing the whole system of the administrative regions and their administrative bodies became almost insignificant. By a resolution in the thirty-second meeting of the central People's Government Council, formal abolition was achieved on June 19, 1954.

II. The Provincial and Other Lower Level Governments

A. Relationship to Regional Government

The provincial governments traditionally have been important links in the Chinese governmental system. During the decades prior to the Communist victory, when the regional power groups had become extremely influential, this fact was even more true. After the Communists took over, however, the power of the provincial government was temporarily weakened by the establishment of the administrative regions. When the Government Administration Council passed the Organizational Regulations of the Provincial People's Governments on January 6, 1950, the provincial governments were reduced almost to instruments of the Military and Administrative Councils of the administrative regions. The first article of these regulations mentioned that the people of a province would execute their political power through the provincial people's congress. The second article promised that the provincial government, including the governor, would be elected by the provincial people's congress. However, the second section of Article 2, had most significance. It stated:

"In the first stage of liberation, for the sake of a speedy establishment of a revolutionary order, the provincial People's Government Council should be nominated by the government Administration Council, subject to the approval and appointment of the Central People's Government Council; or by the People's Government Council of the administrative region... subject to the approval and appointment of the Central People's Government Council."

The appointed term of the provincial People's Government Council was two years. But through reappointments, the same provincial People's Government Council could be continued indefinitely.

1. authority

In the same regulations, the provincial People's Government Councils were given authority similar to that of the Military and Administrative Council of the administrative regions. For instance;

000 almost every phase of their lives.

The functions of the people's councils, reveal the contradictory character of the Communist system of local government. The Councils are responsible for carrying out decisions of the people's congresses at their corresponding levels, but they also have to carry out all decisions and orders from higher level government organs. The people's councils are the servants of the people, but they also are entrusted with stopping the execution of inappropriate decisions of people's congresses at the next lowest level. This power is especially significant since the higher people's councils must decide what decisions are inappropriate.

c. bureaus, offices and commissions

The Organic Law for local governments states that the provincial people's councils may establish the following bureaus, offices, or commissions according to local needs:

(1) Civil Affairs
(2) Public Security;
(3) Justice;
(4) Supervision;
(5) Planning;
(6) Finance;
(7) Food;
(8) Industry;
(9) Commerce;
(10) Transportation and Communications;
(11) Agriculture and Forestry;
(12) Water Conservancy;
(13) Labor;
(14) Culture;
(15) Education;
(16) Public Health;
(17) Physical Culture;
(18) Administrative Office.

In areas where there are minority groups, the councils may also add a Commission on Nationalities Affairs.

So far, no material is available concerning the actual structure of the northwestern provinces under the new law. However, it is known that the Committee on Financial and Economic Affairs and the Committee on Cultural and Educational Affairs have been abolished.

Under the new law, the municipal people's council may establish the following bureaus, offices, or commissions:

(1) Civil Affairs;
(2) Public Safety;
(3) Justice;
(4) Supervision;
(5) Planning;

1: Washington S-4 (no date) 1956 AF13 Northwest China AF13

*668
• 647
632
631

(6) Finance;
(7) Food;
(8) Taxation;
(9) Industry;
(10) Commerce;
(11) Labor;
(12) Culture;
(13) Education;
(14) Public Health;
(15) Physical Culture;
(16) Municipal Construction;
(17) Public Utilities;
(18) Administrative Office.

In areas where there are minority groups they may also establish a Commission on Nationalities Affairs.

*668
647
634
631

The county people's councils may establish, according to need, the following divisions or bureaus:

(1) Civil Affairs;
(2) Public Security;
(3) Finance;
(4) Food;
(5) Taxation;
(6) Industry and Commerce;
(7) Agriculture and Forestry;
(8) Transportation and Communications;
(9) Culture and Education;
(10) Public Health;
(11) Administrative Office.

The people's councils of the hsiang, nationality hsiang, and towns may establish, according to need, the following working committees:

(1) Civil Affairs
(2) Public Security;
(3) Armed Forces;
(4) Production and Cooperation;
(5) Finance and Taxation;
(6) Culture and Education;
(7) Mediation.

Members of the local people's congresses and other suitable individuals are encouraged to serve on these working committees.

*668
685

D. Comparison with Nationalist Organization

If this system is compared with the system of local governments under the Nationalists, the following differences can be noted:

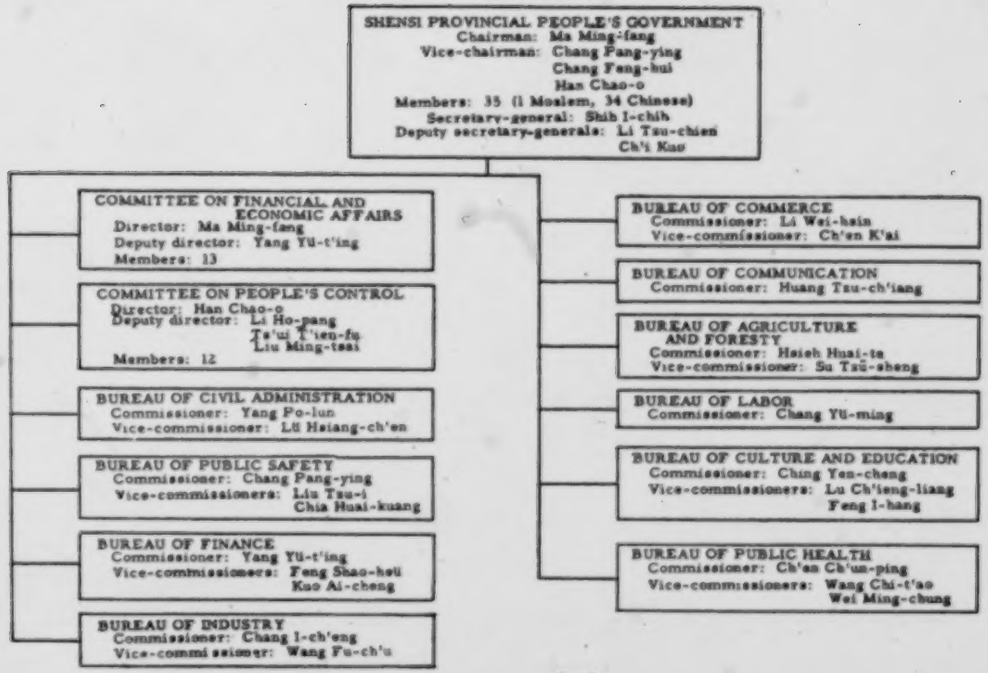
(1) The Nationalists adopted the council system only at the provincial level.

(2) Under the Nationalists, the heads of the provincial bureaus and

*668
635
647

1: Washington S-4 (no date) 1956 AF13 Northwest China AF13

TABLE II



following page 474 (a)

between the Moslems and the Lamaists.

As a result of the aforesaid complexity of its geographic basis as well as its intricate historical and political background, the Northwest's population problems are as complicated as its intermingling ethnic composition. For many years , the extreme northwestern province of Sinkiang suffered from continual conflict between China and Russia, although with the introduction of the Communist regime, the conflict seems at least temporarily resolved.

The development of industrialization in present day China is concentrated in the Northwest. New towns have been emerging in barren mountains and in deserts, such as Shih-yu-ho (near Yü-men), Tu-shan-tzu, (south of Wu-su) and Shih-ho-tzu on the western highway of Urumchi between the towns of Manas (Sui-lai) and Ulan-Wusu. The first two sprang up because of the drilling of promising oil wells in the Chi-lien and Tien-shan mountains.

The China Academy of Sciences announced in December, 1955, that in 1956 a number of new research divisions will be established in the Northwest: a Petroleum Research Bureau in Lanchow of Kansu, an Agro-biology Bureau in Wu-kung, Shensi, an Archaeological Research Bureau in Sian, a Geo-physical Research Bureauand a Veterinary Research Bureau. (Jen-min jih-pao Dec. 16, 1955, NCNA. May 11, 1956).

Last November, the Northwest Branch of the China Academy of Sciences held a meeting at which, with the assistance of the Russian Korshekov an ambitious plan was formulated for the economic development of the Northwest in the coming fifteen years, with emphasis on survey of natural resources, study of petroleum and rare metals, exploitation of non-ferrous metals, agronomy, soil science and animal husbandry. In these discussions, the professors of three schools of higher education, the Northwest University, the Northwest Industrial College, and the Northwest Agricultural College, took an active part. (Kuang-ming jih-pao Dec. 13, 1955; NCNA. May 11, 1956).

B. General Distribution and Regional Characteristics.

The Northwest Region has an average density of 28.6 persons per square mile, as compared with the average density of 160 per square miles for the whole country. It has the smallest number in population among all the major regions of China, as the following shows:

Major Regions	Population (1953 Census)
North China	55, 749, 000
Northeast China	41, 732, 000
East China	162, 682, 000
Central and South China	176, 331, 000

ciations located at Urumchi. With the advent of the Chinese Communists, the nationalities cultural associations were taken over and in their place, cultural halls and cultural teams managed and operated by Communist cultural cadres were established in the cities and towns of Sinkiang.

It is strange that in the pronouncements of Communist leaders and the reports of cultural and educational achievements in Sinkiang in the Communist press, no mention can be found on libraries. One can only speculate that with the expansion of publication enterprises under the Communists, the number of libraries must also have increased, as well as the number of books. In the library of the Sinkiang College of Nationalities, the number of books increased 700 per cent of the pre-1949 figure, and the number of books in the languages of the minority peoples increased by 1,400 per cent.

VII. Organization

The organizational system of public information in the Northwest appears simple but is complicated. Government offices in charge of information services are Bureaus or Committees of Cultural and Educational Affairs on the provincial level, which receive instructions from Peking and control the various information services. Some of these, however, are directly controlled from Peking, and among the newspapers and journals are many which are in the hands of the party rather than of the Government.

done in public welfare. The information about the situation in the Northwest has to be inferred mostly from what is available to us about China proper, keeping in mind that Chinese policies in Sinkiang have never achieved a fulfillment comparable with the fulfillment they have achieved in China proper.

It was only during the Sino-Japanese War (1937-1945) that the Nationalist Government established a Ministry of Social Affairs. This Ministry organized in each province, including Sinkiang, a Bureau of Social Affairs for relief and welfare works. Institutions were set up to take care of the aged, orphans, the disabled, disabled veterans and beggars.

The relief organs in the Northwest sponsored by the Ministry of Social Affairs were restricted to free medical service centers; organs maintained by provincial governments were mainly experimental relief stations, which were responsible for a variety of relief work. Municipal and district governments maintained, in addition to general relief organs (90 for the entire Northwest; 57 of these were located in the provinces Chinghai and Ninghsia, which had Moslem governors), children's relief centers (37) and a sprinkling of other institutions. There were several dozens of private Chinese Charity Associations active in the Northwest during the war.

Furthermore, the National Government joined efforts with some religious and humanitarian bodies and organized the National Relief Commission. During the war, this Commission was particularly active in disaster relief. Large appropriations were earmarked for the famine in Shensi in the years 1943 and 1944. Contributions to this province as well as to the provinces of Kansu and Ninghsia were largely used for the resettlement of and the starting of reclamation projects by disaster victims of Shensi as well as of Honan province.

The activities of the National Relief Commission included care for war orphans and refugee children. Five hundred of them were sent to Sinkiang and one thousand were resettled in Chinghai. Furthermore, a Juvenile Northwest War Area Service Corps was organized to accommodate graduates from War Refugee Children's Schools.

The National Child Welfare Association, founded by H. H. Kung, also maintained a Child Welfare Camp at Hei-hsien, Shensi.

Among the service corps operated by the Friends of the Wounded Society, organized under the New Life Movement Association; one had a base in Shensi. These corps worked in hospitals and convalescent camps. They provided delousing, laundry and sewing services etc. and special dieting.

The welfare work of Christian missions contributed to alleviate much distress. There were few large Protestant missionary

*175
*668
631
701
[666]

a People's Government Council of the administrative region to take the place of the Military and Administrative Council.

2. Northwest administrative council

a. composition

Apparently this anticipated election never took place in Northwest China under the Northwest Military and Administrative Council. Since November 15, 1952, when the Central People's Government ordered the reorganization of the Council into the Northwest Administrative Council, it has been known as the Northwest People's Government Council.

*175
*668
631

b. functions

Article 3 of the same regulations indicated that the People's Government Council of the administrative region (the Military and Administrative Council) was to be a part of the regular local government system, ranking between the Central Government and the provinces. It represented the Government Administration Council in guiding the provincial and county governments in administrative work.

This was well defined in Article 4, which gave the detailed functions of the Council. The Council was to be the organ for transferring the orders of the central government to the provincial and other lower local governments. It made suggestions to the central government concerning personnel, law, and financial arrangements for the region. It also coordinated and supervised administrative work for the central government.

These regulations indicated that the Communist Government meant to make the administrative regions and their administrative structures a part of their regular, permanent government system. This was quite a change from the former system, which emphasized the position of the provinces.

c. structure

*175
*668
631
• 647

After the Communists organized the Military and Administrative Councils of the administrative regions into offices with real power, their structure became large, and even bulky. In 1952, at the peak of its power, the Northwest Military and Administrative Council included the following offices;

Administrative Office;
Committee on Political and Legal Affairs;
Committee on Financial and Economic Affairs;
Committee on Cultural and Educational Affairs;
Committee on People's Control
Committee on Land Reform;
Commission of Nationalities Affairs;
Department of Personnel;
Department of Civil Administration;
Department of Public Safety;
Department of Justice;

following page 474 (c)

1: Washington S-4 (no date) 1956 AF13 Northwest China AF13

1. The secret service

The command of the police system on mainland China rests with the national headquarters of the Chinese Communist Party. Nominally it is the Chinese Communist Party Central Committee, but the real power is in the hands of the small group which forms the Political Bureau. In turn this bureau is influenced greatly by the Secretariat and the secretary-general. When the secretary-general is strong he may even dominate the bureau. It usually makes the decisions on policy. The secret police service's executive body is centered around the Social Department of the Central Committee of the Party. This Department has a direct system of organization within the Party. In large areas (such as the former northwest region) or in special areas (such as Sinkiang Uighur Autonomous Region), there is a Social Department subordinate to the Party's "Central Committee Sub-bureau." From this level down, like the Party local organization, there is a social department or social secretary at each level to take charge of the secret service in the corresponding area.

2. Other police systems

Built around this Party secret service system, are numerous other separate, but not entirely independent, systems of police forces. The most important is the regular police. Organizationally, this is a branch of the People's government. Its central headquarters is the Ministry of Public Security under the Government Administration Council. From this level down there is a branch office of the department at every level of the People's government. This branch commands the regular police forces.

The United Front Department system which extends to the provincial and municipal levels, is designed for two purposes. Negatively, it infiltrates into the organizations of the people and watches their functions. Positively, it dominates and utilizes the people's organizations to promote the Party program.

The system of People's control is similar. Here, people are used as spies for the Party. The People's Procurator system is slightly different. It is a prosecuting government organ. Since prosecution needs the investigation of facts, inevitably this sytem is involved in the police system.

The spy system under the Ministry of Foreign Affairs also has a dual purpose. Positively, this system infiltrates into foreign territories to conspire for future conquests. Negatively, it is used to detect and prevent possible agitations which may disturb public order in mainland China.

The police and spy system among the military forces can be divided into two parts. The system of political defense is used to weed out potential political enemies inside the army, while the scout and spy system is mainly used to detect military enemies. Both of these systems have branches in the field army and the army areas.

000 areas.

*668 625 Although there are so many different branches in the whole police system, final control still rests in the hands of the "Party Central."

*668 625 • 649 Before the abolition of the Northwest Region there was a Northwest Regional Public Security Department in charge of the regular police in the area. From June 19, 1954, when the Department, together with the Northwest Administrative Committee was abolished, the provincial Public Security Bureaus, in Shensi, Kansu, Chinghai and Sinkiang gained increased prominence. Starting with the provincial level, there is an office of Public Security at every level. The Sub-Bureau (or Station) is the Public Security Office at the ch'ü (district) level; the sub-station is at the hsiang level, while the public security group is the lowest open office.

S N
489 Only since 1930 have some automobile high-
496 ways been built, and the Communist regime, in cooperation
648 with Soviet Russia, are building the first Inner Asiatic railway,
668 linking Alma-Ata with Lan-chou. This railway will, without
175 doubt, speed up the Sinification of the frontier areas, and
[491] above all add industrialization to agriculture and pastoral nomadism.

S N
631 As far as Chinhai was concerned, the Western Mongols
563 (the Oirats) were also locally ruled by dzasaks, the leaders
657 of banners. Unlike the banners of Inner and Outer Mongolia
175 and Sinkiang, however, they did not combine banners to form leagues or to elect one of their tribal leaders as the captain-general of the league. The Chinese governor- with his seat in Sining - functioned as captain-general. In regard to the nomadic Tibetans, the Chinese government appointed chieftains as dzasak-lamas and gave them the rights and the privileges which this office involves. The sedentary Tibetans were ruled by t'u-ssus, also appointees of the Peking government. By and large, this governmental pattern existed until the Communists came into power.

S N
563 The form of governing non-Chinese peoples changed in the
657 course of time in various ways, but one thing never changed:
175 the aim of the Peking government to rule, to suppress, to exploit, and to simify them.

S
631 Unlike the eighteen provinces in China proper, the province
635 of Sinkiang (after 1884) and the Eastern Three Provinces, (after
175 1907) the areas comprising Mongolia, Tibet, and Chinese Turkestan, although occupying more space than China proper, were administrated by a quite different type of governmental system.

S
631 Political subdivisions of the Chinese Empire such as Mongolia,
657 Chinese Turkestan and Tibet were usually referred to as de-
175 pendencies. This is however an inaccurate translation of
647 the Chinese term "fan," which really means "the barbarian west." Since the cultural, ethnic and historical background in these areas was very different from the rest of the Empire, these regions required, and in practice had, a very particular type of governmental control. All these frontier territories were administered by the "Department of Dependencies" in Peking. This department was subdivided into the following bureaus:

a. Inner Mongolian bureau, that administered frontier boundaries, titles of nobility, appointment of officials, military affairs, league conferences, and finally organization of banner units of Inner Mongolia.

b. "Reception bureau" for Inner Mongolia nobility, that was responsible for the payments and allowances to the Inner Mongolian aristocracy.

c. Eastern Turkestan bureau, that was in charge of Moslem affairs in Eastern Turkestan.

S
631 d. Justice bureau which took care of the civil and criminal
657 cases of the frontier area.
175 e. Territorial development bureau which took care of the
647 preservation of forests, wild animals and which was in charge of the improvement of live-stock, fur curing and of the Mongolian inhabitants in general.

S N
175 The Yüan and Manchu dynasties, which themselves repre-
657 sented minorities, employed a quite different, one might say a
563 positive attitude towards non-Chinese. Generally speaking, the Manchus functioned and acted as the mediators between the

S N
175 minorities and the Chinese. But even the Manchus, after they
657 had become completely sinified, used colonial methods that
563 led to revolts and uprisings in Sinkiang, in Kansu and in Chinghai.
669 The Chinese Muslims in Kansu, e.g., revolted in 1648, 1781-1784, 1820-28, 1862-78, 1895-97, 1918-21, 1928-1929, at which times they tried, with little success, to get rid of the Chinese mastery and to establish their own Muslimic realm. Whenever such uprisings occurred, the Muslimic Turks of Sinkiang sympathized with them or revolted at the same time. In Sinkiang, Yakub Bëk even succeeded in establishing a short-lived Muslimic empire between 1864-1877. The Western Mongols of Sinkiang, Kansu and Chinhai, who revolted and established the Dzungarian Empire between 1673 and 1697, were defeated by a Chinese army in 1697 and again in 1757. In Chinghai, the Tanguts (Tibetans) revolted successfully many times, but like all other minorities who tried and failed, they were eventually brought under Chinese control again. Needless to say, all these unsuccessful petty revolutions, revolts and uprisings of non-Chinese or Chinese Muslims, always upset the economy of the area greatly, increasing thereby the hatred towards the Chinese in general, and the Chinese officials in particular.

S N
175 II. Main Patterns of Social Life, Social Organization and Mode
631 of Economy of the Minorities.

619 Even though the Northwest is occupied by a fantastic con-
glomeration of heterogeneous societies, it still can be, and always has been, considered by politicians as one area, a

S N
175 political, military, and economic unit, and also as the "land
631 of promise," which it in fact became. When the Communists
668 again set up the unit as an administrative area in 1949, it
178 was only the continuation of an old concept, held by the
619 Chinese rulers because of the geographical location of the North-
648 west and its commercial traditions (silk road, Mongolia-Tibet road, Chinghai-Tibet road, Sinkiang-India road, Sinkiang-Russia road), which culminated in Sheng Shih-ts'ai's cooperation with Russia, or earlier with Yakub Bëk's policy

to the Venetian merchant, Marco Polo.

During the centuries when China faced the land frontier of the Northwest and the Silk Road was the main channel of China's intercourse with the outside world, the target of China's imperialistic expansion, when strong, was the domination of the petty states of Central Asia. The principal strategic pass that must be held to prevent invading armies from pouring in and ravaging China, in periods of weakness and division, was Yü-men, the Jade Gate, in northwestern China.

B. Recurring Cycles of Nomadic Eruptions

As the advance and recession of Chinese power in Turkestan reflected the vigor and the decline of Chinese dynasties,(a feature of Chinese history discussed in the historical section of the General Handbook), so were the outbursts and withdrawals of the nomads the manifestations of their activity and passivity. The juxtaposition and interaction of the Chinese scheme of advance and withdrawal with the nomadic scheme shaped the dynamics and course of history of Northwest China. Together with Inner Mongolia, Sinkiang forms a broad semicircular belt, which marks the marginal zone between China and the steppes and is the amphitheater for the vast age-long struggle between the sedentary and nomadic peoples.

1. Earliest invasions

The alternate thrust of the nomads into this marginal zone, at times even penetrating into the heartland of China, and their retraction into the steppes, have been a recurring phenomenon in the history of Central Asia. With tidal regularity, the nomads have surged forth when China was weak and divided, only to ebb when China was strong and united. As far back as the eighth century B.C., when China was beginning to disintegrate into warring states, there were invasions of China by the north and northwestern peoples called Ti and Jung. In Central Asia there was the expansion of the Scythians. From the third to the first century B.C., the confederacy of nomads led by the Hsiung-nu or Huns were active in China's Northwest. During this same period Central Asia was overrun first by the Greeks of Alexander's army, then by the Yüeh-chih and, further east, by the Sakas and Wu-sun. The defense measures of the Ch'in dynasty and the military advance of the Chinese during the Han dynasty in the first century B.C. and the first century A.D., held the Huns in check and finally succeeded in splitting up the Hun confederation.

2. Turkic incursions

From the fourth to the seventh centuries, with China weak and divided, the border peoples from China's northern and northwestern frontiers breached China's defenses. First in dribbles and then in raging torrents they occupied the northwest and poured

into China to establish militaristic states in North China. The aggregation of invaders included the Huns, the Hsien-pi, the Juan-juan, the Toba, and the Tibetans. But the dominant group to emerge was the Turks, who eventually ruled an extensive territory stretching from Mongolia to the Urals. Once more China, reunited under the Sui dynasty, was able to hold off the nomads. Under the T'ang dynasty the Chinese were able to advance into the domain of the nomads and to destroy the Turkish federation.

By the ninth century, as China declined in power, the nomadic peoples on the northern rim of the Chinese empire came into their own again. The situation appeared to be a repetition of what had happened at least twice before. The decline of the Chou had been followed by the disintegration of China into warring states (cycle one); the collapse of Han had ushered in the Three Kingdoms and the North and South Dynasties (cycle two). Now, with the fall of T'ang, there came the chaotic Five Dynasties and the division of China again into the north and south (cycle three). In each successive stage, the extent of nomadic power was greater than in the previous one. In the first period of division, both northern and southern states were primarily Chinese; in the second stage of division, the northern states were non-Chinese while the southern states were Chinese; but in the third stage, at first the northern states were alien and the southern state (Sung) Chinese, but later the northern invaders (Mongols) succeeded in conquering all of China.

3. Mongol expansion

In the period following the fall of Tang, peoples from Manchuria, Khitans and Juchens, as well as peoples from Turkestan, such as the Sha-t'o (or Chöl) Turks, poured into China. In the Northwest, the Western Turks and their offshoots, the Qarluqs the the Uighurs, were active. Later, some of the Khitans, ousted from North China, also established themselves in Turkestan. Here too, the Arabs, who had penetrated Central Asia in the 7th and 8th centuries, were influential. But the most powerful were the Mongols who, having united the tribes of Mongolia into a vast confederation of nomadic people in a series of sanguinary wars, in the 13th century embarked on a career of conquest that was to include all of Asia and part of Europe.

The Chinese, in their resurgence under the Ming dynasty, did not recover Turkestan. Central Asia remained in the grip of the later Mongols, from the Timurid dynasty in Persia, through the descendants of the Chagatai princes in Turkestan, to the Oirats in Northwestern China, the last of whom by the mid fifteenth century, were bold enough to make forays into China. The 17th century saw the rise to power of the Oirats who dominated vast areas of Mongolia and Turkestan. Not until the middle of the eighteenth century was the power of the Oirat confederacy broken and China,

under the Ch'ing emperors, reasserted its sway in Turkestan.

4. Pattern of nomadic expansion and contraction

Wave after wave of nomadic peoples have made their appearances and then faded away, leaving the imprint of their stay on the palimpsest of Turkestan. The pattern of their entry, their ascendency, and their exit have been similar. Each outburst and withdrawal of the nomads showed but variations on the major theme. The Huns, the Turks, and the Mongols, to mention a few of the more powerful of the plethora of nomadic peoples, all had their geneses in the same region, an area of Mongolia south of Lake Baikal. The process of their rise to power followed parallel lines. First, there was a bitter internecine struggle from which one group emerged triumphant. Second, the nomadic tribes were unified into a strong coalition under the leadership of the dominant group. Third, they expanded outward from the steppes into neighboring regions, especially into the marginal zone of modern Sinkiang and Inner Mongolia. Then they consolidated these areas into bases of operation for the fourth stage, the invasion and, when successful, the conquest of the opulent agrarian lands. At the peak of their strength, these nomadic invaders would establish a strong, militant empire, under an absolutist government, to control the motley subject peoples under their domination.

But once they reached the peak of their power, the downgrade began. The paucity of their numerical strength made it difficult for them to hold large territories. The tradition of intertribal contest instilled the spirit of independence in the minds of the satraps appointed to rule portions of the far-flung empires. The failure to resolve the incompatibility between pastoral and agrarian economy, and the resentment and rebellious tendency of the subject peoples whom the conquerers were only able to overawe by military strength, were all factors which brought about the disintegration and decline of the empires of the nomads.

5. Theories concerning nomadic eruptions

What accounted for the sudden irresistible ferocity of nomad eruptions and what accounted for the docility of their withdrawal? A number of very ingenious theorires have been advanced, as answers to this intriguing question, but so far these are still in the realm of assumptions.

Many scholars have regarded the influence of climate as a possible cause of the high tide and ebb of nomadic activities. Superimposed on the progressive dessication of Central Asia resulting from the withdrawal of glaciers, were the minor cyclic fluctuations of alternating dry and moist spells. A climatologist (C.E.P. Brooks) spoke of the "classical rainfall period of 640 years," and a geographer (Raymond Wheeler) believed in a major alternation of dry and cold every 510 years. Ellsworth Huntington,

a proponent of the theory of climatic alternations, called the phenomenon "the pulse of Asia."

The most important of the multiple influences is believed to be that of the economic effects of climatic changes. When the climate is warm and moist, the land of the nomads is fertile enough to support the nomads and their herds, but when the climate becomes drier and colder, the rivers and lakes shrink and the pasturage is reduced. This cuts down the food supply and forces the nomads to rampage into the land of their neighbors. Speaking of the thirteenth century, Arnold Toynbee declared that the "paroxysm of aridity coincided in date with the demoniac eruption of the Mongols, and it will be seen that the physiographical recoil towards humidity likewise corresponds in date with the rapid ebb of the Mongols." (A Study of History, vol. III, p. 439).

Although the outbursts and recessions of the nomads were periodic, the rigid periodization was too mechanical and many scholars have discredited climate as the sole factor. Huntington suggests that four factors may have impelled the huge migration of the nomadic peoples, namely: climate, the inherent quality of the people especially as manifested by the leaders, the pull exerted by the wealth and the opportunities of the agricultural lands, and the push exerted by over-population. (Mainsprings of Civilization, p. 568).

A period of peace and prosperity would allow the population of the nomads to increase. However, in the desolate steppes, food was dependent upon flocks of sheep and herds of cattle and horses, and the people, unlike their sedentary neighbors, did not have the tradition nor the facilities for food storage. Any sudden change in climate which caused a reduction of pasturage and water supply would create a "time of troubles" and compel the nomadic people to migrate in search of food and pasturage.

When the nomads were experiencing a "time of troubles," the lush riches and the military weakness of the settled peoples would tempt border tribes to encroach upon the agrarian regions. Distress and discontent at home and the lure of wealth abroad furnish the push and the pull of Toynbee's theories. When the leavening of bold leadership and ideas were added, the nomads often were induced to burst out from the steppes of Asia and to set the world in commotion.

Other scholars entirely discount the influence of climate and seek the explanation for the advance and withdrawal of the nomads in social and political conditions. Owen Lattimore, who has given much thought to this question, (cf. Inner Asian Frontiers, passim), lists a number of reasons other than climate, for the eruption of the nomads. There were, for example, technological factors like the invention of the powerful compound bow and the technique of mounted archery which gave the nomads an edge over their enemies.

The Chinese had to adopt the nomad bow and the technique of mounted archery before they could meet the nomads on equal terms.

Another factor, according to Lattimore, was the pastoral economy of the nomads which led to migration. Horses and cattle cannot graze on fields that have been cropped by sheep and goats. Therefore, the nomads whose livelihood depended upon their herds and flocks, must continually seek new pastures. The claims to pasturelands and the right of movement led to wars. The continuous wars stimulated the rise of leaders, hard-headed men who survived the hurly-burly of warfare and politics of the steppes and deserts. Finally, a supreme leader emerged who would then weld the various groups into a grand confederation strong enough to encroach upon the neighboring regions for land, for the profits of trade, and for revenue and tribute from the conquered peoples.

According to Lattimore, the nomads who invaded the marginal zone between the steppes and the settled lands, were not pure nomads but were semi-settled. Their wars of conquest were not only for pastures for their herds and flocks but for land, for the riches of the cities, and for the proceeds of commerce. Moreover, the cycles of their invasion and retreat began only a few centuries before the Christian era when they split from the settled peoples on China's northwestern frontier and when they acquired the technology of nomadic warfare. The true nomads on the steppes evolved from the mixed nomads, not vice versa.

The migrations which led to conquest over a wide area, such as those carried out by the Huns, the Turks and the Mongols, normally did not begin with the true nomads but with the mixed nomads, and were caused by (1) a group breaking away from the mixed nomads in order to become true nomads; or (2) a group breaking away from the true nomads in order to revert back to mixed nomadism. The Huns, Turks, and Mongols had fixed bases of operation and their conquests were for land.

Under these circumstances, according to Lattimore, the cycles of nomadic expansion and withdrawal each went through the following process:

1. The maintenance of large armies of mounted warriors to conquer land for the profit of trade and revenue from subject peoples;
2. A dichotomy of nomad society. The nomadic warriors who went forth to conquer and who were left to garrison conquered territories had control of the sources of wealth but declined militarily. The warriors who stayed in the steppes as the military reserve continued to be warlike but gradually became impoverished;
3. A split within the nomad state between those in the conquered areas and those in the steppes, leading to decline and and withdrawal.

6. Summary

In summary, the workings of the historical process represented

I: Washington S-4 (no date) 1956 AF13 Northwest China AF13 ● Sinkiang AI1

in these tides of nomadic eruptions can hardly be explained by one set of factors, useful as it may be as a contribution to our understanding of this process. Moreover, each act in turn led into a rather involved pattern. Geography and the highly specialized economies of the nomads, particularly when they had reached the stage of pure nomadism, induced them to seek a more stable base for their evolving power urge than could be found in the steppe lands of Mongolia, from which most of the nomadic conquests emerged. It induced them to push first into the oasis situation of Turkestan with its mixed, richer, more stable but, geographically speaking, more fragmented economy. This aspect helped form the pattern of relationships of the group, which was on its way to conquest of other nomadic or semi-nomadic peoples in Central Asia. However, only from the foundation of this economic basis could an effort at conquest of neighboring civilizations be sustained.

The social pattern of development leading a warrior leader to integrate his clan, his tribe, his people, and finally, a confederation of peoples, into a conquest force is interlinked with the previous one. This expansion led to a relative shrinkage of the group that had been carrier of the power urge and more and more force had to be substituted for the self-consciousness of the participants and their community of purpose. In the course of the social development towards conquest and empire building, the initial group gained a feeling of mission but lost its surroundings geographically, economically, and socially. As a rule this change also led to a change in the pattern of emerging leadership: the warrior leader chosen by his own people had to make room for the heir of a diversified empire.

This development again was linked with the development of a relationship to neighboring agricultural societies, particularly China, a relationship that has been understood under the concept of marginality by Krader (The Cultural and Historical Position of the Mongols, Asia Major 3, 1952, 169-183). Economically speaking, this relationship is always one of interdependence. From the Chinese side the natural and necessary exchange of produce was conceived under an evolving series of patterns. In periods of Chinese power ascendancy the nomadic raid pattern was transformed into trade, then into tribute, and then, if necessary, into conquest. However, in periods when a nomadic empire building situation coincided with a decline of Chinese power, the nomads would shake off conquest, resort to raids and to conquest in their turn.

Whatever may have been the causes of the periodic eruption of the nomads, whether they were due to climatic changes or due to concentration and the disintegration of nomadic society, the pattern remained. With clockwork regularity different groups of

625

following page 537

towards Russia, Turkey, and England. The cultural cohesion created by Islam that connects Chinese Turkestan with Russian Turkestan and other neighboring Muslim countries, and that created by Buddhism that connects Mongolia with Tibet through Chinghai and small areas of Sinkiang, marked the four provinces of Sinkiang, Chinhai, Kansu, and to a small degree, Shensi, as one single area which represents one administrative unit.

The Eastern Turks:

The main pattern of social life of the Eastern Turks is based primarily on "Oasis Agriculture" with its irrigational complex. All agriculture in this area is made possible through the organized use of water. The family organization among the Eastern Turks is therefore an extended one, since a certain level of productivity can only be reached through collective labor (upkeep of irrigational systems and dikes). One reason the Eastern Turks developed the extended family pattern is that the family recieves water in proportion to the amount of labor its members put into the upkeep of irrigational systems and canals; the greater the family, the more water is therefore provided for their land.

The Internal structure of the family system is not based upon clan rules. Eastern Turkic communities are governed by a body of leaders, selected from the community itself whereas the larger governmental districts are headed by Chinese officials or, at present, by Chinese Communists. A secondary aspect of Eastern Turkic social life is formed by trade and handicrafts. Merchants and craftsmen form "guilds" which in turn influence the social life of the community.

Kirghiz and Kazakhs:

Kirghiz and Kazakh society is clan-based. (The definition of the notion of "clan" is explained in the chapter about the Social Structure.) All family relationships are deeply rooted in the clan system. The main pattern of social life among these two tribes is created by their nomadic way of life, whose most essential economic activity is cattle breeding. The transition to a semi-sedentary life is now under way. The Communists insist that the Kirghiz and Kazakhs occupy a permanent winter camp site, since this facilitates better political control over the tribes. The choice of the summer camp site still remains more or less in the hands of the tribes. Kirghiz and Kazakhs are ruled by "biks," or "manaps" (elders) responsible to the Chinese officials.

The Mongols: general remarks.

Mongol social life is based on nomadic pastoralism. The basic unit is the nuclear family. A group of patrilineally

N S 105 175 648 182

nomads have descended on the marginal zones, such as Turkestan and Inner Mongolia, conquering and absorbing some peoples and pushing others, in a sort of chain reaction, until the reverberations were felt from China Proper in the east to Russia in the west. The history of China's great Northwest cannot be clearly delineated without tracing in broad sweep the see-saw of power between China and the nomadic peoples.

C. Early History to 1644

1. Cnou Dynasty

N *175 N (101)

In antiquity the Northwest region of China was known as the province of Yung, one of the nine provinces of ancient China. For a long time, it was a region inhabited by peoples whom the Chinese called "barbarians," the Ti in the north and the Jung in the west. The founder of the Chou Dynasty, King Wen (circa 12th century B.C.) was himself a "western barbarian." His fief in the Wei River Valley in Shensi, an area which in the early years of Chinese civilization was fertile and fruitful, provided his son, King Wu, with the men and resources for the campaign to gain control over China. Later, as the barbarians of the Northwest became strong, they forced the Chou court to transfer its capital from the Wei River Valley to Honan.

2. Ch'in Dynasty

The region of Shensi, centering around the Wei River Valley, became the fief of the Marquis (later Duke) of Ch'in. The bountiful resources of the region, enhanced further by the development of irrigation, the militant nature of the people who were part Hun, and the administrative and social reforms initiated by Legalist ministers enabled Ch'in to rise to power, to triumph over the other feudal states in 221 B.C., to conquer the empire and establish the first centralized government over China. Ch'ang-an (now Sian), the erstwhile capital of the Chou kings, became the national capital of a mighty empire from this time on, down through the Han, Sui and T'ang Dynasties.

Under the Ch'in state and later the Ch'in empire, the Chinese began to extend their power up the Kansu Corridor and into the regions of the modern provinces of Ninghsia and Chinghai. In the north, they completed the Great Wall to fend off the northern barbarians and to protect their flanks as they advanced westward. The advances made during the Ch'in Dynasty, which fell in 209 B.C., prepared the way for the great expansion of the Chinese into Turkestan during the Han period.

3. Han Dynasty

With the consolidation of Chinese unity a new power arose among the barbarians of the Northwest. This was the confederation of nomadic tribes formed under the leadership of the Hsiung-nu or Huns. Dur ng the civil war which overthrew the Ch'in

N 315 S [315] new oil plants at Tu-shan-tzu in Sinkiang. Undoubtedly, the exploitation of the Yü-men oil field of Kansu has been considerably increased in the last two years. At a conference on petroleum research, called in May, 1954, by the Ministry of N 315 Fuel, Popoff, a Russian professor, laid great emphasis on the • 648 development of Yü-men oil fields, where Russians have been 177 working side by side with German, Czech, and Rumanian oil experts (KM Oct. 1, 1954). Towards the end of 1953 the Russian Atlas (sic!) was experimenting there on an improved method of oil exploitation which was to be introduced in 1954 (PD Feb. 9, and June 23, 1954).

N 315 654 Special emphasis on oil prospecting and drilling are given by the Communist Government. Throughout the nation, geological surveying and prospecting plans since 1953 have been the most inttensive in China's history. Total Government investment in surveying in the Northwest in 1953 was nearly seven times more than the previous year. Twice as many oil wells were planned to be sunk in 1953 as compared to 1952, while work on other mineral reserves topped previous years' quota by thirty-three percent.

The bureau in charge of prospecting and surveying mineral reserves in the Northwest trained nearly 2,000 workers in drilling, surveying, drawing, and analysis in 1953. (Geological Report, China Monthly Review, May, 1953).

N 315 The first drilling for oil was made some sixty years ago at Yen-chang in northern Shensi province. During the Anti-Japanese war, China spent large sums to equip the China National Petroleum Corporation's field at Yü-men in Kansu. At present, the major production is at Shih-you-ho near Yü-men in the most northwestern part of Kansu at the foot of N [133] the Nan-shan. There the possible oil-bearing formations extend 700 miles, with a width of some tens of miles. Seepages are known in four localities, but only a few anticlines have N [433] been developed. Drilling started in 1939, and the yield amounts to several thousand barrels a day. The oil has a fifteen percent paraffin base. Prospects in Sinkiang appear even more pro- S 315 mising, with oil on both sides of the Tien-shan Mountain Range. [648] Drilling at Wu-su, west of Urumchi and in the northern foot- [433] hills of Tien-shan began in 1935, under Soviet direction. Its current yield is only a few hundred barrels a day. However, some new fields have been discovered and new wells drilled in other parts of the province.

N 315 S [315] Recently, both oil-extracting and refining industries have been growing rapidly. Refining facilities in northwest China with its five oil regions distributed in north Shensi, West Kansu, central Kansu, and Ho-hsi corridor and Sinkiang have been substantially extended. Petroleum development is one of

315 the factors that should soon turn the once poor and desolate expanses of the Northwest into a major industrial area. At the National Petroleum Exhibition, held in Peking in December 1951, an illuminated chart showed that the Northwest is one of the principal sources of oil in the country. (China is rich in oil, China Reconstructs, No. 2, May-April, 1952).

Oil Development in Shensi:

In 1925, Mr. Brouyard, Chief Engineer of the Cheng-tai Railway (a branch of the Peking-Hankow Railway - from Cheng-ting in West Hopei to Taiyuan, the capital of Shansi province), in making a survey for a proposed line from Taiyuan to Sian, the capital of Shensi, explored the petroliferous region east of Yenan, along the Yen-shui and the ravines, locally known as "petroleum ravines," above and below Yen-ch'ang in northern Shensi. An oil plant has been established in Yen-ch'ang, but the cost of transport has confined its market to the adjacent area in Shensi. The present plant at Yen-ch'ang is small and poor, even for handling the small amount of crude oil produced there. Some deposits of oil shale are found in the southern part of the province, in the districts of Pao-chang and Chung-shan.

[131] The North Shensi Basin lies in the north of that province, roughly between thirty-five and forty North Latitude and 107 and 111 East Longitude. The boundary on the east is the Huang-ho or Yellow River, and the oil seepages lie in that part of the basin south of the Great Wall in the valleys of Yen-shui, Lo-ho, and Wei-ho rivers. In Yen-ch'ang, from [648] 1907 to 1914, the Chinese drilled several shallow wells, and from 1914 to 1916 the Standard Oil Company of New York drilled two wells to 1,950 feet and 2,700 feet. This company also drilled five other wells in the basin in the three years they were there, the deepest being 3,500 feet, but results were not satisfactory. After this the Chinese drilled some thirty more wells, but none yielded much oil. Because of the smallness of the seepages and the unfavoragle geological structures, the basin cannot be considered promising. (See Table 1.) 1

Oil Development in Kansu:

The oil reserves of Kansu province are among the richest in the country. China's biggest oil field, Yümen, is located in the northwestern part of the province, and the largest production at present comes from the Shih-you-ho plant. A long sinuous basin stretches some 700 miles northwest with a width of some 100 miles in the east part and from a few miles to sixty miles in the west. Mountain masses border the basin on the northeast [133] and southwest. The oil beds are located in loose sandstones and conglomerates of upper Cretaceous and lower Tertiary age. Possibly the oil originated in Permian or Jurassic formations,

1, [See p. 128--Analyst]

315 and more oil sands may be found in the sands between the
[133] source beds and the present shallow reservoirs, which would increase the reserves a great deal. Oil seepages have been discovered at Wen-chu-shan, south of Chung-yüan (36.37 by 104.32), Shan-hsien-tzu, south of Yung-teng (36.44 by 103.24); Ching-tu-chen, north of Yung-cheng (38.17 by 102.07) and near Yü-men (40.15 by 97.13). Only one oil field has been developed in this basin - the Shih-you-ho, southwest of Yü-men at approximately 39.46 by 97.33 and near the last seepage.

[648] In 1937 the Standard-Vacuum Oil Company sent a party of geologists in to examine the field. After a study of its report the Chinese Government decided to develop the Shih-you-ho anticline. Actual drilling started in February, 1939, on the crest of the anticline near the oil seepage and sent to 492 feet and produced twenty barrels a day from two small oil sands. A second well nearby to a depth of 656 feet gave thirty-five barrels a day. These wells were drilled on the floor of the canyon by two small cable rigs and a small boiler. Then two rotary drills with Diesel engines were brought in from the coal mines. Nineteen holes in all were drilled up to
[433] March, 1944, the deepest being near 1,400 feet. Number 18 well at 1,313 feet came in with 10,000 barrels a day, but blew out cratering the hole. On account of small refinery capacity, only 4,000 barrels of crude could be handled a day. Until a larger and better refinery can be brought in, the wells now drilled supply the crude oil needed. The oil is a paraffin base, with 15.5 percent paraffin content, which is difficult to handle at low temperatures in that part of the country. It is impossible to estimate the potential reserves at present, but the extent of the anticlinal structure offers great promises. A geologist who visited the field in 1943 said that there may be twenty-six to forty-six million barrels of recoverable oil in the pool.
[133] Within the radius of eighteen miles of this field are three other anticlinal structures in the Tertiary sediments that warrant investigation. Other likely structures will probably be discovered as the basin is thoroughly examined.

315 The production of oil at the Yü-men field increased to
433 4,000,000 gallons in 1946. With the completion of thirteen construction projects in early 1955, its production has been considerably increased as well as greatly improved in the refining process of the oil produced. According to press reports, the Yü-men oil fields reported over-fulfillment of production targets for the first quarter of 1955. The oil fields administration stated that output targets for gasoline, kerosene, diesel, and lubricating oil and other items were surpassed by seven to fifty-one percent in the first quarter. (NCNA, April 14, 1955). It was also said that a number of the newly-completed projects

S N 316 [648] Sinkiang. The discovery of uranium and some other fissionable materials has been reported there. While rumors that Sinkiang is being built up into an ataomic arsenal for Russia remain to be confirmed, nevertheless it seems to be of particular strategic importance in the building up of a joint Sino-Soviet Inner Asian fortress.

S N 315 [648] Under a previous Sin-Soviet agreement concluded in 1937, the U.S.S.R. carried out prospecting and drilling in regard to petroleum exploitation. Fields were discovered in several localities, and a refinery was built at the Wu-su field, which, completed in 1940, had a daily capacity of a thousand barrels. This refinery was closed, however, in 1943. The largest field discovered to date, some forty miles in length, is located at An-chi-hai. No estimate of reserves is available at present, but on the basis of known fields and producing wells, Sinkiang has China's most extensive and abundant reserves, far outstripping those of Shensi, Kansu and Szechwan. Moreover, the oil from Sinkiang bores is reportedly of better quality than that found in other provinces in the Northwest.

S 315 316 648 Before the Sino-Soviet Agreement of Moscow on March 27, 1950, the mineral exploitation of Sinkiang was carried out sporadically and on a very small scale, with inefficient local mining methods predominating. Under the terms of the 1950 Moscow Agreements, a joint Sino-Russian petroleum company was formed with Russian-supplied technicians and equipment to undertake prospecting, surveying, working, and refining or petroleum and gas. Two other similar corporations were also organized to explore and exploit the non-ferrous and rare metals. By agreement the products of the corporation were to be divided equally between China and the U.S.S.R., as well as running expenses and profits. Leadership of the corporations was to be assumed by representatives of the two contracting parties in rotation for periods of three years and the corporations were to be staffed by an equal number of citizens from each of the two countries. The agreements were supposed to be valid for thirty years. (China Weekly Review, July 1, 1950, p. 82). It has been reported that all three Sino-Soviet joint corporations have been transferred to Chinese ownership, although with Russian advisers, since the beginning of 1955. At the same time, the Peking Government, together with Sinkiang authorities, sent out three large survey teams to search for new mineral deposits.

N 135 Northwest China has a great variety of minerals, only a few of which have been even partially developed. In addition to the rich oil fields of both Kansu, Sinkiang, and possibly Shensi, and the abundant coal deposits of these three provinces, other recently discovered minerals are as follows: rich copper deposits

000 N *175 635 civilization. The former provinces of Ninghsia, Chinghai, and Sinkiang are China's frontier dependencies. While Ninghsia was part of Inner Mongolia and Sinkiang is the homeland of the Turkic peoples, Chinghai forms a transitional area between the Tibetans and Mongols on the southwest and northeast as well as between the Chinese and Uighurs in the southeast and northwest repsectively. Although these borderlands were first brought under China's political control during the Han Dynasty at the beginning of the Christian Era, their political ties to China were not consolidated until recently.

S 175 648 635 In order to check Tzarist Russia's aggression towards Chinese Turkestan (Sinkiang) after her occupation of the Ili valley, China sent an expedition under General Tso Tsung-t'ang in 1871 to reconquer the region and to make it a province under the name of Sinkiang (literally "New Dominion") in 1881.

N *175 648 635 In view of Russia's continued southward encroachment from Siberia upon Outer Mongolia and Britain's from India northward to Tibet during the Chinese Revolution at the end of the Manchu Dynasty in 1910-1912, China carved Ninghsia out of Inner Mongolia and Chinghai out of greater Tibet, thereby creating two special districts with Yin-chuan and Hsi-ning as their centers under the provincial administration of Kansu in 1913. By 1928, they were made into two separate provinces. However, quite unexpectedly, following the formation of the Inner Mongolian Autonomy, the province of Ninghsia was abolished and has been added to Kansu province in 1955. (In May 1956 the Alashan and Edsingol regions have been detached from Kansu province and incorporated into the Inner Mongolian Autonomous Region. Precise boundary demarcations are not yet known.) Although the political control over these frontier dependencies of Sinkiang, Chinhai, and Ninghsia has been strengthened gradually by the subsequent changes of their administrative status in relation to China, they still remain as "pale" areas in the distribution of Chinese population and culture. That is, the inhabitants of these borderlands are essentially ethnic minority peoples such as Mongols, Tibetans, Uighurs, Monguors, Khirgiz, Kazakhs, etc. They are non-han Chinese peoples with an increasing touch of Chinese cultural influence and an increasing number of Chinese elements among the various native groups.

S N 635 186 [563] The annexation of these frontier territories to China has brought about an artificial connection between the Chinese and the non-Han Chinese minority peoples, both nomads and settlers. Until now, the natives do not seem to have been influenced much by administrative unity. Not much sympathy is exchanged between the Chinese and Lamaist Tibetan or Mongol; even less

S
N **E. Population Problems**

563 1. Traditional Antagonism Between the Moslems and the Chinese
578
669 Of the many problems in regard to the population of North-
● 648 west China, the traditional antagonism between the Moslems
175 and the Chinese, together with its international complications, is by far the most serious. Moslem uprisings have been frequent and often caused great massacres on both sides. In most cases the Moslem disturbances are supported and made use of by ambitious neighboring powers, particularly Russia - both Tsarist and Soviet. In 1871 Tsarist Russia used the 1861-1874 Moslem disturbance as a pretext to occupy the Ili Valley and then force China to cede the lower part of the Valley, west of Khargos to Russia. Time and again Russia took advantage of Moslem troubles in Sinkiang to make some special territorial, political and economic demands in the provinces, i.e., free trade in Sinkiang by the Ili Commercial Treaty of 1851 and the cession of the territory west of Tarbagatai by the treaty of
S Chuguchak (Ta-cheng) in 1864.
648 Sinkiang had always been a center of international intrigue between Russia and Britain for the spoils of Central Asia, as well as the barometer of power relations between Russia and China. (See Foreign Relations).

S 2. The Uighur Autonomy
642
177 Under the Chinese Communist Regime, Sinkiang became
[668] the Uighur Autonomous Area in September, 1955. A National Autonomy for Sinkiang was first recommended by General Chang Chih-chung, a liberal Nationalist Government high official in 1946-49. He was "influenced by views of American politicians who insisted that the principle of self-government should be applied to Sinkiang also - an illusory wish for a people which stood between Russia and China, like a mouse between two cats." (CNA. No. 103, October 7, 1955).

S A continuous great influx of Chinese to Sinkiang has
167 occurred, which is particularly marked by the present-day
708 Army Construction Corps and the presence of the Corrective
466 Labor Force. The soldiers are sent to meet the urgent demand of labor to undertake the gigantic construction program and the latter, estimated at several hundred thousands, are condemned to forced labor in the thinly populated border areas. (See: Labor).

S "Since the Chinese Communist troops entered Sinkiang,
642 the rulers have always been Chinese, and at present, with
668 the introduction of autonomy, this Chinese domination is the
177 more emphasized." (CNA. No. 103, October 7, 1955). Furthermore, Government officials are transferred from Peking to Sinkiang in large numbers. On August 21, 1955, seventy-nine officials from the "First Grade Offices" of the Central Government left Peking for Sinkiang; at the same time

795 'P'ags-pa. After his conversion, the Great Khan, Tümen Sasaq-
171 tu (1557-1593), of the Chahar area, promulgated a Buddhist code
175 of law. His second successor, Legdan, built a Buddhist temple and had the Buddhist compilation of the Tanjur translated. The "Living Buddha" settled at Urga in 1602 and was succeeded by a chain of reincarnations until 1924. In 1620, the Khoshuts, inhabitants of present-day Dzungaria, broke away from Shamanism. Buighabu Bātur also adhered to Yellow Sect Lamaism. As a reward for leading the "holy league" of Oirats who defeated a Red Sect prince's attack on Lhasa, the Dalai Lama ordained Gushi-Khan, the Buighabu's brother, as "vicar" of the Yellow Church. After the Ordos and the Chahar, the Tümet and Khalkha, having adopted Buddhism, also lost their warlike characteristics. In contrast to the "secret history" of 1240, the history of the Ordos prince, Sanang Setsen (1662) dealt not with the conquest of the world but with the conquest of souls.

175 C. The Lamaism of Chinghai
795 The province of Chinghai, or Amdo as the Tibetans refer to
792 it, has played a very significant role throughout the history of Lamaism. From Chinghai came the first new stirrings of Buddhism after the religious persecution by the apostate king, Langdarma. The great reformer, founder of the ruling (Yellow) sect, the Gelugpa, came from this border area. The immediate excuses for China's marching into Lhasa usually have been supplied by events here. Both the present and the late Penchen Lamas had spent considerable periods of exile or semi-exile in one of the most famous monasteries of the area, Kumbum. Cen-
• [648] [795] turies ago the Chinese system of Ambans at Lhasa was instituted after a Chinese army had marched as escort for a disputed reincarnation of the Dalai Lama. This Dalai had been born south of Amdo, but had spent his years at Kumbum. As a meeting place of Mongols, Tibetans and Chinese, the area has also played a vital role, religiously and politically, in matters concerning Mongolia and China.

795 Lamaism has played a role in Chinghai equal to the role that
792 the province has played in the religion. According to Ekvall (1939), one out of every three males in the area is a monk. Lhasa has never succeeded in achieving the secular rule of this region; as a result, all sects of Lamaism including the various unreformed sects and the non-Buddhist Bonist sects have continued to flourish. However, the two largest monasteries, Kum-
792 bum and Labrang, adhere to the Yellow Church. Kumbum had held the pride of place as the site where the great reformer
[669] Tsong-kha-pa was born. After the Moslem rebellions in the last century, however, the population of Kumbum dropped. Until recently it had to bow to Labrang in respect to numbers. Between

N
795 Aty Affairs Commission, both stressed that the aim of the asso-
*668 ciation was to imbue its members with the love for the fatherland.
177
S In Sinkiang and other concentrations of Moslem population in
795 China, branches of the China Islamic Association and the cul-
668 tural associations established by the Communists, have supple-
177 mented the Islamic church, and the function of the Moslem dignitaries.

N 3. A more important reason for the apparently tolerant atti-
795 tude of the Chinese Communists toward Islam is the utilization
• 648 of the Moslem leaders for the purpose of propaganda, both
*668 domestic and foreign. In a speech at the third session of the
177 First National Committee of the CPPCC, October, 1951, Ma Chien declared: "I have received numerous letters from the ahungs in the Northwest and the Southwest regions expressing their desire to study and to reform themselves. In order to assist them to study the revolutionary ideas of Mao Tse-tung as well as to enable these theories to be universally made known to the people of the Middle East and North Africa, we have translated the following documents of the CPPCC: 'On New Democracy,' 'The Chinese Revolution and the CCP,' and the 'Important Documents of the CPPCC.'" (JMJP Nov. 2, 1951.)

The fact that the Chinese Communists intend to use the Moslem leaders to extend Chinese Communist propaganda to their co-religionists in the Middle East may be seen in the statement in the Jen-min jih-pao (June 6, 1952) that the religious leaders of the Northwest were aroused "to boundless sympathy and concern for the people of the Arab countries of the Middle East—Egypt and Iran—in their fight for national liberation and struggle against the United States and British imperialism and to adopt concerted action to support their struggle."

The first act of the preparatory committee of the Chinese Islamic Association was to assist the Chinese Communist Party and Chinese Communist government in publicity work in the Arab countries. In August 1952, it organized a Chinese Hajji Mission to visit Mecca, which, for reasons unexplained, turned back upon reaching Pakistan without going on to its destination. However, two months later, many Moslem leaders from Asiatic countries were invited to attend the Peace Conference of Asian and Pacific Regions, held in Peking, during which Burkhan, chairman of the Association, at a reception to the Moslem delegates, told them that "our religion as well as our customs and habits are fully respected" by the Communist regime. His speech dwelt, however, more on the material benefits than on religious well-being of the people in the Northwest except to say
N that they were permitted to observe their festivals.
[793] Deprived of their civil and judicial duties, the Moslem clergy

795 in the Northwest was utilized primarily as propagandists. In
• 648 April, 1951, three thousand Moslem ahungs and mullahs from
*668 forty-five mosques in Urumchi held a mass meeting to denounce
177 the United States and, later in meetings of their congretations,
793 they made speeches to persuade the Moslem people to sign the Stockholm Peace Appeal, the Appeal for the Five-Power Peace Pact, and to protest the rearmament of Japan. On May 2, 3,500 people, led by ahungs and mullahs of 46 Urumchi mosques offered prayers for world peace. The mass rally initiated a drive for funds for the purchase of planes, tanks and heavy artillery for the Chinese troops in Korea. The minority peoples of Sinkiang donated funds sufficient, it was reported, for the purchase of thirty planes and seven artillery pieces. The religious leaders of Yin-chuan in Ninghsia donated funds for a fighter which they named "Mohammedan."

795 In a way, the acquiescence of the Moslem leaders to assist
793 the Chinese Communists in the promotion of propaganda has
• 648 been a reason for the comparative moderation of the Communist
*668 regime toward Islam in China. The attitude of the Chinese Com-
177 munists toward the teachings of Muhammad has followed very much the line adopted in Soviet Russia. The evolution of the Soviet authorities toward Islam has undergone the following stages: (1) the attack on the teachings of Muhammad as the deification of big capitalistic merchants exploiting the unhappy poor, (2) the argument that Islam was originally the ideology of the peasantry but was later corrupted by the aristocratic class. This view was rejected as being too favorable to Islam. (3) The anti-religious propaganda lines that Muhammad was a myth or that Muhammad was the leader of a feudal revolution. (4) The argument that finally prevailed was that of S.P. Tolstov, that Islam emerged from a social-religious movement which evolved from the feudalism following the disintegration of Arab tribal systems. (Essays in the History of Research into Islam in the USSR, published by the History Institute of the Soviet Academy of Sciences, cited in Missionary Bulletin, September, 1955.)

In China, the argument for and against the teachings of Muhammad also raged in Communist publications early in 1951. Lu Hung-chi, in an article in Kuang-ming jih-pao (January 10, 1951) charged that Muhammad, figuratively speaking, held a gun in one hand while he reached into the pockets of the people for money with his other hand, and that his teachings were an excuse for robbing the people. This article aroused a storm of protest from the Moslem residents of Peking and prompted Ma Chien to write a rebuttle entitled "The Sword of Muhammad," published in the Hsin-hua Monthly (February, 1951 issue), stating that the sword of Muhammad was for self-defense, aimed only

at the counter-revolutionaries and not to coerce the people to become converts. In this article, Ma Chien skillfully diverted the attention of the people from Islam to the United States as the enemy of the nation, saying that it was American imperialism, not Islam, which aimed at the conquest of Asia and the enslavement of the Asians. This line was immediately adopted. On May 16, 1951, the Jen-min jih-pao carried an article entitled, "The American Imperialists are the Deadly Enemies of the Moslems of the World." On April 16, 1951, another article appeared in the Jen-min jih-pao, signed by forty-nine prominent Moslem leaders in Peking, entitled "Moslem Brethren of the World, Rise up to Halt the Crimes of the American Imperialists." The cry was re-echoed by Moslem leaders in the Northwest. Ma Liang-chün, imam of the Chinese Moslems in Sinkiang, issued a proclamation under the title "Moslem Believers, Take Positive Action and Struggle to Crush the Germ Warfare of the United States." (Sinkiang jih-pao, March 13, 1952.)

Thus, by joining the Resist United States and Aid Korea Movement, which was raging at a frenzied pitch in 1950-52, the Moslem leaders in China were able to deflect attacks on Islam launched by some of the Communist publicists. But with the conclusion of hostilities in Korea, the Chinese Communists began to re-evaluate and to revise their policy toward the Moslems in the Northwest. Moreover, by 1954, when Communist China had gained ascendency in Chinese Turkestan and political domination over the Moslem population in that region, there was less need to pacify them by promises. The year 1954 also marked the end of the period of New Democracy, which called for a United Front of all the peoples, and the commencement of socialism, in which the CCP would emerge paramount.

The change of Communist policy toward the Moslem peoples of the Northwest as in other parts of China is seen in the official documents of the Chinese Communists. In contrast to the Common Program of the CPPCC, the blue print for the period of New Democracy, in which, in Article 53, the national minorities were promised freedom to develop their languages and to preserve or reform their cultures and religions, the Constitution of the People's Republic of China (adopted in September, 1954,) pointedly omits the freedom of religion for the national minorities. Article 3, which discusses the rights of the national minorities, states that "all the nationalities have freedom to use and foster the growth of their spoken and written languages and to preserve or reform their own customs and ways." Only in Article 88 was there the provision that the "citizens of the People's Republic of China enjoy freedom of religious belief," and, according to Mao Tse-tung's definition (in his People's

ciations located at Urumchi. With the advent of the Chinese Communists, the nationalities cultural associations were taken over and in their place, cultural halls and cultural teams managed and operated by Communist cultural cadres were established in the cities and towns of Sinkiang.

It is strange that in the pronouncements of Communist leaders and the reports of cultural and educational achievements in Sinkiang in the Communist press, no mention can be found on libraries. One can only speculate that with the expansion of publication enterprises under the Communists, the number of libraries must also have increased, as well as the number of books. In the library of the Sinkiang College of Nationalities, the number of books increased 700 per cent of the pre-1949 figure, and the number of books in the languages of the minority peoples increased by 1,400 per cent.

VII. Organization

The organizational system of public information in the Northwest appears simple but is complicated. Government offices in charge of information services are Bureaus or Committees of Cultural and Educational Affairs on the provincial level, which receive instructions from Peking and control the various information services. Some of these, however, are directly controlled from Peking, and among the newspapers and journals are many which are in the hands of the party rather than of the Government.

The first department devoted most of its time to preventing epidemics, innoculating people against possible epidemics (such as typhoid, typhus, smallpox, cholera) and preventing animal diseases. The National Department of Health was concerned with the promotion of regional health and sanitation institutes. Experimental stations for public health were opened in Kansu. In the Northwest the health programs of the Nationalist Government were launched in the last part of the 1930's. The numbers of hospitals recorded in the Northwest during 1936 are as follows:

	Hospitals	Beds
Shensi	7	263
Kansu	10	124
Chinghai	3	22

The Sino-Japanese war interfered with the progress of the health programs in the Northwest. However, some of the war results proved beneficial. During the war two medical schools were transferred to the Northwest. Sian has had a medical school since 1940 when the famous Medical School of National Peiping University was transferred there. It was not retransferred to Peiping after the war. A medical school was started in Lanchow after the war as part of the National Lanchow University. In 1942 the Northwest Hospital was established at Lanchow, where, in 1944, over 30,000 outpatients and over a thousand inpatients were treated. Much medical field work was done during the war and a few army hospitals were opened in the Northwest. Hsi-ning also started a school hospital and a city-hospital during the war. A special health center was opened at Ting-yüan-ying for the Alashan Mongols.

V. Health and Sanitation Under the Communists

The necessity to extend the work done in the medical field in the Northwest was clearly recognized by the Communist Government. According to the Chinese Communist reports from Peking, Northwest China, included in the overall program adopted by the Party to improve health and sanitation, has made relative progress in the field of public health.

The overall health policies of the Communist Government were adopted in 1950 by the First All-China Health Conference. This Conference stressed the following three principles as the guiding lines: (1) concentration on the health of the workers, farmers and soldiers; (2) emphasis on the means of prevention rather than cure of disease; and (3) uniting the modern and old-style doctors. The latter measure was decided upon because of the tremendous shortage of qualified doctors trained in modern methods to meet the needs of the huge population of China, the problem being more acute in remote regions.

A special conference entitled "The All-China Conference on the

747 799 establishments in the Northwest prior to the war. (See Section on Religion). During the war, however, religiously sponsored welfare work also spread to the Northwest. Among the more active organizations, the Friends' Ambulance Unit (FAU) which came to China in 1941 has to be mentioned; Catholic missionary organs also did much welfare work in the Northwest. The outstanding welfare contribution of the Catholics is their maintenance of orphanages, particularly for girls. In 1933 there existed three Catholic orphanages in Sian (Shensi), six in Lanchou (Kansu) and one in Ch'in-chou (Kansu) in which altogether 480 orphans were cared for. During the war, the number of orphanages grew to eleven in Shensi, twenty in Kansu (including Ninghsia) and one each in Chinghai and Sinkiang. In these institutions altogether 2,758 orphans found shelter and relief. Under the Communists these Catholic orphanages attracted particularly vicious attacks. No data are available from the Northwest; if, however, events in other parts of China can be generalized, it has to be assumed that none of these institutions survives. In addition eleven homes for the old were maintained by Catholic missionaries in the Northwest with over two hundred inmates. Also the Catholic refugee camps at Feng-hsiang, Shensi must be mentioned.

747 648 As the provinces of the Northwest were not occupied by the Japanese during World War II, UNRRA activities did not extend to this region.

V. Chinese Communist Welfare Projects

74 *668 177 From the information that we get from the Communist press and propaganda, the Chinese Communist Government has launched an extensive program of public welfare, dedicated in particular to the raising of standards and security of the working class. It is no wonder that the Communist regime emphasizes the working classes to such an extent, since it claims that its ideological bases rest on this class. Life and medical insurance programs, better working conditions in factories and construction jobs, and welfare facilities for the working people are included in the Communist program. According to the Labor Insurance Law of 1951 (revised in 1953) workers were guaranteed from sixty to one hundred percent of their wages in case of injury or illness (including non-occupational ones) for their first six months of absence; after six months, they were to receive from forty to sixty percent of their wages from the labor insurance fund. Their jobs are secured for them upon recovery. Women had special provision for childbirth, upon which they received eight weeks of paid vacation and the expenses of the birth were taken on by the management. Provisions for the workers' future at old age, and the future of their families in case of accident was guaranteed as well.

745 *668 177

state as they may prefer." (point 14, ibid. p. 22.)

Coming to the second state, the Yenan period, the Communists retreated to an almost amiable position. The differences were summarized by a friendly observer as follows: "The basic structural change which distinguishes the Border Region from its predecessor lies in the broadening of the electorate. As contrasted with the Soviet election system which was restricted, indirect and unequal, the present system is characterized as universal, direct and equal, and to insure this change the secret ballot is substituted for the hitherto open ballot hand-raising. This means that whereas under the Soviets franchise was limited to workers, farmers and a section of the 'petty bourgeoisie', the new system extends the right to vote to all men or women over eighteen years of age, including landlords and capitalists, except when a person is insane or his political rights have been specifically suspended by court action. The Soviet election was also pyramidal. This means that a voter under the Soviets voted only for delegates to a local soviet, while delegates to an upper Soviet were chosen by the lower Soviets but not by the voter. The new system allows the voter to vote as many times as there are local, county or regional elections for members to the representative body of each grade of geographical division. The segregation of farmer and worker voters and their disproportionate representation under the Soviets are abolished under the new regime and secret or unsigned ballots of citizens of all walks of life in the same territorial unit are counted together without discrimination." (Ch'u Yun, Factual Account of a Shensi Trip, or Shen-hsing Chi-shih, Hankow, 1938, pp. 11-12 as quoted in Hsü Yung-yingt A Survey of Shensi-Kansu-Ninghsia Border Region, Part I, p. 43.)

Judging by western standards, this was progress toward democracy. But from the Communists' point of view, it was a temporary necessity.

When the Communists conquered the Northwest in 1949, they found themselves in a much more favorable position than during the war. Hence their "common program" of this stage brought back a lot of the characteristics of the old Soviet Constitution. The Communists made the following points very clear:

1) The People's Republic of China is a country led by the Communists. Those who refuse to follow this leadership will be crushed and denied all rights (Articles 1 and 7).
2) The Communists are ready to continue the war to the last, at least until Formosa is occupied (Article 2).
3) The Communists will protect the private property only of qualified people, and at any time they can disqualify anybody (Article 3).
4) China must be tied to the U.S.S.R. now and in the future (Article 11).

POLITICAL DYNAMICS

I. Historical Background

Political life in China's Northwest, a region which in area comprises one-third of China but with a population that comes to less than six per cent of China's population, is complicated by the dissimilitudes of the geographical components and diversity of its population. Joined by the narrow neck of Kansu province, it is virtually two widely divergent regions. Historically, the problem and basic cause of conflict have been the attempts of the eastern or Chinese end of the vast region to dominate the western or non-Chinese end, and the resistance and struggle for autonomy of the non-Chinese peoples in the west against the domination of the Chinese in the east.

East of the narrow passage of Kansu is Shensi and southern Kansu, a region densely populated by Chinese, forming an integral part of China and subject to all the political vicissitudes of China. This region was the base of strong dynasties in the past not only for the conquest of China but also for the extension of power to the west. The Chinese Communists, who had a nucleus in this region since 1931, considerably expanded their control since 1935 when they established their Shensi-Kansu-Ninghsia Border Region with headquarters at Yenan. From 1935 to 1947 this region was the center of the Communist revolution, and the laboratory of Communist experiments in government and in the mobilization of the people. After 1949, when the Communists moved their capital to Peiping, the Shensi-Kansu-Ninghsia Border Region became one of their many "old liberation areas," and their base for their domination of the Northwest. The headquarters of the Northwest Military and Administrative Council (later the Northwest Administrative Council) as well as the Northwest Bureau of the Central Committee of the CCP were located at Sian.

Westward, beyond the Kansu Corridor is Sinkiang, a huge dominion which, in accessibility and in economic ties is more closely oriented to Soviet Central Asia than to China. During the past century, the province had been the amphitheater for a three-way tug-of-war among China, Russia and Britain, and for a time in the 1930's, this was further complicated by the machinations of the Japanese. The conglomeration of the inhabitants of Chinese Turkestan, three-quarters of whom are Uighurs, a Moslem Turkic people, are split along racial, regional, religious, cultural and political lines and disunited by historical and traditional antipathy, present wide differences of interests and aspiration. Even in their opposition to Chinese domination and in their striving for self-rule, which they share in common, they rarely presented a united front. The history of the Northwest is thus a prolix story of attempts of the Chinese to assert their political dominance and the

attempts of the native peoples to throw off the Chinese yoke and to set up their own government, a story of intrigue and bloodshed, set against the backdrop of international rivalry.

In the past thirty years, superimposed on the political and international complex of Sinkiang were the new ideas that have added fuel to the discords and discontent in Sinkiang. Generally, the more important of the new ideologies injected into the political life of Sinkiang were the following:

1. Policy of assimilation, generally denounced by its enemies as the Great Hanism (Ta-Han chu-i), in which the border peoples were regarded as descendants of an ancient Great Chinese race and should be reabsorbed into the Chinese race. This concept was pushed by the Kuomintang extremists.
2. Program of cultural diversity and cultural autonomy. This idea was pushed by men such as Sheng Shih-ts'ai and Chang Chih-chung, as an alternative to the policy of compulsory assimilation.
3. Pan-Turkestanism and Pan-Islamism, promoted by the native people, especially by the Uighurs and their Kazakh allies, stressed the fact that the majority of people of Sinkiang speak Turkic language and belong to the Moslem faith. The exponents of this concept belong to many shades of political opinion, from the moderates such as Maksud Sabri, Burkhan Shahidi, and Mehmet Emin Bughra, to the more radical faction which included Akhmejan Kasimi, Saifuddin Azizi, and the members of the Kulja coalition.
4. Territorial-aid cultural autonomy under the principle of federalism based on ideas derived from the Soviet policy towards the minority nationalities. This policy was actively propagandized by the Chinese Communists and served to inflame the native peoples as well as to embarrass the Nationalist authorities.

These divergent views, in substance, were the expressions of nationalism on the part of the Chinese and on the part of the native peoples of Chinese Turkestan, especially among the educated classes. As in many other parts of the Orient, the game of politics was not a popular one. The people, downtrodden and persecuted, desired only to be left alone, and they rose in revolt only when tyranny and injustice became intolerable, and they would then follow the cue of their leaders in wholesale uprisings. In the wars of the Oirats against the Ch'ing government two hundred years ago, the leaders were the tribal chieftains; and in the rebellion of the Khojas and the Dungan rebellion in the last century, the leaders were religious prelates. But in republican times, there were few of the hereditary tribal princes or religious leaders taking a part. Instead, the leaders were drawn from the ranks of the bandits, officers in the Chinese army, or young intellectuals who had studied in China or abroad. On the part of the Chinese, the men in political life in the Northwest were either local civil and military officials, or officials sent out by the central government.

Northwest Federation of Trade Unions: The chairman is Chia T'o-fu, a member of the Financial and Economic Commission in the Central People's Government and vice chairman of the Financial and Economic Commission in the Northwest Military and Administrative Council. An influential figure is Chao Chan-hui, director of the Department of Labor in the Northwest Military and Administrative Council and a member of the All-China Federation of Trade Unions.

Federation of Democratic Women: The dominating personality in the Northwest is Chang Tsu-fang, onetime director of the federation in the Shensi-Kansu-Ninghsia Border Region and after 1949 a member of the Executive Committee of the All-China Federation. In the Northwest Military and Administrative Council, she was a member of three commissions. Ma Wen-jui, chairman of the People's Supervisory Commission of the Northwest Military and Administrative Council and director of the Organizational Department of the Northwest Bureau of the CCP, was also director of the Commission of Women's Work. Thus, intimately and inescapably entwined with Communist activities, the Northwest Federation of Democratic Women saw a tremendous expansion of its membership. In Sinkiang, by the summer of 1951, it had branches in 47 of the 78 counties and in five of the ten administrative districts, and 190,000 women members took part in the propaganda campaign to resist America and aid Korea.

Federation of Literary and Art Workers: By September, 1950, 7,000 literary and art workers in the Northwest were mobilized to take part in propaganda activities, and 30,000 writers and artists joined the Reformation Congress of Literary and Artistic Workers in the Northwest to establish the United Front.

New Democratic Youth League (renamed the Communist Youth League in 1955): This is an auxiliary of the Communist Party the function of which was to mobilize the youth. In the Northwest it was guided by Lo I, a member of the Standing Committee of the Central Committee of the New Democratic Youth League and of the China Democratic Youth Federation, and a member of at least two commissions in the Northwest Military and Administrative Council.

An example of the expansion of the New Democratic Youth League in the Northwest may be seen in Sinkiang, where, by spring of 1953, there were 1,015 branches with over 20,000 elite youth members. Half of the labor models in the Urumchi Saw Mill in 1952 were New Democratic Youth League members, and it was reported that the New Democratic Youth League members "have become efficient assistants of the (Communist) Party in carrying out patriotic movements in factories and villages." (NCNA May 4, 1953).

Sino-Soviet Friendship Association: By the end of 1951, there were 1,314 branch associations and 417 sub-branch associations in 157 of the 274 counties in the four Northwest provinces. Over

60,000 of its total membership of 336,610 in the Northwest were (from the city of Sian. Hsi Chung-hsün is president of the Sino-Soviet Friendship Association in the Northwest, and Chang Chih-chung, Chia T'o-fu, Chang Chia-fu, and Burkhan are the vice-presidents. Since 1951, the membership of the Sino-Soviet Friendship Association throughout China has vastly multiplied, as the following figures show: three million in 1950, 17 million in 1951, 23 million in 1952, and 58 million at the end of January, 1953.

The membership of the Sino-Soviet Friendship Association in the Northwest, therefore, must have increased proportionately.

One of the strongest centers of the Sino-Soviet Friendship Association in the Northwest was the Ili Administrative District, where, by fall of 1951, there were 36,814 members in 11 county branches (out of the 12 counties), and in 16 branches of the government. According to Te-li-ha-te, head of the Department of Organization of the Ili branch of the Sino-Soviet Friendship Association, the people of Ili, Altai (Achan) and Chughuchak (Tacheng) had cherished the friendship of the Soviet Union since their revolt of 1944-45, and as their political consciousness was higher than elsewhere in the Northwest, they took the lead in the founding of the Sino-Soviet Friendship Association in 1949.

One of the chief responsibilities of the Sino-Soviet Friendship Association in the Northwest was the conduct of propaganda. Its propaganda objectives were not only to propagate the gospel of the advance technology in Soviet Russia and the "very great assistance received from the Soviet Cultural Associations for Foreign Countries," but also to combat popular opposition to Soviet Russia. The Sino-Soviet Friendship Association in Sinkiang might have fared better if many of the people were not deterred from joining by a whispering campaign warning them that if they joined the Sino-Soviet Friendship Association they would forfeit their right of worship of their religion. (Sian Ch'un-chung jih-pao, November 7, 1951).

B. Elevation of Political Consciousness

Aside from propaganda, the Sino-Soviet Friendship Association in the Northwest also initiated an ideological remoulding campaign in 1951 aimed at 2,500 teachers selected from eleven nationalities. This campaign was one of the many drives, one following or overlapping another, which were correlated to the work of mobilizing and organizing the people. The more important of the popular drives were the Land Reform, the Resist-America and Aid Korea Movement and the Suppression of Counter-Revolutionaries.

By the summer of 1952, the so called land reform was completed in 97 per cent of all the agricultural hsiang (administrative villages) in the then five provinces of the Northwest. The membership in farmers' associations constituted 30-40 per cent of the

N
*563 saw tremendous uprisings. But the Chinese shared in this violence.
795 When they defeated the Moslems, it was their custom to massacre
186 even women and children. (see section on Attitudes and Reactions)

b. Turks

The Chinese Moslems are on good terms with the Turks, and are reported to have feelings of kinship with them. Generally, this has been true even though the uprising of the 1930's ended in skirmishes between Chinese Moslems and the Turks.

N
*563 B. History of Islam in Kansu

795 There are no exact data on the introduction of Islam into
174 Northwest China, but it is believed that the major conversion to
797 the religion of Islam took place during or after the Yüan dynasty (1260-1306). It is unlikely that the first conversion appeared as early as the end of the Tang dynasty (618-906). Richard Wilhelm states, and it is true, that the first Moslem missionaries came to China at the end of the seventh century (Richard Wilhelm, Geschichte der chinesischen Kulture, München, 1928, 238 ff). Islam came to China by two routes, through Turkestan and then from Canton.

N
*563 The first Moslem revolt took place in Kansu as early as 1648.
795 Two hundred years later Yaqub Beg (1865-1877) ruled the newly-
*175 established Islamic empire from Kashgar. Russia, England, and Turkey officially recognized him. Yaqub Beg had an army of 50,000 men.

N
• [648] The Moslems of Kansu tried to establish another Islamic empire (1861-1874). They conquered the western part of Mongolia, but the T'ung-chih emperor (1861-1875) defeated them completely. Another uprising in 1895 was equally unsuccessful.

N
*[668] When the Communists took over Northwest China in 1949-1950, they granted the Chinese Moslems the rights of religious freedom and autonomy. (see section on Constitutional System)

N
*563 The communities of Chinese Moslems adopted the classical
795 Arabian educational system, i.e., each mosque has so-called
891 medresse (schools) connected with it, where boys are taught to
N
[212] read the Koran, etc. This is one reason why illiteracy is so seldom found among Chinese Moslems.

VI. The Indo-Europeans of the Northwest

S
563 A. The Tajiks or Iranians or Sarikolis

1. General characteristics

S
[131] In the southwestern part of Sinkiang there lives a small Iran-
[181] ian tribe called Tajiks, Iranians or Sarikolis, who are farmers,
[197] merchants and traders. They have a reputation for being very
[191] intelligent. They speak an Iranian dialect which is very closely related to Persian. The Tajiks very often speak Turkish as a second language, and the merchants even speak Chinese.

N
*563 The clan /The Nomadic Tibetans/
614 as such owns no property. It serves only as a geneological record
[421] of importance in determining who are not legitimate marriage mates. The clans are patrilineal, but the clan affiliations of both parents limit the choice of possible spouses.

N
*563 Beyond the larger unit, Ekvall states "...the Tibetans acknow-
• 648 ledge no law or control beyond that of the tribe. About seventy years ago some of these tribes paid token-taxes to the Chinese government
[651] as a sort of yearly tribute, but even that has gone out of practice; and, though in a vague way the Tibetans acknowledge the 'emperor's household,' i.e., the Chinese government... to all practical purposes Chinese law is completely ineffective in the region. Not only are the tribes independent of the Chinese government but they are even more independent of each other...." (1939 p. 50-51.)

N
*563 Lhasa has almost as little influence as Peking. It has no poli-
792 tical control over the area, but it still remains the prime ecclesiastical authority and the goal of every prospective pilgrim-trader, i.e., every-Tibetan.

N
*563 Despite the rigors, the feuds and the dangers of Tibetan nomadic
554 life, it presents a very strong attraction for both the nomadic and
556 the sedentary Tibetan. By attaching himself to a nomadic encampment a young and poor ex-farmer can become a social, as well as a literal, climber. Success and prestige are measured in terms of
N
[579] influence and wealth. The high road to these is the road of the nomad, with his herds and his golden opportunities to acquire wealth rapidly by removing it from its previous owner and by trading. With his wealth, regardless of how acquired, he can be lavish with
N
[574] gifts and donations to a monastery. This lavishness combined with the ability to entertain guests liberally, adds to the individual's influence and with influence he has prestige, therefore success. The sedentary man or woman who succeeds in making himself valuable to a nomadic tent is well on the way to becoming a self-made nomad.

II. The Sedentary Peoples

S
563 A. The New Uighurs (Eastern Turks)
121 Some socio-historical considerations are necessary for a better
175 understanding of New Uighur social structure. No clear concepts about the transformation of the New Uighur to a sedentary population have been advanced to this time. However, the following hypotheses are presented. Until the eighth century the New Uighurs (or simply the Uighurs, as they were known at that time), were a predominantly nomadic people. After the collapse of the middle Turkic empire in 744 A.D. Chinese influences upon all the Turkic peoples in Sinkiang became increasingly stronger. This is brought

. /The Tibetans/

*563 [197] race, the Hsi-fans of the country west of T'ao-chao speak the Tibetan language and are as much Tibetans as the inhabitants of any other portion of the Tibetan plateau. They come into contact [177] with the Koko Nor Mongols farther north, whom they bully and plunder. Unlike the Mongols, who are being pushed back every- [648] where along the northern borders of China by Chinese agriculturalists, the Tibetans of the Kansu border hold their own against the Chinese colonists. The northeastern Tibetans are [181] truculent and independent as compared to the Mongols, and they take readily and successfully to farming.

[142] There appear to be two physical types in Tibet, the short, round-faced Mongoloid type, and the tall Aryan type with prominent features. The latter type is common among the Tibetans of [291] Amdo. The eastern Tibetan, even though he is in Chinese dress, [177] may be readily recognized by his peculiar habit of standing with [516] his feet turned out at right angles to his body.

[181] On the whole, these people are hardy, independent, and cautious with strangers, but they are also notably hospitable.

2. Patterns of living

*563 a. Dwelling

342 Like all nomads, the Tibetans have no fixed homes. They live in rectangular tents usually made of yak hair instead of felt, with wooden framework. The bottoms of the tents are made fast with iron pins or animal horns. Mud, stone or dry dung is built up around the tent to keep off wind and snow.

*563 The interior arrangement varies little from tent to tent. A 342 mud stove is in the middle, a Buddha image at the left side. On 352 wooden shelves along the walls are chests and boxes where food 353 and clothing are stored. Skin bags of butter, tsamba or flour, and saddles and rifles also hang along the walls. Shelves on the right side hold pans, water buckets, kettles, bowls, cups, a [237] stone mill and a few skin bags. Near the door there is usually a [372] heap of dried ox dung for fuel.

b. Food

*563 Farm products do not grow in the cold climate and high alti- 262 tude, and transportation is difficult. Thus there is little variety [241] in foodstuffs, and eating and drinking are simple functions. The [489] daily fare is beef, mutton and other domestic meats, fresh and sour milk, butter, cheese, noodles, tsamba (parched barley meal) and tea.

*563 There are no regular meal times in most households. In 264 winter when the days are short, they may eat three meals a day; in spring and summer, perhaps four or five. During the day they [262] eat tsamba and sour milk. The evening meal is noodles with boiled beef or mutton, though the poor can have noodles and beef less often.

Rich and poor eat with their hands, though the Tu-kung (chief

658 871 *175 schools.

In Ninghsia: Two training classes for Mongolian and Tibetan teachers and fourteen primary schools.

563 658 792 871 Special attention was paid to the education of the lamas in the great monastery of Labrang, at Hsia-ho in Kansu. The Mongolian and Tibetan Affairs Commission organized a Tibetan People's Cultural Association which helped to set up a vocational school and a political training class for young lamas. In the field of political instruction, the Central Political Institute also established a Mongolian-Tibetan School at Sining, in Chinghai, with a branch at Suchou, in Kansu.

*175 166 871 During the war against Japan, with the migration of the coastal population inland, universities and middle schools from Peking and other places moved to the Northwest. When the war front was more or less stabilized after 1938, the Northwest en- [648] joyed a comparatively stable peace. These "immigrants" built [658] up cultural centers such as Ch'eng-ku, Ku-lu-pa in Shensi; and with the mass education movement promoted by the National Government, education in the northwest was greatly improved both in quantity and in quality.

658 872 Under the school system of the National Government, children started school when they were a full six years old. Before that age they might go to kindergarten if there were such facilities and if the parents could afford it. But at six the government required every child to attend the first grade. The free and compulsory education covered the first four grades, which were called junior primary school. The fifth and sixth grades were classified as senior primary school. A school with all six grades was called a complete or central primary school. In the Northwest, the National Government made a real effort during the war to push toward the goal of one junior primary school in every pao (approximately one hundred families) and one central primary school in every town or hsiang (administrative village). By the end of the war, all children with the exception of those in really remote areas had a chance to attend a junior primary school, even though some of these schools were of low caliber. As the central primary schools were limited in number, only the luckier ones who either lived close by or were financially better 658 off could enter the fifth and sixth grades. After graduation from 873 the sixth grade, there was quite a hurdle to clear before one could enter the secondary schools. Entrance examinations were difficult because the facilities were so limited that only selected children could be admitted. The secondary schools included three types: the middle schools; the vocational schools, and the normal schools. The middle schools were meant for a selected [874] group, as preparation for more advanced studies. The vocational schools offered training in agriculture, industry, commerce

*668 625 1. The secret service

The command of the police system on mainland China rests with the national headquarters of the Chinese Communist Party. Nominally it is the Chinese Communist Party Central Committee, but the real power is in the hands of the small group which forms the Political Bureau. In turn this bureau is influenced greatly by the Secretariat and the secretary-general. When the secretary-general is strong he may even dominate the bureau. It usually makes the decisions on policy. The secret police service's executive body is centered around the Social Department of the Central Committee of the Party. This Department has a direct system of organization within the Party. In large areas (such as the former northwest region) or in special areas (such as Sinkiang Uighur Autonomous Region), there is a Social Department subordinate to the Party's "Central Committee Sub-bureau." From this level down, like the Party local organization, there is a social department or social secretary at each level to take charge of the secret service in the corresponding area.

*668 625 647 2. Other police systems

Built around this Party secret service system, are numerous other separate, but not entirely independent, systems of police forces. The most important is the regular police. Organizationally, this is a branch of the People's government. Its central [645] headquarters is the Ministry of Public Security under the Govern- [647] ment Administration Council. From this level down there is a branch office of the department at every level of the People's government. This branch commands the regular police forces.

The United Front Department system which extends to the provincial and municipal levels, is designed for two purposes. Negatively, it infiltrates into the organizations of the people and watches their functions. Positively, it dominates and utilizes the people's organizations to promote the Party program.

The system of People's control is similar. Here, people are used as spies for the Party. The People's Procurator system is slightly different. It is a prosecuting government organ. Since prosecution needs the investigation of facts, inevitably this sytem is involved in the police system.

[645] The spy system under the Ministry of Foreign Affairs also has a dual purpose. Positively, this system infiltrates into for- [648] eign territories to conspire for future conquests. Negatively, it is used to detect and prevent possible agitations which may disturb public order in mainland China.

*668 625 708 726 The police and spy system among the military forces can be divided into two parts. The system of political defense is used to weed out potential political enemies inside the army, while the scout and spy system is mainly used to detect military enemies. Both of these systems have branches in the field army and the army areas.

SUBVERSIVE POTENTIALITIES

I. Introduction

*175 69 The history of China's Northwest has been a great number of insurrections and revolts against the established order. Spontaneous outbreaks, however, occurred only as a result of desperation. The forces that ruled the people remained unchallenged until the misery and poverty which surrounded them became unbearable. Even then, the people would not strike out blindly against their oppressors, but would look to their own tribal chieftains and priests for leadership (see section Political Dynamics). In more recent times, intellectuals, army men and even bandits have taken the place of the old leaders, but it would be incorrect to say that the people themselves have the political consciousness which changes governments or overthrows regimes. On the other hand, the persistent nationalism combined with the strong religious tradition that exists among the Moslems of the Northwest, and the tribal and nomadic past of the peoples of Turkestan and Central Asia, could always be aroused by ambitious and popular leaders in opposition to alien penetration. Throughout the centuries, hostility has existed both against any foreign rulers and among the tribes and minority groups themselves. Three major sources of conflict will be mentioned here: 1) The traditional friction among the tribes of Northwest China due to religious and economic differences; 2) wide-spread resentment on the part of the native peoples toward Chinese rule; 3) dissatisfaction with the Communist regime.

*175 *668 • 648

II. Friction among Northwestern Peoples

*563 598 In the first place, because of its geographical position, Northwest China stands at the crossroads of conflicting political ideologies and religious beliefs, originating from the Middle East, India, China and Russia. In an area like Sinkiang, there have lived in uneasy proximity Buddhists, Mohammedans, Greek Orthodox Russians, unorthodox Chinese and atheistic Russians, as well as believers in the most primitive religious practices. Economically also there has existed great contrast: the nomadic tradition of the Kazakhs and Mongols, the oasis economy of the peoples of Inner Asia, the methods of Chinese agriculture, the alpine economy of the Kirghiz of the Tienshan, the economy of the Arikolis who live on the high plateaus of the Pamirs, alongside of which a very young industrial and commercial economy is developing. Friction has always existed between the settled farmers of the oases and the nomadic herdsmen, while within the farming communities, conflicts over water rights, the use of forests and roads, were permanent features in rural life.

N
*668 collectivize was slight, but the speed toward socialization has
177 been increased greatly especially since the middle of 1955. The
plans call for a continuation in the breakdown of privately-owned
S farms. In Sinkiang the 1702 production cooperatives which existed
[668] in 1955 are to be increased to 3469 in 1956. By 1960, 85% of all
[177] households are scheduled to be at least semi-socialized. Further-
[494] more, a relatively large number of mechanized state farms have
been instituted in the Northwest (China News Agency No. 112.).
It is not surprising that these rapid changes, combined with methods
of terror and intimidation, should result in peasant opposition.
(Union Research Service, Oct. 14, 1955.)

N 4. Religious organizations
*668 Religious organizations have also come under attack. Counter-
798 revolutionaries are suspected of hiding in them and of using them
669 for propaganda activities and espionage. Sinister anti-government
N activities are attributed to the traditional secret societies, espe-
*668 cially I-kuan-tao, which has many branches throughout China and
575 appears under various names. It is estimated to have 100,000
members in Shensi, Kansu and Ninghsia. Secret society activities
have existed among the Chinese Moslems since Tso Tsung-t'ang's
invasion of the Northwest. Only now are they being suppressed.
It is unlikely that, after such a long existence, the Communists
will succeed in completely uprooting the organizations in the very
near future.

N C. Centers of Resistance Abroad
*668 It is clear that no effective organs of opposition can exist in
669 the Northwest under conditions of terror and in the face of a cen-
tralized system of police and military control. All that can be
expected is individual terror and sabotage - a method of opposition,
nevertheless, that continues to give the administration constant
irritation and worry. Moreover, if historical precedent can serve
as an indication for the future, a rebellious movement can attain
political significance only when military aid from abroad is avail-
able. This was the case during World War II, for instance, when
the Turks of southern Russia rebelled against the Soviet regime
and sided with the Germans. At present only two important cen-
ters of resistance exist abroad. One is the so-called National
Turkestanian Unity Committee (Turkish: Milli Turkistan Birlik
Quomitasinin), headed by its president, Veli Kayum Khan, a mem-
ber of an old aristocratic Uzbek clan; the other is Formosa, the
rallying point of all anti-Communists from the mainland.

1. The Turkestanian Unity Committee

N Few people in the West are aware of the existence of an East
*668 and West Turkistan government-in-exile, which is supported by
669 the Turks of Central Asia and by Turkestanian refugees. Due to
● 648 their fear of political entanglements with Russia, none of the

668
669
648

N countries bordering Soviet and Chinese Turkestan have given offi-
*668 cial recognition to this government-in-exile. It has its headquar-
669 ters far from Central Asia - in Düsseldorf, West Germany. How-
• 648 ever, the National Turkestanian Unity Committee is supported
S unofficially by many of the Moslem countries of the Middle East
668 and Central Asia, such as Turkey, Iran, Afghanistan, Pakistan,
669 Egypt, Syria, Iraq, Jordan, and Saudi Arabia. In each of these
648 countries the Committee maintains a representative office staffed by two members from each Turkish clan from Eastern and Western Turkestan. Iraq is the exception where there is only one representative. In addition to giving financial aid to the exiled government, these countries render assistance in getting Turkestanian refugees temporarily settled. They also allow the establishment of National Turkestanian Unity Committee branches within their borders.

The Committee is composed of ten departments, each of which is under the combined direction of President Veli Khayum Khan and a secretary. These departments are: 1) Organizations and Social Institutions; 2) Science; 3)Information; 4) the Press; 5) Public Health; 6) the Clergy (Turkish: Ulema); 7) Military Affairs; 8) Education, directed cooperatively by all members; 9) Women's Activities; and 10) Foreign Relations, of which Veli Khayun Khan alone is the head.

The spiritual leader of the movement for an independent Turkestan is the famous turkologist Zeki Velidi Togan, who is now a member of the Philosophical Faculty of the University of Istanbul. A native of Bashkiria, Zeki Veliki Togan studied and taught Arabic literature at the University of Kazan. In November, 1917, he became president of Bashkiria. In 1922 he led the Basmachi revolt against Soviet rule. With their suppression, he fled to Tashkent, and from there to Turkey.

During the Second World War, the National Committee gave Germany effective aid against Russia, but its aim always has been independence from any foreign power. "The Germans, as the enemy of our enemy, were temporarily our friends, but we envisaged this state of affairs only for as long as they were fighting against the Russians." (Milli Turkistan #79B, p. 5). The ultimate goal of the Turkestanian government-in-exile is to liberate all of Soviet Central Asia and Chinese Turkestan, a territory of about four million square miles with a population of over twenty million. The leaders of the National Turkestanian Unity Committee claim that they are able to maintain contact with the peoples of Central Asia and that messengers frequently cross unguarded mountain passes to take contraband literature to Communist-controlled countries, and return to the West with reliable information of conditions under Communist rule. Naturally, it is difficult to estimate the degree of influence which the National Turkestanian Unity

N Committee holds over the people of Northwest China. Nor is it
*668 possible to predict to what extremes a fanatically nationalistic
669 movement may go in order to establish a Greater Turkestan Em-
648 pire, or the new sufferings which such a Turkic regime may mean
S to others.

[668]
[669]
[648]

2. Formosa

Since 1949, Formosa has been the natural center for anti-Communist activities. The Nationalists attempt to maintain contact with the border regions, but it is impossible to estimate the effectiveness of such an espionage or sabotage system. Refugees from the Northwest and elsewhere are given subsidies. Frequently they are employed in the anti-Communist propaganda and planning undertaken by Taipeh. The Commission on Mongolian and Tibetan Affairs sponsors radio broadcasts to the Northern, Northwestern and Western border regions, and has done most of the planning for the eventual overthrow of the Communist regime. These include, 1) a draft plan for the administration of the border regions during the counter-offensive, 2) a draft plan for anti-Communist work to be handled by the anti-Communist agencies in the border regions (although no details are given about them), and 3) plans for the training of administrative personnel from the border regions. The Commission has also been publishing books and pamphlets on the problems of these areas.

An anti-Communist branch of the China Islam Association also has its headquarters on Formosa. It serves as a center for Moslem refugees from the Northwest, as well as from Inner Mongolia and China Proper.

Aside from these organizations, there are also individuals who possibly may form a nucleus for future anti-Communist leadership. They include such people as General Pai Chung-hsi, who works closely with the China Islam Association on Formosa, Yolbas Khan, one of the Kazakh leaders who fought with Osman Batur, Ma Hung-k'ui, the former governor of Ninghsia who now lives in San Francisco, and Ma Pu-fang, the former governor of Ch'inghai, who escaped to Formosa and thence to Egypt in 1949. The latter two are devout Moslems and have fought actively against the Communists in the Northwest. Ma Pu-fang is remembered for his enlightened rule and is trusted by the Moslems in all parts of the Northwest. (See section Biographies for details on these men).

Thus, the potential organization and leadership for a non-Communist government in the Northwest exists. Their practical value must remain slight as long as the regime in power continues to be centralized and as long as it gives the people enough material benefits to take the place of political freedoms.

#668 658 of Muslim-Hui, Uighurs (Sarigh-Uighur), Kazaks, Usbeks, Tatars, and Tung-hsiang nationalities. (NCNA Peking, August 4, 1952).

#563 484 A 45 member delegation from 15 different nationalities of Northwest China arrived in Peking yesterday to take part in the coming October 1st National Day celebrations....

The Northwest delegation, headed by Mainor, an Uigur woman, included the following 15 nationalities: Han, Hui, Uigur, Kazakh, Mongolian, Tibetan, Tunghsiang, (Sarigh-Uighur), Uzbek, Manchu, Tartar, Solon, Khalhas (Kirgiz), Tajik, Sibo and Russian." (NCNA Peking, September 24, 1952).

3. Minority group organizations

#668 #563 794 Various nation-wide organizations such as the China Buddhist Association, the Chinese Islamic Association, the Chinese Moslem Cultural Association, and the China-Soviet Friendship Association were organized with numerous minority and local leaders as members and sponsors. The local chapters also have propaganda departments. For instance, the Tibetan Buddhists in Chinghai, under the leadership of Hsi-jao-chia-ts'o contributed 728,750,000 for the Resist-America Aid Korea movement in the year 1951 alone. Some monasteries signed patriotic compacts and launched programs of propaganda on current events. According to Hsi-jao-chia-ts'os report,

"The next step is to expand the propaganda work, mobilize the lamas to organize propaganda teams, make use of temple fairs or festivals for propaganda activities, and carry the propaganda deep into the rural villages and nomadic regions.... In pushing the autonomous work in the minority region, Buddhism should give more active support and preach the nationality policy of the People's Government." (Sian, Ch'un-chung jih-pao, November 23, 1951.)

[788] [648] Besides the Buddhists, the Moslems are used to promote the Communist programs, not only in Northwest China, but some were organized into pilgrim groups to visit Mecca and the Moslem nations in the Near East in order to win the friendship of these nations for Red China.

#668 648 The special effort to create Sino-Soviet Friendship Associations in northwest China can be seen in the following incomplete figures. By September of 1951, Sino-Soviet Friendship Association organizations had been organized in four provinces, four municipalities, thirty-six administrative districts and 157 hsien in northwest China. There were 1,314 branch associations and 417 sub-branch associations with a total membership of 336,610 of all nationalities. The purpose of this association is to tell the people of the merits of the USSR.

Obviously a special attempt has been made in Northwest China to capture the minorities with propaganda.

*668 796 656 Furthermore, in places where restrictions are exercised over the slaughter of cattle and sheep, these restrictions may be relaxed.

*668 484 648 *563 B. Guided Tours

Representatives of national minorities from northwest China are invited to visit Peking and other urban centers of north and east China. They are guided to see the factories, schools and palaces of historical interest. After being deeply impressed they are sent back to their homes. They often become good native propagandists for the Party.

*668 208 876 C. School Programs

In local schools, the pupils are not spared from propaganda. For instance, in the Mongol schools in the province of Chinghai: "In mathematics, the number of American and bandit Rhee's troops annihilated by the Chinese and Korean people's armies in Korea and the construction figures in Chinghai were made into questions for the students and the masses to solve. By this way, they not only learned mathematics but they also retained in their minds the victorious results of our war and the great achievements in construction following the liberation." (Sian, Ch'un-chung jih-pao, March 30, 1952.)

*668 208 D. Other Methods

The whole propaganda system generally functions as follows. When the Party central committee decides to promote certain propaganda, it orders the reporter at every level of the Party organization to report the party line to the people inside as well as outside the Party. Then the propagandists and activists all go out to do the work. This can be done in various ways, according to the situation. In factories, it may be a kind of question and answer. The workers might be asked to check each other with these questions until all got the right answers. In streets, it might be in the form of door-to-door visits and "casual chats." While these were going on, the people would be bombarded daily with the same theme in newspapers, blackboard newspapers, wall newspapers, periodicals, books, pamphlets, pictures, cartoons, radio broadcasts, concerts, lantern slides, movies, plays, operas, story-tellers, picture-story books, street meetings, signature drives, production competitions, challenges, counter-challenges.. and a lot of other devices to drive the point home.

V. The Campaigns and Contents of Propaganda.

A. Campaigns

1. Destruction of organized resistance

The contents of propaganda follow the shifts in the Party line.

159 afforestation, construction and repair of roads, and introducing
185 the irrigation system. During the fifteen years of his adminis-
[656] tration, 1933-1948, Ninghsia Province changed from a land of devastation to a land of peace and normalcy, achieved by ruthless regimentation.

159 When the war between Japan and China broke out in 1937, Ma
• 648 Hung-k'uei volunteered to fight the enemy. Because of the importance of the Northwest, and because of the importance of Ninghsia as the gateway to the Northwest, he was ordered by the Central Government to stay in Ninghsia to guard that strategic area against Communist infiltration. From 1937-1945, however, Ninghsia became a part of the Eighth War Area, and Ma was appointed as the deputy commander-in-chief. When the war against Japan was brought to an end in 1945, he was appointed deputy director of the Northwest Headquarters of the president.

159 When all-out fighting started between the Nationalists and the
669 Communists, he was given the post of deputy Director of Military and Political Affairs of the Northwest Area. In July 1949, when the Communist troops began to push their way to the Northwest, he joined Ma Pu-feng, another member of the famous Ma clan, then Director of Military and Political Affairs of the Northwest Area, to set up defense lines. But the victorious forces of the Communists broke through all these lines and pushed their way to the eastern and southern parts of Kansu Province. The two Ma flew to Canton, the provisional capital, to see Vice-President General Li Tsung-jen for new instructions. It was decided to concentrate the troops to defend Lanchou. On August 25, 1949, when the troops of Ma Hung-k'uei were still some eighty miles away from Lanchou, the Communist troops had already reached that city. By the middle of September, 1949, the whole Northwest, including Kansu, Ninghsia and Chinghai, was taken over by the Communists.

[631] In 1949 when the Nationalist Government took up the defense of Kansu Province, Ma was appointed concurrently as governor of Kansu. His administrative record in Kansu was short-lived. The Communists took over the whole Northwest by September, 1949. When the Nationalist Government retreated to Taiwan, both the military and political life of Ma Hung-k'uei came to an end. He entered the United States and lived a life of retirement in San Francisco.

159 **Ma Hung-pin (1883-)**

Another of the Four Ma who once ruled the Northwest of modern China, Ma Hung-pin is a cousin of Ma Hung-k'uei, governor of Ninghsia Province from 1933-1948 and governor of Kansu Province from 1948-50. Together with Ma Pu-fang and Ma Pu-ch'ing of Chinghai Province, they were usually called the "Four Ma of Islam" in the Northwest.

159 701 the "Four Ma of Islam" in the Northwest. When he was twenty-one years old, Ma Hung-pin started his military career by serving as commanding officer of the cavalry corps in charge of the Sining mines in Chinghai Province, and at the same time he was a member of the reclamation commission and mining commission of that province. In 1911, he became commanding officer of the cavalry batallion in charge of the patrol of the western region of Kansu. His first military merit was achieved when he pacified the disturbances of the two Mongol banners in western Suiyuan who were stirred to revolt by the independence achieved by Outer Mongolia in the first years of the Chinese Republic. In 1914, he was the commanding officer of the Seventh Cavalry Batallion and stationed in western Suiyuan guarding the Yellow River Bend and keeping a watchful eye against the Outer Mongols. Because of his meritorious record in the pacification of bandits in his area, he was awarded several medals and was promoted to lieutenant general by President Li Yüan-hung of the Peking Government. Later he also received a medal from the [648] government of Belgium for his excellent work in protecting Belgian missionaries. In 1920 he was appointed as Defense Commissioner for Ninghsia (not a province at that time) and was charged with the duty of defending the frontier areas. In 1926 he was given the post of Pacification Commander of the Shensi-Kansu border regions. In 1927, when the Northern Expedition began, he was the commander of the 24th Division of the Second Army Group of which General Feng Yu-hsiang (the Christian General) was the commander-in-chief. In 1928 he was transferred as the commander of the Seventh Division.

159 635 When the Nationalist Government was established in Nanking, Ma Hung-pin was appointed the first governor of the newly organized province of Ninghsia. This was, so far, the first political assignment for Ma. In 1930 he was also made acting governor of Kansu Province. His political life ended in 1933 when his cousin, Ma Hung-k'uei, succeeded him as governor of Ninghsia.

159 [579] From 1934-1936, his main task was to pacify the remaining bandits in the eastern region of Kansu. Because his policy in suppressing bandits was to win them over rather than annihalate them, he had won for himself the nickname of "Ma the Kind Man." In 1937, as commander of the 81st Division and, concurrently, defense commissioner for the western region of Suiyuan, [701] [648] he led his troops in fighting the Japanese invaders in that area. In 1940 he became commander-in-chief for the defense of Etokuchi, a Mongol Banner in western Suiyuan.

159 669 * 668 When the Communists started their campaign in the Northwest, Ma Hung-pin surrendered Ninghsia Province to the People's Liberation Army on September 16, 1949. Because of this drastic move, the whole Northwest was soon lost to the Communists.

159 614 635 under the Ma family in Chinghai Province started with their father, Ma Lin, who devoted his efforts toward the promotion of education within the province. After Ma Lin died, his brother, Ma Ch'i, took over the administration. But when the war with • [648] Japan began in 1937, Ma Pu-fang was given the position of governor of Chinghai, and at the same time he shouldered the tasks of leading the Kuomintang and commanding the troops within that province.

159 [701] Ma Pu-fang was a career army officer. He started as a commanding officer of a batallion, and gradually climbed up to the post of commander of an army. When his uncle, Ma Ch'i, [635] was governor of Chinghai before the Sino-Japanese War, he became a member of the provincial government. When he finally took over the administrative job in Chinghai in 1937, he was one of the youngest governors in China.

159 635 185 For more than thirteen years, 1937-1950, he held the position of governorship. During his administration, particularly during the war years, he aimed at the following six main tasks: First, he organized the Pao-chia system not only among the Chinese and Moslems, but also among the Mongols and Tibetans in his province. Second, he trained the local militia for the [206] purpose of maintaining local order. Third, he was very strict in carrying out the policy of elimination of opium. Fourth, he [871] conducted the movement of compulsory education aiming at the total elimination of illiteracy within Chinghai. As a result of his policy, in a single year more than a hundred thousand people learned to read. In addition, there were 8 middle normal schools, 131 primary schools and 805 grade schools in that province. The fifth task was to construct highways, and during [499] his administration, more than two thousand kilometers of highways were constructed. The sixth point was afforestation. Every person was compelled to plant five to ten trees a year, and as a result, more than seven million trees had been planted during those war years.

159 77 641 635 Being a Moslem himself and realizing the complexity of religions in Chinghai, Ma Pu-fang was cautious in his handling of different religious groups. On the whole he worked toward religious harmony, and his policy was one of equal treatment toward all tribes. He chose his personnel regardless of religion or race, on the basis of capacity and personality. Thus he was generally trusted by all religious groups in his province.

159 669 When the Communists began their campaign in 1949, they pushed their way to the Northwest. Ma Pu-fang was appointed director of the Administrative Headquarters of the Northwest, succeeding General Chang Chih-chung. Joining forces with Ma Hung-k'uei, he directed the defense of the Northwest. Unfortunately, all his attempts failed and by October, 1949, the

Inasmuch as Chao Shou-shan, governor of Shensi, is not a Communist but only a political figurehead, the actual power in Shensi was in the hands of P'an Tzu-li. While vice-governor of Shensi, P'an was responsible for mobilizing the people and preparing for the elections. He pushed through the campaign for the suppression of counter-revolutionaries and also expedited the judicial process, clearing seventeen thousand cases from the dockets in a couple of months.

Saifuddin Azizi: Communist, government official

Born 1914 in Sinkiang. A Uighur. Studied in the Central Asiatic University in Soviet Russia, majoring in law and political science. Commissioner of education in the provincial government of Sinkiang under Chang Chih-chung's administration, 1946 and 1947. Member and representative to the first People's Political Consultative Council, 1949, delegate to the CPPCC. Member in the Central People's Government Council, and vice-chairman of the Commission on Nationality Affairs, 1950, and member of the Political and Legal Commission of the Central People's Government and member of the Constitution-Drafting Commission. In September-November 1955 he served as vice-chairman of the Standing Committee of the National People's Congress and a member of the National Defense Council.

In the Northwest, he was a member of the Military and Administrative Council, in which he served as a member in the Political and Legal Commission and the Nationality Affairs Commission. In 1953, when the MAC became the Northwest Adminis-

arrived in Sian in November 1868. From 1867 to 1872, for six years, Tso fought with the Mohammedans, and finally in February, 1871, the headquarters of the Mohammedans, Chin-chi-pao, was taken by Tso's troops and their leader, Ma Hua-lung, was executed. In August 1872, Tso finally arrived in Lanchou, Kansu. By November 1873, the whole province of Kansu was liberated from the Mohammedans, and Tso was made the associate grand secretary. In 1874 he was promoted to full grand secretary. In 1875 the trouble in Sinkiang broke out, and Tso was ordered to take charge of the military affairs of that area. After all the preparations were made, Tso began moving his troops westward to Sinkiang, and by 1877, both the northern and southern regions of T'ien-shan were recovered. In 1878, the whole region of Sinkiang was restored and Tso was awarded by promotion to second class marquis (hou) and his lieutenant, Liu Chin-t'ang, was made a baron. In 1880, when Tseng Chi-tse was sent to Russia by the Manchu government for the second negotiation of the return of Ili which the Russians occupied during the Turkestan uprising. Tso was ordered to move his troops to stand by for any eventuality. But in August 1880, Tso was suddenly summoned back to Peking. He arrived at the capital in February 1881, and was appointed to serve in the Grand Council and the Tsungli yamen. In 1881 he was appointed governor-general of Kiangnan and Kiangsi. In 1883, he quelled a minor uprising in southern Shantung. By August 1884, the conflict with France began and the coast of Fukien became seriously involved, so Tso was once again appointed high commissioner of that province, and in December 1884 he arrived in Foochow. In the spring of 1885, negotiations with the French were resumed and by June 9, 1885, a treaty was signed by Li Hung-chang with the French representative. In September 1885, Tso died in Foochow. He was granted all posthumous honors and was canonized as Wen-hsiang.

[648]

The achievements of Tso Tsung-t'ang in the Northwest can be summarized briefly in the following points; First, his military achievements had consolidated the political control of the Manchu Dynasty in the north. The pacification of the Nien revolts in Chihli and Shantung, the suppression of the Moslem uprising in Shensi and Kansu and the defeat of the Sinkiang rebels, chiefly Pai Yen-hu and Yakub Beg, all contributed heavily to the restoration of Ching power in the Northwest.

S
[648]
Secondly, his diplomatic triumph in dealing with both Russians and British in Sinkiang had secured that territory under the Chinese administration. During the civil war in Sinkiang, the Russians occupied Ili and the British supported Yakub Beg in the south. At one time when the northern region of T'ien-shan was recovered by Tso-s troops, British diplomats

159 Chinese Soviets, 1950, political commissar in the People's
*668 Liberation Army, member of the NW MAC, and a member of its
631 Financial and Economic Commission, vice-chairman of Kansu
496 People's Government and director of its Commission on Financial and Economic Affairs, director of the Northwest Railway Trunk Line Engineering Bureau, and deputy head of the political committee of the Northwest Railway Trunk Line. 1952, vice-minister of Railways; 1955, vice-chairman of the National Construction Commission in the State Council of the Central People's Government; member of the CCP. Member of the National Defense Council, 1955.

[466] Wang's major responsibility has been the extension of the railway from Lanchou into Sinkiang, and he commanded the troops which supervised the workers building the railway, many of them slave laborers.

159 Wang, Tzu-i: Government and Party official
*668 Former director of the Office of Civil Affairs in the Shensi-
631 Kansu-Ninghsia Border Region, 1950, member of the Northwest Military and Administrative Council, member of its Land Reform Commission, vice-chairman of its Political and Legal Commission, head of the Department of Personnel, and head of the Department of Civil Affairs. 1953, vice-minister of Interior in the Central People's Government.

Wu Hung-pin (1902-): Moslem leader, government official

Born in Kansu Province in 1902, reared in a Moslem family. In 1930, graduated from the National Peking University; 1932, took part in Anti-Japan activities in Shanghai during the Shanghai incident; 1936, organized Moslem People's League in the Anti-Japan and National Salvation Association; 1945, organized and headed the Lanchou branch of the Democratic League; 1949, represented the league in the First Chinese People's Political Consultative Council in Peking and was a member of its standing committee; in the same year, appointed mayor of Lanchou; vice-chairman of the Military Control Commission in Lanchou, and member of the Northwest Military and Administrative Council. 1953-54, member of the Northwest Administrative Council and served concurrently as mayor of Lanchou.

Concurrently, in Peking, he was a member of the Commission on Nationality Affairs, a member of the central committee of the Democratic League, member of the Board of Directors of the Sino-Soviet Friendship Association and a member of the executive council of the China Peace Committee, an outfit organized in 1950 to rally the people to support the campaign to resist America and aid Korea.

159 Wu was noted as an able organizer. He organized the students
*668
● 648

159 of Shanghai and engaged in the anti-Japan activities during the
*668 Shanghai incident when the Japanese troops invaded Shanghai.
• [648] He also organized his own Môslems after the Sian incident when the Japanese aspirations in China became very clear. When the war was over, he was responsible for the organization of the Lanchou chapter of the Democratic League. Being an educated [354] leader in a minority group has helped him reach his high position in the Communist government.

159 Yang Ming-hsuan: Member of the Democratic League
*668 A native of Shensi Province, dates unknown. 1937-45, vice-
631 chairman of the Shensi-Kansu-Ninghsia Border Government and chairman of the Northwest Branch Committee of the China Democratic League; 1949, delegate to the CPPCC: 1950, member of the People's Government of Shensi Province; 1952, member of the Military and Administrative Council of the Northwest, director of the Commission on Culture and Education of that council and member of the Commission on Nationality Affairs; 1953-54, appointed one of the vice-chairmen and secretary general of the Northwest Administrative Council, and chairman of the Committee on Culture and Education; since 1951, member of the National Committee of the People's Political Consultative Conference, member of the Central Committee of the Democratic League and member of its Standing Committee. In 1955, he was made a member of the Standing Committee of the National People's Congress.

159 Yang Ming-hsuan belongs to that group of men who, claiming
*668 to be non-Communists and members of third parties, have served the Communists well. It may be noted that he was, even before the Communists came to power, a vice-chairman of the Shensi-Kansu-Ninghsia Border Region People's Government. Later, after 1950, he was director of the Commission on Culture and Education, with the task of bringing the students and teachers in line. In 1951, the Democratic League announced that it would devote its efforts to rallying and mobilizing the students and teachers, and Yang Ming-hsuan, as head of the Northwest headquarters of the China Democratic League, turned the attention of the league members toward organizing the students and teachers. But Yang's services to the Communists went further. He sought also to use his influence in bringing other political factions into line with Communist policies. When the Northwest Work Committee of the Kuomintang Revolutionary Committee was formed with Chang Chih-chung as head, Yang was among the Communist officials who spoke, saying that the duty of the minority parties was to follow the lead of the Communist Party.

1: Washington S-4 (no date) 1956 AF13 Northwest China AF13

COMMUNICATIONS

I. Introduction

A. Geographical Setting

101 The Northwest Region under Communist China consists of the provinces of Shensi, Kansu (including former Ninghsia province), Chinghai and Sinkiang Uighur Autonomous Region. It is surrounded on the northeast and east by Outer Mongolia, the Inner Mongolia Autonomous Region, Shansi, Honan and Hupei, and on the west and northwest by Kashmir, Afghanistan and Russia. Szechwan (including Sikang) and Tibet border it on the south.

B. Historical Background of the Northwest Trade Routes

*175 487 [439] Commerce was possibly the main factor in the development of roads. In ancient times, the localization of scarce and desirable goods such as silk, led to definite long distance overland routes between China and Central Asia. The routes started either from Shensi, or Honan in China proper, and led via Kansu to Sinkiang, known as Chinese Turkestan. There were two important roads which connected China with Central Asia:

1) The Southern (or Silk) Road, from Tun-hwang in Kansu along the southern part of the Lob Nor and then along the southern brim of the Taklahakan desert via the cities of Yü-tien, Hotien (Khotan) and Kashgar to Ulugh Chat, thence a trade route leading to Central Asia through the Pamir Pass. Another road led from Turfan via Kurle Aksu and Kashgar also to Ulugh Chat.

2) The Northern Road went through the eastern part of Sinkiang along the Tienshan North Road by Hami, Turfan, Urumchi, Wusu, and Ili to Hocheng and thence to Alma Ata.

The origin of the caravan trade can be traced back even beyond the time of historical records, so we have no idea when these roads came into being. However, it was over these trade routes that the people of the East and West first met on peaceful terms, long before the seas had been navigated. To the ancient merchants this kind of route was the most natural and direct way to guide a caravan from Eastern Turkestan (or from China Proper via Turkestan) toward Bactria, or following the opposite direction from west of the Pamirs toward the Yellow River. This old trade found one of its best markets in the ancient Roman Empire, to which, among other things, the large amount of silk exported from China gave its name to one of the trade routes.

*175 • 648 487 The importance of China's commercial relations with Bactria and the Mediterranean provinces during the Han dynasty made it advisable for the court to send there such envoys as Chang Ch'ien in 122 B.C. and Pan Ch'ao under the Emperor Ming (A.D. 58-76) both empowered to negotiate treaties with the kingdoms of the west.

It was the Mongol Empire under Chingis Khan (1162-1227) which extended her power from the Yellow River through the Northern Road across Asia into Poland and Hungary to the Danube. Marco Polo went to China from Italy in 1275 by way of the Southern Road. Through the centuries, however, the life of the trade routes was subject to frequent fluctuations. There have been interruptions to commerce during the periods of warfare when the Huns came south of the mountains, and the roads were overrun. But as soon as hostilities ceased, the merchants would resume their accustomed task of rebuilding their caravans and carrying loads of goods eastward and westward.

These trade routes remained significant through the years until modern transportation was introduced to China. Later on, motor highways were built, based on the old trade routes in this area. The Lanchow-Urumchi-Alam Ata Railway is presently being constructed along the old Northern Road. Even so, caravans still travel throughout the northwest.

II. Communications Development before and under the Nationalist Government

A. Railways

In the vast area of Northwest China, there was only one railway line which was an extension of the Lunghai Railway running to Shensi province. This railway is an east-west trunk line, starting from a seaport in Kiangsu, running through Honan and Shensi, and now into Kansu. Construction was started on different sections as early as 1903, but owing to civil strife only the 810 kilometer section from Taipu Harbor near Haichou in Kiangsu in the east, westward to Ling-pao in Honan, was completed prior to 1930. Construction on the section from Ling-pao to Tung-kuan, a distance of about seventy kilometers, was initiated in 1930 and completed in August, 1932. It was extended another 130 kilometers to Sian in December, 1934. Service was inaugurated before 1937 on the last section in Shensi from Sian to Paoki, a distance of 170 kilometers.

Because of obstructions in Taipu Harbor, a new port at Lien-yün was built in 1935 to serve this railroad. In the same year, a thirty-seven kilometer extension to join the new port with the trunk line at Hsin-pu was completed.

During the war, railway construction in the Northwest was emphasized. To solve the serious shortage of coal on the Lunghai Railway, a branch line of about 138 kilometers was created in December, 1940, from Hsien-yang northward through San-yüan and Yao-hsien to Tung-ch'uan in Tung-kuan county. Despite the extreme shortage of rail-building materials and manpower, work on the extension of the Paoki-T'ien-shui section began in 1939 and

Construction was initiated at Lanchou on
*125 Communist National Day, October 1, 1952, immediately following
*668 the completion of the T'ien-shui-Lanchou section. A Sino-Soviet
496 agreement was concluded on October 12, 1954 which provided that
499 the originally planned route was to be extended from Urumchi to
648 Ho-cheng on the Sino-Soviet border to link with the Russian Turk-
• 648 sib Railway at Alma Ata. Construction on the section on Chinese
territory was to be undertaken by Communist China, while Russia
was responsible for the construction on the section from Alma Ata
to Ho-cheng. It has been reported that Russia had already finished
the section on its territory in 1955.

On the Chinese side, service on the Lanchow-Wu-wei section of 303 kilometers began in February, 1954. At the end of that year, tracks had been laid as far as Chiu-pa, 347 kilometers northwest of Lanchou. On September 28, 1955, the section was extended to Chang-yeh, which, in the Kansu Corridor about 538 kilometers west of Lanchou, was the original goal for 1955. An extra 108 kilometers of tracks were laid up to a point about 100 kilometers from Yü-men by the end of 1955. A new section from Chang-yeh to Ching-shui reportedly began operating on May 1, 1956. This 138 kilometer extension made the railway serviceable for a total of 676 kilometers. It has been reported that tracklayers on this railway had pledged to extend the line to Yü-men, 800 kilometers from Lanchou, by the first of July, 1956, about one month ahead of schedule.

*668 Construction of this railway is of utmost significance economi-
499 cally and politically, as well as strategically. The Northwest still lags behind in industry, agriculture, and density of population, although it is vast in area and abundant in natural resources. When this railway is completed, trucks operating on the highways along this line can be employed to support the rail transport. The people in the region will be able to buy industrial products cheaply. Large numbers of workers and technical personnel will undoubtedly move to Kansu, Chinghai and Sinkiang, so the population will grow rapidly and new cities spring up. Furthermore, travel time between Peking and Moscow via this railway would be greatly shortened, even more so than by the newly-opened route through the Chi-ning-Ulan Bator Railway.

*668 3. Paoki-Chengtu Railway: The Chinese Communists had
496 long looked for a route through which it could move from North-
499 west to Southwest China over the high mountains. At first, they
648 intended to build a railway linking Tien-shui on the Lunghai Rail-
*195 way with Chengtu, the terminus of the Chengtu-Chungking Railway. It was the route originally planned by the Nationalists but construction on it was never undertaken due to the Sino-Japanese War and later, the civil strife. However, a new project, was reportedly drawn up by Russian experts and agreed to by the Chinese, to run a line from Chengtu through Lüeh-yang in Shensi to Paoki instead

*668 of T'ien-shui. Construction on this 700 kilometer railway was
496 initiated in July, 1952, and was scheduled for completion by the
499 end of the first Five Year Plan in 1957. On January 1, 1955, tracks on the southern section had been laid to Kuang-yüan, 315
• 648 kilometers north of Chengtu, and rail service was officially
*195 opened on New Year's Day, 1956, from Chengtu to Lüeh-yang, about 170 kilometers north of Kuang-yang. Construction had been in full swing on the 215 kilometer northern section from Paoki to Lüeh-yang at the same time. Although shorter, this section was said to be a more difficult project: over 100 tunnels were cut through mountains, the longest one being more than 2, 3 kilometers; the Chialing River was crossed 16 times and about 400 bridges and culverts were built. Soviet technicians planned to run electric locomotives along the Feng-hsien (in Shensi)-Paoki section in order to pull the trains through the sloping terrain of the Chin-ling Mountains.

It was reported that in March, 1956, only about 100 kilometers of tracks remained to be laid on the whole Paoki-Chengtu Railway. On the northern section, rails had passed through the Chin-ling Mountains area and continued southward. It was expected that the entire line would be connected and opened for traffic by the end of 1956.

*668 This railway, when completed, will become the trunk line to
499 link the southeast with the northwest of China. It will make possible deliveries of rice and other products of the Southeast to the Northwest and Central China, and provide cheap transportation for industrial machinery and equipment with which to tap the rich natural resources of Szechwan and its neighboring provinces.

4. Lanchou-Pao-t'ou Railway: Construction on the 1000
*668 kilometer Lanchou-Pao-t'ou Railway which would link up North-
*195 west China with the Inner Mongolia Autonomous Region, was started
496 in February, 1955. Work was under way on the fifty kilometer
499 section from Lanchou to Hsing-hsing-wan until the end of 1955. When completed, it would not only facilitate the development of the iron and steel base of Pao-t'ou but also shorten the route between Peking and Moscow.

5. Lanchou-Chinghai Railway: Survey work on the Lanchou-Chinghai Railway was begun on December 23, 1955. This railway was to begin at Ho-kou on the Lanchou-Sinkiang Railway, about thirty kilometers west of Lanchou, following the Lanchou Chinghai Highway, through Hsining and along the Tsaidam basin which is rich in minerals, to Ta-e'h-ting for a distance of 1500 kilometers. As reported, survey of the 176 kilometer section between Ho-kou and Huang-yüan (in Chinghai) was completed at the end of 1955, and construction was scheduled to start in the beginning of 1956. (The rest of the route was not yet decided.) The construction of this railway was aimed at opening up resources in the

*668 Tsaidam basin and developing the economy and culture of the
*177 national minorities.
496 Up to the beginning of 1956, the railway mileage in the North-
499 west region was increased to roughly 1800 kilometers from some 600 kilometers prior to 1949.

Based on the above-mentioned data, new railway construction in this region may be tabulated as follows:

Railway Construction in Northwest China
1950-1955
in kilometers

Line	length planned	date started	date completed	to 1955	Total
T'ien-shui-Lanchou	346	1950	1952	346	
Lanchou-Sinkiang a	2,800	1952	- -	646	
Paoki-Chengtu b	700	1952	1956	485	
Lanchou-Paotow	1,000	1955	- -	- -	
Lanchou-Chinghai c	1,500	1956	- -	- -	
Total				1,477[e]	3660[d]

a. To the end of 1955.
b. Of the total 485 kms. only about 100 kms were in Shensi.
c. Newly projected route
d. Based on the table of "Construction of New Railways in Chinese Mainland, 1950-1955" in Communication section of General Handbook.
e. Of the 1477 kms. about 1100 kms. were built in the Northwest region.

*668 As shown in the above table, about thirty per cent of the total
491 of new railways was built in this Northwest area. As officially
499 reported, Communist China has scheduled to spend, on transport
185 and communication projects, over 140 million taels of gold (1 tael is equal to 1, 1023 ounces) of investments totalling over 700 million taels in capital construction during the First Five Year Plan. ("A Great Plan" People's China, August 1, 1955, pp. 5-6.) It appears clear that a very large amount has been spent on railway construction in this region, though no breakdown figure can be
[399] located. With regard to railway building materials, the same source indicated that "after reconstruction of the factories, Anshan alone will produce enough rolled steel to meet the needs of the nation's locomotive-building works, shipyards and motor and tractor works throughout the first Five Year Plan and the early part of the second. Anshan's annual output of rails will be sufficient for the laying of more than 3000 kilometers." It should
• [648] be noted that at least up to the beginning of the first Five Year
[439] Plan, most of the materials for railroad building had to be supplied by the Soviet Bloc, particularly Russia.

000by the Soviet Bloc, particularly Russia.

Manpower on railway construction is another interesting point.
*668 According to Dr. Ling Hung-hsün's (veteran engineer of Free
499 China) personal survey of the present Lanchou Alma Ata line in
461 1943, population along the whole line within the border of Sinkiang
466 did not exceed 600, 000; the part in Kansu was also thinly populated.
*175 In view of the shortage of laborers, especially skilled workers, among the local population, it would be necessary for the Chinese Communists to use forced labor from other areas to work in this remote region. Although no exact information concerning this is available, as reported, out of a total of 23. 25 million, about 250, 000 persons were forced to work in transportation projects as a whole in 1955. (Wu, Yuan-li. An Economic Survey of Com-
[701] munist China. p. 323.) The armed forces were also employed for this purpose. For example, a unit of the First Field Army contracted with the Communist Government in the spring of 1950 for the construction of the entire T'ien-shui-Lanchou Railway. According to the news reporter, Robert Guillain, the manpower resources in building the Lanchou-Sinkiang Railway consisted of the Northwest Chinese troops (as well as others) who had first "volunteered" to fight in Korea, and after being demobilized in Lanchou had again "volunteered" to remain as civilian workers.
• [648] ("I Saw Communist China" The Saturday Evening Post, June 2, 1956, p. 114.) Russian experts, of course, were invited to supervise the railway construction.

B. Highways

491 In addition to the railway construction which is carried out at
499 full speed in the Northwest, highway building and renovating were
*668 greatly developed. There is not much information available con-
*175 cerning new highway construction in Shensi province. The only report available said that during 1954 over 210 kilometers of highway were repaired and 115 kilometers of new highways added, in addition to the renovation of the Han-chung-Pai-ho Highway.

In Kansu, highways radiate from Lanchou towards Chinghai, Sinkiang, Inner Mongolia, Shensi and Szechwan. The most important highways built in 1953 were the Lanchou-Hsia-ho-A-pa (in Szechwan), Hsia-ho-Min-hsien and T'ien-shui-Chang-chia-chuan lines with a total of 630 kilometers. In 1955, over 1000 kilometers of highways were either constructed or repaired in Kansu. One from Lanchou led to the Ching-tai coal field, one ran from Lanchou to the Liu-chia Gorge where the gigantic hydro-electric resources along the Yellow River are located, and another ran from Shan-tan to the Shantan coal area. The 426 kilometer section between Tun-huang of Kansu to Shuerhkuli in Sinkiang was being renovated.

C. Civil Aviation

The Chinese Communist Civil Aviation Company, which until the end of 1955 was a Sino-Soviet jointly-owned corporation and was still entirely adjusted to the Russian system, raised its service from two to four trips a week from Lanchou via Chiu-chuan, Hami to Urumchi. There was another flight twice a week, continuing the route from Lanchou to Sian where two sub-lines existed, one to Peking and the other southbound to Chungking. A third flight, also twice a week, connected Urumchi with Alma Ata through Ili by the Sino-Soviet international route; and the fourth was running inside Sinkiang from Urumchi via Kucha, Aksu to Kashgar.

IV. Conclusion

The influential role which the development of transportation and communications can play in the creation of a favorable climate for sustained national economic growth, needs no elaboration. The Northwest which contains many of China's untapped mineral resources, and where the potential of agricultural development is fairly high, is a region where the man-resource ratio is low and the long-run economic potential is promising, provided it is linked with the populous regions of China and the outside world by better transport and a modern system of communications.

Transportation and communications development in Northwest China used to lag far behind the other regions as did its agriculture and industry. After the establishment of the Communist regime, transportation construction activities in this area have increased greatly in the form of railway and highway construction. Of the total railway construction in Red China from 1950 to 1955, newly-built roads in the Northwest amounted to thirty per cent. Meanwhile the Lanchou-Sinkiang Railway, Lanchou-Pao-t'ou Railway and Chengtu-Paoki Railway were still under way and the Lanchou-Chinghai Railway was projected for 1956.

Highways were constructed or renovated mostly along the old routes already in existence prior to 1949, some of which might not have been motor roads. Among them the most notable ones were the Hsi-ning-Tibet Highway, Sian-Lanchou-Urumchi Highway, Ansi-Tun-huang-No-chiang-Ho-tien-Kashgar Highway and the Hsi-ning-Chin-hung-shan-No-chiang-Kashgar Highway. Three international highways starting at Urumchi across the Sino-Soviet border linked up with the stations on the Soviet Turksib Railways.

Air transportation was to be established to strengthen the Sino-Soviet relationship from Peking to Moscow via Sian, Lanchou, and Urumchi.

It is true that Chinese Communists had devoted much attention to construction in the Northwest area, especially in the phase of transportation and communication. Aside from their shrewdness

in understanding the long-run economic potential of this region, it is equally true that there must have been some other reasons forcing them to develop this remote region more swiftly than they might otherwise have done, investing in it sizable amounts of much needed capital backed by considerable forced labor. Other factors, both internal and external, should therefore be taken into consideration. In the first place, Communist China had made a tremendous effort to shift the center of its gravity from the coastal regions into these relatively empty lands bordering Soviet central Asia, perhaps partly as a result of the United Nations embargo and the Korean War. Secondly, the forced pace of development in the Northwest might be partly a defense measure. During the War in Korea it became clear how vulnerable Manchuria was to bombing attacks. Had the United Nations chosen to do so, most of Manchuria's industrial complexes could have been destroyed. But in the Northwest, factories, railways and mines were far safer than anywhere else in China. Moreover, this area would assure maximum secrecy for projects which Red China and Russia were reported to have been jointly undertaking. ("I Saw Communist China" by Robert Guillain in the Saturday Evening Post, June 2, 1956, p. 114.)

Following on the heels of the railway construction work, a huge oil refinery at Lanchou was built. It is also reported that between Lanchou and the site of the refinery, a road was constructed more than twice as wide as Fifth Avenue in New York city, and a large hill thickly covered with houses was completely leveled to make the road straight. At Lanchou the railway yard under construction contained fifty kms. of tracks, with modern equipment such as turntables, grain silos, refrigerating plants and the like, all brought from Russia. Along the wide road, the beginning of what is called New Lanchou has arisen. In Sinkiang, a new city was born in Urumchi, where giant factories have been built, including the Sinkiang Non-ferrous Metals Co., the Sinkiang Petroleum Co., the Sinkiang "August 1st" Iron and Steel Plant, the Sinkiang Machinery Plant, the October Motor Car Repair and Assembly Shop, the Urumchi Automatic Electric Plant, and the like. This accomplishment in industrial construction and future plans of industrial development are indeed very much tied up with communications development.

Communist China may very well focus its principal attention on the Northwest during the period of its second Five Year Plan scheduled to begin in 1958, just as the first Five Year Plan concentrated on the Northeast. The Northwest might then play a major role in the economic relations between China and Russia, and be industrialized to a level comparable with Manchuria.

It may therefore be concluded that so long as there are both internal and external pressures, and the "lean-to-one-side"

Wall; if this is so, the old gate and wall at T'ungmen Kuan, between Labrang and Ho Chou, is probably a portion of the same loop, which must have been constructed to protect the Hsining region against the incursions of Tibetans or Mongols from the Kokonor, and the course and history of which it would be interesting to trace. The road eventually debouches on to the city of Hsining, lying in a small cultivated plain of loess formed by the junction of three valleys, the Pei Ch'uan from Tatung Hsien, the Hsi Ch'uan from Tanko T'ing, and the Nan Ch'uan from T'a-erh Ssu (Kumbum), the combined streams going to make up the Hsining River.

Hsining is one of the chief cities of Kansu, being the centre of a region of fertile corn-growing valleys, producing wheat, barley, and particularly beans. Its commercial importance arises from its position near the Kokonor border, and together with Tanko T'ing, a day's journey further west, it commands the bulk of the valuable Kokonor trade in skins, furs, deer horns, musk, gold, and particularly wool. A state of passive hostility has reigned between China and Tibet since the collapse of Chinese power in Lassa consequent on the revolution, and the Szechuan-Tibetan trade through Tachienlu has suffered greatly thereby; the Hsining and Tanko trade, on the other hand, has continued uninterruptedly throughout these troubles, and has perhaps even increased. As elsewhere on this border this trade is largely in the hands of the Mahomedans.

Before the Mahomedan rebellion of 1860–70 the Hsining-Kokonor road to Lassa was the most frequented route between China and Tibet, but was then replaced by the Szechuan road through Tachienlu; now it is coming into its own again. The interior of the city is fairly prosperous in appearance as far as Kansu towns go, but by no means indicative of the commercial and political importance of the place. The east suburb, the former Mahomedan quarter, is still completely in ruins, a relic of the last Mahomedan rebellion in 1895, when the city successfully withstood a siege by the rebels. The walls are particularly formidable and well built.

Hsining, as well as being the seat of a Taoyin and a Mahomedan General, has always been the residence of the high Chinese official controlling the immense territory of

65

65 GOVERNMENT ACTIVITIES--general statements dealing with several aspects of the administrative activities of all governmental agencies usually above the level of the small local community.

*668 631 includes, depending on its level, the provincial governor and deputy provincial governors; the mayor and deputy mayors; the county head and deputy county heads; the district head and deputy district heads; the hsiang head and deputy hsiang heads; or the town head and deputy town heads. The number of members in a people's council (head and deputy head included) differs according to level, as follows:

(1) Provinces and municipalities directly under the central authority, 25 to 55;

(2) Municipalities, 9 t 25; membership may increase when there is an extraordinarily large population, but in no case may exceed 45;

(3) Counties, 9 to 21; membership may increase when there is an extraordinarily large number of hsiang and towns, as well as a large population, but in no case may exceed 31;

(4) Municipal districts, 9 to 21;

(5) Hsiang, nationality hsiang, and towns, 3 to 13.

The term of office of a provincial People's council is four years. It is two years for those councils or municipalities, municipal districts, hsiang, nationality hsiang, and towns.

b. functions of councils

The functions of the people's councils at all levels are numerous. Many of them are traditional, such as collecting taxes, managing conscription, and running the administrative routine. But some are new or have been given new content, such as:

(1) Carrying out economic plans and budgets;

(2) Regulating and controlling the market and the local state enterprises, and directing the socialization of the private enterprises.

(3) Directing the production of agriculture, handicrafts, and mutual-aid cooperatives;

(4) Managing transportation, communications, and public enterprises;

(5) Managing local activities in the fields of culture, education, public health, pensions, relief, and social welfare.

• 65 631 *668 The nationalization of business and industry has burdened the local governments with much that formerly was done by private parties. Economic plans existed previously, but were limited to a few public works. Now the plans and budgets of the government cover almost every economic activity in the area. Previously, only when an occasional crisis arose did the local governments regulate or control the market. Now it is one of their regular functions. In the past, there were few, if any, local state enterprises. Now, with the program of socialization of private enterprises in full swing, the task of operating local state enterprises is tremendous. The local governments are responsible for the people from before birth until after death, and for controlling and managing almost every phase of their lives.

651

651 TAXATION AND PUBLIC INCOME--sources of public income (e.g., gifts and bribes, tribute, license fees, ground rents, profits from public enterprises, fines, confiscations, tolls, taxes); types of taxes (e.g., taxes in kind, labor levies, poll taxes, property taxes, stamp taxes, excise taxes, customs duties, income taxes, inheritance taxes); importance of and revenue from each type; differentiation by administrative level; principles of taxation; tax law; mode of fixing and collecting taxes; specialized personnel (e.g., tax collectors, tax consultants); tax exemptions; etc. See also:

S N 563 182 II. Stability of the Societies in the Northwest

It is safe to say that the minorities of Sinkiang, Chinghai and Kansu represent rather unstable societies. This instability has several causes. The first is certainly the fact that the Turks, the Mongols and the Tibetans consider themselves utterly different from the Chinese in regard to race, religion, language, and ethnic grouping; therefore they desire independence and do not want to be ruled by "aliens," which they consider the Chinese to be. The second reason for instability S N [167] is the progressive settling and colonization by Chinese peasants who cut down the pasture areas of the nomadic Mongols, Turks, and Tibetans, and consequently provoke hatred against themselves. The third reason for the unstable character of the S N • [651] societies of the Northwest was the reckless taxation of the minorities by many Chinese officials who considered their offices in areas like Sinkiang and Chinghai as an opportunity to gain wealth while holding those offices for a limited number of years. In periods of wars, the minorities were subject to merciless requisition of their cattle and agricultural products.

In addition to the friction and animosity between the minorities S N and the Chinese, the disunion among the minorities themselves 563 669 was at times considerable. As an illustration one might remember that during the uprisings of the Dungans between 1931 and 1936, the Chinese Muslims fought against Turkic Muslims 182 (which supposedly represent a single religious unit), Mongols, Chinese, and White Russians fought against the Chinese Muslims (Dungans) and the Kirghiz and Kazakhs even formed a special unit and fought against both groups or joined one of the two according to the military situation, opportunistically. This period was without doubt the culmination of disunion and confusion among minorities of the Northwest during the last decades.

S 563 635 182 On the other hand, when a governor who was more interested in the welfare of the country as such than in his own enrichment, like Sheng Shi-ts'ai of Sinkiang with a cleaner officialdom, ruled the province, the society gave a more stable impression and the frictions between the various nationalities decreased.

S N 563 798 182 A further reason for the disunion of the society in the Northwest is the incompatibility of various religions, especially the "martial" Islam on the one hand and the more peaceful Buddhism on the other. The Muslims feel superior to any other religious community; the Buddhists (Mongols, Tibetans, Shera Yögurs, Monguors) consider the Muslims as having a barbarian religion; the Chinese, generous and tolerant in regard to religions consider at least Islam to be somewhat inferior to their own multi-religious conceptions and beliefs.

N
The clan /The Nomadic Tibetans/
*563 as such owns no property. It serves only as a geneological record
614 of importance in determining who are not legitimate marriage mates.
[421] The clans are patrilineal, but the clan affiliations of both parents
N limit the choice of possible spouses.

*563 Beyond the larger unit, Ekvall states "...the Tibetans acknow-
648 ledge no law or control beyond that of the tribe. About seventy years
• [651] ago some of these tribes paid token-taxes to the Chinese government as a sort of yearly tribute, but even that has gone out of practice; and, though in a vague way the Tibetans acknowledge the 'emperor's household,' i.e., the Chinese government... to all practical purposes Chinese law is completely ineffective in the region. Not only are the tribes independent of the Chinese government but they are
N even more independent of each other...." (1939 p. 50-51.)

*563 Lhasa has almost as little influence as Peking. It has no poli-
792 tical control over the area, but it still remains the prime ecclesiastical authority and the goal of every prospective pilgrim-trader,
N i.e., every Tibetan.

*563 Despite the rigors, the feuds and the dangers of Tibetan nomadic
554 life, it presents a very strong attraction for both the nomadic and
556 the sedentary Tibetan. By attaching himself to a nomadic encampment a young and poor ex-farmer can become a social, as well as
N a literal, climber. Success and prestige are measured in terms of
[579] influence and wealth. The high road to these is the road of the nomad, with his herds and his golden opportunities to acquire wealth rapidly by removing it from its previous owner and by trading. With his wealth, regardless of how acquired, he can be lavish with
N gifts and donations to a monastery. This lavishness combined with
[594] the ability to entertain guests liberally, adds to the individual's influence and with influence he has prestige, therefore success. The sedentary man or woman who succeeds in making himself valuable to a nomadic tent is well on the way to becoming a self-made nomad.

II. The Sedentary Peoples

S
563 A. The New Uighurs (Eastern Turks)
121 Some socio-historical considerations are necessary for a better
195 understanding of New Uighur social structure. No clear concepts about the transformation of the New Uighur to a sedentary population have been advanced to this time. However, the following hypotheses are presented. Until the eighth century the New Uighurs (or simply the Uighurs, as they were known at that time), were a predominantly nomadic people. After the collapse of the middle Turkic empire in 744 A.D. Chinese influences upon all the Turkic peoples in Sinkiang became increasingly stronger. This is brought

/The Sedentary Tibetans/

*563 62 [622] [623] [632] [792] There is more rigidity about the village organization. The sedentary Tibetans generally have a formally selected village headman. But again the council of elders has considerable authority. Groups of villages are organized into a larger unit, nor is it uncommon for villages and encampments to be joined together in such a larger unit. A monastery is more apt to have authority over a group of villages than over the strictly nomadic people. However, like the nomads, the sedentary [622] Tibetans give very little recognition to any authority beyond that of the ecclesiastical or lay chief of the "tribe". Ma Ho-t'ien, in his Diary of Travels in the Border Region of Kansu, Chinghai and Tibet makes frequent reference to the inability of the Chinese officials to exert any sort of authority over the border-Tibetans and other sources also record the absence of any effective government beyond the local level.

The village itself represents a very tightly-knit organization, economically and politically, as well as physically. [423] Houses, housesites and the fields belong to the individual families, but the grazing lands and forests are community property. Use of the pastureland is available to all, but the village may place certain restrictions on the quantities of timber that may be taken for specific purposes.

*563 621 241 [787] [292] Just as the nomads act simultaneously in moving their encampments from one site to another, so the sedentary Tibetans also insist on simultaneous group action within the village. The first day of spring planting, determined by horoscope, sees all the villagers proceeding to their individual fields in their best clothing. The fields are ploughed simultaneously. The seeds are sown at the same time in each field. And, when harvest time comes, all the fields must be completely harvested in the time that it takes the smallest field to be harvested with a small hand sickle. If one's fields are too large one hires extra help. During the course of the growing season all the villagers periodically parade through the fields carrying the holy books on their heads. These communal activities have both religious and economic bases. [787] From the viewpoint of the religion, if the days have been selected as auspicious, they are auspicious for the community's members as a whole. It is when the spirits of the ground, [776] the demons of hail and misfortune can be allayed or propitiated [782] that determines the best days for performing the needed tasks. From the viewpoint of economics, when the ground has been plowed and the seeds planted, the fields are encircled by a community fence to prevent onslaughts by roaming animals. [625] A community watchman also stands guard. It also means that [486] the villagers can collect a tax from caravans that pass through [651] their lands. Once the fields have been harvested, the community

*563 463 621 578 Unless the occupations of the minority are specialized and not coveted by members of the dominant group, there is always the phenomenon of the majority group attempting to usurp the callings or occupational opportunities of the minority group and hoping that the minority group eventually will leave the community. Under such conditions, antagonisms always exist between the two groups in the same farm community.

*563 621 184 The Chinese in the predominantly Tibetan districts are organized in exactly the same way as the Chinese in the predominantly Chinese Moslem areas. Again the village is the important unit of organization, the village organization is integrated in the county, and the village authorities are answerable to the county magistrate.

• [651] These Chinese villages are taxed far more heavily than the Tibetan villages. The Tibetan villages, in many aspects are similar to the

[361] Chinese villages. Generally, the Chinese villages are in predominantly Chinese sections while the Tibetan villages are in predominantly Tibetan country. But some of the Chinese villages are quite far up in Tibetan country. In their culture these conform more to the Tibetan pattern than to the Chinese. In both groups the village is of supreme importance as a social and political unit

[162] of organization. The villages are much alike in size, the average village having a population of between twenty and thirty families.

In organization and function the Chinese and Tibetan villages show differences. Within the organization of the Chinese village there is not only a compact family unit but a clan system as well. The sedentary Tibetans, on the other hand, have no clearly defined clan organization, and their family is much looser than among the Chinese. Nevertheless, the Chinese village organization permits a considerable degree of individualism, whereas the Tibetan village communal activity completely overshadows individual activity. This is probably because the Chinese family and clan compete with the village organization, thereby acting as a check on the exercise of village authority. It may be that Chinese frontier life necessarily entails greater liberty of action and individual initiative. In everything related to communal properties and communal activities, as well as in all matters regulating the time of planting, harvesting, etc., the Tibetan village acts with a solidarity and unanimity that is comparatively lacking in a Chinese village community in the same area. In spite of these differences, the subsistence routine is substantially the same for the Chinese farmer and the Tibetan farmers, and the village of the one has a close resemblanc to that of the other.

*563 628 177 Although there is a great deal of culture contact between the Chinese and Tibetans in the same areas, an interesting feature is that contact is quite one-sided. The agents, almost without exception, are Chinese. The contact can be called reciprocal only to the

*563 *[175] • [651] minority tribes or bandits, and lately there have been skirmishes between the warlords and between the Nationalists and the Communists. These disturbances have not only deprived the people of normal livelihood but also increased their financial burden, as they have been taxed heavily by both the government

[731] and the warlords to support the fighting armies. Moreover, the region is susceptible to the disasters of flood and famine. The

[167] corruption in officialdom, the banditry, the armies and the disasters have caused people of means to leave the region and make

[463] their homes elsewhere. Of course there are officials and rich merchants who have authority in political and economic matters, but it may be said that the majority of those left behind are small business men and poor farmers who stay on their land and struggle for a living.

*563 131 It should be noted that the southeast part of Northwest China is the place where Chinese civilization and culture developed and matured. This region, around the Wei and Lo Rivers, referred to as Kuang-chung, was the most prosperous and well-developed part of China during many of the Imperial dynasties. According to Communist geographical division, Kuang-chung, the area within Shensi Province, is included in the Northwest region. It is a region of fertile soil, where Han Chinese farmers have made their homes for countless generations. The regions to the north and west are populated by the Chinese Moslems, the Mon-

[441] [439] gols and the Tibetans. As this is the case, many Han Chinese who remained in the Northwest became merchants who traveled north to Mongolia and west to Sinkiang with their caravan trade. There are also soldiers and prisoners who had settled here generations ago.

*563 342 Village dwellings are the conventional types of mud huts. Some live in caves, the rich in elaborate caves with fine fur-

[369] nishings, the very poor in caves scooped out of the porous yellow earth cliffs. In cities and towns where the wealthy merchants dwell, one of course finds the traditional big brick home with several courtyards, as well as modern two-story houses. But in Pao-chi, most of the people live in caves with regular doors and windows, dug out of the cliffs.

*563 262 The eating habits of these people are slightly different from those of the Han Chinese in other parts of China, in that more flour than rice is consumed. Rich people have no difficulty in

[556] obtaining all the delicacies they desire. Meat, eggs, fruits, fowl, rice, flour and vegetables are their common fare, but the poor people can afford only barley flour, millet and salted vegetables for their daily diet. Tou-fu, soybean cake, is consumed

*563 291 by rich and poor alike. Clothing in this region resembles that worn by Chinese in other parts of the country. Among nomads and the poor, sheepskin coats are very common. They are worn with the fur side inside.

/Chinese Moslems (Dungans)/

S N 563 183 799 431 (651) religious teachings. According to the religious code it is obligatory for a man of means to contribute a certain amount of his wealth to public charity. Next to worship, this is the most important duty in Moslem society. The original idea of helping the poor and needy evolved into a tax (ten per cent on agricultural produce and two and one-half per cent on animals) collected from all believers for religious and public welfare purposes. Another form of alms, the sadaqa, is a voluntary offering. Public welfare supported by the tax, after the collector's fee is deducted, includes freeing slaves, assistance to persons who became indebted for good reason, making holy war to defend the people and the faith, and aiding needy travelers.

S N 563 796 935 During the month of Ramadan (fasting) donations and offerings are collected for public welfare purposes. The amount is not fixed, and the act of giving is voluntary. A sense of public responsibility is strong among these people. Not only do they give regular allowances to the needy in their own communities, but they help needy outsiders of their own faith.

S N 563 788 554 The Hajjis, or those who have completed the pilgrimage to Mecca, are highly respected in the Moslem community, and wear special badges to mark their distinction. The opportunity to journey to Mecca is the dream of all Moslems.

c. Virtue

S N 563 570 774 It is important for the individual to cultivate the true concept of peace and submission. The concept of peace involves such ideals as mutual cooperation and aid among mankind, mutual understanding among religions and peaceful co-existence of nations to achieve world brotherhood. The concept of submission means to submit oneself wholly to Allah and follow his teachings, sacrificing self-interest for the promotion of happiness for mankind.

S N 563 515 Personal cleanliness, both internal and external, is most important. Cleanliness in eating habits and personal hygiene is thought to develop a clean soul, free of evil thoughts and immoral conduct.

d. Racial superiority

S N 563 186 The Chinese Moslems regard themselves as a special group, superior to their Chinese neighbors. As students and officials, their attitude toward respect for the emperor and for Confucius has, in the past, been one of compromise. Compelled by law to conform, they excused themselves on the grounds that they did so outwardly but not in their hearts. The old and the new sects of Chinese Moslems, although bitterly hostile toward each other and at times engaged in armed conflict, on the whole present a united front toward the Chinese and the rest of the world.

S N (798)

792 the two monasteries there has been a total of five to seven thousand monks. These monks came not only from the immediate area, but were attracted by the prestige or teachings of the monasteries from Mongolia and other areas on the Chinese border.

792 871 Labrang prides itself on being one of the six major academic monasteries in all Tibet. Ma Ho-t'ien even claims for it more complete systems of education and organisation than are to be found at the central Tibetan centers of Ganden, Sera and Tashihlumpo. But this pride is modified by the fact that an academic degree of Geshe from Labrang is not actually recognized in Tibet proper. The Labrang incarnations, Chia-mu-yang, have generally gone to Depung in Lhasa to receive instructions.

792 (798) (423) Kumbum can rest on its laurels as a place of holy pilgrimage. Within its grounds is the rock associated with Tsong-kha-pa's birth; so too is there the famed tree that supposedly sprang from the shorn locks of the Great Reformer. Both monasteries own much land and represent great wealth. Some has come in the form of the accumulated gifts and donations of the pious. (651) Still more is representative of taxes imposed over the years on their local subjects, for, like many of the smaller monasteries, these two are the seats of secular rule as well as religious reverence.

792 701 In return for the gifts and other revenue, however, the monasteries perform many functions for their subjects and believers. In the turbulent conflicts between Moslems, Chinese and Tibetans, the monasteries have represented the effective military force of the area. Rijnhart, Ekvall, Ma and others who have been present in crises have all reported the efficacy of the fighting monks. Their strongholds serve as banks for the wealth of all in danger from looting; their armed force stands for the safety of Chinese, Tibetans and foreigners who seek refuge. Nor is there any perceptible hesitancy about the prospects of taking life when the lama war cry, "Sha-sa sha-sa" (Eat meat, eat meat!), summons the monks to arms. Sometimes these armies (669) were aroused by major crises, such as those of the Moslem rebellions in the late 1800's. They have also done battle against the Communists in the 1930's. And when no greater danger threatens, they are apt to do battle among themselves on an inter-sect or local rivalry basis.

792 795 But the hold of the monasteries cannot be measured solely in terms of the social and political roles they fulfill. The religion of Lamaism is a very tenacious one. The complete conversion of Tibetans to another faith, be it Christianity or Islam, remains on a very small scale. Within the Lamaist structure, the hold of the older sects is the strongest, especially in areas that have remained outside the control of Lhasa. And underneath

/Chinese, Chinese Moslems and Sedentary Tibetans/

S 563 642 643 177 829 The old administration of the Khan was not always liked by the Moslems, but he and his people were one, and they understood each other well. His Oriental style of court life was appreciated by the Turkis, and the Khan, by virtue of his hereditary title, was unquestionably accepted by them. There was immediate resentment among the populace at the suggested changes, and the resentment became the more bitter when a great display of highly organized officialdom was made.

S 563 177 631 642 829 [423] At the same time, the whole area of Hami was carefully surveyed and the land redistributed. Three large administrative districts were arranged and given names which dated back to the Han dynasty. The new government was to be wholly in Chinese hands, and the old Khanate system was to vanish. Chinese magistrates were appointed to hear the law cases and Chinese tax-collectors were to levy the dues and convey them to the capital, where they would be allocated to the respective departments. These propositions all seem legitimate to the Chinese authority and they were presented to the people as improved measures of justice; but the Moslems did not like them and had a great deal of suspicion towards them. There was also the rumor that some unappropriated land which the Turki farmers would have liked to use was given to the Chinese and that arrears of taxes from which the Chinese were exempt were demanded from Moslem landowners.

S [669] Suddenly that dangerous thing so well known to the Oriental as a "breath of fury" rose fiercely among men who had hitherto dealt only with their own Khan, and they unanimously determined on revolt.

N 829 565 Fan Ch'ang-chiang, a well-known journalist connected with the most influential Chinese daily Ta Kung Pao in the prewar period and now editor of the People's Daily in Peking, reported, after a trip to the Northwest in 1936 through Shensi, Kansu, Chinghai, and Ninghsia, that the common people, especially the peasants in

N [651] Kansu, all had a very bad impression of the government. Because there were so many kinds of taxes, the people thought that the government had nothing to do but to collect taxes from the common

N 565 181 562 829 people. The people did not trust the government. In regard to social customs Fan says that the Chinese in Kansu are very conservative in matters which have anything to do with their women. Even middle-aged women of respectable families can hardly have anny opportunity to be seen by or to be spoken to by any man who is not a relative or a neighbor. Young ladies must absolutely not be seen by strangers. Soldiers who have come from the coastal provinces and who are accustomed to more liberal relations between the two sexes were resented by the local people because

N 565 829 [181] they acted rather freely toward their women folk. Notwithstanding their bad impression of the government and their resentment toward the "outside" soldiers, the common Chinese in Kansu are

rather low, their conception about the party is not clear, and they are not qualified, or completely qualified, as party members. They take little interest in party work, consider the exemplary behavior of other party members in leading the masses as a 'disadvantage,' take no heed of the phenomena detrimental to the interest of the people."

Ma went on to state that bad elements had infiltrated into the party: "Some of the veteran party members in the face of the nationwide victory, display laxity, are arrogant and think of themselves as heroes. They are steadily losing or have already lost the sense of responsibility and positiveness that qualified Communists should have. They pay little attention to study and improvement, take little interest in politics, lack a serious attitude towards their work, do not seek to develop the work but simply carry out routine, and some of them are not prepared to continue with the revolutionary struggle, reject any difficult tasks assigned them by the party, and even degrade themselves to corruption, moral disintegration and estrangement from the masses, and are against party discipline." (Ch'un-chung jih-pao, October 8, 1951).

Two months later, at another conference of cadres, Hsi Chung-hsün also deplored the deterioration of party discipline. "Diverse non-proletarian ideas have infiltrated into the party," he said, "and some of the elements whose class standpoint is not firm and whose political consciousness is not very high cannot stand the test and become degenerated." (NCNA December 2, 1951). In May, 1952, Chang Chia-fu, director of the Department of Propaganda of the Northwest Bureau of the Chinese Communist Party, declared: "Since they entered the cities, the Northwest Literary and Art Workers, owing to corrosion by bourgeois thought, have wavered more or less in carrying out Chairman Mao's literary and artistic policy." (NCNA May 25, 1952).

2. Poor Quality of the New Cadres: The large numbers of students and former government employees who were incorporated into the ranks of the cadres were not men of high caliber and they quickly followed the examples set by the old party cadres. At a speech at a conference of cadres at Sian in May, 1950, Hsi Chung-hsün charged that there were glaring shortcomings in the United Front Work because the new cadres, who make up 90 per cent of the total number of cadres, following the practices of the old cadres. They were arrogant, they entertained non-proletarian thoughts, and, because of their behavior, there were flagrant cases of bureaucratism (which he defined as estrangement from reality and isolation from the masses) and commandism (just going through the motions of carrying out orders). He pointed out that in the municipality of Sian, for example, eleven hundred residents were arrested and punished for the mere crime of possessing bicycles, and that in the countryside, the cadres resorted to threats, arrests, and tortures in the collection of taxes.

S 668 708 208 545 4. Cultural corps

In the army, cultural work corps promoted propaganda by means of entertainment. In local dances and songs, the Cultural Work Corps of the Fifth Army (originally the Sinkiang National Army) in the summer of 1951 promoted the Party's Nationality policy and the Resist-America Aid-Korea movement in Sinkiang. They visited various villages and regularly attracted an audience of from three or four thousand to ten thousand people. The members included thirteen minority groups living in Sinkiang. Some of them went to Peking in 1953 and presented a performance of 21 acts before the audience in the capital.

S [563] [484] [648] 668 648 545

The visit was returned by the Central Nationality Dancing Corps of Peking which sent a performing team of 140-odd members to Sinkiang in April, 1955 to celebrate the establishment of the Sinkiang Uighur Autonomous Region. It spent more than half a year in Sinkiang and returned to Peking on November 13 after having visited ten special districts, three autonomous chou, seven counties, two state farms, three mines in Sinkiang and two cities (Lanchow and Su-chou) in Kansu. It performed 112 times before audiences of various nationalities totalling more than 439,000 people.

N *668 208 IV. The Methods of Propaganda.

Besides those already mentioned, the Communists are using many other methods of propaganda. Parading, signature drives, circulation of pictures and pictorial stories, large-scale welcome meetings for important personnel sent from Peking, lantern slides and movies produced by the Party and the government, theater activities such as opera, drama, dance, and concerts all have been used as means of propaganda. The public accusation meeting is another form. No matter what the main target of a particular accusation meeting may be, whether a landlord or the U.S.A., the accusation always carries out the propaganda of the day, whether it be the Resist-America Aid-Korea movement or land reform. Other kinds of meetings are equally useful. "Model Peasants Rallies," held in the main farming districts of Sinkiang are the place to promote propaganda for increasing production as well as for denouncing germ warfare.

S [668] [208]

N *668 796 *[563] [771] - [651] A. Festivals

Festivals are always good opportunities for promoting propaganda. In Northwest China where most of the minority groups are followers of the Moslem religion, the Islamic festivals are used as a time to express the thoughtfulness of the Communist government. For instance, during their celebration of the three major Moslem festivals of the year, the butchery tax on beef and mutton consumed by Mohammedan communities is exempted. Further-

*668 The subject changes as the Party moves from one campaign to
208 another. For instance, in Northwest China the first stage empha-
sized the destruction of organized resistance and the establish-
ment of the Communist Government. About the time that the edi-
torial of Jen-min jih-pao, Peiping, November 14, 1950, declared
that "a comprehensive and far-reaching propaganda campaign
should be carried out beforehand so as to enable the masses to
gain a true understanding of the significance, functions and the
way of the convening the chu people's representatives' conference"
in Sining, Chinghai, "the Central People's Government Mission
to the Northwest...convened three forum meetings of represent-
atives of Tibetan, Mongolian, Turk, Moslem, Salar and Kazakh
nationalities, and personages of all circles in Sining, and visited
the mosque at the East Gate of Sining and the Chinghai Nationalities
House..."

2. Resist-America, Aid-Korea and related movements

After the Communists participated in the Korean War and when
the U.N. was discussing the case against Red China, an anti-Austin
(chief U.S. delegate to the U.N. at the time) Rally" was held at
Sian, Shensi. It promoted the Resist-America, Aid-Korea move-
ment as well as the three self (self-governing, self-supporting,
self-propagating) movement of the Chinese Christian churches.
In January, 1951, there came the first wave of attacks against the
religious group I-Kuan-Tao. In 1952, there were the three anti
and five anti-movements. About the same time, a movement for
production-increase was launched.

3. Agricultural tax campaign

*668 When the new agricultural tax system came into force in June,
• 651 1952, the propaganda gave unreserved priase of the new tax and
cursed the old regime. It is a good example of the Communist
propaganda:

"New minimum tax rate is 7 per cent. For the majority of
peasants, the rate will range from 11 to 15 per cent. Exemptions
or tax reductions will be given those having economic difficulties
arising from calamities, lack of manpower or disabilities and to
families of the Chinese People's Volunteers in Korea and Chinese
People's Liberation Army men. The new system is based on
average annual agricultural income of every member of a family.

This new tax system is in sharp contrast to multifarious taxes
under the Kuomintang regime. At that time peasants on an average
paid from 30 to 60 per cent of what was left to them in taxes to
the Kuomintang government after paying 50 to 80 or even 90 per
cent of their harvest to landlords as rent." (NCNA, Peking, June
20, 1952. See section Agriculture of General Handbook for an
evaluation of the actual tax burden.)

Judging by the above paragraph, the peasants under the Nationa-
lists (Kuomintang) paid as high as 90 per cent of their harvest to

N
*668 the landlord as rent and 60 per cent of what was left to the govern-
• 651 ment as tax. If these figures were true, then the peasants were
receiving only 4 per cent of what they harvested. Furthermore, at
the most, the Nationalist Government had taxed the peasants only
6 per cent of their harvest while the minimum tax of the Commun-
N ists is 7 per cent of the farmers' total annual agricultural income.
*668 4. Achievements of Communist government

After the Communist government had existed for a while, the
propaganda emphasized the achievement of the Communist regime.
A good example is the article written by Liu Ke-p'ing, Deputy-
Director of Commission of Nationalities Affairs of the Central
People's Government, concerning "The achivements of the Nation-
ality works during the past three years." In this article he listed
the following achievements:

1) The establishment of the autonomous districts
2) The participation of the minorities in the government
3) The training and education of local cadres
4) The sending of Chinese cadres to work among the minorities
5) The establishment of state trading agencies in the minority
areas
6) The gradual promotion of land reform among the minorities
7) The gradual change in the feudal relations between the owner
and helpers among minority herdsmen
8) The improvements in public health among the minorities
9) The establishment of schools in Sinkiang and other areas
where the minorities live
10) The help given to the minorities to create or improve their
written languages
11) The printing and distribution of books and periodicals in
minority languages
12) The radio broadcasts in minority languages
13) The study and improvements made on the traditional dances
and music of the minority groups
14) The organization of the Chinese Islamic Association to honor
the customs, habits and religious faith of the minority
groups
15) Visiting groups sent to the national minorities from the Com-
munist government and those organized among the minor-
ities to visit Peking and inland China. (The Great Achieve-
ments in the People's Republic of China during the Past
Three Years, (Chung-hua Jen-min Kung-he-kuo San-
nien-lai-te Wei-ta Ch'eng-chiu, Jen min Ch'u-pan-she,
ed. Peking 1952, Dec.) p. 37. The article was written
on September 13, 1952.)

S
668 Propaganda along this same line can be found in Burhan's
articles on "The great achievements made in People's Sinkiang
during the past three years" in Sinkiang Jih-pao, January 1, 1953

132 variable, thus making agriculture hazardous. The growing sea-
(241) son is short, with about five frost free months; even the few crops
134 that can be grown are often injured by autumn frosts. Dark colored
chestnut earth is common only on the higher parts of the loess
plateau of Shensi and Kansu provinces. It also occurs in the high
plateau region of Chinghai Province. In the loess region most of
the well-developed dark chestnut earth has been buried under
recent loess and alluvial deposits. (T.H. Shen. Agriculture
Resources of China, p. 20.)

2. Agriculture

241 Important irrigation systems, made possible by the Yellow
312 River and its tributaries, have been developed in Kansu, Ning-
hsia, and Shensi. All these irrigated areas except Shensi pro-
duce one crop a year, such as wheat, millet, peas, or flax because
the growing season is short. The large irrigated plains in Shensi
along the Wei River, a tributary of the Yellow River, produce
good American upland cotton in addition to wheat, corn, and mil-
let. The largest irrigated area is in the Ninghsia plain where
there are twenty-five canals from the Yellow River maintained
by the provincial industrial bureau. Irrigation is only possible
in the valleys, but they are narrow and comprise but a small per-
centage of the total cultivated area. When Buck made his survey
of this area in 1929-1933, he estimated that thirteen per cent of
the total cultivated land was irrigated. He felt that the extent of
irrigation sometimes depended upon the prices of agricultural
• (651) products fell. Because taxes were still imposed on irrigated land
and some of these taxes had even increased, further construction
of irrigation works was abandoned until prices commenced to rise
again.

137 The vegetation of this region is distinguished by the xerophytic
plants, bunch grasses on the high elevation, and the tall and short
grass sod. In Chinghai province, the Tsaidam Basin is charac-
terized by desert and weeds while in the same province, in the
vicinity of Kokonor, there is grass. In Kansu, along the foothills
and in the mountains, grass and weeds exist while in the desert
area of Ninghsia, only weeds grow. Grass grows in Shensi along
the Chin-ling and Huang-lung mountain ranges.

241 There is an inadequate amount of green manure crops used in
this region, which has resulted in a shortage of organic matter and
a deficiency in plant nutrients, especially nitrogen. In most of the
(372) area, straw of rice, wheat, rape, and legumes are not ploughed
under but are used for fuel, decreasing an important source of
organic matter to the soil and removing minerals necessary for
plant growth and crop production. Application of chemical fertil-
izer in addition to local manures and the plowing under of plant
residue is very necessary to soil fertility.

*668 and coordinate all rural activities toward the fulfillment of Chi-
241 nese Communist agrarian policy: complete cooperativization of
407 agriculture and the assurance of a steady flow of food and raw
185 materials through fixed purchase of produce. (The problem of
agricultural taxes in the Northwest has not been mentioned so far,
• (651) The Communists have not reported any reduction of agricultural
taxes, or what the average tax rates in the Northwest are.) They
have a system of cooperatives at the basic production levels.
Though cooperativisation has taken place slowly because of the
peculiar conditions of many areas in the last six years, it is
expected that once some nucleus of control has been established
in the rural areas in the form of permanent mutual aid coopera-
tives and producer cooperatives, rapid cooperativization will
take place, to embrace, ultimately, all rural inhabitants.

*668 In the national minority area, the Chinese Communists have
563 proceeded slowly, so far, in their attempts to organize agri-
cultural and pastoral activities. The problem of different national
(404) minority groups has been one of the principal stumbling blocks in
the creation of lower level co-ops, and will undoubtedly pose a
barrier to rapid cooperativization.

*668 Secondly, the State has been able to provide only a small
241 supply of farm implements and credit. Shortages in China and
651 the difficulties of transportation undoubtedly account for this.
452 It is questionable whether these shortages can be overcome in
the next few years, but when they are, new farm tools and suffi-
cient credit should account for significant output increases.

Thirdly, one of the principal ways the Communists have
*668 attempted to increase output in the Northwest has been through
241 extensive farming rather than through intensive means. They
433 have done this by using vast amounts of labor, particularly mili-
tary, to reclaim desert wastes, build irrigation works, and con-
struct state farms to manage the reclaimed area. Evidence of
this is most striking in Sinkiang and Kansu. Although Chinghai
and Shensi with their hills and valleys limit extensive farming
procedures, cultivation has been extended wherever possible.
Because of the shortage of fertilizer and tools the Chinese Com-
munists have been unable to promote intensive farming on a
scale that would raise output per acre significantly. Instead, they
have had to resort to expanding cultivation, that is, extensive
farming, to obtain the desired increases.

*668 Finally, it is clearly evident that in all parts of the Northwest,
24 with the exception of Chinghai, there has been a general neglect
23 in promoting livestock production and instead an all-out effort to
433 increase the planting and extension of cultivation of wheat, cotton,
and oil seed bearing crops. This program differs radically from
policy measures suggested by Western agronomists, i.e., J.L.
Buck and T.H. Shen who advocated the restoration of fertility to

a correspondingly important part in Chinese history. In more recent days too, during the troubles since the fall of the Manchus in 1911, it has once more figured prominently in the manœuvres of Imperial, Revolutionary, and Republican armies, brigands, and train bands, while in times of peace it lends itself admirably, flanked as it is by river and mountain, to the levying of likin and other barrier tolls dear to the Chinese official. It is a compact little place, with ramparts and gates remarkable for their massive size even in China, the land of walls, overlooking the Yellow River, which pouring down from the north in a turgid yellow flood here strikes the Ch'inling Shan and turns sharply to the east.

As we approached T'ungkuan some one noticed three strange pack mules which had attached themselves to our caravan. Enquiries elicited the fact that they belonged to a merchant who was endeavouring to smuggle three loads of Price's candles through the frontier barrier into Shensi by this means. We had unwillingly to cut him adrift. Unless accompanied by transit passes goods in transport through the interior of China are taxed again and again at every point where a barrier can be erected until the prospective profit on their sale is eaten up by these tolls and their further transport becomes futile.

From the railhead at Kuanyint'ang to T'ungkuan is called a distance of 280 li, and can be done in three days. As far as Lingpao the li are "short li"; thence to T'ungkuan they are "long li"; the difference is most marked, the short and the long li averaging about a quarter and a third of a mile respectively. This absurd and typically Chinese arrangement is said to be due to the fact that the authorities of Honan Fu endeavoured in days gone by to lay claim to the fortress of T'ungkuan on the ground that it was nearer to their city than to Hsian Fu.

A peculiar four-wheeled cart of prehistoric appearance is used round T'ungkuan, the only place in China where I have seen a four-wheeled native vehicle. Even the huge carts which one meets on the grasslands of the Mongolian border or in the sands of Western Kansu, regular ships of the desert, and often accommodating whole families, are always of the familiar two-wheeled type.

From T'ungkuan to Hsian is a distance of 290 li, which

and enters a gorge which soon ends in a stiff climb up to a pass, about 5000 feet high and two hours' scramble from Fenghuangtsui. There is a similar steep descent for a thousand feet or so down the other side into a ravine where farmsteads and rice fields reappear, and then a weary three hours' march down a stony gorge which debouches on to the narrow valley of the Ch'ienyu Ho, a considerable stream for these mountains, which takes its rise in the watershed ranges north of Hsiaoyi T'ing and flows south past Chenan to join the Han near Hsünyang Hsien. The trail continues down this stream, which has to be crossed and recrossed though barely fordable, for another hour's march through precipitous limestone gorges, and then turns up a small tributary to the west for a few li to reach the city of Chenan, a dilapidated little place lying hidden away in the mountains just round the corner from the canyon of the Ch'ienyu Ho.

We had had nine days' continuous travel over the most appalling mountain tracks since leaving T'ungkuan, and as we were well housed in the Yamen of the Chief of Police, and were informed that the trail on to Hsingan was much worse, we decided to rest in Chenan for a day. The fourteen days between T'ungkuan and Hsingan by this route constituted one of the hardest journeys we made in all our wanderings through Shensi and Kansu owing to the roughness of the mountain trail. Travelling as we were with the assistance of the local officials we did not have to sample the inns, if there were any, *en route*; without such assistance it would of course have been very much harder and more fatiguing.

Chenan has practically no city wall left, which is unusual. The explanation lies in the fact that the inhabitants own a particularly fine *chaitzu* on a neighbouring mountain top in which they prefer to take refuge, with their magistrate and his police, in times of trouble rather than defend their city. A large proportion of the population were there at the time of our visit, for at that early period of our journey our party was so formidable in size that when we descended on these small mountain towns like a swarm of locusts the people used often to fly at our approach as though from a band of brigands. Chinese officials travelling on what used to be, and often still is, called an Imperial Mission, such as

that on which we were engaged, must according to immemorial custom be provided with food and accommodation free of charge by the towns and villages through which they pass, and not only they themselves, but the cloud of parasites who accompany them, servants, soldiers, coolies, and animals as well. The local magistrates of course try and recoup themselves from the people, but in a very poor post they might almost be ruined by the passage of such a party.

There are patches of rice fields round Chenan, but most of the district is composed of a maze of wild mountains, the lower slopes of which are often dotted with the valuable wood oil tree, a pretty sight in blossom in April. The Chinese assert that the district is rich in minerals, copper, iron, asbestos, and antimony. It is a third class district and the post of magistrate is of course a poor one, as the land tax receipts amount to less than a thousand taels per annum. But amongst our party was an official who had been magistrate at Hsiaoyi, a day's journey further north in the mountains, who affirmed that compared to the latter district, Chenan was a garden; for Hsiaoyi, it seems, has no land tax receipts, and practically no population. It should be explained that the land tax is usually collected in grain and remitted to the provincial treasury in silver, the process of exchange from the one into the other not being effected without a certain percentage remaining in the hands of the local official; hence the amount of the land tax is usually considered the standard by which the wealth of a post may be measured.

A road runs due south from Hsian, the provincial capital, through the Ch'inling Shan *via* Hsiaoyi and Chenan to Hsingan on the Han River, being the most direct route between these two important cities, but it is so rough as to be little used. It is bad enough in the dry season when it follows up and down the stream beds in the simple manner of so many mountain trails in China, but when the water rises and the path has to take to the cliffs of the gorges it is very much worse and probably quite impassable for pack animals and chairs. We found the stream bed still just practicable in April.

The number of burnt-out ruins of hamlets, farmsteads, and huts along the trail we had just traversed could not fail

than some of the veterans of the China Inland Mission, who have passed the best part of their lives in isolated stations in Shensi and Kansu, such as Hsingan, Hanchung, Fenghsiang, Lanchou, Liangchou, Hsining, and Ninghsia, where months and years pass by without their ever seeing another foreigner. Their success in securing converts may not have been striking, but it is permissible to speculate on whether those whom they have secured are not more genuine Christians than the native Catholics. Often in spite of the basest ingratitude on the part of the Chinese, whose wounds and illnesses they tend one day, only to be passed by in the street with a scowl on the next, these noble men have laboured on year after year doing good and leavening, in however small a degree, the leaden mass of Chinese materialism. The results of their work may not always be apparent now, but they have sown a seed which cannot fail in time to produce a harvest of some kind, a harvest of which other Missions not infrequently reap the benefit.

We spent the night at Kulupa, where we were most hospitably received and entertained with a banquet.

The distance to Hanchung is called 75 li. After descending for about an hour's march through gullies in the hills the track debouches on to the famous plain of Hanchung, a highly fertile, heavily cultivated, and densely populated region, stretching for a certain distance along both banks of the Han, and entirely surrounded by mountains. Another two hours' march across this plain, past the boundary between Ch'engku and Hanchung (Nanch'eng) districts, brings one to the Han River here a shallow stream flowing in a broad sandy bed, a hundred yards wide and a few feet deep. The path runs along the banks of the Han for a short distance, and then, crossing by a ferry, continues for ten li over the plain to reach the busy township of Shihpali P'u. This village, which, as its name implies, is 18 li from Hanchung, is developing into a large town, and is evidently the centre of the through trade from Szechuan, Kansu, and Northern Shensi, which, as is usually the case in China, is driven to avoid the capital by the various tolls and dues. From here the road runs west for the rest of the way to Hanchung, passing through a rich suburb to reach the East Gate of the city.

Hanchung, now officially known by the name of t district as Nanch'eng, is a first class Hsien, and is one the three or four wealthiest and most populous cities the province. It lies in the centre of the rich cigar-shap plain of the Han valley, surrounded by mountains, and its situation and general appearance much resembles smaller edition of Chengtu in Szechuan. Two crops, wh followed by rice, are regularly raised on the plain. A co siderable quantity of silk is also produced and some cott The situation of Hanchung in the centre of the most fer region in the province and at the point of intersection four trade routes, south to Szechuan, west to Kansu, no to the Wei valley, and east down the Han to the coa has made it a considerable trade centre. For the same rea it has always been one of the richest and most import likin stations in the province, where the Chinese offici as elsewhere, do their best to throttle the transit trade kill the goose which lays the golden eggs by the excess imposition of dues and tolls. There are few more lucrat offices in the province than that of Superintendent of t Hanchung Likin.

Hanchung is the administrative capital of the upper H basin, and is the seat of a Taoyin and a Chenshoushih. T position of the former is that of Civil Superintendent of t magistrates in his jurisdiction. It is nowadays less import than it was in the days of the Manchus. Since the abolit of the hierarchical system of Tao, Fu, Chou, and Hsi the territorial administration is entirely in the hands of district magistrates acting directly under the Civil Goverr of the province. Thus the magistrates correspond direc with the Governor and send copies of their despatches reports to the Taoyin, so that the latter is short-circuit and the abolition of the post is sometimes advocated as be superfluous. Under the old system the Hsien reported the Chou, the Chou to the Fu, the Fu to the Tao, and Tao to the Governor, each being responsible for the a of his subordinate. The position of Chenshoushih is t of a General with powers of military administration. At present time, when things are more or less unsettled the military rule the roost, a Chenshoushih often has pow which amount practically to those of an independe

in the loess hills. The path, crossing the northern branch, strikes up the hill side between two ravines and emerges on to a wheat covered plateau intersected by rifts and valleys in the loess. It runs across this plateau in a northerly direction, ascending gradually, for a couple of hours, and then, as the cañons on either side close in and the plateau narrows to a spur, it follows along the top of the latter, still ascending, for another hour to reach the village of Tsuimu, 4800 feet, perched up on a rocky knoll with the ground falling away in deep cañons all around, and 40 li from Linyu. Supplies were very scanty in these hills, as the people are miserably poor; but a little wheat flour could usually be obtained, which was generally not mixed with too much loess in the process of threshing and grinding. Cock pheasants could generally be secured out of the corn fields when required.

It is an agreeable peculiarity of loess mountain country that the trails follow where possible along spurs and ridges rather than the valleys (this is so, in spite of a famous and much quoted description of the loess in which the life and traffic of the region is described as moving along the bottoms of the cañons), and Tsuimu lies on a sort of knot, where several ridges and therefore mule trails meet; consequently, though only a dot of a place, it boasts a likin station, and commands two trails into Kansu. The path to Yungshou Hsien, 50 li, follows along the top of one of these winding ridges, this one being actually the summit of a range which runs eastwards from the Kansu border and constitutes the first barrier crossed by the Great West Road between Hsian and Lanchou, and provides a most interesting march owing to the continuous and extensive views on either side over this peculiar loess country. To the south a series of loess ridges and intervening ravines fall away step by step towards the Linyu valley, beyond which the Ch'i Shan range is seen to end, as Yungshou is approached, in the rolling plains of the Wei River and its tributaries; while to the north, across an intervening dip, rises like a wall the edge of the loess plateau country of Eastern Kansu. These loess clad ridges of Western Shensi seem to be pieces broken off from the Kansu plateau, like the mountains on the edge of the Mongolian plateau, south of Dolonor in Northern Chihli.

From Hoyang to Ch'engch'eng, a short march of 45 li, the trail runs west across the same undulating plains, traversing two deep cañons *en route*. Ch'engch'eng, a second class district city, is a replica of Hoyang.

The next stage to P'uch'eng is a very long march, called 105 li, probably over 30 miles, for the li are long on these prairies. The trail runs south across the plain past numerous hamlets, descending gradually, for three to four hours' march, and then drops by easy gradients in the loess terraces to the walled township of Yungfeng Chen, 50 li from Ch'engch'eng, in the valley of the Lo River. These little walled towns often have the characters for their names inscribed over the gateway, like stations on a railway, a custom which is most useful to the traveller, and which I have not noticed elsewhere.

Five li west of Yungfeng the Lo River, at low water a few feet deep and fifteen yards wide, and of the consistency of liquid mud, is crossed by a ferry. The Lo here flows from north to south; on the right bank rises a loess bluff a few hundred feet high, and on the left the open valley some miles wide stretches up by easy slopes and low terraces to the level of the plateau. From the ferry the trail ascends the bluff constituting the edge of the tableland, and then runs west across the usual undulating wheat prairies, dotted with walled farms and villages, for the rest of the way to P'uch'eng.

P'uch'eng lies in the open plain backed by low mountains about ten miles to the north. It is a large and important place, a first class district city and the centre of a great wheat-growing region. Many prominent men in Shensi have their homes in the district, and therefore, in these days of home rule, exercises considerable influence in the province. These large first class districts in the loess of Central Shensi, such as P'uch'eng, Lint'ung, Weinan, and Fup'ing, the very heart of ancient China, have always been proverbial for their agricultural wealth, and to this day the provincial Government subsists largely off their land tax revenues.

From P'uch'eng to Fup'ing, another long march of 95 li, the trail continues west across the same undulating prairies past many villages including the township of

west until we had got behind the Liangchou mountains, and then dropping south to Hsining along the Kokonor border. There is a shorter trail south-west from Liangchou, passing apparently more or less directly over the snow-range, but we were told that it was very difficult, seldom used, and probably impassable for loaded mules. There are only a limited number of trails leading up from the plains of Mongolia through the Nan Shan to the Kokonor plateau, and the route we followed, though itself little known to foreigners, is probably one of the most important of these tracks. It reaches the plateau by means of a famous gorge known as the Pien Tu K'ou (meaning Passage across the Frontier), and the section of our route from Chenfan, in the Alashan desert, to Êpo, in the Kokonor, is probably a portion of an important trail connecting Urga with Lassa, placing these two capitals of Lamaism in communication without the necessity of passing through any hostile territory. Our first few days' march lay across a portion of the Alashan desert to regain the Great West Road at Yungch'ang, a very trying experience, since the season of the year was the end of July, when nobody travels in the desert if he can possibly avoid it.

The first stage on this road being a very long one of 100 li across the desert, the magistrate had kindly arranged for us to break it into two by sending on tents to some wells 30 li out. Leaving Chenfan the road runs south through the oasis for 15 li, crosses the main branch of the Chenfan River by a ford, and then turns west into the desert. Two hours' march further on we reached the wells of Sha Ching, where we found a luxurious camp established for us by the forethought of the magistrate. The water from the wells is evil-looking and very brackish, but we had been told to bring sweet water with us. The contrast between these rich oases, such as Chenfan, and the absolutely lifeless desert, lying side by side so that one passes in one stride from the one to the other, is most striking. The great wealth of the irrigated land is evidenced by the fact that the district of Chenfan, though containing so much desert, offers a highly lucrative post to its magistrate; that is to say the land-tax receipts, consisting of grain, are large; the grain collected in this fashion by the magistrate is remitted by him to the

provincial treasury in silver at an old-established rate much below the market price, permitting a considerable profit to be made on the transaction. The productiveness of the land is of course entirely dependent on the irrigation streams from the snows of the Nan Shan, the magistrate informing us that he had been nine months at his post and only seen rain fall on two occasions.

The following day's march of 70 li to the oasis of Shehsia Kou would have been easy enough had we not lost our way. We started at 3 a.m. in order to reach the wells of T'ou Ching, 40 li out, before the sun got too hot. The trail led across a waste of sand hills and soon ceased to exist. The desert is devoid of all vegetation and lifeless except for antelope, which were constantly in view; what they find to eat I cannot imagine. After we had been marching for some hours the soldier from Chenfan who was acting as guide announced that he had lost the way. Looking for the wells where we were to have our midday halt was like searching for a needle in a haystack, and the position was unpleasant enough. Altogether we wandered round, steering more or less west, for some seven or eight hours, suffering greatly from thirst, with the sand often over the ponies fetlocks. Our only landmark was an ancient ruined tower, the remains of some old fortification in this region, perhaps a part of the Great Wall. At last one of the soldiers sent out to reconnoitre from a rise descried the tents pitched at the wells in pretty well the opposite direction to that in which we were then trekking, and an hour later men and animals were satisfying their thirst. Another three hours' march across the desert brought us to the oasis of Shehsia Kou, where we were comfortably lodged in the interior of one of the fortified farms so common in this region.

The next stage is another desert march of 80 li to the village of Ningyuân P'u, but there is an oasis, Tung Wan, half-way, the going is better, and we took care not to lose our way. Ningyuan P'u is a walled village at the mouth of an irrigated gorge where the mountains meet the desert plain. From here to Yungch'ang is a distance of 75 li. The trail follows up the irrigated valley for 35 li to the hamlet of Tsungchis Chai, where it turns up a barren stony ravine, crosses a low pass, and descends across an arid sloping

Kokonor border. The wool is usually bought by Mahomedan middlemen, called *Hwochia*, and passed on by them to the Chinese agents. A similar, but smaller trade, is carried on at collecting centres such as Chungwei, Ninghsia, Shihtsuitzu, Wufang Sha, and Huamach'ih on the borders of Mongolia in the north of the province, but this Mongolian wool is inferior in quality to the Kokonor produce.

The immense journey made by this wool from the Kokonor to Tientsin is only rendered commercially possible by the Treaty right exercised by foreigners of bringing produce down to the coast from the interior under transit pass, which exempts the goods from taxation by the likin barriers *en route*, a fixed transit duty being paid to the Customs at the coast. This arrangement is all right when the provinces are knit together under a strong central government and when the finances of the country are national rather than provincial, but under a loose federal system of semi-independent provinces, however, into which China appears at times to be drifting, the authorities of a distant interior province like Kansu can scarcely be expected to look with favour on an arrangement by which the most valuable trade in the province is in theory immune from all local taxation.

We purchased ponies at various places during our long journey as we required them; one of the best I secured was acquired at Hsining. These Kansu ponies are bred on the grass-country of the Kokonor, and the two chief collecting centres for horse flesh are Hsining and T'aochou, especially the latter. They are of an entirely different breed to the East Mongolian pony so well known in the Treaty ports. The Kansu pony is much finer in appearance though not so strongly built or as good a weight carrier at fast paces as the Kalgan pony; and being usually handled at an earlier age he is generally more civilized. For the purposes for which they are required, that is to say long road journeys of four miles an hour or so, the Kansu ponies would be difficult to beat anywhere, doing twenty to thirty miles a day for weeks or months on end, with the roughest of stabling, and on a diet of chopped straw, bran, and peas. A *Fei K'ou Ma* (pony from the Northern Passes, i.e. from Kalgan) is considered of little account in Kansu, and

distant. We made a détour to visit this, and questioned a band of workmen we found on its border, raking the white crust into glittering mounds. They informed us that every year, in the month of April, the water wells up to its highest level, gradually retreating during the summer, and leaving behind the crystals, which are so clean and pure as to require no further process than that of being exposed to the sun's rays. Strange to say, however, the spring of drinking-water used by the villagers is perfectly sweet.

The inhabitants of Salt Lake village possess the right to a certain tax on every cartload of salt exported, but as usual opium has killed all initiative, and these unhappy people are reduced to an abject state of poverty. The miserable houses, however, are constructed of very enduring material, the blocks being of sun-dried, bituminous clay dug from the borders of the lake, and which are much harder than the kiln-burnt bricks commonly used in Kansu.

It had been reported to us that a Christian Chinese couple resided here, the husband being the official recently appointed by the Chinese Government to receive the salt tax. This lady and gentleman hearing we were there, invited us to their house and we were cordially welcomed into a delightful Christian home. It was indeed pleasant to sit down at a well-served table, and to enjoy once again Christian fellowship and intercourse. These refined people were living under conditions of the utmost isolation, where all foodsupplies had to be brought from Kaotai, as it is impossible to grow any grain or vegetables; indeed, the neighbourhood produces no commodity of any description whatever except salt.

And now at length we finally touched the extreme southern border of our objective, and passed, without

come too,' was gathering impetus for a more organised attack than any to which the Christian community had hitherto been exposed. Severe financial loss was incurred through the death of mules, horses, sheep and cows, in which live stock the Church funds were invested. One of the most valued Christian leaders was at death's door with rheumatic fever, and hope of his restoration was almost abandoned. He, however, slowly recovered, but when barely convalescent, received news that his two cousins who had but recently left us on a visit to Honan, were murdered by brigands on the road. A few days later came a letter, telling of a robber-band attack on his home, and the capture of the head of the house. A large ransom was demanded for his release, and the whole clan impoverished itself to raise the money, yet when this was handed over, they merely received the information that his body would be found in a certain well, and so it proved to be.

There had, moreover, been trouble lately in Kan-chow, which clearly showed us the active opposition of enemies. The Kanchow Christian farmers had not sown any opium, and so many had registered as enquirers as to cause a positive difficulty to the Local Official in the raising of the twenty-four-thousand-dollar opium tax, at which sum the district had been assessed. These wheat-growing farmers did not place themselves in a position of financial advantage, as the value of the opium crop, even allowing for the tax, was almost five times that produced by grain. As friction increased, the local tax-gatherer determined to wreak vengeance on the whole Christian community, and thus the plan of revenge was laid with a craft and subtlety such as is difficult for the Westerner to grasp. An old man, seventy years of age, so poor as to be nearly starving, was secretly approached with the offer of

501 dozen whole yak skins are blown up and joined to make rafts and carry wool and other goods that come down from Tibet on camels or small conveyances farther down the river. In 1907 there were eight larger shops where Russian goods of the so-called Tschan tou hui hui - as the Sarts and Turkistan-Turks are called in Kansu - were traded. (1)

1. The number of Russian shops was on the increase. Tschan tou hui hui literally means "Mohammedans with bound heads." This designation comes from the fact that the Turkistan Turks always appear before the Chinese in turbans.

511 As long as I was in the province of Kansu the inhabitants used
651 astonishingly few foreign commodities compared to those of other provinces. The population of Kansu is particularly backward. To be sure, the way to the coast is very far and inconvenient. Besides that, the provincial government introduced a trade monopoly in 1907 on glass, bronze and lacquer goods, and Kansu in any case is regarded as the poorest province of the middle kingdom. Its annual balance is said to be so deficient that for many years other provinces have had to assume responsibility for the deficit. The many soldiers which seem to be necessary for the constantly recurring uprisings are said to be to blame for this state of affairs. The chief reason is, of course, the destruction and impoverishment, a result of the wars. Nor was stealing as prevalent in other provinces as here; the emperor was too far away. Payment of direct taxes, of land tax, is largely in kind. The most ancient registers of landed property are still used to control the levying of these taxes, whereas the farmer himself is taxed on the basis of the amount of land he [661] has at the moment. In this way the agents of the yamen above all amass great riches.

When I was in Lanchow fu there were few Europeans living
563 there and these were missionaries. My old friend, the Belgian Father Vän Dyk lived a quite lonely life in his mission and therefore greeted me particularly cordially. I moved into a camel hostelry outside the city quite near the Catholic mission, so that we could get together for an evening of conversation now and then and no city gates separated us, which were here irrevocably locked at twilight and divided up Lanchow fu and its suburbs into several separate parts. (Plate XXXIII). Mohammedans are not permitted to live here in the center of the city, they may only keep

624 se of the so-called Tu jen (2) living in the city. Every day he places

2. A Chinese word, literally: "earth-people," meaning oldest inhabitants.

the insignia of his power in front of the door of his house, like a
685 petty Chinese official or a police officer. Everyone who passes the houses sees two kang (3) and a stick for administering bastinadoes

3. The kang. Chinese kia (popularly known as dia-dia in Kansu) is the rectangular piece of wood, weighing 20 pounds and about 60 centimeters in length, through which the head of a convict is stuck. The Chinese fear it less as a punishment than as a mark of shame, and it is used primarily in cases of petty thievery. The conviction lasts from one to two months, and this collar often may not be taken off at night. But the convicted person may go walking with it if he feels like it and if he has been granted bail or is a property owner.

which are used as punishment or to extract confessions. This represents the power which the li tu se still exercise over their subjects,
346 the Tu jen. The yamen of these tu se is very small. But close be-
178 side it under a three-tiered roof (Plate L) sits a colossal clay Buddha in the midst of a rambling group of buildings which have long since crumbled except for the foundation walls. In any case this structure stems from ancient times (perhaps Ming?) and was the temple of the Tu jen. A large part of the property around the temple still belongs to the Tu jen. There are many inhabitants of Hsining who maintain that the building containing the giant Buddha was not built as a temple but as a palace of the li tu se when they were still independent, around the time of the Sung Dynasty (11th
624 century). A rather large part of the city belongs to the Tu jen who
651 pay taxes to their kings and not to the Chinese officials.

The holder of the position of li tu se in Hsining was a young man in his early twenties who, in complete contrast with his father, enjoyed very little esteem. And rightly so! For, within a few years 171 he had spent his father's entire fortune in drinking and gambling, and was now heavily in debt. Even his father had little power left over his subjects; the Chinese mandarins have now become even more the rulers. They now gather a tenth of the produce

from the tu se fields into their barns. I shall come back to the sub- 624
ject of the Tu jen later when my journey takes me through their 651
country. In and around the city of Hsining there are only a few Tu jen living today.

The city of Hsining fu is now almost entirely Chinese. Even 563
in the erstwhile very important eastern suburb, the Tung kwan which was destroyed by the Chinese in 1895, Mohammedans are no longer permitted to live with their families; they may only conduct their businesses there. Since 1896 specific sections and valleys in the mountains have been assigned to Mohammedan families. The only thing that is waived today is the decree that was for years carried out very strictly, namely, that Mohammedans wishing to visit the inner part of the city were obliged to have a stamp put on their cheeks as they entered the city gate.

The inhabitants still vividly recalled the horrible battles with 701
the Mohammedans. Hsining was therefore also a military city. There were five ying (battalions) stationed here and the largest and most beautiful yamen was that of the general (tschen tai) who had a rather large arsenal. In it incense was lit on the first and fifteenth of every [782]
month to the deliverer of the city, an old ko lu pu pau (a Krupp cannon), and officers and soldiers fell to the ground in a kowtow before the rusty cannon. This weapon was the soul of the defense in the year 1895. Human blood was officially smeared around the mouth of the cannon in order to make it voracious and thirst after Mohammedan blood. The natives said: "It has a soul just like a human being," and they undoubtedly had a much more definite image than our native recruits do when we teach them to speak of the "soul" of the axis of a gun or cannon.

The tsch'eng schu ying, the military governor of the city who is 701
also the keeper of the keys to the city gates and commander of the 712
so-called middle battalion, (1) as well as the hsien, the prefect,

1. The Chinese provincial army consisted only of the green banners, the lü ying. In peace time one seldom heard of the larger associations, the tschen piao (brigades), the hsie (regiments), because the Chinese provincial army (I am not speaking of the troops on the coast) was used as a police troop and was garrisoned in various places. The primary important military unit is the ying camp or battalion that is under the command of a major (yu tschi) or a captain (du se or schu be).

563 (1260-1368) and still continues. The Tu ren of Wei yüan bu are a very
[779] peculiar little group. Many of them say they believe in only one god. But, like the Chinese, they are also Buddhists. But besides
791 that they have shaman priests similar to the Bönbo, who are primari-
789 ly concerned with making the weather and exorcizing hail. On the way from Hsining to Wei yüan bu one constantly comes across small loam towers and numerous small heaps of stones which the hail exorcisers have erected for the protection of the fields.

563 Most of the Tu ren men dress like Chinese, but some of them
[271] also wear, like the Tibetans, caftan-like wool skirts that reach
142 halfway to the ground and they wrap their legs up to the knees with gray or blue bands like the poor people of North China. It is very difficult, in fact, impossible, to distinguish a Tu ren from a Chinese by the cast of his features or his build (Plate LIV). They may be smaller on the average and have broader faces than the Chinese. But just as among us Europeans one recognizes persons of different nationalities only by certain external characteristics and by their language, so it is with all the Mongoloid peoples at the opposite end of Eurasia. There is no truly significant difference in physical structure which would exclude misjudgment or confusion.

565 The men wore the Manchurian-Mongolian queue - which is
[302] taken for granted among faithful subjects of the emperor - and for the rest they shaved just as much of their heads around this queue [162] as the Chinese did. There are today still many thousands of them (allegedly 50,000 families). In the Hsining prefecture alone the number of their princes (tu se) equals more than 12, formerly it [651] was 16 or 18. These princes receive gifts and land tax from their subjects, administer justice and represent their subjects in dealings with Chinese officials. They submitted as early as 1372 in the fourth year of the reign of the first Ming emperor (Hung wu) and [551] in return their old noble families were established. Beside their Mongolian names they have Chinese surnames and three of their tu se are called Li, two Ch'i, others Yi, Chen, Wang, Na Chao, Chu, etc., and all of them have remained faithful since the Yüan dynasty, just as though they were real Chinese. During the Mohammedan rebellions they suffered exactly like the Chinese.

563 There are also Tu ren living on the old highway between Lan-
342 chow and Hsining fu, in the region of the confluence of the Datung ho and the Hsining Ho, where they are scattered among Chinese and Mohammedans in individual villages. These are

After I had had my presents handed over, the conversation turned to 643
European weapons and the dsassak who already had a number of Russian 574
and English repeater guns, made every effort to buy some of my weapons. When I showed no inclination to comply with his wishes, the atmosphere became strained and I hurried to take my leave. /350/

The Barun dsassak (Plate LXXV), like all Dam Mongols, cannot 252
be relied upon. The flour for which I had paid him up in the Wulasetä Valley, was still not ground when I came to Barun kurä, and I was obliged to wait two days before I could get it. It was ground in hand-mills by old women and widows.

There were a great many beggars and cripples loafing about in 735
the dsassak's courtyard. They mumbled their Om mani padme hung and plucked at their rosaries without ceasing. There were people 644
coming and going all the time who paid tribute to the dsassak, and my companions were always amazed at how obsequious the Mongols were toward their ruler. Whereas the tent Tibetan shows very little respect toward his chieftain, the ordinary Mongol is bound by strict etiquette. He may never sit down with crossed legs before his prince, he must bend his right knee and remain in a half squatting, half kneeling position. If he is not invited to sit down he remains standing with his legs together. He must take his sword in his left hand and may not leave it sticking diagonally in his belt as he usually does.

The Mongol princes have incomparably greater prestige than the 643
chieftains of the Tibetan nomads. I have already spoken of the princes' right of preëmption. Besides that, the dsassak owns his en- [423]
tire country, he annually apportions the pastures and also the arable land among his subjects and for this he receives his tithe in the form of animals and grain. Moreover, he demands several days of [651]
gratuitous service from each family, which the wealthier ones may pay off in the form of added taxes. On his part he feels himself responsible only toward the priests, he always supports a few lamas and [792]
gives large gifts to the monasteries. In many things he is the only source of supply for his subjects. He had large supplies stored in his warehouses in Barunkurä. In them I saw pulo from Shigatse, lambskins from Lhasa, Nepalese amulet boxes, peacock feathers from India, saffron from Kashmir, Indian dates and cocoanut, Tibetan stag-antlers and pouches of musk, as well as American cotton materials, boots from Dankar, tea and the many little things with which the Chinese furnish the nomads of the highlands.

While I was staying there a huge felt yurt was erected in the court- 792
yard of the dsassak, measuring 10 meters in diameter. The tribal 346

German castle, while the ordinary priests' houses are spread out on the main mountain behind like a neat little village. (Plate XXVI). In the dschong on the cliff lives the ruler of the Dscherku tribe (Tibetan: sde schok), the Tsawu be hu. At present this is an incarnate lama of the Saskya sect, but it has only been in Manchu times that he has taken the place of the former secular and hereditary princely house. There is now fixed spiritual ownership instead of the hereditary succession of the old aristocratic families. The same soul which from time to time merely enters another body, so to speak, is now permanent master. But, strangely enough, this soul always keeps choosing aristocratic families. He still delivers his taxes to the Chinese every three years. For the rest, he as well as his neighbors are subordinate to the Nan tsien king. In addition to him a second living Buddha has set up his labrang on the mountain.

Since it is the most important place in a wide area, Dscherku ndo is also the center of the Chinese (i. e., Hsining) government in the entire "Hung mao ör de ti fang" or "Yü fu" (Peking dialect: Yü schu). At the time of my visit there was, however, only a single man, a Fan tse to boot, from Dunkur who was the representative and political agent of the Chinese in this country. This "Lo ts'a" was given board at Tibetan expense, but was not entitled to anything else, and his only duty was to be able to give information, if necessary, about important events in the country. Real Chinese officials could be found here only once every three years and these consisted of a commission to collect taxes. The latter were taken over from Mongolian times and the amount has been fixed since the year 1732. The commission was made up of a civilian and a military mandarin /Bi tieh sche (2)

2. Bi tieh sche is written pi t'ieh shih in Mayers, The Chinese Government. The name derives from the Manchurian word bitheschi meaning "writer" and one who knows how to write. These officials finally always had Chinese secretaries under them.

and Schu be who in Tibet wore red buttons/ with three interpreters and three secretaries, for whose protection close to twenty Chinese soldiers with four flags and several Mongolians from Tsaidam were taken along. On the journey thither the people always went from Dankar north of the Koko Nor across Tsaidam and the Odontala (Sing /143/ su li t'ai) to the northernmost Yü fu tribe, Niamtso, then by way of the tribes of Guts'a and Antschun as far as Dscherku ndo which they finally reached

after three or four months. The nomads living along the route were obliged to furnish free means of transportation (ula) and plenty of free food (seven sheep a day). En route disputes between tribes were ironed out as much as possible, and secretaries and interpreters received earnings from this as well as from the ula. The commission stayed in Dscherku 10 to 13 months, that is, strictly speaking, long enough until the K'amba tribes had paid their taxes, whereupon the Chinese traveled back to Hsining fu with ula out of K'am by way of Deda, Lab (e) and Tendo, approximately along the route that I had taken to K'am. The result of these strenuous journeys, besides the moral reminder of Chinese supremacy was a sum of 2,000 taels. However, in the last few years it had never been collected, but had shrunk to 600 taels because the tribes always sought to avoid payment and maintained that they were unable to collect the proper amount. They said this was caused by progressive poverty which was supposed to have been caused by over-population and increasing summer droughts. I was told by various people that there had been very poor harvests the preceding years. However, my six Schen si merchants thought that the chief reason for the refusal to pay taxes lay in the small amount of authoritative power which China develops in K'am. (1)

1. The expenses involved in the sojourn and the return journey of the Chinese, which the K'amba had to pay in kind amounted to another 3,000 taels or so.

The ula, that is, free transportation back to Hsining, was arranged so that the K'amba gave the Chinese two oxen and one horse for each man and 15 oxen and 5 horses to transport the silver and the goods that had been got in trade, giving them a total of 75 to 80 oxen and 35 horses as their property and only a few guides besides.

The tax which each individual family was required to pay in money every three years was 0.075 tael (about 22 pfennig). Originally each 100 families were required to furnish one horse. As long as the value of a horse was still 7.5 tael (1780) the horse tax was figured in silver and this figure has been retained. On the basis of 0.075 tael per family and five members to each family, one can estimate the population of the Yü schu at 133,300 laymen and 22,000 tax-exempt lamas (that is, approximately one-sixth of the population) or a total of 155,300 souls. I regard this as a fairly accurate figure (i. e., 1.9

653

653 PUBLIC WORKS--government construction of dams, reservoirs, canals, ship channels, railways, highways, sewers, and public buildings; method of accomplishment (e.g., by labor drafts, by contract with private entrepreneurs); public works policies (e.g., to relieve unemployment, to increase public revenues); maintenance of public works; etc. See also:

Chuzzi gods	186	Forced labor	466
Water supply	212	Highway and railway construction	499
Construction contractors	331	River and harbor improvements	503
Public buildings	366	Political graft	667
Sewers	366	Public works programs to relieve unemployment	746

and the other at San-men which will give an annual output of 110,000 million kilowatts of electricity, ten times the nation's total output of power in 1954.

In San-men gorge, where the river is narrow and its bed solid igneous rock, a dam and reservoirs will be built. The dam will be some 295 feet high and detain in its huge reservoir water to a level of 1,150 feet above sea level. The reservoir will be able to hold back some 47,086,144,000 cubic yards (7,923,600 million imperial gallons) of water. At San-men gorge, a great million kilowatt power station is to be built with an average output of 4,600 million kilowatt hours, equivalent to sixty-four percent of the country's total output of electricity in 1952. A big electricity supply network in central China as well as over the vast rich basins of Wei-ho and Fen-ho rivers in Shensi and Shansi respectively will be built around the San-men gorge; over 2,623,400 acres more land will be irrigated before 1967, for the water levels and the huge waterhead above the dam - the water above it may be close to 230 feet higher than it is below.

At Liu-chia, above Lanchow, another million kilowatt hydroelectric power station will be built with an annual output of 5,230 million kilowatts. It will not only supply ample and cheap electric power to the new industrial enterprises in and around Lanchou and Hsi-ning, but also would free the city of Lanchow from the menace of inundations caused by the overflowing of the river during a flood. In addition, large tracts of land in Kansu as well as Inner Mongolia will be brought under irrigation. Navigation between Lanchou or even Hsi-ning along the Huang -shui, a tributary of the Yellow River, and Paotou in Suiyuan will also be improved.

The two great power stations will mark the completion of the first phase of the plan in the fifteen years ending 1967. Thus the completion of these multiple-purpose plans for flood control, power generation and irrigation works to be built along the mid-course of the Yellow River will bring a new phase in the industrial and agricultural development of the region.

2. Iron Ore and Ferro-alloys

Northwest China has a fair amount of iron ore deposits and some ferro-alloy minerals, such as tungsten, molybdenum and nickel.

a. Iron Ore:

Iron ore deposits are found in all the four provinces of Northwest China. In Shensi province, iron ore is widely spread in the Chin-ling and Pa-shan Mountain ranges - extending west to Kansu, east to Honan, and south to Szechwan provinces. It is relatively more concentrated in the districts of Feng-hsien

by the laymen. Temples frequently maintain free hostels for travellers, and one can count on any Layman to provide food, shelter, road guidance, and any kind of help to needy passers-by. It is even customary for a Mongol to leave food in front of his tent during the time he is on an outing. This hospitality is extended to destitutes and refugees also, by Mongols as well as Tibetans, irrespective of the creed of the receiver.

IV. Welfare Efforts Under the Republic, Particularly Under the National Government

With the coming of the Chinese Republic, the realization grew that welfare was a public matter. Although it took time until the rudiments of an organization were set up to implement this realization, the government at best acted to the limits of its possibilities to bring relief in the case of natural catastrophes. During the great famine in the Northwest, caused by protracted droughts and earthquakes in 1928/29, the government organized a special commission to handle relief. The relief work of this commission was financed partly by fixed government grants, special loans and by solicited special contributions from Chinese cities, provinces and private organizations and individuals as well as by organizing a rather successful drive for funds abroad. The role played by the China Famine Relief Commission in this as well as in similar instances is discussed in the Social Welfare Section of the General Handbook.

The realization grew however that with regard to natural disasters, prevention work might be of greater importance than relief. One of the projects that grew out of this realization might be mentioned here, the Wei-pei irrigation project in Shensi. This project was conceived jointly by the Shensi provincial authorities and the China International Famine Relief Commission in the twenties. Actual work commenced in December 1930 and was completed in June 1932. Ninety thousand acres of land have been reclaimed b this combined conservancy and irrigation project. The maintenance of the system was later taken over by the National Economic Council.

In the late thirties this Council was particularly active in irrigation and reclamation schemes in the Northwest. It was responsible for the sponsoring or subsidizing of several large-scale projects in Shensi, Kansu and Ninghsia Provinces.

Unfortunately, there is very little information available on the efforts on the part of the Chinese administration in the field of public welfare in the Northwest, both under the National Government and under the present Communist regime. From the little material we have the general impression is that the local efforts of the Mosium community encompass most of the work done in public welfare.

654

654 RESEARCH AND DEVELOPMENT--government-supported research in applied science (e.g., agriculture, fisheries, mining, forestry, nutrition, medicine); public extension and demonstration services;government subsidies to weak or essential industries (e.g., airlines, shipping, agriculture); exploration; coast, geodetic, and geological surveys; meteorological research and weather stations; etc. See also:

N
135 oil field which was discovered near Yümen in northwest Kansu during the latter part of the last war. Though several wells
N
[315] had been drilled and a small refinery plant established, oil
[489] production was never large due to shipping and transportation
[499] difficulties. (It might be noted that construction of the Kansu-Sinkiang Railway has been completed up to Yümen in July 1956. Tank cars may now replace trucks in the transportation of Yümen oil.) Despite these adverse factors, the Peking Government's planned economy gives top priority to the development of the known and the search for the unknown mineral wealth of China's Northwest.

N
315 Thirteen construction projects were completed in the Yümen Oil Field, China's biggest oil center, in the spring of 1955. A number of these projects now enable Yümen to produce eighteen percent more heavy lubricating oil and fifteen percent
N
316 more kerosene. (NCNA April 22, 1955). A large coal field was discovered in Kansu in April, 1955. It is reported the new discovery with a total of approximately thirty-two million metric tons is four times as large as the A-kan-chen colliery of Kao-lan (Lanchou) county, one of the major coal mines in the province.

S
N
315 Work has been started by three oil prospecting teams sent to Sinkiang and Chinhai provinces by the Northwest Geology
[654] Bureau under the Ministry of Geology. The prospectors are operating in Turfan and Dzungaria Basins, Sinkiang and in Tsaidam, Chinahai, to locate oil-bearing structures, oil shales, heavy feldspar and other minerals. (NCNA April 19, 1955). One of the plans for 1955 was to complete the prospecting of several oil-bearing structures in the Turfan Basin and obtain the data to design a modern shaft mine in the Urumchi coal field (American Consul General, SCMP, June 1-30, 1955). In addition, rich coal deposits have been discovered in North Sinkiang, particularly in the Ili Valley.

According to 1955 reports, new oil fields were discovered and drilled, e.g., at Tu-shan-tzu, south of Wu-su, and new
S
N
316 coal fields were discovered in Sinkiang. Up to now, eight coal fields are being worked along the foothills of Tien-shan in Sinkiang, which form one of the largest coal fields in China, ranking third among all the provinces. In coal reserve, Sinkiang is next only to Shansi and Shensi. The present coal reserves of Sinkiang are estimated at 35,040 million metric tons and can last for three hundred years at the present daily output rate of 320,000 tons.

Iron ore and ferro-metals like tungsten, manganese, molybdenum and nickel, as well as some non-ferrous minerals, like gold, platinum, copper, lead and zinc, and aluminum have been discovered and some even worked, especially in the province of

N 315 new oil plants at Tu-shan-tzu in Sinkiang. Undoubtedly, the exploitation of the Yü-men oil field of Kansu has been consid-
S [315] erably increased in the last two years. At a conference on pet-
N 315 roleum research, called in May, 1954, by the Ministry of
648 Fuel, Popoff, a Russian professor, laid great emphasis on the
1177 development of Yü-men oil fields, where Russians have been working side by side with German, Czech, and Rumanian oil experts (KM Oct. 1, 1954). Towards the end of 1953 the Russian Atlas (sic!) was experimenting there on an improved method of oil exploitation which was to be introduced in 1954 (PD Feb. 9, and June 23, 1954).

N 315 Special emphasis on oil prospecting and drilling are given
• 654 by the Communist Government. Throughout the nation, geological surveying and prospecting plans since 1953 have been the most inttensive in China's history. Total Government investment in surveying in the Northwest in 1953 was nearly seven times more than the previous year. Twice as many oil wells were planned to be sunk in 1953 as compared to 1952, while work on other mineral reserves topped previous years' quota by thirty-three percent.

The bureau in charge of prospecting and surveying mineral reserves in the Northwest trained nearly 2,000 workers in drilling, surveying, drawing, and analysis in 1953. (Geological Report, China Monthly Review, May, 1953).

N 315 The first drilling for oil was made some sixty years ago at Yen-chang in northern Shensi province. During the Anti-Japanese war, China spent large sums to equip the China National Petroleum Corporation's field at Yü-men in Kansu. At present, the major production is at Shih-you-ho near
N [133] Yü-men in the most northwestern part of Kansu at the foot of the Nan-shan. There the possible oil-bearing formations extend 700 miles, with a width of some tens of miles. Seepages are known in four localities, but only a few anticlines have
N [433] been developed. Drilling started in 1939, and the yield amounts to several thousand barrels a day. The oil has a fifteen percent paraffin base. Prospects in Sinkiang appear even more pro-
S 315 mising, with oil on both sides of the Tien-shan Mountain Range.
[648] Drilling at Wu-su, west of Urumchi and in the northern foot-
[433] hills of Tien-shan began in 1935, under Soviet direction. Its current yield is only a few hundred barrels a day. However, some new fields have been discovered and new wells drilled in other parts of the province.

N 315 Recently, both oil-extracting and refining industries have
S [315] been growing rapidly. Refining facilities in northwest China with its five oil regions distributed in north Shensi, West Kansu, central Kansu, and Ho-hsi corridor and Sinkiang have been substantially extended. Petroleum development is one of

N 315 oil shales, heavy feldspar, and other minerals. By mid-June,
• 654 1955, as a result of an air survey to prospect for oil in Sinkiang, in addition to ground teams with magnetic and gravitational methods in the search for oil, the secret of a petroleum river has been leaked out from a state oil refinery. (American Consul General, SCMP, June 1-30, 1955; June 16, p. 3-5), and ten promising areas for petroleum
N 315 production are discovered.

Oil prospecting in Chinghai:

No actual drilling and production of oil are reported from Chinghai, but the province has been prospected extensively for oil since early 1955. Promising discoveries of oil-bearing structures have been increasingly revealed.

N [654] Two oil-prospecting teams were sent to Chinghai under the supervision of the Ministry of Fuel Industries and the Ministry of Geology. A new oil field was first discovered southeast of Hsi-ning, the capital of Chinghai province. Oil wells for trial production are reported to be sunk there. (NCNA, April 26, 1955). New Oil-bearing structures have just been discovered in the Tsaidam Basin in Changhai province. (Am. Consul General: SCMP June 1-30, 1955, p. 27).

The Tsaidam Basin is one of the concentration points of present day oil prospecting and more oil bearing structures have been increasingly discovered in the area. (NCNA, June, 1955). In order to do the prospecting work, members of the Youth Prospecting Corps are dispatched there, and they
N [654] have reported new discoveries of oil structures in the basin. Following the recent discovery of the four layer oil structure by the fourth Sub-company of Number 632 Company of the Northwest Geological Bureau, the Number 104 Company under the Chinghai Petroleum prospecting Bureau of the petroleum prospecting General Bureau discovered at the foot of the northern slopes of the Kunlun mountains, a three layer oil structure in May, 1955. (Am. Consul General: SCMP June 1-30, 1955, p. 28). As to the exact locations of these new discoveries and their possible reserves, no data are available. Recent reporters however say that the newly discovered oil deposits in the Tsaidam Basin and at Karamai Northwest of Urumchi have even greater prospects than the Yü-men field (N. Y. Times, August 15, 1956).

N 135 b. Coal

Northwest China is particularly rich in coal. About twenty-nine percent of China's coal reserve lies in Shensi alone, formerly considered second only to its neighbor Shansi, if
S [135] claims of recent Manchurian discoveries are discounted). With some new discoveries, Sinkiang claims a coal reserve next only to Shansi and Shensi provinces. Thus the Northwest

1: Washington S-4 (no date) 1956 AF13 Northwest China AF13

*668 241 474 185 and coordinate all rural activities toward the fulfillment of Chinese Communist agrarian policy: complete cooperativization of agriculture and the assurance of a steady flow of food and raw materials through fixed purchase of produce. (The problem of agricultural taxes in the Northwest has not been mentioned so far, [651] The Communists have not reported any reduction of agricultural taxes, or what the average tax rates in the Northwest are.) They have a system of cooperatives at the basic production levels. Though cooperativization has taken place slowly because of the peculiar conditions of many areas in the last six years, it is expected that once some nucleus of control has been established in the rural areas in the form of permanent mutual aid cooperatives and producer cooperatives, rapid cooperativization will take place, to embrace, ultimately, all rural inhabitants.

*668 563 In the national minority area, the Chinese Communists have proceeded slowly, so far, in their attempts to organize agricultural and pastoral activities. The problem of different national [474] minority groups has been one of the principal stumbling blocks in the creation of lower level co-ops, and will undoubtedly pose a barrier to rapid cooperativization.

*668 241 • 654 452 Secondly, the State has been able to provide only a small supply of farm implements and credit. Shortages in China and the difficulties of transportation undoubtedly account for this. It is questionable whether these shortages can be overcome in the next few years, but when they are, new farm tools and sufficient credit should account for significant output increases.

*668 241 433 Thirdly, one of the principal ways the Communists have attempted to increase output in the Northwest has been through extensive farming rather than through intensive means. They have done this by using vast amounts of labor, particularly military, to reclaim desert wastes, build irrigation works, and construct state farms to manage the reclaimed area. Evidence of this is most striking in Sinkiang and Kansu. Although Chinghai and Shensi with their hills and valleys limit extensive farming procedures, cultivation has been extended wherever possible. Because of the shortage of fertilizer and tools the Chinese Communists have been unable to promote intensive farming on a scale that would raise output per acre significantly. Instead, they have had to resort to expanding cultivation, that is, extensive farming, to obtain the desired increases.

*668 241 231 433 Finally, it is clearly evident that in all parts of the Northwest, with the exception of Chinghai, there has been a general neglect in promoting livestock production and instead an all-out effort to increase the planting and extension of cultivation of wheat, cotton, and oil seed bearing crops. This program differs radically from policy measures suggested by Western agronomists, i.e., J.L. Buck and T.H. Shen who advocated the restoration of fertility to

S 316 Sinkiang. One lies near Urumchi, the capital of Sinkiang and the other is in the Kuldja area in the Ili river basin. Data are collected for designing a modern coal mine in the Urumchi coal field where large deposits of good steam coal have been proved to exist. The two coal fields will in time supply fuel for the Lanchou-Urumchi-Alma Ata Railway Line which is now under rapid construction.

N 316 Coal Mining and Its Production:

While the Northwest leads in coal reserve among the major geographical and administrative areas, its production is still small compared to the Northeast and North China. This has been mainly due to the difficulty in transportation and backward mining techniques. At present, the only mining of importance takes place in Tung-kuan near Sian in Shensi, at A-kan-chen near Lanchow in Kansu and ad Urumchi in Sinkiang. They are close to the populous administrative centers of the three provinces. The coal mine at Tung-kuan is connected by a xixty mile long sideline of the Lung-hai Railway at Hsien-yang which is close to Sian, the capital of Shensi. A number of N the small mines in Tung-kuan are still privately owned. But [655] since 1954, the Government has taken over control of production and sale of ninety-five percent of the coal production in these N mines. The villagers were conscripted to transport the coal [466] by mule collie carrier and ox cart (TKT, June 17, 1954). In addition, primitive coal mines for local use are also found at Pai-shui, Pu-cheng, and Lung-hsien.

The chief coal mine worked in Kansu is in A-kan-chen, near Lanchow, where primitive methods are still used. There are other coal mines in Liang-tang, Wu-tu, Min-hsien, Tien-shui, and Cheng-hsien. Small coal mines are also located along the eastern foothills of the Ho-lan-shan Range between the districts of Chung-wei and Teng-kou in former Ninghsia province. Production will be increased when adequate machinery is supplied.

S 316 Coal mining in Sinkiang is also carried on mainly by primitive methods which are crude and cumbersome, Up to the present the coal mined has only been used locally. Because of the primitive nature of mining, many accidents occur and the fatality rate is high.

The major coal producing areas are at Ta-cheng and Tihua and Hami on both sides of the Tien-shan mountains. Considerable coal mining is done on a small scale for local consumption as fuel, but extensive development of coal reserves must await the completion of the Kansu-Sinkiang Railway. At present, eight coal fields are being worked near Tihua (1955-56), which extend to about fifty kilometers, having thirty seams. In addition to Urumchi, coal deposits are apparently also being

*668 491 178 Sinkiang and Outer Mongolia have been re-opened for traffic. (See section Communications.) With these improvements in transportation, it is only logical to assume that trade in the Northwest must also have increased in volume.

*668 178 433 [315] [288] Another important change is the increase of production of the Yumen Oil Field and the establishment of four new textile factories in Shensi (for details see section Industry). Although there is no information on the distribution of these products, it is reasonable to assume that most of them are intended for the consumption in the Northwest. If this is the case, the import of [439] textiles and kerosene, which were two of the most important items of the imports of this region, must have been reduced.

*668 178 248 [438] [439] Still another important change is the enlargement of cotton plantations in Sinkiang. It is reported that the China Cotton, Yarn and Cloth Company in Sinkiang-Uighur Autonomous Region plans to send five thousand tons of cotton to other parts of the country in addition to ensuring an adequate supply for local consumption. On November 3, 1955, the first cargo of cotton of Sinkiang was dispatched to Shensi for its textile industry.

B. Government Control

*668 655 43 The Communist control of trade in the Northwest is more or less the same as that in other parts of the country. The main instrument of control is the state trading companies, which are in charge of wholesale trade and, together with the various co-operatives and mobile trading units, purchase of native products from this region. According to Communist reports, the six basic commodities in Sian, i.e., food, cotton cloth, edible oil, coal, tea and salt, have been fully monopolized by the state trading companies since June 29, 1955; and all private wholesale establishments dealing with those goods have been liquidated. More than one hundred members of the "capitalist side" were sent to reform camps, and the store assistants were either employed by the state trading companies or sent back to their native places to seek other employment. In the Sinkiang-Uighur Autonomous Region, the number of branches of state trading companies exceeded five hundred in 1954, about eight times as many as in 1950. They provide the people there with general merchandise, cotton cloth, oil and fats, petroleum, pharmaceuticals and stationary.

Aside from supplying goods on the wholesale level, the state trading companies have also undertaken to buy goods from this region. Among the goods bought in 1950 are: (1) wool, 23,000 catties, (2) hides, 800,000 pieces, (3) intestines, 1,270,000 pieces, (4) bristles, 280,000 catties, (5) tung oil, 4,500,000 catties, (6) medical herbs, 4,000,000 catties, (7) cotton, 800,000 piculs and (8) grain, 130,000,000 catties (cf. The Native Products of the Northwest, preface, Sian, 1951).

*668 As to control on the retail level, it is exercised through the
494 various cooperatives and the mobile trading units. As far as the
443 cooperatives are concerned, detailed information is not avail-
656 able. However, a recent report on the state of trade in the
43 rural market, Lo-men-chen, Wu-shan, Kansu, may well illus-
trate how deeply the Communist control has penetrated into the
*668 rural areas. According to this report, Lo-men-chen is one of
443 the large rural markets in the county of Wu-shan, which lies
656 near T'ien-shui on the T'ien-shui-Lanchou Railway. The market
43 is open on every other day, and the number of people coming to
trade is usually between five and six thousand. Before the Com-
munists took over, there was no government control over such
markets. But under the Communist regime, the following mea-
sures have been adopted (cf. Hsin-hua yüeh-pao, 1956, No. 2,
pp. 94-96):

1. State Purchase: The Communists demand that farmers or
• (655) producers sell certain commodities to the state trading com-
panies or their agencies before they may sell elsewhere. Such
commodities, in 1954, were grain and oil products.

2. Controlled Markets: The Communists have put five com-
modities under their direct control. They are grain, cattle,
lumber, firewood and hemp. Prices are fixed by those who are
in charge of economic control, and trade is conducted mainly on
the wholesale level under the supervision of the Communist
cadres. The volume of trade of these commodities in 1954
amounted to 276,422 yüan (approximately U.S. $110,000), con-
stituting some 30 per cent of the total value of trade of Lo-men-
chen.

3. Free Markets at Fixed Locations: Such markets are con-
ducted in a specific place, and the Communists do not regulate
the quantity nor the price. In 1954, the volume of trade in these
markets amounted to 448,379 yüan, constituting some 60 per
cent of the total value of Lo-men-chen trade. The main commo-
dities belonging to this category are straw hats (seasonal), bam-
boo and wood articles (mostly farming implements), hemp rope,
hemp shoes, vegetables, fruits and chinaware. The participants
include the agencies of the state trading companies and the co-
operatives.

4. Mobile Free Markets: These include peddlers who are not
under government control and do not have a definite place of
marketing. Trade of this nature is necessarily on a very small
scale, the total volume constituting about ten per cent of the
total trade of Lo-men-chen.

It is mentioned in the same report that government control
*(195 (655 (494 has made remarkable progress since 1953. In 1953, all retail
trade of Lo-men-chen amounted to 2,123,682 yüan (NJMP), of
which amount the state-trading companies handled 3.58 per cent,

*668 the cooperatives handled 2.65 per cent and 93.77 per cent was
443 handled privately. But in 1954, private trade was reduced to
656 43.02 per cent, state trade increased to 41.55 per cent and that
43 of cooperatives increased to 15.43 per cent, the total being
*195 2,372,936 yüan. In the first five months of 1955, the private
• 655 trade comprised only 23.42 per cent of the total of 871,234 yüan,
494 and the state and cooperatives handled 74.36 per cent. Although
all this is the situation in one single rural community, it can be
assumed that it is typical.

The mobile trading units are especially designed for the con-
*668 trol of trade in the so-called national minority regions where the
443 people are mostly nomads. They travel from one place to an-
563 other, to provide the herdsmen with the supplies they want and
43 to buy up their products. According to a semi-official statement
concerning the trade in the national minority regions (cf. Hsin-
hua yüeh-pao, 1955, No. 9, pp. 178-79), the Communists aim to
achieve two things in this connection. One is to raise the stan-
dard of living of the minority peoples by giving them better
[195] terms of trade. For instance, the exchange ratios between wool
(the main export) and tea and cloth (the main imports) in Hsi-
ning from 1950 to 1954 were as follows:

Table X: Exchange Ratios between Wool, Cloth and Tea in Hsi-ning

Year	Price of Wool per 100 catties (yüan)	Exchange Ratio with respect to: 1. cloth (No. pieces per 100 catties/wool)	2. tea
1950	745,700	2.29	11.61
1951	1,042,700	3.09	19.61
1952	1,230,758	3.71	28.13
1953	1,278,825	4.18	34.44
1954	1,258,000	4.18	31.45

Source: Hsin-hua yüeh-pao, 1955, No. 3., p. 146.

The other aim is to drive foreign goods out of the national minor-
ity regions and replace them with goods made in China. If the
Communists really mean what they said, this would lead to a
sharp conflict between Chinese and Soviet goods, especially in
Sinkiang, where Soviet goods have long been very popular. How-
ever, no detailed information on this matter is now available.

C. Evaluation and Prospects

*668 According to Communist propaganda, trade control in the
43 Northwest has been very successful. For instance, they boasted
*195 that the per capita purchase of commodities in Liu-lin-chu, Yao-
hsien, Shensi, has increased from 345,000 yüan in 1953 to

*668 467,000 yüan in 1954, showing an increase in purchasing power
43 of 40.8 per cent. In the second sub-district of Hsien-yang,
*195 Shensi, the per capita outlay was 410,000 in 1953, and 620,000
yüan in 1954, showing an increase of 51 per cent. In Sinkiang-
Uighur Autonomous Region, the purchasing power of the people
is said to have increased 13 per cent in 1954 as compared with
1953, and the total value of state purchases of local products
went up 3.7 times in 1954 as compared with 1950. And in the
national minority regions, the total sales of state trade in 1954
increased 4.7 times as compared with 1951, and the total pur-
chase in 1954 increased 5.1 times as compared with the same
period.

On the other hand, the Communists have admitted certain
failures. For instance, on March 15, 1955, the Sian Municipal
Committee of the Chinese Communist Party issued a directive
to improve the work of unified grain marketing, in which it was
pointed out that waste and extravagance have been prevalent, and
it was demanded that the party and the New Democratic Youth
League branches in the various places should supervise and
ensure the check-up.

Another failure is revealed in the report on trade control in
*668 Lo-men-chen, Wu-shan, Kansu. From June, 1954, to January,
*195 1955, the supply and purchase cooperatives in that area under-
494 took to buy all the native products at an official price and pro-
43 hibited the farmers from entering free trade. But the farmers
refused to cooperate, and they reduced production and lowered
quality. As a result, the Communists had to reverse themselves
and announce that it was still too early to eliminate free trade
entirely in the rural areas.

*668 As to trade in the national minority regions, the shortcom-
*563 ings as admitted by the Communists are as follows: One is that
43 the state trading agencies were interested only in wholesale and
refused to purchase products in small quantities. Another short-
• (655 coming is that they sometimes unduly eliminate private mer-
chants and thus a shortage in commercial outlets results. Still
another shortcoming is that the Communist cadres had failed to
pay attention to the specific needs of the national minorities. For
instance, some of them were so careless as to send swimming
suits to mountainous areas or electric typewriters to areas in
which people do not even know how to write (cf. Hsin-hua yueh-
pao, 1955, No. 9, pp. 178-79).

The main difficulty of the Communist control of trade in the
*668 Northwest seems to be the lack of cadres. For instance, the so-
43 called socialization of wholesale trade in the coastal cities such
*195 as Shanghai and Tientsin was more or less completed in 1953,
but they did not start it in Sian until 1955. Similarly, the control
of rural trade in Kansu, as revealed in the report on Lo-men-

PUBLIC INFORMATION

N I. Newspapers

175 During the past decades, Northwest China was lagging in cul-
204 tural development. There were very few newspapers before 1937.
167 After the war started, numerous people migrated from the coastal
N provinces into the Northwest. Among these there were a great
(873) number of intelligentsia. Several universities moved from Peking
into the Northwest and thousands of students poured into the area.
With the coming of these people, the average of cultural standard
N was greatly raised and the demand for more and better newspapers
204 increased. A number of papers emerged and some stayed. Among
these, some were supported by the Nationalist Party, such as the
Hsi-ching jih-pao or the Western Capital Daily in Sian. Some
were supported by the San-min-chu-i Youth Corps, such as Ch'ing-
nien jih-pao or the Youth Daily in the same city. Some were sup-
ported by churches, such as the I-shih-pao (Sian edition) in Sian,
a Catholic paper. Some were supported by local influences, such
as Ch'ing-feng jih-pao in Sian. After the war, there were even
anti-government papers, such as Kung-shang jih-pao in Sian,
organ of the Democratic League.

Some of these papers achieved an admirable standard of quality.
In appearance, these papers were unattractive. Usually printed
on the native newsprint, which was thin, dark and rough, the print
N was often unclear. Bad as it was, this kind of newsprint was ex-
• (656) pensive and could be bought in quantity only through government
rationing. In fact, the government did occasionally use this
authority of rationing newsprint to practice a kind of indirect cen-
sorship on the papers. Papers were occasionally cut off their
rations and found it necessary to buy on the black market at for-
bidding prices. The dailies usually had no more than four pages,
with half of the space occupied by advertisements. About a page
and a half would carry the national and world news, editorials, and
articles, leaving about half of a page for local news and miscella-
neous subjects. The news were mainly supplied by the Central
News Agency, a Nationalist Party organ. Within these limitations,
little could be done to give profile to a paper. This monotonous
pattern was later broken by the anti-government papers, which
carried a lot of the Communist news and views. The circulation
of all the papers was limited among the intelligentsia, officials
and merchants. Few, if any, of the papers exceeded a daily
S circulation of 10,000 copies. In Sinkiang, during the administra-
204 tion of Sheng Shih-tsai, there were editions of the Sinkiang jih-pao
published in seven languages. (Lattimore, Pivot of Asia, p. 73.)

N After the Communists conquered the Northwest, they took over
204 all the former government papers. The private papers were dis-
*668 couraged to continue. According to the limited information avail-
177 able, the following papers have been or are being edited in the

/Chinese, Chinese Moslems and Sedentary Tibetans/

because there is nothing for which to exchange it. Once a week a caravan carrying Government supplies deposits a bag of flour at the door. This is the subsidy granted to them, in exchange of which her husband is bound to be at his post all through the year, and keep the well from being choked by sand. She has never thought in terms which refer to anything except meals, births and occasionally deaths. Her boys may go farther afield, and if they do, she knows that they will never return, but after a time she will become accustomed to their absence and it will not trouble her again."

With spiritual senses dormant, mental powers arrested and physical demands reduced to the minimum, wherein shall a human being show that he differs from the beasts whose conditions he shares? There is hardly anything which can be called attitudes or reactions.

About the Chinese-speaking Moslems Miss Cable reports that Chinese travelers avoid any inn operated by Moslems because of the rudeness to which they may be subjected when using it. This is a very particular observation, as in other places in the Northwest, non-Moslem Chinese prefer to go to Mohammedan restaurants, which are famed for their cleanliness and tasty food. In many places Moslems have monopolized the innkeeper business, so that they cannot possibly be avoided. Even the Chinese guests abstain from eating pork during their stay, every pot and pan which they possess is considered unclean and will not be allowed inside the kitchen. This is not conducive to good feeling between host and guest, and may at any time lead to high words and even to blows. Toward known westerners the Moslems' attitude is somewhat different, and more tolerant. Cable records the experience of her party in staying in an inn with the sign of "Pure and True Religion" by saying, "The attitude toward our party was different because, though we were styled kaper (infidel) we were known to keep a 'clean' kitchen, which is to say that pork, lard, and every produce of the pig was rigidly excluded from our menu. We were 'infidels of the book' for the Bible and not the Koran was our guide, but we were not 'infidels of the pig' which was an insult reserved for eaters of unclean food. The closest watch was kept upon us as we journeyed, and any lapse or laxity would have been reported to every mosque on our route, so that 'pure religion' inns would have been closed to us. Moslems acknowledged that we were as free from idolatry as themselves, but openly stigmatized us as blasphemers, for we called the prophet Jesus 'Son of God', and the innkeeper turned aside to spit whenever he heard the word." (pp. 72-73). The Moslems who are of means like to make others understand that they are wealthy people. "Like other Tungan landlords to whose houses we had the entree, he left us with a sense that he was very wealthy and that his

241 489 culture on land already under cultivation might be realized.

The Nationalist Government gave no financial assistance of 241 any magnitude until the Second World War. Finally, when it was 654 forced to retreat into the remote areas of Southwest China, the 175 government had to depend largely on the Northwest for food and revenue (agricultural taxes). The Nationalist Government became more interested in the agricultural development of the Northwest and some experimental stations were set up in Kansu. Government assistance, however, was directed primarily to farmers engaged in producing crops for the war effort; e.g., cotton.

241 After 1938, the price index for farm products rose rapidly in 175 all four provinces and the purchasing power of the farmers began [435] to grow. After 1940, food prices rose speedily and the farmers had more money than in prewar days. By examination of the [433] data of the war years as to whether farmers undertook to increase their scale of production and thereby extend cultivation, we can say that there was little increase in extensive farming (except in the case of Ninghsia) and that the output increases during this period can be attributed (wheat especially) largely to intensive farming.

241 Turning to the land tenure system, the percentage of farmers 423 who are owners, partowners and tenants, as determined by a land survey undertaken by J. L. Buck, reveals that on the average most of the farmers own their own plots of land. The following [175] chart, compiled from data collected by Buck in 1933 on a sample basis gives us the landholding breakdown. In Farm Survey (a), [429] farmers who own their farmsteads but who rent all their crop land are classified as tenants rather than as partowners. When compared to the agricultural survey (b), (in this survey, 236 localities, 146 hsien, and twenty provinces in China were examined), the results in both cases are similar except in the case of Chinghai where the few samples taken disallows an accurate breakdown. (Land Utilization in China p. 57.)

241 Percentage of farmers who are owners, partowners and tenants

423 427	Province & local Farm Survey (a)			Agricultural Survey (b)		
	Kansu	owner	part-owner	tenant	owner	part-owner	tenant

000 and it is already reported that some cotton cloth is being shipped to the U.S.S.R.

452 In the field of credit financing, purchasing and marketing, ex-
474 tensive efforts have been underway to place these activities under
*668 the control of cooperatives specifically erected and designed to extend State control over the rural areas. These co-ops are designed to assist in agricultural planning and to assure the realization of annual output quotas. Credit cooperatives are closely coordinated with the development of agricultural producer cooperatives in order to provide them with funds to develop and simultaneously to absorb any liquid savings that have accrued among these co-ops. For the purpose of State purchasing and marketing, cooperatives have been set up which survey individual households to determine household consumption and output. Frequently, advance purchases of expected agricultural surpluses are made by these co-ops. All surpluses which can be purchased by State marketing and supply co-ops are channeled through State apparatus to where they can be used most efficiently.

654 The State has taken measures to increase livestock production
232 by first attempting to set up mutual aid teams among the pastoral
*668 people and sending specially trained teams into the pastoral areas
[476] to immunize animals, teach the herders better care of their stock to prevent loss of animals, and conduct breeding experiments to improve the quality of livestock. Superior types of animals from
[177] the Soviet Union have been imported on some occasions to be bred with native stock.

242 Pests, locusts, and animal diseases have always been a
*668 scourge in this region. The State has undertaken to acquire tech-
[177] nicians and airplanes from the U.S.S.R. to spray regions where the threat of locusts has become serious. Insecticide has been distributed throughout the lower level agricultural co-ops and campaigns have been conducted among the peasants to eliminate plant and animal diseases.

313 Teams have been sent out to survey forested portions of the
*668 region and to determine what measures might be taken to expand existent forest reserves, plant saplings, establish nurseries and carry out large-scale afforestation to prevent erosion.

241 These have been the general measures taken by the Chinese
*668 Communists so far to develop agriculture in this portion of the
[433] country. Some successes have been scored; e.g., in increasing
[242] the number of livestock and higher crop yields per acre by the introduction of better procedures of livestock care and farming.
[474] However, the program of organizing the peasantry into co-ops to achieve similar results, has not been successful in every instance.

[578] Bandits and dissatisfied portions of the minorities who did not welcome the Communists have been quite active in disrupting their programs. As the years in the first five year plan pass, the plan-

conditions in 1954 and tasks for 1955, it was stated that 2,000 modern plows were now in use, and 67,245 mou (10,221 acres) of dry fields have been converted into water fields, while adequate water supply has also been made available to 28,597 mou (4,347 acres) of original water fields. It was planned to have 746 agricultural producer co-ops in operation in 1955, with an area of 5,115,000 mou (777,480 acres) to be sowed with a planned output for the province of 853,350,948 carries (42,337,207 bushels). An area of 500,000 mou (76,000 acres) is to be sown for oil bearing crops with a planned output of 10 million catties (24,137 metric tons). There is so little data for the pre-Communist and Communist period that it is impossible to construct a table. The only comparison that can be made is in oil seed bearing crops (and livestock which follows). The pre-Communist figures give an average of 21,000 metric tons for the years 1931-1939. Since it is planned to increase output to 24,137 metric tons, this will mean an increase of 3,137 metric tons; not a very significant increase.

In Chinghai there is a population of over one million; sixty per cent belong to the Tibetan, Mongolian, and Hui minority nationalities. The Communists reported that the province's seven million head of livestock in 1951 was increased to over twelve million in 1954 and it is planned that 20 million will be raised by 1957. (Pre-war and war year statistics list the total livestock at little over one million. Communists claims of sevenfold and twelvefold increases in this case, ought to be accepted with reservations. However, because the base year (one million) is so low, it is possible to have rapid increases of a relatively large magnitude.) The People's Government issued loans to husbandmen engaged in animal husbandry totalling 6,555,000,000 yuan (U.S. $266,365) in 1954. Steps were taken in cutting and storing grass for winter, repairing sheds and enclosures, and building winter and spring shelters to protect livestock during the cold season. It was also reported that in 1954, goals in planned purchases of cattle and sheep were achieved, and this produced definite contributions in support of the industrial construction of the State. At the same time, these activities served to educate the people in patriotism and mutual aid.

Tasks for the future were to continue to raise agricultural production based on the mutual aid and producer co-ops and to develop supply and marketing co-ops, credit co-ops, and arrange for markets in rural areas to promote interflow of supplies and planned purchase and planned supply of food. Care was to be taken to preserve livestock and to continue afforestation schemes. It was reported that within the province some 38,900 mou (5,913 acres) had been afforestated in 1954 and the number of fires greatly reduced.

S N 214 191

March, 1955. Through these regulations, the prices of some books were lowered from 4% to 21%.

S 214 668 199

The above reported figures are impressive. The narrow choice of titles, however, has given constant cause for complaint. Readers in Aksu, Sinkiang reflected, according to a Sinkiang jih-pao report of January 1[illegible], 1953: "Why do you people in the Hsin-Hua Bock Store sell only this kind of book?" And the editorializing explanation: "...to spread Marxism-Leninism and the thoughts of Mao Tse-tung" will have hardly sounded convincing to the questioner. The China Youth Journal, 1955, No. 10, writes: "For a long time, young people have not found satisfaction in the published books. They are mentally half-starved. Some youths are so eager to read that they have fallen prey to feudal, superstitious, mysterious and sexy books."

S N 214 668 199 [656]

Similar complaints can be found in the press and the journals all over the country. Apparently, the policy of the Communists to swamp the "simple-minded" minority groups with Party doctrine did not pay off. Thus recourse was had to censorship. On July 20, 1955, the State Council promulgated the Temporary Regulations on Controlling the Book Renting Business, according to which the books which are lewd, supernatural and full of reactionary ideas are excluded from circulation.

N 207 *668 199

V. Radio

Radio broadcasting of the Chinese Communist Party had a humble start. On September 5, 1945, the Hsin-Hua Broadcasting Station in Yenan made its first official broadcast. It had a power of 300 watts only. When the Nationalists attacked, the station fled with the Party headquarters but never ceased to broadcast.

From September 5, 1945, to September 4, 1946, it broadcast for two hours a day. The programs included news, comments, introduction to the liberated areas, etc. From September 5, 1946, the time increased to two and a half hours daily. The program included speeches, and voices of the people. Later a broadcast to the Nationalist Army was added. Starting from September 5, 1947, the broadcast increased to three hours. News summaries were added, and later, programs in English.

In March, 1949, the station moved to Peking and took over the Nationalists' station there. On October 1, 1949, the name was changed into the Central People's Broadcasting Station. It became the leading broadcast center.

In April, 1950, the Communists began to establish monitoring stations throughout the country. The Central People's Broadcasting Station has since broadcast the main programs for the monitoring stations all over Red China, including the Northwest. In 1950, there was only one program lasting 7 1/2 hours per day. From 1954 on, it increased to two programs with a total broadcasting

*668 violate rules and regulations are stressed as they were in the monarchal days.

[626] Social pressure is also great. With the whole population organized under the Communists' tight control, the entire society can be mobilized to work against crime and political conspiracies. This has been well demonstrated by the various "anti" movements and the study groups.

B. Current Problems of Administration

174 *668 [656] Because of the tight governmental control of news and the distance which separates northwest China from the outside world, very little information has been obtained about resistance activities in the area. However, judging by the meager information offered by the Communists themselves, their rule over the northwest has not been very smooth. The Communists seldom, if ever, reveal their troubles while they are current, but they do uncover some facts when the resistance has been suppressed. By careful screening, one may piece together the picture of subversive activities in the area. Sometimes they were on an alarming scale. To help clarify this general background, some excerpts from the Chinese Communists' own reports and a few indirect quotations are presented as examples.

*175 579 *668 669 1. "During the past year, (i.e. 1950)...we have destroyed more than 69,600 bandits in the northwest. Right now there are still more than 5,400 active bandits. The largest group is the one under the leadership of Osman and Husein who are hiding in the deep mountains along the border line between the provinces of Kansu, Ninghsia, Chinghai and Sinkiang. There are about two to three thousand men in this group. The rest of the bandits are in small groups linked with various underground spies and the rural counter-revolutionary forces. The condition is still very complicated..." (Jen-min ch'u-pan-she: Cheng-fu kung-tso pao-jao, 1950, p. 418, Report on the book of the Government.)

*175 563 *668 669 2. "...the misunderstanding...between the various nationalities has not yet been thoroughly dissolved. Consciously or unconsciously,...the Pan-Chinese idea still exists in our Chinese cadres' mind. Besides, we still have some serious shortcomings and mistakes in our nationality work. When the remnants of the bandits and spies fanned up the feelings of the people, it led to the disputes that occurred among the nationality groups in certain areas after the liberation. In the area of Lin-hsia (in Kansu), the military conflict between the Moslems and the Chinese caused more than one thousand deaths and the dislocation of more than 30,000 people who were forced to leave their homes. The loss in production was even more serious.

"In Ta-t'ung county of Chinghai, the T'ung-hsin-ch'eng of Ninghsia, in the area of P'ing-liang of Kansu, there have been

*668 violate rules and regulations are stressed as they were in the monarchal days.

[626] Social pressure is also great. With the whole population organized under the Communists' tight control, the entire society can be mobilized to work against crime and political conspiracies. This has been well demonstrated by the various "anti" movements and the study groups.

B. Current Problems of Administration

174 *668 [656] Because of the tight governmental control of news and the distance which separates northwest China from the outside world, very little information has been obtained about resistance activities in the area. However, judging by the meager information offered by the Communists themselves, their rule over the northwest has not been very smooth. The Communists seldom, if ever, reveal their troubles while they are current, but they do uncover some facts when the resistance has been suppressed. By careful screening, one may piece together the picture of subversive activities in the area. Sometimes they were on an alarming scale. *668 796 • 656 Furthermore, in places where restrictions are exercised over the slaughter of cattle and sheep, these restrictions may be relaxed.

B. Guided Tours

*668 484 648 *563 Representatives of national minorities from northwest China are invited to visit Peking and other urban centers of north and east China. They are guided to see the factories, schools and palaces of historical interest. After being deeply impressed they are sent back to their homes. They often become good native propagandists for the Party.

C. School Programs

*668 208 896 In local schools, the pupils are not spared from propaganda. For instance, in the Mongol schools in the province of Chinghai: "In mathematics, the number of American and bandit Rhee's troops annihilated by the Chinese and Korean people's armies in Korea and the construction figures in Chinghai were made into questions for the students and the masses to solve. By this way, they not only learned mathematics but they also retained in their minds the victorious results of our war and the great achievements in construction following the liberation." (Sian, Ch'un-chung jih-pao, March 30, 1952.)

D. Other Methods

*668 208 The whole propaganda system generally functions as follows. When the Party central committee decides to promote certain propaganda, it orders the reporter at every level of the Party organization to report the party line to the people inside as well as outside the Party. Then the propagandists and activists all go out to do the work. This can be done in various ways, according to the situation. In factories, it may be a kind of question and answer. The workers might be asked to check each other with these questions until all got the right answers. In streets, it might be in the form of door-to-door visits and "casual chats." While these were going on, the people would be bombarded daily with the same theme in newspapers, blackboard newspapers, wall newspapers, periodicals, books, pamphlets, pictures, cartoons, radio broadcasts, concerts, lantern slides, movies, plays, operas, story-tellers, picture-story books, street meetings, signature drives, production competitions, challenges, counter-challenges.. and a lot of other devices to drive the point home.

V. The Campaigns and Contents of Propaganda.

A. Campaigns

1. Destruction of organized resistance

The contents of propaganda follow the shifts in the Party line.

159 afforestation, construction and repair of roads, and introducing
185 the irrigation system. During the fifteen years of his adminis-
[656] tration, 1933-1948, Ninghsia Province changed from a land of devastation to a land of peace and normalcy, achieved by ruthless regimentation.

159 When the war between Japan and China broke out in 1937, Ma
648 Hung-k'uei volunteered to fight the enemy. Because of the importance of the Northwest, and because of the importance of Ninghsia as the gateway to the Northwest, he was ordered by the Central Government to stay in Ninghsia to guard that strategic area against Communist infiltration. From 1937-1945, however, Ninghsia became a part of the Eighth War Area, and Ma was appointed as the deputy commander-in-chief. When the war against Japan was brought to an end in 1945, he was appointed deputy director of the Northwest Headquarters of the president.
159 When all-out fighting started between the Nationalists and the
669 Communists, he was given the post of deputy Director of Military and Political Affairs of the Northwest Area. In July 1949, when the Communist troops began to push their way to the Northwest, he joined Ma Pu-feng, another member of the famous Ma clan, then Director of Military and Political Affairs of the Northwest Area, to set up defense lines. But the victorious forces of the Communists broke through all these lines and pushed their way to the eastern and southern parts of Kansu Province. The two Ma flew to Canton, the provisional capital, to see Vice-President General Li Tsung-jen for new instructions. It was decided to concentrate the troops to defend Lanchou. On August 25, 1949, when the troops of Ma Hung-k'uei were still some eighty miles away from Lanchou, the Communist troops had already reached that city. By the middle of September, 1949, the whole Northwest, including Kansu, Ninghsia and Chinghai, was taken over by the Communists.

[631] In 1949 when the Nationalist Government took up the defense of Kansu Province, Ma was appointed concurrently as governor of Kansu. His administrative record in Kansu was short-lived. The Communists took over the whole Northwest by September, 1949. When the Nationalist Government retreated to Taiwan, both the military and political life of Ma Hung-k'uei came to an end. He entered the United States and lived a life of retirement in San Francisco.

159 Ma Hung-pin (1883-)

Another of the Four Ma who once ruled the Northwest of modern China, Ma Hung-pin is a cousin of Ma Hung-k'uei, governor of Ninghsia Province from 1933-1948 and governor of Kansu Province from 1948-50. Together with Ma Pu-fang and Ma Pu-ch'ing of Chinghai Province, they were usually called the "Four Ma of Islam" in the Northwest.

As to control on the retail level, it is exercised through the various cooperatives and the mobile trading units. As far as the cooperatives are concerned, detailed information is not available. However, a recent report on the state of trade in the rural market, Lo-men-chen, Wu-shan, Kansu, may well illustrate how deeply the Communist control has penetrated into the rural areas. According to this report, Lo-men-chen is one of the large rural markets in the county of Wu-shan, which lies near T'ien-shui on the T'ien-shui-Lanchou Railway. The market is open on every other day, and the number of people coming to trade is usually between five and six thousand. Before the Communists took over, there was no government control over such markets. But under the Communist regime, the following measures have been adopted (cf. Hsin-hua yüeh-pao, 1956, No. 2, pp. 94-96):

1. State Purchase: The Communists demand that farmers or producers sell certain commodities to the state trading companies or their agencies before they may sell elsewhere. Such commodities, in 1954, were grain and oil products.

2. Controlled Markets: The Communists have put five commodities under their direct control. They are grain, cattle, lumber, firewood and hemp. Prices are fixed by those who are in charge of economic control, and trade is conducted mainly on the wholesale level under the supervision of the Communist cadres. The volume of trade of these commodities in 1954 amounted to 276,422 yüan (approximately U.S. $110,000), constituting some 30 per cent of the total value of trade of Lo-men-chen.

3. Free Markets at Fixed Locations: Such markets are conducted in a specific place, and the Communists do not regulate the quantity nor the price. In 1954, the volume of trade in these markets amounted to 448,379 yüan, constituting some 60 per cent of the total value of Lo-men-chen trade. The main commodities belonging to this category are straw hats (seasonal), bamboo and wood articles (mostly farming implements), hemp rope, hemp shoes, vegetables, fruits and chinaware. The participants include the agencies of the state trading companies and the cooperatives.

4. Mobile Free Markets: These include peddlers who are not under government control and do not have a definite place of marketing. Trade of this nature is necessarily on a very small scale, the total volume constituting about ten per cent of the total trade of Lo-men-chen.

It is mentioned in the same report that government control has made remarkable progress since 1953. In 1953, all retail trade of Lo-men-chen amounted to 2,123,682 yüan (NJMP), of which amount the state trading companies handled 3.58 per cent,

the cooperatives handled 2.65 per cent and 93.77 per cent was handled privately. But in 1954, private trade was reduced to 43.02 per cent, state trade increased to 41.55 per cent and that of cooperatives increased to 15.43 per cent, the total being 2,372,936 yüan. In the first five months of 1955, the private trade comprised only 23.42 per cent of the total of 871,234 yüan, and the state and cooperatives handled 74.36 per cent. Although all this is the situation in one single rural community, it can be assumed that it is typical.

The mobile trading units are especially designed for the control of trade in the so-called national minority regions where the people are mostly nomads. They travel from one place to another, to provide the herdsmen with the supplies they want and to buy up their products. According to a semi-official statement concerning the trade in the national minority regions (cf. Hsin-hua yüeh-pao, 1955, No. 9, pp. 178-79), the Communists aim to achieve two things in this connection. One is to raise the standard of living of the minority peoples by giving them better terms of trade. For instance, the exchange ratios between wool (the main export) and tea and cloth (the main imports) in Hsi-ning from 1950 to 1954 were as follows:

Table X: Exchange Ratios between Wool, Cloth and Tea in Hsi-ning

Year	Price of Wool per 100 catties (yüan)	Exchange Ratio with respect to: 1. cloth (No. pieces per 100 catties/wool)	2. tea
1950	745,700	2.29	11.61
1951	1,042,700	3.09	19.61
1952	1,230,758	3.71	28.13
1953	1,278,825	4.18	34.44
1954	1,258,000	4.18	31.45

Source: Hsin-hua yüeh-pao, 1955, No. 3., p. 146.

The other aim is to drive foreign goods out of the national minority regions and replace them with goods made in China. If the Communists really mean what they said, this would lead to a sharp conflict between Chinese and Soviet goods, especially in Sinkiang, where Soviet goods have long been very popular. However, no detailed information on this matter is now available.

C. Evaluation and Prospects

According to Communist propaganda, trade control in the Northwest has been very successful. For instance, they boasted that the per capita purchase of commodities in Liu-lin-chu, Yao-hsien, Shensi, has increased from 345,000 yüan in 1953 to

The newest development, found in the Northwest, especially in Sinkiang, is the partial industrialization of those areas which are the sources of coal, oil, gold, iron, alum, quartz, gypsum, nitrates, salt, and, as recently reported, uranium.

The non-Chinese peoples of the Northwest are not only outnumbered b ut also outweighed in economic and political respects. For more than two thousand years, the Chinese have been ruling those areas (with short interruptions as far as Sinkiang and Chinghai are concerned), even though they never had more than a few garrisons stationed in frontier areas. Those garrisons made it possible for a thin stratum of Chinese officials to rule the areas on the top level. On the lower level, the indigenous peoples and tribes governed themselves - under the supervision of the Chinese viceroys or governors and their bureaucracy.

The general policy of the Chinese government in Peking was to make use of the existing form of governmental institutions of frontier areas like Sinkiang, Chinghai, and Inner-Mongolia. In Sinkiang (prior to 1884 it was called "Hui-chiang," i.e., Muslimic Dominion), two types of local government had existed: the Muslimic type and the Mongolian type. The Northern and Northeastern part of Sinkiang, where the Mongols were the dominant inhabitants, had the same governmental institutions as Outer and Inner-Mongolia, namely, banners ruled by dzasaks, who were appointees of the Emperor in Peking. The Republic of China tacitly recognized their ranks and interfered very little with their functions. Only Communist China deprived the nomad aristocracy of their titles and rights.

The Muslimic communities were fuled by Bäks with various ranks: the Ak'im Bäk, "local governor"; the Ishkhan Bäk, "assistant governor"; the Shang Bäk, "collector of revenus"; the Qazi, "judge"; the Kukbashi or Mirabu Bäk, "superintendant of agriculture"; Yüzbashi, "hundred-men-leader"; Onbashi, "ten-men-leader"; etc. All the local Bäks were appointed by the emperor or later on by the president of the Republic upon the recommendation of the Imperial or Republican governor, although it must be stated that some governors of Sinkiang, Chin Shu-jen and Sheng Shih-ts'ai, ruled and governed the province without asking Peking for the consent of appointments.

Besides the Chinese civil service there existed Chinese military staffs and detachments, centered in Ili, Urumchi, Kulja, Chuguchak, Kashghar, Sining, Su-chou, Lan-chou, etc. Relay stations provided communication between the government in Peking and the frontier areas. Maintaining the effectiveness of the means of communications was an important duty of Chinese officials. Only since 1930 have some automobile highways been built, and the Communist regime, in cooperation

S N 489 496 648 668 175 [491] Only since 1950 have some automobile highways been built, and the Communist regime, in cooperation with Soviet Russia, are building the first Inner Asiatic railway, linking Alma-Ata with Lan-chou. This railway will, without doubt, speed up the Sinification of the frontier areas, and above all add industrialization to agriculture and pastoral nomadism.

S N 631 563 657 175 As far as Chinhai was concerned, the Western Mongols (the Oirats) were also locally ruled by dzasaks, the leaders of banners. Unlike the banners of Inner and Outer Mongolia and Sinkiang, however, they did not combine banners to form leagues or to elect one of their tribal leaders as the captain-general of the league. The Chinese governor- with his seat in Sining - functioned as captain-general. In regard to the nomadic Tibetans, the Chinese government appointed chieftains as dzasak-lamas and gave them the rights and the privileges which this office involves. The sedentary Tibetans were ruled by t'u-ssus, also appointees of the Peking government. By and large, this governmental pattern existed until the Communists came into power.

S N 563 659 175 The form of governing non-Chinese peoples changed in the course of time in various ways, but one thing never changed: the aim of the Peking government to rule, to suppress, to exploit, and to sinify them.

S 631 635 175 Unlike the eighteen provinces in China proper, the province of Sinkiang (after 1884) and the Eastern Three Provinces, (after 1907) the areas comprising Mongolia, Tibet, and Chinese Turkestan, although occupying more space than China proper, were administrated by a quite different type of governmental system.

S 631 657 175 647 Political subdivisions of the Chinese Empire such as Mongolia, Chinese Turkestan and Tibet were usually referred to as dependencies. This is however an inaccurate translation of the Chinese term "fan," which really means "the barbarian west." Since the cultural, ethnic and historical background in these areas was very different from the rest of the Empire, these regions required, and in practice had, a very particular type of governmental control. All these frontier territories were administered by the "Department of Dependencies" in Peking. This department was subdivided into the following bureaus:

a. Inner Mongolian bureau, that administered frontier boundaries, titles of nobility, appointment of officials, military affairs, league conferences, and finally organization of banner units of Inner Mongolia.

b. "Reception bureau" for Inner Mongolia nobility, that was responsible for the payments and allowances to the Inner Mongolian aristocracy.

c. Eastern Turkestan bureau, that was in charge of Moslem affairs in Eastern Turkestan.

d. Justice bureau which took care of the civil and criminal cases of the frontier area.

e. Territorial development bureau which took care of the preservation of forests, wild animals and which was in charge of the improvement of live-stock, fur curing and of the Mongolian inhabitants in general.

The Yüan and Manchu dynasties, which themselves represented minorities, employed a quite different, one might say a positive attitude towards non-Chinese. Generally speaking, the Manchus functioned and acted as the mediators between the minorities and the Chinese. But even the Manchus, after they had become completely sinified, used colonial methods that led to revolts and uprisings in Sinkiang, in Kansu and in Chinghai. The Chinese Muslims in Kansu, e.g., revolted in 1648, 1781-1784, 1820-28, 1862-78, 1895-97, 1918-21, 1928-1929, at which times they tried, with little success, to get rid of the Chinese mastery and to establish their own Muslimic realm. Whenever such uprisings occurred, the Muslimic Turks of Sinkiang sympathized with them or revolted at the same time. In Sinkiang, Yakub Bëk even succeeded in establishing a short-lived Muslimic empire between 1864-1877. The Western Mongols of Sinkiang, Kansu and Chinhai, who revolted and established the Dzungarian Empire between 1673 and 1697, were defeated by a Chinese army in 1697 and again in 1757. In Chinghai, the Tanguts (Tibetans) revolted successfully many times, but like all other minorities who tried and failed, they were eventually brought under Chinese control again. Needless to say, all these unsuccessful petty revolutions, revolts and uprisings of non-Chinese or Chinese Muslims, always upset the economy of the area greatly, increasing thereby the hatred towards the Chinese in general, and the Chinese officials in particular.

II. Main Patterns of Social Life, Social Organization and Mode of Economy of the Minorities.

Even though the Northwest is occupied by a fantastic conglomeration of heterogeneous societies, it still can be, and always has been, considered by politicians as one area, a political, military, and economic unit, and also as the "land of promise," which it in fact became. When the Communists again set up the unit as an administrative area in 1949, it was only the continuation of an old concept, held by the Chinese rulers because of the geographical location of the Northwest and its commercial traditions (silk road, Mongolia-Tibet road, Chinghai-Tibet road, Sinkiang-India road, Sinkiang-Russia road), which culminated in Sheng Shih-ts'ai's cooperation with Russia, or earlier with Yakub Bëk's policy

students from the nationalities to learn prophylactic and therapeutic work." (FBIS, November 30, 1955).

Particular attention has also been paid to the Tibetan region as a whole and to Chinghai Province. About health programs developed in Tibet we have the following information: "Over 5 million yüan have been allocated by the Central People's Government to develop health work in the Tibet region during the past four years. During this time hospitals have been built in Lhasa and Chamdo; in addition, clinics and mobile medical teams have given service to patients in small towns and remote areas. Incomplete statistics show that free medical treatment and innoculation reached 963,000 people. In the same period, 170 Tibetans have been trained as medical workers. The Central People's Government has sent more than 400 doctors and nurses from other parts of the country to the region.

Plans were drawn up at a regional health conference of leading members of Tibet's health organizations and representatives of the Ministry of Public Health to establish more clinics and mobile medical teams and to train 50 to 80 Tibetan medical workers in the coming two years." (FBIS 181, September 16, 1955).

In Chinghai province itself, the Provincial Health Office administers the health program. Health clinics have been established in different parts of the province. The work here is more difficult because of the many nomadic tribes in the steppes. The Communists have aimed to train people among the nomads to take the position of medical personnel in their tribe. Progress in this area is slower. Some of the bigger already established clinics have been converted to hospitals.

According to their reports, on the whole, the progress made by the Communist Government in the field of health and sanitation is quite impressive. The first positive steps toward improving the health and sanitation conditions have been taken, but there is still much to be done in the future.

PUBLIC WELFARE

I. Introduction

Welfare work in China's Northwest has to be conducted for the benefit of two distinct categories of people in need. The poor are composed of those whose problems arose out of inadequate standards of living. They include the aged and disabled, the orphans and other destitute or handicapped people. Marginal cases of this category are the underprivileged groups of society, who might maintain themselves, even though precariously, in years of abundance but who become relief cases as soon as their balance of life is disturbed. Chinese concepts of charity and charity organizations normally available to this category are discussed in the Public Welfare Section of the General Handbook.

The second category however, the victims of natural disasters, poses a special problem in the Northwest. As has been demonstrated in other Sections of this Handbook, the maintainence of agriculture in the Northwest is more dependent upon conservancy and irrigation projects than in other regions of China. During the last period of the Imperial era, many of these projects have fallen into disrepair, thus exposing the area to more critical inundations and droughts. Reports from the Imperial period reveal that there were fourteen severe inundations in the province of Shensi during the hundred years 1800-1900 and seven in Kansu. The same century brought sixteen severe droughts to Shensi and nine to Kansu. The droughts of 1877 which encompassed both provinces, of 1900/01 in Shensi, and of 1908/09 in Kansu were catastrophes of a national extent.

The frequency and severity of earthquakes in the Northwest adds to the problems of the region, particularly since in many areas of the region people live in loess caves. The great earthquake of 1879 which hit both Shensi and Kansu, the one of 1881 in Kansu and the ones of 1892 in the Kucha district of Sinkiang and the Hsi-ning district of Chinghai are still in everybody's memory, even though the twenties of our century have again brought two devastating earthquakes.

Nor is this all. During the last hundred years the Northwest has been ravaged by rebellions and civil wars almost without interruption. Several of these events left in their wake a vast number of displaced and needy people, who added to the problems of emergency and disaster relief.

II. Welfare Among the Moslems

A. The Distribution of Welfare Responsibilities

Most of the efforts in the field of public welfare among the

by the laymen. Temples frequently maintain free hostels for travellers, and one can count on any layman to provide food, shelter, road guidance, and any kind of help to needy passers-by. It is even customary for a Mongol to leave food in front of his tent during the time he is on an outing. This hospitality is extended to destitutes and refugees also, by Mongols as well as Tibetans, irrespective of the creed of the receiver.

IV. Welfare Efforts Under the Republic, Particularly Under the National Government

With the coming of the Chinese Republic, the realization grew that welfare was a public matter. Although it took time until the rudiments of an organization were set up to implement this realization, the government at best acted to the limits of its possibilities to bring relief in the case of natural catastrophes. During the great famine in the Northwest, caused by protracted droughts and earthquakes in 1928/29, the government organized a special commission to handle relief. The relief work of this commission was financed partly by fixed government grants, special loans and by solicited special contributions from Chinese cities, provinces and private organizations and individuals as well as by organizing a rather successful drive for funds abroad. The role played by the China Famine Relief Commission in this as well as in similar instances is discussed in the Social Welfare Section of the General Handbook.

The realization grew however that with regard to natural disasters, prevention work might be of greater importance than relief. One of the projects that grew out of this realization might be mentioned here, the Wei-pei irrigation project in Shensi. This project was conceived jointly by the Shensi provincial authorities and the China International Famine Relief Commission in the twenties. Actual work commenced in December 1930 and was completed in June 1932. Ninety thousand acres of land have been reclaimed b this combined conservancy and irrigation project. The maintenance of the system was later taken over by the National Economic Council.

In the late thirties this Council was particularly active in irrigation and reclamation schemes in the Northwest. It was responsible for the sponsoring or subsidizing of several large-scale projects in Shensi, Kansu and Ninghsia Provinces.

Unfortunately, there is very little information available on the efforts on the part of the Chinese administration in the field of public welfare in the Northwest, both under the National Government and under the present Communist regime. From the little material we have the general impression is that the local efforts of the Moslem community encompass most of the work done in public welfare.

done in public welfare. The information about the situation in the Northwest has to be inferred mostly from what is available to us about China proper, keeping in mind that Chinese policies in Sinkiang have never achieved a fulfillment comparable with the fulfillment they have achieved in China proper.

It was only during the Sino-Japanese War (1937-194_, that the Nationalist Government established a Ministry of Social Affairs. This Ministry organized in each province, including Sinkiang, a Bureau of Social Affairs for relief and welfare works. Institutions were set up to take care of the aged, orphans, the disabled, disabled veterans and beggars.

The relief organs in the Northwest sponsored by the Ministry of Social Affairs were restricted to free medical service centers; organs maintained by provincial governments were mainly experimental relief stations, which were responsible for a variety of relief work. Municipal and district governments maintained, in addition to general relief organs (90 for the entire Northwest; 57 of these were located in the provinces Chinghai and Ninghsia, which had Moslem governors), children's relief centers (37) and a sprinkling of other institutions. There were several dozens of private Chinese Charity Associations active in the Northwest during the war.

Furthermore, the National Government joined efforts with some religious and humanitarian bodies and organized the National Relief Commission. During the war, this Commission was particularly active in disaster relief. Large appropriations were earmarked for the famine in Shensi in the years 1943 and 1944. Contributions to this province as well as to the provinces of Kansu and Ninghsia were largely used for the resettlement of and the starting of reclamation projects by disaster victims of Shensi as well as of Honan province.

The activities of the National Relief Commission included care for war orphans and refugee children. Five hundred of them were sent to Sinkiang and one thousand were resettled in Chinghai. Furthermore, a Juvenile Northwest War Area Service Corps was organized to accommodate graduates from War Refugee Children's Schools.

The National Child Welfare Association, founded by H. H. Kung, also maintained a Child Welfare Camp at Hei-hsien, Shensi.

Among the service corps operated by the Friends of the Wounded Society, organized under the New Life Movement Association; one had a base in Shensi. These corps worked in hospitals and convalescent camps. They provided delousing, laundry and sewing services etc. and special dieting.

The welfare work of Christian missions contributed to alleviate much distress. There were few large Protestant missionary

III. Resentment of Chinese Rule

These internal differences have made it impossible for the people of the Northwest to cast off their Chinese rulers by united action and to establish a Turkic, Uighur, or federated government of their own. In Sinkiang, 90 per cent of the population is non-Chinese, yet the forces of nationalism and of religion, which at times made for a temporary unity, were not strong enough to transform the sporadic revolts into a lasting revolutionary movement and complete independence.

There always has been a great deal of friction between the Chinese and the non-Chinese as a result of the differences in cultural heritage. In addition, the Chinese form a ruling minority in many parts of the Northwest and appear to the native people as a foreign government of occupation. In this situation, the Chinese Moslems (the Dungans) have found themselves caught between two fires. At times they sided with their Kirghiz and Uighur co-religionists, and at other times they were compelled to support their non-Moslem Chinese compatriots. As a result, they have been distrusted by everyone and have suffered a double persecution during times of upheaval and nationalistic or religious fanaticism.

The Chinese method of ruling minority peoples involved the system of "divide and rule" and created friction not only with China, but also among the tribes themselves. The policies of Tso Tung-t'ang in the latter part of the nineteenth century, can be taken as an example. He managed to place great power in the hands of his own relatives and friends, and to strengthen the old social structures of the Mongols, Uighurs and Kazakhs through the existing Begs and princes who became instruments of Chinese rule. He considered the Chinese Moslems to be traitors and killed large numbers of them while showing leniency toward the Uighurs, Mongols and Kazakhs. After the Revolution of 1911, during the governorship of Yang Tseng-hsin, the tradition of setting one people against another was continued. Fearing that the Mongols of Sinkiang might unite with the Mongols of Outer Mongolia during the revolution there, heavy restrictions were imposed upon them, while the Kazakhs were even allowed to carry arms. Under the previous Manchu rule, the Mongols were favored over the Kazakhs; they were considered the rightful owners of pasture lands, while the Kazakh tribes were treated as their "tenants."

In the case of the Turkic Moslems, nationalism and religion are almost inseparable. Their rebellions against the Chinese have been the most persistent and the most violent, but only one short period of freedom has broken two centuries of Chinese control. Ever since 1759, when the Manchu general, Chao-hui, drove the ruling Moslem Khojas into Khokand and extended Chinese rule into Turkestan, the bitter resentment aroused by foreign control has flared into periodic revolt. In the nineteenth century, while the

III. Functions of Propaganda System

A. Sounding Board

This propaganda network has another important function. It also checks public opinion and relays it to the Party. Every propagandist is supposed to report back not only what he has said but also what the public has said to him. Since the Communist Party has control of all newspapers, radio broadcast programs and other means of public information, there is no other way of knowing the true feelings of the people. Thus, the propaganda machine is utilized to sound out public opinion, in order to better deal with the public.

Furthermore, the propaganda machine is fluid and can be used as a weapon in every field. (For the details, see the Propaganda section of the General Handbook).

B. Work with National Minorities

1. "Central People's Government Mission to National Minorities of Northwest"

Besides the regular propaganda organizations, special groups and teams have been sent at various times to different areas. For instance, in 1950 the Communists sent a "Central People's Government Mission to the National Minorities in the Northwest." The chief of the mission was Shen Chun-ju, the deputy chiefs were Sa K'ung-liao and Ma Yu-kwei. The mission visited Panchan Lama on November 1, at Kumbum monastery in Chinghai. There they also attended a welcome meeting of 12,000 people of all the nationalities in Chinghai. The Panchan Lama presented Shan, Sa and Ma with katag, consisting of silk woven portraits of Buddha, the most precious gift to the Tibetans (obviously these were specially made, usually there is no portrait of Buddha), and expressed his profound respects for, and gratitude to, Chairman Mao Tse-tung. "At the welcome meeting to the mission at Sining city on November 2, representatives of seven nationalities in Chinghai submitted to Chairman Mao a katag consisting of a silk banner more than 10 geet in length, inscribed with words in the Chinese, Arabic and Tibetan languages, stating: "Most Respected and Honored Chairman Mao; under your glorious banner, we have achieved equality, mutual assistance, love and unity." On the top of the banner there were attached 8 national flags of China and the portrait of Mao, at the bottom were paintings of the people of the seven nationalities in the province. (NCNA, November 4, 1950).

Of course, these activities greatly impressed the local people. This same mission in different groups visited Ninghsia and Sinkiang.

In 1952 the Party promoted an ideological remoulding and study campaign among the literary and art circles in the Northwest. Many of those so indoctrinated were organized into groups and sent

EDUCATION

I. Nationality Education in Pre-Communist Times

A. The Traditional Pattern

During the Manchu period, education in the Northwest was characterized by permissive and non-interfering policies of the government. This meant that the minorities were able to maintain and develop their own educational systems. During this period schools connected with the mosques, in the case of the Moslems, and the monasteries, in the case of the Buddhists, were the primary educational institutions. The minorities were allowed to formulate their own educational principles. It may be noteworthy that in the Manchu period, eighteen medrese, mosque schools, existed in Kashgar alone. Reading and writing were taught in these schools, and up to two thousand students were enrolled in the schools in any given year. The total number of medrese in the Northwest during the Manchu rule is unknown, but it is safe to say that each Moslem community had at least one educational institution.

1. Moslem schools

The Mohammedans have two kinds of school. The mekteb, elementary school for children, is administered by the local mosque. These schools provide education for all male children older than six. Since 1923 the Mohammedans have initiated the same educational provisions for girls.

The program of a mekteb comprises, first, the memorizing of a surprisingly high number of suras (chapters of the Koran), then the study of the Arabic alphabet, which is used by the Uighur. By memorizing various suras the pupils acquire some hundred Arabic words by the end of the first year, though their meanings do not become clear until the fifth year when the teaching of Arabian grammar is begun. Between the fifth and tenth years the curriculum covers advanced Koran exegesis, the history of Islam, geography and basic arithmetic.

The medrese, the institutions of higher learning, also teach such familiar subjects as al-mantik (logic), al-arithmātīkī (arithmetic), al-handasa (geometry), al-hai'a (astronomy), al-ṭibb (medicine), al-falāḥa (agriculture); also some subjects which are specifically Islamic in nature, such as al-kalām (theology), al-taṣawwuf (ceremonies or practical theology), 'ilm al-ilāhīyāt (metaphysics), al-'arūḍ (metrics) and al-ḳāfiya (prosody).

As in elementary schools, the method of education consists primarily of learning by rote (talkīn) and dictation. Those

arrangement of the Kanjur but starts, strangely enough, with the most difficult chapters, the abhidharma, metaphysics (Tib.: C'os-mnon-pa, clear doctrine), and difficult sutras. Each student gets an additional private tutor, who explains difficult passages of the matter under study.

When the weather permits, teaching is conducted in the open in the so-called chör-ra. Otherwise instruction takes place in a temple hall.

An important part of instruction is frequent disputations between the teacher-monks and the students, under the supervision of the abbot, khan-po. These loquatious duels give occasion for the students to show how much they know and how much they have memorized.

In the course of time the students are taught ts'ad (logic), bzo (technique), rtsis (astrology), snan ṅags (rhetoric), sgra (grammar) and adul-ba (monastic rules). After having mastered the whole material the student receives the degree of dka-bcu (a man who has passed the ten examinations).

To complete the work of the philosophical college takes more than a decade. Then the dka-bcu can either procede to the next college to gain the title of snags-rams-pa (master of the tantric sciences) or to another monastery where other famous teachers are found.

To receive the title of snags-rams-pa, the monk must study large parts of the Tanjur, a gigantic 225 volume collection of theological, philological, ethical, alchemistic tractates and a tremendous amount of occult tantras.

Another center of monastic studies was Labrang in Kansu, one of the foremost monasteries of the Yellow Sect. This monastery is divided into what might be called six different colleges. In the first, known as Wen-hsi-t'ang, five different sutras are taught. The second college is primarily concerned with the continuation of the studies in the first, but the difficulty of the curriculum increases. In the fifth and sixth colleges the esoteric sutras are taught. There are separate colleges for sciences of medicine. Most monks, however, never learned more than a few prayers. The Labrang monastery showed some concern with modern times by introducing courses in animal husbandry and the manufacture of agricultural by-products. Like other monastic academies, however, it has remained primarily a center of religious learning.

B. Nationality Education under the Republic

The period of the Republic was characterized by the fact that the government attempted to bring the Chinese educational system as far as possible into the area of the nationalities. Education became one factor in the general policy of assimilation.

The plan was to enforce four years of compulsory education in lower elementary schools, and a great effort was made to establish new schools in all the major centers of the nationalities. In Sinkiang, however, this development had not yet superseded the importance of the mosque schools. Figures (for 1941) on the number of schools and on school attendance are as follows:

Table 1

No. of Schools and Students in Sinkiang, 1941*

	Schools	Students		
		Male	Female	Total
Chinese Public Schools	236	9,461	1,979	11,430
Mosque Schools	1152	62,198	12,982	75,180
Total	1,388	71,659	14,961	86,610

* (Hsü Ch'ung-hao, Hsin-chiang chih-lüeh, 1944, pp. 232-233.)

According to another source, the schools were mostly established and operated by the cultural associations of various nationalities in Sinkiang. These cultural associations maintain offices in most of the cities of Sinkiang, with headquarters in Urumchi. They were supported by the ahungs, the village head men, living buddhas, princes and native chieftains, and they had a greater influence upon the promotion of education in Sinkiang than the provincial bureau of education. The number of schools operated by these cultural associations and the number of students enrolled in the schools in the year 1938 were as follows:

Table 2

Schools Operated by Cultural Associations in Sinkiang, 1938*

	Schools	Students
Uighur Cultural Associations	1,540	89,804
Kazakh Cultural Associations	275	14,322
Moslem Cultural Associations	1	44
Mongolian Cultural Associations	24	917
Total	1,840	105,087

*(Ch'en Chi-ying, Hsin-chiang Niao-k'an, Changsha, 1941, p. 36f.)

The Uzbeks, Tatars and Kuei-hua (White Russians) also have cultural associations which operate schools. Statistics about them, however, are not available. It is possible that there is a

S 871 563

certain amount of overlapping of the figures in Tables 1 and 2.

During the war years there was an expansion of schools in Sinkiang. By 1946 the number was as follows:

Table 3

Schools in Sinkiang in 1946 *

S 87 563

1. Schools under the Provincial Bureau of Education
   a. Higher Education: 2 (the Sinkiang College and the Sinkiang Women's College, both at Urumchi)
   b. Middle Grade Schools:
      (1) Middle Schools
         Senior Grade: 4 (at Urumchi)
         Junior Grade: 4 (2 at Ining, one at Kashgar, one at Chuguchak)
      (2) Normal Schools
         Senior Grade: 2 (at Urumchi)
         Junior Grade: 5 (2 at Ining, one at Kashgar, one at Chugachak, one at Aksu)
   c. Vocational Schools
      Senior Grade: 2 (one at Ining, one at Chuguchak)
      Primary School Level: 4 (Urumchi, Kashgar, Khotan, Aksu)
   d. Public Schools, primary level: 580
2. Schools under the Cultural Associations:
   a. Primary Schools: 1,883.

*(Ministry of Information, "Education in the Border Regions," 1948.)

N *563 873 • 658 *175 871 N [669]

Government sponsored education of Mongols and Tibetans was already initiated in 1910, when the comptroller-general of Chinghai founded the Chinghai Mongolian Academy at Hsi-ning. This school was conceived for service to the Mongol Banners exclusively.

A somewhat peculiar situation existed in Chinghai after the revolution of 1911. Chinghai in this period was ruled by Moslem generals, who persued a rather fair policy toward ethnic groups. The activities of one of these Moslem generals, Ma-Ch'i, should be stressed. The goal he set for himself was the introduction of at least one primary school in every community of Chinghai, regardless of the ethnic composition of the particular community. His activities were marked by his insistence that all children should learn Chinese in addition to their own language. Besides, he developed and enlarged the training of the ahung (teacher or lowest priestly rank). His first act upon becoming vice-governor of the province was the establishment of

*563 the first middle school in this area.

873 • 658 *175 871

After the revolution of 1911, the Chinghai Mongolian Academy was renamed Ning-hai Mongolian and Native School, and was now open to other ethnic groups such as Tibetans, Chinese and Moslems. In 1919 this school added a department for the training of elementary school teachers. Since the enrollment of Mongol and Tibetan children steadily decreased after 1919, the government ordered the Mongol nobles to send the children under their jurisdiction to this school. In 1926 the school was again enlarged, and renamed the Planning School of Frontier Development. After the addition of a middle school to this institution, it became the center of secondary education in the area. The curriculum of this school comprised language training in Mongolian, Tibetan and Chinese. Otherwise the school program corresponded to that of other middle schools in China proper. In 1929 the department of vocational education was separated from the school and became the First Provincial Vocational School. The Planning School itself was then renamed First Provincial Middle School. About this time other schools, such as First Provincial Normal School, First Provincial Girls' Middle School and First Provincial Agricultural School, were founded.

*563 873 658 *175

In 1930 the First Middle School provided a Mongolian and Tibetan normal division as a course of study; this division became in 1937 an independent Tibetan and Mongolian Normal School under the supervision of the Chinghai Bureau of Education. The authorities of the Chinghai Moslem Association, to eliminate the differences between the various minorities, established also their own middle school.

*563 871 *175

There were three cultural organizations in Chinghai worthy of note, namely the Tibetan Language Study Association, which translated the Three Principles of the People into Tibetan, and provided Tibetan school children with Tibetan reading and grammar books; the Tibetan Culture Promotion Association, which was founded in 1931 and which was supported by military and political leaders. Its objectives were to propagate the Three Principles of the People in a manner that would awaken the Mongols and Tibetans from their so-called backward cultural condition. A further goal of this association was to unify Tibetan and Mongol culture, and to maintain the physical existence of these minorities. Third, there existed a "Moslem Promotion Association which was primarily concerned with promotion of general education among the Moslems of Chinghai and their indoctrination with the Three Principles of the People. A further objective was to overcome certain racial resentments that existed among various minority groups in the area. Branch associations were set up in all counties (hsien) where Moslems live. The headquarters for all branches was located at Hsi-ning.

and attached to these headquarters was a primary and a middle school. The Moslem Promotion Association, discussed here, operated a total of eighty-three primary schools, twelve of them senior primary schools. They had a total of 5,300 students and 201 teachers.

The main purpose of the government during wartime, in bringing educational facilities to the Northwest, was to unify and reconstruct the cultures of the ethnic minorities along Chinese principles with equal emphasis in primary education on citizenship training, language, vocation and hygiene. In secondary education, the Kuomintang government attempted to develop or initiate technical abilities.

During World War II the Kuomintang government showed some interest in the education of the nomadic Tibetans. Chiang Kai-shek induced some tribal leaders to carry a school tent with their tribes. These tents served as primary educational centers. This move was revolutionary, as it was the first type of education, or at least of organized education, to reach the nomadic Tibetans.

Up to 1945 the educational program sponsored by the provincial authorities was as follows:

1. In Chinghai: As of 1943, there were eleven nationality schools operated by the Mongolian-Tibetan Cultural Promotion Association. These eleven schools supplemented the forty-four Mongolian-Tibetan Nationality Schools already in existence. Following the transfer of the Chinghai headquarters of the Mongolian-Tibetan Cultural Promotion Association to Yü-shu in 1943, six more nationality schools were established, of which two were directly under the administration of the association. In addition, the association established two training classes for teachers of Mongolian and Tibetan, one at Ta-t'ung and one at Yü-shu. Hsi-jao-chia-tso, with the financial assistance of the Ministry of Education of the National Government, also established a training class for the teaching of Chinese language to the native teachers.

2. In Ninghsia: The educational program of the local authorities received a boost when the Yün-t'ing Educational-Cultural Fund of one million dollars was appropriated. The money, however, was in depreciated currency of the National Government and did not amount to much, but with it the provincial authorities were able to set up twelve Yun-t'ing Primary Schools which had a total of twenty-five hundred students. In Ninghsia the number of mosque schools was much fewer than in Sinkiang. Here there were, up to 1945, only twelve classes with a total of two hundred and forty students. There were two nationality schools, one at T'ao-yueh and one at T'eng-k'ou, one banner school and a teacher training class in the Alashan Banner.

1: Washington S-4 (no date) 1956 AF13 Northwest China AF13

3. Kansu: The educational program was more advanced than in the other provinces in the Northwest. The number of schools and students as of 1945 was as follows:

Table 4

No. of Schools and Students in Kansu, 1945*

	Teachers	Students
1. Middle Schools

*(Ministry of Education, "Education in the Border Regions," 1948.)

II. Chinese Education in Pre-Communist Times

A. Education under the National Government

During recent decades, the education in Northwest China has been backward compared to that in the coastal provinces. The educational standards within Northwest China also differed greatly. Generally speaking, the farther the people lived from the big cities, the less they were educated.

Even though the general Chinese school system was introduced also to the Northwest, in remote places the so-called schools were scarcely different from the old-fashioned tutor system.

The provincial authorities were handicapped by the shortage of funds as they struggled to set up schools with what little was appropriated to them by the Central Government. In 1935, the Central Government appropriated half a million dollars for border education, and within two years the following schools were established:

In Kansu: A training class for village teachers and fifty-five primary schools.

In Chinghai: A normal school for the teaching of Mongolian and Tibetan at Hsining, two middle schools, 143 primary

schools.

In Ninghsia: Two training classes for Mongolian and Tibetan teachers and fourteen primary schools.

Special attention was paid to the education of the lamas in the great monastery of Labrang, at Hsia-ho in Kansu. The Mongolian and Tibetan Affairs Commission organized a Tibetan People's Cultural Association which helped to set up a vocational school and a political training class for young lamas. In the field of political instruction, the Central Political Institute also established a Mongolian-Tibetan School at Sining, in Chinghai, with a branch at Suchou, in Kansu.

During the war against Japan, with the migration of the coastal population inland, universities and middle schools from Peking and other places moved to the Northwest. When the war front was more or less stabilized after 1938, the Northwest enjoyed a comparatively stable peace. These "immigrants" built up cultural centers such as Ch'eng-ku, Ku-lu-pa in Shensi; and with the mass education movement promoted by the National Government, education in the northwest was greatly improved both in quantity and in quality.

Under the school system of the National Government, children started school when they were a full six years old. Before that age they might go to kindergarten if there were such facilities and if the parents could afford it. But at six the government required every child to attend the first grade. The free and compulsory education covered the first four grades, which were called junior primary school. The fifth and sixth grades were classified as senior primary school. A school with all six grades was called a complete or central primary school. In the Northwest, the National Government made a real effort during the war to push toward the goal of one junior primary school in every pao (approximately one hundred families) and one central primary school in every town or hsiang (administrative village). By the end of the war, all children with the exception of those in really remote areas had a chance to attend a junior primary school, even though some of these schools were of low caliber. As the central primary schools were limited in number, only the luckier ones who either lived close by or were financially better off could enter the fifth and sixth grades. After graduation from the sixth grade, there was quite a hurdle to clear before one could enter the secondary schools. Entrance examinations were difficult because the facilities were so limited that only selected children could be admitted. The secondary schools included three types: the middle schools; the vocational schools, and the normal schools. The middle schools were meant for a selected group, as preparation for more advanced studies. The vocational schools offered training in agriculture, industry, commerce

1: Washington S-4 (no date) 1956 AF13 Northwest China AF13

658 873 [874] or other professions to those who would enter a profession immediately after graduation. The normal schools offered training for grade school teachers. Each of these three types of schools was divided into two periods of three years each, the junior and the senior. In the Northwest, the government pushed toward the goal of having at least one junior secondary school in each county, and a senior secondary school at every center of each of the provinces. Not only were the normal schools free of tuition, but the government supplied board, room, books and even pocket money against the obligation to teach for a certain number of years.

873 Of institutions of higher education before the war, there was a National Northwest Junior Agricultural College in Wu-kung, Shensi, with modern buildings, equipment and vast experimental farms. In Sian, Shensi, there was the National Northeast University which had moved from Mukden to Sian after the Japanese occupation of Manchuria. In Lanchou, Kansu, there was a college with very low standards. In Urumchi, Sinkiang, there was the Sinkiang College.

After the war broke out in 1937, the Northeast University moved from Sian into Szechwan. But three other important institutions moved into Shensi, the National Peking University (Peiping), the National Peiping Normal University and the National Peiyang University of Tientsin. These three were combined to form the Northwest United University (later called Northwest University) and stayed in Ch'eng-ku, Shensi. Later the engineering school was separated to form the Northwest Engineering College, with its campus at Ku-lu-pa, Shensi.

873 874 At the time the Communists took over, there were more institutions of higher education in the Northwest than ever before. The following list shows the increase of these schools during the war and post-war years:

1. Northwest University, Sian, Shensi
2. Lanchou University, Lanchou, Kansu
3. Northwest Normal College, Lanchou, Kansu
4. Northwest Engineering College, Hsien-yang, Shensi
5. Northwest Agricultural College, Wu-kung, Shensi
6. Sinkiang Provincial College, Urumchi, Sinkiang
7. Northwest Agricultural Junior College, Lanchou, Kansu
8. Shensi Provincial Junior Commercial College, Sian, Shensi
9. Shensi Provincial Junior Normal College, Sian, Shensi
10. Shensi Provincial Junior Medical College, Sian, Shensi
11. Private Northwest Pharmaceutic Junior College, Sian, Shensi

(Ministry of Education: Second Educational Year Book, 1948.)

In addition, in 1946, were the following institutions not of

III. Functions of Propaganda System

*668 208 A. Sounding Board

This propaganda network has another important function. It also checks public opinion and relays it to the Party. Every propagandist is supposed to report back not only what he has said but also what the public has said to him. Since the Communist Party has control of all newspapers, radio broadcast programs and other means of public information, there is no other way of knowing the true feelings of the people. Thus, the propaganda machine is utilized to sound out public opinion, in order to better deal with the public.

Furthermore, the propaganda machine is fluid and can be used as a weapon in every field. (For the details, see the Propaganda section of the General Handbook).

B. Work with National Minorities

*668 659 *563 1. "Central People's Government Mission to National Minorities of Northwest"

Besides the regular propaganda organizations, special groups and teams have been sent at various times to different areas. For instance, in 1950 the Communists sent a "Central People's Government Mission to the National Minorities in the Northwest." The chief of the mission was Shen Chun-ju, the deputy chiefs were Sa K'ung-liao and Ma Yu-kwei. The mission visited Panchan Lama on November 1, at Kumbum monastery in Chinghai. There they also attended a welcome meeting of 12,000 people of all the nationalities in Chinghai. The Panchan Lama presented Shan, Sa and Ma with katag, consisting of silk woven portraits of Buddha, the most precious gift to the Tibetans (obviously these were specially made, usually there is no portrait of Buddha), and expressed his profound respects for, and gratitude to, Chairman Mao Tse-tung. "At the welcome meeting to the mission at Sining city on November 2, representatives of seven nationalities in Chinghai submitted to Chairman Mao a katag consisting of a silk banner more than 10 geet in length, inscribed with words in the Chinese, Arabic and Tibetan languages, stating: "Most Respected and Honored Chairman Mao; under your glorious banner, we have achieved equality, mutual assistance, love and unity." On the top of the banner there were attached 8 national flags of China and the portrait of Mao, at the bottom were paintings of the people of the seven nationalities in the province. (NCNA, November 4, 1950).

Of course, these activities greatly impressed the local people. This same mission in different groups visited Ninghsia and Sinkiang.

*668 658 In 1952 the Party promoted an ideological remoulding and study campaign among the literary and art circles in the Northwest. Many of those so indoctrinated were organized into groups and sent

*668 to factories, rural villages, areas along the railways and in the
• 658 minority districts. Among them, 45 literary and art workers in Sian formed twelve creative writing teams and proceeded to factories, rural villages, areas along the Tienshui-Lanchow railway cities.

2. Propaganda missions by minority representatives

*668 a. To minority areas

658 There was another form of propaganda team which included
*563 well-known local leaders as members, with one of them as the head of the group. They were sent to a particular area to win over its minority groups. For instance, in June, 1952, the Northwest Military Administrative Committee sent out two propaganda missions from Sian, one to the Tibetan districts in southern Kansu and the other to pastoral districts in southern Chinghai. Each of these two divided again into two sub-groups. The first sub-group of the mission to the pastoral districts in southern Chinghai, under the leadership of Hsi-jao-chia-tso (Tibetan), visited the Mongolian banners and Chien-cha districts; the second sub-group, led by Hsia-jih-tsang, the Tibetan Living Buddha of Tung-jen hsien, Chinghai, visited Tung-teh and Tung-jen. The first and second sub-groups of the mission to the Tibetan districts in Kansu arrived at Hsia-ho and Lin-tan on July 17 and 20 respectively. The first sub-group led by Chief Huang Cheng-ch'ing (Tibetan) and Deputy Chiefs, Chu Hsia-fu, Ma Pei-ching (Moslem) and Huang hsiang, offered gifts to Labrang Monastery and its Living Buddha, Chia-mu-yang VI, on July 24. The visiting mission's welcome by the
[576] Tibetans, who had awaited the mission along the Mien-hsien-Hsia-ho highway, included the most solemn welcome ceremony of salutes fired from horseback and the presentation of katags. Abbot Tachi of Labrang Monastery and the leader of the mosque, Kung Ching-lu, were also present to welcome the mission at the outskirt of Labrang. Similar organizations were formed on other occasions.

b. To Peking, etc.

*668 Besides organizing and sending propaganda teams to the minori-
658 ty groups, the local minority people were also organized and trans-
*563 ported inland, especially to the Red capital, Peking, for short visits.
484 There they were exposed to systematic propaganda. They might come to attend meetings, to give performances, to receive training and education, or simply to have a sightseeing tour. The following are some examples.

"The preparatory meeting of the Chinese Moslem Association was held in Peking on July 27-31. The meeting was initiated and convened by eight well-known Moslems among minority nationalities: Burhan, Liu Ko-ping, Saifudin, Ta Pu-cheng, Ma Chien, Pang Shih-ch'ien, Yang Ching-jen and Ma Yu-huai. The meeting was attended by 53 delegates from all parts of China. Among them were Akhuns, Mullah and responsible people of the Moslem groups

*668 of Muslim-Hui, Uighurs (Sarigh-Uighur), Kazaks, Usbeks, Tatars,
• 658 and Tung-hsiang nationalities. (NCNA Peking, August 4, 1952).
*563 A 45 member delegation from 15 different nationalities of
484 Northwest China arrived in Peking yesterday to take part in the coming October 1st National Day celebrations....

The Northwest delegation, headed by Mainor, an Uigur woman, included the following 15 nationalities: Han, Hui, Uigur, Kazakh, Mongolian, Tibetan, Tunghsiang, (Sarigh-Uighur), Uzbek, Manchu, Tartar, Solon, Khalhas (Kirgiz), Tajik, Sibo and Russian." (NCNA Peking, September 24, 1952).

3. Minority group organizations

*668 Various nation-wide organizations such as the China Buddhist
*563 Association, the Chinese Islamic Association, the Chinese Moslem
794 Cultural Association, and the China-Soviet Friendship Association were organized with numerous minority and local leaders as members and sponsors. The local chapters also have propaganda departments. For instance, the Tibetan Buddhists in Chinghai, under the leadership of Hsi-jao-chia-ts'o contributed 728,750,000 for the Resist-America Aid Korea movement in the year 1951 alone. Some monasteries signed patriotic compacts and launched programs of propaganda on current events. According to Hsi-jao-chia-ts'os report,

"The next step is to expand the propaganda work, mobilize the lamas to organize propaganda teams, make use of temple fairs or festivals for propaganda activities, and carry the propaganda deep into the rural villages and nomadic regions.... In pushing the autonomous work in the minority region, Buddhism should give more active support and preach the nationality policy of the People's Government." (Sian, Ch'un-chung jih-pao, November 23, 1951.)

[788] Besides the Buddhists, the Moslems are used to promote the
[648] Communist programs, not only in Northwest China, but some were organized into pilgrim groups to visit Mecca and the Moslem nations in the Near East in order to win the friendship of these nations for Red China.

*668 The special effort to create Sino-Soviet Friendship Associa-
648 tions in northwest China can be seen in the following incomplete figures. By September of 1951, Sino-Soviet Friendship Association organizations had been organized in four provinces, four municipalities, thirty-six administrative districts and 157 hsien in northwest China. There were 1,314 branch associations and 417 sub-branch associations with a total membership of 336,610 of all nationalities. The purpose of this association is to tell the people of the merits of the USSR.

Obviously a special attempt has been made in Northwest China to capture the minorities with propaganda.

659

659 MISCELLANEOUS GOVERNMENT ACTIVITIES--governmental activities not classifiable elsewhere (e.g., census taking, government support of national and state forests; of established churches); expenditures on public safety (e.g., military establishment, police, fire protection, disaster relief); etc. See also:

Census data 16
Army, navy, and air forces 70
Fire protection 368
State and national parks 529
Police 625
Disaster relief 731
Established churches 795

*668 669 578 So-called counter-revolutionary elements were reported to have operated in several provinces. In Hopei, the public security organs uncovered several cases of "I-kuan-tao" sabotage. The "I-kuan-tao" are supposed to be remnants of KMT officers and several sects like the "Golden Line". These elements had operated in Kansu, Shensi, and Inner Mongolia. They usually recruited former prisoners who had been in Chinese Communist prisons. These elements were supposed to have wormed their way into economic enterprises, rural mutual aid, and co-ops to engage in sabotage. They are blamed for fabricating rumors, and during the unified purchase of grain, they are supposed to have instigated the peasants to put aside grain and not send their surplus to the State.

*668 659 433 248 Another major problem is the assessment of cotton output and the fixing of cotton purchase quotas. What the state does with commercial crops, as it does with nearly all rural produce now, is to send teams out to each household and estimate what the output, consumption, and surplus will be. The amount to be purchased is determined on the basis of these findings. Once this data is collected and examined, other items can be planned such as the amount of thread to be spun, the textile output that will result, and how much cotton cloth can be made available to the rural areas. It is very important, then, that the initial surveys to determine the available surplus that may be purchased by the State be correct in order to fulfill other portions of the plan. If incorrect estimates are made; i.e., lower estimates of output allowing peasants to retain excessive quantities of cotton, this would promote the growth of rural capitalist elements who might carry on speculative activities by selling their surplus cotton at a higher price than offered by the State. The Chinese Communists blamed two factors for incorrect assessments of cotton output; the incorrect ideological approach of cadres and their poor survey methods. In the latter case, some cadres, because they were unpopular among the peasants, thought it advisable to make slightly lower estimates of cotton output. In other villages, local cadres wished, by making lower estimates, to keep an extra supply of cotton for themselves or for their relatives and neighbors. In regard to defective working methods, the cadres did not carry out their estimation of output by first propagating Communist policy and mobilizing the masses; they made investigations without the assistance of the peasants and encountered difficulty in deriving the true output.

If inaccurate estimates of peasants' cotton production are made, it will also have a direct effect on peasants activity for mutual aid and cooperation and will hinder the unity between organized and individual peasants. It seems that the difficulties of estimating cotton output were widespread in Shensi and had given rise to peasant resistance of Communist agricultural

policies. Such resistance is revealed in instances where wheat fields have been enlarged at the expense of cotton cultivation. Any failure to carry out the State's purchasing plans correctly then, will "undermine the prestige of the party and of state policies, encourage spontaneous capitalist tendencies among the peasants, and throw State plans into confusion." (Survey of China Mainland Press. No. 971. Supplement, January 19, 1955. "Make Accurate Estimates of Cotton Output and Fix Purchase Quotas.") Since the publication of this article on estimating cotton output and fixing purchase quotas, Peking has encouraged the "three fix policy" which is a measure designed to overcome food and agricultural raw material shortages in order to meet the planned targets set by the State. This policy provides for every administrative body throughout China to fix the production, fix the purchase of output, and fix the marketing of this output for the agricultural sectors of the Chinese economy. Undoubtedly this policy has been rigorously applied to the Northwest. Information is not available, however, as to whether the "three fix policy" has solved the above problems.

4. Kansu

The Communists have made strenuous efforts to restore Kansu to its former prosperity (in the days of the old Silk Road to Europe Kansu was a fertile and prosperous region). The plan to build Lanchow, the capital, into an industrial base safely removed from the seac oast, the opening of the Lanchow-Sinkiang Railway, and the extensive geological surveys for minerals and oil, indicate recent attempts to do this. On March 14, 1956, Deputy K'o Shih-king reported on the province's five year plan. Only information pertaining to agricultural progress and policy will be considered. The total output of grain and cotton in 1956 will be 10,350 million catties (207 million bushels) and 250,000 piculs (16,662 tons) respectively, representing 124.42 per cent (or 6,882,750 tons of grain) and 281.87 per cent of the quotas set for 1957 in the first five year plan. Afforestation will be carried out over an area of 5,300,000 mou (806,061 acres). (Union Research Service, Vol. 3, No. 3, April 10, 1956. p. 40.)

A comparison of Communist output figures with those of the pre-Communist period is difficult. Since we cannot consider wheat only as grain (grain in this case would include corn, barley, millet, etc.) We possess no figures for oil seed bearing crops for 1956. However, for cotton, where Communist resources have been invested to expand cotton production and output, the 1956 figure of 16,662 tons as compared with the 1941 high of 3,712 tons represents around a fourfold increase.

The Chinese Communists predict that the vast areas of wasteland in Kansu will be transformed into cotton fields soon. Experts have been experimenting, it is reported, to select the most

661

661 EXPLOITATION--exercise of their power by holders of political office to further personal goals, whether materialistic, psychological, or ideological; perquisites of office (e.g., exceptional income and material comforts, special sexual or marital privileges, unusual honors or deference); use of office for self-aggrandizement (e.g., exhibitionism, extortion of bribes, protection of vice, acceptance of commissions for services rendered); employment of power to force others to conform to personal ethical or religious convictions; suppression of rivals (e.g., purges); oppression of opponents; nepotism; protection of vested interests; etc. See also:

Organized vice 548
Political machines 667
Religious persecution 798

bureaucraticism and isolated themselves from the masses. Various national minorities adopted narrow nationalism as a means of protection against the ruling race (i.e., the Chinese)" (JMJP October 1, 1950).

The conflict between Han Chinese cadres and national minority cadres, became so serious that in September, 1953, following the promulgation of four documents on the policy towards national minorities, the Government Administration Council and the Central Committee of the Chinese Communist Party issued a joint order to local party committees to investigate the implementation of the nationality policy and to cadres to carry out self-criticism and mutual criticism. The Jen-min jih-pao in its editorial (on October 10, 1953), also inveighed against the ideology of Great Hanism among the Han Chinese cadres and the "ultra-nationalism" of the minority cadres.

C. Cadres Reforms and Purges

The remedy the situation, the Communist high command instituted a series of reindoctrination conferences, the screening of government personnel, and wholesale arrests and purges to improve the quality of the cadres. Hsi Chung-hsün headed the panel of Chinese Communist Party and government speakers who harangued the cadres at mass meetings, held in May, 1950, in August-September, 1951, and in May, 1952, castigating them for bureaucraticism, commandism, incompetence, and corruption. The conferences of cadres were convened upon instructions from Peking. Following the speech of Li Wei-han, director of the Department of United Front Work of the Central Committee of the Chinese Communist Party in April, 1951, urging Communists to take the lead in rallying non-Communists and Han Chinese cadres to check their growing tendency toward "Great Nationality ideas," the Northwest Bureau of the Communist Party, at the conference of the cadres held in August-September, 1951, adopted a program for the reform of the cadres, to be in three stages. Stage one, to begin September 21, was for a two and a half month study of Chinese Communist and Soviet Communist Party documents; stage two, beginning December 6, forty days for the registration, reexamination and selection of cadres on the basis of their qualifications; and stage 3, to begin January 16, 1952, thirty days for the reform of branch organizations. (Ch'un-chung jih-pao, October 8, 1951).

This was the occasion for the screening and dismissal of large numbers of cadres. But more drastic action was still to come. At the fourth plenary session of the Northwest Military and Administrative Council, November 22-29, 1951, the program of party reform was merged into the campaign for production and austerity. Article 5 of this program was "to simplify and retrench the

1: Washington S-4 (no date) 1956 AF13 Northwest China AF13

government structure and to promote work efficiency," and article 6 was "to strictly enforce austerity, to develop the struggle against corruption, waste, and bureaucratism." (NCNA December 2, 1951).

The announcement of the "simplification and retrenchment" program was the signal for the purging of additional thousands of cadres, but this was still only the beginning. A month later, in January, 1952, Hsi Chung-hsün convened a conference of the Production and Austerity Committees in government organs throughout the Northwest, attended by cadres above the rank of deputy chief in the party, the government, and the military district. At this conference, Hsi Chung-hsün made a blistering speech charging that the campaign in the Northwest was not satisfactory, not penetrating, not broad enough, not directed to the main target and did not have concrete results. The leaders were sleeping, he ranted on, and the masses lacked leadership. The middle and minor officials were guilty of corruption, waste and decay. The top officials, he concluded, should assume responsibility and proceed actively in a militant attitude. (NCNA January 10, 1952).

The result of the purges, known as the Three-Anti Movement (anti-graft, anti-waste, and anti-bureaucratism), which was launched throughout China in 1952, and which, with its companion campaign, the Five-Anti Movement directed at businessmen, became a reign of terror unprecedented in magnitude and in horror. Untold thousands of cadres, Communists as well as non-Communists, and officials in the middle and lower grades of government, were arrested, tried and convicted in "people's courts," and executed while thousands more were jailed or condemned to corrective labor camps.

However, terror and persecutions did not accomplish the desired end of bringing the cadres in line. By spring of 1954, the demoralization of the cadres and the friction among them became so serious that a series of conferences was convened by the Northwest Bureau of the Communist Party at Sian. They were convoked upon orders from Peking, following the 7th Plenary Session of the Central Committee of the Communist Party and in pursuance of its "Resolution to strengthen party unity." The speeches of the leaders all indicated that the demoralization of the cadres was worse and the differences and clash of interests between Communist and non-Communist cadres and between Chinese and non-Chinese cadres had increased. The cadres in general were charged with "conceit, departmentalism, dispersionism, exaggeration of seniority, boasting of achievements, concealing of defects, and suppression of criticism." (NCNA April 25, 1954), and the party cadres, in particular, were charged, at a later party conference, with "bourgeoise individualist ideas, conceit, sectarianism, parochialism, dispersionism and egotism." It was stated that "the low level of Marxist-Leninist consciousness

of the cadres had a corroding effect on the party and endangered the party cause." (NCNA July 21, 1954). But, said the leaders, "the main obstacle to party unity in Sinkiang district at present is the survival of the tendency of Great Hanism and the sentiment of local nationalism among a section of the cadres." (NCNA April 25, 1954).

The demoralization of the government personnel in the Northwest was so widespread that in March, 1954, when the residents of thirty-two villages in the Hu-chu county in Chinghai were told that they were free to voice their grievances, they made a total of 3,800 complaints in the hsiang people's representative assembly against the "bureaucratic work style of the leadership cadres." (NCNA March 20, 1954).

V. Political Structure and Political Progress

A. The Northwest Military and Administrative Council and People's Governments

Early in 1950, the Northwest Military and Administrative Council was established at Sian, which also became the location of the Northwest Bureau of the Communist Party and of the headquarters of the Northwest Military District. In the months that followed, provincial and municipal people's governments were also established in the five provinces then comprising the Northwest: Shensi, Kansu, Chinghai, Ninghsia, and Sinkiang.

While the members of the Military and Administrative Council were appointed by the Central People's Government in Peking, the members of the provincial and municipal people's governments were, according to Communist pronouncements, elected by conventions of representatives of all circles and all nationalities. Since no machinery of election was set up and the people were not instructed, these conventions were actually meetings of Communists and fellow travellers who were invited to attend, in the manner non-Communists were invited to attend the Chinese People's Political Consultative Conference in Peking in September, 1949.

Since the officials were those on the panels who were approved by the Communists, there was little for the representatives to do except to endorse the selection, and then to devote the rest of their time to other unrelated items of the agenda. The first conference of the people's representatives of all circles and all nationalities in Sinkiang, which met April 19 to May 10, 1951, was primarily devoted to the purpose of propaganda, the discussion of means of popularizing the Resist-America and Aid-Korea Campaign, the campaign to suppress counter-revolutionaries and the land reform. The meeting of representatives in Chinghai, held in October, 1950, discussed these items on the agenda plus the means of collecting the grain tax.

*668 is evident that loopholes are open everywhere for sudden changes in tactics and policy. Overnight, a most loyal attitude may change into subversion.

*668 578 The Communists themselves admit that tensions exist even within the ranks of the cadres. Not only do Chinese and non-Chinese cadres confront each other with antagonism, but friction also exists between the old veteran cadres and the newly graduated younger men, as well as between party cadres and non-party cadres. Personal jealousy and ambition, mixed with the fear of sudden purges, have hardly diminished over the last few years and will probably continue to hamper the efficiency of the Communist administration. (See Political Dynamics.)

2. Effect of the campaigns

*668 • 661 578 Nation-wide drives and campaigns are felt as strongly in the border regions as in China Proper. The effects of the Three-Anti and the Five-Anti movements were especially violent when they hit the people of the Northwest in 1952. Countless cadres, officials, and ordinary citizens of the merchant class were charged with graft, waste, bureaucraticism, tax evasion, bribery, cheating in government contracts, theft of economic intelligence, and stealing of national property. Many were imprisoned, sent to corrective labor camps, or sentenced to death. It is difficult to gauge, however, to what degree the Communist charges were true, or, on the other hand, how much the policy of terror increased resentment against Communist rule. But it goes without saying that the result of such spiritual and physical control makes for continual intimidation and fear. While it makes concerted opposition impossible, it foments the bitterness and unrest upon which eventual open resistance is based.

*668 578 [701] Undoubtedly, the role of the army in carrying out government policies causes much tenseness. It heightens the intensity of terror involved in the implementation of such campaigns as land reform and the suppression of counter-revolutionaries. (Union Research Service, September 27, 1955.) To compensate for the lack of man-power in agriculture and industry, the Communist government has sent large numbers of "reform workers" to the Northwest. According to one source, a subversive potential has been created as "reform workers and minority peoples whose interests are identical, have banded together to oppose Communist rule," and that "cases of resistance have been more numerous than has been imagined." (Ibid.)

3. Effect of economic measures

*668 179 The Chinese Communist government hopes that the Northwest will eventually play an important part in the industrial growth of the entire country. For the moment they are still concentrating on increasing the agricultural output and developing animal husbandry. The initial pressure on Northwestern farmers to

it under heaven." 361

The common people usually call the city of Lanchow fu, Gao 631
lan hsien, after the title of the sub-prefect or head of the district (hsien) who has his seat there and who chiefly deals with the people. (1) The city lies close to the right bank of the Hwang Ho where

1. This post of Gao lan hsien was supposed to be a very busy one but poorly paid. These officials were therefore usually transferred to a good sinecure after a year. If they knew how to make a good impression on their superiors and relieve them of a great deal of work, they usually got Tsin tschou in the following year. I heard of a mandarin who three times changed over from one of these posts to the other, i.e., in one year he had to supplement his salary, whereas in the next, his earnings were very good. [661]

the latter narrows down for a short distance to a width of only 250 meters. There is no other place up and down the river where there is a similarly favorable spot for crossing over.

Each winter at this place the Yellow River is frozen over for at 133
least one and one-half months, so that even heavily-laden freight 481
wagons can drive across. The opening of this natural bridge which 527
took place toward the end of December was always a great festival occasion and was celebrated with great pomp. First of all the Gao lan hsien as fu mu kwan, i.e., father-mother-mandarin, as the patriarchally-minded Chinese calls his district chief, had to drive over the ice in his gala carriage, accompanied by a large retinue, in order to prove that the ice was safe. On the other hand, in fall and spring when the ice broke up, river traffic was often blocked for days or weeks. One could, perhaps, at the risk of one's life cross the raging stream between the ice floes on a raft of goat-skin bags. But in the spring when the ice had disappeared, the famous pontoon 491
bridge, the afore-mentioned wonder of the world, was set up at the expense of the provincial government. Twenty-two box-shaped wide boats of poplar wood were held together with heavy iron chains and especially with thick hemp ropes, as may be seen on Plate XXXIV. On top of these were laid unfinished planks, but so unevenly that one seldom dared ride across on horseback. Everywhere there were large holes, everywhere the planks rocked and tipped. The wooden railing, too, was more to look at than to lean on. Even Europeans regarded the bridge as a wonder of the world, but only /148/ to

491 wonder why this weak-looking work of man did not cause untold damage annually with the very swift river current. On several of the large iron posts that looked like cannon bores and were rammed into the earth along the bank in order to hold the large ropes and chains of the bridge, I found an inscription which revealed that the bridge had been put together in this manner long ago under the Ming emperors (in the fifth year of Emperor Hung Wu, 1372 A.D.), and was thus an arrangement that was centuries old. The government was obliged to pay out 10,000 taels (30,000 marks) each year to keep it in repair. And the cost of repair was actually said to have consumed a few thousand taels each summer. A hemp rope alone of the kind necessary to give added support during the summer
[661] floods, cost about 1,000 marks in our money. But from the 10,000 taels the officials who in the eyes of the people represented father and mother, must have been able to pocket a tidy little sum. (1)

1. After negotiations lasting one-half year - for a long time the "parents of the people" would not hear of a change - a German firm succeeded in getting a contract to build a narrow iron bridge across the river a year after my arrival. This was built during the years 1908-1911.

712 Thus Lanchow fu is a bridgehead, a fortress, which defends a convenient Hwang Ho crossing. From time immemorial the place was regarded as important and was occupied by troops. Long before the beginning of our era, during the Ts'in and Han dynasties, we find mention of a fortified encampment here. (2) The Yellow

2. In the feudal age in China, during the Tschou dynasty (1122-255 B.C.) the boundary of present-day Lanchow fu bordered on the territory of the Hsi Kiang (Chinese), who, one suspects, were Tibetan nomads. At times the place was also entirely inundated with Hsi Kiang. At the time of the Ts'in dynasty (255-206 B.C.) and of the Han (206 B.C. -220 A.D.) the district became more and more Chinese. But the chief city of the district lay somewhat farther south. The present-day settlement was begun by Emperor Wen ti, the founder of the Sui dynasty (589-605). In the year 764 during the Tang dynasty everything was again lost to the Tibetans and remained in their hands, with some interruptions, until, after the year 1000, the Hsi Hsia kingdom

501 dozen whole yak skins are blown up and joined to make rafts and carry wool and other goods that come down from Tibet on camels or small conveyances farther down the river. In 1907 there were eight larger shops where Russian goods of the so-called Tschan tou hui hui - as the Sarts and Turkistan-Turks are called in Kansu - were traded. (1)

1. The number of Russian shops was on the increase. Tschan tou hui hui literally means "Mohammedans with bound heads." This designation comes from the fact that the Turkistan Turks always appear before the Chinese in turbans.

511 As long as I was in the province of Kansu the inhabitants used
651 astonishingly few foreign commodities compared to those of other provinces. The population of Kansu is particularly backward. To be sure, the way to the coast is very far and inconvenient. Besides that, the provincial government introduced a trade monopoly in 1907 on glass, bronze and lacquer goods, and Kansu in any case is regarded as the poorest province of the middle kingdom. Its annual balance is said to be so deficient that for many years other provinces have had to assume responsibility for the deficit. The many soldiers which seem to be necessary for the constantly recurring uprisings are said to be to blame for this state of affairs. The chief reason is, of course, the destruction and impoverishment, a result of the wars. Nor was stealing as prevalent in other provinces as here; the emperor was too far away. Payment of direct taxes, of land tax, is largely in kind. The most ancient registers of landed property are still used to control the levying of these taxes, whereas the farmer himself is taxed on the basis of the amount of land he
[661] has at the moment. In this way the agents of the yamen above all amass great riches.

563 When I was in Lanchow fu there were few Europeans living there and these were missionaries. My old friend, the Belgian Father Van Dyk lived a quite lonely life in his mission and therefore greeted me particularly cordially. I moved into a camel hostelry outside the city quite near the Catholic mission, so that we could get together for an evening of conversation now and then and no city gates separated us, which were here irrevocably locked at twilight and divided up Lanchow fu and its suburbs into several separate parts. (Plate XXXIII). Mohammedans are not permitted to live here in the center of the city, they may only keep

have only one-story houses with spacious yards. 361

According to my observations, Hsining fu is 2,300 meters above sea level, while Hedin estimated only 2,265 meters, Grenard 2,250 meters and Filchner, on the other hand, by far the highest figure, namely, 2,380 meters. It lies in the middle of a flat alluvial valley, two kilometers wide, the floor of which can be irrigated, which fact determines the relative wealth of the inhabitants and above all the great cheapness of food supplies. The spot where the city stands 361
has again, of course, been very cleverly selected from a strategic 487
and economic point of view, namely, just below the point from which two broad-bottomed valleys, each containing an important road, branch off to the north and south (2) from the larger Hsining

2. The southern road leads to the Gum bum monastery and the city of Kue de ting; the northern one to Dai tung and farther toward Kanchow fu and the old Yümen, the gate toward Turkistan.

Ho Valley running from west to east. The mountains which enclose 133
these valleys are covered with loess and consist of the horizontal, red sandstone and clay strata which we find today under loess in such extensive areas of Northwest China, and which I have so often had occasion to mention. These reddish mountains rise up as much as 300 and 400 meters above the valley floor and are hopelessly bare. The summer rains are scarcely able to alter their faded color. Not even a tree anywhere. Even the willows and poplars around the villages are scarce. One very seldom sees large old trees anywhere in Kansu; they were cut down and burned during the many rebellions when the fetters of reason and right of ownership were loosened.

There is a great deal of rain in the region and many natural 631
springs. It is a little granery. Grain is sent from here to Lanchow 661
fu and many other places. The district also has a large untouched store of minerals. It is counted among the good sinecures. The best picture of its wealth is probably given by the annual income of the lowest civil mandarin, the Hsien, which amounts to between 20,000 and 30,000 taels (one tael is more than three marks, for the Hsining taels are very large). His regular income is, of course, as always in China, only 60 taels, the "rest" are perquisites. /173/ Taxes and - so it seems - lands which were formerly not surveyed but have now been reclaimed by the Chinese, and above all sentences in the many litigations make up the large sums.

5: Tafel--284 T-3 (1905-1908) 1914 AJ1 Tibet
New. China AF13

Here, as in Lanchow fu, the sum set aside since ancient times by the imperial government for bridge repairs has played a certain part in the income of the hsien of Hsining. The city lies in the far west of China proper. And China represents the world to its inhabitants as well as its rulers. Therefore, outside the west gate of Hsining - as every child in the city knew - lay the tien bien yüe ya kiao, that is, the bridge which officially connects the earth with the moon. Now, no one can blame the holders of the honorable post of hsien for annually pocketing the monies with which, by royal decree, they are supposed to keep this important bridge in repair. But I was shown at least one stone which is supposed to have at one time been the beginning of the bridge. From here the way leads to the Hsi tien, the "western heaven," as Tibet is referred to by many Buddhists.

Another peculiarity of the city of Hsining is the enormous number of ponies which its inhabitants keep. There are surely several thousand of them. Almost everyone has his pony and everyone setting out on a journey, every cobbler or apprentice, rides horseback. Feed is cheap and the price of ponies not high. And if one is not too particular, one can buy up quite a number of ponies in a rather short time. In this respect Hsining is a favorable starting point for a journey into Tibet, and that is why I again looked it up. Nevertheless, it took me a whole week to buy three good ponies. During this time I had ten Chinese women at my inn sew a large servants' tent for me. Carpenters, saddlers, shoemakers, smiths were engaged to complete my equipment. There was nothing in stock, everything had to be ordered. I had to bargain endlessly for every single object. For every button or piece of rope, for every little thing ten times its value was boldly demanded, laboriously I was obliged to bargain it down to a normal price, and if a day later I bought a duplicate, the tiresome haggling began again. Besides, there were so many things I wanted which I could not get. For instance, I had great trouble in that big city finding three pieces of wood which could be used as tent poles. The region has extremely little wood. After we had spent days looking in vain for a piece that would serve as a ridge pole, the son of the general finally took what I needed out of the arsenal and gave it to me.

Anyone wishing to travel in China should first of all tuck patience into his traveling bag. A Chinese must never be allowed to notice that you are in a hurry for a thing. In Hsining fu, also, all trade, whether in the open market or in shops, is carried on

665

665 POLITICAL PARTIES--organization for the purpose of acquiring and retaining political power; political factions; organized political parties (e.g., number, composition, leadership, objectives); party organization (e.g., national, regional, and local committees); methods of recruiting and rewarding members (e.g., spoils system); nomination procedure (e.g., caucuses, primaries, conventions, slates); special organization during electoral campaigns; integration of political parties with the structure of the state and its subdivisions; etc.

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

but the products are wretched. In any case all these enterprises suffer from the blight of Chinese official management. Lanchou is also at a great disadvantage in this respect owing to the immense difficulties involved in transporting foreign machinery and all kinds of foreign goods across the many hundreds of miles of intervening mountains from the coast. The foreign resident can import a case of beer, drink the contents, and then sell the bottles for more than the original cost of the beer; but this does not represent a new method of getting rich quick, as the cost of transport is likely to be greatly in excess of the value of either the beer or the bottles. There is, however, one really flourishing native industry in Lanchou, independent of foreign machinery, and that is the cultivation and manufacture of water pipe tobacco, which is exported to all parts of China.

The time of our visit to Lanchou coincided with the period of Yuan Shih-k'ai's power, and the Governor was one of the latter's Northern Generals. He was an excellent representative of the type of Northern soldier, and was universally acknowledged to be one of the best rulers Kansu has ever enjoyed. Owing to the geographical isolation of the province and the conservative nature of its Mahomedan population, the rebellion of 1916 had but little effect locally, and the Governor maintained his position after the fall and death of Yuan Shih-k'ai; and had we again visited Lanchou two years later we should have found him still ruling only under a different title. After the Revolution the Governors of provinces were styled Tutu[1]; Yuan Shih-k'ai abolished this name with its republican associations, and revived the old title of Chiangchün[2]; after the compromise which followed the rebellion and Yuan Shih-k'ai's death, the title of Governor was also compromised in true Chinese style into Tuchün[3]. The Governor was a native of Hofei Hsien in Anhui, and consequently not a few civil and military officials throughout the province at the time of our visit wrote Hofei on their cards. It is extraordinary what a number of prominent Chinese in recent years have been natives of this obscure little district in Anhui, ever since

[1] Literally "General Manager," i.e. Governor.
[2] Literally "Army Leader," i.e. Marshal.
[3] Literally "Army Manager," i.e. Military Governor.

the days of the great Li Hung-ch'ang, himself a native of that place. All these officials are, of course, more or less members of the Anhui military party, whose influence in the government of the country has been so great in recent years[1].

The foreign community of Lanchou at the time of our visit consisted of the China Inland Mission, a Catholic priest, and the British Postmaster, who, like his colleague in Hsian Fu, and indeed the foreign postal officials throughout the country, is doing splendid work for the Chinese. The efficiency of the Chinese Postal Service, under a French Director-General in Peking working with a staff of French, British, and other nationals, is truly remarkable, when one takes into consideration the many difficulties there are to contend with. Especially has this been the case during the constant rebellions and civil wars of the past few years, in spite of which steady progress has been made. On the whole the warring factions, whether government troops, revolutionaries, rebels, or brigands, respect the C.P.O. in a remarkable manner, due apparently to their genuine admiration for the one really sound institution in the interior; and the postal couriers are often able to pass backwards and forwards through districts where no other Chinese dare venture. Occasionally, but not often considering the numbers carried, a mail is lost through the action of brigands.

There are not a great many missionaries in Kansu compared to some of the other provinces, at the time we were there only about ten or a dozen stations altogether, and only one doctor. It would probably surprise many people not well acquainted with missionary work in China to find how few ordained clergymen there are amongst the ranks of the Protestant missionaries; I do not think we met any in Kansu. This puzzles the Catholics very much with their strict system of training. Of course there is no particular reason why a missionary should be a clergyman, though the uninitiated are apt to look upon him as such; except that ordained clergymen are usually well-read men of superior

[1] This influence has since steadily increased until in 1920 a group of rival Northern Generals challenged the Anhui military party (on the usual pretext of defending democratic principles) and overthrew them in a series of battles round Peking in the summer of that year.

666

666 ELECTIONS--voting; informal methods of selecting public officials; organized electoral systems (e.g., election districts, registration of voters, requirements for nomination, polling places, balloting, precautions against fraud); election campaigns (e.g., fund raising, campaign platforms, speaking tours, use of publicity and propaganda); voting behavior and its determinants; electoral intimidation and fraud; methods of minority control (e.g., gerrymandering, rotten-borough system, poll taxes); etc. See also:

Punishment of electoral fraud 687

S
668 reform movement encountered in Sinkiang. The attempts at forced
423 cooperation resulted in many hard feelings and in violations of the
578 principles set forth by the government. Examples were cited of
474 "middle farmers" supplying carts or other tools, but not participating in the actual labor. Village cadres were unwilling to work on the cooperative farms lest their private interests suffer. Considerable difficulties were experienced in finding people who would accept responsibility. A partial solution was sought in sending more professional party workers to aid the cadres.

N
#668 Similar reports are available from other parts of the North-
423 west. From these reports the following trends can be gathered:
474 (1) In the program of cooperativization the policy was to exclude not only the landlords but also the rich farmers. Since those who
S
668 were not in the cooperatives would suffer social and economic os-
423 tracisim, the threat to all individual farmers kept out of the co-
474 operatives was great.
(2) The experience of those who did join the cooperative groups, however, was not happy. Their hard work often was not properly rewarded. It was difficult to keep the record of credits straight. This was the reason why many cooperatives collapsed.
(3) However, the average farmer, including the party cadre, dreamed of becoming a rich farmer and private businessman.

Against this background one can understand the significance of Mao Tse-tung's drive for one million cooperatives in 1955. According to Mao's plan, by the spring of 1958 half of the agricultural population must be organized into cooperatives. In other words, by that time, half of the farmers in Northwest China would no longer be working on their own farms.

N
#668 In the field of commerce and industry, the 3-anti and 5-anti
492 movements were the prelude to the program which calls for the total elimination of private enterprise.
S
668
492
N
#668 As described above, the political rights in the Chinese Soviet days followed the conventional Communist Party line. But during
• 666 the Second World War, the Chinese Communists had advocated their democratic government and democratic elections in the border regions. Their procedure of a secret ballot included the following practices: "Each of the candidates' names is written on a bowl. The voter drops a bean or pea in the bowl bearing the name of his choice. If his election "unit" is entitled to more than one representative, he is given the proper number of beans. If a considerable number of the voters cannot read, the candidates are lined up, each carrying a well-calanced bowl or basket on his back. The voter drops his bean or beans into the bowl or bowls of his favorite candidate or candidates. The bowl is carried on the back to insure secrecy, so that no candidate knows who elects whom." (Hsu Yung Ying: A Survey of Shensi-Kansu-Ninghsia Border Region, Part I, p. 59.)

N
*668 Communists, it was claimed, would occupy only one-third of the
• 666 total membership of any administrative organ of the government of any popular organization elected in this way. One-third of the members would go to the Nationalists while the other third would be reserved for non-party people. They called this the 3-3 system. (Hsu Yung Ying: A Survey of Shensi-Kansu-Ninghsia Border Region, Part I, p. 74). The system worked beautifully. The Communists activists together with their "non-party" following were always assured of a comfortable majority.

V. Pledges and Practices Regarding Political Rights

A. Elections

C
668 After the take-over, the Common Program of 1949 declared:
642 "The state power of the People's Republic of China belongs to the people. The people's congresses and people's governments of all levels are the organs for the exercise of state power by the people. The people's congresses of all levels shall be popularly elected by universal franchise. The people's congresses of all levels shall elect the people's governments of their respective levels..."

C
668 But before a general election was held, the People's Political
666 Consultative Conference, which was an appointed body, acted as the All-China People's Congress. (Article 13). In the local districts, the appointed All-Circles Representative Conferences acted as the local People's Congress. (Article 14).

On February 28, 1951, Liu Shao-ch'i reported on the way in which the People's Congress of Peking was elected. He said: "The manner of electing the representatives differed according to the situation. In State Enterprises and schools of higher education the voters gathered in their productive or school units to have a direct election. For the farmers in the countryside, the workers, the businessmen, the youth, the women and the districts, the representatives were elected by 'the representatives of the voters.' With the only exception of the schools where people were experienced and literate, all the units elected representatives on a candidate list produced in the meeting by raising their hands. In schools, the elected with secret ballot. I think this is absolutely accurate and necessary... I think not only the People's Congress of Peking...but all the other places... shall follow the experience of Peking to elect their congresses in the similar way ...

"Whenever we mention election, people often think of 'universal, equal, direct and secret ballot.' This old slogan undoubtedly served its propaganda purpose under the reactionary, dictatorial Chiang Kai-shek's regime... But if we request to realize this slogan under today's New Democratic regime, it is not yet very suitable to the reality. Therefore we cannot wholly adopt it." (Liu Shao-ch'i:

C
668 By this law, the key elections are those below the county level.
671 These elections were generally open elections by raising of hands
666 in public. Only under special conditions were secret ballots allowed.

Furthermore, in spite of article 4, which promised equal rights of election to different groups of people, article 5 disqualified everyone who might vote in opposition.

The control of elections was tightened by article 8. As all campaign expenses are dispersed by the State Treasury, the Communists can easily make or break any candidate.

C
668 In the new Constitution of 1954, there are at least ten articles,
642 i.e., 23, 24, 27, 38, 39, 44, 56, 61, 86, referring to the right to
666 vote or right to stand for election. There is no basic change from the situation analyzed above.

N
C. Political Rights in Practice

631 The following news items trace the practice of political rights
*668 in the Northwest: "On the basis of the universal convocation of People's Representatives' Conferences of all circles in municipalities and counties throughout the country, 20 provinces have successfully convened their first Provincial People's Representatives' Conference of all circles. These provinces and districts are...Shensi, Kansu, Ninghsia, Chinghai...

N
631 "Of these, the People's Representatives' Conferences of all
*668 circles of the first 16 provinces in the above list have successfully
• 666 elected their respective Provincial People's Government Committees. The People's Representatives' Conferences of various provinces and administrative districts have further elected and set up consultative committees to assist the government in carrying out the resolutions of the conference after it adjourns." (NCNA, Peking, December 20, 1950).

N
631 "Since last year, the provincial and municipal People's Gov-
*668 ernments in the Northwest region have attached importance to People's Representative Conferences. Except for some pastoral districts of Chinghai, Ninghsia, and Sinkiang which still do not possess conditions for holding People's Representative Conferences, all counties and municipalities in the Northwest have held People's Representative Conferences while those of over 80 counties and municipalities exercise the functions and power of People's Congresses. But there are still a number of responsible officials of counties and municipalities who do not sufficiently understand that People's Representative Conferences and People's Congresses represent the basic system of our state and who do not convene People's Representative Conferences according to the system." (NCNA, Sian, July 15, 1952)

S
631 "During the three years from 1949 to 1952, twice the Provin-
668 cial Conference of Representatives of All Nationalities and All Groups of the People was held in Sinkiang Province. In each of

S
631 the 78 counties, 1 municipality, 1 central district in Sinkiang, at
668 least three times, and up to nine times...these conferences have been held. In Tihua Municipality and Ch'ien-tse County, the con-
S
[666] ference has already acted as the People's Congress. It elected the mayor or the head of the county and the Council members..." (Burhan: "The great achievements during the three years of people's Sinkiang" in Sinkiang Jih-pao, January 1, 1953).

S "In October, 1953, a general election was held..." (Burhan:
668 "The work report of the past six years of the Sinkiang Provincial
666 People's Government," a report at the 2nd meeting of the 1st session of the Provincial People's Congress, in Hsin-hua yüeh-pao, 1955, No. 11, p. 30).

N This general election mentioned by the Governor of Sinkiang,
#668 Burhan, was one part of the election held all over the country. It
666 was carried out according to the Electoral Law of 1953. The
S nation-wide election was not completed until September, 1954, just
668 in time to meet for voting on the new Constitution. The meetings
666 of the leading local People's Congresses in the Northwest were held on the following dates: (NCNA, August 24, 1954)

Unit	Beginning (1954)	End (1954)	Days of Meeting	Deputies Elected to the National People's Congress
Sian Municipality	July 14	July 17	4	8
Sinkiang Province	July 21	July 31	11	21
Chinghai Province	August 4	August 15	12	9
Shensi Province	August 4	August 12	8	19
Kansu Province	August 16	August 20	5	25

The real meaning of this kind of election was well illustrated in a deputy's confession: "I have never thought of being elected as a deputy to the National People's Congress. Some of my friends ran over the other day to congratulate me, saying, 'Do you know that? You have already received the weighty trust of the people of the whole nation. You are a deputy!'

"When I read my name in the People's Daily I did not know whether I was happy or flurried. My eyes became moist. I was grateful as well as ashamed. I felt that I could hardly catch my breath." (Ts'ao Yü, "I must do my job well as a deputy to the National People's Congress" in Hsin-kuan-ch'a, 1954, No. 18, September 16, p. 3).

VI. The Rights of the Minorities

C
668 A. Constitutional Rights
641 In the Common Program of 1949, chapter VI defined the Com-
642 munists' Nationality Policy. In this chapter, it said:
Article 50: All nationalities within the boundaries of the People's Republic of China are equal....

STRUCTURE OF GOVERNMENT

I. The Government of Administrative Regions

A. Basis of Regions

*175 *668 669

The turning point of the Chinese Communists' military campaign in northwest China was on April 22, 1948, when they retook Yenan. With the deteriorating general military situation, the Nationalists rapidly lost the Northwest. In December, 1949, the Communist conquest of the area was basically complete. Just as in other areas, the army was their main strength, essential in maintaining peace and order. Thus the local political structures which they set up were closely knit to the military forces, an inheritance from the civil war. Recognizing this fact, the central government of the People's Republic decided to divide the nation into several large regions, roughly corresponding to the assigned areas of each field army. It appointed the commanders of the various field armies to manage the civil administrations of the corresponding regions. The Northwest Region included the municipality of Sian, directly under the central authority, and five provinces: Shensi, Kansu, Ninghsia, Chinghai, and Sinkiang.

*175 *668 631 701

B. Organizational Regulations

1. Military and administrative council

On December 16, 1949, the Government Administrative Council passed the organizational regulations of the People's Government Committee on Administrative Regions. According to these regulations, a Military and Administrative Committee was to be appointed by the Central Government in each administrative region to maintain peace and order during the first stage of the Communist conquest.

a. composition

P'eng Te-huai, the commander of the First Field Army, was appointed Chairman of the Northwest Military and Administrative Council, which had two vice-chairmen and forty-one members. The chairman and vice-chairmen were Chinese, and the members included four Moslems, two Uighurs, one Tibetan, one Mongol, and thirty-three Chinese. One of the Chinese was a woman.

b. expiation

In the regulations it was also stated that the Military and Administrative Councils were to be abolished as soon as the following conditions were fulfilled:

(1) when the military action was over;

(2) when land reform was completed;

(3) when the people of each region were well organized and a general election had been called. Then the People's Congresses of each administration region, elected by popular vote, were to elect

[666]

*175
*668
631
701
[666]

a People's Government Council of the administrative region to take the place of the Military and Administrative Council.

2. Northwest administrative council

a. composition

Apparently this anticipated election never took place in Northwest China under the Northwest Military and Administrative Council. Since November 15, 1952, when the Central People's Government ordered the reorganization of the Council into the Northwest Administrative Council, it has been known as the Northwest People's Government Council.

*175
*668
631

b. functions

Article 3 of the same regulations indicated that the People's Government Council of the administrative region (the Military and Administrative Council) was to be a part of the regular local government system, ranking between the Central Government and the provinces. It represented the Government Administration Council in guiding the provincial and county governments in administrative work.

This was well defined in Article 4, which gave the detailed functions of the Council. The Council was to be the organ for transferring the orders of the central government to the provincial and other lower local governments. It made suggestions to the central government concerning personnel, law, and financial arrangements for the region. It also coordinated and supervised administrative work for the central government.

These regulations indicated that the Communist Government meant to make the administrative regions and their administrative structures a part of their regular, permanent government system. This was quite a change from the former system, which emphasized the position of the provinces.

c. structure

*175
*668
631
649

After the Communists organized the Military and Administrative Councils of the administrative regions into offices with real power, their structure became large, and even bulky. In 1952, at the peak of its power, the Northwest Military and Administrative Council included the following offices;

Administrative Office;
Committee on Political and Legal Affairs;
Committee on Financial and Economic Affairs;
Committee on Cultural and Educational Affairs;
Committee on People's Control
Committee on Land Reform;
Commission of Nationalities Affairs;
Department of Personnel;
Department of Civil Administration;
Department of Public Safety;
Department of Justice;

*175 *668 635 they were to forward orders from above to the lower level governments; to make decisions or suggestions concerning the personnel, laws, and financial arrangeme nts of the province; and to coordinate and supervise work in the area. There were, however, some new points. They were required "to execute the decisions of the provincial people's congresses."

a. limitations on authority

The significance of this requirement was lessened by the qualification: "provided that these decisions have been approved by the Government Administrative Council or the Military and Administrative Council of the administrative regions." Thus, nothing could be done on the provincial level that was not acceptable to the officials of higher levels. Second, the provincial councils were to [632] [634] "annul or revise the decisions and orders of the municipal and county people's government councils, or the municipal and county people's congresses under its jurisdiction, whenever these decisions and orders are contradictory to those of the higher level people's government." The higher government officials could over-ride the local interests.

b. increased authority

Under this system, the provincial governments of Shensi, Kansu, Ninghsia, Chinghai, and Sinkiang actually were branch offices of the Northwest Military and Administrative Council, until the power of the latter was weakened in 1952. With the abolition of the Northwest Military and Administrative Council in June, 1954, the traditional importance and position of the provincial governments was fully restored. However, primarily they still are instruments of the central government.

B. People's Congress and People's Councils

631 The day after the First National People's Congress passed the *668 new Chinese Communist Constitution, on September 21, 1954, the [691] same congress passed the organic law for local governments. Taken at face value, this law gives more power to the local governments as well as to the people. From the town level up to the province, each is supposed to have a people's congress and a people's council, the congress representing the people, and the council acting as the executive body. Their position and interrelation can be seen in the following excerpts from the law:

1. Role of peoples' congress

Local people's congresses at all levels are the organs of government authority in their respective localities. (The Organic Law of People's Congresses and People's Councils at all Local levels in Chinese Peoples' Republic, p. 1, Article 3.)

a. election of deputies

• [666] Deputies to the people's congresses of provinces, municipalities directly under the central authority, counties, and municipalities divided into districts are elected by the people's congresses

of the next lower level; deputies to the people's congresses of municipalities not divided into districts, municipal districts, hsiang, nationality hsiang, and towns are directly elected by the voters. The minority groups shall have guaranteed quotas in these congresses. Minority nationals in administrative areas shall have an appropriate number of deputies to the people's congresses of their administrative areas.

Thus, the people theoretically have political authority and the people's congresses are the organs for practicing this authority. These congresses on the lower levels are elected directly by the voters, while those on the higher levels are elected by the people's congresses of the next lowest level. For instance, the voters elect the people's congresses of the various towns. Then the People's Congresses of the towns elect deputies to the people's congresses of the counties, and so on. The provincial People's Congresses are elected for four years, while the other local congresses are elected for two years.

b. functions of congress

As listed by law the functions of the people's congresses are numerous. In brief, the congresses are to defend the rights of the people and also to assure the support of the people. They approve local budgets and financial accounts; draw up plans for local economic and cultural development; elect and recall the people's councils at their own level; elect the deputies to the people's congresses at the next highest level; listen to and examine the working reports of the people's councils at their own level; and revise or annul inappropriate decisions and orders issued by these people's councils.

These functions and powers could make the local people's congresses into real "watch dogs" for the people, but for several hidden handicaps. One of these is to be found in this same Organic Law, Article 6, which states that a people's congress can "revise or annul inappropriate decisions of the people's congresses at the next lower level." In this way power is retained by the upper level.

2. Role of people's councils

The people's councils have a dual role: they are responsible to the people's congresses at their corresponding levels, and they are responsible to the governments above their own levels. Although they are supposed to be the people's instruments of self-government, they are also agencies of the central government and must obey the State Council. Theoretically, this double responsibility could put the local governments in an embarrassing dilemma, were the local congresses to differ with the central government on policy. In practice, however, it is not possible, because of the tight party control at every level and since the representatives are hand-picked by the party.

a. composition

In addition to the council members, a local People's Council

Ch'en Shih-yü deputy mayors. All were appointed by the central People's Government. After the abolition of the administrative region in 1954, the Communist Government made these major changes in Northwest China:

(1) Sian was changed from a municipality under central authority to a municipality under the authority of Shensi province.

(2) Ninghsia was made part of Kansu on September 27, 1954.

(3) Sinkiang province was made the Sinkiang Uighur autonomous region on October 1, 1955.

Thus, in 1955 the administrative units of Northwest China were quite different from those of 1950. The units under Shensi, Kansu, and Chinghai are summarized in Table 7. The units under Sinkiang in early 1955 are shown in Table 8, while those after October 1, 1955, are shown in Table 9.

After the promulgation of the Chinese Communist constitution in 1954, elections were held and People's Congresses and People's Councils were organized. There were some personnel changes, but the general structure and control of the government remained about the same.

III. Government of the Autonomous Districts

A. Earlier Systems

In the past, although the Chinese government gave little publicity to them, autonomous governments existed among the minorities in Northwest China. As late as the 1880's, when the proposal to transform Sinkiang into a regular province was presented to the Court, it met with strong opposition on the grounds that the minorities who differed from the Chinese in tradition, language, religion, and customs would be difficult to govern. Before then, the minorities had been governed by their own leaders. Even after the area became a province, the life of the minorities was not greatly disturbed.

B. The Communist System

The Communists have a definite program for changing the social and economic order. Knowing that cooperation is necessary to attain their aims, the Communists intend to lessen the friction between racial groups under their regime. On the surface, they grant autonomous governments to the minorities; in fact, they control them from within through hand-picked Party members. So far there is no evidence to show that the structure of these autonomous local governments is essentially different from that of the regular local governments. The government of the Sinkiang Uighur Autonomous Region, as well as of the local governments under it, superficially is the same as under the former Sinkiang province. A complete list of all autonomous districts in Northwest China,

Even with the advent of the Chinese Communists, there was little fundamental change in the composition of the panel of men in the political arena of the Northwest. The men who acquiesced to the Communists and were retained in office as well as those who opposed the Communists were the same men who had been in the political limelight in the past. Some of the men sent out by the Communist Central People's Government were the same men who had been sent out in the past by the Nationalists. The names of local Communist officials appeared to be new, but actually many of them had been in the Northwest for a long time, working in the underground. The old and the new, the local and the Peking-appointed, were all worked into the Administrative Council of the Northwest and the provincial governments. The general election of 1954 resulted in a reshuffle of the political figures of the Northwest, but not in a basic change in the composition.

The situation in the northwestern provinces was in a state of flux in 1949 prior to the actual occupation by the Chinese Communists who were then in the process of conquering all of mainland China. In May, Sian was occupied by Chinese Communist troops, who were posed for their westward advance to gain control of Ninghsia, Chinghai (both of which soon fell to Communist arms), and Sinkiang.

Out in the west, Sinkiang was divided into two political regimes: the adherents of the provincial government and the insurrectionists in Ili. At Urumchi was the headquarters of the Chinese Nationalist Army, under the command of T'ao Chih-yüeh, and the provincial government headed by Burkhan Shahidi, a Russianized Uighur, who was then middle-of-the-road in politics and who represented the large Uighur population. With him was Mehmet Emin Bughra, who had played a part in the establishment of the East Turkestan Republic of 1933 (at Kashgar) as well as in the East Turkestan Republic of 1944 (at Kulja in Ili). Politically, they cooperated with the Nationalist Government and they sought only a modicum of liberties, such as the establishment of a government of their own choosing and the preservation of their languages, culture and traditions. They were thus a less militantly revolutionary group than the Ili faction. In September, 1949, with the defeat of the Nationalists on the mainland, with the Chinese Communist Army preparing to march into Sinkiang, and with the persuasion of such men as Chang Chih-shung, the provincial government under Burkhan and the Nationalist forces under T'ao Chih-yüeh formally submitted to the Communists.

The revolutionary movement centered around Kulja was, since 1948, quiescent, rendered impotent by internal dissensions and the defection of some of its leaders, including Osman Batur. To recoup their fortunes, Akhmejan Kasimi and his lieutenant, Saifuddin, organized the Sinkiang League for the Defense of Peace

of the cadres had a corroding effect on the party and endangered the party cause." (NCNA July 21, 1954). But, said the leaders, "the main obstacle to party unity in Sinkiang district at present is the survival of the tendency of Great Hanism and the sentiment of local nationalism among a section of the cadres." (NCNA April 25, 1954).

The demoralization of the government personnel in the Northwest was so widespread that in March, 1954, when the residents of thirty-two villages in the Hu-chu county in Chinghai were told that they were free to voice their grievances, they made a total of 3,800 complaints in the hsiang people's representative assembly against the "bureaucratic work style of the leadership cadres." (NCNA March 2[illegible] 1954).

V. Political Structure and Political Progress

A. The Northwest Military and Administrative Council and People's Governments

Early in 1950, the Northwest Military and Administrative Council was established at Sian, which also became the location of the Northwest Bureau of the Communist Party and of the headquarters of the Northwest Military District. In the months that followed, provincial and municipal people's governments were also established in the five provinces then comprising the Northwest: Shensi, Kansu, Chinghai, Ninghsia, and Sinkiang.

While the members of the Military and Administrative Council were appointed by the Central People's Government in Peking, the members of the provincial and municipal people's governments were, according to Communist pronouncements, elected by conventions of representatives of all circles and all nationalities. Since no machinery of election was set up and the people were not instructed, these conventions were actually meetings of Communists and fellow travellers who were invited to attend, in the manner non-Communists were invited to attend the Chinese People's Political Consultative Conference in Peking in September, 1949.

Since the officials were those on the panels who were approved by the Communists, there was little for the representatives to do except to endorse the selection, and then to devote the rest of their time to other unrelated items of the agenda. The first conference of the people's representatives of all circles and all nationalities in Sinkiang, which met April 19 to May 10, 1951, was primarily devoted to the purpose of propaganda, the discussion of means of popularizing the Resist-America and Aid-Korea Campaign, the campaign to suppress counter-revolutionaries and the land reform. The meeting of representatives in Chinghai, held in October, 1950, discussed these items on the agenda plus the means of collecting the grain tax.

Chinese-owned companies. Although Soviet and Eastern European experts were retained as salaried technicians, the move was made to appear that Soviet Russia was withdrawing from Sinkiang in favor of Communist China.

In addition to these conditions, there was a whole plethora of other factors which made the Communist authorities reluctant to grant regional autonomy to the people of Sinkiang. However, as they had in repeated pronouncements promised autonomy to the non-Chinese inhabitants of this province, they found that they could not procrastinate any longer, and in the late summer of 1953 they finally agreed to the establishment of the first autonomous people's governments in Sinkiang, but on an experimental basis. The three experimental autonomous governments were: one for the Sibo on the hsiang level, one for the Chinese Moslems on the county level, and one for the Mongols on the district (ch'ü)level. In December, 1953, Saifuddin urged "that a good job must be done to guarantee that the various national autonomies in the province may be established." (Ch'ün-chung jih-pao, January 6, 1954).

The experiments proved successful and by May, 1954, the green light was given for the establishment of autonomous people's governments in Sinkiang for other concentrations of national minorities in the province. There were thirty-three autonomous areas below the level of district in Sinkiang in August (NCNA, August 7, 1954). However, in proportion to its population of non-Chinese people, Sinkiang was still behind. During the same period, the number of autonomous areas in Kansu had increased to 86 (NCNA April 9, 1955).

C. The General Election of 1953-54

In 1953, the people of Northwest China, as elsewhere in China, were for the first time permitted to cast their votes for the election of their representatives. In February, the Central People's Government in Peking passed the Election Law which provided for suffrage for adults over 18 years of age with the exclusion of all those whom the Communist authorities had classified as landlords, counter-revolutionaries, and lunatics and those who were deprived of the right to vote or to run for election. The certified voters vote only once, at the lowest or basic levels, and by a show of hands (art. 55). The system is pyramidal. The representatives chosen by the people at the basic election elect their representatives to people's congresses of a higher level, and these in turn elect representatives for peoples of still higher level, and so on up, through the levels of county and district people's congresses to municipal and provincial congresses, and through the level of municipal and provincial congresses to the National People's Congress. Only at high levels was the balloting secret. The candidates running for election were Communist or men approved by the

Communists. On paper, the people were permitted to nominate candidates from the floor, but such practices were discouraged. "Through the method of small group discussions and appraisals now adopted, . . individual nomination will gradually be standardized and consequently should not be subject to any restrictions." (Wang Shui, "How to nominate candidates for election" JMJP June 11, 1953). Thus the electoral procedure followed the Soviet practice of presenting single lists of candidates. The nominees were shifted by means of a process of "consultation and agreement" and after the list of names were agreed upon, the voters go through the motion of approving it.

This manner of voting bears close resemblance to the system in the USSR and is a far cry from the system adopted by the Chinese Communists in the Shensi-Kansu-Ninghsia Border Region sixteen years before. (See Table 5).

In preparation for the election, large numbers of cadres were given training to qualify them to serve as chairmen of basic level election committees and to guide, conduct and supervise the elections. The number who were assigned was one cadre for every 2,000 persons and one technical cadre for every 500 persons. In the months before the election, the people were screened during the process of census-taking, and the qualified ones were registered. They were subjected to a barrage of propaganda and indoctrination in the form of meetings, forums, discussion groups, and through the media of books, pamphlets, films, radio broadcasts, and exhibitions. Mock elections were held where the cadres taught the voters how to conduct themselves, how to discuss the list of candidates and how to cast their ballots. Prior to the real election, experimental elections were held in a number of selected locations. These were the straw votes to give the Communist authorities an idea as to how well the cadres and propagandists have indoctrinated the people, how well the machinery operated, and what were the reactions of the people.

In Shensi, the experimental elections were held during the months from May to October, and the places where they were held included: the counties of Lin-tung, Nan-cheng, Pao-shan, Tao-shui, and, surprisingly, the wartime capital of the Communists, Yenan. As the results were satisfactory, the real elections were permitted to take place in October, and they were expected to be completed by the end of April, 1954.

In Kansu, due to the mixed population, the preparations for the elections were the reverse of those in China Proper. While in North China, in preparation for the elections, 67,727 hsiang were merged into 20,000. In Kansu, the 3975 hsiang were increased to 5850.

By March, 1954, it was reported the basic elections were nine-tenths completed in Ninghsia with 90 per cent of the people

[TEXT CONTINUED ON PAGE 516]

Table 5. COMPARISON OF ELECTION PROCEDURES

Chinese Communists in 1937	Chinese Communists in 1953	Soviet Russia in 1936
Universal, direct, equal	Restricted to certain groups; direct at lowest level and indirect at upper levels, unequal	Restricted, indirect, unequal
Secret ballot	Show of hands at lower level, secret ballot at higher levels	Show of hands
All men and women over 18 including landlords and capitalists	All over 18 except landlords, counter-revolutionaries, lunatics, and those deprived of civil rights	Limited to workers, farmers, and petty bourgeoisie.
Voters vote as many times as there are levels, in county and regional elections	System pyramidal. Voters vote only at lowest levels for delegates who in turn elect delegates to higher levels	Pyramidal. Voters vote for delegates to local soviets, who in turn vote for upper soviets
Ballots of citizens in all walks of life counted without discrimination	Different proportions for urban, rural, Chinese, non-Chinese, army and overseas Chinese	Segregation of farmers, workers votes. Disproportionate representation.

The sections on Chinese Communists in 1937 and Soviet Russia in 1936 are based on Chu Yun, Factual Account of a Shensi Trip (Hankow, 1938), pp. 11-12, quoted in Hsu Yung-ying, A Survey of the Shensi-Kansu-Ninghsia Border Region (IPR, 1945), I, p. 43.
The section on Chinese Communists in 1953 is based on the Electoral Law of 1953.

N
*175 going to the polls, but in Chinghai where it was reported that 95
•666 per cent of the people went to the polls, the election was only one-
*668 fourth completed.

In Sinkiang, the Communist authorities were more cautious.
S The experimental elections began in May, 1953, in 17 basic elec-
175 tion units (hsiang) selected from the ten administrative districts,
666 then in 36 basic election units. In these experimental elections,
668 80-95 per cent of the electorate turned out. With the successful conclusion of the experiments, the real basic level elections began in September in 665 basic level areas in Sinkiang, followed in December by the second group of 860 basic level area elections. By April, 1954, the basic level election in Sinkiang was concluded,
S having been held in 2,424 basic units in 83 counties and munici-
[369] palities. In urban areas, 89 per cent of the voters turned out, while in southern Sinkiang, the turnout by the Uighur population was 95 per cent. The elections during 1953 had been supervised by 1,127 cadres who formed 144 election courts and 98 mobile investigation teams, which uncovered 204 cases of irregularities and nonconformity.

The fruit of the efforts of the election cadres was the election of large numbers of cadres and party members. Sixty-three per cent of the 619 new party members employed in the Sinkiang provincial and Urumchi municipal governments were elected as delegates. In 312 hsiang in Sinkiang, out of the 7,088 of the delegates elected, 5,248 were Communist Party cadres, and the bulk were Chinese. In Ninghsia, only 25 per cent of the 9,700 deputies elected in the basic level elections were Chinese Moslems (Hui).

N
Moreover, the elections in the Northwest, as in the rest of
*175 China, were by no means universal. Vice-premier Teng Hsiao-
666 p'ing, one of the top officials in charge of the nationwide elections,
*668 revealed that basic level elections were not held in a quarter of
641 the regions inhabited by national minorities, and the number of
*563 national minority people who were not given a chance to vote came to 8,708,169. The reason for defranchising these minority people, he said, was due to the "lack of requisite conditions," which were (1) the native cadres were unsatisfactory and (2) the people failed to appreciate the nationality policy of the government. (NCNA June 19, 1954).

N
In contrast to the publicity given to the basic level elections
*175 in the Northwest, the elections in the higher levels were conducted
*668 quietly and, in many cases, the results were not published. How-
666 ever, from scattered information gleaned from the Communist
635 press, the following picture emerges: in Shensi, Kansu, and
S Sinkiang, the incumbent governors were re-elected. Only in
[175] Chinghai, was there a change in the governor. In these four pro-
[666] vinces, three of the governors are Chinese. In the three provinces
[668] of Shensi, Kansu and Chinghai, about half of the thirteen vice-
[635]

N
governors were holdovers from the past, and of these thirteen,
*175 nine were Chinese. The provincial people's congresses also
•666 showed a greater proportion of Chinese. In Kansu, 20 of the 25
*668 elected members of the people's congress were Chinese, and in
635 Chinghai, 12 of the 23 were Chinese.

N
A word must be said about the representation of national
*175 minorities in the National People's Congress in Peking in the fall
*563 of 1954. The number of national minorities in China, according
666 to the 1953 census, was 35,320,360, and they elected a total of
646 150 delegates. This comes to one delegate for every 235,470 persons, which compares unfavorably with the residents of municipalities and industrial centers where the ratio was one to 800,000. In the 1226-seat National People's Assembly, 177 national minority delegates (150 elected, 27 appointed) representing six per cent of the total population, occupy 14 per cent of the seats.

N
The seats allocated to the minorities of the Northwest were as
*175 follows: Kansu 8, Chinghai 6, and Sinkiang 18, or a total of 32.
*563 Geographically, the distribution of seats were: Sian municipality
646 8, Shensi 19, Kansu 25, Chinghai 9, Sinkiang 20, or a total of 82.
S It was not explained whether the 32 minority delegates were added
175 to the 82 or were part of the 82. If the total number of seats was
563 82 for the 35,358,000 people of the Northwest, it would come to
646 one delegate for every 431,200 people. At any rate, the number of seats is unimportant, except as window-dressing. The delegates were all Communist officials, fellow travellers, labor heroes, military commanders, religious leaders, and educational and technical workers, who, having been screened and processed in the elections of successive levels, were not men who would entertain nonconformist thoughts.

N
Moreover, the formation of people's congresses, like the
642 establishment of regional autonomous governments, does not
631 mean that the people have been given the right to govern them-
646 selves. According to the Organic Law on the Local People's Congresses and Local People's Councils adopted by the National People's Congress in September, 1954, the functions and powers of the people's congresses was "to ensure the observance and execution of the laws, decrees, and resolutions of the people's congresses of higher levels," (art. 6), and the functions and powers of the people's councils (or people's governments) was "to promote and carry out the decisions of the governments of higher level" (art. 27).

N
VI. Further Consolidation of Communist Control
*175 In the fall of 1954, as the elections were approaching their
631 final stage, there were structural changes in the administration
*668 of the Northwest which gave the impression that Peking was re-
177 laxing its grip over the Northwest. Following the decisions of the

Reform movements	186	Development of nationalism	619
Propaganda	208	Temperance movements	730
Collective bargaining	469	Sociopolitical theories	839

The newest development, found in the Northwest, especially in Sinkiang, is the partial industrialization of those areas which are the sources of coal, oil, gold, iron, alum, quartz, gypsum, nitrates, salt, and, as recently reported, uranium.

The non-Chinese peoples of the Northwest are not only outnumbered b ut also outweighed in economic and political respects. For more than two thousand years, the Chinese have been ruling those areas (with short interruptions as far as Sinkiang and Chinghai are concerned), even though they never had more than a few garrisons stationed in frontier areas. Those garrisons made it possible for a thin stratum of Chinese officials to rule the areas on the top level. On the lower level, the indigenous peoples and tribes governed themselves - under the supervision of the Chinese viceroys or governors and their bureaucracy.

The general policy of the Chinese government in Peking was to make use of the existing form of governmental institutions of frontier areas like Sinkiang, Chinghai, and Inner-Mongolia. In Sinkiang (prior to 1884 it was called "Hui-chiang," i.e., Muslimic Dominion), two types of local government had existed: the Muslimic type and the Mongolian type. The Northern and Northeastern part of Sinkiang, where the Mongols were the dominant inhabitants, had the same governmental institutions as Outer and Inner-Mongolia, namely,banners ruled by dzasaks, who were appointees of the Emperor in Peking. The Republic of China tacitly recognized their ranks and interfered very little with their functions. Only Communist China deprived the nomad aristocracy of their titles and rights.

The Muslimic communities were fuled by BMks with various ranks: the Ak'im BMk,"local governor"; the Ishkhan BMk, "assistant governor"; the Shang BMk, "collector of revenue"; the Qazi, "judge"; the Kukbashi or Mirabu BMk, "superintendant of agriculture"; Yüzbashi, "hundred-men-leader"; Onbashi, "ten-men-leader"; etc. All the local BMks were appointed by the emperor or later on by the president of the Republic upon the recommendation of the Imperial or Republican governor, although it must be stated that some governors of Sinkiang, Chin Shu-jen and Sheng Shih-ts'ai, ruled and governed the province without asking Peking for the consent of appointments.

Besides the Chinese civil service there existed Chinese military staffs and detachments, centered in Ili, Urumchi, Kulja, Chuguchak, Kashghar, Sining, Su-chou, Lan-chou, etc. Relay stations provided communication between the government in Peking and the frontier areas. Maintaining the effectiveness of the means of communications was an important duty of Chinese officials. Only since 1930 have some automobile highways been built, and the Communist regime, in cooperation

Only since 1930 have some automobile highways been built, and the Communist regime, in cooperation with Soviet Russia, are building the first Inner Asiatic railway, linking Alma-Ata with Lan-chou. This railway will, without doubt, speed up the Sinification of the frontier areas, and above all add industrialization to agriculture and pastoral nomadism.

As far as Chinhai was concerned, the Western Mongols (the Oirats) were also locally ruled by dzasaks, the leaders of banners. Unlike the banners of Inner and Outer Mongolia and Sinkiang, however, they did not combine banners to form leagues or to elect one of their tribal leaders as the captain-general of the league. The Chinese governor- with his seat in Sining - functioned as captain-general. In regard to the nomadic Tibetans, the Chinese government appointed chieftains as dzasak-lamas and gave them the rights and the privileges which this office involves. The sedentary Tibetans were ruled by t'u-ssus, also appointees of the Peking government. By and large, this governmental pattern existed until the Communists came into power.

The form of governing non-Chinese peoples changed in the course of time in various ways, but one thing never changed: the aim of the Peking government to rule, to suppress, to exploit, and to sinify them.

Unlike the eighteen provinces in China proper, the province of Sinkiang (after 1884) and the Eastern Three Provinces, (after 1907) the areas comprising Mongolia, Tibet, and Chinese Turkestan, although occupying more space than China proper, were administrated by a quite different type of governmental system. Political subdivisions of the Chinese Empire such as Mongolia, Chinese Turkestan and Tibet were usually referred to as dependencies. This is however an inaccurate translation of the Chinese term "fan," which really means "the barbarian west." Since the cultural, ethnic and historical background in these areas was very different from the rest of the Empire, these regions required, and in practice had, a very particular type of governmental control. All these frontier territories were administered by the Department of Dependencies" in Peking. This department was subdivided into the following bureaus:

a. Inner Mongolian bureau, that administered frontier boundaries, titles of nobility, appointment of officials, military affairs, league conferences, and finally organization of banner units of Inner Mongolia.

b. "Reception bureau" for Inner Mongolia nobility, that was responsible for the payments and allowances to the Inner Mongolian aristocracy.

c. Eastern Turkestan bureau, that was in charge of Moslem affairs in Eastern Turkestan.

d. Justice bureau which took care of the civil and criminal cases of the frontier area.

e. Territorial development bureau which took care of the preservation of forests, wild animals and which was in charge of the improvement of live-stock, fur curing and of the Mongolian inhabitants in general.

The Yüan and Manchu dynasties, which themselves represented minorities, employed a quite different, one might say a positive attitude towards non-Chinese. Generally speaking, the Manchus functioned and acted as the mediators between the minorities and the Chinese. But even the Manchus, after they had become completely sinified, used colonial methods that led to revolts and uprisings in Sinkiang, in Kansu and in Chinghai. The Chinese Muslims in Kansu, e.g., revolted in 1648, 1781-1784, 1820-28, 1862-78, 1895-97, 1918-21, 1928-1929, at which times they tried, with little success, to get rid of the Chinese mastery and to establish their own Muslimic realm. Whenever such uprisings occurred, the Muslimic Turks of Sinkiang sympathized with them or revolted at the same time. In Sinkiang, Yakub BMk even succeeded in establishing a short-lived Muslimic empire between 1864-1877. The Western Mongols of Sinkiang, Kansu and Chinhai, who revolted and established the Dzungarian Empire between 1673 and 1697, were defeated by a Chinese army in 1697 and again in 1757. In Chinghai, the Tanguts (Tibetans) revolted successfully many times, but like all other minorities who tried and failed, they were eventually brought under Chinese control again. Needless to say, all these unsuccessful petty revolutions, revolts and uprisings of non-Chinese or Chinese Muslims, always upset the economy of the area greatly, increasing thereby the hatred towards the Chinese in general, and the Chinese officials in particular.

II. Main Patterns of Social Life, Social Organization and Mode of Economy of the Minorities.

Even though the Northwest is occupied by a fantastic conglomeration of heterogeneous societies, it still can be, and always has been, considered by politicians as one area, a political, military, and economic unit, and also as the "land of promise," which it in fact became. When the Communists again set up the unit as an administrative area in 1949, it was only the continuation of an old concept,held by the Chinese rulers because of the geographical location of the Northwest and its commercial traditions (silk road, Mongolia-Tibet road, Chinghai-Tibet road, Sinkiang-India road, Sinkiang-Russia road), which culminated in Sheng Shih-ts'ai's cooperation with Russia, or earlier with Yakub BMk's policy

• 668

[For additional information on the communist party in Northwest China prior to 1956, its aims, objectives, programs and the way in which these programs were implemented, see category 116, pp. 73, 158, 180, 235, 296-298, 312-320, 351-356, 358-361, 365-377, 379-381, 397-399, 408-409, 422-423, 434, 437, 441-442, 447-448, 450-452, 454-455, 459-460, 465-477, 480-482, 484,486, 488-510, 513-524, 535-545, 560, 569, 571-578, 581-596, 598-608, 611-612, 615, 618-619, 624-626, 629-632, 636, 648, 650-652, 654-665, 671-672, 675-676, 685-690, and 696-704.]

towards Russia, Turkey, and England. The cultural cohesion created by Islam that connects Chinese Turkestan with Russian Turkestan and other neighboring Muslim countries, and that created by Buddhism that connects Mongolia with Tibet through Chinghai and small areas of Sinkiang, marked the four provinces of Sinkiang, Chinhai, Kansu, and to a small degree, Shensi, as one single area which represents one administrative unit.

The Eastern Turks:

The main pattern of social life of the Eastern Turks is based primarily on "Oasis Agriculture" with its irrigational complex. All agriculture in this area is made possible through the organized use of water. The family organization among the Eastern Turks is therefore an extended one, since a certain level of productivity can only be reached through collective labor (upkeep of irrigational systems and dikes). One reason the Eastern Turks developed the extended family pattern is that the family recieves water in proportion to the amount of labor its members put into the upkeep of irrigational systems and canals; the greater the family, the more water is therefore provided for their land.

The Internal structure of the family system is not based upon clan rules. Eastern Turkic communities are governed by a body of leaders, selected from the community itself whereas the larger governmental districts are headed by Chinese officials or, at present, by Chinese Communists. A secondary aspect of Eastern Turkic social life is formed by trade and handicrafts. Merchants and craftsmen form "guilds" which in turn influence the social life of the community.

Kirghiz and Kazakhs:

Kirghiz and Kazakh society is clan-based. (The definition of the notion of "clan" is explained in the chapter about the Social Structure.) All family relationships are deeply rooted in the clan system. The main pattern of social life among these two tribes is created by their nomadic way of life, whose most essential economic activity is cattle breeding. The transition to a semi-sedentary life is now under way. The Communists insist that the Kirghiz and Kazakhs occupy a permanent winter camp site, since this facilitates better political control over the tribes. The choice of the summer camp site still remains more or less in the hands of the tribes. Kirghiz and Kazakhs are ruled by "bīks," or "manaps" (elders) responsible to the Chinese officials.

The Mongols: general remarks.

Mongol social life is based on nomadic pastoralism. The basic unit is the nuclear family. A group of patrilineally

S
N A group of patrilineally
563 related families forms the basic economic (i.e., migrational)
621 unit in Mongol society. Pastures are distributed among such
S units. The structure of the society itself dictates a certain
N collectivistic working concept. Mongol social groupings are
[622] led by tribal chieftains, who are directly responsible to the
563 district Chinese official. Mongol society, unlike other North-
[109 western societies, has not undergone great changes under
668 Communist influences. Their basic pattern of life has remained
S the same as it was under the Manchu and Republican regimes.

563 The Oirats (or Western Mongols:
233 The Oirats of the Northwest are primarily pastoral nomads.
[434] Their chief source of income is cattle, horses, sheep and
[131] goats. Because they live in a desert-steppe area they move
S around in larger or smaller groups depending upon the avail-
563 able resources.
621 The designation for these small economic and migrational
[594] units or camps is "xotn" which includes a group of nuclear
[613] families patrilineally related - tracing descent from a common
[597] ancestor in the third, fourth, or fifth generation.

Membership in this group can be gained by adoption, by attachment of a daughter's husband in the case of a man with no sons and of poor unrelated families or poor related families on the paternal side. Although some poorer families remained apart from these "xotn" it usually is more worthwhile to add their few cattle, etc., to that of the larger group and render services in return for the benefits gained
S thereby.

[613] Among the Oirats the closer an individual's relationship
[554] to the ancestor, the greater prestige and status he enjoys in
S this group.
563 The headman or elder ("axalaci") dwells in a tent situated in
361 the front of the encampment facing south. The remainder of
[622] the group is arranged according to the age of the male members
S in a circle behind the dwelling of the elder. The dependent
[613] families are situated in the rear of the circle but still according
[554] to the closeness of their relation to the ancestor.

563 Wives of members of these extended families are also
621 affected by the social set-up; their position and status varies
593 directly with that of their husbands, although a wife's position
562 as far as respect patterns go was never equal to her husband's. A wife observes strict respect for her husband's kinsmen who possess, by reason of age and relationship, a higher position than that of her husband. Very often she will not even pronounce the names of any of these elder gentlemen out of respect for them. The status of the wife grows with that of her husband during his lifetime. When he dies, she can either remain living with his kinsmen, in which case she holds the same position socially that he had during his lifetime, or she can

SN 563 563 182 The Chinese, fully aware of their old culture and history, continued up to our times to consider Mongols, Turks and Tibetans if not as barbarians, at least as inferior peoples. This attitude of the Chinese caused, perhaps as an understandably psychological reaction, the superiority-complex behaviour of some minorities. In addition, the higher efficiency and diligence of the average Chinese peasant in comparison with the average non-Chinese did not help mutual understanding and esteem.

SN 563 668 [641] Constitutionally, for the first time in centuries, the minorities are not only considered by the present Communistic regime as absolutely equal to any other racial or ethnic group but they are also treated with consideration. The Communists do everything in order to avoid hurting the nationalistic feeling of the minorities. The price the minorities have to pay for a certain degree of local self-determination, independence and self-government is the thorough acceptance of the party line with all its consequences, above all, collectivization, which certainly means an incredible change of the traditional economic pattern, because eight ninths of the total population are peasants and only the remaining one ninth are pastoral nomads, whose livestock - collectivization is yet to come.

SN 563 829 Since the overwhelming majority of the population of the Northwest consists of Chinese, the attitude toward the state in general is positive. Natural recognition of the government lies in the traditional line of Chinese behavior. The deep-rooted respect for "magistracy" and officialdom implies this basic recognition.

SN 563 668 578 669 The relationship between Chinese Communist rulers and ruled Chinese (whether Communist or not) might be described as less frictional than that between the non-Chinese minorities and the Chinese Communist rulers, that is, a certain tension and uneasiness between the Uighur Autonomous Region and the government has occurred several times during the last five years, and also between the Tibetans of Chinghai and the Communist authorities, and the recent uprisings of Tibetans (July 1956) seem to be of major significance.

SN 829 Generally speaking, the average Chinese in the Northwest has neither a sense of common destiny or any sense of mission.

SN 829 571 The average Chinese peasant's life is concerned with one main and urgent problem: livelihood. Quite different is the situation among the intelligentsia, who are culture conscious to such a degree that it often results in a feeling of superiority over other peoples. Among those intellectuals there is a strong feeling and conviction that China has a grand mission in Asia - cultural and political leadership.

668 Based on our experience with Soviet Russia, there can be little doubt that the Chinese Communist propaganda has been, or will be, successful in building up a tremendous feeling for nation and nationality, an artificial and overemphasized pride for everything which is China or Chinese. The Chinese society in the Northwest might be described as stable and united because of its common history, common language, common beliefs, common pattern of living (agriculture by means of irrigation accounting for ninety-five percent) and common fate. We do not refer to the artificial stability and unity enforced by secret police and military garrisons which might turn into a genuine stability like that in Russia after a long period of propaganda. Training of the younger generation and making propagandistic use of political mistakes committed by other powers, like Hitler's lost war against Russia, which was the last step in developing a final and real unity among Russians.

563 795 797 668 Turning back to the minorities, we can say that the Turks and the Chinese Muslims do have a sense of mission in regard to their religion. For centuries the Muslim has been taught to fight and to convert the "non-believers" to the "only true faith on earth": Islam (Mohammedanism). How strong their feeling is in regard to their religion may be seen from the fact that the Communist regime avoids carefully interference in religious matters and even permits every religious activity to continue, including the pilgrimage to Mecca. Of course, the average Muslim is hardly aware of the fact that the top level Muslim leadership is under complete control of the Communist regime. As a religious group the Turks (Eastern Turks, Salars, Kirghiz, Kazakhs and some small islamized Tibetan clans) and the Dungans (Chinese Muslims) are united to a certain degree and they do have a sense of common destiny, repeatedly brought forward, when political events showed that they considered themselves one single group, imbued with common fate, which culminated in their idea and highest aim: the attempt to erect their own Islamic Empire and realm, an attempt which cost hecatombs of blood but never came true. Their perception and conviction that the support of their highest spiritual leaders, first the Caliph of Baghdad, then the Sultan of Constantinople and finally the Great Mufti of Jerusalem (in spite of Stalin's and Ata Turk's discouraging denoucement of any Pan-Islamic or Pan-Turkic movement) developed their group feeling and group consciousness.

563 As far as the Mongols of the Northwest are concerned, it can be stated that because of their geographical separation (see map of ethnic groups) political disunion was inevitable. [795] However, as an ethnic and religious group (the Mongols are

deprivation of livestock and the progressing industrialization are certain to be the source of increasing discontent among the nomads.

In summing up, the nomads are extremely freedom-conscious. Freedom of the individual is expressed by the everlasting dream of every nomad which finds its expression in the conception of the free rider who recognizes nothing but "the eternal power of the eternal heaven" (Mongolian saying), and who possesses nothing but his felt tent, his highly esteemed and valued horses and his herds. But, no doubt, the Communists will succeed as they did in Soviet Russia in destroying the picture of the independent rider of the steppes of Central Asia, the cradle of so many different peoples and magnificent cultures.

Within their own social structure and social units, the Nomads combine harmoniously individualistic and collectivistic trends of their pattern of life. Communistic collectivization can be imposed upon them by force, of course, but they will hardly accept it in their minds.

VI. Approach to Individual and National Problems

The nomads of the Northwest work hard for their existence. It is easily understood that they need their whole energy for maintaining such a life, which is a constant struggle against the hardships of land, weather and against the centuries-old uncertain political environment. Under such circumstances the nomads developed very realistic minds. A realistic mind is implicitly logical in regard to political or daily matters of life, although the realization of the unpredictable inclemencies or favors of surrounding Nature gave rise to an illogical or, in terms of Jung's depth philosophy, a translogical conception of the relationship between man and Nature, whose favorable or unfavorable phenomena were brought into connection with their "good andbad" deeds, whereby "good and bad" do not have the same connotation as they do in our society; polygamy in the case of the Kirghiz, Kazakhs, Eastern Turks, polyandry in the case of the Tibetans, or murder of a personal dependent in the case of Kazakhs, for example, are never considered as "bad" deeds, but killing a louse, in the case of a Mongol, or killing of a yak calf (even if it is sick or hurt) in the case of Tibetans, are considered "bad" deeds.

The nomadic Muslims (Kirghiz, Kazakhs, Salars and some Islamized Tibetan clans) as well as the sedentary Muslims (New-Uighurs, Uzbeks, Tatars, Tajiks, Chinese Muslims or Dungans) have on account of their religion a rather doctrinal

in the case of Tibetans more than in the case of the Mongols and Turks.

While the attitude of the average Northwest Chinese is rather indifferent to national problems, at least as long as his economic position is not unfavorably affected, his approach to individual problems is characterized by a distinct realism and opportunism.

The provinces of Kansu and Shensi, almost exclusively populated by Chinese, are, in comparison with the provinces of China proper, less progressive in regard to education and general living standard; therefore the frontier Chinese is more conservative but also more suspicious and distrustful when faced with innovations and reforms. He relies more upon himself, seeking and expecting less help from the bureaucracy.

Generally speaking, the frontier Chinese can be divided into the following groups: the descendants of those who were exiled and ostracized for political reasons during the Manchu period, further on, the descendants of criminals who were sent to the frontier areas as workmen, and last but not least, the colonist (the overwhelming majority), partly adventurers and desperados and partly surplus population of China proper and finally descendants of former garrison troops and merchants from China proper who were condemned to frontier service, desperately looking for new cultivable land.

Among the Chinese of the Northwest, those living in Shensi and Kansu belong to the oldest settlers. Detached and severed from his old homeland, the frontier Chinese is more versatile and more open-minded towards unusual and unaccustomed situations. The old Confucian ethics in regard to family life and relationship with neighbors is still very strong.

The frontier Chinese is possessed by a romantic feeling for his old country. His position at an outpost in a remote area makes him see the old homeland in an euphemistic light.

The frontier Chinese has to prove true and to stand the test more than the Chinese of China proper, which creates a healthy measure of self criticism without falling into the neurotic error of self-laceration. The frontier Chinese is difficult to influence since he is more unrestrained and less bound to his environment than the Chinese of China proper.

The obvious propagandistic success of the Communists in the Northwest does not contradict the above-mentioned phenomena, because the Communistic propaganda proceeds in an atmosphere of terror and the Chinese, as a born realist and opportunist, inclines to rationalize his pretended acceptance of propaganda.

HISTORICAL SETTING

I. General History of Relations with China

Northwest China, once a major administrative region of Communist China, is an arbitrary political union of widely dissimilar geographical areas inhabited by a conglomeration of diverse ethnic groups. At the eastern end of this vast wedge-shaped region is Shensi, which has been an integral part of China Proper throughout history and is inhabited almost exclusively by Chinese. Although it is only one-seventeenth of the total area, this single province holds almost half of the population of the Northwest. Sian, the provincial seat of Shensi, has been in centuries past and still is today China's political and military base for the control of the Northwest and has been the center for the diffusion of Chinese culture to the Northwest in the past and of Communist ideology in the present.

At the western end of the Northwest region of China is the province of Sinkiang or Chinese Turkestan. Its territory occupies half the area of the Northwest but its population is only a seventh of the total. Three-quarters of the inhabitants are Uighurs, a people Turkic in speech and Moslem in religion. The rest is divided among thirteen nationalities.

In the north is the now abolished province of Ninghsia, inhabited largely by Mongols. In the south is Chinghai (also known as Kokonor) with a heterogeneous population of Mongols, Chinese and Tibetans. The Gobi Desert, which pushes south to Ninghsia, and the highlands of Chinghai constrict the habitable area into an hourglass shape, forming a corridor connecting Shensi in the east and Sinkiang in the west. This is the province of Kansu.

A. The Role of the Kansu Panhandle

All traffic between China Proper and Turkestan has been funnelled through the narrow confines of this corridor. The ancient Silk Road started from its terminus at Sian (known in the past as Ch'ang-an) and wound its way, via the Kansu Corridor, into Chinese Turkestan where it branched into the northern and southern routes to bypass the towering Tienshan Mountains. The conquering armies of Han, T'ang and Ch'ing had marched out through this narrow passageway to assert the political rule of China over the desert wastes and oasis towns of Turkestan. Hordes of nomads, lured by the lush plains and opulent cities of China, have poured through this funnel to raid and pillage and, when successful, to found militaristic kingdoms. This was the route worn deep by the trudging feet of camel caravans bearing the tea and silk and porcelain of China to bazaars in the Near East and even to the markets of Byzantium and Rome. In the train of these caravans travellers have come into China, from the Buddhist missionary, Kumarajiva,

/Chinese Moslems (Dungans)/

making of a will, the giving of alms, rites at the grave, and the recitation of prayers and giving of alms on certain days after death, and on the first, second and third anniversaries.

The Moslems have their own burial grounds. The mounds raised over the graves are rectangular, not round as in the case of the Chinese. The top of the filled grave must be at least five inches (half a Chinese foot) above the surrounding earth, lest the location be forgotten. A stone may be erected in front of the grave, but the name of the deceased may not be engraved upon it.

e. Festivals and holidays

Many of the religious festivals are more pagan than Moslem, especially those which are seasonal and therefore not connected with the Moslem calendar. Their celebrations are merely popular gatherings for feasting and enjoyment.

The Moslem New Year (Yengi Yil) celebrates the breaking of the Ramadan fast. The festival takes place during the first three days of the tenth month by the Moslem calendar. Special services are held in the mosques. The people bathe and dress in their best clothes. It is a time of greeting, well-wishing, feasting, visiting and gift-giving. For the Moslems and the Chinese alike, the New Year celebration is the greatest holiday of the year.

5. Present day conditions

According to a speech delivered by Burkhan, chairman of the Preparatory Committee of the China Islamic Association, at the Conference of the Asian and Pacific Regions, on October 18, 1952, the Islam religion as well as the customs and habits of its followers are fully respected by the Communist regime. Chinese Moslems are free to practice their faith without interference. It is also said that official circulars from Peking have ordered the people to continue the observance of their important festivals. The tax on the slaughter of cattle for Moslem consumption is abolished, and official holidays are granted on Moslem holidays.

In accordance with the Agrarian Reform Law, the mosques may retain their land holdings if the local populace so desire. It is also reported that when the land reform movement was carried out in the Northwest, the land of the mosques was in most cases left untouched. There was also a report of an organized Hajji to Mecca in 1952, which for reasons unknown failed to reach its goal. Special government regulations give Moslem workers in public organizations and educational institutions time off on the more important religious festival days. In military units, factories and schools, consideration is also given to the habits and customs of cadres, soldiers, workers and students of the Moslem faith.

March, 1955. Through these regulations, the prices of some books were lowered from 4% to 21%.

The above reported figures are impressive. The narrow choice of titles, however, has given constant cause for complaint. Readers in Aksu, Sinkiang reflected, according to a Sinkiang jih-pao report of January 11, 1953: "Why do you people in the Hsin-Hua Bock Store sell only this kind of book?" And the editorial-izing explanation: "...to spread Marxism-Leninism and the thoughts of Mao Tse-tung" will have hardly sounded convincing to the questioner. The China Youth Journal, 1955, No. 10, writes: "For a long time, young people have not found satisfaction in the published books. They are mentally half-starved. Some youths are so eager to read that they have fallen prey to feudal, superstitious, mysterious and sexy books."

Similar complaints can be found in the press and the journals all over the country. Apparently, the policy of the Communists to swamp the "simple-minded" minority groups with Party doctrine did not pay off. Thus recourse was had to censorship. On July 20, 1955, the State Council promulgated the Temporary Regulations on Controlling the Book Renting Business, according to which the books which are lewd, supernatural and full of reactionary ideas are excluded from circulation.

V. Radio

Radio broadcasting of the Chinese Communist Party had a humble start. On September 5, 1945, the Hsin-Hua Broadcasting Station in Yenan made its first official broadcast. It had a power of 300 watts only. When the Nationalists attacked, the station fled with the Party headquarters but never ceased to broadcast.

From September 5, 1945, to September 4, 1946, it broadcast for two hours a day. The programs included news, comments, introduction to the liberated areas, etc. From September 5, 1946, the time increased to two and a half hours daily. The program included speeches, and voices of the people. Later a broadcast to the Nationalist Army was added. Starting from September 5, 1947, the broadcast increased to three hours. News summaries were added, and later, programs in English.

In March, 1949, the station moved to Peking and took over the Nationalists' station there. On October 1, 1949, the name was changed into the Central People's Broadcasting Station. It became the leading broadcast center.

In April, 1950, the Communists began to establish monitoring stations throughout the country. The Central People's Broadcasting Station has since broadcast the main programs for the monitoring stations all over Red China, including the Northwest. In 1950, there was only one program lasting 7 1/2 hours per day. From 1954 on, it increased to two programs with a total broadcasting

all Buddhists) they have a strong feeling of belonging together. Nevertheless the Mongols are fully aware that their former power is declining more and more every decade and that their pastures are constantly diminishing because of the encroachment of agriculture and Chinese migration pressure. The establishment of the Inner Mongolian Autonomous Region (to which the Edzin Gol and Alashan areas have recently been added) and the organization of several autonomous chou for the Mongols of Sinkiang, Kansu and Chinghai, might restore to a small degree the hope for recovery of their lost strength and political power, a hope which has been stimulated during the Sino-Japanese war. In addition, the organization of those autonomies will certainly raise their feeling of security, and might east the widespread desperation of Mongolian leaders who have anticipated the final decline of the Mongols as an ethnic group and a linguistic unit because of rapid sinification and loss of pasture land, and therefore loss of cattle, the only life resource of the average Mongol. It is difficult to say what effect the Communist regime will have on the ethnic group of the Mongols. So far, the Mongolian indigenous culture has been fostered by the Communist regime, but there is little doubt that, when it comes, the complete transition of the Mongolian society into a Communistic society will not be carried out without resistance and ensuing hatred. It is unthinkable that the average Mongol, who for centuries has adhered to the simple pattern of nomadic life (owning cattle individually and only pastures collectively) will agree with the policy of bolshevisation. It can be easily conceived that deprivation of their cattle will mean the end of the nomadic Mongolian society as such. What has been said about the Mongols may very well be true also for the Kazakhs and Kirghiz.

IV. Dominant Social Motives.

The dominant social motive of the average citizen of the Northwest depends largely on his ethnic group affiliation. Starting with the majority, the Chinese, it should be repeated that they are diligent and industrious farmers whose whole energies must be used in order to maintain their families, who cooperatively toil in the fields and earn just enough to live on. In such a setup little room is left for cultural and religious ambitions; although ancestor worship is sincerely practiced it is difficult to say whether this kind of worship is a true religious phenomenon or only a reflection of the traditional respect toward elders and parents. The religious behavior

of the average Chinese seems to be fatalistic, considering Providence or Heaven to determine his fortune in life. In general, the average Chinese is rather indifferent in religious matters, although he might be sensitive if someone looked askance on his belief in local spirits, demons, and gods, but this is merely a matter of tradition rather than religion.

The Chinese is strongly individualistic and usually dislikes to be ordered around and governed; he ardently defends his own opinions. His inclination for social groupings is obvious. Wherever Chinese live, they soon form integrated communities and at times of distress or in critical situations they are ready to help each other collectively, a characteristic tendency found especially within the extended family, which as a rule feels itself responsible as a whole for debts, misdeeds, etc., of any member. The Chinese are reported to be basically anti-militaristic, although this may be more a traditional attitude of the literati than a sound fact, considering only the last fifty years of Chinese history. However, a Chinese proverb says, "From good iron do not make nails; from good men do not make soldiers." To toil his fields in peace, to make a living this way, and to raise his children, whom he deeply loves, and not to be interfered with by state and government, can be described as the average conception of the "good life." The average Chinese of the Northwest lives in simple mud or stone houses (in the Yellow River area, caves of the adjacent loess hills), stove, k'ang, and ancestor altar being almost the only furniture.

Culture, art, and literature were primarily fostered by the richer merchants, land and water owners, and, or course, the officials and scholars. These groups represented, up to 1949, an economically powerful class who owned a considerable part of the land and the water rights. Chinese officials of the frontier provinces had a reputation for being extremely money-minded. The Chinese gentry, consisting of former officials and degree holders, who were in many cases at the same time holders of land or watter rights, have been abolished as a class, while large parts of the academic strata, the intelligentsia, became more or less the Communist avantgarde of China, showing the same phenomenon which appeared in Yugoslavia, Bulgaria, Czechoslovakia, Italy, etc., before and during the Second World War, where the intelligentsia showed a deep inclination towards Communism.

In regard to the nomadic minorities of the Northwest (Kirghiz, Kazakhs, Mongols and Tibetans) the dominant social motives are two fold, and can be subdivided into an economic and a religious one, equally strong. The whole economic life of the nomads is centered around their livestock. The nomad's life

V. Individualistic and Collectivistic Bents and Traditions

The nomadic society of the Kirghiz, Kazakhs and Mongols shows collectivistic trends insofar as the pastures are always owned collectively and the livestock can be taken care of and protected only cooperatively. In periods of war and uprisings, the livestock had to be protected militarily, which was one reason why the military organization of the nomads, introduced by Chingis Khan, survived up to the twentieth century. Here we can say that the nomadic Kirghiz and Kazakh still shows a tremendous martial spirit, especially the Kazakhs who fought the Communists in 1949 and 1950 in a heroic way in spite of the fact that they were outnumbered from the very beginning.

As a matter of fact, the Mongols show much less martial spirit than neighboring Kirghiz, Kazakh and especially Tibetans, who constantly rise up here and there, becoming a major nuisance for Peking, although they are hopelessly outnumbered by Chinese Communist Troops. Many explorers agree independently that the Mongols, once intrepid, dauntless, unafraid, frightful and terrifying warriors, make now the impression of being inefficient soldiers, timid, downhearted, and discouraged (so Rockhill, Howorth, Tafel, Vladimirtsov, Hedin, Futterer, and Filchner). Russian scholars, above all B. Vladimirtsov in his Le Regime Social Des.Mongols, Le feodalisme Nomade, Paris 1948, blame Buddhism for the disappearance of the martial spirit and courage of the Mongols. This opinion is, however, contradicted by the fact that Tibetans, who have been influenced by Buddhism some centuries longer than the Mongols, are well-known as tough and cunning fighters and apparently fearless and daring insurgents.

Almost every Tibetan family has at least one son in a monastery. They faithfully pay their tributes to these monasteries where their sons live as novices or monks. The monasteries are the only cultural centers of the nomads. Kumbum might be named as a magnificent example in regard to external architectural beauty as well as internal wealth in respect to its library, printing house, and the spiritual value of its schools and its Lamaistic academies.

There are many reasons to believe that the Communist regime is determined to abolish nomadism and to make the nomads sedentary or at least semi-sedentary. The first step was the erection of permanent winter sites. The attitude of the nomads toward the regime seems to be ambivalent. The erection of veterinary stations for the livestock and the extension of additional irrigated pastures certainly are measures approved by the nomads but on the other hand the threatening

S N
175 The Yüan and Manchu dynasties, which themselves repre-
657 sented minorities, employed a quite different, one might say a
563 positive attitude towards non-Chinese. Generally speaking, the Manchus functioned and acted as the mediators between the
S N minorities and the Chinese. But even the Manchus, after they
195 had become completely sinified, used colonial methods that
657 led to revolts and uprisings in Sinkiang, in Kansu and in Chinghai.
563 The Chinese Muslims in Kansu, e.g., revolted in 1648, 1781-1784,
669 1820-28, 1862-78, 1895-97, 1918-21, 1928-1929, at which times they tried, with little success, to get rid of the Chinese mastery and to establish their own Muslimic realm. Whenever such uprisings occurred, the Muslimic Turks of Sinkiang sympathized with them or revolted at the same time. In Sinkiang, Yakub Bïk even succeeded in establishing a short-lived Muslimic empire between 1864-1877. The Western Mongols of Sinkiang, Kansu and Chinhai, who revolted and established the Dzungarian Empire between 1673 and 1697, were defeated by a Chinese army in 1697 and again in 1757. In Chinghai, the Tanguts (Tibetans) revolted successfully many times, but like all other minorities who tried and failed, they were eventually brought under Chinese control again. Needless to say, all these unsuccessful petty revolutions, revolts and uprisings of non-Chinese or Chinese Muslims, always upset the economy of the area greatly, increasing thereby the hatred towards the Chinese in general, and the Chinese officials in particular.

S N II. Main Patterns of Social Life, Social Organization and Mode
175 of Economy of the Minorities.
631
619 Even though the Northwest is occupied by a fantastic con-
glomeration of heterogeneous societies, it still can be, and always has been, considered by politicians as one area, a
S political, military, and economic unit, and also as the "land
175 of promise," which it in fact became. When the Communists
631 again set up the unit as an administrative area in 1949, it
668 was only the continuation of an old concept, held by the
178 Chinese rulers because of the geographical location of the North-
619 west and its commercial traditions (silk road, Mongolia-
648 Tibet road, Chinghai-Tibet road, Sinkiang-India road, Sinkiang-Russia road), which culminated in Sheng Shih-ts'ai's cooperation with Russia, or earlier with Yakub Bïk's policy

/Chinese, Chinese Moslems and Sedentary Tibetans/

565 829 181 extremely obedient and timid toward the government officials. Anyone who has some connection with the government can command the service and materials of the small people. One who has just a sword may act as a lord in the Chinese rural community. The common people in these communities are too meek and ignorant to resist. The rural people in general are primarily concerned with their food problem. Their attitude toward anything 565 829 668 179 is affected by this problem. Their attitude toward the coming of the Communists, for example, was quite interesting. They were anxious to know how far the Communists were and how great the possibility was of their coming. When they were asked how they felt about the coming of the Communists, the answer was that what they feared mostly about the Communists was that the Communists might eat up all the food they had and then they would be left to starvation. They seemed to believe that the Communists would not persecute them because they were just poor people. They had heard that the people in Szechwan called the Communists the misfortune bringers. It meant that wherever the Communists appeared they would bring misfortune. The Kansu people would not care how sweet the Communist promises might be, if the Communists had to live off the province's scanty food supply, they were not wanted. This shows that the economic conditions in the Northwest, as in other places, had great influence on the people's political attitude.

However, this does not mean that the Chinese peasants in the Northwest care only about their stomach and overlook all else. They also resent the fact that the government officials and the local gentry looked down upon them and treated them as people of little value. It is reported that bad administration of the local government at that time was the reason that the local Communists, led by a man named Liu Tzuotan, were able to make considerable progress among the peasants in a big territory between the provinces of Shensi, Kansu and Ninghsia. The Communists gave the people many kinds of little or temporary advantages and made all sorts of big promises. At the moment they looked much better than the local government officials and therefore they won the people's confidence and support. It is reported that when the government tried to call the people in the villages to a meeting so they might be enlightened about the government's policy, very few came. But whenever Liu Tzu-tan wanted a mass meeting, the peasants swarmed into wherever the gathering was held. Liu Tzu-tan knew the common people's psychology and their dire needs, and he skillfully played these factors for his purpose. Consequently, his movement was very successful among the rural masses.

423 According to Fan Ch'ang-chiang's report, the Chinese farmers in the areas between Shensi, Kansu and Ninghsia were by and large landowners, not tenants. The areas were very thinly populated

S N 563 182 II. Stability of the Societies in the Northwest

It is safe to say that the minorities of Sinkiang, Chinghai and Kansu represent rather unstable societies. This instability has several causes. The first is certainly the fact that the Turks, the Mongols and the Tibetans consider themselves utterly different from the Chinese in regard to race, religion, language, and ethnic grouping; therefore they desire independence and do not want to be ruled by "aliens," which they consider the Chinese to be. The second reason for instability is the progressive settling and colonization by Chinese peasants who cut down the pasture areas of the nomadic Mongols, Turks, and Tibetans, and consequently provoke hatred against themselves. The third reason for the unstable character of the societies of the Northwest was the reckless taxation of the minorities by many Chinese officials who considered their offices in areas like Sinkiang and Chinghai as an opportunity to gain wealth while holding those offices for a limited number of years. In periods of wars, the minorities were subject to merciless requisition of their cattle and agricultural products. In addition to the friction and animosity between the minorities and the Chinese, the disunion among the minorities themselves was at times considerable. As an illustration one might remember that during the uprisings of the Dungans between 1931 and 1936, the Chinese Muslims fought against Turkic Muslims (which supposedly represent a single religious unit), Mongols, Chinese, and White Russians fought against the Chinese Muslims (Dungans) and the Kirghiz and Kazakhs even formed a special unit and fought against both groups or joined one of the two according to the military situation, opportunistically. This period was without doubt the culmination of disunion and confusion among minorities of the Northwest during the last decades.

On the other hand, when a governor who was more interested in the welfare of the country as such than in his own enrichment, like Sheng Si-ts'ai of Sinkiang with a cleaner officialdom, ruled the province, the society gave a more stable impression and the frictions between the various nationalities decreased.

A further reason for the disunion of the society in the Northwest is the incompatibility of various religions, especially the "martial" Islam on the one hand and the more peaceful Buddhism on the other. The Muslims feel superior to any other religious community; the Buddhists (Mongols, Tibetans, Shera Yögurs, Monguors) consider the Muslims as having a barbarian religion; the Chinese, generous and tolerant in regard to religions consider at least Islam to be somewhat inferior to their own multi-religious conceptions and beliefs.

SN 563 182 The Chinese, fully aware of their old culture and history, continued up to our times to consider Mongols, Turks and Tibetans if not as barbarians, at least as inferior peoples. This attitude of the Chinese caused, perhaps as an understandably psychological reaction, the superiority-complex behaviour of some minorities. In addition, the higher efficiency and diligence of the average Chinese peasant in comparison with the average non-Chinese did not help mutual understanding and esteem.

SN 563 668 [641] Constitutionally, for the first time in centuries, the minorities are not only considered by the present Communistic regime as absolutely equal to any other racial or ethnic group but they are also treated with consideration. The Communists do everything in order to avoid hurting the nationalistic feeling of the minorities. The price the minorities [177] have to pay for a certain degree of local self-determination, independence and self-government is the thorough acceptance of the party line with all its consequences, above all, collectivization, which certainly means an incredible change of the traditional economic pattern, because eight ninths of the total population are peasants and only the remaining one ninth are pastoral nomads, whose livestock - collectivization is yet to come.

SN 563 829 Since the overwhelming majority of the population of the Northwest consists of Chinese, the attitude toward the state in general is positive. Natural recognition of the government lies in the traditional line of Chinese behavior. The deep-rooted respect for "magistracy" and officialdom implies this basic recognition.

SN 563 668 578 669 The relationship between Chinese Communist rulers and ruled Chinese (whether Communist or not) might be described as less frictional than that between the non-Chinese minorities and the Chinese Communist rulers, that is, a certain tension and uneasiness between the Uighur Autonomous Region and the government has occurred several times during the last five years, and also between the Tibetans of Chinghai and the Communist authorities, and the recent uprisings of Tibetans (July 1956) seem to be of major significance.

SN 829 Generally speaking, the average Chinese in the Northwest has neither a sense of common destiny or any sense of mission.

SN 829 571 The average Chinese peasant's life is concerned with one main and urgent problem: livelihood. Quite different is the situation among the intelligentsia, who are culture conscious to such a degree that it often results in a feeling of superiority over other peoples. Among those intellectuals there is a strong feeling and conviction that China has a grand mission in Asia - cultural and political leadership.

S N 563 578 669 648 175

B. Population Problems

1. Traditional Antagonism Between the Moslems and the Chinese

Of the many problems in regard to the population of Northwest China, the traditional antagonism between the Moslems and the Chinese, together with its international complications, is by far the most serious. Moslem uprisings have been frequent and often caused great massacres on both sides. In most cases the Moslem disturbances are supported and made use of by ambitious neighboring powers, particularly Russia - both Tsarist and Soviet. In 1871 Tsarist Russia used the 1861-1874 Moslem disturbance as a pretext to occupy the Ili Valley and then force China to cede the lower part of the Valley, west of Khargos to Russia. Time and again Russia took advantage of Moslem troubles in Sinkiang to make some special territorial, political and economic demands in the provinces, i.e., free trade in Sinkiang by the Ili Commercial Treaty of 1851 and the cession of the territory west of Tarbagatai by the treaty of Chuguchak (Ta-cheng) in 1864.

S 648

Sinkiang had always been a center of international intrigue between Russia and Britain for the spoils of Central Asia, as well as the barometer of power relations between Russia and China. (See Foreign Relations).

2. The Uighur Autonomy

S 642 199 [668]

Under the Chinese Communist Regime, Sinkiang became the Uighur Autonomous Area in September, 1955. A National Autonomy for Sinkiang was first recommended by General Chang Chih-chung, a liberal Nationalist Government high official in 1946-49. He was "influenced by views of American politicians who insisted that the principle of self-government should be applied to Sinkiang also - an illusory wish for a people which stood between Russia and China, like a mouse between two cats." (CNA. No. 103, October 7, 1955).

S 167 708 466

A continuous great influx of Chinese to Sinkiang has occurred, which is particularly marked by the present-day Army Construction Corps and the presence of the Corrective Labor Force. The soldiers are sent to meet the urgent demand of labor to undertake the gigantic construction program and the latter, estimated at several hundred thousands, are condemned to forced labor in the thinly populated border areas. (See: Labor).

S 642 668 199

"Since the Chinese Communist troops entered Sinkiang, the rulers have always been Chinese, and at present, with the introduction of autonomy, this Chinese domination is the more emphasized." (CNA. No. 103, October 7, 1955). Furthermore, Government officials are transferred from Peking to Sinkiang in large numbers. On August 21, 1955, seventy-nine officials from the "First Grade Offices" of the Central Government left Peking for Sinkiang; at the same time

S 87 563

certain amount of overlapping of the figures in Tables 1 and 2.

During the war years there was an expansion of schools in Sinkiang. By 1946 the number was as follows:

N *563 873 658 *175 871 N [669]

Government sponsored education of Mongols and Tibetans was already initiated in 1910, when the comptroller-general of Chinghai founded the Chinghai Mongolian Academy at Hsi-ning. This school was conceived for service to the Mongol Banners exclusively.

A somewhat peculiar situation existed in Chinghai after the revolution of 1911. Chinghai in this period was ruled by Moslem generals, who persued a rather fair policy toward ethnic groups. The activities of one of these Moslem generals, Ma-Ch'i, should be stressed. The goal he set for himself was the introduction of at least one primary school in every community of Chinghai, regardless of the ethnic composition of the particular community. His activities were marked by his insistence that all children should learn Chinese in addition to their own language. Besides, he developed and enlarged the training of the ahung (teacher or lowest priestly rank). His first act upon becoming vice-governor of the province was the establishment of

795 171 175

'P'ags-pa. After his conversion, the Great Khan, Tümen Sasaqtu (1557-1593), of the Chahar area, promulgated a Buddhist code of law. His second successor, Legdan, built a Buddhist temple and had the Buddhist compilation of the Tanjur translated. The "Living Buddha" settled at Urga in 1602 and was succeeded by a chain of reincarnations until 1924. In 1620, the Khoshuts, inhabitants of present-day Dzungaria, broke away from Shamanism. Buighabu Bātur also adhered to Yellow Sect Lamaism. As a reward for leading the "holy league" of Oirats who defeated a Red Sect prince's attack on Lhasa, the Dalai Lama ordained Gushi-Khan, the Buighabu's brother, as "vicar" of the Yellow Church. After the Ordos and the Chahar, the Tümet and Khalkha, having adopted Buddhism, also lost their warlike characteristics. In contrast to the "secret history" of 1240, the history of the Ordos prince, Sanang Setsen (1662) dealt not with the conquest of the world but with the conquest of souls.

175 795 792

C. The Lamaism of Chinghai

The province of Chinghai, or Amdo as the Tibetans refer to it, has played a very significant role throughout the history of Lamaism. From Chinghai came the first new stirrings of Buddhism after the religious persecution by the apostate king, Langdarma. The great reformer, founder of the ruling (Yellow) sect, the Gelugpa, came from this border area. The immediate excuses for China's marching into Lhasa usually have been supplied by events here. Both the present and the late Penchen Lamas had spent considerable periods of exile or semi-exile in one of the most famous monasteries of the area, Kumbum. Centuries ago the Chinese system of Ambans at Lhasa was instituted after a Chinese army had marched as escort for a disputed reincarnation of the Dalai Lama. This Dalai had been born south of Amdo, but had spent his years at Kumbum. As a meeting place of Mongols, Tibetans and Chinese, the area has also played a vital role, religiously and politically, in matters concerning Mongolia and China.

[648] [795]

795 792

Lamaism has played a role in Chinghai equal to the role that the province has played in the religion. According to Ekvall (1939), one out of every three males in the area is a monk. Lhasa has never succeeded in achieving the secular rule of this region; as a result, all sects of Lamaism including the various unreformed sects and the non-Buddhist Bonist sects have continued to flourish. However, the two largest monasteries, Kumbum and Labrang, adhere to the Yellow Church. Kumbum had held the pride of place as the site where the great reformer Tsong-kha-pa was born. After the Moslem rebellions in the last century, however, the population of Kumbum dropped. Until recently it had to bow to Labrang in respect to numbers. Between

233 prevails more in the south along the northern foothill slope
311 of the Tien-shan than the north along the southern side of the Altai.

N
161 C. Population Trend and Its Significance

1. The Changing Trend of the Northwest in Comparison with Other Major Regions.

The population of the Northwest as in the rest of the country has been on the increase in spite of the limited arable and irrigable land resulting from inadequate rainfall, and the mountainous terrain, as well as the frequent earthquakes in
N
[173] Kansu and repeated Moslem disturbances. It was reported that more than 246,000 people were killed by the great earthquake
[165] of Hai-yüan, Ching-ning, and Tung-wei in eastern Kansu in
[169] December, 1920, and the Moslem uprisings of 1861-1874, 1895, and 1944. Long before the 1953 census was taken, there has been an incessant influx of people in large numbers. A gradual increase is marked by various estimates and reports.
S
[161] For example, in regard to the population estimation of Sinkiang Province, the Ministry of Internal Affairs in 1910 gave the figure of 2,670,000 and 2,519,579 in 1923; the record taken from "Le Temps" of April 5, 1934, is around 5,000,000. According to a nation-wide regional survey taken by the Agricultural College of Nanking University in the period from 1928-1933, the annual rate of natural increase of the Northwest was at 11.5 per thousand which was exceeded only by the North China Plain, as illustrated by Table XII.[2]

N
163 According to the 1953 census report for the nation as a
165 whole, the average birth rate is thirty-seven per thousand, average death rate, seventeen, and average annual natural increase, twenty.

Table XII clearly indicates that the annual natural increase rate of the Northwest is due to a smaller death rate rather than a higher birth rate as compared with other regions. This might be the result of a healthier, drier climate rather than better living conditions or medical care. The 1953 census report gives an even larger natural increase for the nation due to a higher birth rate and a lower death rate. The gradual
N
161 population increase of the Northwestern provinces is also shown by Table XIII:[2] this table shows a considerable increase for the provinces of Shensi and Kansu (including Ninghsia)
S
[161] especially. As for Chinghai and Sinkiang, although the increase is not so pronounced, nearly one third of a million for the former and 1.1 million increase for the latter are indicated. These bring a total increase of over thirteen million (more than half the original number in seven years) for the four

1,2, [See pp. 135-136--Analyst]

792 the two monasteries there has been a total of five to seven thousand monks. These monks came not only from the immediate area, but were attracted by the prestige or teachings of the monasteries from Mongolia and other areas on the Chinese border.

792 871 Labrang prides itself on being one of the six major academic monasteries in all Tibet. Ma Ho-t'ien even claims for it more complete systems of education and organization than are to be found at the central Tibetan centers of Ganden, Sera and Tashihlumpo. But this pride is modified by the fact that an academic degree of Geshe from Labrang is not actually recognized in Tibet proper. The Labrang incarnations, Chia-mu-yang, have generally gone to Depung in Lhasa to receive instructions.

792 [778] [423] [651] Kumbum can rest on its laurels as a place of holy pilgrimage. Within its grounds is the rock associated with Tsong-kha-pa's birth; so too is there the famed tree that supposedly sprang from the shorn locks of the Great Reformer. Both monasteries own much land and represent great wealth. Some has come in the form of the accumulated gifts and donations of the pious. Still more is representative of taxes imposed over the years on their local subjects, for, like many of the smaller monasteries, these two are the seats of secular rule as well as religious reverence.

792 701 In return for the gifts and other revenue, however, the monasteries perform many functions for their subjects and believers. In the turbulent conflicts between Moslems, Chinese and Tibetans, the monasteries have represented the effective military force of the area. Rijnhart, Ekvall, Ma and others who have been present in crises have all reported the efficacy of the fighting monks. Their strongholds serve as banks for the wealth of all in danger from looting; their armed force stands for the safety of Chinese, Tibetans and foreigners who seek refuge. Nor is there any perceptible hesitancy about the prospects of taking life when the lama war cry, "Sha-sa, sha-sa" (Eat meat, eat meat!), summons the monks to arms. Sometimes these armies [669] were aroused by major crises, such as those of the Moslem rebellions in the late 1800's. They have also done battle against the Communists in the 1930's. And when no greater danger threatens, they are apt to do battle among themselves on an inter-sect or local rivalry basis.

792 795 But the hold of the monasteries cannot be measured solely in terms of the social and political roles they fulfill. The religion of Lamaism is a very tenacious one. The complete conversion of Tibetans to another faith, be it Christianity or Islam, remains on a very small scale. Within the Lamaist structure, the hold of the older sects is the strongest, especially in areas that have remained outside the control of Lhasa. And underneath

/Chinese Moslems/

S N 795 792 185 equal to or even higher than Muhammad himself. Most of his followers were uneducated. They believed that he had divine revelations since, without instruction, he had answers to all questions and appeared to know many things. As the founder of a new sect, he had to prescribe certain external forms by which his adherents might be distinguished from others. The differences he ordered are best described by W. T. Chan in the following passage:

"The New Sect insists that a certain chapter of the Koran should be recited once only instead of three times as held by the Old Sect, that at prayer clasped hands should be raised once instead of twice, that after a meal there is no need to raise clasped hands in greeting, and that in singing the praise of Allah the voice should be low instead of high. With reference to religious service, the New Sect does not allow any substituting for an ahung in preaching, whereas the Old Sect permits such an arrangement. The two sects also disagree on the basis for calculating the period of fasting, with the New Sect adhering strictly to the Arabic method and the Old Sect following the Chinese lunar Calendar. The New Sect believes that at funerals the mourners should take off their shoes, and stand on a mat while praying for the dead, whereas the Old Sect holds fast to the tradition of standing on the ground with the shoes on. The New Sect also directs that the corpse be laid on the ground, whereas the Old Sect insists on its being on a platform. There is also a disagreement as to whether there should be an honoraria for preachers. In short, the New Sect insists on returning to Islamic traditions, but the Old Sect prefers to keep the customs that have developed in China through the centuries." (Religious Trends in Moslem China, p. 193.)

S N 795 792 [669] Being partly dedicated to ideas of forming a Moslem state in the Northwest, independent of China proper, Ma Hua-lung played a very important role in the Moslem rebellion during the nineteenth century.

S N [578] After the death of Ma Hua-lung, friction developed in his sect. His son-in-law, Ma Ta-hsi, and his grandson, Ma Hi-hsi, fought each other for the sacred inheritance. Ma Ta-hsi had the advantage of numbers and his place of residence, Cha-ku, became an important religious center.

S N 795 Chang distinguished another sect existing in the Northwest, which he identifies as the New New Sect. Unfortunately there is not much evidence as to its nature. He also mentions a Sufi order in the Northwest called Che-ho-yeh (corruption of Jahrivah). The latter is described as "having an abbot, like the Buddhist lama. It is heavily superstitious and is generally despised by other schools." D'Ollone and Hartmann, however, identify this sect as that of Ma Hua-lung, the name Jahriva

/Chinese Moslems/

S N 795 referring to "those who pray openly," contrasted with Khafira (identified as the Old Sect) or "those who pray secretly."

All the sects described above belong to the Sunni order; there are extremely few Shi'is among the Chinese Moslems. These sects have retained continuous hostility, which has manifested itself in violence, at times even resulting in bloodshed.

N 795 563 [197] [142] H. The Salars

The Salars are another group of Moslems, distinct from the Dungans, who live in China. They differ considerably from the Chinese Moslems in appearance, and they speak a form of corrupt Turkish.

N 795 [361] The Salars live in Hsün-hua-t'ing on the right bank of the Huang-ho, and in the surrounding villages. They are also found on the road from Sining to Ho-chou. In religion they are Sunnis of the Hanefite School. They are not very strict in their observance of the different Moslem rites, and are known to be heavy drinkers. Although they do not observe the rites of Islam in a strict manner, they feel very strongly about their belonging to the world Moslem community and are quite fanatic in this respect. They have participated in many of the rebellions against the Han Chinese in the Northwest. Their clergy, who are greatly respected, are leaders of the Salar community.

N [669] [793] Unlike the Chinese Moslems, the Salars have not assimilated many of the customs and beliefs of the Chinese. They do not burn incense nor pay special reverence to their ancestors. They have a much better knowledge of the Arabic language than have the Dungans, and even the lowest classes are acquainted with the Arabic alphabet. They are said to have received their present form of religion from Ma Ming-hsin (Muhammad Amin).

III. Religious Life of the Chinese in the Northwest

N 346 778 A. Sites of Religious Traditions

The Northwest includes what was once the economic and administrative center of the Chinese Empire. In the city of Sian and its surroundings, some of the older relics of religious institutions can still be seen. The memory of the great culture heroes of the past is particularly strong here and many of them are still worshipped in temples and shrines. Foremost among them is the Great Yü, tamer of the flood, who, according to legend, made life in this region possible by draining the excess water off through the narrows of T'ung-kuan. Among the famous Buddhist temples of Sian is the Wo-lung-ssu (The Temple of the Sleeping Dragon) which was built in Han times and has been a place of continuous reverence by emperors and peasants ever since. It contained a famous mural of the Kuanyin by Wu Tao-zu

795 641 *668 179 795 798 *668 179 Democratic Dictatorship, 1949), the term "citizen" is restricted to certain select classes of people, not all the people.

Moreover, as the Communist officials have frankly stated, toleration would be granted to only religious faiths which (1) have been purified of foreign influences and "feudal superstitions," (2) contribute toward the increase of production, and (3) do not conflict with the teachings of Marx, Lenin and Mao Tse-tung. In other words, the Chinese Communists sanction only religions that have been tamed, domesticated, and cleansed of political coloration.

In the implementation of this policy of the Central People's Government, Burkhan, governor of Sinkiang, announced in February, 1955, that only "legal religious activities would be permitted by the people's government," because, he said, "individual counter-revolutionary elements have infiltrated into Islam and, under the cloak of religion, are carrying on counter-revolutionary activities." (Sinkiang jih-pao, February 25, 1955.)

The stiffening of Chinese Communist policy toward the adherents of Islam represented, actually, no radical change but rather the shedding of the pretense of benevolence toward the nationality minorities whose attachment to their religion was stronger than their allegiance to the state. It represented, too, a recognition by the Chinese Communists of the fundamental differences between Islam and Communism and of the impossibility of rationalizing these differences. Islam, with its strong social principles for the regulation of state and homelife, conflicts with the totalitarianism of Communism. As Moslem leaders of Asian countries have pointed out, Communism advocates the use of force against those who would not readily accede to it; Islam teaches men to bring others to follow the way of God by peaceful means. Communism does not respect the sanctity of human life, but teaches violence and favors the organization of society based upon atheism and anti-religion; Islam provides for individual rights and freedom, and encourages humanitarian services, compassionate feeling toward all living beings, apart from devotion to God.

795 182 [669] Besides being a religion, Islam in Chinese Turkestan has also been a strong political force welding the multi-racial groups together in their struggle for self-rule and their resistance to oppression. The insurrections of the Moslems against the Chinese in the beginning of the nineteenth century have been led by religious leaders, the Khojas; the widespread uprisings of the Moslems in the 1860's were led by Ma Hua-lung, the leader of the New Sect, in Kansu, and by Yakub Beg, who bore the title of Commander of the Faithful, in Kashgaria.

000 The demands of the natives of Sinkiang for independence were

PUBLIC WELFARE

I. Introduction

657 Welfare work in China's Northwest has to be conducted for the benefit of two distinct categories of people in need. The poor are composed of those whose problems arose out of inadequate standards of living. They include the aged and disabled, the orphans and other destitute or handicapped people. Marginal cases of this category are the underprivileged groups of society, who might maintain themselves, even though precariously, in years of abundance but who become relief cases as soon as their balance of life is disturbed. Chinese concepts of charity and charity organizations normally available to this category are discussed in the Public Welfare Section of the General Handbook.

657 The second category however, the victims of natural disasters, 731 poses a special problem in the Northwest. As has been demonstrated in other Sections of this Handbook, the maintainence of agriculture in the Northwest is more dependent upon conservancy and irrigation projects than in other regions of China. During the last period of the Imperial era, many of these projects have fallen into disrepair, thus exposing the area to more critical inundations and droughts. Reports from the Imperial period reveal that there were fourteen severe inundations in the province of Shensi during the hundred years 1800-1900 and seven in Kansu. The same century brought sixteen severe droughts to Shensi and nine to Kansu. The droughts of 1877 which encompassed both provinces, of 1900/01 in Shensi, and of 1908/09 in Kansu were catastrophes of a national extent.

The frequency and severity of earthquakes in the Northwest adds to the problems of the region, particularly since in many areas of the region people live in loess caves. The great earthquake of 1879 which hit both Shensi and Kansu, the one of 1881 in Kansu and the ones of 1892 in the Kucha district of Sinkiang and the Hsi-ning district of Chinghai are still in everybody's memory, even though the twenties of our century have again brought two devastating earthquakes.

[669] Nor is this all. During the last hundred years the Northwest has been ravaged by rebellions and civil wars almost without interruption. Several of these events left in their wake a vast number of displaced and needy people, who added to the problems of emergency and disaster relief.

II. Welfare Among the Moslems

794 735 799

A. The Distribution of Welfare Responsibilities

Most of the efforts in the field of public welfare among the

/Chinese, Chinese Moslems and Sedentary Tibetans/

apparent trade of innkeeping was simply a cover for another and more lucrative business." (p. 73).

Like the Chinese, the sinicized Moslems are very much concerned with the problem of offspring. To them continuity of life is bound up with that prolongation of existence which a son secures, one who carries on the life which he owes to his parents. This is a completely Chinese concept. The Chinese-speaking Moslems cannot understand and would certainly not accept the Christian faith that life after death is God's gift, that one does not depend upon a son and his worship, and that immortality means the soul or spirit living eternally in Heaven. Miss Cable records in her book: "We talked often of these things, but it was hard for them to understand what I told them, and they would turn it off with one excuse or another. 'She is different from us', they said, 'her life is given up to God's work and her merit will secure her an entrance to Paradise'. Some envied, some pitied, some just stared and made no effort to understand, others summed it up in these words: 'Eastern ways are for the East, Western ways are for the West.'" (p. 75).

The Chinese-speaking Moslems in the Northwest, in spite of their having taken up a considerable amount of the Chinese way of life, are deeply conscious of racial and religious inadaptability to Chinese rules. Most of them are always rebellious. They always think that they are oppressed or unfairly treated by the Chinese authorities. For this reason, Moslem revolts occur in the Northwest frequently. For example, the immediate cause of the the 1930 revolt was, according to Miss Cable's account, the suspicion of the Moslems that the Chinese Government was to change their age-old social and political system and that the Chinese population in the area goat many advantages at the expense of the Moslems. Up to 1930 the Moslems in the Hami district of Sinkiang were always governed by a ruler of their own race, religion and speech. The last one of their rulers was Khan Maksud Shah. This ruler died during the year 1930. The Chinese Sinkiang Government took this opportunity to end the Moslem system and the succession of the Khan was not allowed to continue. Maksud's son, Nazir, heir to the throne was summoned to report at Urumchi, then capital of the Sinkiang Provincial Government, and Yolbars, the Tiger Prince, was ordered to appear with him. This was bad news for the Moslem inhabitants. Later, a word came from the capital that the young prince had been made a prisoner in his own lodging, and that there were to be many changes in the standing of the Turki people. When Yolbars returned to Hami he left Nazir in Urumchi, and arrived in company with a band of Chinese officials who at once sat down to business and drew up a list of changes which were to be introduced in the administration of the Moslem community. The old administration

STRUCTURE OF GOVERNMENT

I. The Government of Administrative Regions

A. Basis of Regions

The turning point of the Chinese Communists' military campaign in northwest China was on April 22, 1948, when they retook Yenan. With the deteriorating general military situation, the Nationalists rapidly lost the Northwest. In December, 1949, the Communist conquest of the area was basically complete. Just as in other areas, the army was their main strength, essential in maintaining peace and order. Thus the local political structures which they set up were closely knit to the military forces, an inheritance from the civil war. Recognizing this fact, the central government of the People's Republic decided to divide the nation into several large regions, roughly corresponding to the assigned areas of each field army. It appointed the commanders of the various field armies to manage the civil administrations of the corresponding regions. The Northwest Region included the municipality of Sian, directly under the central authority, and five provinces: Shensi, Kansu, Ninghsia, Chinghai, and Sinkiang.

B. Organizational Regulations

1. Military and administrative council

On December 16, 1949, the Government Administrative Council passed the organizational regulations of the People's Government Committee on Administrative Regions. According to these regulations, a Military and Administrative Committee was to be appointed by the Central Government in each administrative region to maintain peace and order during the first stage of the Communist conquest.

a. composition

P'eng Te-huai, the commander of the First Field Army, was appointed Chairman of the Northwest Military and Administrative Council, which had two vice-chairmen and forty-one members. The chairman and vice-chairmen were Chinese, and the members included four Moslems, two Uighurs, one Tibetan, one Mongol, and thirty-three Chinese. One of the Chinese was a woman.

b. expiation

In the regulations it was also stated that the Military and Administrative Councils were to be abolished as soon as the following conditions were fulfilled:

(1) when the military action was over;
(2) when land reform was completed;
(3) when the people of each region were well organized and a general election had been called. Then the People's Congresses of each administration region, elected by popular vote, were to elect

Even with the advent of the Chinese Communists, there was little fundamental change in the composition of the panel of men in the political arena of the Northwest. The men who acquiesced to the Communists and were retained in office as well as those who opposed the Communists were the same men who had been in the political limelight in the past. Some of the men sent out by the Communist Central People's Government were the same men who had been sent out in the past by the Nationalists. The names of local Communist officials appeared to be new, but actually many of them had been in the Northwest for a long time, working in the underground. The old and the new, the local and the Peking-appointed, were all worked into the Administrative Council of the Northwest and the provincial governments. The general election of 1954 resulted in a reshuffle of the political figures of the Northwest, but not in a basic change in the composition.

The situation in the northwestern provinces was in a state of flux in 1949 prior to the actual occupation by the Chinese Communists who were then in the process of conquering all of mainland China. In May, Sian was occupied by Chinese Communist troops, who were posed for their westward advance to gain control of Ninghsia, Chinghai (both of which soon fell to Communist arms), and Sinkiang.

Out in the west, Sinkiang was divided into two political regimes: the adherents of the provincial government and the insurrectionists in Ili. At Urumchi was the headquarters of the Chinese Nationalist Army, under the command of T'ao Chih-yüeh, and the provincial government headed by Burkhan Shahidi, a Russianized Uighur, who was then middle-of-the-road in politics and who represented the large Uighur population. With him was Mehmet Emin Bughra, who had played a part in the establishment of the East Turkestan Republic of 1933 (at Kashgar) as well as in the East Turkestan Republic of 1944 (at Kulja in Ili). Politically, they cooperated with the Nationalist Government and they sought only a modicum of liberties, such as the establishment of a government of their own choosing and the preservation of their languages, culture and traditions. They were thus a less militantly revolutionary group than the Ili faction. In September, 1949, with the defeat of the Nationalists on the mainland, with the Chinese Communist Army preparing to march into Sinkiang, and with the persuasion of such men as Chang Chih-shung, the provincial government under Burkhan and the Nationalist forces under T'ao Chih-yüeh formally submitted to the Communists.

The revolutionary movement centered around Kulja was, since 1948, quiescent, rendered impotent by internal dissensions and the defection of some of its leaders, including Osman Batur. To recoup their fortunes, Akhmejan Kasimi and his lieutenant, Saifuddin, organized the Sinkiang League for the Defense of Peace

in curbing the hostility of segments of the population towards the Communist regime. Sabotage as well as open rebellion continued unabated, as the following items, culled from Communist papers, show:

Item: November, 1951, arsonists set fire to the Urumchi Fur Factory causing a loss of two billion yuan (US $100,000).

Item: April to July, 1952. Revolt of Chinese Moslems in Kansu, who killed over 3,000 Communist cadres and many government officials and seized control of three districts.

Item: March to June, 1953. 1,380 "bandits" reported annihilated in southern Kansu.

Item: December, 1953, Suppression of "bandit" forces under Ma Liang in the Kansu-Chinghai-Szechwan border region.

Item: First half of 1954, 3,420 counter-revolutionary cases unearthed.

IV. United Front Work, 3. The Cadres

A. Recruitment of Cadres

The placement of non-Communist and non-Chinese leaders in the government and the organization of the people, while important, were but subsidiary tasks. The principal task was the reform of the old cadres and the recruitment of new cadres to serve as the work forces of the party and the state. The job, which was a part of the building of the "democratic United Front" since it concerned the integration of Communist with non-Communist employees, was handled by two agencies of the Northwest Bureau of the CCP: the Department of Organization, headed by Ma Wen-jui, which was responsible for party expansion, and the Department of United Front Work, headed by Wang Feng, which was responsible for recruiting and integrating non-Communists and non-Chinese functionaries in government and party work.

The shortage of trained cadres and the need for more were felt by the Communist authorities from the beginning of their rule over the Northwest. In November, 1949, barely a month after the Communists took over the vast territories of the Northwest and two and a half months before the formation of the Northwest Military and Administrative Council, Ma Wen-jui, who had already set up his Department of Organization, declared that the main problem facing the Chinese Communist Party was the training and employment of new cadres (JMJP, January 4, 1950). The need was particularly urgent in view of the depletion of trained men due to the transfer of many of the veteran cadres of the old Shensi-Kansu-Ninghsia Border Region to other parts of the country and the reluctance of the local youth to become cadres. Hsi Chung-hsün, secretary of the Northwest Bureau of the Chinese Communist Party, pointed out that the number of men who had

violate rules and regulations are stressed as they were in the monarchal days.

Social pressure is also great. With the whole population organized under the Communists' tight control, the entire society can be mobilized to work against crime and political conspiracies. This has been well demonstrated by the various "anti" movements and the study groups.

B. Current Problems of Administration

Because of the tight governmental control of news and the distance which separates northwest China from the outside world, very little information has been obtained about resistance activities in the area. However, judging by the meager information offered by the Communists themselves, their rule over the northwest has not been very smooth. The Communists seldom, if ever, reveal their troubles while they are current, but they do uncover some facts when the resistance has been suppressed. By careful screening, one may piece together the picture of subversive activities in the area. Sometimes they were on an alarming scale. To help clarify this general background, some excerpts from the Chinese Communists' own reports and a few indirect quotations are presented as examples.

1. "During the past year, (i.e. 1950)...we have destroyed more than 69,600 bandits in the northwest. Right now there are still more than 5,400 active bandits. The largest group is the one under the leadership of Osman and Husein who are hiding in the deep mountains along the border line between the provinces of Kansu, Ninghsia, Chinghai and Sinkiang. There are about two to three thousand men in this group. The rest of the bandits are in small groups linked with various underground spies and the rural counter-revolutionary forces. The condition is still very complicated..." (Jen-min ch'u-pan-she: Cheng-fu kung-tso pao-jao, 1950, p. 418, Report on the book of the Government.)

2. "...the misunderstanding...between the various nationalities has not yet been thoroughly dissolved. Consciously or unconsciously,...the Pan-Chinese idea still exists in our Chinese cadres' mind. Besides, we still have some serious shortcomings and mistakes in our nationality work. When the remnants of the bandits and spies fanned up the feelings of the people, it led to the disputes that occurred among the nationality groups in certain areas after the liberation. In the area of Lin-hsia (in Kansu), the military conflict between the Moslems and the Chinese caused more than one thousand deaths and the dislocation of more than 30,000 people who were forced to leave their homes. The loss in production was even more serious.

"In Ta-t'ung county of Chinghai, the T'ung-hsin-ch'eng of Ninghsia, in the area of P'ing-liang of Kansu, there have been

N
+175 military riots on a large or small scale.... The Chinese at Tien-
+563 tzu-wa of Ku-yuan county (in Kansu) were unwilling to be annexed
+668 to Chang-hua-tien where the Moslems were the majority. They
• 669 repeatedly petitioned to the county government, but the county magistrate insisted on upholding his own opinion.... This ended in the tragedy of the magistrate being beaten and numerous people murdered." (Ibid., p. 444).

3. "(NCNA Sian, December 10, 1950)"

S
175 "Bandit remnants remaining in Sinkiang, native bandits,
579 and special agents working for the US-Chiang elements, led by
668 Ulachibai, Stiga and Pulungchiafu who had been determinedly pur-
669 sued by the People's Liberation Army, were forced on December 1 to surrender their force of 127, bringing with them 70 rifles, 4,000 rounds of ammunition, and a number of horses.

"Ulachibai, a Kazak, was formerly the puppet (i.e. Nationalist) deputy magistrate of Chinghua hsien. Stiga, also a Kazak, was Commander of the Kou-mintang Self-Defense Corps at Nanshan. Pulungchiafu, a Mongol, was formerly puppet deputy magistrate of Ashan hsien, and a company commander of the forces of the bandit Osman.

"During the months of June and July, 1950, the aforementioned three bandits, in collusion with the US-Chiang agent, Osman, undertook to shelter special agents and army deserters, and proceeded with an orgy of rebellion, massacre, and robbery, in the Ching-hua, Nanshan, and Yenki areas.

"For the protection of the interest of the people, the People's Liberation Army, after the successful suppression of the bandit gangs led by Osman, Yollbars (Yolbar), and Janimkan (Janim Khan), since July has conducted operations against the bandit remnants of the three bandit chiefs.

"After overcoming many difficulties, the People's Liberation Army finally dealt annihilating blows to the remaining bandits."

An editorial in the Peking Jen-min jih-pao, (December 28, 1950) reported:

N
+175 4. "Liu Yung-nien, chief of the technical division of the
669 Kuomingtang's 'Second Bureau' in Lanchow... is an arch criminal, who, after liberation of Lanchow, planted 1,200 mines and destroyed the Hsiang-t'ang bridge."

5. "In the spring of 1952, the anti-Communists guerrillas in the P'ing-liang area of eastern Kansu started two open rebellions on April 2nd and May 8th under the leadership of Ma Hsiao-tung and Ma Kuo-yuan. They attacked the counties of Hsi-chi, Hai-yuan and spread all over eastern Kansu and continued their activities, commented Lo Chun in "The Construction and Management of the Highway in Northwest China," in Chung-kung wen-t'i, No. 3, p.120.

N
+175 6. "(NCNA Sian, September 7, 1952)
+668 The Ang-la tribe is located 300 li southeast of Sining in the
669
579

Chien-cha district in Chinghai province. It is a place in the wooded mountains on the west bank of the upper stretch of the Yellow River, where over 8,000 Tibetans dwell together. After the liberation of Chinghai province, large numbers of the KMT remnant bandits under Ma Pu-fang fled to the Chien-cha district, and instigated Hsiang Ch'ien, chieftain of the tribe, to oppose the People's Government, obstructed the communication lines in the adjoining districts, successively assaulted with force the Tibetans and people of other nationalities in the border regions of Kweiteh, Hwalung, Shunhwa, and Tungjen, and several times attacked the PLA.

"With a view to peacefully solving the problem of the Ang-la tribe, as early as October, 1950, the Chinghai Provincial People's Government appointed Hsiang Ch'ien as a member of the Consultative Conference. From September, 1951, to April, 1952, the provincial people's government dispatched personnel 17 times to persuade and convince Hsiang Ch'ien. Chairman of the Chinghai Provincial People's Government Hsi-jao-chia-tso, Vice Chairman of the Consultative Committee Drashi, Deputy Secretary General Ku-chia-sai; Ta-erh-ssu-fa-t'ai-hsia-jung-to-pu, member; Yueh-sai-to-chieh, member of the Committee of Financial and Economic Affairs; Sang-je-shia-tso, deputy director of the Department of Culture and Education; Keng-teng, deputy magistrate of Kweiteh hsien; Ch'ueh-chi, deputy magistrate of Hwalung hsien; T'ung-ch'u-hu, magistrate of Haiyen hsien; Pa-meng, Vice Manager of the Chinghai Trading Company, and other prominent figures of the Tibetan nationality went in person to persuade him...

"In February and March 1952, Hsiang Ch'ien thrice instigated more than 1,000 persons to invade the border region of Kweiteh and other hsien, and attacked the PLA forces at the locality. Furthermore, he dispatched personnel to infiltrate into Tungteh, Hsinghai, Tulan, and other hsien with the intent of instigating and expanding the rebellion...

"In early May, under the assistance and cooperation of the Tibetans and the people of various nationalities, the PLA of the Chinghai Military District carried out an annihilation campaign in the Chiencha district. Most of the reactionary armed forces surrendered at the locality, while Hsiang Ch'ien himself fled and hid in the mountains, bringing along a small number of persons and horses....Hsiang Ch'ien's family was protected by the PLA...

"Chou Jen-shan, director of the United Front Work Department of the CCP Chinghai Provincial Committee, Sang-je-chia-tso, deputy director of the Department of Culture and Education of the Chinghai Provincial People's Government, Yueh-sai-to-chieh, member of the Committee of Nationalities Affairs, Yu-chia-sai, Secretary General of the Chinghai Provincial Consultative Committee, and Ch'ueh Chi, deputy magistrate of Hwalung hsien also went to comfort them...

"Under a call of the correct nationalities policy, Hsiang Ch'ien yielded to the people in Chiencha in the afternoon of July 11, and arrived at Sining on July 31....

"The Chinghai Provincial People's Government has appointed Hsiang Ch'ien to continue to hold the post of chieftain."

7. In an article entitled "The great achievements of People's Sinkiang during the past three years", in Sinkiang jih-pao, January 1, 1953, Burhan, the governor of Sinkiang, gave the following report:

"During the past three years, (1949-1952)...we have wiped out more than 20,000 of the remnant of the KMT bandits, basically cleared out the hidden spies...."

8. In the same paper, in April of 1953 there appeared the following:

"(NCNA Lanchow April 6, 1953)...Northwest Regional Administration Council called a meeting of the Kazakh chiefs along the border of Kansu, Chinghai, Sinkiang at Lanchow from March 23, to April 3, 1953....The Kazakh chief A-t'ung-pai-k'e said: 'In the past, being deceived by the bad people and believing in the rumors, we did not cooperate with the People's government. Instead of punishing us for our past faults, you are now helping us...'"

The above cases all clearly indicated political disturbances. Judging by what has been revealed here, the Communists did try to modify their laws and standards to woo the minority groups. They also did use the minority people as their own agents to police as well as to pacify the resisting minorities.

9. (NCNA Sian, February 28, 1955)

"According to statistics of the people's procuratorates in 48 administrative districts, hsien, and municipalities, 3,500 cases were taken on in 1954."

10. (Urumchi Sinkiang jih-pao, January 20, 1955)

"The Provincial Public Security Department has also dispatched five work teams to various places and adopted a combined policy of carrying out penetrating detection, investigation and research together with the resettling of vagrants and the pronouncing of sentences with great fanfare. According to incomplete data from various localities during the past 11 months, 71.7% of the criminal cases have been brought to light. The data from the two special districts of Tacheng (Chuguchak) and Altai, from the two municipalities of Ining and Kuche as well as from Shache hsien reveal that a total of 25 major criminal cases have been unearthed."

11. (Urumchi Sinkiang jih-pao, January 20, 1955)

"Judging from the events that have taken place in our province during the past year, there are still some habitual robbers, habitual thieves and other criminal culprits who have not been disposed of. Some elements who have gone through reform through labor or who have been released on termination of sentences still refuse to repent and continue to jeopardize social order. Some landlords

who are recalcitrant in maintaining their reactionary standing and military and government officials of the former Chiang government still cling to the shameful and parasitical way of life without engaging themselves in proper employment but commit various practices of thieft and swindling. Some ruffians indulge in drinking and assaulting women. Some illegal prostitutes and professional gamblers convert their brothels and gambling houses into dens for robbers, thieves, and ruffians, and into hotbeds for nourishing crimes. Some unscrupulous second-hand goods dealers and hotel keepers collude with burglarious elements to dispose of spoils and even act as chief planner of crimes. More serious still, a batch of habitual thieves who sneakily move areund various places even collaborate with one another to commit theft and robbery in an organized manner, using arms to threaten people and to carry out violence. Some culprits refuse to repent during reform through labor and even escape from jails to continue their crimes. Some burglarious elements who sneaked into our province from other provinces and who also belonged to the category of counter-revolutionaries carry out their counter-revolutionary sabotage activities in the form of criminal offense or impose themselves as military and government personnel to commit extortion and blackmailing. Some ruffians even intensified their activities to rob and rape women."

12. "An address delived by Hsi-jao-chia-ts'o, a deputy from Chinghai, at the 2nd meeting of the 1st session of the National Congress:

"'Recently, in some nomadic areas (in Chinghai) we discovered rumors spread by the enemies, saying, "To start cooperatives in nomadic areas is just another form of confiscation of cattle and sheep." It definitely hurt the productive morale of the people....

"'Furthermore, there are numerous counter-revolutionary elements carrying on sabotage under the cover of religion. This is often discovered in the area of minority groups. For instance in some nomadic areas in Chinghai, people rumored that a Heavenly mandate had descended, saying that the world would be destroyed soon. The people would suffer in great calamities, etc. It was a disguise of the devil to disturb the common people... But a lot of those who had faith but were short of wisdom believed it.... They interrupted their productive activities and devoted their time wholly on chanting Buddhist scriptures every day, hoping that by doing so they may escape from the disasters....

"'The counter-revolutionists are so active that we cannot afford to neglect them. We must get rid of the idea that everything is in order.... We must suppress them.'" (Hsin-hua yueh-pao, 1955, No. 8, p. 69.)

13. In the Hsin-hua yueh-pao, 1955, No. 8, p. 197, there appeared

"An address delivered by Sun Tso-ping, a deputy from Chinghai,

at the 2nd meeting of the 1st session of the National People's Congress on July 27, 1955:

"'Chinghai is an area where many nationalities live....There are hidden counter-revolutionists and reactionary landlords, rich farmers who are still trying in every way to sabotage the unity of the nationalities. The methods used by these enemies for sabotage are dangerous and shrewd, mainly along two lines, namely, under the cover of religion or by upsetting international relations. The counter-revolutionists also sabotage our productive activities through arson, robbery, spreading of rumor, etc. They even organize open military rebellions. The reactionary landlords and rich farmers also stir up trouble between the middle farmers and the poor farmers. They infiltrate into the mutual cooperative groups and cooperatives to sabotage the mutual cooperative movement.'"

14. The Sinkiang jih-pao, September 30, 1954, reported that

"In the first half of 1954 alone, we have discovered 3429 cases of counter-revolutionary plots in Sinkiang. According to incomplete statistics, we have made arrests in at least 15,000 cases of various criminal offenses during the past 5 years." (A Report on the Achievements of the Political Works in Sinkiang Province during the Past Five Years," by Vice-chairman Kao Chin-ch'un of Sinkiang Province.)

The above reports clearly indicate that there have been disturbances, resistance, sabotage and open rebellion besides ordinary crimes in every province of the Northwest from the very beginning of the Communist conquest until the present.

4. Conclusion

The regular police system under the Communists is huge, yet it is only a very small part of the whole police system, much like the part of an iceberg floating above the sea level. Strictly speaking, every branch of the Communist government, no matter whether it is legislative, administrative, judicial or economic, is a part of the police system and under the control of the Party. Moreover, every person in the country is organized and enlisted in the secret service. He is watching and being watched. Violators are subject to very heavy penalty. (See "The Regulations for Punishing the Counter-Revolutionaries" adopted by 11th meeting of the Central People's Government Council on February 20, 1951, in 1952 Jen-min shou-ts'e.)

SUBVERSIVE POTENTIALITIES

I. Introduction

*175 • 669 The history of China's Northwest has been a great number of insurrections and revolts against the established order. Spontaneous outbreaks, however, occurred only as a result of desperation. The forces that ruled the people remained unchallenged until the misery and poverty which surrounded them became unbearable. Even then, the people would not strike out blindly against their oppressors, but would look to their own tribal chieftains and priests for leadership (see section Political Dynamics). In more recent times, intellectuals, army men and even bandits have taken the place of the old leaders, but it would be incorrect to say that the people themselves have the political consciousness which changes governments or overthrows regimes. On the other hand, the persistent nationalism combined with the strong religious tradition *175 *668 that exists among the Moslems of the Northwest, and the tribal 648 and nomadic past of the peoples of Turkestan and Central Asia, could always be aroused by ambitious and popular leaders in opposition to alien penetration. Throughout the centuries, hostility has existed both against any foreign rulers and among the tribes and minority groups themselves. Three major sources of conflict will be mentioned here: 1) The traditional friction among the tribes of Northwest China due to religious and economic differences; 2) wide-spread resentment on the part of the native peoples toward Chinese rule; 3) dissatisfaction with the Communist regime.

II. Friction among Northwestern Peoples

*563 578 In the first place, because of its geographical position, Northwest China stands at the crossroads of conflicting political ideologies and religious beliefs, originating from the Middle East, India, China and Russia. In an area like Sinkiang, there have lived in uneasy proximity Buddhists, Mohammedans, Greek Orthodox Russians, unorthodox Chinese and atheistic Russians, as well as believers in the most primitive religious practices. Economically also there has existed great contrast: the nomadic tradition of the Kazakhs and Mongols, the oasis economy of the peoples of Inner Asia, the methods of Chinese agriculture, the alpine economy of the Kirghiz of the Tienshan, the economy of the Arikolis who live on the high plateaus of the Pamirs, alongside of which a very young industrial and commercial economy is developing. Friction has always existed between the settled farmers of the oases and the nomadic herdsmen, while within the farming communities, conflicts over water rights, the use of forests and roads, were permanent features in rural life.

*668 cance than the fact that the hardships and disasters previously
177 caused by poor precipitation now seem to have been eliminated.
[466] Livestock has improved, as has the economy in general. There is a fairly good public health program to protect humans, and an even better one for the cattle. With patriotic fanfare both men and beasts now must undergo inoculation campaigns. In the cultural sphere, the Communists have increased the number of schools and have extended adult and higher education. Religious practices are not restricted. The native theater, music and dance, as well as the publication of books and magazines in the native languages, are officially encouraged, and lend color to what is generously called "cultural autonomy." Women have been given equal rights with men, a policy that has caused that segment to look favorably on the whole Communist regime. Even the enforcement of public safety and order has revealed a positive side. It has stopped the endless inter-tribal struggles over pasture lands and irrigation rights, and has insured a certain degree of internal peace - even if a rather artificial one. Mechanization in agriculture and industrialization in general has brought a great deal of pride to the tribal people. The superficial rights they have obtained have created a surprising amount of loyalty toward the regime.

[167] As a result, the number of refugees leaving for Afghanistan, Iran, Tibet and Pakistan, has become smaller, and the organs of effective opposition within Sinkiang and Northwestern China have become considerably weaker, a condition not entirely attributable to the campaign of suppression of counterrevolutionaries.

B. "Counter-Revolutionary" Activities

*668 • 669 While all this may be true to some degree, there are sufficient indications that the negative aspects of Communism often are greater than the technological gains and cultural freedoms that have made it acceptable to a substantial part of the population. The campaign for the suppression of counter-revolutionaries revealed that large numbers of people are antagonistic toward the Communist policies. (For incidents of this kind see section on Public Order and Safety and Political Dynamics). If these statements seem to be mutually contradictory, it must be remembered that elements of truth are present in both contentions. Any categoric evaluation of the attitudes of the people toward the Communist regime would surely be unrealistic. It must also be noted that official sources tend to exaggerate the evil and intensity of the counter-revolutionary activities in order to carry on an effective suppression campaign. This policy itself will continue to increase the dissatisfaction and insecurity of the people. Another point to be remembered is that opposition to the Communist administration is not uniform throughout the Northwest. The provinces of Kansu, Ninghsia and Chinghai, are inhabited by large numbers of Chinese,

N *668 collectivize was slight, but the speed toward socialization has
177 been increased greatly especially since the middle of 1955. The plans call for a continuation in the breakdown of privately-owned
S. farms. In Sinkiang the 1702 production cooperatives which existed
[668] in 1955 are to be increased to 3469 in 1956. By 1960, 85% of all
[177] households are scheduled to be at least semi-socialized. Further-
[494] more, a relatively large number of mechanized state farms have been instituted in the Northwest (China News Agency No. 112.). It is not surprising that these rapid changes, combined with methods of terror and intimidation, should result in peasant opposition. (Union Research Service, Oct. 14, 1955.)

4. Religious organizations

N *668 798 • 669 Religious organizations have also come under attack. Counter-revolutionaries are suspected of hiding in them and of using them for propaganda activities and espionage. Sinister anti-government activities are attributed to the traditional secret societies, espe-
N *668 575 cially I-kuan-tao, which has many branches throughout China and appears under various names. It is estimated to have 100,000 members in Shensi, Kansu and Ninghsia. Secret society activities have existed among the Chinese Moslems since Tso Tsung-t'ang's invasion of the Northwest. Only now are they being suppressed. It is unlikely that, after such a long existence, the Communists will succeed in completely uprooting the organizations in the very near future.

C. Centers of Resistance Abroad

N *668 669 It is clear that no effective organs of opposition can exist in the Northwest under conditions of terror and in the face of a centralized system of police and military control. All that can be expected is individual terror and sabotage - a method of opposition, nevertheless, that continues to give the administration constant irritation and worry. Moreover, if historical precedent can serve as an indication for the future, a rebellious movement can attain political significance only when military aid from abroad is available. This was the case during World War II, for instance, when the Turks of southern Russia rebelled against the Soviet regime and sided with the Germans. At present only two important centers of resistance exist abroad. One is the so-called National Turkestanian Unity Committee (Turkish: Milli Turkistan Birlik Quomitasinin), headed by its president, Veli Kayum Khan, a member of an old aristocratic Uzbek clan; the other is Formosa, the rallying point of all anti-Communists from the mainland.

1. The Turkestanian Unity Committee

N *668 669 648 Few people in the West are aware of the existence of an East and West Turkistan government-in-exile, which is supported by the Turks of Central Asia and by Turkestanian refugees. Due to their fear of political entanglements with Russia, none of the

668 669 648

countries bordering Soviet and Chinese Turkestan have given official recognition to this government-in-exile. It has its headquarters far from Central Asia - in Düsseldorf, West Germany. However, the National Turkestanian Unity Committee is supported unofficially by many of the Moslem countries of the Middle East and Central Asia, such as Turkey, Iran, Afghanistan, Pakistan, Egypt, Syria, Iraq, Jordan, and Saudi Arabia. In each of these countries the Committee maintains a representative office staffed by two members from each Turkish clan from Eastern and Western Turkestan. Iraq is the exception where there is only one representative. In addition to giving financial aid to the exiled government, these countries render assistance in getting Turkestanian refugees temporarily settled. They also allow the establishment of National Turkestanian Unity Committee branches within their borders.

The Committee is composed of ten departments, each of which is under the combined direction of President Veli Khayum Khan and a secretary. These departments are: 1) Organizations and Social Institutions; 2) Science; 3)Information; 4) the Press; 5) Public Health; 6) the Clergy (Turkish: Ulema); 7) Military Affairs; 8) Education, directed cooperatively by all members; 9) Women's Activities; and 10) Foreign Relations, of which Veli Khayum Khan alone is the head.

The spiritual leader of the movement for an independent Turkestan is the famous turkologist Zeki Velidi Togan, who is now a member of the Philosophical Faculty of the University of Istanbul. A native of Bashkiria, Zeki Velidi Togan studied and taught Arabic literature at the University of Kazan. In November, 1917, he became president of Bashkiria. In 1922 he led the Basmachi revolt against Soviet rule. With their suppression, he fled to Tashkent, and from there to Turkey.

During the Second World War, the National Committee gave Germany effective aid against Russia, but its aim always has been independence from any foreign power. "The Germans, as the enemy of our enemy, were temporarily our friends, but we envisaged this state of affairs only for as long as they were fighting against the Russians." (Milli Turkistan #79B, p. 5). The ultimate goal of the Turkestanian government-in-exile is to liberate all of Soviet Central Asia and Chinese Turkestan, a territory of about four million square miles with a population of over twenty million. The leaders of the National Turkestanian Unity Committee claim that they are able to maintain contact with the peoples of Central Asia and that messengers frequently cross unguarded mountain passes to take contraband literature to Communist-controlled countries, and return to the West with reliable information of conditions under Communist rule. Naturally, it is difficult to estimate the degree of influence which the National Turkestanian Unity

Committee holds over the people of Northwest China. Nor is it possible to predict to what extremes a fanatically nationalistic movement may go in order to establish a Greater Turkestan Empire, or the new sufferings which such a Turkic regime may mean to others.

2. Formosa

Since 1949, Formosa has been the natural center for anti-Communist activities. The Nationalists attempt to maintain contact with the border regions, but it is impossible to estimate the effectiveness of such an espionage or sabotage system. Refugees from the Northwest and elsewhere are given subsidies. Frequently they are employed in the anti-Communist propaganda and planning undertaken by Taipeh. The Commission on Mongolian and Tibetan Affairs sponsors radio broadcasts to the Northern, Northwestern and Western border regions, and has done most of the planning for the eventual overthrow of the Communist regime. These include, 1) a draft plan for the administration of the border regions during the counter-offensive, 2) a draft plan for anti-Communist work to be handled by the anti-Communist agencies in the border regions (although no details are given about them), and 3) plans for the training of administrative personnel from the border regions. The Commission has also been publishing books and pamphlets on the problems of these areas.

An anti-Communist branch of the China Islam Association also has its headquarters on Formosa. It serves as a center for Moslem refugees from the Northwest, as well as from Inner Mongolia and China Proper.

Aside from these organizations, there are also individuals who possibly may form a nucleus for future anti-Communist leadership. They include such people as General Pai Chung-hsi, who works closely with the China Islam Association on Formosa, Yolbas Khan, one of the Kazakh leaders who fought with Osman Batur, Ma Hung-k'ui, the former governor of Ninghsia who now lives in San Francisco, and Ma Pu-fang, the former governor of Ch'inghai, who escaped to Formosa and thence to Egypt in 1949. The latter two are devout Moslems and have fought actively against the Communists in the Northwest. Ma Pu-fang is remembered for his enlightened rule and is trusted by the Moslems in all parts of the Northwest. (See section Biographies for details on these men).

Thus, the potential organization and leadership for a non-Communist government in the Northwest exists. Their practical value must remain slight as long as the regime in power continues to be centralized and as long as it gives the people enough material benefits to take the place of political freedoms.

military commander of the Nationalist forces in Sinkiang. He further hinted that he might be in a position to persuade Russian authorities to render help for developing Sinkiang under Chang's leadership. Thereupon Chang Chih-chung recommended Burkhan as a member of the State Council of the Nationalist Government in Nanking, and sent him to Nanking to negotiate with the Soviet ambassador. By December 2, 1948, a secret agreement was reached between Burkhan, as personal representative of Chang Chih-chung, and the Soviet ambassador. The prerequisite of the secret treaty was the removal of the Nationalist commander, Sung Hsi-lien. The important clauses included closer cooperation between Chang Chih-chung and the Chinese Communist Party for the purpose of liberating Sinkiang, and in return, the government of the Soviet Union would give assistance toward reconstruction of Sinkiang. Chang had no choice but to remove both General Sung Hsi-lien and Governor Maksud, and recommend Burkhan as governor of Sinkiang. On December 31, 1948, the Central Government formally appointed Burkhan.

On January 10, 1949, Burkhan officially took over the office. In his open letter to the peoples of Sinkiang, Burkhan stressed the pro-Russia attitude of General Chang Chih-chung. When Chang called a conference of the political and military chiefs in the Northwest, rumors spread that Sinkiang would be given to the Soviet Union or was preparing to surrender to the Communists. When Burkhan returned from the conference he denied all these rumors. By March 1949, the entire situation in the interior of China had made a drastic change. In Sinkiang, prices had become extremely high. Burkhan proclaimed his policy of economic self-sufficiency in Sinkiang by issuing silver dollars and silver dollar notes as the new currency and discontinuing use of National gold yüan notes. In May of the same year, Burkhan extended the Sino-Russian Aviation Pact for another five years. In the meantime Manchuria had been taken by the Communists, and the whole of north China was also put under the control of the Communists with the surrender of General Fu Tso-i, while in Central China, a Soviet regime was also formed. Generalissimo Chiang Kai-shek announced his retirement from his presidency, and General Li Tsung-jen, vice-president of the Nationalist Government, took over the power and began to negotiate peace with the Communists.

In July, 1949, the Communist troops had begun to move into Kansu Province. On September 23, 1949, the Communist general, Wang Chen, received the surrender of the Nationalist troops at Chiu-ch'uan, Kansu Province. On September 25, two days after the surrender, Burkhan, together with the commander of the Nationalist troops in Sinkiang, cabled to Peiping to announce their severance of relationship from the Nationalist

159 and the so-called Four Ma, all of Moslem religion. Ma Hung-
[614] k'ui is one of them. His father, Ma Fu-hsiang (literary name, Yun-t'ing), served in the early years of the Republic as the High Commissioner for Chinghai, commander of the Guards Division for Altai, and later in the second year of the Republic, 1913, the Commission of the Guards Division for Ninghsia.

When the Revolution of 1911 broke out, Ma Hung-k'uei was
• [669] studying at the military school in Lanchou, Kansu. He played a small part in the revolution by mobilizing the students of the school and trying, unsuccessfully, to take over some strategic points in the city.

159 He started his military career when he followed his father to
701 Ninghsia as a batallion leader. In 1921, when his father was transferred to be the garrison commander of Suiyuan, he was promoted as commanding officer of the Fifth Mixed Brigade. During the war between Chang Tso-lin of Manchuria and Wu P'ei-fu of Chihli (Hopei) Province, he was appointed as the commander of the cavalry in Jehol, Chahar and Suiyuan Provinces. After the war was over, he followed the victorious General Feng Yu-hsiang to Peking. In 1926, when the Northern Expedition started, he followed General Feng again, taking part in the expedition. At this time his troop was reorganized into the Fourth Army of the First Army Group, and he became the commander of the Fourth Army. In 1928, he fought the war in North China and his troops suffered a great loss. When the situation was settled, he regrouped his troops into the 17th Division, and was put in charge of suppressing the bandits in the western part
[669] of Shantung Province. In April, 1929, when General Feng Yu-hsiang revolted against the Nationalist Government headed by Generalissimo Chiang Kai-shek, Ma remained loyal to the Nationalist Government. His troops were again reorganized into the 11th Army. In 1930, his army was enlarged into the 15th Army Group and was in charge of patrolling the Lung-hai and Tientsin-Pukou Railway lines. In the winter of 1932 he was ordered to go to Ninghsia, and on January 1, 1933, he was appointed governor of Ninghsia.

When Ma Hung-k'ui took over the administration in 1933, the
159 province of Ninghsia was in a deplorable situation, suffering
185 from floods and the ravages of Ma Chung-ying. To restore
656 peace and prosperity to the people, Ma Hung-k'uei first mopped
[579] up the remnants of the bandits in his province. He introduced the Pao-chia system by which the people were organized to insure against the recurrence of banditry. Third, he adopted measures to put a gradual end to the planting and smoking of opium. Fourth, he stabilized the currency within Ninghsia and improved the taxation system. Simultaneously, he followed the policies of improving land administration, encouraging

159 the "Four Ma of Islam" in the Northwest. When he was twenty-
701 one years old, Ma Hung-pin started his military career by serving as commanding officer of the cavalry corps in charge of the Sining mines in Chinghai Province, and at the same time he was a member of the reclamation commission and mining commission of that province. In 1911, he became commanding officer of the cavalry batallion in charge of the patrol of the western region of Kansu. His first military merit was achieved when he pacified the disturbances of the two Mongol banners in western Suiyuan who were stirred to revolt by the independence achieved by Outer Mongolia in the first years of the Chinese Republic. In 1914, he was the commanding officer of the Seventh Cavalry Batallion and stationed in western Suiyuan guarding the Yellow River Bend and keeping a watchful eye against the Outer Mongols. Because of his meritorious record in the pacification of bandits in his area, he was awarded several medals and was promoted to lieutenant general by President Li Yüan-hung of the
[648] Peking Government. Later he also received a medal from the government of Belgium for his excellent work in protecting Belgian missionaries. In 1920 he was appointed as Defense Commissioner for Ninghsia (not a province at that time) and was charged with the duty of defending the frontier areas. In 1926 he was given the post of Pacification Commander of the Shensi-Kansu border regions. In 1927, when the Northern Expedition began, he was the commander of the 24th Division of the Second Army Group of which General Feng Yu-hsiang (the Christian General) was the commander-in-chief. In 1928 he was transferred as the commander of the Seventh Division.

159 When the Nationalist Government was established in Nanking,
635 Ma Hung-pin was appointed the first governor of the newly organized province of Ninghsia. This was, so far, the first political assignment for Ma. In 1930 he was also made acting governor of Kansu Province. His political life ended in 1933 when his cousin, Ma Hung-k'uei, succeeded him as governor of Ninghsia.

159 From 1934-1936, his main task was to pacify the remaining
[579] bandits in the eastern region of Kansu. Because his policy in suppressing bandits was to win them over rather than annihalate them, he had won for himself the nickname of "Ma the Kind Man." In 1937, as commander of the 81st Division and, concur-
[701] rently, defense commissioner for the western region of Suiyuan,
[648] he led his troops in fighting the Japanese invaders in that area. In 1940 he became commander-in-chief for the defense of Etokuchi, a Mongol Banner in western Suiyuan.

159 When the Communists started their campaign in the North-
• 669 west, Ma Hung-pin surrendered Ninghsia Province to the Peo-
* 668 ple's Liberation Army on September 16, 1949. Because of this drastic move, the whole Northwest was soon lost to the Communists.

159 under the Ma family in Chinghai Province started with their
614 father, Ma Lin, who devoted his efforts toward the promotion
635 of education within the province. After Ma Lin died, his brother,
Ma Ch'i, took over the administration. But when the war with
[648] Japan began in 1937, Ma Pu-fang was given the position of governor of Chinghai, and at the same time he shouldered the tasks of leading the Kuomintang and commanding the troops within that province.

159 Ma Pu-fang was a career army officer. He started as a
[701] commanding officer of a batallion, and gradually climbed up to the post of commander of an army. When his uncle, Ma Ch'i,
[635] was governor of Chinghai before the Sino-Japanese War, he became a member of the provincial government. When he finally took over the administrative job in Chinghai in 1937, he was one of the youngest governors in China.

159 For more than thirteen years, 1937-1950, he held the posi-
635 tion of governorship. During his administration, particularly
185 during the war years, he aimed at the following six main tasks: First, he organized the Pao-chia system not only among the Chinese and Moslems, but also among the Mongols and Tibetans in his province. Second, he trained the local militia for the
[706] purpose of maintaining local order. Third, he was very strict in carrying out the policy of elimination of opium. Fourth, he
[891] conducted the movement of compulsory education aiming at the total elimination of illiteracy within Chinghai. As a result of his policy, in a single year more than a hundred thousand people learned to read. In addition, there were 8 middle normal schools, 131 primary schools and 805 grade schools in that
[499] province. The fifth task was to construct highways, and during his administration, more than two thousand kilometers of highways were constructed. The sixth point was afforestation. Every person was compelled to plant five to ten trees a year, and as a result, more than seven million trees had been planted during those war years.

159 Being a Moslem himself and realizing the complexity of
77 religions in Chinghai, Ma Pu-fang was cautious in his handling
641 of different religious groups. On the whole he worked toward
635 religious harmony, and his policy was one of equal treatment toward all tribes. He chose his personnel regardless of religion or race, on the basis of capacity and personality. Thus he was generally trusted by all religious groups in his province.

159 When the Communists began their campaign in 1949, they
669 pushed their way to the Northwest. Ma Pu-fang was appointed director of the Administrative Headquarters of the Northwest, succeeding General Chang Chih-chung. Joining forces with Ma Hung-k'uei, he directed the defense of the Northwest. Unfortunately, all his attempts failed and by October, 1949, the

159 provincial capital of Chinghai, Sining, fell to the Communists.
669 He was asked by the Communist authorities to serve on their Military Control Board, but when the Nationalist Government moved to Formosa, he managed to leave China. He now lives in Cairo, Egypt.

Ma Pu-ch'ing (1898-)

159 Born in 1898 in the district of Lin-hsia in Kansu Province, Ma Pu-ch'ing was the elder brother of Ma Pu-feng, governor of Chinghai Province from 1937 to 1949, and the oldest son of the late governor of Chinghai, Ma Lin. The youngest son, Ma Pu-ying, did not enter public life, but chose to be a farmer. After
159 he was graduated from the First Middle School of Kansu, Ma
701 Pu-ch'ing entered military life. In 1922 he was commander of the Fourth Regional Garrison. Next year he was promoted as commanding officer of the Cavalry Regiment of the Fifth Mixed Brigade of the Army. In 1928 he became commanding officer of the 77th Brigade of the 28th Division of the Nationalist Revolutionary Army. In 1929 he was transferred to commanding officer of the 65th Brigade of the 22nd Division of the 4th Route of the 2nd Army Group of the Revolutionary Army. In 1930, he was given commandership of the Loyang Garrison. By next year he became commanding officer of the 26th Division of the 4th Route of the 2nd Region of the Nationalist Army. In 1932 he was promoted as commanding officer of the First Cavalry Division of Kansu Province. In the same year, he was transferred as commanding officer of the Second Cavalry Division of the Nationalist Army. In 1936 he became commanding officer of the Fifth
159 Cavalry Division of the Army. When the Sino-Japanese War
701 broke out, he was appointed as the Commissioner of Highways
631 in Kansu Province. Later he was given the position as Reclamation Commissioner of Tsaidam region in Chinghai Province, and concurrently commanding officer of the Fifth Cavalry Division. In 1943 he became deputy commander-in-chief of the Fortieth Army Group.

159 His appointment as Reclamation Commissioner of Tsaidam
631 region in Chinghai Province by the Central Government came at
635 the time his brother, Ma Pu-fang, was governor of that province. Thus the two brothers were often mentioned together as administrative heads of Chinghai. At that time China was engaged in the war against the Japanese invaders, and the whole coastal region had been lost to the enemy. To deal with the urgent need to continue the war, the Central Government then adopted a policy of developing the border regions. Ma's appointment as Reclamation Commissioner of Tsaidam was therefore considered a very important step. Tsaidam region is situated in the northwestern part of Chinghai Province, between the

159 Ch'ilien and Chishih Mountains. In the Tsaidam River valley,
631 comprised of six districts, there were nearly a hundred thou-
635 sand Mongols, who were Buddhists by religion and nomads
economically, and twenty-five thousand Kazakhs, with some
Moslems and Chinese. When Ma Pu-ch'ing took over this re-
[185] gion he directed his reclamation program along the following
lines: to inspire patriotism among the border peoples, to pro-
mote education, to develop the uncultivated lands by settlements
of people, and to increase production by encouraging industrial
programs, to improve the transportation facilities to ship
needed goods to the interior, and finally to open mines in that
region for the needs of both the border area and the interior.
159 His public life, like that of his younger brother, was finally
• 669 ended by the arrival of the Communists. When the Northwest
was lost to the People's Liberation Army, he fled from Ching-
hai and followed the Nationalist Government to Formosa.

159 Ma T'eng-ai
631 Background and dates unknown. 1953-, member of the North-
635 west Administrative Council and vice-chairman of the People's
Government of Ninghsia Province until 1954.

159 Ma Wen-jui: Communist Party member
*668 A native of Shensi Province. He had served as secretary to
631 the Communist Headquarters in eastern Kansu under the Shensi-
Kansu-Ninghsia Border Government. When the Military and Ad-
ministrative Council for the Northwest was formed in 1950, he
was appointed as a member of that council, in which he was
chairman of the People's Supervisory Commission and a mem-
ber in the Political and Legal Commission, positions which he
retained when the council was reorganized as the Northwest
Administrative Council in 1953. In the party, he has been since
1950, director of the Department of Organization and director
of the Commission on Women's Work in the Northwest Bureau
of the CCP. In 1955, he was transferred to Peking as Minister
of Labor.

159 The main responsibility of Ma Wen-jui was to push the United
*668 Front work in the Northwest in 1950. His Department of Organi-
zation was active, months before the formation of the MAC and
the People's Governments, in the induction of former National-
ist Government functionaries and students into the governments
of the Communists. Later, he was responsible for pushing the
ideological reforms of the cadres and the purges in 1952, and
the job of Communist Party expansion in the Northwest.

159 position in 1954. Since 1953, appointed concurrently a member
*668 of the Administrative Council of the Northwest. In 1955 he was
701 made a member of the National Defense Council. He is also a
member of the Board of Directors of the Sino-Soviet Friendship
Association.

Teng is another example among the officers of the Nationalist Army who shifted their allegiance from one party to the other. As his defection from the Nationalist Government speeded the Communist cause in North China, he won a rather high place in the Communist Government.

159 Tso Tsung-t'ang (1812-1885); General, statesman
Born in 1812 in Hunan Province. His family was poor though both his grandfather and father held the degree of hsiu-ts'ai. He studied under his grandfather and later under his father, and in 1837 entered the Ch'eng-nan Shu-yuan (Southern City Academy) and studied under Ho Hsi-ling. Obtained the Chu-jen degree in 1838 but failed in three attempts to win Chin-shih degree. In 1852 when the Tai-ping troops entered Yunnan Province, he was asked by the governor of Hunan, Chang Liang-chi, to help in the defense of Ch'angsha, the capital city of Hunan. He fought against the Tai-ping troops for three months, until the invaders had to by-pass Hunan to go northward to Hupeh Province and down the Yangtze River. In 1853, when Chang Liang-chi was promoted to governor-general for Hunan-Hupeh-Kuangtung-Kwangsi, Tso went with him to Wuchang and defeated the Tai-ping rebels. When Chang was transferred, Tso resigned from his post and retired to his native home. In 1854, Lo Ping-chang was appointed governor of Hunan, and Tso was asked to serve under him, but did not accept the offer. In 1854 the Tai-ping troops invaded Hunan again. Tso was asked by the people of the province to resist the invasion, and he helped Lo for five years in the defense of Hunan. In 1860, Tso was asked by Tseng Kuo-fan to train five thousand troops in Hunan; in 1861 he was ordered to take charge of the military affairs of Chekiang Province, and in the same year he was appointed governor of Chekiang. In 1863 he was promoted to governor-general of Fukien and Chekiang Provinces, and concurrently governor of Chekiang. In 1864 the whole province of Chekiang was freed from the Tai-ping troops, and Tso was awarded an earldom of the first rank and the designation of k'o-ching. In 1866 he recovered both Fukien and Kwangtung Provinces and the Tai-ping regime came to an end.

159 In 1866, when the Mohammedan uprising started in the North-
• 669 west, Tso was made the governor-general of Shensi and Kansu. In 1868 he first engaged the Nien bandits in Chihli, and by the summer he annihilated the bandits in Shantung Province. He

N
159 arrived in Sian in November 1868. From 1867 to 1872, for six
• 669 years, Tso fought with the Mohammedans, and finally in Feb-
ruary, 1871, the headquarters of the Mohammedans, Chin-chi-
pao, was taken by Tso's troops and their leader, Ma Hua-lung,
was executed. In August 1872, Tso finally arrived in Lanchou,
Kansu. By November 1873, the whole province of Kansu was
liberated from the Mohammedans; and Tso was made the assoc-
iate grand secretary. In 1874 he was promoted to full grand
S secretary. In 1875 the trouble in Sinkiang broke out, and Tso
[669] was ordered to take charge of the military affairs of that area.
After all the preparations were made, Tso began moving his
troops westward to Sinkiang, and by 1877, both the northern and
N southern regions of T'ien-shan were recovered. In 1878, the
[554] whole region of Sinkiang was restored and Tso was awarded by
promotion to second class marquis (hou) and his lieutenant, Liu
N Chin-t'ang, was made a baron. In 1880, when Tseng Chi-tse
159 was sent to Russia by the Manchu government for the second
[648] negotiation of the return of Ili which the Russians occupied dur-
ing the Turkestan uprising, Tso was ordered to move his troops
to stand by for any eventuality. But in August 1880, Tso was
suddenly summoned back to Peking. He arrived at the capital in
February 1881, and was appointed to serve in the Grand Council
and the Tsungli yamen. In 1881 he was appointed governor-gen-
eral of Kiangnan and Kiangsi. In 1883, he quelled a minor up-
rising in southern Shantung. By August 1884, the conflict with
France began and the coast of Fukien became seriously involved,
so Tso was once again appointed high commissioner of that
province, and in December 1884 he arrived in Foochow. In the
spring of 1885, negotiations with the French were resumed and
by June 9, 1885, a treaty was signed by Li Hung-chang with the
French representative. In September 1885, Tso died in Foo-
chow. He was granted all posthumous honors and was canon-
ized as Wen-hsiang.

The achievements of Tso Tsung-t'ang in the Northwest can be summarized briefly in the following points: First, his military achievements had consolidated the political control of the Manchu Dynasty in the north. The pacification of the Nien revolts in Chihli and Shantung, the suppression of the Moslem uprising in Shensi and Kansu and the defeat of the Sinkiang rebels, chiefly Pai Yen-hu and Yakub Beg, all contributed heavily to the restoration of Ching power in the Northwest.

S Secondly, his diplomatic triumph in dealing with both Rus-
[648] sians and British in Sinkiang had secured that territory under
the Chinese administration. During the civil war in Sinkiang,
N the Russians occupied Ili and the British supported Yakub Beg
159 in the south. At one time when the northern region of T'ien-
S shan was recovered by Tso-s troops, British diplomats
669
648

So-called counter-revolutionary elements were reported to have operated in several provinces. In Hopei, the public security organs uncovered several cases of "I-kuan-tao" sabotage. The "I-kuan-tao" are supposed to be remnants of KMT officers and several sects like the "Golden Line". These elements had operated in Kansu, Shensi, and Inner Mongolia. They usually recruited former prisoners who had been in Chinese Communist prisons. These elements were supposed to have wormed their way into economic enterprises, rural mutual aid, and co-ops to engage in sabotage. They are blamed for fabricating rumors, and during the unified purchase of grain, they are supposed to have instigated the peasants to put aside grain and not send their surplus to the State.

Another major problem is the assessment of cotton output and the fixing of cotton purchase quotas. What the state does with commercial crops, as it does with nearly all rural produce now, is to send teams out to each household and estimate what the output, consumption, and surplus will be. The amount to be purchased is determined on the basis of these findings. Once this data is collected and examined, other items can be planned such as the amount of thread to be spun, the textile output that will result, and how much cotton cloth can be made available to the rural areas. It is very important, then, that the initial surveys to determine the available surplus that may be purchased by the State be correct in order to fulfill other portions of the plan. If incorrect estimates are made; i.e., lower estimates of output allowing peasants to retain excessive quantities of cotton, this would promote the growth of rural capitalist elements who might carry on speculative activities by selling their surplus cotton at a higher price than offered by the State. The Chinese Communists blamed two factors for incorrect assessments of cotton output; the incorrect ideological approach of cadres and their poor survey methods. In the latter case, some cadres, because they were unpopular among the peasants, thought it advisable to make slightly lower estimates of cotton output. In other villages, local cadres wished, by making lower estimates, to keep an extra supply of cotton for themselves or for their relatives and neighbors. In regard to defective working methods, the cadres did not carry out their estimation of output by first propagating Communist policy and mobilizing the masses; they made investigations without the assistance of the peasants and encountered difficulty in deriving the true output.

If inaccurate estimates of peasants' cotton production are made, it will also have a direct effect on peasants activity for mutual aid and cooperation and will hinder the unity between organized and individual peasants. It seems that the difficulties of estimating cotton output were widespread in Shensi and had given rise to peasant resistance of Communist agricultural

*668 563 474 474 476 185 In the Wu-chung Autonomous Chou, in Kansu, Hui and Han groups live together. Today there are 277 agricultural producer co-ops, eighty nine for the Hui and 124 for the Han. More than 3,200 mutual aid teams have been developedp 1,200 are permanent. Future policy stresses increased agricultural production by cooperativization. In a speech delivered by Ma Teng-ai to the National People's Congress however, key emphasis was placed on the correct implementation of solidifying the poor and middle class peasants and following the principle of allowing the peasants of various nationalities to enter the co-ops voluntarily. Such a desire to enter must result from the mutual benefit they feel they would receive. When agricultural producer co-ops are to be formed, namely, consolidating the various permanent mutual aid teams and pooling land, farm implements, etc. special attention is to be given the customs, habits, and religious beliefs of the different nationalities. For instance, if the Hui and Han members of the same cooperative do not want to use the same well, different wells are to be drilled, and used separately. If hogs are raised in a cooperative, they may be attended by the Han members themselves and they are not considered an auxiliary occupation of the cooperative. The Chinese Communists, in dealing with the nationality problem in the Northwest, so far have tread very lightly whenever they wished to promote cooperativization. They have proceeded very slowly, using subtle methods of persuasion to urge the various nationalities to enlist their labor power in the mutual aid and produce co-ops.

*668 669 578 474 Communist administrators complain bitterly of counter-revolutionary activities in Kansu. In a speech by Su Chen-yung, Vice Director of Public Security Bureau, he states: "Counter-revolutionaries have unceasingly wages destructive activities against the Socialist transformation enterprises in both the cities and the countryside. With a view to impeding the work of the peasants joining the cooperatives, and to sabotaging agricultural production, they concentrated on certain reactionary landowners, wealthy peasants, and Taoist leaders to cheat some backward elements into establishing false cooperatives and even organising uprisings." (Union Research Service. Vol. 3, p. 43.)

Su Chen-yung then gives as examples the disruption of progress in establishing agricultural cooperatives, the killing of Communist cadres, the burning of supply and marketing cooperatives storehouses, etc. Such admission by Communist officials of overt violence indicates that the Chinese Communists still are encountering peasant resistance, although nearly seven years have passed since their occupation of the region.

*668 24 474 185 C. Conclusion

The Chinese Communists have attempted to control closely

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

medanism, an equally alien religion, has become so firmly rooted in many parts of the country. The Chinese show more interest in the inscriptions relating to their classic works in the Pei Lin than in the famous Nestorian Tablet, and indeed the latter was only moved into that select enclosure recently because of an alleged attempt by a foreigner to remove the original stone under the pretext of having a copy made for a foreign museum.

We stayed in Hsian twice in the course of our journeys, an interval of two years elapsing between the two visits. On the first occasion, which was during Yuan Shih-k'ai's regime as President-Dictator, the city and province were in the hands of one of the Northern Generals supported by a Northern army; two years later the situation had completely changed, the province was enjoying a kind of home rule under native officials of its own choice, and was practically independent of Peking. In the interval Yuan Shih-k'ai had been dragged under in the collapse of his monarchical scheme, and with him had vanished, it would seem, all hope of a stable government in China. Many provincial capitals have had a rough time during the years which have elapsed since the Revolution of 1911, but few or none have suffered more than Hsian Fu. The history of events in Shensi during these years is interesting and not uninstructive for those concerned with the future of the Republic, and is here briefly related.

The Revolution of 1911 took a particularly violent form in Shensi, largely owing to the fact that it was engineered by the local members of the notorious secret society known as the Ko Lao Hui, and was ushered in by an outbreak at Hsian, in which the Manchu inhabitants of the Manchu city were massacred, and some missionaries murdered by the uncontrollable mob. For some months afterwards a state of chaos reigned everywhere, and to make matters worse the province was for a considerable time threatened by an invasion of Mahomedan troops from Kansu, under Sheng Yün, the ex-Viceroy of the North West, and Ma An-liang, the leader of the Kansu moslems, both of whom refused to acknowledge the Republic even after the abdication of the Emperor. These Mahomedan troops did in fact cross the border and sacked a few cities in Shensi, but were

stopped just in time by the explanations of Yuan Shih-k'ai; for it is unlikely that the revolutionary levies of Shensi would have been able to withstand them, and had it not been for Yuan Shih-k'ai's hand at the helm, the devastation of the whole North West by the Mahomedans, and possibly the establishment of an independent Mahomedan State in Kansu, might have been added to the general chaos of those days.

During 1913 things began to settle down under a loose home rule sort of government composed of natives of the province and strongly influenced by the Ko Lao Hui, but early in 1914 Shensi was once more thrown into a state of turmoil by the raid of the so-called "White Wolf" brigands. Hsian was saved by its walls, by no means for the first time in its history, and this terrible horde swept by, almost within sight of the city, westwards into Kansu, whence they straggled back again across Shensi into Honan laden with silver and opium before the close of the year. Yuan Shih-k'ai, however, had in the meantime taken advantage of the opportunity created by these disturbances to send a Northern army into the province on the pretext of fighting the White Wolf brigands, and having thus secured control of the situation, he proceeded to remove the local Tutu, or provincial Governor, and his native administration, and to replace them by one of his Northern generals as Governor with a staff of Northern officials. Shensi thus emerged from the White Wolf ordeal to see its home rule episode at an end and to find itself once again under the strong hand of Peking.

This action of Yuan Shih-k'ai's in Shensi was only a part of a far-sighted scheme which he was then carrying out for replacing the post-revolution Governors, mostly men of the extreme republican type, by his own nominees, stout soldiers from the North on whom he could rely, in preparation for the great day, the existence of which was totally unsuspected by the vast majority of Chinese and foreigners in the country, when he would ascend the Imperial Throne "at the will of the people." He carried out this policy with extraordinary success and tact in province after province, though in most cases it was a case of playing with fire, but for some reason or other he omitted to do so in the case of

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

Yunnan, an omission which was to cost him his throne and his life. When the crash came in 1916 many of these stalwarts put up a splendid fight in the interests of their Imperial master, notably the Governor at Canton (who was not, as it happened, a Northerner at all, but a Yunnanese of aboriginal stock); but one by one they gave way before the overwhelming wave of a really popular rebellion; and it is said that it was the receipt of a telegram from one of the most trusted of them all, the Governor of Szechuan, announcing his abandonment of the Imperial cause, which finally brought home to Yuan Shih-k'ai the hopelessness of the position, and caused him to renounce his throne and sink soon after into the grave.

Returning, however, to the history of events in Shensi; during 1915 Yuan Shih-k'ai's hold over the province continued to tighten, and at this time many of the former revolutionary leaders and Ko Lao Hui chiefs were compelled to go into exile abroad, or to join the bands of brigands, composed largely of ex-soldiers disbanded since the Revolution, who began at that time to infest the Northern districts, and who have practically controlled the North of the province ever since.

At the end of 1915 Yuan proclaimed himself Emperor under the dynastic title of Hung Hsien, and on Christmas Day his great antagonist, the late General Tsai Ao, perhaps after Yuan Shih-k'ai the greatest Chinese of modern times, raised the standard of revolt in Yunnan in the name of the Republic. Scarcely anyone, Chinese or foreigner, in Peking when they heard this news suspected that this movement in a far distant corner of the Empire would grow into a rebellion which would overturn Yuan Shih-k'ai within six months. But General Tsai had laid his plans well, and carried them out with a courage and energy not always found amongst the revolutionary leaders, and as the year wore on and the Northern armies failed to defeat him in the mountains of the south west, province after province threw in their lot with the rebellion. The power of Yuan's military governor in Shensi rested purely and simply on his few Northern troops, and it was not surprising that, when in the early summer of 1916 the anti-monarchical rebellion assumed serious proportions, the situation in so turbulent a

province soon became critical. The crisis was eventually precipitated by the action of a young military officer of high rank, a native of the province, who revolted with the troops under his command, and having collected a large force from amongst the brigands and secret society men in hiding in the north of the province, marched on Hsian Fu as a supporter of the Republic. The Governor, who was not as staunch an individual as many of Yuan Shih-k'ai's other Northern Generals, promptly threw up the sponge and surrendered the city to save his own life. Shortly afterwards Yuan Shih-k'ai died, and Shensi thus reverted to the state of independent home rule existing after the Revolution of 1911, under the leadership of the young General who had successfully headed the rebellion.

Shensi is in rather a peculiar position. Though geographically it is one of the Northern provinces like Chihli, Shantung, Honan, and Anhui, from which the Northern Military Party draw their power and their troops, it has yet of recent years always exhibited a strong revolutionary and republican spirit. The proximity of Szechuan, a Southern province, may have something to do with this. But the main reason is probably not so much a feeling of sympathy with the Southern republicans, as the independent and somewhat turbulent nature of the population, strongly infected with Ko Lao Hui influence, which renders them impatient of Central Government control and desirous of managing their own affairs[1]. This desire for provincial independence is natural and laudable, being perhaps a preliminary step towards a spirit of true patriotism in which the Chinese are as a people, with a few exceptions, so extraordinarily lacking. But the actual results of provincial home rule are altogether bad, and consist in increased brigandage, a corrupt and inefficient administration, an uncontrolled soldiery preying on the people, and other evils too numerous to mention. The problem now facing the country is how to unite a truly republican form of government with a strong central administration.

[1] Shensi has since nominally joined the North, remaining, however, to all intents and purposes independent.

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

pictures on the walls, in practically every district city throughout China (of which there are nearly 2000) evidences the excellence of the principles governing the administration of the country. In the middle schools English, the official "foreign" language, is taught. Unfortunately in too many cases the local school does little more than represent the principle of education. The Chinese have a well-known saying *Yu Ming Wu Shih*, which means "theory without practice"; this saying holds good of most things in China, especially those connected with the Government of the country.

The magistrate of Shang Chou at the time of our visit was rather a remarkable character, and a "Ta Ko" (lodge-master) in the notorious secret society called the Ko Lao Hui. It is improbable that any foreigner knows much about the secrets, the history, doings, and aims of the Ko Lao Hui, but during and since the Revolution it has been the great power in Western China, particularly in Shensi and Szechuan. Originally anti-dynastic, it worked very much in the dark in the days of the Manchus, and for a magistrate then to have been a member would have been an unheard-of scandal. With the overthrow of the Manchus the Ko Lao Hui came out more into the open. The revolution in the West was largely their work, and the bands of the T'ung Chih Hui who rose in Szechuan against Chao Erh-feng in August 1911, and whose rising brought about the military revolt at Hankow which ultimately swept away the Manchu Dynasty, were Ko Lao Hui partisans under another name. On the coast the revolution was to a large extent a matter of hoisting republican flags, and whole provinces joined the republican cause with their Generals and Governors at their heads. In the West, thanks to the Ko Lao Hui, the revolution was a real rising of the people, led by some of their least desirable representatives, against their rulers, and was accompanied by much more bloodshed, including the terrible massacre of the Manchus at Hsian Fu.

After the fall of the Manchus the Ko Lao Hui reckoned Yuan Shih-k'ai as their chief enemy, and perhaps this was not the least of the latter's many admirable qualities. After his death their power and influence rose almost unchallenged, and at present they are in many parts an absolute curse to

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

that on which we were engaged, must according to imm morial custom be provided with food and accommodat free of charge by the towns and villages through which th pass, and not only they themselves, but the cloud of parasi who accompany them, servants, soldiers, coolies, and anim as well. The local magistrates of course try and reco themselves from the people, but in a very poor post th might almost be ruined by the passage of such a party.

There are patches of rice fields round Chenan, but m of the district is composed of a maze of wild mountains, t lower slopes of which are often dotted with the valual wood oil tree, a pretty sight in blossom in April. The Chine assert that the district is rich in minerals, copper, ir asbestos, and antimony. It is a third class district and t post of magistrate is of course a poor one, as the land t receipts amount to less than a thousand taels per annu But amongst our party was an official who had be magistrate at Hsiaoyi, a day's journey further north in t mountains, who affirmed that compared to the latter distri Chenan was a garden; for Hsiaoyi, it seems, has no la tax receipts, and practically no population. It should explained that the land tax is usually collected in grain a remitted to the provincial treasury in silver, the process exchange from the one into the other not being effec without a certain percentage remaining in the hands of local official; hence the amount of the land tax is usua considered the standard by which the wealth of a post m be measured.

A road runs due south from Hsian, the provinc capital, through the Ch'inling Shan *via* Hsiaoyi and Chen to Hsingan on the Han River, being the most direct ro between these two important cities, but it is so rough as be little used. It is bad enough in the dry season when follows up and down the stream beds in the simple mann of so many mountain trails in China, but when the wa rises and the path has to take to the cliffs of the gorges it very much worse and probably quite impassable for pa animals and chairs. We found the stream bed still j practicable in April.

The number of burnt-out ruins of hamlets, farmstea and huts along the trail we had just traversed could not

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

to attract one's notice, and enquiries elicited the fact that these were the result of the passage of the terrible "White Wolf" rebels, who passed in and out of Shensi in scattered bands by these out of the way mountain trails in 1914. During our wanderings through Shensi and Kansu we often found ourselves travelling in the footsteps of this devastating horde, whose trail of desolation could be traced in the ruins of farms, villages and towns from the borders of Honan to the confines of the Kokonor. Their lootings, burnings, and killings recall the depredations of the T'aip'ing and Mahomedan rebels who devastated N.W. China, south and north of the Ch'inling Shan respectively, fifty years ago.

This terrible horde of bandits or rebels was an aftermath of the rebellion of 1913. It consisted of an organized and well-equipped nucleus of a few thousand fighting men, disbanded soldiery from the Yangtzu Valley and Secret Society men from Honan, together with many thousands of local adherents drawn from amongst the brigands, soldiers and bad characters of the provinces through which they passed. The four words "Pai Lang Chao Liang" (White Wolf is recruiting) passed secretly up and down the Han Valley, and recruits from all quarters flocked to join the band. After 30,000 of Yuan Shih-k'ai's best Northern troops had failed to crush these rebels in Honan, they burst through into the Han Valley *via* the rich mart of Laoho K'ou, where a foreign missionary was murdered in the sacking of the city, and early in 1914 worked through the mountains into Central Shensi. Hsian, with its mighty walls, withstood the raiders as it had withstood the Mahomedans fifty years earlier, and the horde drove on almost unopposed through Western Shensi into Southern Kansu, looting, burning and killing. The massacres of Chinese non-combatants were appalling, and the raiders, many of them mere youths, richly dressed in looted silks and jewellery and armed with modern rifles and Mauser pistols, rivalled in their cruelty and lust for indiscriminate slaughter the most terrible of Chinese rebels of days gone by. The object of the raid into the North West seems to have been the stocks of opium in Shensi and Kansu. The resistance they met with and the measures taken to deal with them reflect no credit on the Chinese Government of the time and it is a common

rumour that many high officials were privy to the raid and shared in the loot which was brought back to Honan. It was not until they reached the Mahomedan districts of Kansu near the Kokonor border that they suffered any serious loss, and that was mainly at the hands of the Mahomedan population of those parts, who are not accustomed to permit themselves to be looted and killed without showing fight, and from the hardships of the long forced marches through that wild region, rather than owing to the action of any Government troops. Eventually the survivors straggled back with their loot through Shensi to their homes in Honan and Anhui. The Chinese officials assert that White Wolf himself, who appears to have been an ex-military officer from the Yangtzu armies, was captured and executed.

The failure of the Shensi troops, mostly revolutionary levies of Ko Lao Hui men and ex-brigands, of much the same type as the raiders, to deal with the White Wolf rebels was to be expected; but the failure of the Northern Army opposed to them in Honan in the winter of 1913–14 seems at first sight difficult to account for. The rebels were of course much more mobile than the Government troops, as they lived on the country by taking what they wanted and impressed men and animals everywhere to carry their transport. Then again their lives being at stake, they could be depended on to fight when cornered, whereas it is difficult to induce the Chinese soldier to close with his enemy in a fight of this kind in which he has no interest. Where not an ex-brigand, the Chinese soldier is often a good fellow in most respects, but he is apt to be too sensible to be willing to run the risk of getting killed without adequate reason. Hence battles between rebels and Government troops in China usually consist in the discharge of large quantities of ammunition at a safe distance from one another. It is the civilian inhabitant of the raided towns and villages who gets killed if he does not manage to escape in time to his *chaitzu* in the mountains.

We left Chenan on April 19th for Hsingan, distant, we were told, five hard days' march over the worst possible roads. The first stage was 80 li to the village of Ch'ingt'ung Kuan. The trail lay all the way down the steep winding gorges of the Ch'ienyu River and was terribly rough and

the south, runs for two hours' march across the flat-topped hills, descending finally by precipitous zigzags to reach the city of Yich'uan lying in the narrow valley of a stream flowing east to join the Yellow River. The country crossed on this march is again pure loess, very sparsely populated, and with innumerable grass-grown terraces which have gone out of cultivation and render evident the depopulation of the region.

Yich'uan Hsien, lying at the junction of two narrow valleys in the loess, is the capital of a second class district, and was evidently a comparatively large and prosperous city in the past. At the time of our visit it was practically empty, and lying in the heart of that wild and little frequented region which contains the chief haunts of the brigand bands of Northern Shensi, it is at the present time uninhabitable by any but the poorest classes. Northern Shensi, depopulated by the Mahomedan rebellion fifty years ago, and now probably undergoing a process of desiccation, is losing its few remaining inhabitants of the better class through the devastations of the brigands, many having moved across the Yellow River into Shansi, where conditions are much better. Recently a large band of brigands, perhaps finding that Northern Shensi was getting rather bare, also moved across the river; but prompt military measures were taken by the Shansi authorities and they were soon driven back to their original haunts with great loss. The question naturally arises, why should these brigands be left apparently unmolested by the authorities of their own province?

The answer is provided by the history of events in Shensi during the years since the revolution of 1911, which is outlined in another chapter. The brigands of Northern Shensi are mostly ex-soldiers and Ko Lao Hui men, and are composed of the same material as the provincial troops, with whom they exchange rôles from time to time. It is therefore not possible to use the latter against them. Further, they constitute in a way the reserves of the provincial army, which are thus maintained without cost to the provincial Government. The Shensi soldier usually owns his own Mauser and as much ammunition as he can carry wound round and round his body in a cloth bandolier, acquired in the course of some previous rebellion or brigand raid,

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

and thus equipped serves either as a soldier or a brigand according to his own tastes and the military requirements of the local Government. In either character he is about equally obnoxious to the people. Both rôles too have their respective advantages; the life of a Chinese brigand may be rather lean at times, but there is always the possibility of a good haul; the life of a soldier in Shensi may be dull, but he is fed and paid without being asked to do any work. This kind of soldier of fortune is known locally in the province as a *Tao K'o* (guest of the sword); most of the better-class brigands and soldiers are Tao K'o, which is considered a title to be proud of. The Shensi soldier differs widely from and compares unfavourably with his colleagues in the well-organized and disciplined armies of the North (Chihli, Shantung, Anhui, and Honan provide most of the sturdy men for those fine Northern armies on which the power of Peking rests); but it is not his fault, for he is the victim of circumstances and of the Ko Lao Hui. I have been in close contact for months with Shensi soldiers, who were, to use the Chinese euphemism, *Kuei hui pei shan* ("returned from the Northern hills"—a polite way of referring to an ex-brigand locally), and always found them excellent fellows as far as I was concerned, though behaving tyrannically towards the people.

The difficulties of suppressing brigandage in the wild and pathless mountains of Shensi are in any case very great. Measures for the satisfactory pacification of the region would include the complete reorganization of the provincial army, or the garrisoning of the province with three or four brigades of good Northern troops. But the latter is not at present practicable, as the people of the province not unnaturally are great believers in home rule and like to manage their own affairs. Another very necessary but difficult reform is the disarming of the people and the recovery of the large stocks of rifles at present in private hands. In modern China the brigand without a rifle is a negligible quantity. It is chiefly through the various rebellions that these arms have become scattered over the country with such disastrous results, and brigandage grows steadily worse with every such outbreak of civil war. A rebellion is engineered (in Shensi at any rate) by collecting funds and enlisting brigands and

secret society men as soldiers; after the rebellion is over, whether it succeeds or not, the soldiers are disbanded and scatter with their arms over the country, with the inevitable result of increased brigandage. The growth of brigandage in Shensi may easily be traced since 1911, the revolution of that year, the rebellion of 1913, the White Wolf rebellion in 1914, the anti-monarchical rebellion of 1916, the troubles of 1917, and so on.

From Yich'uan Hsien to Hanch'eng Hsien is a distance of about 240 li, three hard days' march by a difficult track through the mountains which here hem in the Yellow River. All the way from Yench'ang south to the plains of Central Shensi, which are reached at Hanch'eng, the traveller is crossing a series of parallel ridges trending east and west across his path; but while between Yench'ang and Yich'uan the intervals between these ridges are filled by loess which provides comparatively easy slopes, the region between the latter place and Hanch'eng is covered by mountains which are practically free from loess and entail the crossing of a series of precipitous little passes. The trail slants across these mountains towards the Yümen K'ou, the point where the Yellow River emerges from its gorges on to the plains; the river itself is not touched, though glimpses are caught from the tops of the passes of its huge trough in the mountains.

From Yich'uan the trail runs up the valley to the S.W. for a few li and then turns up a gorge to the south, which leads after a couple of hours' march to the foot of the barrier range which bounds the Yich'uan valley on the south. A steep climb leads to the pass, the Lut'ou Ling (5100 feet). This range and the valleys and spurs leading up to it, though covered with loess on the northern side, are uncultivated and uninhabited. On the southern side there is practically no loess, and the latter is not met with in any quantity again till the path debouches on to the plains of the Yellow River above Hanch'eng three days later. The absence of loess in the low-lying valley bottoms of these mountains is rather curious, and one may speculate whether perhaps the Lut'ou Ling range, which before the existence of the Yellow River was probably joined to the mountains of Shansi, did not form a barrier keeping the floods which deposited the loess from reaching this region, which con-

Yakub Beg. In 1895 he had risen to be commander-in-chief of the Kansu forces and despatched troops to aid in the suppression of the Mahomedan rebellion near Sining in that year. In 1900 he commanded an army of Kansu braves in the attacks on the Legations, and subsequently arranged for the safety of the Imperial Court during its flight to Hsian Fu. Being proscribed by the Foreign Powers after the collapse of the Boxer movement he was cashiered and sent back to Kansu in disgrace, where he resided on his large estates in some state till his death about ten years ago. His rôle was loyalty to the Manchus through thick and thin, and his example in this respect has been followed more recently by the other Mahomedan leaders, who were ready to remain faithful to the cause of the fallen dynasty even after the abdication in 1912. Had Yuan Shih-k'ai not been at the head of affairs then, and had T'ung Fu-hsiang still been alive, the Mahomedan North West would perhaps have refused to accept the Republic, with disastrous results to the neighbouring provinces.

From Wat'ing the road runs up a ravine to the west, reaching the foot of the Liupan Shan after 15 li, whence it ascends by a series of zigzags to the summit of the pass, a grassy ridge about 9000 feet high. There were many big carts making the ascent, a most arduous business effected by relays of animals. Here again, as often on our journeys, we had reason to congratulate ourselves on having a caravan of good pack mules instead of carts. The Liupan Shan is a prominent range of mountains rising far above the loess, which crosses Kansu from N.W. to S.E.; it is probably a continuation of the chief range of the Nan Shan, which is crossed by the main road west of Lanchou at the Wushao Ling (10,000 feet) and through which the Yellow River breaks its way in a series of precipitous gorges between Lanchou and Chungwei. From the pass there is a steep drop of about a thousand feet, and the road then descends through a dreary barren valley to Lungtê Hsien, a most miserable little city almost entirely in ruins, 50 li from Wat'ing. The loess country west of the Liupan Shan is much more barren and desiccated than on the P'ingliang side, and round Lungtê the poor-looking wheat crops were only just showing above ground towards the end of May.

485 inns of Shensi and Kansu, which we very seldom used, are also not bad, being large and roomy, and constructed mainly with a view to the accommodation of plenty of animals in the courtyard. I have a particular aversion to the Szechuan inn, usually considered, especially by the Chinese, as providing the height of luxury on the road; they are always crowded in between the other houses of a narrow street, and invariably have the defect of placing the *shang fang* (the chief guest room) next door to the *mao fang*, a revolting arrangement for a night's rest, which the Chinese do not seem to object to.

271 Ch'ingchia Yi was the first place where we struck brackish water, and from here on to within two days of Lanchou I found it scarcely potable. This is a very real trial in the dry season in Central Kansu, and though in the course of our journeys brackish water was of frequent occurrence, we never became accustomed to it, and found it a great hardship to be greeted with a cup of salted tea at the end of a hot day on the road. After the rains have 312 fallen the water is said to sweeten. We were warned of this, of course, but were told that the Mahomedans collected sweet rainwater in specially prepared pits, called *chiao shui*; but owing to lack of rain most of these pits were dry, or contained only a little evil-looking liquid loess mud. I believe that water in pure loess is usually brackish, but in most parts streams or wells are available in the underlying rock; this portion of Central Shensi, however, is in the heart of the loess watershed between the Wei and Yellow rivers, lying mostly over 6000 feet above sea level, and it is the streams themselves which are the worst to drink. I thought I did not know what real thirst was till crossing Central Kansu at the driest season of the year, but later on, when traversing a portion of the Alashan desert further west in early August, we longed even for the salted tea of Huining.

487 From Ch'ingchia Yi the road continues to ascend the same defile for ten li, crosses a pass in the loess, and descends 133 by a similar ravine leading west. Several hamlets mostly in ruins are passed, including the walled posting stage of Chaichia Tsui. These ruins, now more than fifty years old, 669 which become increasingly frequent as one proceeds west, are part of the trail of desolation left by General Tso's

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

victorious army all the way from Shensi to Turkestan, their method of dealing with the rebellion being to massacre the inhabitants and reduce to heaps of ruins every Mahomedan habitation they came across. As the male Mahomedans were mostly scouring the country in marauding bands, they met with little difficulty in doing so. Chinese rebellions have in the past of course always been suppressed in this manner, and indeed could probably not have been suppressed otherwise. Fifteen li from Huining the valley contracts into a gorge, and the road runs down the bed of the stream, a brackish trickle of water, for the rest of the way. Huining is a poor city lying in a region of arid valleys. Complaining of the hardships of life at his post, the magistrate informed us that in many parts of his district ordinary fuel was unobtainable, and the inhabitants were reduced to burning dried dung as in the deserts of Tibet and Mongolia. This arid region stretches away apparently to the north till it merges into the Ordos desert, a land of sand and camels. In addition to being such a miserably poor district, his post had the disadvantage of lying on this great road, and when an important personage, such as a Mongol prince or high Chinese functionary, passed by on his way to or from Turkestan, his passage would leave the unfortunate magistrate many hundreds of taels out of pocket, which he could ill afford. We were a very small party when travelling in Kansu and I hope we did not cost him anything; but I know that when we commenced our journeys in Shensi with a huge party we were a heavy burden on the people and officials of the districts through which we passed.

The next stage is a short one of 60 li to the walled posting stage of Hsikung Yi. The road runs down the Huining valley for 20 li, and then ascends a side ravine to the south-west for the rest of the way. The hamlets passed seemed more miserable and the country more desiccated than ever. All along this road, as on most of the bigger roads of Kansu, may be noticed groups of curious little towers every five to ten li. It was a long time before we could get a satisfactory explanation of what these towers were intended for; so far as I know they are only to be seen on the roads of Kansu. We now learned that they were beacon towers, another relic of the rebellion and its suppression, by means of which

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

but the products are wretched. In any case all these enterprises suffer from the blight of Chinese official management. Lanchou is also at a great disadvantage in this respect owing to the immense difficulties involved in transporting foreign machinery and all kinds of foreign goods across the many hundreds of miles of intervening mountains from the coast. The foreign resident can import a case of beer, drink the contents, and then sell the bottles for more than the original cost of the beer; but this does not represent a new method of getting rich quick, as the cost of transport is likely to be greatly in excess of the value of either the beer or the bottles. There is, however, one really flourishing native industry in Lanchou, independent of foreign machinery, and that is the cultivation and manufacture of water pipe tobacco, which is exported to all parts of China.

The time of our visit to Lanchou coincided with the period of Yuan Shih-k'ai's power, and the Governor was one of the latter's Northern Generals. He was an excellent representative of the type of Northern soldier, and was universally acknowledged to be one of the best rulers Kansu has ever enjoyed. Owing to the geographical isolation of the province and the conservative nature of its Mahomedan population, the rebellion of 1916 had but little effect locally, and the Governor maintained his position after the fall and death of Yuan Shih-k'ai; and had we again visited Lanchou two years later we should have found him still ruling only under a different title. After the Revolution the Governors of provinces were styled Tutu[1]; Yuan Shih-k'ai abolished this name with its republican associations, and revived the old title of Chiangchün[2]; after the compromise which followed the rebellion and Yuan Shih-k'ai's death, the title of Governor was also compromised in true Chinese style into Tuchün[3]. The Governor was a native of Hofei Hsien in Anhui, and consequently not a few civil and military officials throughout the province at the time of our visit wrote Hofei on their cards. It is extraordinary what a number of prominent Chinese in recent years have been natives of this obscure little district in Anhui, ever since

[1] Literally "General Manager," i.e. Governor.
[2] Literally "Army Leader," i.e. Marshal.
[3] Literally "Army Manager," i.e. Military Governor.

missionaries holding these strange beliefs should be the only vehicle for the propagation of Christianity amongst the Kokonor tribesmen does not seem to be fair either to Christianity or to the tribesmen.

Having outlined the history of recent events in Shensi since the Revolution in a preceding chapter, with the Ko Lao Hui in the leading rôle, it may be of interest to recount the history of the same period in Kansu, assigning the principal part to the Mahomedans.

Kansu only played a small part in the Revolution of 1911, and, as was to be expected in so backward and isolated a province, there was little sympathy with the republican cause. The troops in the province at that time consisted still of the old style *Hsün Fang Tui* who were in the course of being modernised into the new regular army known as *Lu Chün*, and of Mahomedan soldiers peculiar to the province called *Hsi Chün*. After the Revolution the *Hsün Fang Tui* and the *Lu Chün* melted away together with the provincial government, and the attitude of the province towards things in general was governed by the action of the Mahomedan leaders and the Mahomedan troops, who, true to their recent traditions, remained loyal to the Manchu throne. Ma An-liang, the famous leader of the Kansu Mahomedans, who thus found himself at the head of the province, together with Sheng Yün, ex-Viceroy of the North West and one of the Manchu die-hards, despatched Moslem troops across the border into Shensi to fight the revolutionary forces of the Ko Lao Hui, but were eventually induced by the wise statesmanship of Yuan Shih-k'ai to withdraw them and accept the republic in name. Had Yuan Shih-k'ai not been at the head of affairs at that time, and had the Manchus been able to rally themselves to the Mahomedans of the North West, the settlement of 1912 might have been much delayed.

The result of the Revolution was therefore to give the Mahomedans what they had failed to obtain by rebellion in the past, namely complete autonomy and control of the province under General Ma An-liang, who moved into Lanchou from his residence near Hochou. There was a republican Tutu at the same time, but he seems to have been a mere figure-head. General Ma's management of the

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

affairs of the province during those critical times appears to have been admirable, and Kansu was spared many of the troubles which were afflicting the rest of China during that period. Early in 1914, however, Yuan Shih-k'ai, who was then engaged in centralising his power by replacing the republican Tutus by his own nominees, sent one of his Northern Generals to Lanchou as Governor, accompanied by a bodyguard of a couple of thousand good Northern soldiers. To avoid friction the latter travelled up to Kansu as Commissioner for the Kokonor, his appointment as Governor only being announced by telegraph when he was within a few days of the capital. For some months there was a period of great tension between the Mahomedans and the new Governor, but the latter was a true Northern soldier, strong and reliable, and the Mahomedans, under wise leadership, eventually accepted the situation, and General Ma retired again to Hochou.

In the summer of 1914 the southern portion of the province suffered greatly from the incursion made by the so-called White Wolf rebels, who, after ravaging parts of Anhui, Honan and Shensi, made a sudden raid into Kansu by the Ch'inchou road, being attracted probably by the stocks of opium in those parts. A year after their passage we could trace their route by ruined towns and villages and burnt out yamens. After looting the rich cities of Ch'inchou and Fuchiang and other towns in that neighbourhood, they struck west through the mountains to Minchou and T'aochou on the Kokonor border. At Old T'aochou they encountered the Mahomedans for the first time and met with a fierce resistance from the Moslem population of that district. This so infuriated the rebels that when, by sheer weight of numbers, they eventually captured the city they massacred the inhabitants and literally razed the town to the ground. At the time of our visit a year later the four walls of the city enclosed a mass of ruins, not a single house being left intact. The destruction of T'aochou proved, however, the turning-point in the career of that terrible horde. So far they had ranged, pillaging, murdering, and burning, right across China practically unchecked. But here they had been severely handled by the Mahomedans, who were not accustomed to take that kind of thing lying

down; and in that wild and out of the way country there soon arose a shortage of supplies for so many thousands. Northwards towards Lanchou the way was barred by the Moslem troops of Ma An-liang, and southwards towards the rich province of Szechuan the intervening country was wilder and even more desolate; and so the rebels started back the way they had come, through towns and villages already laid waste. The mountain tracks were bad, the stages long, and food and fodder scarce. The bridge across the T'ao at Minchou had been destroyed, and many were drowned in the fierce waters of this Tibetan torrent. At Fuchiang and other places on the road the local people wreaked a terrible revenge for what they had suffered, and many hundreds of rebels hiding in the cornfields and scrub were beaten to death with sticks and agricultural implements. Many straggled back through Shensi with their silver and opium to their homes in Honan, but this was really the end of the White Wolf rebels whom 30,000 picked troops of China's modern army had completely failed to destroy in the central provinces six months previously.

With the disappearance of the White Wolf rebels and the surrender of the nominal government by the Mahomedans to Yuan Shih-k'ai's Governor, peace returned to the province. During the anti-monarchical rebellion of 1916 there was a renewal of unrest, especially after Shensi had joined the rebels, and influence was brought to bear on the Governor from various quarters, urging him to resign or secede from Peking. But a declaration of independence was successfully staved off until Yuan Shih-k'ai's death relieved the situation, perhaps largely owing to the attitude of Ma An-liang, who prepared his troops for action, and let the republicans know that if anyone was to succeed the Governor it would be himself, and that he and his Mahomedans would stick by Yuan to the last.

The shadow of another Mahomedan rebellion is always over the Chinese in Kansu, who stand in great fear of the Moslems and have passed through some anxious times during recent years. But the general opinion we heard expressed was that there was no need for alarm as long as the Mahomedans continue to be guided by the wise and statesmanlike leadership of their present chiefs.

2: Teichman G-8 (1919) 1921 AF13 Northwest China AF13

the Kokonor (in Chinese Ch'ing Hai, meaning, like the Mongol name, "Azure Lake"), who used to be known by the Tibetan or Mongol term of "Amban," but who at the time of our visit was styled in the republican manner *Ch'ing Hai Pan Shih Chang Kuan* ("Chief Authority in charge of the Affairs of the Kokonor Territory"). Soon afterwards the post and its occupant, an old Manchu, were abolished by Yuan Shih-k'ai's Government, and the control of the Kokonor territory handed over to the Mahomedan General of Hsining. This control is of the usual vague and shadowy nature, such as has been exercised for so long by China over her outlying dependencies. The Mongol inhabitants are ruled by their own princes under China's overlordship; the Tibetans wander pretty well at will over the territory, robbing one another, the Mongols, and the Chinese, and generally pay but little respect to their nominal Chinese masters. It is possible that the Mahomedans will now take measures to bring them more under control[1].

We remained some days at Hsining, but unfortunately had no leisure to visit either the Kokonor Lake or the famous monastery of T'a-erh Ssu. In the intervals of official business we were hospitably entertained by the Mahomedan General, the Manchu Amban, the Taoyin, and other officials. The former, like most of the Mahomedan leaders we met, was a bluff, hearty soldier and a delightful companion; he had served under T'ung Fu-hsiang at Peking in 1900.

Tanko and Hsining are the headquarters of the great Kokonor wool trade, which has been going on for twenty years or more and has now reached very large dimensions. This wool is produced on the grass lands of the Kokonor border, and is carried by raft and boat down the Yellow River and by camel caravan across the desert to Tientsin, whence it is exported to America. The trade is largely in the hands of the foreign export firms in Tientsin who, through their compradores, maintain buying agencies at various collecting centres such as Hsining, Tanko, Kueitê, Hochow, Hsünhua, Tatung, Yungan, and Épo on the

[1] Such measures have since been taken, with the result that the Tibetans, and more especially the lamas, have on several occasions risen in arms against the Mahomedans, and the peace of the Kokonor border has been seriously disturbed.

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

and Kansu, situated short marches of 50 li one from the other. The Chengtu plain, notoriously one of the most fertile and thickly populated regions in the world, was one vast rice field, the grain nearly ripe, and promising, as usual, an enormous harvest. The most lucrative posts in the whole territorial administrative system of China are said to be the district magistracies on the Chengtu plain in Szechuan and in parts of Kuangtung, which are alleged to be more desirable from a monetary point of view than a Taoyinship.

Having left Chengtu five or six years previously shortly after it had been looted and partly burned during the troubles following on the Revolution of 1911, we now returned to find it once more in ruins, with street after street of wealthy shops and residences burnt down to heaps of rubble as the result of recent street-fighting between the Szechuanese and the Yunnan and Kueichou troops. Chengtu is incomparably the finest, richest, and most populous native city I know of in China, but it has known but little peace since the Revolution. Szechuan, the most fertile and thickly populated province in the Republic, lies in an unfortunate position between the North and the South, and has frequently been the bone of contention between the respective protagonists, the Peking Government and the Yunnanese, during the long drawn out and indecisive struggle of recent years. The Szechuanese themselves incline naturally towards the South and their fair province is in every respect a portion of the South-West; but the Yangtzu waterway and the overland road from Shensi render them very liable to invasion by the Northerners. Further the abundance of labour, rice, and all kinds of supplies make the province a most suitable battle ground, where both Yunnanese and Northerners can practise the latest Japanese manœuvres and test their newest foreign machine guns at a minimum cost to themselves. The Szechuanese are not a warlike race, and have not in the past played an important part in these civil wars; though recently signs have not been wanting that they propose to make a change in this respect in the future. As regards numbers they are in a position to swamp all the rest, while they also have the great advantage of a modern arsenal at Chengtu.

The Yunnanese have played a very large part in the

2: Teichman G-5 (1919) 1921 AP13 Northwest China AP13

and Haich'eng to Chinchi (Ningling) and Ninghsia. The Chinese consider those in the Southern area, who are of more recent Turki origin, to be the more dangerous and fanatical today. In a secluded valley near P'ingliang resides a sort of Mahomedan saint, who has great influence not only in Kansu but also in Yunnan, and who undoubtedly commands the services of thousands, or perhaps tens of thousands, of armed Mahomedans; he is not one of the regular Moslem leaders, who are referred to in later chapters; and there seems to be some sort of mystery about him, which it was not our business to enquire into.

The next stage from P'ingliang is one of 90 li to Wat'ing, a walled fort and posting stage at the foot of the Liupan pass. The road runs up the valley, which beyond a half-way village with inns contracts to a gorge, scrub-covered mountains of shale and sandstone taking the place of the cultivated loess hills. Pheasants were thick here, and so tame that one had to throw stones at them to make them fly. Wat'ing is rather an important point as the roads to Lanchou and Ninghsia here bifurcate (the latter *via* Kuyuan). We were met here by the magistrate of Kuyuan and also by a representative of the family of the late General T'ung Fu-hsiang, whose ancestral seat is in the neighbourhood. I have been told on more than one occasion by Chinese that T'ung Fu-hsiang was not a Mahomedan at all, but a Chinese General commanding Moslem troops; perhaps he was considered a Chinese because he fought against the Mahomedans in the great rebellion. The following is a sketch of the career of this celebrated individual, who came into contact with foreigners by leading his Mahomedan troops to the attacks on the Legations in Peking in 1900.

T'ung Fu-hsiang was a native of Kuyuan in Eastern Kansu. In the big rebellion of 1864–1873 he figured prominently as a military chief on the Chinese side under General Tso, and it was he who captured the rebel stronghold of Chinchi on the Yellow River near Ninghsia, an event which was the turning-point in the campaign. This was the foundation of his fortunes, as he was enriched with the confiscated estates of rebels, and from that time on counted as one of the most prominent and influential leaders in Kansu. Subsequently he fought in Central Asia against

2: Teichman G-8 (1919) 1921 AF13 Northwest China AF13

Chinch'i, where we were able to examine some of the wonderful irrigation works which render these huge plains, otherwise desert, so fertile. There are similar works on the other bank near the village of Tapa. Their destruction would turn one of the richest plains in North China into a desert. In the North West irrigation is the key to agricultural prosperity, and though the ancient Chinese have done so much in this region, modern engineers could probably accomplish wonders in turning immense areas of what is still desert into fertile lands. Especially lower down, where the river makes its great bend round the Ordos, there would seem to be great openings for modern irrigation works.

Chinch'i Hsien, formerly known as Chinch'i P'u or Ningling T'ing, is a Mahomedan centre, and was the chief rebel stronghold in the great rebellion. The Mahomedans are still very powerful in this region, where their settlements extend south through Haich'eng and Kuyuan to P'ingliang in Eastern Kansu. T'ung Fu-hsiang's family own large estates in the neighbourhood, which they appear to have acquired after the capture of Chinch'i in 1871 by the latter. This event was the beginning of the end of the rebellion in Kansu, which led to the eventual defeat of Yakub Beg and the recovery of Chinese Turkestan; had the Kansu Mahomedans held out, the reconquest of Central Asia would have been rendered impossible, and the fall of Chinch'i constitutes therefore an event of the first importance in Chinese history.

Shortly before reaching the neighbourhood of Chinch'i we noticed, much to our amazement, a small stern-wheel steamer tied up to the right bank. An examination through glasses showed her to be a mere rusty skeleton, and our boatmen said she had lain there for years. From subsequent enquiries in Ninghsia we learned that this vessel represented an attempt, made just before the revolution, by the Kansu Viceroy with the assistance of a Belgian gentleman to establish steam navigation on the upper Yellow River. A small river steamer was purchased, transported in sections at great expense overland and put together at Paot'ou. She seems to have made one trip up river, reaching with great difficulty the spot where she is now, and where she is likely

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

than the Mahomedan leaders of Kansu. But, unlike some of the Manchu irreconcilables, General Ma Fu-hsiang moves with the times, and was later on one of the staunchest supporters of Yuan Shih-k'ai and the Peking Government. He is looked upon in some quarters as a likely successor to General Ma An-liang as leader of the Kansu Mahomedans, a position which it is generally agreed he is well qualified to fill.

Ninghsia was one of the few places in Kansu which had a rough time during the Revolution of 1911 owing to the city being seized by the Ko Lao Hui, and matters seem to have been very bad until the arrival of Mahomedan troops under one of Ma An-liang's Generals, when many Ko Lao Hui heads rolled in the dust and order was speedily restored. It is only in the extreme north and south of Kansu, for instance at Ninghsia and Chieh Chou (Kai Chou), where there is a considerable extra-provincial element in the population, that the Ko Lao Hui are formidable, owing apparently to the counter-influence of the Mahomedans, who will never have any dealings with secret societies.

Immediately west of the Ninghsia plains rises the barrier range usually known to foreigners as the Alashan, and three days' distant in these mountains lies Tingyuan Ying, or Wangyeh Fu, the residence of the Mongol Prince of the State of Alashan. It was to this place that Prince Tuan, the Boxer leader and father of the then Heir Apparent, retired after the events of 1900, though he was supposed to have been exiled to Turkestan. After the Mahomedans had occupied Ninghsia during the Revolution of 1911, he came down and lived there for some time awaiting the issue, but on the abdication of the Manchus he appears to have retired west into Turkestan, together with the famous old Manchu die-hard, Sheng Yün.

At Ninghsia we received what then seemed the incredible news of Yuan Shih-k'ai's intention to make himself Emperor. Kansu and its Mahomedans probably welcomed the event, since they were never particularly enthusiastic about the Republic, but it was a terrible blow to the young men of the student class who believed in the *Min Kuo*[1]. I have heard Yuan Shih-k'ai's opponents allege that his ambition was always fixed on the Throne, and that in the days when

[1] "People's Country," i.e. Republic.

he was living in retirement in Honan after the death of the Empress Dowager he was in secret communication with many of the military chiefs of the new army of his own creation and plotting a *coup d'état*; then followed the revolution, and he was able to advance with consummate skill, under the pretence of trying to keep the Manchus on the Throne, to the positions of Provisional President, Dictator, and Emperor. Other Chinese assure one that he was a faithful servant of the Republic led astray by the ambitions of his family and entourage. Whatever the facts may have been, there is no doubt that Yuan Shih-k'ai would have made a splendid Emperor, and subsequent events have proved that he was then the only man capable of ruling China. The Kansu officials, like those of all the other provinces, were instructed to make preparations for the holding of popular elections for or against a monarchy, which were to follow a joint memorial from the provincial Military Governors, all with one or two important exceptions Yuan's own men, begging their master to ascend the Throne. These instructions were, however, accompanied by secret telegrams regarding the working of the elections, and so successful were these arrangements that Yuan Shih-k'ai was elected Emperor practically unanimously by all the provinces. Everyone throughout the length and breadth of China knew that these elections were a sham and a fraud from beginning to end; but the Chinese are a race of actors, and make-belief enters largely into most phases of their private and public lives, and the farce was solemnly completed. Yet when the standard of rebellion was raised by General Tsai Ao in Yunnan on Christmas Day, 1916, the fraud was soon apparent, and the whole monarchical scheme came tumbling to the ground as province after province, all of which had supposedly announced themselves as unanimously in its favour, deserted the Imperial cause. As an instance of Chinese make-belief (*yu ming wu shih*) the monarchical elections of the autumn of 1916 are hard to beat.

The officials of Ninghsia had kindly prepared two of the large wool boats for our accommodation and smaller craft for the ponies for the journey down river to Paot'ou. Our craft were broad flat-bottomed scows with high sides, and when roofed over with our tents made quite comfortable

Tu ren

down their back their hair is spread out on a little piece of wood which terminates in a plate. The latter is decorated with colored beads and cowrie shells and [illegible] out horizontally (Plate III). It is 20-25 centimeters in diameter. In order to make themselves even more beautiful and colorful, the young peasant women paint a round red disk on their Mongolian cheeks which are tanned a deep brown from the strong mountain sun. Thus, the spectacle with which one is confronted at the fairs in Wei yüan cun is in point of color and gaiety not inferior to that of the temple festival at Gum bum.

The chief holiday of the Tu ren occurs annually during the sec Chinese month and falls on the days when the rivers which have be frozen during the cold season begin to thaw, but before the field work begins. It is at the same time the annual fête of Mother Earth. The Tu ren as well as many other inhabitants of the region gather together with their wives and children for eight to ten days in order to drink, sing and play. The gathering-place is a meado south of the walls of the town, beside old Chinese graves. There is a large temple there in pure Chinese style with two courtyards, one behind the other, and beside it a second smaller Chinese temp has been erected for the manes of the Chinese who were killed du ing the last rebellion. In 1896 several hundred men fell into an ambush in front of Wei yüan bu and were killed to a man by the Dungan in hand-to-hand fighting. (It was almost always a hand-to-hand battle.) Now each man's name is written on a small woo tablet and they are set up on a long table-like structure of loam on the back wall of the temple. A young man had entered the temple with me. He lighted two thin incense sticks in front of on of the narrow wooden tablets and kowtowed three times before it. He was honoring the names of a close relative. There were incense candles burning in front of many of the other little tablets.

The festival at Wei yüan bu itself strikes the visitor as very worldly. Very few people pay any attention to the offerings, the cakes of wheat flour, the /251/ loaves of bread (1), the eggs,

252

1. The Tu ren, like the Mohammedans of Lanchow and Hochow, bake a leavened bread in small, round copper pans. Into the bread dough they mix the ashes of some kind of grass which is found near Tsing yüan and as far up as Di dao and which is burned in the fall in a sort of char coal kiln. Otherwise only steamed, unleavened bread is eaten throughout West China

671

671 LEGAL NORMS--extent of differentiation of social norms enforceable by some organ of politically constituted society from those enforced only by informal social control; conception of law (e.g., as precedent, as a body of absolute or relative principles); comparative prevalence of customary or common law and of "made" laws (e.g., edicts, decrees, ordinances, statutes, constitutions, binding judicial or administrative decisions, imposed taboos, divine revelations); lawgivers; law codes; legal categories (e.g., civil and criminal law); legal rules and administrative law; jurisprudence; uniform and multiple systems of law; etc. See also:

795 sculpture by Arghun. Under Özbek Khan (1312-1340) and Jani Bek
171 (1340-1357) Islam conquered the "realm (empire) of the Golden
175 Horde" of southern Russia. Later there followed the Inner Asian Khanac Chaghatai which stuck longest to the Jassa Laws of Chingis Khan.

As far as Central Asia was concerned, the conversion of the masses occurred under Tughluq (1347-1363) and Chingis Khan's greatest successor, Timur (Tamerlan), who wanted to recreate the Great Mongolian Empire and who founded his empire completely on Islam. However, his plans for the invasion of China never materialized.

II. The Position of Islam in Northwest China

A. The Sources of Islam

779 The original source from which all principles and ordinances of Islam are drawn is the Koran, the Holy Book which, according to Moslem belief, was revealed to the Prophet Muhammad by God through his Angel Gabriel. Although the Koran does not contain a systematic exposition of Moslem beliefs or rituals, yet taken as a whole, there emerges from it a consistent body of doctrine and of practical obligations. Through the ages these have remained the core and inspiration of Moslem religious life.

The Koran is not the only source of the Islamic religion. The sunna (custom) of the Prophet and the interpretation of his different ways of behavior also constitute an extremely important source for the religion. At first the sunna of the Prophet was handed down in the form of a short narrative, called a hadith (story), told by his Companions. The whole corps of sunna collected and handed down soon received the general name of hadith. The hadith was first transmitted orally. Later it was collected and written down. The tradition was invaded on a vast scale by forgeries. However, the serious students of the hadith became aware of the danger of incorporating many of these tales which contained elements foreign to Islam. They established different methods of control by which to attempt to sift out the genuine traditions from the mass of forgeries.

779 The Shari'a is the third important source of Islam. It em-
671 bodies Islamic juristic studies and doctrines, which evolved into a rather coherent body of laws and regulations. The law contained in the Shari'a is not restricted to religious regulations, but envelops all phases of life. Yet it is considered a part of the religious doctrine, for one of the characteristics of Islam is that law is considered part of the religion, and there is no clear distinction between the two. In the Koran, both legal and religious aspects were interwoven. The connection between law and religion established by Muhammad and adopted by his followers

*668

detain, punish or evict them... ("The Provisional Regulations Governing Organization of Security Committees" proclaimed on August 10, 1952 by the Ministry of Public Safety of the CPG, NCNA, Peking, August 10, 1952.)

Besides these auxiliary police forces, there are People's Supervision Correspondents and People's Denunciation Reception Rooms. People's Supervision Correspondents are recruited from every branch of government organs, enterprises and people's popular bodies in towns and villages. The members are selected from among the activists. "The tasks of the People's Supervision Correspondents are to investigate all cases of violation of laws and discipline and damage to the state and people's interest such as graft, waste, bureaucracy and dereliction of duty by government organs, enterprises and their personnel, as well as to canvass the opinions of the masses on the implementation of government policies and laws, report them to supervisory organs of a superior level and to leading officials of their own departments and to assist them in the disposal of cases. The methods for studying and discovering problems are: (1) to observe and discover problems through their own activities; (2) to regularly go deep into the masses to discover problems and listen to the views of the masses; (3) to collect accusations and appeals from the masses through people's opinion boxes; (4) to maintain close contacts with the People's Denunciation Reception Rooms, and to cooperate with the latter in work." (NCNA, Peking, August 25, 1952.)

The same source adds "The principal task of the People's Denunciation Reception Rooms is to receive and dispose of accusations and appeals from the masses."

701
625
*668

These police forces are supported by the regular People's Liberation Army and the militias. The militias are local self-defense corps who, according to Peking, Jen-min jih-pao, August 10, 1952, p. 18, cannot be separated from production. They are those who must engage in productive work, such as farming or handicraft, to make a living. They provide a powerful auxiliary force for the army and regular police.

*668
• [674]
[873]

Augmenting all these organizations is the persistent program of indoctrination. The Communists realize that every crime committed now is politically harmful to their regime, so they have instituted numerous programs in education and propaganda to fight against crime. Reading the "new" moral standards set up for high school students by the Communist Ministry of Education (The Ministry of Education of the People's Republic of China: Jen-min chiao-yu, or People's Education, monthly, July issue of 1955, p. 46. "The moral standard of the middle school students" promulgated by the Ministry of Education on May 13, 1955.) is like reading something from the past. Absolute loyalty to the government, strict obedience to authorities, extreme care not to

361 over their shoulders, like the togas of an ancient Roman. Defiant-
631 looking Tibetan horsemen, their long guns with meter-long forked supports on their backs, ride through the streets on strong ponies, often bargaining haughtily from their saddles with the shop owners. This outer city or suburb is also surrounded by an earth wall with
• 674 gates, for Kue de is not very safe. A small theft or robbery is the
432 order of the day, in spite of the fact that there are only about 400 families (2,000-3,000 inhabitants) living in the city. An incident that happened while I was there best illustrates the conditions. A Tibetan yeoman, son of a chief, of one of the Lutsang /265/ tribes in the southern part of the city, had sold a horse to a Chinese merchant. But hardly had the deal been closed when a rumor arose that the Tibetan had stolen the horse from a neighboring tribe. Now in order to pose, not as a common thief, but as a grandseigneur who would not let such a fatal accusation rest upon himself, and also to avoid conjuring up political difficulties for his entire tribe, our Tibetan was forced to return the stolen horse to its former owner, a Tibetan. For, just as was the case during the period of our robber barons, the Tibetans lay great stress on good manners and reputation. So the young man goes to the Chinese in order to buy back the horse. In his distress, he even offers slightly more than he got for it. But the Chinese is merciless. He will not under any circumstances cancel the bargain. Of course, the Tibetan cannot offer him so very much because he stole the horse in order to recoup his finances. What does a Tibetan do in such a dilemma? The next day as the Chinese is leading his horse out from its stable, the Tibetan knocks him down, swings himself onto the horse and disappears into the steppes, never to be seen again. His friends bring the animal to the owner from whom it was first stolen. Honor has been restored. A Chinaman does not count here.

631 On the morning after our arrival I went first to the ör fu, the ting, in the interior of the city. At the gate of his yamen I was received with a salute of guns, a great honor in China, for which I was indebted to the amban and which implied the wish that I should not go into the Ts'ao ti from here.

The yamen building was in a surprisingly dilapidated condition; the town is very unpopular among the officials. None of them stays more than a year and so no one has the offices and living quarters put into shape. When it rains only a few rooms are weather-proof. Even in the guest room large pieces of wall paper hang down from the ceiling. Through the holes one could see the

675

675 CONTRACTS--conception of contractual relations; agreements, bargains, promises, and their enforceability; consideration; rights, privileges, and powers of contracting parties; procedure in the conclusion of contracts (e.g., presence of witnesses); terms and stipulations; types of contracts (e.g., legal forms, oral agreements, covenants); etc. See also:

*563 right side. The honored seat is the one farthest from the door
594 After the guests are seated the hostess will brew tea, place a
596 wooden box in front of the guests, and serve tsamba and butter
The guests take their eating bowls out of their robes.

[521] At dinner parties, conversation takes place before the meal. It is proper and right for the guests to say farewell and leave immediately after dinner.

c. Position of women

*563 The position of women in Tibetan society is very low. They
562 have no place in matters of religion, and are permitted to par-
796 ticipate in few religious rituals. They are permitted to enter the monastery on the Memorial Day of Sakyamuni, which occurs on the fifteenth day of the fourth month. At sunrise, all women put on their best clothing with all their trimmings and ornaments, and gather outside the monastery. The women of each village form into a group, and the groups take turns going inside the temple and turning the prayer wheel. Men and boys stand by to witness the spectacle. On this day, women fast until sundown.

d. Customs

*563 On the third day of the first month each year, a coming-of-
521 age festival is held for all girls of fifteen or sixteen. Girls do
88 their hair in the adult style, dress in their best, and visit the
[302] households of relatives and friends, who present them with gifts.
[248] After a ceremony, the girls may participate in all mixed social
[574] functions, and they may also have any sort of relationship with
[481] men. After the coming-of-age ceremony, a girl may ask any man she likes to spend the night in her tent.

Tibetan marriage follows much the same customs as in tra-

*563 ditional China. Proposals are made through go-betweens, who
584 are usually relatives of the families. It is important that the
[187] horoscopes of bride and bridegroom be in harmony. When the parents and the young couple give consent, gifts of wine and
• [575] katags are exchanged and a contract is drawn up giving the terms on which the alliance is to be made.

The family receiving a bride or a "male bride" (The male

*563 bride is a man who marries into the bride's family, leaving his
583 own home and joining hers.) pays the family for the bride in
584 money or jewels, and also pays a sum to meet the expenses of the engagement party. Katags are exchanged between the relatives of the two families to signify mutual consent and wishes for a happy union. The bride usually has a dowry in cash or in livestock, land and goods, depending upon the means of the family.

*563 Before the wedding day, the families of the bride and bride-
585 groom prepare a feast to entertain relatives and friends, who bring gifts for the couple. The bride's family builds a tent for the ceremony, decorating it with pillows and comfortable seats

681

681 SANCTIONS--incidence and distribution of the major types of sanctions; capital punishment (e.g., hanging, decapitation, strangling, burning, dismembering); corporal punishment (e.g., flogging, mutilation, torture); property sanctions (e.g., damages, fines, confiscation); public humiliation (e.g., ridicule, pillory); deprivation of civil rights (e.g., enslavement, outlawry, imprisonment); theory of sanctions; systematization of sanctions (e.g., wergild, criminal codes); purpose of sanctions (e.g., compensation, punishment, prevention); penology; recipient of fines, damages, confiscated property (e.g., state, injured party); etc. See also:

779 (1885) of the necessary means and the physical possibility of getting to Mecca.

e. The Way of God (Jihad). In addition to the obligations mentioned, in many passages the Koran further enjoins believers to "strive in the Way of God." The duty is formulated in general terms in Sura ii, v. 186., between the regulations of the fast and pilgrimage: "Fight in the Way of God against those who fight against you, but do not commit aggression. . . Slay them wherever you find them, and expel them from whence they have expelled you, for sedition is more grievous than slaying. . . Fight against them until sedition is no more and allegiance is rendered to God alone; but if they make an end, then commit no aggression save against the evil-doers."

A distinction is drawn between warfare against the pagans, on the one hand, and against the Jews and Christians on the other:

"When the sacred months are over, kill those who ascribe partners to God wherever you find them; seize them, encompass them, and ambush them; then if they repent and observe prayer and pay alms, let them go their way." [Sura ix, v. 5]

779 " "Fight against those who believe not in God nor in the last
782 day, who prohibit not what God and His Apostle have prohibited
779 and who refuse allegiance to the True Faith from among those who have received the Book, until they humbly pay tribute out of hand." [Sura ix, v. 29]

"As for those who are slain in the Way of God, they are not dead but living in the presence of their Lord their needs supplied, rejoicing in the bounty which God has given them." [Sura iii, vv. 163-4]

779 Besides these major issues of doctrine, ritual and obliga-
• [681] tions, the Koran contains a large body of religious and ethical
[262] teachings and legal injunctions. For example, wine, pork, gam-
• [681] bling and usury are forbidden along with the making of images
[562] or representations and a number of the practices of pagan Arabs. Marriage, dowry, divorce, the guardianship of orphans, and inheritance are all regulated in detail. Penalties are laid down for certain crimes such as stealing, homicide and murder as well as for a few minor offenses. Slavery is accepted as an institution, but certain limitations are placed upon the rights of owners over slaves and good treatment of slaves is enjoined.
[681] Fraud, perjury and slander are repeatedly and severely con-
[671] demned, and rules of social behavior are laid down in several passages. All these and other regulations explicitly detailed in the Koran served as foundations for a more elaborate set of rules and regulations upon which the structure of the Shari'a, the Islamic law, was erected by later generations.

has persisted to this day. The Koran and Hadith were the basic foundations on which the Shari'a evolved. The law was developed by Moslem jurists who, by different rational devices (e.g. analogy, consensus), adapted the principles of the Koran to fit many new situations, and supplemented the law when the Koran could not suffice.

B. The Principles of Islam

The whole of the religion of Islam is briefly summed up in the shahada, or the profession of faith (which is considered the primary duty of every Moslem)—La illaha illallah, i.e., there is but one God; Muhammadun rasulu-llah, i.e., Muhammad is the Apostle of God. The shahada is not found in this composite form anywhere in the Koran, but its two halves occur separately and are its constant theme. "O you who believe, believe in God and His Apostle and the Book which He has sent down formerly. Whoever denies God and His Angels and His Books and His Apostle and the Last Day has strayed far from Truth." (Sura iv, v. 135).

One of the essential elements of Islam is an uncompromising monotheism. The true belief demands ikhlas, the giving of one's whole and unmixed allegiance to God. Its opposite, which is considered the gravest sin that Moslems can commit, is shirk, the ascribing of partners to God and the worship of any other than him. Of the different forms of shirk, idolatry is denounced as the gravest.

Islam conceives of God as existing at all times and to eternity. "Call not any other God but Allah; there is no God but He. Everything shall perish except His Being. To Him belongs the rule and to Him you shall be brought back for judgment." (Sura XXVIII, v.88.) Along with the terrible and majestic aspects of God as Creator, Supreme Power, Judge and Avenger, the Koran also stresses His bounty and loving kindness.

The doctrine of angels also exists in the Koran. In the imagery of the Koran, the angels are represented generally as God's messengers. They are, like men, His creatures and servants and worship Him constantly; they bear up His Throne, descend with His decrees on the Night of Power, record men's actions, receive their souls when they die, and witness for or against them at the Last Judgment, and guard the gates of Hell.

With the doctrine of angels there is also the doctrine of devils although the devils are represented as rebellious Jinn rather than fallen angels. The Jinns, like men, are created out of fire instead of earth; there are believers and infidels among them, and the unbelievers will be judged with men and condemned to Hell. The rebellious Jinns are called shaitans; they lead men astray, oppose the Prophets and try to overhear what is dis-

of the necessary means and the physical possibility of getting to Mecca.

e. The Way of God (Jihad). In addition to the obligations mentioned, in many passages the Koran further enjoins believers to "strive in the Way of God." The duty is formulated in general terms in Sura ii, v. 186., between the regulations of the fast and pilgrimage: "Fight in the Way of God against those who fight against you, but do not commit aggression. . . Slay them wherever you find them, and expel them from whence they have expelled you, for sedition is more grievous than slaying. . . Fight against them until sedition is no more and allegiance is rendered to God alone; but if they make an end, then commit no aggression save against the evil-doers."

A distinction is drawn between warfare against the pagans, on the one hand, and against the Jews and Christians on the other:

"When the sacred months are over, kill those who ascribe partners to God wherever you find them; seize them, encompass them, and ambush them; then if they repent and observe prayer and pay alms, let them go their way." [Sura ix, v. 5]

"Fight against those who believe not in God nor in the last day, who prohibit not what God and His Apostle have prohibited and who refuse allegiance to the True Faith from among those who have received the Book, until they humbly pay tribute out of hand." [Sura ix, v. 29]

"As for those who are slain in the Way of God, they are not dead but living in the presence of their Lord their needs supplied, rejoicing in the bounty which God has given them." [Sura iii, vv. 163-4]

Besides these major issues of doctrine, ritual and obligations, the Koran contains a large body of religious and ethical teachings and legal injunctions. For example, wine, pork, gambling and usury are forbidden along with the making of images or representations and a number of the practices of pagan Arabs. Marriage, dowry, divorce, the guardianship of orphans, and inheritance are all regulated in detail. Penalties are laid down for certain crimes such as stealing, homicide and murder as well as for a few minor offenses. Slavery is accepted as an institution, but certain limitations are placed upon the rights of owners over slaves and good treatment of slaves is enjoined. Fraud, perjury and slander are repeatedly and severely condemned, and rules of social behavior are laid down in several passages. All these and other regulations explicitly detailed in the Koran served as foundations for a more elaborate set of rules and regulations upon which the structure of the Shari'a, the Islamic law, was erected by later generations.

*668 of the next lower level; deputies to the people's congresses of
631 municipalities not divided into districts, municipal districts,
666 hsiang, nationality hsiang, and towns are directly elected by the
[563] voters. The minority groups shall have guaranteed quotas in these congresses. Minority nationals in administrative areas shall have an appropriate number of deputies to the people's congresses of their administrative areas.

Thus, the people theoretically have political authority and the people's congresses are the organs for practicing this authority. These congresses on the lower levels are elected directly by the voters, while those on the higher levels are elected by the people's congresses of the next lowest level. For instance, the voters elect the people's congresses of the various towns. Then the People's Congresses of the towns elect deputies to the people's congresses of the counties, and so on. The provincial People's Congresses are elected for four years, while the other local congresses are elected for two years.

b. functions of congress

*668 As listed by law the functions of the people's congresses are
631 numerous. In brief, the congresses are to defend the rights of the
671 people and also to assure the support of the people. They approve local budgets and financial accounts; draw up plans for local economic and cultural development; elect and recall the people's councils at their own level; elect the deputies to the people's congresses at the next highest level; listen to and examine the working reports of the people's councils at their own level; and revise or annul inappropriate decisions and orders issued by these people's councils.

These functions and powers could make the local people's congresses into real "watch dogs" for the people, but for several hidden handicaps. One of these is to be found in this same Organic Law, Article 6, which states that a people's congress can "revise or annul inappropriate decisions of the people's congresses at the next lower level." In this way power is retained by the upper level.

2. Role of people's councils

*668 The people's councils have a dual role: they are responsible
631 to the people's congresses at their corresponding levels, and they are responsible to the governments above their own levels. Although they are supposed to be the people's instruments of self-government, they are also agencies of the central government and must obey the State Council. Theoretically, this double responsibility could put the local governments in an embarrassing dilemma, were the local congresses to differ with the central government on policy. In practice, however, it is not possible, because of the tight party control at every level and since the representatives are hand-picked by the party.

a. composition

In addition to the council members, a local People's Council

S
175 places. For instance, during the first two or three years of the
625 Republic, when Sinkiang was controlled by the governor Yang Tseng-hsin, numerous local officials lost their lives in local riots. However, Yang built up a police force efficient enough to maintain peace and order for almost two decades, a record much better than that of the average warlords who controlled other provinces during
S the same period. However, Yang finally was assassinated. Later,
[177] when another ambitious man, Sheng Shih-ts'ai, controlled Sinkiang, he developed a modern police system patterned after the Soviet secret police. Purge after purge made Sinkiang a police state, though people had to give credit to Sheng for his efficiency in maintaining public order. With the removal of Sheng, this police force declined and the province gradually fell into a chaotic situation again.

S
N B. Problems of Managing Diverse Groups
184 Managing the different ethnic groups was a common problem
577 throughout the Northwest, but it was especially serious in Sinkiang where more than a dozen different peoples lived. The problem can be viewed in terms of the different moral standards which were the result of their different cultural patterns and their historical and geographical backgrounds. For instance, among the Chinese, to
S give shelter overnight to a stranger is a favor, not an obligation.
N But according to V. A. Riasanovsky: Customary Law of the Mongol
[671] Tribes, p. 88, among the Mongols, refusal to give shelter for the
674 night is a crime. Obviously over the barren, bitter cold desert and steppe refusal to grant shelter may mean life or death to a wandering traveller, while among the Chinese agricultural society it was usually only an inconvenience. Among the Moslems, Muhammad Ali
S N in The Religion of Islam, p. 759, reports that it is believed that
681 people are equal before God, so that punishment must be inflicted
184 without respect of persons. On the contrary, the Mongols pay much
674 respect to their leaders. Riasanovsky op. cit., p. 93, states: "The punishment changes not only with respect to the object, but also with respect to the subject of the crime: there is no equality before
S the law." Hence, ibid., p. 88, "for the murder (with arson) of a
N nobleman the punishment is ruin (confiscation of all properties);
[565] of a man of the middle class -- 300 animals, 30 valuable things; of a man of the lower class -- 15 times nine animals and one valuable thing." Adultery and rape are serious crimes among the
N Chinese. However, the Tibetans, according to Robert B. Ekvall:
681 Cultural Relations on the Kansu-Tibetan Border, p. 11, permit
184 more freedom in sexual intercourse than most people. Theft is
674 punished by the Mongolian laws, Riasanovsky, op. cit., p. 91, reports, especially if a third theft, the punishment for which is ruin. But to the Tibetans "a crime is determined by the position of the one against whom it is committed. Robbery of a stranger is laudable; robbery of another Tibetan is serious only if he is powerful

673

673 WRONGS--general definitions of acts which violate legal norms; major categories of breaches (e.g., crimes, torts, violations of contract, sins); recognized gradations in the gravity of offenses (e.g., malum prohibitum and malum in se, misdemeanors and felonies, venial and deadly sins); etc. See also:

Specific offenses and their sanctions 68
Sex perversions 83
Breaches of etiquette 576
Breaches of ethics 577
Taboo 784

625 *668 178 The above chart (chart II) is self-explanatory. However, in the past, the major work of the police station was the fight against crime. At present, the emphasis has been shifted to political defense. Thus, the political section becomes a major section in the internal organization of the police offices. To • 673 *668 view the problem from another angle, even common crimes can be political in nature. A case of arson may be considered sabotage of state property. A case of theft may involve the stealing of state property. Murder may be viewed as a disruption of production. Therefore it is difficult to separate common crimes from political resistance. One of the major arguments of the Communists to defend their own criminal past (e.g. Chou En-lai has a record as murderer in Shanghai Police Department) is the political purpose of the crime.

3. Committee of residents

625 *668 In addition to the regular police, the Communists have also organized and used the common people to maintain public order and safety. In cities, there are Committees of Residents. These Committees are organized by districts, each one controlling from 100 to 600 families. Under the committee are "cells of residents." Each cell includes from 15 to 40 families. Each committee shall not control more than 17 such cells. The main function of these cells and committees is to maintain public order. ("The Regulations of the Urban Committee of Residents," adopted by the 4th meeting of the Standing Committee of the National People's Congress on December 31, 1954, articles 2 and 3 in Peking Kuang-ming jih-pao, January 1, 1955.)

The rural areas have Security Committees, the administrative village being the unit with 3 to 11 members participating. Under these committees, security teams of 3 to 5 activitsts are established. These people police the countryside for the Communist government. The functions and power of these security committees are:

1)...Arresting and rugning over to the government and public security organs of counter-revolutionaries caught flagrant, derelicts and criminals wanted by law, but... have no power to try to imprison or dispose of such criminals.

2)...Investigating, supervising, prosecuting and denouncing counter-revolutionaries other than those caught in the act, but...have no power to arrest, detain, search or restrict them.

3)...Educating the masses to preserve the revolutionary order and supervising the persons subject to control in labor and production, forbidding them to speak and act indiscriminately and reporting in time to the public security organs on their behavior, but...have no power to

423 and therefore land was abundant. Among the landowners there were quite a few with extremely large holdings. It is reported that the amount of farm and grazing land owned by a family was so big that it was not measured by acre or by any other unit but was simply estimated as reading from this mountain to that mountain, or from this river to that river. Thus these people's attitude toward land must have been different from that of the people in the coastal provinces. They certainly would not treasure their land so much as farmers of other places. This assumption is verified by the fact that the peasants in these areas would easily abandon their farms and migrate to other places whenever the farming business failed to produce an adequate livelihood. (566) Also, merely large landholdings would not necessarily make a person wealthy. It depends very much on whether or not there are irrigation facilities. Without such facilities, the land might mean nothing.

*563 578 Racial relations in the Northwest are very complicated. This complication influenced not only political and social affairs but also people's attitudes toward each other. Fan reports that in the province of C inghai the Chinese and the Chinese-speaking Moslems all considered themselves civilized and thought of the Tibetans and Mongols as primitive tribes. Both the Chinese and the Chinese-speaking Moslems claimed that they were people from China Proper, chung-yüan. Between the Chinese and the Chinese-speaking Moslems in that province there was also much discrimination. The Chinese-speaking Moslems held all the key political, economic, and military positions and they were the predominant group while the Chinese either had no such positions or had only the secondary or insignificant ones. This discrimination had undoubtedly fostered a great deal of bitterness in the Chinese toward the Moslems.

*563 181 183 829 (674) About the Chinese-speaking Moslems in the district of Ho-chou, Kansu, Fan has this to say: The Chinese-speaking Moslems in Ho-chou are brave and disposed to fight or to make war. They praise warriors but look down upon literature. They have the characteristics of the ancient Spartan people. In their communities stealing and robbery are not things to be frowned upon, as long as they are not done to their own people. If a person left his community empty-handed and came back after a year or so with a big horse and many precious things he would certainly be lavishly praised by his relatives and neighbors as a hero or a worthy man. Nobody would care to ask how the man acquired his wealth. But if such a man came back without any gain and bore the mark of having been captured and punished for stealing or *563 181 526 robbery, he would be exposed to humiliation. In order to express their warlike spirit and to train their people for fighting and bravery, the Chinese-speaking Moslems in Ho-chou have numerous

S
175 places. For instance, during the first two or three years of the
625 Republic, when Sinkiang was controlled by the governor Yang Tseng-hsin, numerous local officials lost their lives in local riots. However, Yang built up a police force efficient enough to maintain peace and order for almost two decades, a record much better than that of the average warlords who controlled other provinces during
S
[177] the same period. However, Yang finally was assassinated. Later, when another ambitious man, Sheng Shih-ts'ai, controlled Sinkiang, he developed a modern police system patterned after the Soviet secret police. Purge after purge made Sinkiang a police state, though people had to give credit to Sheng for his efficiency in maintaining public order. With the removal of Sheng, this police force declined and the province gradually fell into a chaotic situation again.

S
N
184 B. Problems of Managing Diverse Groups
577 Managing the different ethnic groups was a common problem throughout the Northwest, but it was especially serious in Sinkiang where more than a dozen different peoples lived. The problem can be viewed in terms of the different moral standards which were the result of their different cultural patterns and their historical and geographical backgrounds. For instance, among the Chinese, to
S
N give shelter overnight to a stranger is a favor, not an obligation.
[671] But according to V. A. Riasanovsky: Customary Law of the Mongol
[674] Tribes, p. 88, among the Mongols, refusal to give shelter for the night is a crime. Obviously over the barren, bitter cold desert and steppe refusal to grant shelter may mean life or death to a wandering traveller, while among the Chinese agricultural society it was
S
N usually only an inconvenience. Among the Moslems, Muhammad Ali in The Religion of Islam, p. 759, reports that it is believed that
681 people are equal before God, so that punishment must be inflicted
184 without respect of persons. On the contrary, the Mongols pay much
674 respect to their leaders. Riasanovsky op. cit., p. 93, states: "The punishment changes not only with respect to the object, but also with respect to the subject of the crime: there is no equality before
S
N the law." Hence, ibid., p. 88, "for the murder (with arson) of a nobleman the punishment is ruin (confiscation of all properties);
[565] of a man of the middle class -- 300 animals, 30 valuable things; of a man of the lower class -- 15 times nine animals and one valuable thing." Adultery and rape are serious crimes among the
N Chinese. However, the Tibetans, according to Robert B. Ekvall:
681 Cultural Relations on the Kansu-Tibetan Border, p. 11, permit
184 more freedom in sexual intercourse than most people. Theft is
674 punished by the Mongolian laws, Riasanovsky, op. cit., p. 91, reports, especially if a third theft, the punishment for which is ruin. But to the Tibetans "a crime is determined by the position of the one against whom it is committed. Robbery of a stranger is laudable; robbery of another Tibetan is serious only if he is powerful

681 and has great prestige; robbery of a chief may be a life-and-death
184 matter; and robbery of some great living Buddha would mean al-
• 674 most certain death," states Ekvall, op. cit., p. 70. In the past, these problems of differences were somewhat minimized by leaving the various ethnic groups to their own leaders. For instance, as late as in the 1930's, among the Tibetans on the Kansu-Tibetan border, Ekvall reports that the village was the basic unit of administration:

621 "The village organization is generally an informal one. Among
184 the farmers there is a tendency to have a properly chosen head-man; but among the nomads, although there is usually one person in the encampment who is known as the head-man by right of his influence, it is seldom that he has been chosen formally. The real power and final court of appeal is found in the group of substantial middle-aged and elderly men known as the elders (rgan-po), and their word is final in village affairs. Villages - whether villages in the restricted sense, like those of the sedentary districts, or in the larger sense which includes the encampments of the nomads - are associated in groups that have common territorial interests" (op. cit., p. 68).

II. Communist Administration

* 668 A. The System in General
625 In order to suppress widespread resistance, the Communists have organized the largest and most complicated police system in Chinese history. This system includes regular police as well as secret police. To make sure that the police force will not rebel, there are numerous branches in the system to check on each other. The final control, however, is in the hands of the Chinese Communist Party Central Committee. To understand this complicated system, it is necessary to draw a skeleton diagram of the whole system instead of just the part in northwest China.

*175 they were to forward orders from above to the lower level governments; to make decisions or suggestions concerning the personnel, laws, and financial arrangements of the province; and to coordinate and supervise work in the area. There were, however, some new points. They were required "to execute the decisions of the provincial people's congresses."

a. limitations on authority

The significance of this requirement was lessened by the qualification: "provided that these decisions have been approved by the Government Administrative Council or the Military and Administrative Council of the administrative regions." Thus, nothing could be done on the provincial level that was not acceptable to the officials of higher levels. Second, the provincial councils were to "annul or revise the decisions and orders of the municipal and county people's government councils, or the municipal and county people's congresses under its jurisdiction, whenever these decisions and orders are contradictory to those of the higher level people's government." The higher government officials could over-ride the local interests.

b. increased authority

Under this system, the provincial governments of Shensi, Kansu, Ninghsia, Chinghai, and Sinkiang actually were branch offices of the Northwest Military and Administrative Council, until the power of the latter was weakened in 1952. With the abolition of the Northwest Military and Administrative Council in June, 1954, the traditional importance and position of the provincial governments was fully restored. However, primarily they still are instruments of the central government.

B. People's Congress and People's Councils

The day after the First National People's Congress passed the new Chinese Communist Constitution, on September 21, 1954, the same congress passed the organic law for local governments. Taken at face value, this law gives more power to the local governments as well as to the people. From the town level up to the province, each is supposed to have a people's congress and a people's council, the congress representing the people, and the council acting as the executive body. Their position and interrelation can be seen in the following excerpts from the law:

1. Role of peoples' congress

Local people's congresses at all levels are the organs of government authority in their respective localities. (The Organic Law of People's Congresses and People's Councils at all Local levels in Chinese Peoples' Republic, p. 1, Article 3.)

a. election of deputies

Deputies to the people's congresses of provinces, municipalities directly under the central authority, counties, and municipalities divided into districts are elected by the people's congresses

175

rather low, their conception about the party is not clear, and they are not qualified, or completely qualified, as party members. They take little interest in party work, consider the exemplary behavior of other party members in leading the masses as a 'disadvantage,' take no heed of the phenomena detrimental to the interest of the people."

Ma went on to state that bad elements had infiltrated into the party: "Some of the veteran party members in the face of the nationwide victory, display laxity, are arrogant and think of themselves as heroes. They are steadily losing or have already lost the sense of responsibility and positiveness that qualified Communists should have. They pay little attention to study and improvement, take little interest in politics, lack a serious attitude towards their work, do not seek to develop the work but simply carry out routine, and some of them are not prepared to continue with the revolutionary struggle, reject any difficult tasks assigned them by the party, and even degrade themselves to corruption, moral disintegration and estrangement from the masses, and are against party discipline." (Ch'ün-chung jih-pao, October 8, 1951).

Two months later, at another conference of cadres, Hsi Chung-hsün also deplored the deterioration of party discipline. "Diverse

S
175 places. For instance, during the first two or three years of the
625 Republic, when Sinkiang was controlled by the governor Yang Tseng-hsin, numerous local officials lost their lives in local riots. However, Yang built up a police force efficient enough to maintain peace and order for almost two decades, a record much better than that of the average warlords who controlled other provinces during
S the same period. However, Yang finally was assassinated. Later,
[177] when another ambitious man, Sheng Shih-ts'ai, controlled Sinkiang, he developed a modern police system patterned after the Soviet secret police. Purge after purge made Sinkiang a police state, though people had to give credit to Sheng for his efficiency in maintaining public order. With the removal of Sheng, this police force declined and the province gradually fell into a chaotic situation again.

For instance, among the Chinese, to
S give shelter overnight to a stranger is a favor, not an obligation.
N But according to V. A. Riasanovsky: Customary Law of the Mongol
[671] Tribes, p. 88, among the Mongols, refusal to give shelter for the
[674] night is a crime. Obviously over the barren, bitter cold desert and steppe refusal to grant shelter may mean life or death to a wandering traveller, while among the Chinese agricultural society it was usually only an inconvenience. Among the Moslems, Muhammad Ali
S in The Religion of Islam, p. 759, reports that it is believed that
N 681 people are equal before God, so that punishment must be inflicted
184 without respect of persons. On the contrary, the Mongols pay much
674 respect to their leaders. Riasanovsky op. cit., p. 93, states: "The punishment changes not only with respect to the object, but also with respect to the subject of the crime: there is no equality before
S the law." Hence, ibid., p. 88, "for the murder (with arson) of a
N nobleman the punishment is ruin (confiscation of all properties);
[565] of a man of the middle class -- 300 animals, 30 valuable things; of a man of the lower class -- 15 times nine animals and one valuable thing." Adultery and rape are serious crimes among the
N Chinese. However, the Tibetans, according to Robert B. Ekvall:
681 Cultural Relations on the Kansu-Tibetan Border, p. 11, permit
184 more freedom in sexual intercourse than most people. Theft is
674 punished by the Mongolian laws, Riasanovsky, op. cit., p. 91, reports, especially if a third theft, the punishment for which is ruin. But to the Tibetans "a crime is determined by the position of the one against whom it is committed. Robbery of a stranger is laudable; robbery of another Tibetan is serious only if he is powerful

"and some of the elements whose class standpoint is not firm and whose political consciousness is not very high cannot stand the test and become degenerated." (NCNA December 2, 1951). In May, 1952, Chang Chia-fu, director of the Department of Propaganda of the Northwest Bureau of the Chinese Communist Party, declared: "Since they entered the cities, the Northwest Literary and Art Workers, owing to corrosion by bourgeois thought, have wavered more or less in carrying out Chairman Mao's literary and artistic policy." (NCNA May 25, 1952).

2. Poor Quality of the New Cadres: The large numbers of students and former government employees who were incorporated into the ranks of the cadres were not men of high caliber and they quickly followed the examples set by the old party cadres. At a speech at a conference of cadres at Sian in May, 1950, Hsi Chung-hsün charged that there were glaring shortcomings in the United Front Work because the new cadres, who make up 90 per cent of the total number of cadres, following the practices of the old cadres. They were arrogant, they entertained n on-proletarian thoughts, and, because of their behavior, there were flagrant cases of bureaucratism (which he defined as estrangement from reality and isolation from the masses) and commandism (just going through the motions of carrying out orders). He pointed out that in the municipality of Sian, for example, eleven hundred residents were arrested and punished for the mere crime of possessing bicycles, and that in the countryside, the cadres resorted to threats, arrests, and tortures in the collection of taxes.

axles, since the gauge required for the desert is a foot 425
wider than that used in the provinces of North China. 326

The first night was spent in a very cold, damp, north
room of a noisy, dirty and crowded inn. The next day, 681
however, we secured the use of a small private court,
containing an apartment with a tiny kitchen, where our
servant was able to prepare the meals. This small
court had been built by a Kashgar merchant, whose
business necessitated frequent journeys to Suchow,
Hankow and Peking. A few years previously, a deal in
business involved him in a transaction through which he
incurred the displeasure of a high official, the result
being that he was placed under arrest, and forced to
reside in that portion of a Chinese prison corresponding
to the old English 'Debtors' Gaol.' No trial had taken
place, and consequently no judgment had ever been
passed on him. Any representations that he might
make had been bandied from court to court, as each
successive official refused either to investigate the case,
or to take any action which might bring upon himself
the wrath of some other notable, from whom depended
the tenure of his own office. When we reached Suchow,
Mr. Li's imprisonment, now ancient history, was
merely nominal, and he was free to come and go at
pleasure, provided he did not leave the precincts of the
town. He was one of our first visitors, and we found
him to be a man of alert mentality, and of great know-
ledge of the world. His morals and general outlook
were those of Islam, to which he had added under the
stress of trouble the Chinese vice of opium-smoking.
He seemed, however, much pleased that we should be
occupying his premises, and urged us not to hesitate
to report to him if the manager failed to make us as
comfortable as possible.

The news of our arrival spread rapidly through the 700

583 and without a word he took me by the arm and led me along behind
the farmer, to a house a few doors away. There the farmer threw the
silver he had got for the mules on a table and roughly seized a mid-
dle-aged woman who protested in vain and who had evidently been
sitting in front of the door, quite unsuspecting. He quickly lifted the
woman onto his horse and hurried off with her toward the nearest city
gate. Twilight had already descended. He escaped just before the
gates were barred. The Chinese who witnessed the drama laughed
aloud while the woman covered her face with her hands and sobbed
loudly and bitterly. My guide explained to me, laughingly: "For
your two mules the man has got himself this faded woman, a widow."
It is not considered respectable to marry widows, and so no wedding
is celebrated, nor guests invited. The new husband pays a certain
price to the family of the deceased or to whomever the woman be-
longs, and departs with her from her old home, if possible in the dark
and without causing much stir. If the widow is self-respecting and
well brought up, she leaves her old home with tears streaming, even
though she may be heartily glad to get away from it.

Around the same time there occurred another incident which is
426 typical of the sense of justice of the Hsining people. The secretary
682 of a yamen owed a certain bank five tael and left this small debt un-
paid in spite of repeated admonishment. The owner of the bank
thereupon sent one of his employees who demanded payment. But
since the man either could not or would not pay, there was a lively
altercation and the debtor suddenly took a knife and cut off a finger
of his left hand, threw it to the young man and said "There's your
money!" I was told that the blood balanced the debt. However,
both parties were now so aroused that the quarrel continued and the
employee was thoroughly thrashed by the secretary and members of
his family. In his distress the employee kicked the secretary in such
a way that the latter collapsed unconscious and died two days later.
The wife of the secretary then went to the hsien and accused the bank
employee of the murder of her husband. The hsien had the young man
seized and would probably have beheaded him if his family had not
demanded payment of 2,000 tael by the bank for the loss of their son.
Finally the hsien (the father-mother-mandarin) decided that the bank
should pay the secretary's widow 600 taels and thus redeem the young
employee. Inasmuch as the "bank" had to pay the hsien for court
expenses besides, the owner of the bank was on the point of bankruptcy
when I left Hsining fu - all for 5 taels.

the insignia of his power in front of the door of his house, like a
685 petty Chinese official or a police officer. Everyone who passes the
● houses sees two kang (3) and a stick for administering bastinadoes

3. The kang. Chinese kia (popularly known as dia-dia in Kansu) is the rectangular piece of wood, weighing 20 pounds and about 60 centimeters in length, through which the head of a convict is stuck. The Chinese fear it less as a punishment than as a mark of shame, and it is used primarily in cases of petty thievery. The conviction lasts from one to two months, and this collar often may not be taken off at night. But the convicted person may go walking with it if he feels like it and if he has been granted bail or is a property owner.

which are used as punishment or to extract confessions. This represents the power which the li tu se still exercise over their subjects,
346 the Tu jen. The yamen of these tu se is very small. But close be-
778 side it under a three-tiered roof (Plate L) sits a colossal clay Buddha in the midst of a rambling group of buildings which have long since crumbled except for the foundation walls. In any case this structure stems from ancient times (perhaps Ming?) and was the temple of the Tu jen. A large part of the property around the temple still belongs to the Tu jen. There are many inhabitants of Hsining who maintain that the building containing the giant Buddha was not built as a temple but as a palace of the li tu se when they were still independent, around the time of the Sung Dynasty (11th
624 century). A rather large part of the city belongs to the Tu jen who
651 pay taxes to their kings and not to the Chinese officials.

The holder of the position of li tu se in Hsining was a young man in his early twenties who, in complete contrast with his father, enjoyed very little esteem. And rightly so! For, within a few years [171] he had spent his father's entire fortune in drinking and gambling, and was now heavily in debt. Even his father had little power left over his subjects; the Chinese mandarins have now become even more the rulers. They now gather a tenth of the produce

the edge of a precipitous cañon, which has engulfed the road during recent years, and continue again on the further side, while the track now in use winds round the head of the ravine. All through the loess country of Shensi and Kansu it is the same story, the track winding about to avoid the rifts, which are ever widening and working backwards by the collapse of their vertical walls. We were met on the provincial border by some Kansu officials and a couple of dozen Mahomedan braves, picturesque looking warriors mounted on handsome Kansu ponies, from whose appearance it was evident we were entering a new country. All Chinese in the North can ride after a fashion; but a Kansu Mahomedan, a Mongol, or a Tibetan sits his pony as though born to the saddle. Thus escorted we dropped by a long descent of ten li through a gully in the loess to Ching Chou (now Chingch'uan Hsien), and found ourselves once more in the valley of the Ching Ho.

From Ching Chou to P'ingliang Fu is a distance of 130 li, which can be divided into two marches by halting at the village of Paishui Yi, 75 li out. The road, a broad tree-lined highway, runs up the valley of the Ching Ho, which is well cultivated and populated. The trees along this road, which extend on and off all the way from Hsian to Lanchou, are said to have been planted by the order of the great General Tso, the conqueror of the Mahomedans, and if so, all travellers in summer time have reason to be thankful to him for the welcome shade they afford. At Paishui Yi we were met by the P'ingliang magistrate, one of the very best district officers we came across in all our journeys, who proceeded that same evening to take advantage of his presence in the village to try a case in the courtyard of the rest-house in which we were stopping; no red tape or ceremony of any kind, but a quick, straightforward hearing. Kansu is an old-fashioned and conservative province, and at the time of our visit was jogging along in much the same way as under the Manchus, without having adopted many of the new methods of the Republic. This magistrate was a regular territorial official *de carrière*, the son of an official, and, though still quite young, had served for some years as a magistrate under the previous regime. Consequently he was thoroughly conversant with his work, and compared

798 in the secret hope that the ever-shifting sands of the political hour-glass would produce new conditions, capable of manipulation, if needs be, to cover over such an insignificant incident as that of the execution of a Christian leader. They were strengthened in this expectation by reports of successful demonstrations by the anti-Christian organisations in large cities.

To us the reply from Lanchow seemed to hand over the situation to our enemies; nevertheless, prayer was constantly made by the whole Christian community to God for Dr. Kao, and we waited for the answer to come.

798 By the law of China, it is the Civil Magistrate who
● 692 pronounces the sentence upon the prisoner; nevertheless, it cannot be carried into execution without the additional authority of the District Judge; therefore, when this Official was approached and asked to ratify the sentence upon Dr. Kao, he very indignantly replied: 'I refuse to condemn a man whom we all know to be innocent. Every child in the Suchow streets knows that the prison door has never been forced, nor has any prisoner there been unofficially released.' And from this position no persuasion moved him, although he was perfectly aware that such opposition might ruin his magisterial career. We, on our side, at Dr. Kao's request, refrained from any kind of interference or interposition, with the exception that we duly informed our Lanchow friends of all the facts, urging them, if possible, to use their influence to secure an impartial enquiry, which must necessarily be held by officials other than the local authorities. As a result of this appeal, a telegram was presently received from Lanchow, ordering the case to stand over until the arrival of a Special Commissioner appointed for the examination. The natural effect of this communication, following on the action taken by the District Judge, caused some degree

of trepidation in official circles, one result of which being 798
that it immediately secured for Dr. Kao the privilege of 692
receiving visitors, ourselves among the number. We ●
always found him cheery and serene, although the sanitary conditions were so bad that they told seriously on his health, so much so, that when at last he emerged into the open day, he fell to the ground overpowered by the effect of the light. Many a time did we remind each other that although he had not broken open the city gaol and released its prisoners, we were yet all at that very hour seeking to preach liberty to the captives held in the strongholds of the Power of Evil.

It was with a peculiar sense of triumph that we brought the news to the prison, one Sunday afternoon, of the first baptismal service in Suchow having taken place that day.

The turnkey was increasingly friendly to his genial, though intractable prisoner, and when the doors were closed for the night, allowed him to leave his cell and preach to the other captives. The accusation was hanging on the evidence of one witness, namely that of the Governor of the gaol, and owner of the little slave-girl mentioned in a previous chapter. He was a man of weak and shallow nature, to whom cruelty of any kind partook of the nature of an amusement. He had bought over several witnesses, but when they heard the rumour of an investigation by a Commissioner appointed from Lanchow, they backed out and declared that only fear of torture had led them to give evidence. He began to realise, when it was too late, that each of the other officials had left himself a possible loophole of escape, which, if acted upon, would leave the whole burden of the responsibility upon his own head. Surreptitiously, therefore, he began to make preparations for a hasty exit into Turkestan; but this being prevented by his

798 692 superior, it soon became the city talk, that whereas formerly he looked like a man, now his face resembled that of a terrified ghost.

Meanwhile the Commissioner from Lanchow arrived, and only made himself known after spending several days *incognito* in an inn, under the guise of a merchant. He easily satisfied himself that the accusation brought against Dr. Kao was without any foundation, and he collected witness from every tradesman in the vicinity of the prison, to the effect that the gaol had never been 798 attacked at all. He personally visited the prison court, 692 and noticed that this cell now bore a new red paper 697 notice stating that : ' This room is to be called a House of Detention.' This was a ruse by the Civil Magistrate, to justify himself for having placed an untried prisoner in a condemned cell.

Before returning to Lanchow, the Commissioner insisted upon immediate removal to the real ' House of Detention,' where was a sunny courtyard, surrounded by decent rooms, each containing only one occupant. Here, Dr. Kao soon resumed his normal appearance ; he was allowed to shave and keep his hair cut ; visitors came freely, and things in general were decidedly better. All the same, it was still a prison, and many of his neighbours had lived there for years, awaiting a trial that never came ; fed from their homes by little slave-girls sent in with their meals, and who slipped their slender bodies between the thick wooden bars of the locked entrance gate, with basins of rice for their masters' dinner. Some of these men had settled to a dull apathetic endurance of a wrong that could not be righted, many found a solace in the deadening fumes of opium, but there were a few who abandoned themselves to such a frenzy of despair that within a few months they were released by death from the hands of their enemies.

631 five work teams to various places and adopted a combined policy of
S carrying out penetrating detection, investigation and research to-
175 gether with the resettling of vagrants and the pronouncing of sen-
668 tences with great fanfare. According to incomplete data from
625 various localities during the past 11 months, 71.7% of the crimi-
694 nal cases have been brought to light. The data from the two spe-
631 cial districts of Tacheng (Chuguchak) and Altai, from the two municipalities of Ining and Kuche as well as from Shache hsien reveal that a total of 25 major criminal cases have been unearthed."

11. (Urumchi Sinkiang jih-pao, January 20, 1955)
S "Judging from the events that have taken place in our province
175 during the past year, there are still some habitual robbers, habit-
668 ual thieves and other criminal culprits who have not been disposed
694 of. Some elements who have gone through reform through labor or who have been released on termination of sentences still refuse to repent and continue to jeopardize social order. Some landlords

701 635 public works set on foot for the unemployed. Suchow was transformed! But still Dr. Kao's imprisonment dragged on.

798 194 635 701 Finally, on June 1st, the trial of our patience came to an end. A student arrived in our court at dawn, saying that Dr. Kao was under orders to leave that morning for Lanchow, there to stand his trial. In spite of final delays and procrastinations, that same afternoon he left on foot for the eighteen days' tramp to the provincial capital. Here he spent some months, during the greater part of which he was able to live with his own friends. When the trial finally took place, he was declared innocent, and acquitted on all charges.

Many had been the orders and counter-orders, the subterfuge, and the conflicting motives at work, under the shifty régime of Chinese officialdom. On his release General Feng appointed him to the position of Medical Officer in charge of Red Cross work at his own Military Hospital, and his return to the far North-West has been temporarily delayed.

people. I expect you agree with me ; I had better go ; and so I just came in to say good-bye. Our life and death are in God's hands, as also the reputation of His Church. He will vindicate His Name.'

Commending each other to the care of God we parted, and he proceeded in company with Mr. Chang to the Yamen. As the two men left the house and walked down the streets, knots of Yamen runners, who had been placed at various points from which they watched the doors of the compound, closed in behind them, so that, as they reached the Yamen gate, they were completely surrounded by soldiers. As they entered the courtyard, the Civil Magistrate appeared, who shouted angrily : 'Seize that fellow Kao!' Immediately a dozen hands took hold of him, and thrust him into the Black Hole of the inner prison, reserved only for condemned criminals.

CHAPTER XXVII

THE STORM

798 • 697

Dr. Kao's arrest took place on February 17th, 1926, and it was June 1st of the same year before he left Suchow for Lanchow, to be present at the enquiry into his case. For forty-two days he was incarcerated in the Black Hole, which is an inner apartment of the prison, without any window ; it contains, however, a small aperture in the roof to admit a little air and light. The cell was so unspeakably filthy that the Doctor's first request was for some quicklime to scatter on the floor and under the boards of the *kang*, on account of the numerous rats, and other even worse vermin. The only door was the one by which the gaoler entered,

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

798 697 •

and in it was a small grating through which the food could be passed. Next to this was the gaoler's own room, and beyond that again was another cell, in which twenty prisoners were incarcerated, most of them heavily ironed ; this room, too, was in almost total darkness. None of all those wretched prisoners were permitted to leave their cells except for a few minutes once in twenty-four hours, and all were entirely dependent upon their relatives or friends for their food ; consequently death from starvation was all too frequent, while, according to Dr. Kao's own account, the nights were made hideous by the agonised cries and groans of these most miserable of men.

798

For some days after the arrest we suffered intense anxiety from the fact that no message whatever could reach us direct from the Doctor ; moreover, persistent rumours were afloat that he was to be shot. Of course he was regularly supplied with food from the Mission Compound, but we had no certain means of knowing whether he really did receive it or not. Those first days of suspense were, indeed, terrible. The Civil Magistrate, it must be explained, had secured to the accusation brought by him against the Doctor the signatures of the two other most important officials of the city, each one thereby declaring himself personally cognisant of the offence. Consequently, when the answer ultimately came from the provincial capital of Lanchow, it was couched in these terms : 'Since you affirm Kao to be guilty of breaking open the prison of Suchow with an armed mob, you may inflict the extreme penalty of the law ; but if later investigations should prove him to be innocent, you will personally be held responsible for your action.' The three officials then pronounced themselves prepared to take this responsibility ; but did so as a means of currying favour with the local garrison,

One or two there were who vowed to know no rest until this system of bribery and corruption should be overturned, which made it possible to incarcerate innocent men, sometimes for life, without trial and without appeal.

Kansu was at this time in a political ferment. Some months previously General Feng's troops had assumed authority in Lanchow, and were gradually making their power felt throughout the province. His appointment of his own men to positions of importance caused the greatest excitement and apprehension among the local authorities, and the city walls were posted with the announcement that anyone spreading reports on political or military matters would be shot.

The first we saw of Marshal Feng's officers was one Sunday morning at the early Communion Service, when two finely-grown, well-set-up soldiers, in spotless uniform, walked in, taking their place among the little group of believers, thus openly associating themselves with Christianity. They only stayed a few days, however, but were soon followed by recruiting officers, and lecturers, who addressed themselves to the populace and preached equality and the rights of the proletariat, and when the city walls were covered with anti-British posters. It was all very chaotic. But the recruiting fell off, because the people said, 'Under Feng you *must* fight, so what's the use of his good pay if you die?' Then the posters quietly disappeared, but the authorities left ours up intact—one did not know what to expect! At last an officer appeared, sent by Feng, under whose superintendence the city was entirely transformed in only a few weeks. The main streets were widened and levelled; a market-place was erected where the peasants might sell their goods unmolested; industrial institutions were opened for the poor children, and other

159 under the Ma family in Chinghai Province started with their
614 father, Ma Lin, who devoted his efforts toward the promotion
635 of education within the province. After Ma Lin died, his brother,
Ma Ch'i, took over the administration. But when the war with
[648] Japan began in 1937, Ma Pu-fang was given the position of governor of Chinghai, and at the same time he shouldered the tasks of leading the Kuomintang and commanding the troops within that province.

159 Ma Pu-fang was a career army officer. He started as a
[170] commanding officer of a batallion, and gradually climbed up to the post of commander of an army. When his uncle, Ma Ch'i,
[635] was governor of Chinghai before the Sino-Japanese War, he became a member of the provincial government. When he finally took over the administrative job in Chinghai in 1937, he was one of the youngest governors in China.

159 For more than thirteen years, 1937-1950, he held the posi-
635 tion of governorship. During his administration, particularly
185 during the war years, he aimed at the following six main tasks: First, he organized the Pao-chia system not only among the Chinese and Moslems, but also among the Mongols and Tibetans in his province. Second, he trained the local militia for the
[216] purpose of maintaining local order. Third, he was very strict
[891] in carrying out the policy of elimination of opium. Fourth, he conducted the movement of compulsory education aiming at the total elimination of illiteracy within Chinghai. As a result of his policy, in a single year more than a hundred thousand people learned to read. In addition, there were 8 middle normal schools, 131 primary schools and 805 grade schools in that
[499] province. The fifth task was to construct highways, and during his administration, more than two thousand kilometers of highways were constructed. The sixth point was afforestation. Every person was compelled to plant five to ten trees a year, and as a result, more than seven million trees had been planted during those war years.

159 Being a Moslem himself and realizing the complexity of
771 religions in Chinghai, Ma Pu-fang was cautious in his handling
641 of different religious groups. On the whole he worked toward
635 religious harmony, and his policy was one of equal treatment toward all tribes. He chose his personnel regardless of religion or race, on the basis of capacity and personality. Thus he was generally trusted by all religious groups in his province.

159 When the Communists began their campaign in 1949, they
669 pushed their way to the Northwest. Ma Pu-fang was appointed director of the Administrative Headquarters of the Northwest, succeeding General Chang Chih-chung. Joining forces with Ma Hung-k'uei, he directed the defense of the Northwest. Unfortunately, all his attempts failed and by October, 1949, the

159 provincial capital of Chinghai, Sining, fell to the Communists.
669 He was asked by the Communist authorities to serve on their Military Control Board, but when the Nationalist Government moved to Formosa, he managed to leave China. He now lives in Cairo, Egypt.

Ma Pu-ch'ing (1898-)

159 Born in 1898 in the district of Lin-hsia in Kansu Province, Ma Pu-ch'ing was the elder brother of Ma Pu-feng, governor of Chinghai Province from 1937 to 1949, and the oldest son of the late governor of Chinghai, Ma Lin. The youngest son, Ma Pu-ying, did not enter public life, but chose to be a farmer. After
159 he was graduated from the First Middle School of Kansu, Ma
701 Pu-ch'ing entered military life. In 1922 he was commander of the Fourth Regional Garrison. Next year he was promoted as commanding officer of the Cavalry Regiment of the Fifth Mixed Brigade of the Army. In 1928 he became commanding officer of the 77th Brigade of the 28th Division of the Nationalist Revolutionary Army. In 1929 he was transferred to commanding officer of the 65th Brigade of the 22nd Division of the 4th Route of the 2nd Army Group of the Revolutionary Army. In 1930, he was given commandership of the Loyang Garrison. By next year he became commanding officer of the 26th Division of the 4th Route of the 2nd Region of the Nationalist Army. In 1932 he was promoted as commanding officer of the First Cavalry Division of Kansu Province. In the same year, he was transferred as commanding officer of the Second Cavalry Division of the Nationalist Army. In 1936 he became commanding officer of the Fifth
159 Cavalry Division of the Army. When the Sino-Japanese War
701 broke out, he was appointed as the Commissioner of Highways
631 in Kansu Province. Later he was given the position as Reclamation Commissioner of Tsaidam region in Chinghai Province, and concurrently commanding officer of the Fifth Cavalry Division. In 1943 he became deputy commander-in-chief of the Fortieth Army Group.

159 His appointment as Reclamation Commissioner of Tsaidam
631 region in Chinghai Province by the Central Government came at
635 the time his brother, Ma Pu-fang, was governor of that province. Thus the two brothers were often mentioned together as administrative heads of Chinghai. At that time China was engaged in the war against the Japanese invaders, and the whole coastal region had been lost to the enemy. To deal with the urgent need to continue the war, the Central Government then adopted a policy of developing the border regions. Ma's appointment as Reclamation Commissioner of Tsaidam was therefore considered a very important step. Tsaidam region is situated in the northwestern part of Chinghai Province, between the

kitchens."

N *563 M 601 59 . For all members of the same generation, the Monguors use the same term differentiating according to sex. The extended family provides a framework of social support for the nuclear family, the latter consisting of a father, mother and their children. Adoption of sons by childless couples is practiced.

N *563 M 565 582 614 Exogamy is the first rule of marriage and is strictly observed among the nobles. There are no marriages between nobles and commoners in the clan, since all individuals bear the same clan name. However, there are exceptions to this rule, especially when the clan structure breaks down. The status of the wife is inferior to that of the husband. Relationship between two families connected by marriage is clearly seen in the special role of the maternal uncle, who has a powerful influence over his sister's child and over the family into which his sister's child is born.

N *563 M 421 The basis on which Monguor property is divided is that fact that, under the patrilineal system, the entire extended family is the owner of fields, cattle, houses, agricultural implements and money. Individual property is restricted to a few personal possession. The sons of a man who has died, are entitled to receive and divide their father's share.

N *563 361 III. Relationships between the Chinese, the Chinese-speaking Moslems, and the Sedentary Tibetans

Agricultural Chinese, Chinese Moslems and sedentary Tibetans all live in villages for the sake of protection and in accordance with a tradition of settlement that is continent-wide and probably older than history. The area is typical of the farming economy that is found all the way across the northern half of China. The crops are the same and the manner of life is similar. The villages, whether Chinese, Moslem or Tibetan, are alike not only as to spatial characteristics but as to their function in the social organization. The counties may be administratively divided into districts, "roads", or "directions", but the basic unit of control is the village, with a village head-man who is largely responsible for the maintenance of law and order and for the observance of government regulations. The larger villages have their own "family protective associations" and organized units of the militia. The smaller ones have no such organization, but are recognized by the county administration as self-administering units.

N [171] [241] N *563 621 [631] [622] N [701]

N *563 621 631 It is not clear whether there are such intermediate divisions as hsiang, chen and chü between the villages and the county organizations. It seems probable, however, since the National Government has put the Northwest provinces under an administration system similar to that of other provinces. In practice, such divisions

792 the two monasteries there has been a total of five to seven thousand monks. These monks came not only from the immediate area, but were attracted by the prestige or teachings of the monasteries from Mongolia and other areas on the Chinese border.

792 871 Labrang prides itself on being one of the six major academic monasteries in all Tibet. Ma Ho-t'ien even claims for it more complete systems of education and organization than are to be found at the central Tibetan centers of Ganden, Sera and Tashihlumpo. But this pride is modified by the fact that an academic degree of Geshe from Labrang is not actually recognized in Tibet proper. The Labrang incarnations, Chia-mu-yang, have generally gone to Depung in Lhasa to receive instructions.

792 [778] [423] [651] Kumbum can rest on its laurels as a place of holy pilgrimage. Within its grounds is the rock associated with Tsong-kha-pa's birth; so too is there the famed tree that supposedly sprang from the shorn locks of the Great Reformer. Both monasteries own much land and represent great wealth. Some has come in the form of the accumulated gifts and donations of the pious. Still more is representative of taxes imposed over the years on their local subjects, for, like many of the smaller monasteries, these two are the seats of secular rule as well as religious reverence.

792 701 In return for the gifts and other revenue, however, the monasteries perform many functions for their subjects and believers. In the turbulent conflicts between Moslems, Chinese and Tibetans, the monasteries have represented the effective military force of the area. Rijnhart, Ekvall, Ma and others who have been present in crises have all reported the efficacy of the fighting monks. Their strongholds serve as banks for the wealth of all in danger from looting; their armed force stands for the safety of Chinese, Tibetans and foreigners who seek refuge. Nor is there any perceptible hesitancy about the prospects of taking life when the lama war cry, "Sha-sa, sha-sa" (Eat meat, eat meat!), summons the monks to arms. Sometimes these armies [669] were aroused by major crises, such as those of the Moslem rebellions in the late 1800's. They have also done battle against the Communists in the 1930's. And when no greater danger threatens, they are apt to do battle among themselves on an inter-sect or local rivalry basis.

792 795 But the hold of the monasteries cannot be measured solely in terms of the social and political roles they fulfill. The religion of Lamaism is a very tenacious one. The complete conversion of Tibetans to another faith, be it Christianity or Islam, remains on a very small scale. Within the Lamaist structure, the hold of the older sects is the strongest, especially in areas that have remained outside the control of Lhasa. And underneath

These feelings and emotional attitudes were hardly sufficient to arouse animosity or hatred toward the Chinese but rather an unjustified and unwarranted feeling of superiority. The progressive advancement of Chinese settlers, however, who gradually took over lot after lot of their pasture land led not only to hatred but resulted in petty uprisings, so that even the Manchu government several times issued laws against Chinese advancements, which were hardly ever observed. Complaints of the Mongol leaders did not help and they were numerically too weak for military action.

Only in the case of the sedentary Mongols of the Northwest, the Monguors, such problems never arose, as they had become so strongly sinified that their tribal leaders were considered by the Chinese themselves as Chinese officials with a reputation of absolute loyalty.

D. Attitudes toward the Communist Regime

Throughout the history of the Mongols, their pattern of living, internal and external, changed very little. Their families constituted auls, the auls, clans and the clans, tribes. Besides this structural organization, there existed the military institutions of banners and leagues. The internal order was always strict and the laws and regulations hard. A leader who was not strict and hard would hardly be considered as a leader and the history of the Mongols shows that a strong leader always evoked their respect and found them to be submissive followers.

In view of this fact there is little doubt that the Mongols of the Northwest will respect the iron hand of Peking, even though probably with mixed emotions. The creation of autonomous chous (districts) populated only or overwhelmingly by Mongols might give them a certain feeling of self-determination and cultural autonomy. The organization of veterinarian stations which take care of their livestock will certainly be welcome to the nomads; the organization of a widespread educational system might be another asset for the Communists as it fosters Mongolian language and promotes literature written in Mongolian. The establishment of permanent winter sites, on the other hand, which is contradictory to Mongol customs and above all the threatening collectivization of their livestock, which is the Mongols' highest and greatest treasure, are negative aspects. This, of course, refers to the present generation only. The younger and youngest generation, subject to a very vivid and propagandistic education will undoubtedly change their attitude toward the present regime, a process for which the Khalkhas of Outer Mongolia are a classic example. (see also IMAR Handbook, same section).

III. The Chinese, Chinese Moslems and Sedentary Tibetans

An attempt at a cohesive description of popular attitudes among

/Chinese, Chinese Moslems and Sedentary Tibetans/

712 361 different from the others. All the inns and shops were in the suburb. The people who owned them were descendants of a long line of old residents who took pride in the very exclusiveness which was imposed by their isolation. Few of them ever left the place, and many had never even seen the neighboring town of Suchow. An inner gate led to the military section of the fortress, where life was entirely different. The yamen, built in traditional Chinese 712 style, was the center of garrison life, and here the general and 701 his family lived, guarded day and night by sentries! Officers marched in and out, and much official business was done, for this was an important military center and the officer in command held a high rank. Unlike the old residents, the military hated the place and seized every chance of being away from it, bitterly resenting the appointment to such a lonely outpost, and longing to be transferred elsewhere. Nothing would have induced them to walk outside the Northwest Gate where that fateful Gobi Desert stretched, and their eyes always turned longingly to the city where, twenty miles away, there was solace, gaiety and life.

712 512 517 If the men disliked Kiayukwan (Chia-yu-kuan), the women hated it. There is nothing to do here all day but sit and listen to that howling wind, they would say frequently.

[529] [521] [296] The ladies of the yamen would gather in each other's rooms, play ma-jong for small stakes, sip tea and gossip. Often the game was prolonged until midnight, with interludes for drawing on the opium pipe, but the next morning's reaction brought a fierce hatred of this place where desert demons hid themselves in dust-clouds and whistled through every crevice of the crazy [567] buildings. The little slave girls learnt to dread the days of blizzard when their mistresses' nerves were tensed and blows were dealt out irritably for the slightest offense.

[796] [574] [545] Each festival of the year was the occasion for a welcome social function, and during the summer months life was made brighter by the frequent exchange of visits with the officials from Suchow. Twice a year a theatrical troupe visited the fortress, and for the three days of its performance all the inhabitants enjoyed themselves and made merry. But it was soon over, and when the properties were packed and carts carried both actors and their belongings elsewhere, life in the fortress relapsed into desolating stagnation.

712 485 484 The third category of human beings to be met in Kiayukwan were the travellers who came, lodged for a night or two at the inns, and forthwith went their ways. Every sunset and every sunrise they arrived, some taking night stages and some travelling by day, but all were travel worn and weary....

484 712 These formed the stream of living men and women who moved up and down the great road, acquainted with life and full of knowledge about distant places. They were familiar with the large

484 712 cities and the great waterways of China, and had traversed her wide plains by the iron track at speed which seemed fabulous to the owners of these little shops. The static inhabitants saw them come, heard them talk, watched them go, but failed to understand the matters of which they spoke, for, to them everything which they had never seen was unreal, vague, remote and seemed to bear no re'ation to daily life. Enough for them that today they [432] had sold three boxes of matches, two packets of cigarettes and handful of salt. They cared little for travellers' tales and probably believed none of them....

712 512 The restless soldiers of the garrison rushed to and from the large town, but the old inhabitants cared for none of these things, [701] and when the fortress gates were closed each night they put up the shutters of the little shops and crept under miserable cover- [352] lets to lie on the mud kangs, fill their opium pipes and escape into [276] the land of illusion and dreams, which was the only wider horizon that they knew." (pp. 17-20).

361 443 While she was visiting in Tun-huang Miss Cable observed: [186] "The people of Tunwhang (Tun-huang) viewed themselves as the elite of Gobi land, and were abnormally proud of their oasis. They had plenty of money to spend and opened their markets freely to goods from other places, but prided themselves on being a self-supporting community, not only in respect of food, but also in regard to brides and bridegrooms, and they did not approve of marriages arranged between their own children and those of other towns." (ibid.) The people in this district were very conservative. 181 436 "One sign of its deep-seated conservatism," observed Miss Cable, 441 "was the backward system of money exchange which it retained. Long after the silver dollar had become the common basis of coinage on the main road, Tunhwang businessmen looked askance at it, and preferred the shoe of silver which was chipped down, weighed up and exchanged for copper coinage. Here again Tunhwang set its standard by allowing one hundred worn and valueless cash to be introduced into each string of a thousand. It became therefore worthwhile to collect these useless copers in other towns, cart them to Tunhwang and dispose of them there. When the reluctance to admit the silver dollar was finally overcome, merchants still discriminated between different issues and refused one or the other according to fancy. The coin stamped with the dragon was depreciated in favor of one designated as the 'standing man' which was H ngkong currency. The dollar bearing the head of Yuan Shih-kai found favor, and for some reason the third-year issue was more highly valued than any other, but when a new coin stamped with the head of Sun Yat-sen appeared, this Gobi town absolutely refused to recognize it because the new president's effigy was small and unimpressive. No other explanation was offered than the words 'The head seems small', but no one would use it.

STRUCTURE OF GOVERNMENT

I. The Government of Administrative Regions

*175 *668 669 A. Basis of Regions

The turning point of the Chinese Communists' military campaign in northwest China was on April 22, 1948, when they retook Yenan. With the deteriorating general military situation, the Nationalists rapidly lost the Northwest. In December, 1949, the Communist conquest of the area was basically complete. Just as in other areas, the army was their main strength, essential in maintaining peace and order. Thus the local political structures which they set up were closely knit to the military forces, an inheritance from the civil war. Recognizing this fact, the central *175 *668 631 government of the People's Republic decided to divide the nation into several large regions, roughly corresponding to the assigned areas of each field army. It appointed the commanders of the various field armies to manage the civil administrations of the corresponding regions. The Northwest Region included the municipality of Sian, directly under the central authority, and five provinces: Shensi, Kansu, Ninghsia, Chinghai, and Sinkiang.

*175 *668 631 • 701 B. Organizational Regulations

1. Military and administrative council

On December 16, 1949, the Government Administrative Council passed the organizational regulations of the People's Government Committee on Administrative Regions. According to these regulations, a Military and Administrative Committee was to be appointed by the Central Government in each administrative region to maintain peace and order during the first stage of the Communist conquest.

a. composition

P'eng Te-huai, the commander of the First Field Army, was appointed Chairman of the Northwest Military and Administrative Council, which had two vice-chairmen and forty-one members. The chairman and vice-chairmen were Chinese, and the members included four Moslems, two Uighurs, one Tibetan, one Mongol, and thirty-three Chinese. One of the Chinese was a woman.

b. expiation

In the regulations it was also stated that the Military and Administrative Councils were to be abolished as soon as the following conditions were fulfilled:

(1) when the military action was over;
(2) when land reform was completed;
(3) when the people of each region were well organized and a general election had been called. Then the People's Congresses of [666] each administration region, elected by popular vote, were to elect

*175 *668 631 • 701 [666] a People's Government Council of the administrative region to take the place of the Military and Administrative Council.

2. Northwest administrative council

a. composition

Apparently this anticipated election never took place in Northwest China under the Northwest Military and Administrative Council. Since November 15, 1952, when the Central People's Government ordered the reorganization of the Council into the Northwest Administrative Council, it has been known as the Northwest People's Government Council.

*175 *668 631 b. functions

Article 3 of the same regulations indicated that the People's Government Council of the administrative region (the Military and Administrative Council) was to be a part of the regular local government system, ranking between the Central Government and the provinces. It represented the Government Administration Council in guiding the provincial and county governments in administrative work.

This was well defined in Article 4, which gave the detailed functions of the Council. The Council was to be the organ for transferring the orders of the central government to the provincial and other lower local governments. It made suggestions to the central government concerning personnel, law, and financial arrangements for the region. It also coordinated and supervised administrative work for the central government.

These regulations indicated that the Communist Government meant to make the administrative regions and their administrative structures a part of their regular, permanent government system. This was quite a change from the former system, which emphasized the position of the provinces.

c. structure

*175 *668 631 647 After the Communists organized the Military and Administrative Councils of the administrative regions into offices with real power, their structure became large, and even bulky. In 1952, at the peak of its power, the Northwest Military and Administrative Council included the following offices;

Administrative Office;
Committee on Political and Legal Affairs;
Committee on Financial and Economic Affairs;
Committee on Cultural and Educational Affairs;
Committee on People's Control
Committee on Land Reform;
Commission of Nationalities Affairs;
Department of Personnel;
Department of Civil Administration;
Department of Public Safety;
Department of Justice;

625 *668 detain, punish or evict them... ("The Provisional Regulations Governing Organization of Security Committees" proclaimed on August 10, 1952 by the Ministry of Public Safety of the CPG, NCNA, Peking, August 10, 1952.)

Besides these auxiliary police forces, there are People's Supervision Correspondents and People's Denunciation Reception Rooms. People's Supervision Correspondents are recruited from every branch of government organs, enterprises and people's popular bodies in towns and villages. The members are selected from among the activists. "The tasks of the People's Supervision Correspondents are to investigate all cases of violation of laws and discipline and damage to the state and people's interest such as graft, waste, bureaucracy and dereliction of duty by government organs, enterprises and their personnel, as well as to canvass the opinions of the masses on the implementation of government policies and laws, report them to supervisory organs of a superior level and to leading officials of their own departments and to assist them in the disposal of cases. The methods for studying and discovering problems are: (1) to observe and discover problems through their own activities; (2) to regularly go deep into the masses to discover problems and listen to the views of the masses; (3) to collect accusations and appeals from the masses through people's opinion boxes; (4) to maintain close contacts with the People's Denunciation Reception Rooms, and to cooperate with the latter in work." (NCNA, Peking, August 25, 1952.)

The same source adds "The principal task of the People's Denunciation Reception Rooms is to receive and dispose of accusations and appeals from the masses."

• 701 625 *668 These police forces are supported by the regular People's Liberation Army and the militias. The militias are local self-defense corps who, according to Peking, Jen-min jih-pao, August 10, 1952, p. 18, cannot be separated from production. They are those who must engage in productive work, such as farming or handicraft, to make a living. They provide a powerful auxiliary force for the army and regular police.

*668 [674] [873] Augmenting all these organizations is the persistent program of indoctrination. The Communists realize that every crime committed now is politically harmful to their regime, so they have instituted numerous programs in education and propaganda to fight against crime. Reading the "new" moral standards set up for high school students by the Communist Ministry of Education (The Ministry of Education of the People's Republic of China: Jen-min chiao-yu, or People's Education, monthly, July issue of 1955, p. 46. "The moral standard of the middle school students" promulgated by the Ministry of Education on May 13, 1955.) is like reading something from the past. Absolute loyalty to the government, strict obedience to authorities, extreme care not to

*668 is evident that loopholes are open everywhere for sudden changes in tactics and policy. Overnight, a most loyal attitude may change into subversion.

*668 578 The Communists themselves admit that tensions exist even within the ranks of the cadres. Not only do Chinese and non-Chinese cadres confront each other with antagonism, but friction also exists between the old veteran cadres and the newly graduated younger men, as well as between party cadres and non-party cadres. Personal jealousy and ambition, mixed with the fear of sudden purges, have hardly diminished over the last few years and will probably continue to hamper the efficiency of the Communist administration. (See Political Dynamics.)

2. Effect of the campaigns

*668 661 578 Nation-wide drives and campaigns are felt as strongly in the border regions as in China Proper. The effects of the Three-Anti and the Five-Anti movements were especially violent when they hit the people of the Northwest in 1952. Countless cadres, officials, and ordinary citizens of the merchant class were charged with graft, waste, bureaucraticism, tax evasion, bribery, cheating in government contracts, theft of economic intelligence, and stealing of national property. Many were imprisoned, sent to corrective labor camps, or sentenced to death. It is difficult to gauge, however, to what degree the Communist charges were true, or, on the other hand, how much the policy of terror increased resentment against Communist rule. But it goes without saying that the result of such spiritual and physical control makes for continual intimidation and fear. While it makes concerted opposition impossible, it foments the bitterness and unrest upon which eventual open resistance is based.

*668 578 [701] Undoubtedly, the role of the army in carrying out government policies causes much tenseness. It heightens the intensity of terror involved in the implementation of such campaigns as land reform and the suppression of counter-revolutionaries. (Union Research Service, September 27, 1955.) To compensate for the lack of man-power in agriculture and industry, the Communist government has sent large numbers of "reform workers" to the Northwest. According to one source, a subversive potential has been created as "reform workers and minority peoples whose interests are identical, have banded together to oppose Communist rule," and that "cases of resistance have been more numerous than has been imagined." (Ibid.)

3. Effect of economic measures

*668 179 The Chinese Communist government hopes that the Northwest will eventually play an important part in the industrial growth of the entire country. For the moment they are still concentrating on increasing the agricultural output and developing animal husbandry. The initial pressure on Northwestern farmers to

159 Democratic League and has served as director of its branch in
#668 Sian. After the Communists took over, he was selected as one
631 of the two deputy mayors of the city of Sian. He is an alternate member of the Central Committee of the Democratic League.

Chang, Pang-ying: Communist Party official

Up to 1950, Chang was secretary of the South Shensi Regional Committee of the CCP. After 1950 he rose to be director of the Bureau of Public Security and vice-chairman of the Shensi People's Government. He was a member of the Northwest MAC and also third secretary of the Sinkiang Sub-Bureau (later the Sinkiang Committee) up to the present. In 1955 he was made a member of the Standing Committee of the National People's Congress.

Chang Te-sheng: Government official

Chang is a native of Shensi Province. His birth date is unknown. Under the Nationalist Administration he served as a member of the Commission of Overseas Affairs of the Central Kuomintang. Later he supported the Communist revolution and served as Vice-Commissar of the Political Department of the North China Military Area. When the Northwest Administrative Council was formed in 1953, he was given the post as a member of that council and concurrently one of the vice-chairmanships of the People's Government of Kansu Province. In 1955 he was elected chairman of the Shensi PPCC Committee.

Chang, Tsung-sun: Communist Party official

[701] Background unknown, 1937, commander of the 358th Brigade in the 133rd Division in the 18th Group Army and later commander of the 2nd Military District in Northern Shensi. 1945, elected as alternate member of the Central Committee of the CCP; 1948, deputy commander of the First Field Army under P'eng Te-huai; 1950, deputy commander of the Northwest Military District. Member of the Northwest MAC, and procurator-general of the Northwest Office of the Supreme Procuratorate. Since 1952, deputy chief of staff of the People's Liberation Army and since 1954, member of the National Defense Council.

Chang, Tzu-fang (Woman): Communist mass organization leader

Prior to the Communist triumph in 1949, Chang Tzu-fang was chairman of the Federation of Democratic Women in the Shensi-Kansu-Ninghsia Border Region. In 1950 she became a member of the executive committee of the All-China Federation of Democratic Women. In the NW MAC, and subsequently the Administrative Council, she was a member of the council, the Political and Legal Commission, the People's Supervisory

159 Commission, and the Land Reform Commission.
*668
631

Ch'ang, Li-fu: Member of the Communist Party

A native of Shensi Province, dates unknown. When the Military and Political Council for the Northwest was established in the Northwest, he was appointed Secretary-General in 1950; in 1953, when that council was re-organized into the Northwest Administrative Council, Ch'ang was appointed a member of that council and also served as its secretary-general. In the Central People's Government, he was made deputy secretary-general and director of the secretariat in the State Council in 1955.

Chao, Chan-k'uei: Labor model and official

Native of Ting-yuan in Shensi; a servant at age twelve; at thirty-eight worked as a metal worker on a railroad; at forty-two, went to Yenan, organized workers into labor unions and labor corps, set production record in iron foundry. In 1947 when the Nationalist forces captured Yenan, Chao first defended the iron works and then hid the machinery.1949, delegate to CPPCC, Peking. 1950, was deputy head of the Department of Labor in the NW MAC.

Chao, Po-p'ing: Communist Party and government official

Personal data not available. 1950, director of the Department of Labor in the Northwest Military and Administrative Council, deputy secretary in the Sian Municipal Committee of the CCP. 1952, director of the Department of Propaganda in the Northwest Bureau of the CCP. Elected as vice-governor of Shensi in 1954.

159 Chao, Shou-shan: Army officer
*668
• 701
631

Born in 1895 in Shensi Province in farm family; graduated from a surveying school; joined the army and became a commanding officer of a brigade in General Yang Hu-ch'eng's army in Shensi; Garrison Commander of Hanchung, Shensi; after the December 12, 1936, incident when Generalissimo Chiang Kai-shek was detained by the Young Marshall, General Chang Hsueh-liang, and General Yang Hu-ch'eng, Chao became Garrison Commander of Sian. In 1937 he became commanding officer of the 38th Army; later, the commander of the 4th Army Group; 1947, relieved from his command and given a choice of becoming a member of the Military Advisory Council or going to U.S.A. on an investigating tour. Toured U.S.A., joined the Communists later that year. In 1949 his troops re-entered Sian. 1949, delegate to the CPPCC; 1950, became chairman of the People's Government of Chinghai; 1952, appointed chairman of Shensi People's Government; 1953, member of the Northwest

N
159 Administrative Council. Reelected Governor of Shensi in 1954.
*668 Chao's career as an army officer was highlighted at three
• 701 different occasions: First he took part in the coup d'etat against
631 Chiang Kai-shek during the Sian incident; then he became a war hero in the Sino-Japanese War for his campaign in the Chung t'iao Mountains along the Shensi border, and finally when he shifted his allegiance to the Communists in 1947, he was instrumental in appealing to the Northwestern troops to revolt against Chiang's regime. His appointment as Governor of Chinghai and then Shensi by the Communist regime was a recognition of his service to the Communist cause.

N
159 Chia T'o-fu: Communist, government official
*668 Background unknown, dates unknown. During the Sino-Japan-
631 ese War he served as the secretary-general to the Northwest Office of the Central Political Bureau of the Communist Party; 1948, member of the Financial and Economic Committee of the North China People's Government; later secretary to the Municipal Committee of Sian. 1950, mayor of Sian; 1950-52, member of the Financial and Economic Committee of the Government Administration Council in the Central People's Government, and vice-chairman of the Financial and Economic Committee of the Military and Administrative Council of the Northwest; since 1952, vice-chairman of the Financial and Economic Committee of the Government Administrative Council, member of the Northwest Administrative Council and concurrently vice-chairman of the Financial and Economic Committee of the Northwest Administrative Council. Chairman of the Northwest Headquarters of the Federation of Trade Unions, and vice-president of the Northwest Branch of the Sino-Soviet Friendship Association. Also a member of the Northwest Bureau of the CCP.

In 1955 he was promoted to director of the Fourth General Office (Light Industries, Fuel) and concurrently Minister of Light Industries in the State Council of the Central People's Government.

Chia is one of the principal officials responsible for the economic development and industrialization of the Northwest.

S
159 Ch'ü, Wu: Government official
668 Head of the Office of Civil Affairs in the Sinkiang Provincial
631 Government under the Nationalists; 1949, mayor of Urumchi, member of the Sinkiang People's Government Council; 1950, deputy secretary general in the Government Administration Council; 1953, member of the Northwest Administrative Council; 1955, deputy secretary-general of the Standing Committee of the National People's Congress. Member of the Executive Committee of the Sino-Soviet Friendship Association.

Hsi Chung-hsun: Communist

159 *668 631

Born 1912 in Shensi Province. In 1926 he joined the Communist Youth League. 1927, was in prison. 1932, staged "soldier rebellion of the Liang-tang Mountain" and conducted guerilla warfare in northern Shansi Province; 1937-45, in charge of the defense of the Shensi-Kansu-Ninghsia Border Area. 1949-52, alternate member of the Central Committee of the Chinese Communist Party, member of the People's Revolutionary Military Committee, vice-chairman of the Northwest Military Administrative Council and concurrently chairman of the Land Reform Committee for the Northwest MAC. Since 1953, in the Central People's Government, member of the Central People's Government, vice-chairman of the Commission on Culture and Education in the Government Administration Council, member of the People's Revolutionary Military Committee, member of the National Planning Committee, member of the Constitution Drafting Committee and member of the Central Election Committee; in the local government, vice-chairman of the Northwest Administrative Council; in the Communist Party, he is an alternate member of the Central Committee and first secretary of the Northwest Bureau of the CCP. In the army, he holds the post as political commissar of the Northwest Military District, and in the mass organizations, he has been, since 1951, president of the Northwest headquarters of the Sino-Soviet Friendship Association and member of the Board of Directors of the SSFA. In 1955 he was promoted to be vice-premier of the State Council of the Central People's Government.

Hsi has been virtually the boss of the Northwest region, especially after the transfer of P'eng Te-huai to be commander in chief of the Chinese People's Volunteers in Korea in 1951. It was Hsi who instituted the ideological reforms and the purges of the cadres in 1952, and it was he who instituted the "study" program for the general line of the state for the transition to socialism in the Northwest region.

Hsi has been a life-long Communist. The fact that he holds so many memberships in the Central Government indicates the important role he plays in the Communist regime. His position in the local administration is equally high for he is the second political boss in the Northwest, next to General P'eng Te-huai.

Hsing Chao-t'ang: Army officer

159 *668 701 631

Native of Kansu Province, dates unknown. 1923, commanding officer of a division in the Second Army of the Kuo-min-chun under the command of Hu Ching-i of Shensi. 1937, deputy commander of the Hopei-Chahar Guerrilla Forces; 1941, deputy speaker of the Hopei-Shansi-Shangtung-Honan Border Council; 1948, member of the North China People's Government of

159 Ninghsia Province; 1952-54, chairman of the People's Govern-
*668 ment of Ninghsia. His name, however, disappeared from the
*701 lime light after the Ninghsia People's Government was abol-
[631] ished and Ninghsia merged into Kansu in 1954.

Hsing was a career soldier. His long years of fighting a guerilla war against the Japanese had made him a man of distinction. His association with the Communists, however, did not begin until he broke away from Sun Tien-ying, under whom he had fought as a guerrilla leader for many years. When Sun's guerrilla forces were re-organized into the Nationalist Fifth Army, Hsing began to shift his political leaning toward the Communists. Hsing's red star began to shine when he was first selected as deputy speaker of the Border Assembly for Hopei-Charhar area. He was responsible for the training of a large number of cadres in Ninghsia.

159
*668 Hsi-jao-chia-ts'o: Buddhist, government official

Born in 1884 in Chinghai Province. At age of twelve entered
[792] one of the colleges in Drepung Temple in Tibet to study Buddhism; 1916, given the degree Geshe (after completing the five classics in Buddhism, namely, Sutras and Commentaries, Prajnparamita or book on philosophical matters, Madhyama or book on the Middle Doctrine, Vinaya or book on moral discipline and Vasubhandu's work); since then edited and commented on the Kanjur for twelve years. In 1937, he went to Nanking by way of India and gave lectures on Tibetan culture at the National Central University, Tsinghua University, Sun Yat-sen University, Peking University and Wu-han University. 1939, sent to Tibet by the Nationalist Government on a good-will mission.
159 Since 1946 has been a reserve member of the Kuomintang Cen-
*668 tral Supervisory Committee and from 1947 to 1949, vice-chair-
631 man of the Commission on Mongolian and Tibetan Affairs in the National Government. In January 1950, appointed member of the Military and Administrative Council for the Northwest, and concurrently deputy-chairman of the People's Government of Chinghai. Since January 1953, member of the Administrative Council of the Northwest, member of the Political and Legal Commission, vice-chairman of the People's Government of Chinghai, director of the Cultural and Educational Commission in the provincial government, and acting chairman of the Chinese Buddhist Association.

159 The fact that he achieved his degree of Ke-hsi had made Hsi-
*668 jao-chia-ts'o a man of high esteem. He devoted twelve years to
792 editing and commentating the Kanjur, the complete works of
594 Tibetan Buddhism, and his bold approach in editing the textual errors in the scriptures has made him an authority on Buddhism, although he did incur the displeasure of the Dalai Lama.

I: Washington S-4 (no date) 1956 AF13 Northwest China AF13

159
668
554

Before the Communists took over Tibet in 1951, his effort in bringing about a peaceful "liberation" of Tibet had won him a tribute from Communist authorities.

159
668
701
631

Huang Cheng-ch'ing: Tibetan army officer

A Tibetan of Sik'ang Province, born 1903 and graduated from the Kansu Political Training Institute; teacher of the Five Tribes College in Lanchou; member of the Supervisory Committee of the Lanchou Branch of the Kuomintang; 1927-1928, commander of the tribal troops of the 7th Field Army of the Second Army Group of the People's Revolutionary Army; 1934, garrison commander of Labrang, Kansu; 1944, leader of the Labrang Delegation to Chungking; 1950, member of the Military and Political Council of the Northwest and concurrently vice director of the Department of Animal Husbandry in that council; 1953, one of the vice-chairmen of the Northwest Administrative Council. In 1955, he was elected one of the vice-chairmen of Kansu.

159
668

Huang is the oldest of three brothers. His second brother, Huang Cheng-pen, was the Grand Assistant of the Labrang Temple, one of the six famous Lamaist temples in the country, and was in charge of all the affairs of that temple and others under its jurisdiction. His third brother, Huang Cheng-ming, is the Living Buddha of Ah-mang-ts'ang, Chia-mu-yang the Fifth. The three brothers were the actual rulers of Labrang in charge of the military, political and religious affairs within that region. Thus Huang's high position in the Northwest under the Communist administration is understandable, another example of the Communist policy in that area of using local minorities leaders.

Ho Wei-te

(631)

Background and dates unknown. 1953-, member of the Northwest Administrative Council, and one of the vice-chairmen of the People's Government of Kansu Province, a position he retained in the election of 1953-54.

159
668

631

Kan, Ssu-ch'i: Army officer and government official

Native of Hunan, graduate of Hunan Middle School, political commissar in the 18th Division of the Sixth Army under Hsiao K'e; 1934, deputy political commissar in the Second Front Army under Ho Lung; chief of staff and political director in the 120th Division under Ho Lung; political commissar in the Shensi-Kansu-Ninghsia Border Region Defense Forces; 1945, elected alternate member in the Central Committee of the CCP; 1950, member of the NW MAC, member of the Land Reform Commission and director of the Department of Public Security in the NW MAC. 1951, political commissar in the Chinese Volunteer

N
159 Forces in Korea; 1955, deputy director of the General Political
668 Department of the People's Liberation Army.
[701]
631

Kao Chin-shun: Communist Party member

S Background unknown. When the Communists took over Sin-
159 kiang in late 1949, he was chosen as one of the two vice-chair-
668 men of the People's Government of Sinkiang. He is now vice-
631 chairman of the Sinkiang-Uighur Autonomous Region and second secretary of the Sinkiang Committee of the CCP.

N Li Ching-lin
159 Background and dates unknown. 1949-53, member of the Mili-
*668 tary and Administrative Council for the Northwest, and vice-
631 chairman of the People's Government of Ninghsia; 1953-54, member of the Northwest Administrative Council and vice-chairman of the People's Government of Ninghsia.

Liao Han-sheng: Communist Party member

A native of Hupeh Province, dates unknown. A political commissar of the People's Liberation Army; in 1949 he was appointed a member of the Military and Administrative Council for the Northwest, and concurrently one of the vice-chairmen of the People's Government of Chinghai Province until the election of 1954. When the council was reorganized in 1953 into the Northwest Administrative Council, he continued as a member.

Lo I: Communist official and mass organization leader

Background unknown; member of the commission on political and legal affairs, land reform and people's supervision in the Northwest Military and Administrative Council, and member of the standing committee of the Central Committee of the New Democratic Youth League. Member of the All-China Democratic Youth Association. In charge of youth work for the CCP in the Northwest.

Ma, Hsi-wu

Background unknown. In 1952 he was president of the Northwest court of the Supreme People's Court, and member in the Political and Legal Commission and the Land Reform Commission of the Northwest Military and Administrative Council. 1955, vice-president of the Supreme Court in Peking.

N Ma Hung-k'uei (1893-)
159 In the study of the modern history of Northwest China under
614 the Nationalist administration, particularly the history of the provinces of Kansu, Ninghsia and Chinghai, special attention must be directed to the history and background of the Ma clan,

159 and the so-called Four Ma, all of Moslem religion. Ma Hung-
[614] k'ui is one of them. His father, Ma Fu-hsiang (literary name, Yun-t'ing), served in the early years of the Republic as the High Commissioner for Chinghai, commander of the Guards Division for Altai, and later in the second year of the Republic, 1913, the Commission of the Guards Division for Ninghsia.

When the Revolution of 1911 broke out, Ma Hung-k'uei was
[669] studying at the military school in Lanchou, Kansu. He played a small part in the revolution by mobilizing the students of the school and trying, unsuccessfully, to take over some strategic points in the city.

159 He started his military career when he followed his father to
701 Ninghsia as a batallion leader. In 1921, when his father was transferred to be the garrison commander of Suiyuan, he was promoted as commanding officer of the Fifth Mixed Brigade. During the war between Chang Tso-lin of Manchuria and Wu P'ei-fu of Chihli (Hopei) Province, he was appointed as the commander of the cavalry in Jehol, Chahar and Suiyuan Provinces. After the war was over, he followed the victorious General Feng Yu-hsiang to Peking. In 1926, when the Northern Expedition started, he followed General Feng again, taking part in the expedition. At this time his troop was reorganized into the Fourth Army of the First Army Group, and he became the commander of the Fourth Army. In 1928, he fought the war in North China and his troops suffered a great loss. When the situation was settled, he regrouped his troops into the 17th Division, and was put in charge of suppressing the bandits in the western part
[669] of Shantung Province. In April, 1929, when General Feng Yu-hsiang revolted against the Nationalist Government headed by Generalissimo Chiang Kai-shek, Ma remained loyal to the Nationalist Government. His troops were again reorganized into the 11th Army. In 1930, his army was enlarged into the 15th Army Group and was in charge of patrolling the Lung-hai and Tientsin-Pukou Railway lines. In the winter of 1932 he was ordered to go to Ninghsia, and on January 1, 1933, he was appointed governor of Ninghsia.

159 When Ma Hung-k'ui took over the administration in 1933, the
185 province of Ninghsia was in a deplorable situation, suffering
656 from floods and the ravages of Ma Chung-ying. To restore peace and prosperity to the people, Ma Hung-k'uei first mopped
[579] up the remnants of the bandits in his province. He introduced the Pao-chia system by which the people were organized to insure against the recurrence of banditry. Third, he adopted measures to put a gradual end to the planting and smoking of opium. Fourth, he stabilized the currency within Ninghsia and improved the taxation system. Simultaneously, he followed the policies of improving land administration, encouraging

159 the "Four Ma of Islam" in the Northwest. When he was twenty-
701 one years old, Ma Hung-pin started his military career by serving as commanding officer of the cavalry corps in charge of the Sining mines in Chinghai Province, and at the same time he was a member of the reclamation commission and mining commission of that province. In 1911, he became commanding officer of the cavalry batallion in charge of the patrol of the western region of Kansu. His first military merit was achieved when he pacified the disturbances of the two Mongol banners in western Suiyuan who were stirred to revolt by the independence achieved by Outer Mongolia in the first years of the Chinese Republic. In 1914, he was the commanding officer of the Seventh Cavalry Batallion and stationed in western Suiyuan guarding the Yellow River Bend and keeping a watchful eye against the Outer Mongols. Because of his meritorious record in the pacification of bandits in his area, he was awarded several medals and was promoted to lieutenant general by President Li Yüan-hung of the
[648] Peking Government. Later he also received a medal from the government of Belgium for his excellent work in protecting Belgian missionaries. In 1920 he was appointed as Defense Commissioner for Ninghsia (not a province at that time) and was charged with the duty of defending the frontier areas. In 1926 he was given the post of Pacification Commander of the Shensi-Kansu border regions. In 1927, when the Northern Expedition began, he was the commander of the 24th Division of the Second Army Group of which General Feng Yu-hsiang (the Christian General) was the commander-in-chief. In 1928 he was transferred as the commander of the Seventh Division.

159 When the Nationalist Government was established in Nanking,
635 Ma Hung-pin was appointed the first governor of the newly organized province of Ninghsia. This was, so far, the first political assignment for Ma. In 1930 he was also made acting governor of Kansu Province. His political life ended in 1933 when his cousin, Ma Hung-k'uei, succeeded him as governor of Ninghsia.
159 From 1934-1936, his main task was to pacify the remaining
[579] bandits in the eastern region of Kansu. Because his policy in suppressing bandits was to win them over rather than annihalate them, he had won for himself the nickname of "Ma the Kind
[701] Man." In 1937, as commander of the 81st Division and, concur-
[648] rently, defense commissioner for the western region of Suiyuan, he led his troops in fighting the Japanese invaders in that area. In 1940 he became commander-in-chief for the defense of Etokuchi, a Mongol Banner in western Suiyuan.

159 When the Communists started their campaign in the North-
669 west, Ma Hung-pin surrendered Ninghsia Province to the Peo-
* 668 ple's Liberation Army on September 16, 1949. Because of this drastic move, the whole Northwest was soon lost to the Communists.

S
159 authorities. Moreover, Osman was not given a post in the gov-
648 ernment of the East Turkestan Republic, but only a regional
669 post, despite the fact that he had helped in the establishment of the republic, and his Kazakhs were discriminated against. When he joined the Chinese Nationalist Army and repulsed the Outer Mongolian invasion, he was hailed throughout China as a hero. Later, he was the rallying point of the resistance of the Kazakhs and other anti-Communist forces in Sinkiang.

N Pai Hai-feng: Mongol, army officer
159 A native of Jehol Province and a member of the Kharchin Banner of the Mongol tribe in Inner Mongolia. Dates unknown. Graduated from the first class of the Central Military Academy; went to Russia and studied in the Oriental University. 1931-1932, served in the Peiping Branch of the National Military Council; later succeeded Yun Chi-hsien as commander of the Mongolian
N Police of Pai-ling-miao, Suiyuan. During the war period. 1937-
[701] 1945, when the police were reorganized into a brigade of the regular army, he served as commanding officer of the brigade and was eventually promoted to commander of a division. In the meantime, also served as a special representative of the Kuomintang to the Mongol Banners in Chahar and Suiyuan Provinces as well as the representative of the San Min Chu I Youth Corps for that region. 1943, resigned from his duties with the Kuomintang Party.

N When the Communists took over North China in 1949, he
159 served as a member of the Military and Administrative Council
631 of the Northwest, and as vice-director of the Department of Agriculture and Forestry. 1953, a member of the Northwest Administrative Council, and vice-dean of the Northwest Nationalities College.

N Pai Ju-ping: Communist
159 A native of Shensi Province; dates unknown. During the per-
631 iod of Shensi-Kansu-Ninghsia Border Government, served as
*668 the director of financial affairs in the Administrative Commissioner's Office in western Shensi, and later as finance commissioner in the border government. 1950, when the Military and Administrative Council of the Northwest was formed, he served as a member of the council and as director of the Department of Finance. In January 1953, the Northwest Administrative Council was established to replace the Military and Political Council of the Northwest. He serves as a member of that council and concurrently as vice-chairman of the Financial and Economic Commission in the council. 1955, director of the Central Handicraft Administrative Bureau in the State Council.

000 one of the vice-chairmen of the Kansu PPCC.

701 T'ao Ch'ih-yueh: Army officer

A native of Hunan, dates unknown. Graduate of Whampao Military Academy; 1936, commanding officer of the Eighth Division, Nationalist Army; 1945-49, commander of the Sinkiang Garrison; 1949-, deputy commander of the Communist forces in the Sinkiang Military Area, and commanding officer of the 22nd Army Group; 1949-, member of the Northwest Military and Administrative Council and member of the Government Council of the People's Government of Sinkiang; 1951-, member of the National Committee, People's Political Consultative Conference; 1953-, member of the Northwest Administrative Council.

S
159
701 During the Nationalist administration, T'ao was never in a very important position in the army. His rise to fame began when General Chang Chih-chung, representing the Nationalist Government, conducted peace talks with the local leaders of Sinkiang from 1946-1949. At this time T'ao, succeeding General Sung Hsi-lien, became the commander of the garrison forces in Sinkiang. When the defense of the Northwest by the Nationalist

S
159
669
668 troops was broken down by the victorious Communist army, T'ao took the lead of all military and political leaders of Sinkiang to switch his allegiance and support to the Communist regime in Peking. On September 26, 1949, he made his public announcement in which he separated Sinkiang's relationship from the Nationalist regime and gave his whole support to the Peking regime. And on October 1, 1949, he went to Chiu-ch'uan, Kansu, to welcome the commanding officer of the People's Liberation Army, General Wang Chen, to Sinkiang. His troops were then reorganized into the 22nd Army Group, which he still commands, but which was later disarmed and transformed into "production corps." T'ao was elected to the CPPCC in 1951. He was a member of the NW MAC (later the Northwest Administrative Council) and in 1955, a member of the National Defense Council.

*701 Teng Pao-san: Army officer

A native of Kansu Province; dates unknown. 1927, deputy commander-in-chief of the Preparatory Army for National Construction under the command of General Feng Yu-hsiang, the Christian General. 1930, deputy commissioner in the Pacification Headquarters of Shensi Province. 1937, deputy commander of Suiyuan War Area under General Fu Tso-i, stationed in Paotou, Suiyuan; 1948, 1949, during the Communist advance in 1949 he gave up his city and fled. Later he defected from the Nationalists. Delegate to the CPPCC; appointed chairman in the People's Government of Kansu Province and re-elected to the same

000 by the Soviet Bloc, particularly Russia.

*668 499 464 466 *175 Manpower on railway construction is another interesting point. According to Dr. Ling Hung-hsün's (veteran engineer of Free China) personal survey of the present Lanchou Alma Ata line in 1943, population along the whole line within the border of Sinkiang did not exceed 600,000; the part in Kansu was also thinly populated. In view of the shortage of laborers, especially skilled workers, among the local population, it would be necessary for the Chinese Communists to use forced labor from other areas to work in this remote region. Although no exact information concerning this is available, as reported, out of a total of 23.25 million, about 250,000 persons were forced to work in transportation projects as a whole in 1955. (Wu, Yuan-li. An Economic Survey of Communist China, p. 323.) The armed forces were also employed [701] for this purpose. For example, a unit of the First Field Army contracted with the Communist Government in the spring of 1950 for the construction of the entire T'ien-shui-Lanchou Railway. According to the news reporter, Robert Guillain, the manpower resources in building the Lanchou-Sinkiang Railway consisted of the Northwest Chinese troops (as well as others) who had first "volunteered" to fight in Korea, and after being demobilized in Lanchou had again "volunteered" to remain as civilian workers. ("I Saw Communist China" The Saturday Evening Post, June 2, [648] 1956, p. 114.) Russian experts, of course, were invited to supervise the railway construction.

B. Highways

491 499 *668 *175 In addition to the railway construction which is carried out at full speed in the Northwest, highway building and renovating were greatly developed. There is not much information available concerning new highway construction in Shensi province. The only report available said that during 1954 over 210 kilometers of highway were repaired and 115 kilometers of new highways added, in addition to the renovation of the Han-chung-Pai-ho Highway.

In Kansu, highways radiate from Lanchou towards Chinghai, Sinkiang, Inner Mongolia, Shensi and Szechwan. The most important highways built in 1953 were the Lanchou-Hsia-ho-A-pa (in Szechwan), Hsia-ho-Min-hsien and T'ien-shui-Chang-chia-chuan lines with a total of 630 kilometers. In 1955, over 1000 kilometers of highways were either constructed or repaired in Kansu. One from Lanchou led to the Ching-tai coal field, one ran from Lanchou to the Liu-chia Gorge where the gigantic hydro-electric resources along the Yellow River are located, and another ran from Shan-tan to the Shantan coal area. The 426 kilometer section between Tun-huang of Kansu to Shuerhkuli in Sinkiang was being renovated.

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

immediately above the rock on which the loess rests. The regularity of level and depth of the loess over wide areas, the invariable slope of the loess uplands in the same direction as the rivers and streams, i.e. all draining S.E. and the meeting-line of the light sandy loess and the heavier reddish loess, which can often be traced for miles at the same level, may also be noted in support of a water origin; while lastly there is the fact that the loess has nowhere, except in the extreme west, crossed the Ch'inling Shan, a continuous range, whereas it is piled high on either side of other ranges which are not continuous. These lines are written without access to books of reference of any kind, and it should be understood that they represent merely the impressions of a traveller with no scientific training, who has not the least intention of starting a controversy on the subject of a problem which has probably long been settled by competent scientists. But in spite of the fact that we have often seen loess at a height of 6000 feet or more, it is difficult to believe that it was not deposited there by water.

Yao Chou, now a second class Hsien, is quite a large city for Northern Shensi, and about the most prosperous, or rather least miserable, place we came across in that region. It lies, surrounded by indigo fields, in a narrow valley below the level of the loess uplands. We were here joined by a *Lien* (company) of infantry, since the north of Shensi is, at the time of writing, so overrun with brigands, well armed and organized in bands many hundreds strong, that it would have been impossible for a party of Chinese officials to tour those districts with a smaller escort. Curiously enough, owing to the extraordinary change which has occurred in the position of the foreigner in the interior of China since the Revolution of 1911, while no Chinese but brigands, soldiers, or the poorest of coolies can travel on the roads of Northern Shensi without great danger to property and life, a missionary or other foreigner can circulate where he pleases with comparatively little danger of being attacked. We had so far been accompanied by a small mounted escort of a dozen men or so; for though the mountainous districts of Southern and Central Shensi through which we had passed harbour plenty of brigands, these are mostly local robbers who plunder isolated travellers

the south, runs for two hours' march across the flat-topped hills, descending finally by precipitous zigzags to reach the city of Yich'uan lying in the narrow valley of a stream flowing east to join the Yellow River. The country crossed on this march is again pure loess, very sparsely populated, and with innumerable grass-grown terraces which have gone out of cultivation and render evident the depopulation of the region.

Yich'uan Hsien, lying at the junction of two narrow valleys in the loess, is the capital of a second class district, and was evidently a comparatively large and prosperous city in the past. At the time of our visit it was practically empty, and lying in the heart of that wild and little frequented region which contains the chief haunts of the brigand bands of Northern Shensi, it is at the present time uninhabitable by any but the poorest classes. Northern Shensi, depopulated by the Mahomedan rebellion fifty years ago, and now probably undergoing a process of desiccation, is losing its few remaining inhabitants of the better class through the devastations of the brigands, many having moved across the Yellow River into Shansi, where conditions are much better. Recently a large band of brigands, perhaps finding that Northern Shensi was getting rather bare, also moved across the river; but prompt military measures were taken by the Shansi authorities and they were soon driven back to their original haunts with great loss. The question naturally arises, why should these brigands be left apparently unmolested by the authorities of their own province?

The answer is provided by the history of events in Shensi during the years since the revolution of 1911, which is outlined in another chapter. The brigands of Northern Shensi are mostly ex-soldiers and Ko Lao Hui men, and are composed of the same material as the provincial troops, with whom they exchange rôles from time to time. It is therefore not possible to use the latter against them. Further, they constitute in a way the reserves of the provincial army, which are thus maintained without cost to the provincial Government. The Shensi soldier usually owns his own Mauser and as much ammunition as he can carry wound round and round his body in a cloth bandolier, acquired in the course of some previous rebellion or brigand raid,

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

and thus equipped serves either as a soldier or a brigand according to his own tastes and the military requirements of the local Government. In either character he is about equally obnoxious to the people. Both rôles too have their respective advantages; the life of a Chinese brigand may be rather lean at times, but there is always the possibility of a good haul; the life of a soldier in Shensi may be dull, but he is fed and paid without being asked to do any work. This kind of soldier of fortune is known locally in the province as a *Tao K'o* (guest of the sword); most of the better-class brigands and soldiers are Tao K'o, which is considered a title to be proud of. The Shensi soldier differs widely from and compares unfavourably with his colleagues in the well-organized and disciplined armies of the North (Chihli, Shantung, Anhui, and Honan provide most of the sturdy men for those fine Northern armies on which the power of Peking rests); but it is not his fault, for he is the victim of circumstances and of the Ko Lao Hui. I have been in close contact for months with Shensi soldiers, who were, to use the Chinese euphemism, *Kuei hui pei shan* ("returned from the Northern hills"—a polite way of referring to an ex-brigand locally), and always found them excellent fellows as far as I was concerned, though behaving tyrannically towards the people.

The difficulties of suppressing brigandage in the wild and pathless mountains of Shensi are in any case very great. Measures for the satisfactory pacification of the region would include the complete reorganization of the provincial army, or the garrisoning of the province with three or four brigades of good Northern troops. But the latter is not at present practicable, as the people of the province not unnaturally are great believers in home rule and like to manage their own affairs. Another very necessary but difficult reform is the disarming of the people and the recovery of the large stocks of rifles at present in private hands. In modern China the brigand without a rifle is a negligible quantity. It is chiefly through the various rebellions that these arms have become scattered over the country with such disastrous results, and brigandage grows steadily worse with every such outbreak of civil war. A rebellion is engineered (in Shensi at any rate) by collecting funds and enlisting brigands and

secret society men as soldiers; after the rebellion is over, whether it succeeds or not, the soldiers are disbanded and scatter with their arms over the country, with the inevitable result of increased brigandage. The growth of brigandage in Shensi may easily be traced since 1911, the revolution of that year, the rebellion of 1913, the White Wolf rebellion in 1914, the anti-monarchical rebellion of 1916, the troubles of 1917, and so on.

From Yich'uan Hsien to Hanch'eng Hsien is a distance of about 240 li, three hard days' march by a difficult track through the mountains which here hem in the Yellow River. All the way from Yench'ang south to the plains of Central Shensi, which are reached at Hanch'eng, the traveller is crossing a series of parallel ridges trending east and west across his path; but while between Yench'ang and Yich'uan the intervals between these ridges are filled by loess which provides comparatively easy slopes, the region between the latter place and Hanch'eng is covered by mountains which are practically free from loess and entail the crossing of a series of precipitous little passes. The trail slants across these mountains towards the Yümen K'ou, the point where the Yellow River emerges from its gorges on to the plains; the river itself is not touched, though glimpses are caught from the tops of the passes of its huge trough in the mountains.

From Yich'uan the trail runs up the valley to the S.W. for a few li and then turns up a gorge to the south, which leads after a couple of hours' march to the foot of the barrier range which bounds the Yich'uan valley on the south. A steep climb leads to the pass, the Lut'ou Ling (5100 feet). This range and the valleys and spurs leading up to it, though covered with loess on the northern side, are uncultivated and uninhabited. On the southern side there is practically no loess, and the latter is not met with in any quantity again till the path debouches on to the plains of the Yellow River above Hanch'eng three days later. The absence of loess in the low-lying valley bottoms of these mountains is rather curious, and one may speculate whether perhaps the Lut'ou Ling range, which before the existence of the Yellow River was probably joined to the mountains of Shansi, did not form a barrier keeping the floods which deposited the loess from reaching this region, which con-

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

being refused all opportunity for clearing themselves, although the whole populace declared them to be innocent. Dr. Kao was actually with us at distant Suchow when the incident occurred. Subsequently, however, he made an open enemy of the Kanchow Official by peremptorily refusing to consider the case on a suggested compromise basis, *i.e.* that as a life had been sacrificed on either side, and honour was satisfied, it only remained for the parties concerned to seal their agreement by feasting!

The circle of those bound together to wreak vengeance on the Christians and their leader was growing, and they were now joined by an influential man of whom Dr. Kao had made an enemy by refusing his donation of several hundred dollars towards the hospital work, a gift which had been offered on the tacit understanding that having accepted it the doctor would cease his open denunciation of the opium traffic.

During the winter months of 1925 the Provinces of the North-West Frontier were placed under the jurisdiction of Marshal Feng, and the city walls were covered with excellent proclamations, forbidding soldiers to oppress the people, and promising adequate protection to farmers bringing in their produce, it being the custom of the local battalions to ill-treat persons and seize goods at their pleasure. These proclamations were received with acclamation by the people, but were obviously *not* liked by the officials or the soldiers.

One day in January 1926, Dr. Kao, walking along the street, met a crowd running towards a back alley, where on following them, he found five men beating a young villager so severely as to endanger his life. Several of the assailants were soldiers, and one, armed with a hammer, was proceeding to break the youth's skull when, without a moment's hesitation, the Doctor

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

flung himself on the victim so as to receive the blows on his own body. This so startled the assailants that they desisted; he then took possession of a young soldier's cap, for purposes of identification, saying, 'This is a matter for judicial investigation. If this boy has done anything wrong, take him to the Mandarin.' This the soldiers refused to consider, and followed the Doctor to the Mission House, finally begging him to drop the matter, and not to report them to their officers. To this he consented. A few days later our own carter was sent out to a village near by to bring in grain for the mules. A band of soldiers, acting in accordance with their irregular custom, commandeered the cart and animals for their own use. The carter questioned their right, whereupon he was beaten, and filth of the worst description was rubbed into the wound. The soldiers then moved away, leaving him semi-conscious by the roadside, to which place our small scouts soon fetched some of the students, as well as Dr. Kao, who indignantly called attention to General Feng's placard above his head. This happened close to the residence of the Minister of Defence, who, hearing what had occurred, came out himself and saw the man still lying wounded near his own gate. He ordered the offender to be brought before him, whereupon one of his own soldiers was produced, and by his order was stripped of his uniform and handed over to the civil authorities for punishment. The Commanding Officer was likewise degraded, and the Minister himself called at the Mission Compound to apologise for the insult offered, expressing himself as exceedingly angry that we, who were his friends, should have been exposed to a public insult. Meanwhile, the carter developed a severe form of blood-poisoning, and his life was despaired of; and in the civil prison lay the soldier, whose life was to be taken

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

the same hour as the carter died—a life for a life, while the local garrison was most indignant at the suggestion that one of their number should be executed on such a trivial charge as the death of a common carter, and swore vengeance. However, after forty-eight hours of extreme anxiety, our relief knew no bounds when a slight improvement, following on a severe operation, showed itself in the patient, and he eventually recovered, the two lives being saved, as the soldier was released.

The New Year festivities were at this juncture in full swing, and the friendliness on all sides was such that we greatly hoped the ill-feeling produced by this incident had passed over. Our guest-rooms were daily crowded with visitors, and the tent would barely hold the congregation which gathered each evening.

It came like a bolt from the blue when one day Dr. Kao walked into our sitting-room with the startling announcement :

'The compound is surrounded by men sent to arrest me!'

'To arrest you!' we exclaimed. 'Impossible! On what plea?'

'I am accused,' he quietly said, 'of leading an armed mob to break open the city gaol in order to release a certain Moslem prisoner. The man, as we all know, has been living in his own home for months, nor have I been inside their prison. The accusation is futile, but the power of the accusers is tremendous ; and chief among them is the Governor of the prison himself, *the master of the little slave whose foot I amputated.*" Then, showing a visiting-card, he added : 'This card has just reached me from the Judge, who is a patient of mine, and who asks for a visit from me. I know he never sent it, and it is but a trap to get me quietly into the Yamen and arrest me there, for they fear a hubbub among the

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

people. I expect you agree with me ; I had better go ; and so I just came in to say good-bye. Our life and death are in God's hands, as also the reputation of His Church. He will vindicate His Name.'

Commending each other to the care of God we parted, and he proceeded in company with Mr. Chang to the Yamen. As the two men left the house and walked down the streets, knots of Yamen runners, who had been placed at various points from which they watched the doors of the compound, closed in behind them, so that, as they reached the Yamen gate, they were completely surrounded by soldiers. As they entered the courtyard, the Civil Magistrate appeared, who shouted angrily : 'Seize that fellow Kao!' Immediately a dozen hands took hold of him, and thrust him into the Black Hole of the inner prison, reserved only for condemned criminals.

CHAPTER XXVII

THE STORM

Dr. Kao's arrest took place on February 17th, 1926, and it was June 1st of the same year before he left Suchow for Lanchow, to be present at the enquiry into his case. For forty-two days he was incarcerated in the Black Hole, which is an inner apartment of the prison, without any window ; it contains, however, a small aperture in the roof to admit a little air and light. The cell was so unspeakably filthy that the Doctor's first request was for some quicklime to scatter on the floor and under the boards of the *kang*, on account of the numerous rats, and other even worse vermin. The only door was the one by which the gaoler entered,

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

One or two there were who vowed to know no rest until this system of bribery and corruption should be overturned, which made it possible to incarcerate innocent men, sometimes for life, without trial and without appeal.

Kansu was at this time in a political ferment. Some months previously General Feng's troops had assumed authority in Lanchow, and were gradually making their power felt throughout the province. His appointment of his own men to positions of importance caused the greatest excitement and apprehension among the local authorities, and the city walls were posted with the announcement that anyone spreading reports on political or military matters would be shot.

The first we saw of Marshal Feng's officers was one Sunday morning at the early Communion Service, when two finely-grown, well-set-up soldiers, in spotless uniform, walked in, taking their place among the little group of believers, thus openly associating themselves with Christianity. They only stayed a few days, however, but were soon followed by recruiting officers, and lecturers, who addressed themselves to the populace and preached equality and the rights of the proletariat, and when the city walls were covered with anti-British posters. It was all very chaotic. But the recruiting fell off, because the people said, 'Under Feng you *must* fight, so what's the use of his good pay if you die?' Then the posters quietly disappeared, but the authorities left ours up intact—one did not know what to expect! At last an officer appeared, sent by Feng, under whose superintendence the city was entirely transformed in only a few weeks. The main streets were widened and levelled ; a market-place was erected where the peasants might sell their goods unmolested ; industrial institutions were opened for the poor children, and other

Today the city of Ho (1) tschou itself consists mainly of the

1. Pronounced like H'e with a very sharp guttural sound.

southern suburb of Nan kwan. That is where the mosques and the large Mohammedan shops are. The actual city of Ho tschou, on the other hand, is pure Chinese. The Mohammedans are forbidden, under penalty of death, to live inside the city. There are always many hundreds of soldiers garrisoned on the city wall (Plate XXXVI), and one finds there stables for the horses of officers and men. The wall is kept in excellent repair. But since not very many Chinese live here, there are large areas inside the walls that are deserted. All the life goes on outside. There we find closely built-up streets, for the most part with two-story houses as in Di dao, surrounded by a wall which today is destroyed. I estimate that Ho tschou proper and its suburb has a population of 30,000 and of these over two-thirds are Mohammedans. (2) There is not another city within the 18

2. The entire district is said to have had 85,526 families, according to the census of 1831.

provinces of the Chinese empire that has a similarly strong Mohammedan aspect. And yet there are many things that are entirely different here from other genuinely Mohammedan countries. In Ho tschou and environs I never saw a Hui hui who spread out his prayer rug in a courtyard or out in the open to pray when the muezzins (3)

3. The muezzins like the mullahs are always called ah'un in Kansu. The word comes from East Turkish where ahon means the scholar. Even these Ahun are not always circumcized. Most Chinese Mohammedans do not know anything about circumcision.

called out. The Ho tschou Mohammedans, like the ones that have become still more Chinese, are very superficial in their religion and can scarcely execute the prescribed ablutions without making a mistake. It seldom happens that one of them makes a pilgrimage to Mecca. Only a few of them even know the name of the city. Most of them only know about "Kerbe" (4) and that this is a place

4. Kaaba, the cubiform holy of holies in the mosque at Mecca.

-4° temperature they were too warm, they went about half naked so that their torsos were dark brown. /163/

In a wood near a small monastery south, that is to say, this side of the pass, I came through a decayed wooden lattice that led me to a low wall of earth and field stones. A small, damp watchman's hut lay behind it and inside ten soldiers and a sergeant with a few rifles, lances and swords were keeping watch. This was the border of China! Beyond it was Tibetan territory, from an administrative standpoint also. For the country beyond, there was to be no governmental protection on the part of the Chinese!

Inasmuch as I had only two servants and, as I said, my entire supply of silver for years to come, and since the pass was supposed to be very dangerous from the point of view of robbers, I gave the commanding officer a small present and for that I was given half the frontier guard as an escort. I would have been given the entire watch, but unfortunately the other half was not present. It had been - as the sergeant repeatedly assured me - "eaten" by some superior officer, that is, the wages for the soldiers had got stuck in the pockets of the higher officers. Only one salary, as I heard later, the sergeant had saved for himself. And since the powder which the superiors delivered would not burn, my protectors immediately borrowed powder and lead from me. We loaded our guns and under the protection of a fluttering red flag, we set out a half hour later. But only a small strip of land is Tibetan here. On the same evening, after we had left the Dar dia La Pass and traveled for many hours down the broad Tschi tai gu Valley which has been reproduced on Plate XXXV as it is seen from the pass, after we had passed four smaller Tibetan monasteries, we again reached a Mohammedan village. The valley contains a Salar gun and is under the control of a Schu be (captain) in the walled village of Tschi tai bu. In the year 1895 a large battle was fought in this Tschi tai Valley at the town of Be tschuan tang, in which many hundreds of people were killed - my soldiers even spoke of thousands. The Mohammedans, chiefly Salar, who had taken part in the great rebellion were hard-pressed here by Chinese and Tibetans under the command of Tung fu hsiang, assisted by the generals Hsining fu and Ho tschou, and finally, after desperate resistance, yielded to the superior forces. Since that time many villages in the Tschi tai gu Valley lie in ruins, others were being built up at the time of my visit. Thus there are now supposed to be only 4,000-5,000 Salar altogether. Many of them were killed,

from the tu se fields into their barns. I shall come back to the subject of the Tu jen later when my journey takes me through their country. In and around the city of Hsining there are only a few Tu jen living today.

The city of Hsining fu is now almost entirely Chinese. Even in the erstwhile very important eastern suburb, the Tung kwan which was destroyed by the Chinese in 1895, Mohammedans are no longer permitted to live with their families; they may only conduct their businesses there. Since 1896 specific sections and valleys in the mountains have been assigned to Mohammedan families. The only thing that is waived today is the decree that was for years carried out very strictly, namely, that Mohammedans wishing to visit the inner part of the city were obliged to have a stamp put on their cheeks as they entered the city gate.

The inhabitants still vividly recalled the horrible battles with the Mohammedans. Hsining was therefore also a military city. There were five ying (battalions) stationed here and the largest and most beautiful yamen was that of the general (tschen tai) who had a rather large arsenal. In it incense was lit on the first and fifteenth of every month to the deliverer of the city, an old ko lu pu pau (a Krupp cannon), and officers and soldiers fell to the ground in a kowtow before the rusty cannon. This weapon was the soul of the defense in the year 1895. Human blood was officially smeared around the mouth of the cannon in order to make it voracious and thirst after Mohammedan blood. The natives said: "It has a soul just like a human being," and they undoubtedly had a much more definite image than our native recruits do when we teach them to speak of the "soul" of the axis of a gun or cannon.

The tsch'eng schu ying, the military governor of the city who is also the keeper of the keys to the city gates and commander of the so-called middle battalion, (1) as well as the hsien, the prefect,

1. The Chinese provincial army consisted only of the green banners, the lü ying. In peace time one seldom heard of the larger associations, the tschen piao (brigades), the hsie (regiments), because the Chinese provincial army (I am not speaking of the troops on the coast) was used as a police troop and was garrisoned in various places. The primary important military unit is the ying camp or battalion that is under the command of a major (yu tschi) or a captain (du se or schu be).

In Haining fu there was a "middle," "left," "right," "front," and "rear" ying, each of which was under a du se, or more often under schu be. They were very poorly armed. The troops almost never drilled. Each month the soldiers were given a goodly ration of wheat and four marks pay. By far the majority of them were married.

Outside the city there was a fortified encampment of so-called bu tui (allegedly modern drilled infantrymen) which was under the direct command of the general, and these men had better uniforms and were armed with muzzle-loaders. As long as I was in Hsining fu the officers did not hand out modern guns from the arsenals, partly for reasons of economy, partly for safety's sake, for often the soldiers deserted taking their guns with them and then selling them to the secret societies or to the Mohammedans.

the dao tai and also the highest official in the city, the ts'ing tsch'ai da-tsch'en, that is the imperial minister in residence /172/ or, in short, the amban to whom North Tibet is subject (1), - all of these

1. The official title of this official is: tsung li tsch'ing hai sche wu da tsch'en, that is, minister and military attaché of the entire Koko Nor district. He was always a Manchu and had a position equal in rank with that of the viceroy of Lanchow. He is always given the title of amban or Seling amban, i.e., Hsining minister, by the Tibetans and Mongols. The office was created in 1723 for the Mongolian banners. The Tibetans call Hsining "Seling" or "Siling mkar."

have a separate arsenal in connection with their yamen, so that in the siege of 1895 each of them could arm his own men and send them up on the city walls. Besides that, there are a considerable number of other official buildings in the city. A great deal of room is taken up by large guild houses, especially those of the Shensi merchants, and by the ordinary state temples and the schools. Since large areas within the city are not built up and consist of fields which are so extensive that several times I was able to shoot wild pheasants on them for my dinner, it will be understandable that most travelers have overrated the population of the city. Even though the Chinese live close together, they nevertheless always

The crumbled loam walls and the old roofless yamen and temple buildings lay bleak and desolate when we passed through. We were still merely crawling along at a snail's pace. In the interior of the city, in a corner of an old ruin, we brewed our tea once more before we traveled on into the night. In spite of our weariness, none of us wanted to spend the night here. The cold which set in anew after sundown was too intense. We preferred to fumble along across the barren steppes. Even though we were now going along a well-traveled caravan road, we had difficulty in finding our way in the dark to Schara khoto. We did not reach it until morning. We had covered 140 kilometers on our flight. All of us had sore feet from the solidly frozen riding boots, and the three rescued ponies were also near exhaustion because they were too heavily loaded.

Schara khoto (1) is today the farthest Chinese military outpost

1. A Mongolian name meaning "yellow city." The Chinese call the town Scha la ku to and say that this means "city of the green meadow."

from Kansu. The Chinese government had stationed here a schu be (first lieutenant), a lieutenant and a few sergeants with 30-40 men (belonging to the green banner). They were armed with swords and matchlocks and a few old German drums and French horns. Thus, the detachment does not play a very important role. The soldiers even have difficulty defending themselves against the attacks of marauding Tibetans. There is an old wall but it is so large that it would take at least a regiment to defend it. There is also a large old parade ground. Between this and the city which is empty today there live about thirty Chinese families who cultivate a few small acres in the vicinity, raising barley and wild oats. Nothing else grows here. It is an unspeakably miserable spot.

One of the Chinese immediately received us very hospitably in his mud hut, and turned over his large warm kang to us. Without wasting any words he immediately prepared a few opium pipes for us, for the Chinese say this is the best restorative if one is over-tired. I was the only one who did not smoke and I did not wake up until the next night, whereas my companions, all of whom had smoked, walked about vigorously early in the day.

Two days later I traveled back to Dankar. On this stretch I was accompanied by fifteen armed men and half way to the city I was

159 position in 1954. Since 1953, appointed concurrently a member
*668 of the Administrative Council of the Northwest. In 1955 he was
•701 made a member of the National Defense Council. He is also a member of the Board of Directors of the Sino-Soviet Friendship Association.

Teng is another example among the officers of the Nationalist Army who shifted their allegiance from one party to the other. As his defection from the Nationalist Government speeded the Communist cause in North China, he won a rather high place in the Communist Government.

159 Tso Tsung-t'ang (1812-1885); General, statesman

Born in 1812 in Hunan Province. His family was poor though both his grandfather and father held the degree of hsiu-ts'ai. He studied under his grandfather and later under his father, and in 1837 entered the Ch'eng-nan Shu-yuan (Southern City Academy) and studied under Ho Hsi-ling. Obtained the Chu-jen degree in 1838 but failed in three attempts to win Chin-shih degree. In 1852 when the Tai-ping troops entered Yunnan Province, he was asked by the governor of Hunan, Chang Liang-chi, to help in the defense of Ch'angsha, the capital city of Hunan. He fought against the Tai-ping troops for three months, until the invaders had to by-pass Hunan to go northward to Hupeh Province and down the Yangtze River. In 1853, when Chang Liang-chi was promoted to governor-general for Hunan-Hupeh-Kuangtung-Kwangsi, Tso went with him to Wuchang and defeated the Tai-ping rebels. When Chang was transferred, Tso resigned from his post and retired to his native home. In 1854, Lo Ping-chang was appointed governor of Hunan, and Tso was asked to serve under him, but did not accept the offer. In 1854 the Tai-ping troops invaded Hunan again. Tso was asked by the people of the province to resist the invasion, and he helped Lo for five years in the defense of Hunan. In 1860, Tso was asked by Tseng Kuo-fan to train five thousand troops in Hunan; in 1861 he was ordered to take charge of the military affairs of Chekiang Province, and in the same year he was appointed governor of Chekiang. In 1863 he was promoted to governor-general of Fukien and Chekiang Provinces, and concurrently governor of Chekiang. In 1864 the whole province of Chekiang was freed from the Tai-ping troops, and Tso was awarded an earldom of the first rank and the designation of k'o-ching. In 1866 he recovered both Fukien and Kwangtung Provinces and the Tai-ping regime came to an end.

159 In 1866, when the Mohammedan uprising started in the North-
669 west, Tso was made the governor-general of Shensi and Kansu. In 1868 he first engaged the Nien bandits in Chihli, and by the summer he annihilated the bandits in Shantung Province. He

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

public works set on foot for the unemployed. Suchow was transformed! But still Dr. Kao's imprisonment dragged on.

Finally, on June 1st, the trial of our patience came to an end. A student arrived in our court at dawn, saying that Dr. Kao was under orders to leave that morning for Lanchow, there to stand his trial. In spite of final delays and procrastinations, that same afternoon he left on foot for the eighteen days' tramp to the provincial capital. Here he spent some months, during the greater part of which he was able to live with his own friends. When the trial finally took place, he was declared innocent, and acquitted on all charges.

Many had been the orders and counter-orders, the subterfuge, and the conflicting motives at work, under the shifty régime of Chinese officialdom. On his release General Feng appointed him to the position of Medical Officer in charge of Red Cross work at his own Military Hospital, and his return to the far North-West has been temporarily delayed.

T
792 The houses are not old; they were built after the great Mohammedan
346 revolution in the 1860s during which time the monastery burned to the ground.

C
361 On the evening of the second day of the journey beyond Wei
701 yüan bu, I had already reached Da tung hsien. I had again come to a purely Chinese city, after having passed only Dungan and Tibetan villages on my way. Da tung hsien is one of the extreme outposts of Chinese colonization, the seat of a district head - the hsien was established only in 1762 - and has a very large garrison. Besides the Chinese soldiers and officials there is also a Tibetan prince stationed here with a band of militia, and not far from the walls Mongols pasture their herds.

C
361 The city is usually called Mo bai tschen by the people, which refers to the old market that belonged to the nomads here. The town is small because only Chinese are permitted to live in it. Adjoining it on the west, however, is an attractive and busy suburb where many Mohammedans do business. In the year 1895 it fell upon evil days. The Mohammedans made every effort to capture the city by undermining the miserable walls and making assaults upon them. It is amazing that the city nevertheless held for four months.

C
563 The following day brought me through uninhabited high mountain
361 country and through snow a foot deep farther west, as far as the Mohammedan town of Bamba. I found there only a few miserable huts instead of the thousands of families that once lived here. But it was possible to recognize all the old streets because of the countless ruins, almost level with the ground, which testified only too eloquently of the unspeakable misery, of the destruction of a talented people which, heedlessly, in a state of blind religious fervor, entered into hopeless battle with the Chinese giants. Bamba and the extremely fertile valley 25 miles long of Schang wu tschuan as far as Do ba where it joins the Hsining Valley was one of the centers of the last Mohammedan insurrection. With the capture of Do ba the revolt was quelled. The entire valley now has only 800 families of Hui hui all told. Once (until 1895) Bamba was a great rival of Dankar, today it is dead. Its caravan road which follows the narrow valley northwest up into the Koko Nor steppes is deserted because all trade from here is forbidden by the government. The Mohammedans whose families /256/ were forced to settle here after the Chinese victory (1) must carry on their trade in Dankar and

1. In Bamba there are about 100 families of the old sect

[text continues on p. 439]

wolves and their constant howling made sleep impossible. My dogs were mad at this disturbance and answered with angry barking, and the surrounding rocky mountains intensified this concert of the steppes with endless echoes. On the third day we again came across traces of human beings, finally discovered a distinct path and soon saw people. We found a few dozen tents of the Tscham ri Tibetans, and around noon we pitched our tents on the small grassy plain in front of the Schara khoto walls (Plate LVII).

The extremely jovial Schu be Tsch'en, the captain of Schara khoto, with whom I was well acquainted from my previous visit, arrived accompanied by his non-commissioned officers and official interpreters and was friendliness personified, although he must have cursed me inwardly for once again disturbing his peace and meditation. After the initial formal greeting, we embraced like old friends and exchanged presents. He asked me above all for European gunpowder because he could not get any at all or none that was good, from his superiors. His thick accent, his many "f" and "pf" sounds instead of the North Chinese "sch" and "tsch" respectively, betrayed the fact that he was a man of the people from "Lan dpfu" (Lanchow fu). He was an officer who had risen from the ranks. This schu be did me a great favor by sending a messenger the very first evening to the amban of Hsining fu to inquire after the promised /280/ escort. I had notified the amban of my change of plans and the reasons as soon as I got to Kue de and had reminded the old gentleman of his promise. But up to now I had received no answer.

At Captain Tsch'en's orders, a uniformed soldier with a loaded gun always had to help my men tend the animals during my five-day stay at Schara khoto. However, none of the soldiers inspired me with confidence. They were 15 and 16-year old boys, and yet the Chinese mature more slowly than Westerners. Besides, the entire garrison indulged in opium and were, without exception, obsessed with gambling. And indeed, what else should these people do with their time in this godforsaken place? Once a month there is drill, otherwise, except for carrying messages, there is no official duty for the men. Throughout the rest of China the soldiers can carry on a little trade or agriculture on the side. But in Schara khoto there is nothing to sell, the caravans pass heedlessly by and on the few fields only wild oats grows and even that ripens only every few years. It is easy to see how little profit there is in animal husbandry, considering how much is stolen, for Tibetans passing by take all the animals that are not carefully

[after leaving Ts'ien hu tsch'eng— Analyst]

C 701 watched. It is the duty of the garrison to safeguard the road, but they cannot even afford to stock herd animals, although the garrison numbers 40 men, and nominally 100.

T 792 346 If one travels down the valley from Schara khoto, that is, in the direction of Dankar, one comes to a monastery on the left of the road about an hour's distance from Schara khoto. It is Dunkur gomba which gives its name to the whole district. The city of Dankar which lies about 20 kilometers farther to the north is also called Dunkur by the Mongols. But in order to distinguish the city from the monastery the former is called Dunkur khoto or Gä sching (Chinese: Gai schang), meaning bazaar and city (Tibetan: Kar). The monastery was founded very early by the Mongols, in Gushi Khan's time. In the course of the years it has had its own sacred incarnations which are called Dunkur-buddha by the Chinese. It consists of a collection of one-story priests' houses which enclose two temples with their accompanying prayer houses and administrative buildings, and it has a very peaceful atmosphere. T 792 It does not need a wall. People say that it is not easy to harm the devout monks in their home which belongs to the yellow sect. Many Tibetans are convinced that the priests can cause the wrath of God to descend on their adversaries, and the fear of divine punishment is the best protection. But outside the portals, on the pastures round about the houses, as everywhere else, not a tail is safe from theft. For this reason the monks have their own guards for the animals. They themselves do not personally have anything to do with animal husbandry. T 792 426 In their many leisure hours, all they do is carry on financial enterprises. The entire valley, down as far as Dankar, is in their debt. But in such worldly activities the monks of the Dunkur monastery do not assume a unique place. The monks of the Gum bum monastery T [669] also have their debtors up and down the land. Many people say that the Mohammedan rebellions of 1896 were hatched primarily because far too many Mohammedans had, as a result of /281/ poor harvests, fallen into the hands of usurious monks and were on the brink of ruin. It was the leaders of the movement, primarily, who owed the monks enormous sums, according to Central Asiatic conceptions of fortunes. Through the rebellion they hoped to get rid of their tormentors, or at least be granted indulgence.

T 346 351 The monks of Dunkur are little experts in the art of living. Their shrine is located in a truly idyllic spot. On the slope opposite the temple buildings there is a small pine forest. The monastery is 3,100 meters above sea level, and far and wide there are to be found only willow shrubs that grow only a little more than a meter above

000 over with hoar frost. The valley of Schara khoto was enveloped in thick white clouds of fog. Only the low pass in the southwest, which separated us from the open Tibetan steppes, from Kou wei, from "outside the gates of the kingdom," it alone lay open and free. From there a stiff, cold wind blew down upon us and made the morning even more uncomfortable. Snow lay round about. It crunched under our steps. Only stones and a few grass tips rose above the white covering, for trees are entirely absent in the valley of Schara khoto and only a few bushes remained on isolated, steep northerly slopes. Even here at Schara khoto I was already surrounded by the barren, wild and magnificent spectacle of the high plateau which again and again entices me with its elemental power (Plate LVIII).

In order to spare my caravan as much as possible I had rented four additional Tibetans and forty yak oxen from the vicinity of Schara khoto for the first few days, four strong, tall chaps who leapt about with their restive, sharp-horned cattle. It was a pleasure to watch them. In a jiffy the animals were loaded. One of the men began humming some insignificant, meaningless words of four syllables and in the rapid rhythm of these syllables the packs were tied to the saddles. During their work the chaps had let their fur coats slip down over their shoulders, their tanned bodies were exposed to the icy wind and weather. They were Fan tse true of the Ts'ao ti.

701 276 Shortly after seven o'clock we set out in five large groups. Behind each group rode a few drivers with reserve horses and a few mules. The ten men belonging to the captain of Schara khoto kept to themselves. They alone went on foot and wore sandals. They carried a large red flag as well as two small donkeys shivering with cold, which were carrying their huge but ragged tent, cooking pots, a few fork guns and swords. The group of soldiers looked pitifully miserable and more like marauders than like an imperial escort just leaving its garrison. Each one of these heroes, of course, carried his opium, and all of them were so dependent on this elixir of life that they had to stop every two hours en route and lie down on the steppes in order to smoke a few puffs, otherwise their legs would have given way. Surely, all that can be expected of a troop in good fighting trim! In Kansu it was difficult to find people who did not smoke opium. A great deal of it was grown in this province and the price was extraordinarily low, so that everyone here could afford this luxury. In selecting my servants and the people accompanying my actual caravan I had the greatest difficulty finding non-smokers.

N.W. China AF13

The greatest object of interest in Hsingan fu is an ancient museum, the Be ling, the forest of inscription stones, a small cypress wood with pavilions and temple-like buildings in which for many years already hundreds of stone slabs bearing inscriptions and classical paintings were gathered together for official reasons into a gold-mine for Sinology. A few months before my arrival the famous Nestorian tablet had been hastily brought there from its former place in the western part of the city by 50 coolies because it was in danger of being taken along by an American collector. It tells of the great dissemination of Nestorian Christianity in China during the eighth century. Besides that, every stranger is supposed to look at the old governor's yamen in which Emperor Kuang sü and Empress Tse hi had lived during the Boxer Rebellion. After the court left, this yamen remained unoccupied because no one else was considered worthy of dwelling in the imperial rooms. The rooms were very simply furnished. On the walls hung kakemonos, flowers and luck-bearing Chinese pictograms, many of which the Empress Dowager was said to have designed and painted herself. In the courtyard of the one-time imperial palace I was shown a walled cistern that was many meters deep. In it - my cicerone said - the unfortunate emperor attempted to commit suicide in order to escape the torments of his aunt. Much more entertaining, were two festivals which were celebrated in the city while I was waiting there. One of them was a large parade of the Manchu garrison which at that time with 3,900 families (about 15,000 souls) occupied the entire northeastern part of the city; the second festival was a pupil and student celebration that took place on the old Chinese parade ground in the northwest corner of the city. On the one hand, the class which was at that time still in control and the banner people, the mainstays of the ruling dynasty; on the other hand, Chinese youth who were celebrating the end of their annual examinations, those new educational methods which were supposed to lead the kingdom of the middle, the Chinese common people, into new paths, to new bloom. In place of the old state competitions in which calligraphy and poetry and essays, interlarded as much as possible with quotations from the classics, were the dominating factors and determined the maturity and dignity of the candidate for the highest posts in the state, /329/ and for which one prepared privately, the Manchu had set up schools in which mathematics, natural sciences, foreign languages and political science were taught and examined. Now a general sport festival ended the school year of the elementary schools, of the preparatory schools, and of the

217

701

871

N.W.China AF13

871 technical and cadet institutions, all of which together represented tremendous progress on the road toward modernization. Whereas, for reasons of state, an effort was being made to modernize Chinese youth and make it conform to Western ideas, whereas outside the west gate of Hsingan fu two permanent camps of two Chinese infantry regiments drilled in uniforms resembling those of the Japanese army, in leather boots with side-arms and modern repeater guns, the troops of the ruling Manchu group stood before their chief commander carrying the oldest kind of muzzle loader, the cannonaders brought medieval muzzle loader canons to the parade, which looked like playthings, and in the cavalry division which was scantily mounted, every other man, at least, carried a flag that covered him up completely and a quiver with a dozen bows. Besides, scarcely 1,000 men appeared for the parade. We are not surprised, therefore, that the Manchu who pursue such a short-sighted policy and equip their own people so poorly, should have meanwhile been overthrown from their privileged position and succumbed almost without a struggle. When in 1912 the news reached Europe that the entire banner garrison of Hsingan fu was overcome and massacred by the Chinese in one night, one could, strictly speaking, only marvel at the fact that this had not happened before; it only showed that the Manchu as such were not so very much hated by the Chinese people and that they were impediments only for a few ambitious young Chinese and officials. In the 260 years of their rule the Manchu had become too completely Chinese in their entire thinking and feeling. The small Manchu group - in 1912 it did not even number one and one-half million souls including women and children and the banner men - had forgotten its own language almost completely and had cultivated Chinese literature more than any national dynasty before it.

205 The greatest change in China has been brought about by the introduction of the postal system and, in connection with that, the Chinese press which became possible only through the postal system. Whereas in Lanchow fu a Chinese seldom took a letter to the post and there were no newspapers either in Tibet or in all of Kansu and wherever I had stayed during my journey, in Hsingan fu whole cart-loads of magazines and pamphlets arrived from Shanghai, Hankow and Tientsin. The people of the city pounced on new reading matter and all at once it had become a necessity for them. It was the post, the regular couriers introduced by the Europeans, who spread the new ideas and the changes throughout the country.

CHAPTER XXIX

THE ONWARD TREK

ON previous expeditions our young cook, 'Welcome Home,' had driven our cart, but this time the difficulties and fatigues which lay ahead required our selecting an older man, and one inured to every form of hardship. Knowing that he must quit our service when we left for furlough, the young *chef*, however, had allowed his imagination to be captured by visions of the martial glory to be afterwards won under the banner of General Feng's Christian Army. 702

The walls of Suchow were then posted with notices to the effect that young men of steady character and able to produce suitable guarantees of good conduct, would be given the opportunity of a military career combined with educational advantages, besides liberal pay, on joining the forces of Marshal Feng. Recruiting officers took up their residence in an inn of the east suburb, where the following scene was described to us by a looker-on. Dressed in a clean white cotton suit, his face flushed with excitement, young 'Welcome Home' presented himself, and stood at attention before the recruiting sergeant :

'I hear that you want recruits. Is this a Christian corps?'

'It is,' was the immediate answer.

'You speak of general education, but do you allow time for Bible study?'

'We do,' said the sergeant.

'Then write down my name, sir,' said 'Welcome Home'; which was forthwith done.

'If your references are good we shall accept you in ten days' time. During that period you may withdraw if you wish, but if you present yourself then, you are enrolled

3:Cable & French M-5 (1926) 1927 AF13 Northwest China AF13
~~Sinkiang A1-1~~

as a soldier, and afterwards, leaving will be desertion.'

'I am in the employ of the Lady Missionaries. They are quitting the country soon, but I must stay with them as long as they need me.'

'That is quite right,' said the sergeant. 'Go back and talk it over with them, and,' he added, 'if there are any more young Christian men in the Church who want to enlist, tell them to come along, they are the kind of men we want.'

'Welcome Home,' who had sallied forth with the bearing of a simple young farmer, returned to us an hour later with the deportment, gestures and style of an accomplished orderly. He greeted us from the back of the breakfast table with a military salute, and clicked his heels whenever we spoke to him. The joy of realising he was to be one of Feng's men endued him with an enthusiasm that transformed him. At the appointed time we released him to fulfil his engagement, and three days later, as we were driving to a farewell luncheon party, we passed the drill-ground where recruits were learning the goose-step. 'Welcome Home' caught sight of us, turned his head and smiled rapturously, whereupon the corporal's iron hand smote him on the shoulder, and he stood once more at attention. The next day he called in company with a 'centurion,' who informed us that there was every prospect of our late cook quickly securing a commission. 'In this army,' he said, 'we are like one big family, and we look to Marshal Feng as children to a father.'

The last few days were busy with meeting social claims. Various members of the Christian circle begged us to take one more meal with them before we left. The ladies of our landlord's family entertained us in the summer-house of a flower-garden. It was the season when the fragrant tree-peony is in bloom, and

3:Cable & French M-5 (1926) 1927 AF13 Northwest China AF13
~~Sinkiang A1-1~~

the hour at which the midday meal is served. In place of the customary fresco of the tiger endeavouring to seize the sun in its jaws, which symbolises the covetousness of the man who seeks to devour his neighbour's goods, the wall was frescoed with the 'Map of China's Shame,' showing China and her dependencies, with prominent scarlet patches indicating those portions which have been seized by foreign powers, and a similar map was exhibited in all the towns we visited in North-West China.

The business men, with whom we were friendly, seeing the group of students with us, at once seriously warned us of the trouble we might certainly expect in attempting to cross the Turkestan border with them. We learnt that young men were constantly impressed at that point, and afterwards were neither allowed to continue their journey nor to turn back, as the Governor of Sinkiang was raising an army of defence, and was conscripting every man who passed that way. They consequently earnestly begged us not to risk such complications as might ensue on the attempt to take our fellow-workers with us into Turkestan. Needless to say, the students themselves, keen, enthusiastic, and ready as they were to face every emergency, felt quite confident that all would turn out well, but our wider experience caused us to spend many anxious moments as we faced this new contingency. Our attention was also drawn to the fact that the Turki merchants, who usually travelled in large numbers up and down the road, were no longer to be seen, since, by the Governor's regulation, no man from Sinkiang could enter China, neither could one from Kansu pass into Sinkiang.

For many years the atmosphere of China had been so constantly disturbed by rumours, that if we had paid much attention to them our work must have come to a

5: Tafel--483 T-3 (1905-1908) 1914 AJ1 Tibet AJ1
N.W. China AF13

I did not wish to be at the mercy of arbitrary Chinese governmental bodies, and from the beginning I counted on having to carry out my plans by means of my own efforts. For I had been told all too plainly, that anyone traveling in Tibet is completely unprotected and free as a bird. So I could not shrink from any expense for firearms and when we set out, my arsenal consisted of three Henry Martini guns, a Winchester carbine, a German military gun, model 1871, a German military gun with a magazine dating from 1884, and a modern German military rifle from the year 1889, a Japanese infantry gun, two Mauser- and one Bergmann-pistols, a heavy German three-barrelled gun, an old English musket, a Tibetan /287/ fork gun and two revolvers. Besides that, we also had two long lances and half a dozen swords. Each gun had several hundred cartridges.

It was, of course, a serious matter to have so many different types of guns and ammunition, but it never caused any unpleasant results because my men were used to it. The provincial troops of Kansu also have the most different types of weapons. The only serious matter was the loading difficulty of the old Henry-Martini guns. The guns were perfectly adequate for our purpose but the accompanying cartridges were made before the time when the cases were stamped out of one piece of metal, and were rolled into shape out of a thin metal strip. The bullets were extremely soft and so full of dents after a few days that they would no longer fit into the barrel. More than once one of us aimed at a bear or a wild yak and after the first shot had to bend the cartridge case which had become dented in the heat of the chase, in shape with his teeth in order to be able to push it into the barrel. The most exciting thing I saw in Tibet was to watch a hunter in such a predicament!

My Japanese military gun was a very good weapon, although it had gone through a lot before it fell into my hands. I bought it in the Gum bum monastery from a Mongol who said he had "found" it on a battlefield in Manchuria. My German military guns I had also bought in the interior. They, too, had surely had an eventful life history. Besides their German factory and regimental stamps they also bore Chinese symbols and I have a strong suspicion that they were sold by deserters. At the end of the 1890s large lots of discarded military guns, especially from South Germany, were sold by brokers to the Chinese provinces whose troops were armed according to the preferences of whoever happened to be governor. There were thousands of old Mauser guns stored in the arsenals of Lanchow and Hsining.

5: Tafel--484 T-3 (1905-1908) 1914 AF1 Tibet
N.W. China AF13

From these stores there were always some that got into the trade each year. For, although every Chinese soldier who deserted and sold his gun was beheaded, this capital offense is so widespread, especially on the borders, that the mandarins did not dare place these repeater guns in the hands of their troops except in special cases, and preferred to equip their regiments with old muzzle-loaders. According to their superiors, there are very few soldiers who can withstand the temptation of running away and taking their guns along when the first favorable opportunity presents itself. They could always easily get 80-100 taels for their guns, in other words, a fortune with which they could rent a small field in some remote corner and realize their ideal, namely, raise a family. This was also the reason why in the exposed garrison of Schara khoto there was not a single repeater gun to be seen.

But let us return after this digression to my departure from the Schara khoto Valley, from the yellow city, the city of the green meadow.

An easy climb brought me and my yak herds up the afore-mentioned saddle of the mountain, to the water shed between the Hwang Ho, or the 238 sea, and the Asiatic plateau which is without an outlet. The altitude measured 3,420 meters. It is only 6 kilometers from Schara khoto to this pass which is not more than 300 meters higher.

Suddenly I could see far into the distance. China with its loess dust, its oppressively narrow valleys, its torrential brooks and streams lay behind me, had been overcome. I am at the top! A blissful feeling spreads through my whole body and with a joyful heart I see the caravan slowly cross the pass, group by group. I feel that I have reached the climax of my life. With this band I would surely succeed in getting an insight into Tibet's most hidden secrets. I could not control my emotions. I was forced to let my shouts of joy ring out into the magnificent sunny morning, so that my Tibetans looked at me in amazement and believed I was trying to invoke the god of the pass.

I stood on the roof of the world, which extended from the snows of Pamir up to my flat watershed. The first yung - as the Tibetans say - lay before me, a huge wide and flat valley basin, high above the timber line, without bush or tree, with only a few rounded dunes in the middle. In a yung valley the water course is not the essential thing. These are valleys which originated in other ages, which have been produced by other forces than those in action today. Nor was it possible to say whether this yung below me sloped toward the Brahmaputra to Lake Koko Nor or to the southeast. I was standing in a saddle of

a proponent of the theory of climatic alternations, called the phenomenon "the pulse of Asia."

The most important of the multiple influences is believed to be that of the economic effects of climatic changes. When the climate is warm and moist, the land of the nomads is fertile enough to support the nomads and their herds, but when the climate becomes drier and colder, the rivers and lakes shrink and the pasturage is reduced. This cuts down the food supply and forces the nomads to rampage into the land of their neighbors. Speaking of the thirteenth century, Arnold Toynbee declared that the "paroxysm of aridity coincided in date with the demoniac eruption of the Mongols, and it will be seen that the physiographical recoil towards humidity likewise corresponds in date with the rapid ebb of the Mongols." (A Study of History, vol. III, p. 439).

Although the outbursts and recessions of the nomads were periodic, the rigid periodization was too mechanical and many scholars have discredited climate as the sole factor. Huntington suggests that four factors may have impelled the huge migration of the nomadic peoples, namely: climate, the inherent quality of the people especially as manifested by the leaders, the pull exerted by the wealth and the opportunities of the agricultural lands, and the push exerted by over-population. (Mainsprings of Civilization, p. 568).

N 233 762

A period of peace and prosperity would allow the population of the nomads to increase. However, in the desolate steppes, food was dependent upon flocks of sheep and herds of cattle and horses, and the people, unlike their sedentary neighbors, did not have the tradition nor the facilities for food storage. Any sudden change in climate which caused a reduction of pasturage and water supply would create a "time of troubles" and compel the nomadic people to migrate in search of food and pasturage.

When the nomads were experiencing a "time of troubles," the lush riches and the military weakness of the settled peoples would tempt border tribes to encroach upon the agrarian regions. Distress and discontent at home and the lure of wealth abroad furnish the push and the pull of Toynbee's theories. When the leavening of bold leadership and ideas were added, the nomads often were induced to burst out from the steppes of Asia and to set the world in commotion.

Other scholars entirely discount the influence of climate and seek the explanation for the advance and withdrawal of the nomads in social and political conditions. Owen Lattimore, who has given much thought to this question, (cf. Inner Asian Frontiers, passim), lists a number of reasons other than climate, for the eruption of the nomads. There were, for example, technological factors like the invention of the powerful compound bow and the technique of mounted archery which gave the nomads an edge over their enemies.

N 35 62 98 114 41 704 182

N 182 195 121 58 132 114 41 704 233

The Chinese had to adopt the nomad bow and the technique of mounted archery before they could meet the nomads on equal terms.

Another factor, according to Lattimore, was the pastoral economy of the nomads which led to migration. Horses and cattle cannot graze on fields that have been cropped by sheep and goats. Therefore, the nomads whose livelihood depended upon their herds and flocks, must continually seek new pastures. The claims to pasturelands and the right of movement led to wars. The continuous wars stimulated the rise of leaders, hard-headed men who survived the hurly-burly of warfare and politics of the steppes and deserts. Finally, a supreme leader emerged who would then weld the various groups into a grand confederation strong enough to encroach upon the neighboring regions for land, for the profits of trade, and for revenue and tribute from the conquered peoples.

According to Lattimore, the nomads who invaded the marginal zone between the steppes and the settled lands, were not pure nomads but were semi-settled. Their wars of conquest were not only for pastures for their herds and flocks but for land, for the riches of the cities, and for the proceeds of commerce. Moreover, the cycles of their invasion and retreat began only a few centuries before the Christian era when they split from the settled peoples on China's northwestern frontier and when they acquired the technology of nomadic warfare. The true nomads on the steppes evolved from the mixed nomads, not vice versa.

The migrations which led to conquest over a wide area, such as those carried out by the Huns, the Turks and the Mongols, normally did not begin with the true nomads but with the mixed nomads, and were caused by (1) a group breaking away from the mixed nomads in order to become true nomads: or (2) a group breaking away from the true nomads in order to revert back to mixed nomadism. The Huns, Turks, and Mongols had fixed bases of operation and their conquests were for land.

Under these circumstances, according to Lattimore, the cycles of nomadic expansion and withdrawal each went through the following process:

1. The maintenance of large armies of mounted warriors to conquer land for the profit of trade and revenue from subject peoples;
2. A dichotomy of nomad society. The nomadic warriors who went forth to conquer and who were left to garrison conquered territories had control of the sources of wealth but declined militarily. The warriors who stayed in the steppes as the military reserve continued to be warlike but gradually became impoverished;
3. A split within the nomad state between those in the conquered areas and those in the steppes, leading to decline and and withdrawal.

6. Summary

In summary, the workings of the historical process represented

/Chinese, Chinese Moslems and Sedentary Tibetans/

the Chinese in the Northwest meets with several obstacles. The one most difficult to overcome is the lack of attitudinal uniformity due to a multitude of historical, environmental and social factors which have molded the people's behavior in the Northwest. There is, to begin with, the difference between the urban and the rural situation, which even though prevalent all over China, has made for a specially pronounced diversity in the Northwest. Generally speaking, in centers like Sian or Lanchou attitudes are met with which do not differ too much from those prevalent in other cities of China. It has to be taken into account, though, that Sian has been the capital of the Chinese Empire for centuries up to about one thousand years ago, and this fact still shapes certain attitudes of the citizens of Sian today. Lanchou, on the other hand, is most definitely a frontier city, the last major outpost of Chinese civilization with an ostentatious pride in local traditions and relics of a cultural or esthetic nature, but open, on the other hand, to a colorful mixture of influences coming from a variety of peoples beyond the pale. The urban attitudes prevalent in Sian and Lanchou thus differ perceptively and both cities differ in certain respects from other Chinese metropolises. Their peculiarities influence in turn urban-rural and social tensions in a specific way.

The Chinese rural scene, on the other hand, displays a variety of factors accounting for attitudinal diversity. There are the differences of the loess-cave dwellers and the mud-hut dwellers, those of the irrigational farmer and the one on hills or mountain slopes; there are regions of compact minorities or dominant majorities of Moslems and finally, regions along the few great thoroughfares and regions of remote seclusion.

The picture gains in complexity in the real frontier areas, Western Kansu, Chinghai and Sinkiang, where the Chinese constitute a minority. Here the diversity of peoples with whom the Chinese have contact, the geographical differences, the professional differences, differences of the duration of stay, of the home province of the settlers account for attitudinal patterns which change from settlement to settlement.

What is attempted in the following pages is, in view of the difficulties, and furthermore, in view of the pitifully scanty coverage of the area in the literature, to present a few samples of pertinent observations, which might add up to some general notions. In the selection, stress has been laid on the frontier regions, as the regions within the pale, reference still can be made to the General Handbook.

In their book, The Gobi Desert (New York, 1944), Mildred Cable and Francesca French describe the Chinese people's life in the fortress of Chia-yu-kuan in Western Kansu, which they visited in the thirties: "Inside of the fortress, life was divided into three distinct sections, each of which had an existence quite

C 175 361

Hor) of the Koko Nor, for Nepal and /305/ the Indian border countries, but also for China and its Tan emperors, and when his tu fan as the Chinese called his subjects - under his eight successors (given the title of btsan bo), or rather under their mayors of the palace again and again invaded Kansu. With great effort the Chinese had recaptured the city of Sche bu tsch'eng as early as 729, but after only a short time (741) lost it again. Thereupon Emperor Hsüan Tsung had the city besieged again and again. Finally at the siege of 749 the Chinese stormed the short stretch of wall for three days and nights without pause and wore down the small garrison sufficiently so that it could be overrun. Of 60,000 soldiers who took up this siege, more than half were said to have remained. After this attack the fortifications were destroyed completely. But this occupation of the territory of Sche bu tsch'eng by the Chinese was also of brief duration. The tu fan took advantage of the difficulty in which the Tang dynasty found itself because of the rebel Nan lu schan, and already in 763 they entered the imperial city of Hsingan fu along with the rest of the Tu ku hun, after not only Tao tschou, Min tschou, Ho tschou, but also Lanchow and Tsinchow, in short the entire Lung yu or present-day Kansu fell into their hands.

T C 727

If the superiors of the high command in the Two war[1] had spoken the forceful language with which Li scheng[2] was addressed, this war would also have ended in the glory of Chinese weapons, but at that time the Manchu knew only half-way measures. So the gentleman colonel /Plate LXVIII faces p. 304 in the original text./ /305/ came out of the Tibetan country on September 20 with waving banners and sat happy and proudly smiling on his steed whose long tail - according to the Asiatic idea, a horse's chief ornament - had been completely cut off. Little Radang had yielded nothing until it was paid its 450 taels, and even then it dared, or rather had the temerity to deliver the stolen horses with their manes cut off in derision and with bloody tail stumps. The merchants' guild of Tao tschou fumed with rage at the cowardly act of the officers. "It would have been better if the expedition had never taken place," they grumbled. For this reason the colonel did not stay long in the city. On the march his troops looked very good and offered a pleasing picture, although

C 704

[1 Cf. cat. 116, p. 489 — Analyst] [2 Cf. cat. 116, p. 491-492-A]

they always had to march in single file. Half of the troops were armed with modern repeater guns, the rest with old Mausers; 300 of each 1,000 men were equipped with long lances on which large three-cornered flags of all different colors fluttered, as they entered Tao tschou. Behind each division rode the officer in charge of it and saw to it that no man escaped. If someone for any reason had to stay behind he was first obliged to hand over his gun. The supply train was amazingly small and consisted of yak oxen, an ula from Merema and Tawa. In the endless procession the large copper cooking pots and the opium and tobacco pipes of the men, as well as the badly-packed small personal belongings of the officers were very carefully carried by soldiers. Beside their guns the troops carried only their few cotton garments and wore hemp sandals which were undoubtedly the best foot-gear what with the poor roads, the many brooks without bridges the slippery stones and the endless climbs up and down.

C 704

Native families of rulers have maintained themselves to this day, remnants of the old Mongolian- and Tu ku hun times, in the districts of Tao tschou, Min tschou and Di dao tschou. The mightiest is the Yang tu se, the king of Dschoni. Today he rules only over Tibetans, 48 tribes of them, who annually bring him small gifts. His feudal lands reach as far as Szechwan in the south. However, among the majority of his subjects his word does not carry much weight. They rob merchants and carry on wars whenever they /Plate LXIX faces p. 305 in the original text./ /306 choose. The Dschoni tu se himself, however, in his low and easily-accessible native country, is today with all his clan subject to the general supervision of the tschou of Tao. Even weaker and smaller is the Chan tu se who lives 15 li below Dschoni in the Tao Ho Valley. The Ma tu se also has little more authority; he is already in the Min tschou district near the town of Tang tschen, 150 li south of the chief city of the district, and rules over 2,000 families. Of the fourth, the Kia tu se, I have already spoken briefly in connection with my journey through Di dao tschou. Dschoni, Tschan, Ma, Kia on the one hand and the tschou of Tao, Di dao, and Min on the other, are often referred to as the Wu hu and the country as the Land of the Five Rulers. For the "democratically"minded Chinese used to complete personal freedom and privilege, conditions in the wu hu are very foreign; they are completely baffled that here, not as elsewhere in the Kingdom of the Middle, the ruler should have a claim and levy taxes, but that the individual families and the heads of families belong to the various rulers, so that, as often happens here, subjects of all five live together

668 625 1. The secret service

The command of the police system on mainland China rests with the national headquarters of the Chinese Communist Party. Nominally it is the Chinese Communist Party Central Committee, but the real power is in the hands of the small group which forms the Political Bureau. In turn this bureau is influenced greatly by the Secretariat and the secretary-general. When the secretary-general is strong he may even dominate the bureau. It usually makes the decisions on policy. The secret police service's executive body is centered around the Social Department of the Central Committee of the Party. This Department has a direct system of organization within the Party. In large areas (such as the former northwest region) or in special areas (such as Sinkiang Uighur Autonomous Region), there is a Social Department subordinate to the Party's "Central Committee Sub-bureau." From this level down, like the Party local organization, there is a social department or social secretary at each level to take charge of the secret service in the corresponding area.

668 625 2. Other police systems

Built around this Party secret service system, are numerous other separate, but not entirely independent, systems of police forces. The most important is the regular police. Organizationally, this is a branch of the People's government. Its central headquarters is the Ministry of Public Security under the Government Administration Council. From this level down there is a branch office of the department at every level of the People's government. This branch commands the regular police forces.

The United Front Department system which extends to the provincial and municipal levels, is designed for two purposes. Negatively, it infiltrates into the organizations of the people and watches their functions. Positively, it dominates and utilizes the people's organizations to promote the Party program.

The system of People's control is similar. Here, people are used as spies for the Party. The People's Procurator system is slightly different. It is a prosecuting government organ. Since prosecution needs the investigation of facts, inevitably this sytem is involved in the police system.

645 648 The spy system under the Ministry of Foreign Affairs also has a dual purpose. Positively, this system infiltrates into foreign territories to conspire for future conquests. Negatively, it is used to detect and prevent possible agitations which may disturb public order in mainland China.

668 625 708 726 The police and spy system among the military forces can be divided into two parts. The system of political defense is used to weed out potential political enemies inside the army, while the scout and spy system is mainly used to detect military enemies. Both of these systems have branches in the field army and the army areas.

228 776 823 According to official tradition, the Spirit of Hua-shan is Shan-sheng, one of the descendants of P'an-ku, the mythical creator of the world. Many other genii have, however, been connected with this mountain. According to the oldest legendary 182 records, it was a female spirit, the Holy Mother, Sheng-mu, who was propitiated here to bring forth the all-important rain; but she also received sacrifices and prayers to accord victory in battle. More recent and still prevalent legendary traditions make the Hua-shan one of the centers of the cult of the Jade Maiden (Yü-nü) whose blessings are sought for the propagation of male offspring.

823 It might be added that the Hua-shan with its rugged peaks and valleys, adorned with rare forests and intimate expressions of the pious sense of centuries, belongs to the most scenic spots of all China.

346 712 178 The great temple at the foot of the mountain, one of the most magnificent products of Chinese architecture, has been transformed into an arsenal in Kuomintang times.

B. Religious Attitudes in the Northwest

791 In general the Chinese in the Northwest adhere to the so-called "Three Great Religions." Confucianism, Buddhism and Taoism all play important parts in their religious system. In specific regions, Christianity, particularly the Catholic Church, has strong footholds among the local Chinese people. Where the people belong to the tradition of Chinese history and culture, scholarship and tradition have strengthened the cult of ancestor worship and the ideals and practices of Confucianism. There the blending of Confucian teachings, Buddhist ethics and Taoist principles predominates in the religious complex of the local 199 inhabitants. In the border communities, strongly influenced by the nearby Tibetans, the Chinese include a large amount of Buddhistic observance and practice in their religious activities. They persist in styling themselves Confucianist in religious matters, but they devote their time and money to the performance of Buddhist ritual. It is reported that the Chinese of these areas are appreciably more religious than those of the more typically Chinese communities. Taoism is sandwiched into this all-embracing system of magical practices, necromancy and aberrant forms of philosophy.

797 Christianity first came to China through the Northwest and established its headquarters in Ch'ang-an (present Sian), the national capital during the Tang Dynasty. Missionaries of the Nestorian Church first brought Christianity to the trade routes in the present Northwest. The decisive, historically dated 211 record in Chinese and in Syriac called the Nestorian monument,

712 different from the others. All the inns and shops were in the
361 suburb. The people who owned them were descendants of a long line of old residents who took pride in the very exclusiveness which was imposed by their isolation. Few of them ever left the place, and many had never even seen the neighboring town of Suchow. An inner gate led to the military section of the fortress, where life was entirely different. The yamen, built in traditional Chinese
712 701 style, was the center of garrison life, and here the general and his family lived, guarded day and night by sentries! Officers marched in and out, and much official business was done, for this was an important military center and the officer in command held a high rank. Unlike the old residents, the military hated the place and seized every chance of being away from it, bitterly resenting the appointment to such a lonely outpost, and longing to be transferred elsewhere. Nothing would have induced them to walk outside the Northwest Gate where that fateful Gobi Desert stretched, and their eyes always turned longingly to the city where, twenty miles away, there was solace, gaiety and life.

712 512 517 If the men disliked Kiayukwan (Chia-yu-kuan), the women hated it. There is nothing to do here all day but sit and listen to that howling wind, they would say frequently.

[525] [521] [296] The ladies of the yamen would gather in each other's rooms, play ma-jong for small stakes, sip tea and gossip. Often the game was prolonged until midnight, with interludes for drawing on the opium pipe, but the next morning's reaction brought a fierce hatred of this place where desert demons hid themselves in dust-clouds and whistled through every crevice of the crazy [567] buildings. The little slave girls learnt to dread the days of blizzard when their mistresses' nerves were tensed and blows were dealt out irritably for the slightest offense.

[796] [574] [545] Each festival of the year was the occasion for a welcome social function, and during the summer months life was made brighter by the frequent exchange of visits with the officials from Suchow. Twice a year a theatrical troupe visited the fortress, and for the three days of its performance all the inhabitants enjoyed themselves and made merry. But it was soon over, and when the properties were packed and carts carried both actors and their belongings elsewhere, life in the fortress relapsed into desolating stagnation.

712 485 484 The third category of human beings to be met in Kiayukwan were the travellers who came, lodged for a night or two at the inns, and forthwith went their ways. Every sunset and every sunrise they arrived, some taking night stages and some travelling by day, but all were travel worn and weary....

484 712 These formed the stream of living men and women who moved up and down the great road, acquainted with life and full of knowledge about distant places. They were familiar with the large

484 712 cities and the great waterways of China, and had traversed her wide plains by the iron track at speed which seemed fabulous to the owners of these little shops. The static inhabitants saw them come, heard them talk, watched them go, but failed to understand the matters of which they spoke, for, to them everything which they had never seen was unreal, vague, remote and seemed to bear no re'ation to daily life. Enough for them that today they [432] had sold three boxes of matches, two packets of cigarettes and handful of salt. They cared little for travellers' tales and probably believed none of them....

712 512 [701] [352] [296] The restless soldiers of the garrison rushed to and from the large town, but the old inhabitants cared for none of these things, and when the fortress gates were closed each night they put up the shutters of the little shops and crept under miserable coverlets to lie on the mud kangs, fill their opium pipes and escape into the land of illusion and dreams, which was the only wider horizon that they knew." (pp. 17-20).

361 443 [186] While she was visiting in Tun-huang Miss Cable observed: "The people of Tunwhang (Tun-huang) viewed themselves as the elite of Gobi land, and were abnormally proud of their oasis. They had plenty of money to spend and opened their markets freely to goods from other places, but prided themselves on being a self-supporting community, not only in respect of food, but also in regard to brides and bridegrooms, and they did not approve of marriages arranged between their own children and those of other towns." (ibid.) The people in this district were very conservative.

181 436 441 "One sign of its deep-seated conservatism," observed Miss Cable, "was the backward system of money exchange which it retained. Long after the silver dollar had become the common basis of coinage on the main road, Tunhwang businessmen looked askance at it, and preferred the shoe of silver which was chipped down, weighed up and exchanged for copper coinage. Here again Tunhwang set its standard by allowing one hundred worn and valueless cash to be introduced into each string of a thousand. It became therefore worthwhile to collect these useless copers in other towns, cart them to Tunhwang and dispose of them there. When the reluctance to admit the silver dollar was finally overcome, merchants still discriminated between different issues and refused one or the other according to fancy. The coin stamped with the dragon was depreciated in favor of one designated as the 'standing man' which was Hongkong currency. The dollar bearing the head of Yuan Shih-kai found favor, and for some reason the third-year issue was more highly valued than any other, but when a new coin stamped with the head of Sun Yat-sen appeared, this Gobi town absolutely refused to recognize it because the new president's effigy was small and unimpressive. No other explanation was offered than the words 'The head seems small', but no one would use it.

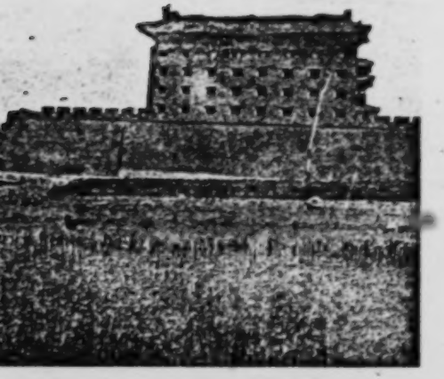
OF THE FORTRESS OF T'UNGKUAN



OF THE FORTRESS OF T'UNGKUAN

[FACING p. 4]

and not infrequently arrive at T'ungkuan in a state of collapse.

From Shen Chou to Lingpao Hsien, a distance of 45 li, the road runs through deep cuttings in the loess near the right bank, but out of sight, of the Yellow River; and from Lingpao to Wenhsiang Hsien, called 60 li, it runs across a series of bluffs high up above the river; for the first 20 li of this latter stage horsemen can follow a footpath along the river itself, which here rolls its pea-soupy waters through a gorge in the loess hills; wild fowl of all kinds abound here in the spring and can be easily shot. Lingpao and Wenhsiang lie right on the river. Round the latter the loess is much mixed with sand. The barrier range on the traveller's left hand here begins to draw in towards the Yellow River to form the famous narrows at T'ungkuan. From Wenhsiang to T'ungkuan, called 60 li, the road continues through the loess not far from the river. Finally T'ungkuan itself is approached through a deep cutting in the loess hills with gates and walls appearing at intervals after the manner of the Nank'ou Pass in the Peking mountains, with which this famous stronghold may be compared.

487 712

The narrows of T'ungkuan are formed by the Northern barrier range of the Ch'inling Shan and the Yellow River, which here approach to within a few miles of one another, the intervening space being filled by a thick layer of loess hundreds of feet deep, intersected by impassable rifts. Here the Peking road through Shansi *via* T'aiyuan Fu meets the Honan road and continues as one to Hsian Fu, where it bifurcates again, one branch leading south-west to Chengtu and Tibet, and the other north-west to Lanchow and Turkestan. The fortress of T'ungkuan commands the meeting-point of these four highways, and is now and always has been one of the most important strategical points in the interior of China. It will one day be also a considerable railway centre as trunk lines are projected along all these roads. The number of roads leading east and west, north of the Yangtzu, is extraordinarily small, and railways usually seem to find that the ancient highways of traffic and commerce offer the easiest routes through mountainous country. T'ungkuan has from time immemorial served as the gateway from China to Central and Western Asia, and has played

712 487

a correspondingly important part in Chinese history. In more recent days too, during the troubles since the fall of the Manchus in 1911, it has once more figured prominently in the manœuvres of Imperial, Revolutionary, and Republican armies, brigands, and train bands, while in times of peace it lends itself admirably, flanked as it is by river and mountain, to the levying of likin and other barrier tolls dear to the Chinese official. It is a compact little place, with ramparts and gates remarkable for their massive size even in China, the land of walls, overlooking the Yellow River, which pouring down from the north in a turgid yellow flood here strikes the Ch'inling Shan and turns sharply to the east.

651

As we approached T'ungkuan some one noticed three strange pack mules which had attached themselves to our caravan. Enquiries elicited the fact that they belonged to a merchant who was endeavouring to smuggle three loads of Price's candles through the frontier barrier into Shensi by this means. We had unwillingly to cut him adrift. Unless accompanied by transit passes goods in transport through the interior of China are taxed again and again at every point where a barrier can be erected until the prospective profit on their sale is eaten up by these tolls and their further transport becomes futile.

804

From the railhead at Kuanyint'ang to T'ungkuan is called a distance of 280 li, and can be done in three days. As far as Lingpao the li are "short li"; thence to T'ungkuan they are "long li"; the difference is most marked, the short and the long li averaging about a quarter and a third of a mile respectively. This absurd and typically Chinese arrangement is said to be due to the fact that the authorities of Honan Fu endeavoured in days gone by to lay claim to the fortress of T'ungkuan on the ground that it was nearer to their city than to Hsian Fu.

493

A peculiar four-wheeled cart of prehistoric appearance is used round T'ungkuan, the only place in China where I have seen a four-wheeled native vehicle. Even the huge carts which one meets on the grasslands of the Mongolian border or in the sands of Western Kansu, regular ships of the desert, and often accommodating whole families, are always of the familiar two-wheeled type.

From T'ungkuan to Hsian is a distance of 290 li, which 000

can be covered in three long marches. The road, a broad tree-lined cart track, lies up the valley plain of the Wei River, with the great barrier range of the Ch'inling Shan on the left hand and the river on the right. The plain is one vast wheat-field, dotted with peculiar walled farms, each a formidable little fortress in itself; they are relics of the great Mahomedan rebellion and form a characteristic feature of the landscape in most parts of Shensi and Kansu. Nowadays the Mahomedans of Shensi are a negligible quantity, the majority having withdrawn westwards into Kansu, where they form an exceedingly important and powerful element in the population.

Forty li from T'ungkuan the district city of Huayin Hsien is reached, the inns lying in the suburb of Huayin Miao, five li east of the walled town. This latter village is the starting-point for the sacred mountain, the Hua Shan, a portion of the Ch'inling range. Seventy li further on the empty city of Hua Chou is passed, and 50 li beyond that Weinan Hsien, the centre of a particularly rich agricultural district, is reached.

The traffic on the roads of this fertile and populous plain is very great, and it is one of the absurdities of modern China that no railway should yet connect Hsian, the metropolis of the North West, with the coast. Railway construction on the plains of Central Shensi means little more than laying the rails on the necessary embankment and building a number of small bridges across the streams which flow down from the Ch'inling Shan into the Wei River. And while these rich and populous plains in the centre of China are innocent of every vestige of railway construction, a line has been built at great difficulty and expense through the mountains north of Peking past Kalgan to end in the air beyond Tatung in Northern Shensi. The Hsian line is a section of the Belgian Lung Hai railway referred to above, which has for the moment come to a stop at Kuanyint'ang in Honan. Failing railways the construction of a few good trunk roads fit for motor traffic would be of enormous advantage to the province and could be undertaken, as far as the plains of Central Shensi are concerned, at comparatively small cost. There can scarcely be another civilized country in the world which would be

All along this road across the eastern end of the Ch'inling ranges a large proportion of the hill tops are crowned with walled strongholds called *Chai* which serve as refuges for the inhabitants of the farms and villages in the valleys in times of trouble. These fortified hill tops are a characteristic feature of S.E. Shensi and N.E. Szechuan. The better ones contain houses all ready for receiving the refugees, while others are merely walled shells inside which the owners erect mat sheds or temporary huts. Nearly all are unapproachable except by most precipitous footpaths. Six years ago, in the comparatively peaceful days of Manchu rule, these *chaitzu* were generally in ruins and fallen into disuse; nowadays they have mostly been repaired at a cost of many thousands of taels and have been in pretty constant use during the troubles which have afflicted these parts ever since the revolution of 1911. It is a regrettable but indisputable fact that public security in the interior of China has steadily deteriorated and that the ravages of brigands have everywhere increased during recent years since the establishment of the Republic.

Leaving Niuerhch'uan on the next day, we followed down the valley, which contracts to a gorge and is rather difficult for loaded mules, for an hour's march. Here the gorge debouches on to the valley of a considerable stream, the Shêch'uan Ho (lower down called apparently the Chia Ho), flowing like most of the rivers of Shensi from N.W. to S.E. Our path turned up the valley of this stream and followed it in a westerly direction for the rest of the way to the large market village of Fenghuangtsui, 80 li from Niuerhch'uan. The valley is hemmed in by rocky jungle-clad mountains and is uncultivated till within 15 li of Fenghuangtsui, where a tributary of equal volume from the north joins the stream. From this point on there are rice fields and a succession of hamlets. Fenghuangtsui is the largest village in the district and contains many more families than Chenan itself. Apart from these occasional townships there is marked absence of villages in these mountains, and one usually travels all day long without passing anything but scattered farmsteads and huts.

The next day's march was a long and tiring one called 90 li. The trail leaves the main valley of the Shêch'uan Ho

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

and enters a gorge which soon ends in a stiff climb up to a pass, about 5000 feet high and two hours' scramble from Fenghuangtsui. There is a similar steep descent for a thousand feet or so down the other side into a ravine where farmsteads and rice fields reappear, and then a weary three hours' march down a stony gorge which debouches on to the narrow valley of the Ch'ienyu Ho, a considerable stream for these mountains, which takes its rise in the watershed ranges north of Hsiaoyi T'ing and flows south past Chenan to join the Han near Hsünyang Hsien. The trail continues down this stream, which has to be crossed and recrossed though barely fordable, for another hour's march through precipitous limestone gorges, and then turns up a small tributary to the west for a few li to reach the city of Chenan, a dilapidated little place lying hidden away in the mountains just round the corner from the canyon of the Ch'ienyu Ho.

We had had nine days' continuous travel over the most appalling mountain tracks since leaving T'ungkuan, and as we were well housed in the Yamen of the Chief of Police, and were informed that the trail on to Hsingan was much worse, we decided to rest in Chenan for a day. The fourteen days between T'ungkuan and Hsingan by this route constituted one of the hardest journeys we made in all our wanderings through Shensi and Kansu owing to the roughness of the mountain trail. Travelling as we were with the assistance of the local officials we did not have to sample the inns, if there were any, *en route*; without such assistance it would of course have been very much harder and more fatiguing.

Chenan has practically no city wall left, which is unusual. The explanation lies in the fact that the inhabitants own a particularly fine *chaitzu* on a neighbouring mountain top in which they prefer to take refuge, with their magistrate and his police, in times of trouble rather than defend their city. A large proportion of the population were there at the time of our visit, for at that early period of our journey our party was so formidable in size that when we descended on these small mountain towns like a swarm of locusts the people used often to fly at our approach as though from a band of brigands. Chinese officials travelling on what used to be, and often still is, called an Imperial Mission, such as

the latter gradually comes to an end, winds through the same low hills in a northerly direction until, crossing a low divide, it emerges into more open country to reach Kulupa.

The latter is a walled stronghold of the Catholics on the top of a hill and is the centre of Catholic missionary work in Southern Shensi, though the Bishop resides at Hanchung. The Italian Fathers who have been established in this corner of Shensi for a great many years, have attained considerable power and influence in the neighbourhood. They work on different lines to the Protestant Missions, but from their point of view with greater success. Their plan is to collect orphans or other children who are not wanted by their parents, to educate them and teach them all kinds of useful industries, and to bring them up as Catholics. This is the work that is carried on at Kulupa, where there are usually some hundreds of children being brought up as members of the Catholic Church, mostly girls, as these are easier to secure. These old-established Catholic Missions usually own a good deal of land acquired in a variety of ways, and are practically self-supporting. At Kulupa an entire hill top is covered by substantial buildings and the whole surrounded by a good wall. When trouble comes, the gates are shut, the community fetches out its arms, and the brigands, or whoever they may be, pass on to easier prey.

To many Catholics the Protestant missionaries, who are usually married and live as far as possible a comfortable European family life, seem entirely out of touch with the Chinese amongst whom they are working. To many Protestants the life led by the children in such an establishment as Kulupa seems somewhat dreary, inhuman, and lacking in the comforts and interests of home life. The ideas of Catholics and Protestants in regard to Christianity and the converting of the Chinese are certainly very divergent and consequently puzzling to the latter, but they both do an enormous amount of good in different ways. The priest appears perhaps to sacrifice his life more completely to the Chinese, as he usually comes out from Europe never to return, and often lives for the rest of his days practically as a Chinese amongst the Chinese. But no missionaries of any persuasion have done more good for the Chinese people

this gorge it continues across the plateau, only to meet a few li further on with another and still larger rift, at the bottom of which there is a welcome stream and a hamlet called Chiehtzu Ho, the boundary of Loch'uan district. The crossing of a district boundary was always noticeable throughout our journeys, because it entailed a welcome rest and an exchange of civilities with a new magistrate. After the usual five hundred foot climb out of this cañon the path runs across the plateau northwards for an hour or so, and then drops again into the valley of the Lo River, here containing a considerably less volume of water than where crossed on the preceding stage, the difference being due to a large tributary from the west which joins it in between. Most of the terraced mountain sides in this neighbourhood have gone out of cultivation, and from here north to Yenan Fu the country becomes more and more desolate and depopulated. Another 20 li up the winding valley brings one to Fu Chou.

Fu Chou, now Fu Hsien, a second class district city, is a fortress of great antiquity guarding this highway into the heart of ancient China against the invasions of the hordes of barbarians from the North. It fills up most of the valley with its walls climbing up the hillside. Since the Mongol ceased to threaten Fu Chou has entirely lost its former importance and is now in a most miserable and decayed condition. A walk on the wall shows the usual dilapidated little city, but a stroll through the streets reveals the fact that it is practically empty, *k'ung ch'eng*, as a Chinese remarked to me. The explanation of this lay in the fact that it had been sacked four times by brigands during the preceding year, and the inhabitants, having given up residence there as hopeless, had emigrated to other parts or provinces. We afterwards passed through many other cities and villages in Northern Shensi in the same condition. The post of magistrate in these districts is an exceedingly unenviable one, and it appears to be difficult to get men to take them up. If the brigands come, the *ching pei tui* (police) are helpless, and the magistrate is lucky if he can save his life by escaping into the mountains. The official of one of these cities informed me that it was inadvisable to arm the local police with modern rifles, as, the

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

place having long been swept bare of all its valuables, there would be nothing to attract another raid provided there were no modern arms and ammunition in the place. Silver, opium, rifles, and ammunition are what the brigands go for. The only thing that was not utterly decayed in Fu Chou was a brand new *chai* (hill fort) on the top of the mountain behind the town, built by the magistrate and the few remaining inhabitants as a refuge against the next raid. In the centre of the town is an old tower containing an ancient bronze bell of fine workmanship dating from the T'ang Dynasty, the only object of value which survives the periodical raids. From Fu Chou a track leads westwards to Ch'ingyang Fu in Kansu, one of the very few east to west trails in these parts.

From Fu Chou to Kanch'uan Hsien, a distance of 85 to 90 li, the trail runs up the valley of the Lo River through poor-looking crops of maize, millet, hemp, and wheat. The loess hills on either side are mostly uncultivated and the whole region gives the impression of turning into desert. Several miserable hamlets are passed, consisting mostly of caves or cave houses, the latter queer-looking square huts built of earth and stones with tunnel-like interiors. Scarcity of wood for roofing purposes is said to be the reason for constructing these remarkable artificial caves, but probably the people are so used to living in caves that they do not feel at home in anything else. A good cave in the loess is not to be despised as a dwelling, being rain proof, warm in winter and cool in summer. Owing to the vertical cleavage which is always going on in the loess these caves are constantly collapsing, but the owners seem to know by instinct when it is necessary to remove to a new abode. Kanch'uan is a smaller replica of Fu Chou, a ruined empty shell of a city.

Here the trail to Yenan, distant 85 li, leaves the Lo River and follows up a side valley to the N.E. which leads after three to four hours' march by an easy ascent to the pass (4100 feet) in the divide between the Lo Ho and the Yen Shui. This divide is entirely covered by loess, but curiously enough there is a complete change of scenery, and the ascent and descent is through jungle clad ravines and over grassy downs. These mountains are uncultivated and uninhabited,

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

the P'ingfan River a few li south of Hung Ch'engtzu, a small walled town and the end of the second stage from Lanchou.

From Hung Ch'engtzu to the district city of P'ingfan is a pleasant march of 70 li up the fertile valley, past several villages, including the township of Nan Tatung about halfway. A mile before getting in the old Manchu garrison town of Chuang-lang T'ing is passed, imposing in appearance with its well-built walls, but nowadays an empty shell. The remnants of these old Manchu garrisons in Western Kansu are now, as elsewhere, in extreme poverty. But their existence at any rate gives the province the distinction of being, so far as I know, the only one of the eighteen provinces which contains a resident population of the five races, symbolised by the new five coloured national flag, which go to make up the Republic, Chinese, Manchus, Mongols, Tibetans, and Mahomedans. The Union of Races represented by this flag has hardly become a reality yet; and is perhaps not likely to materialise until the Chinese cease fighting the Tibetans and grant them autonomy as a self-governing dominion of the Chinese commonwealth on the lines of the relationship between Canada or Australia and the rest of the British Empire. P'ingfan is a prosperous little place, the centre of a rich irrigated valley, and is of some importance as the junction of roads to Lanchou, Hsining, Liangchou, and Ninghsia, the four largest towns of Western Kansu.

From P'ingfan the road continues up the valley with the ruins of the Great Wall on the right hand, the scenery becoming wilder and cultivation and habitations less as one proceeds. Thirty li out the mountains close in on the valley to form a gorge, and shortly afterwards the river is forded to reach the village and former posting stage of Wusheng Yi, 40 li from P'ingfan. Beyond this place the valley becomes flat and open and assumes a plateau-like character, with patches of cultivation here and there. Another 40 li brings one to the village and ruined fort of Ch'ak'ou Yi, the end of a stage of 80 li. General desolation and ruins are the features of this part of Kansu, intensified to us perhaps by the fact that we rode during the afternoon through a succession of bitterly cold hailstorms, the elevation being close on 9000 feet. The remains of the Great Wall, the ruins of farms, villages, and forts, the abandoned fields in the marshy valley,

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

canny Mahomedan innkeeper, seeing such a large party of officials and soldiers (everywhere unwelcome guests owing to their custom of helping themselves to what they want and not always paying for it), assured us it was only 30 or 40 li to Tatung Hsien by a good road; so we took the road again after a rest, and had another weary six hours' march before getting in. The road lies down a narrow picturesque valley, in which trees, farms, and cultivation make their appearance again, and finally debouches on to a broad and fertile valley, closely cultivated and thickly populated, which is crossed to reach Tatung Hsien. I have but the vaguest idea of the latter part of this long march, which was finished by the light of lanterns in the dark, beyond remembering that we forded a stream running in various branches just before getting in, and narrowly missed taking an evening bath on more than one occasion.

Tatung Hsien is a prosperous city, the centre of a fertile corn-growing valley populated largely by Mahomedans. The elevation is about 8000 feet and the wheat was ripening for harvest during the middle of August. It reminded us somewhat of Ho Chou. Being comfortably quartered here in an old military yamen, we enjoyed a welcome day's rest. Tatung Hsien is also known locally by its old name of Maopeisheng, and usually appears on foreign maps under that name in various guises. If a traveller in China, unacquainted with Chinese characters and their usual romanisation, writes down the names of places as they sound to his ear, the results are often unrecognizable; further confusion is entailed by the varying forms of romanisation in use in different European languages. There are several townships called Tatung in Western Kansu; they are sometimes distinguished by being referred to as Tatung Hsien, Nan Tatung, Pei Tatung, and Hsi Tatung, but confusion often results.

From Tatung to Hsining is a distance of 110 li by a good cart track down a fertile and well-cultivated valley past numerous farms and villages. The march may be divided into two by halting at the walled township of Hsin Ch'eng, 40 li out, where the valley narrows to a defile and is barred by an old wall with a gate and the inevitable likin barrier. This is considered by some to be a branch of the Great

Wall; if this is so, the old gate and wall at T'ungmen Kuan, between Labrang and Ho Chou, is probably a portion of the same loop, which must have been constructed to protect the Hsining region against the incursions of Tibetans or Mongols from the Kokonor, and the course and history of which it would be interesting to trace. The road eventually debouches on to the city of Hsining, lying in a small cultivated plain of loess formed by the junction of three valleys, the Pei Ch'uan from Tatung Hsien, the Hsi Ch'uan from Tanko T'ing, and the Nan Ch'uan from T'a-erh Ssu (Kumbum), the combined streams going to make up the Hsining River.

Hsining is one of the chief cities of Kansu, being the centre of a region of fertile corn-growing valleys, producing wheat, barley, and particularly beans. Its commercial importance arises from its position near the Kokonor border, and together with Tanko T'ing, a day's journey further west, it commands the bulk of the valuable Kokonor trade in skins, furs, deer horns, musk, gold, and particularly wool. A state of passive hostility has reigned between China and Tibet since the collapse of Chinese power in Lassa consequent on the revolution, and the Szechuan-Tibetan trade through Tachienlu has suffered greatly thereby; the Hsining and Tanko trade, on the other hand, has continued uninterruptedly throughout these troubles, and has perhaps even increased. As elsewhere on this border this trade is largely in the hands of the Mahomedans. Before the Mahomedan rebellion of 1860–70 the Hsining-Kokonor road to Lassa was the most frequented route between China and Tibet, but was then replaced by the Szechuan road through Tachienlu; now it is coming into its own again. The interior of the city is fairly prosperous in appearance as far as Kansu towns go, but by no means indicative of the commercial and political importance of the place. The east suburb, the former Mahomedan quarter, is still completely in ruins, a relic of the last Mahomedan rebellion in 1895, when the city successfully withstood a siege by the rebels. The walls are particularly formidable and well built.

Hsining, as well as being the seat of a Taoyin and a Mahomedan General, has always been the residence of the high Chinese official controlling the immense territory of

these two faithful friends we had also two earnest Evangelists, who never lost an opportunity of recommending the Good News which we were there to proclaim.

CHAPTER XIII

THE CITY OF TEMPLES

When not busy with village classes we made an opportunity to see the sights of Kanchow, which is a very remarkable town. The city wall is three miles in length, and from it a fine view of the well-irrigated, fertile land around can be obtained. This was sown with wheat, barley, millet, and more especially with rice, for which this district is famous, as well as with the opium poppy, and also peas and beans for animal fodder. Nearer the town were numerous fruit-orchards —pears, apricots, and apples—with vineyards which supply the market with both black and white grapes. The amount of water which floods this district from the melting snows is so great that many of the country roads become shallow rivers during the summer months. Looking down into the city from the wall, one's first impression is the beauty of the reed-filled lakes, and the number of splendid trees. From the midst of these the gay, glazed-tiled roofs of numerous temples appear, and a high pagoda built in Indian style catches the eye, but the dwelling-houses are low and insignificant. The roofs are flat and made of mud, and the houses are all very lightly built and obviously crooked, owing to the boggy nature of the soil which does not allow of a sure foundation. The largest temples and the Mission Compound stand on the higher ground of the city,

through which the ordinary traveller is glad to pass quickly.

The aspect of the country was very different from that which we had met south of Kanchow. On the Tibetan side the snow-covered Richthofen Range came closer and closer, while the Mongolian hills gradually diminished in size until they became mere sand-dunes, and then drifted off into the flat expanse of the Gobi Desert. The style of the country presented a good deal of variety, and lay in clearly defined sections running from north to south in narrow strips. Shako, the first town of importance, was on a fertile band, and lay in the midst of orchards, in which the trees were then laden with ripe pears. Leaving these one mile behind us, we entered an area of loose sandhills, where we found it necessary to descend from our carts to lighten the weight for the animals. We plodded through the fine, dry slopes with a delightful sense of illusion that just over the horizon the sea must surely appear. A number of small sand-coloured lizards sunned themselves by the way; and raising their heads at our approach, they then made off at a great pace pursued by the carter, who derived much enjoyment from catching them by the tail. Our part in the sport was to sing and whistle, which immediately brought the little creatures to a standstill, and kept them spellbound for as long as we continued our tunes. About ten miles further on we passed a clearly-defined line of swamp, through which we approached the city of Fuyi. Here the water-wagtails kept pace with the cart, and a beautiful crocus-yellow-breasted variety flitted in and out of the rushes.

Fuyi was the smallest walled city we had seen, but stands surrounded by well-watered and prosperous farmsteads, owned by wealthy families. The hand of a

My Home was not more than ..."

[Facing p. 94]

we began to view the incoming winter, under present conditions, with a certain amount of anxiety. Seeing therefore that our life must necessarily be somewhat rigorous, we added a layer of camel's hair to our already wadded Chinese garments, and thus equipped we were subsequently enabled to meet temperatures registering fifteen degrees Fahrenheit below zero.

During this first winter we were fortunate in securing from a Moslem farmer excellent milk, but food supplies in these localities are very variable, not only from city to city, but from year to year; and after a few months, cattle disease carried off most of the cows, so our dairy supply failed completely. Mutton, yak beef and pork could be bought, but all were of a poor quality. Vegetables, however, were excellent and eggs plentiful. Our daily dinner was a Chinese meal of rice or macaroni, but for several months of each year no fat of any kind was obtainable for cooking purposes, with the exception of linseed-oil, which is commonly used by Kansu people; unfortunately, in spite of every effort, we were never able to accustom ourselves to the strong taste, nor eat it without revulsion. Our winter preparations also included a large quantity of wheat, which we ourselves ground as needed, and which gave us a good store of bran with which to fill large baskets of eggs, this being the only way to prevent their freezing.

Our first expedition was taken before the winter closed in, when travelling would be too hard. It took the form of a trip to the fortress of Kiayükwan, which was only twenty miles distant. The road was over a barren and stony waste, leading slightly uphill, so that the journey took six and a half hours to perform. It was a dismal landscape, though the Richthofen Range looked magnificent with snow to its very base, and we also crossed a good many beautifully clear streams on

the way. At a distance of about two miles a high gate-tower of many storeys came in sight, flanked on either side by a clay wall, which on the south stretched for seven miles to the foot of the Tibetan mountains. On this side lay green meadows richly watered by springs, and for this reason the name Kiayükwan has been given, meaning 'The Barrier of the Pleasant Valley.' The position of the fortress has indeed been well chosen in view of excluding invaders from the west, this being the narrowest point between the naked hills on the north and south. Under the shadow of the walls a stream is crossed by a wooden bridge, and from here the path mounts steeply to the door of the southern quarter, where all the inns are situated. We passed through two great vaulted gates into the first enclosure, which holds within it the ruins of a small town, now mostly uninhabited. The splendid outer walls, with their loophole battlements and towers, and the Yamen and military barracks, still occupied, give an impression of mediaeval importance to a place which otherwise would be only a tumbledown village.

A most imposing gate led out on the north side, and beyond this, as far as eye could reach, was an undulating desert over which the wintry wind was blowing. A hundred yards from the gate a stone tablet proclaims this to be 'Earth's Greatest Barrier.' The scene was desolate beyond words, and if ever human sorrow has left an impress on the atmosphere of a place, it is surely at Kiayükwan, through whose portals for centuries past a never-ending stream of despairing humanity has defiled. Disgraced officials, condemned criminals, homeless prodigals, terrified outlaws, the steps of all these have converged to that one sombre portal, and through it have for ever left the land of their birth. The arched walls are covered with poems wrung from

we were however, obliged the next night at 1 a.m. to pass the same spot—one lonely shed inhabited by an old man, who provides boiling water for passers-by. But on this occasion he would not permit us a moment's delay, and urged us to proceed to our destination with all possible speed; which, needless to say, we did.

CHAPTER XXII

JADE GATE TO TUNHWANG

Five days' journey from Kiayükwan the traveller sees on the farthest horizon a light, elegant tower rising high above the city wall. This is Yümen—'Jade Gate'—through which he passes to Central Asia, and which being visible from a very great distance, is the one dominant feature of the beautiful little town of the same name.

Ancient records dating back to 104 B.C. speak of Yümenkwan—'Jade Barrier'—as terminating the line of guard-houses which were planted at intervals from Chiuchüan—Ancient Suchow—in a north-westerly direction on the Kansu border. A great deal of research has been made by Sir Aurel Stein as well as by other *savants* to elucidate the exact position held by this particular fort. Sir Aurel Stein places it beyond Tunhwang, one hundred and thirty miles west of the little town which now bears its name, while others believe this elusive gate to have been no other than the original structure of Kiayükwan which is, all agree, the modern equivalent of the ancient Barrier. Local opinion, however, confirms Breitshneider's assertion that the modern Yümen is built on the site of the ancient Jade Gate.

[Outside the village of Chikimpu--Analyst]

wonder why this weak-looking work of man did not cause unr damage annually with the very swift river current. On sever the large iron posts that looked like cannon bores and were r into the earth along the bank in order to hold the large rope chains of the bridge, I found an inscription which revealed t bridge had been put together in this manner long ago under t Ming emperors (in the fifth year of Emperor Hung Wu, 1372 and was thus an arrangement that was centuries old. The go was obliged to pay out 10,000 taels (30,000 marks) each ye keep it in repair. And the cost of repair was actually said t consumed a few thousand taels each summer. A hemp rope of the kind necessary to give added support during the summ floods, cost about 1,000 thaels in our money. But from the taels the officials who in the eyes of the people represented and mother, must have been able to pocket a tidy little sum

1. After negotiations lasting one-half year - for a lo time the "parents of the people" would not hear of a change - a German firm succeeded in getting a cont to build a narrow iron bridge across the river a year my arrival. This was built during the years 1908-19

Thus Lanchow fu is a bridgehead, a fortress, which defe convenient Hwang Ho crossing. From time immemorial the was regarded as important and was occupied by troops. Long fore the beginning of our era, during the Ts'in and Han dyn we find mention of a fortified encampment here. (2) The

2. In the feudal age in China, during the Tschou dy (1122-255 B.C.), the boundary of present-day Lanch bordered on the territory of the Hsi Kiang (Chinese), one time Tibetan nomads. At times the p was also entirely inundated with Hsi Kiang. At the of the Ts'in dynasty (255-206 B.C.) and of the Han B.C. -220 A.D.), the district became more and mor But the chief city of the district lay somewhat farth The present-day settlement was begun by Emperor W the founder of the Sui dynasty (589-605). In the ye during the Tang dynasty everything was again lost t Tibetans and remained in their hands, with some in ruptions, until, after the year 1000, the Hsi Hsia ki

N.W. China AF13

gained control. Finally around 1081 Lanchow fu was again conquered by the Chinese under their brave eunuch general Li hsien, with the help of the Tibetans who, insofar as they were farmers, were subject to the Sung dynasty. (Tsing yuan, too, was snatched from the Hsi Hsia kingdom in the same year.) Since then the city has remained united with the kingdom. But the importance of the place may be seen from its earlier changeful fate.

712 ●

The Yellow River which is of any visible use to the land and its people only insofar as it flows outside the Great Wall, cannot be easily crossed anywhere; certainly not on the Great Chinese Plain where the inhabitants call it their sorrow and affliction on account of its destructiveness. It once took me a full day on a ferry to get through at Kaifeng fu between the countless mud banks which are always in motion and constantly changing. Along the railroad line Peking-Hankow in Honan it forms an almost insurmountable obstacle even for our modern technical resources, because of its insecure mud bottom. Even though it does not contain a great deal of water, it is never easy to cope with at Lung men and in its entire middle course as far up as Lanchow fu. Finally, in Lanchow fu, almost where its Tibetan upper course begins there is a place where not only can the two banks be connected by a bridge without great difficulty, /149/ but where roads also lead down to it. The highway which connected Chinese culture with the Western world here crosses the Yellow River. Inasmuch as roads, to say nothing of highways, in China have, up to now, depended more on the accidents of nature than on the will and skill of man, and Kansu, which is by no means a flat country, possesses very few highways, it follows that every place where this natural road could push through was of particularly outstanding importance. This road, the ancient "silk road," leads out from the original sites of Chinese culture, out of the Wei Ho Valley and the Fen Ho Valley basin from Hsingan fu by way of Ping liang fu to the northwest, to Lanchow fu. It anxiously avoids large rivers which, as for example the upper Wei Ho, have cut deep ravines into the mountains and which only bridle paths and mule tracks can follow. It leads across loess country devoid of stones, past a few loess brooks and often for long distances on high ridges. Each year the summer rains tear up great holes in the road and interrupt traffic, but in the dry winter months trade and traffic flow cheaply and easily. Roughly, this road follows the watersheds between

487

N.W. China AF13

frontier territory" and embrace all of Chinese Turkistan and Dsungari (Ili). Since this time there has been only one governor in Hsingan fu, the ancient capital of the kingdom, a fu t'ai or a hsün fu for Shensi.

631

Thus Lanchow fu has become administratively a very important, if not the most important, city of Central Asia. It belongs to the few places which were left to the emperor in the great Mohammedan struggles of 1862-1873, when an independent Islamic-Turkish kingdom arose under the Sart Yakub Beg and when in Kansu, Hochow which lies a two-days' journey west of Lanchow fu, as well as Kin tse pu, the oasis of Tung fu hsiang mentioned in the last chapter, became centers of a large Islamic-Chinese insurrection. The fact that the Mohammedan leaders of the insurrection did not succeed in occupying this junction made it easier for Generalissimo Tso t'ung tang to recapture the provinces which had for years been lost to China.

721

The Mohammedans succeeded only once during the struggles lasting hundreds of years in breaking through the city gates, but even then (1781, according to the chronicle of Lanchow fu) the Hui hui of Hochow and the Salars could not hold it for long. In all their battles the Mohammedans of China always lacked far-sighted leaders, and their politics always foundered because of their purposelessness and the petty egoism and greed of individuals.

The city of Lanchow fu is surrounded by what according to Chinese ideas is an only moderately strong wall which, however, to the bands of the Mohammedan mullahs, armed with short pikes and swords, may have represented an imposing obstacle. According to my observations, the city lies 1,520 meters above sea level. (1)

712 ●

1. Michaelis 1,473 meters; Potanin 1,495 meters; Kreitner-Loczy 1,594; Rockhill, first journey: 1,669 meters (?); second journey: 1,575 meters; Grenard 1,494 meters; Filchner 1,600 meters (?).

It lies in the upper part of a fertile alluvial plain which is many kilometers long and wide, through most of which the Hwang Ho flows as a broad stream. Red clay mountains covered over with loess rise up south and west of the city quite close to the surrounding walls, and were fortified during the Mohammedan wars of the 19th century. The photograph of the city which in Plate XLIII shows its location was taken from the northernmost point of these mountains and the outermost one in relation to the river.

from the tu se fields into their barns. I shall come back to the subject of the Tu jen later when my journey takes me through their country. In and around the city of Hsining there are only a few Tu jen living today. 624 651

The city of Hsining fu is now almost entirely Chinese. Even in the erstwhile very important eastern suburb, the Tung kwan which was destroyed by the Chinese in 1895, Mohammedans are no longer permitted to live with their families; they may only conduct their businesses there. Since 1896 specific sections and valleys in the mountains have been assigned to Mohammedan families. The only thing that is waived today is the decree that was for years carried out very strictly, namely, that Mohammedans wishing to visit the inner part of the city were obliged to have a stamp put on their cheeks as they entered the city gate. 563

The inhabitants still vividly recalled the horrible battles with the Mohammedans. Hsining was therefore also a military city. There were five ying (battalions) stationed here and the largest and most beautiful yamen was that of the general (tschen tai) who had a rather large arsenal. In it incense was lit on the first and fifteenth of every month to the deliverer of the city, an old ko lu pu pau (a Krupp cannon), and officers and soldiers fell to the ground in a kowtow before the rusty cannon. This weapon was the soul of the defense in the year 1895. Human blood was officially smeared around the mouth of the cannon in order to make it voracious and thirst after Mohammedan blood. The natives said: "It has a soul just like a human being," and they undoubtedly had a much more definite image than our native recruits do when we teach them to speak of the "soul" of the axis of a gun or cannon. 701 [782]

The tsch'eng schu ying, the military governor of the city who is also the keeper of the keys to the city gates and commander of the so-called middle battalion, (1) as well as the hsien, the prefect, 701 712 ●

1. The Chinese provincial army consisted only of the green banners, the lü ying. In peace time one seldom heard of the larger associations, the tschen piao (brigades), the hsie (regiments), because the Chinese provincial army (I am not speaking of the troops on the coast) was used as a police troop and was garrisoned in various places. The primary important military unit is the ying camp or battalion that is under the command of a major (yu tschi) or a captain (du se or schu be).

701 712 ● In Haining fu there was a "middle," "left," "right," "front," and "rear" ying, each of which was under a du se, or more often under schu be. They were very poorly armed. The troops almost never drilled. Each month the soldiers were given a goodly ration of wheat and four marks pay. By far the majority of them were married.

[714] Outside the city there was a fortified encampment of so-called bu tui (allegedly modern drilled infantrymen) which was under the direct command of the general, and these men had better uniforms and were armed with muzzle-loaders. As long as I was in Hsining fu the officers did not hand out modern guns from the arsenals, partly for reasons of economy, partly for safety's sake, for often the soldiers deserted taking their guns with them and then selling them to the secret societies or to the Mohammedans.

the dao tai and also the highest official in the city, the ts'ing tsch'ai da tsch'en, that is the imperial minister in residence /172/ or, in short, the amban to whom North Tibet is subject (1), - all of these

1. The official title of this official is: tsung li tsch'ing hai sche wu da tsch'en, that is, minister and military attaché of the entire Koko Nor district. He was always a Manchu and had a position equal in rank with that of the viceroy of Lanchow. He is always given the title of amban or Seling amban, i.e., Hsining minister, by the Tibetans and Mongols. The office was created in 1723 for the Mongolian banners. The Tibetans call Hsining "Seling" or "Siling mkar."

have a separate arsenal in connection with their yamen, so that in the siege of 1895 each of them could arm his own men and send them up on the city walls. Besides that, there are a considerable number of other official buildings in the city. A great deal of room is taken up by large guild houses, especially those of the Shensi merchants, and by the ordinary state temples and the schools. Since large areas within the city are not built up and consist of fields which are so extensive that several times I was able to shoot wild pheasants on them for my dinner, it will be understandable that most travelers have overrated the population of the city. Even though the Chinese live close together, they nevertheless always

361 [344]

N.W. China AF 13

The crumbled loam walls and the old roofless yamen and temple buildings lay bleak and desolate when we passed through. We were still merely crawling along at a snail's pace. In the interior of the city, in a corner of an old ruin, we brewed our tea once more before we traveled on into the night. In spite of our weariness, none of us wanted to spend the night here. The cold which set in anew after sundown was too intense. We preferred to fumble along across the barren steppes. Even though we were now going along a well-traveled caravan road, we had difficulty in finding our way in the dark to Schara khoto. We did not reach it until morning. We had covered 140 kilometers on our flight. All of us had sore feet from the solidly frozen riding boots, and the three rescued ponies were also near exhaustion because they were too heavily loaded.

Schara khoto (1) is today the farthest Chinese military outpost from Kansu. The Chinese government had stationed here a schu be (first lieutenant), a lieutenant and a few sergeants with 30-40 men (belonging to the green banner). They were armed with swords and matchlocks and a few old German drums and French horns. Thus, the detachment does not play a very important role. The soldiers even have difficulty defending themselves against the attacks of marauding Tibetans. There is an old wall but it is so large that it would take at least a regiment to defend it. There is also a large old parade ground. Between this and the city which is empty today there live about thirty Chinese families who cultivate a few small acres in the vicinity, raising barley and wild oats. Nothing else grows here. It is an unspeakably miserable spot.

1. A Mongolian name meaning "yellow city." The Chinese call the town Scha la ku to and say that this means "city of the green meadow."

One of the Chinese immediately received us very hospitably in his mud hut, and turned over his large warm kang to us. Without wasting any words he immediately prepared a few opium pipes for us, for the Chinese say this is the best restorative if one is over-tired. I was the only one who did not smoke and I did not wake up until the next night, whereas my companions, all of whom had smoked, walked about vigorously early in the day.

Two days later I traveled back to Dankar. On this stretch I was accompanied by fifteen armed men and half way to the city I was

T 122 pass through everywhere. By means of it even the road to Lhasa was open to me. But from the very first moment I was worried for fear my treasure, the passport, might be taken away from me, could be revoked or might even be a forgery.

I now urged our rapid departure and I set out as soon as I had received the notice that the military escort which the amban had promised at the time of the Chinese New Year would be sent after me to the border.

T 121 My task was now to finish the exploration of the Hwang Ho within the boundaries of Tibet and then to push on ever farther through unexplored territory, through the wide white spots on our maps of Tibet, to the southeast until I should be stopped by the Lhasa government or until I had reached the Valley of the Brahmaputra.

C 487 With this end in view I left Hsining fu and followed the most southerly of the three valleys which converge near the west gate of the city, upward, spending the first night in Schang bsin tschuan (meaning, roughly, "upper new town"), a small loess town with a bu tse or fort made of loam and a /261/ small garrison. Half the populace consist of Chinese, the other half are Tu fan, that is, Tibetan farmers, and it lies only a few kilometers south of the Gum bum monastery with which my readers became acquainted in Chapter Six. The loess ends here and this is also the end of the Chinese wagon road. From here one can travel on only with beasts of burden.

C 712 Just beyond this place, at sunrise the next morning, we passed by a low wall and small guard house containing a few ragged soldiers and herewith we crossed the boundary of the land containing the most industrious farmers of our planet: the Middle Kingdom, and entered the kingdom of steppes and mountains. This is where Tibet begins.

C 487 Even directly beyond the little wall the land seemed uncultivated, wild and unclaimed. Soon we climbed steeply up a narrow rock ravine and often labored over slippery masses of ice which filled the entire valley floor like a glacier. Often men had to be sent ahead to cut steps into the ice for the animals and spread earth and sand. In spite of this, many of the animals fell, slid helplessly down the ice slopes on their knees, broke their saddles on the rocky crags and corners on either side of the valley, or had to be laboriously unloaded and re-loaded. Here, already, one of the yak bullocks fell with a wrenched shoulder and had to be

N.W. China AF 13.

C 487 slaughtered. The little brook which runs through this valley ravine had, in the long winter months, prepared this obstacle for us. It had refused to let itself be bound by the winter's cold, but had, a violent fellow, again and again broken through the ice formations, flooded them, thickened them and piled them up until the result of its labors resembled a glacier.

And yet by noon already my caravan climbed up the steep and narrow pass of the La tsche Mountains, the Lao ye Shan as the Chinese call it, at an altitude of over 3,800 meters.

C 133 T 487 The mountain range which I herewith crossed is part of the long chain emerging at Koko Nor from the mountain masses which have been leveled off into a sort of high plateau and coming to an end in the Lan chow fu region among the pliocene clays and the loess of North China. Altogether I crossed this range at six different places. Like several other ranges which emerge from the northern part of the East Tibetan highland, it gradually decreases in height toward the east. Like all the other mountain ranges north of the 32° north latitude, it contradicts Richthofen's theory of a sharp drop in the Tibetan plateau, a Landstaffel, on the Chinese side. Below Hsin hoa ting Shan the chain of the Lao ye is broken through by the Hwang Ho. Farther up it forms the watershed between the Hsining River and the Hwang Ho.

The path across this pass was poor. The animals gasped pitifully under their burdens and we made very little headway. Every few minutes the beasts would stop, panting for breath. Our progress was fitful.

For the first few days of our journey I had rented an additional three dozen mules or so; thus my eye fell upon an imposing file climbing up the steep slope. The caravan moved up toward the pass like a giant worm, winding its way laboriously, desperately twisting to the right and left, /262/ contracting and expanding, but nevertheless making headway and steadfastly striving toward its goal. Amid much shouting and the never-ending "aoaoao" of the Chinese drivers, we finally passed through a tight notch of a narrow ridge and arrived at the top, and from there we climbed down again on the south slope which was much steeper than the northern one, into a narrow rocky valley.

C [712] We passed near a Chinese wall (Ts'ien bu tsch'eng) in which a lieutenant with a small squad of men guards a frontier outpost. Soon after, we again saw a few fields, passed Tibetan farm houses, and saw Garang, the seat of a Tibetan prince of Ts'ien bu (rank). Long

N.W. China AF 13

C 563 631 T 101 belong to it on the right Hwang Ho bank as far as 180 kilometers (aerial distance) or eight to ten travel-days south of the city of Ting. In the east it borders the sphere of influence of the hsin hoang ting and farther south that of the tao tschou. The greatest Tibetan prince is the ts'ien hu of Lutsang, Lubungko, who gets an annual salary if he is not guilty of any major crime. After the last war in which at the end he played the part of mediator, he was awarded the red button and was given about 900 bushels of grain annually. After the Lutsang chief, the Dantschie ts'ien hu with the two tribes of Wanschgoro and Tschoch'ru (altogether 1,000 families) is the most powerful ruler. Other nomad tribes are west of Kue de the Ts'aner, Tschebts'a and Rengan south and southeast between the city and Lutsang: the Wulang, Ats'o, Dschesa, Nerts, Kamba, Bara, Baa-Mongra (800 families) and Gonts'a. Many nomad tribes pay an annual tax in lamb skins instead of the horse tax which was instituted in the Ming period. Each nomad family is supposed to pay a tschü lin (lamb) skin worth 0.5-0.6 tael. In this way 9,000-10,000 skins are received annually. But the ting taxes the farmers around Kue de after each harvest for the amount of the seed that was sown in the fields in spring. The ting, in turn, is required to give gifts to the 24 monasteries in his district.

C 361 631 [712] An earth wall ten meters high, with a rectangular ground plan, with very few gates through which a horseman can just about squeeze himself on horseback (that is to say, he stoops down), gives us here an exact picture of the old Roman frontier camps on the former Limes germanicus. The wall encloses the official buildings and the chief shrines of the Chinese patron saints, besides a few dozen miserable Chinese shacks in which the soldiers and the officials with their families live. On the town wall I saw large piles of stones the size of a fist, which had been gathered together to be used for defense. The actual life and bustle of the city, buying and selling, is carried on in front of the south gate. There are a number of streets there along which Tibetans, Mongols, Mohammedans, as well as Chinese merchants have their shops and dwellings. This section is extremely picturesque. Countless lamas in their attractive costumes idly fingering their beads, lounge about there during the day around the open bazaars, the upper part of their gowns slun

disappear without a trace if we had walked into the trap. 000

At eleven that evening we were in the inn at Kue de. The newly /278/ bought yaks had suffered considerably. They were all overtaxed and two of them were lame.

Thus the proposed journey from Kue de south through the territory of the Ts'aner and that of the Lutsang-Tibetans and on to the Aru Rardscha monastery and thence across the Hwang Ho, was not advisable. My yak purchase, so fraught with adventure, had convinced me that I could only have fought my way through in bloody combat. As a single European and with my few native companions I would have endangered the newly-equipped caravan. The advantages did not seem worth the price. Besides, it was extremely doubtful whether the Tibetans would even permit me on the Aru Rardschan gomba ferry across the great river.

Thus I had no choice but to ride back the old way. On the next day I crossed over to the left bank of the Hwang Ho and at the southern foot of the Lao ye Shan at the Chinese military station of Ts'ien hu tsch'eng I gathered together my entire caravan. Meanwhile the large yak herd had been able to graze there undisturbed. During this time the animals had stored up a great deal of surplus energy.

As I mentioned earlier, the Chinese have guarded the Tibetan part [712] of the road from Hsining fu to the oasis city of Kue de by means of two 487 military posts, Ts'ien hu tsch'eng and I ts'a sche. West and northwest of the former post there spreads out an uninhabited mountain region with peaks of 4,000-4,500 meters. Only on the south side of these mountains, that is, west of the station of I ts'a sche which I first visited, there are pastures which are visited by nomads for certain periods. B... from Ts'ien hu tsch'eng northwest into the mountains there extends a longitudinal fissure with old moraine remnants and along this leads a "caravan road" which, however, is seldom used because the region is regarded as unsafe and thus for long stretches there is not a trace of this "road." Nevertheless, it conveniently connects with Schara khoto, that important military station which had served me as a refuge after my defeat at Koko Nor the preceding January. In 1904 Lieutenant Filchner and I had also set out from there, and Prschewalski, Rockhill, Kozlov had already passed through there. After all that had happened, I finally had to make up my mind to go through the very same gate. The only consolation I had was that the road I used this time to reach the town, had not been traveled by any European before me.

It took us three days to get through the mountains between Ts'ien 000

133 part of this mighty chain which I was now crossing with my caravan had been indicated on our maps as the Siansibel chain since the time of General Prschewalski's journeys. Up to now it was not clear whether this chain discovered by Prschewalski had any connection with the Semenov Mountains. Now as a matter of fact, in the eyes of the natives, Siansibel is only a pass which I myself crossed on the following day and which I discovered to be 3,800 meters high. The mountain range around the pass does not have any particular name for the natives, they give names to peaks and passes only. Thus, it is possible in Tibet to proceed after the fashion of recent Russian explorers and introduce foreign, if possible proper names for the individual ranges. These foreign names have the advantage of showing immediately that they are not local designations, but that they have been introduced by individual travelers in their explorations and in their effort to untangle the knotty problem of Tibetan Mountains. If, as our knowledge grows, we realize that the demarcation of individual mountains has been wrong, we have found that European designations of mountain ranges are easier to change than ostensibly local names.

487 Up on the top of the Siansibel Pass we came upon the large
485 caravan road that leads from Bayan Nor and Kabatalen across the
712 tala to the south and along which - as I now noticed for the first time - there stand loam fortresses every 25 - 30 kilometers, as a protection for travelers against nocturnal attacks. We continued to follow this road and set up Camp 17 within such a loam fortress. The loam walls had been erected probably half a century before by Chinese soldiers. Now they stood empty and partly in ruins but within them we felt infinitely relaxed and safe. I slept like a god between the three walls that still stood upright, in spite of snow and hail which were accompanied by an icy westwind.

133 The descent south from the Siansibel Pass is extremely gentle.
316 Already at an altitude of 3,600 meters one leaves the Semenov Mountain range and thereupon has a wide view across a new steppe which slopes toward the southeast, and once more looks down on a longitudinal valley covered with rubble. A few brooks have cut a bed 200 meters deep into this rubble, and far in the southeast a long, dark crevice with vertical walls stood out sharply against the pale yellow gleam of the steppe. "In that flows the Hwang Ho," my H'an said immediately. He had formerly often come through this region in search of gold and had even, on his way home, gone down the Hwang Ho on a raft. The river flows so deep down that one can see its waters only when one steps close to the edge of the fissure.

5: Tafel--319 T-3 (1905-1908) 1914 AJ1 Tibet AJ1
N.W. China AF13

Formerly as many as 2,000 gold washers traveled to the Gorgi Ravines summer after summer and into the mountains which bordered the southern part of the steppe that lay before us. Most of these gold washers were, like my H'an, people from the so-called "Small Society" (Hsian /308/ kiao), that is, Mohammedans. Meanwhile thousands of them have perished, losing their lives in the Mohammedan rebellion. But at that time, when the gold-washing regions were visited in the greatest numbers - around the 1870s - the government kept ten soldiers in each of the loam fortresses on the road, for their protection, and from each gold washer the mandarins collected two mace per season for licenses. Hundreds of small employers instigated these expeditions and came here with people from their village and their neighborhood. The region is considered one of the richest in gold in the entire Hsining district. But one day - it must have been in the year 1839 - Ngolok-Tibetans came riding up in great numbers from the south, fell upon the unarmed gold washers, took their food supplies which they had laboriously dragged up from their home in the Hsining Valley, and thus forced them to beat a hasty retreat along with the Chinese soldiers. Since that time the soldiers have never again taken up their posts here and only small bands of particularly audacious gold seekers dare to work the Gorgi Ravines, and for this they pay high taxes to the Tibetan tribes living in the vicinity.

At the time of my visit the local landowners, two tribes who have their pastures on the southern edge of the steppe and at the mouth of the Gorgi ravines - in the northern part of the steppe there are few good pastures - were bitter enemies. Disputes over a matter of inheritance had resulted in wars that had been going on for years and cost a great deal of blood-shed. A young Tibetan who had been adopted by a childless couple, had lost his step-father in a smallpox epidemic when he was still a boy. His step-mother took another man into her tent soon after the death of her husband, and when the step-mother died this man refused to give up the property. Meanwhile the young man had reached the age of 20, and when he had in vain brought suit before the chieftain, he resorted to self-defense, attacked the man's tent with the help of some of his contemporaries and some blood relations, drove away the man's herds and took possession of the tent and its contents. Since that time the tribe has been divided into two factions. The two hostile territories are separated by the Da ho ba (Chinese) or the Hongan Chu (Tibetan), a torrential mountain brook which flows through the steppe in a deep channel. Most of the battles took place in its narrow ravine. On the steep slope along the road we saw the

487/133 the south, runs for two hours' march across the flat-topped hills, descending finally by precipitous zigzags to reach the city of Yich'uan lying in the narrow valley of a stream flowing east to join the Yellow River. The country crossed on this march is again pure loess, very sparsely populated, and with innumerable grass-grown terraces which have gone out of cultivation and render evident the depopulation of the region.

364 Yich'uan Hsien, lying at the junction of two narrow valleys in the loess, is the capital of a second class district, and was evidently a comparatively large and prosperous city in the past. At the time of our visit it was practically empty, and lying in the heart of that wild and little frequented region which contains the chief haunts of the brigand bands of Northern Shensi, it is at the present time uninhabitable by any but the poorest classes. Northern Shensi, depopulated by the Mahomedan rebellion fifty years ago, and now 669/162 probably undergoing a process of desiccation, is losing its few remaining inhabitants of the better class through the devastations of the brigands, many having moved across the Yellow River into Shansi, where conditions are much better. Recently a large band of brigands, perhaps finding that Northern Shensi was getting rather bare, also moved across the river; but prompt military measures were taken by the Shansi authorities and they were soon driven back to their original haunts with great loss. The question naturally arises, why should these brigands be left apparently unmolested by the authorities of their own province?

1701/579 The answer is provided by the history of events in Shensi during the years since the revolution of 1911, which is outlined in another chapter. The brigands of Northern Shensi are mostly ex-soldiers and Ko Lao Hui men, and are composed of the same material as the provincial troops, with whom they exchange rôles from time to time. It is therefore not possible to use the latter against them. Further, they constitute in a way the reserves of the provincial army, which are thus maintained without cost to the provincial [714] Government. The Shensi soldier usually owns his own Mauser and as much ammunition as he can carry wound round and round his body in a cloth bandolier, acquired in the course of some previous rebellion or brigand raid,

701/712 In Haining fu there was a "middle," "left," "right," "front," and "rear" ying, each of which was under a du se, or more often under schu be. They were very poorly armed. The troops almost never drilled. Each month the soldiers were given a goodly ration of wheat and four marks pay. By far the majority of them were married.

[714] Outside the city there was a fortified encampment of so-called bu tui (allegedly modern drilled infantrymen) which was under the direct command of the general, and these men had better uniforms and were armed with muzzle-loaders. As long as I was in Hsining fu the officers did not hand out modern guns from the arsenals, partly for reasons of economy, partly for safety's sake, for often the soldiers deserted taking their guns with them and then selling them to the secret societies or to the Mohammedans.

the dao tai and also the highest official in the city, the ts'ing tsch'ai da tsch'en, that is the imperial minister in residence /172/ or, in short, the amban to whom North Tibet is subject (1), - all of these

1. The official title of this official is: tsung li tsch'ing hai sche wu dá tsch'en, that is, minister and military attaché of the entire Koko Nor district. He was always a Manchu and had a position equal in rank with that of the viceroy of Lanchow. He is always given the title of amban or Seling amban, i.e., Hsining minister, by the Tibetans and Mongols. The office was created in 1723 for the Mongolian banners. The Tibetans call Hsining "Seling" or "Siling mkar."

have a separate arsenal in connection with their yamen, so that in the siege of 1895 each of them could arm his own men and send them up on the city walls. Besides that, there are a considerable 361/[344] number of other official buildings in the city. A great deal of room is taken up by large guild houses, especially those of the Shensi merchants, and by the ordinary state temples and the schools. Since large areas within the city are not built up and consist of fields which are so extensive that several times I was able to shoot wild pheasants on them for my dinner, it will be understandable that most travelers have overrated the population of the city. Even though the Chinese live close together, they nevertheless always

victorious army all the way from Shensi to Turkestan, their 669 method of dealing with the rebellion being to massacre the inhabitants and reduce to heaps of ruins every Mahomedan habitation they came across. As the male Mahomedans were mostly scouring the country in marauding bands, they met with little difficulty in doing so. Chinese rebellions have in the past of course always been suppressed in this manner, and indeed could probably not have been suppressed otherwise. Fifteen li from Huining the valley contracts into a 487/133 gorge, and the road runs down the bed of the stream, a brackish trickle of water, for the rest of the way. Huining is a poor city lying in a region of arid valleys. Complaining of the hardships of life at his post, the magistrate informed us that in many parts of his district ordinary fuel was unobtainable, and the inhabitants were reduced to burning [372] dried dung as in the deserts of Tibet and Mongolia. This arid region stretches away apparently to the north till it merges into the Ordos desert, a land of sand and camels. In addition to being such a miserably poor district, his post had the disadvantage of lying on this great road, and when an important personage, such as a Mongol prince or high Chinese functionary, passed by on his way to or from Turkestan, his passage would leave the unfortunate magistrate many hundreds of taels out of pocket, which he could ill afford. We were a very small party when travelling in Kansu and I hope we did not cost him anything; but I know that when we commenced our journeys in Shensi with a huge party we were a heavy burden on the people and officials of the districts through which we passed.

The next stage is a short one of 60 li to the walled posting stage of Hsikung Yi. The road runs down the Huining valley for 20 li, and then ascends a side ravine to the south-west for the rest of the way. The hamlets passed seemed more miserable and the country more desiccated than ever. All along this road, as on most of the bigger roads of Kansu, may be noticed groups of curious little towers every five to 718 ten li. It was a long time before we could get a satisfactory explanation of what these towers were intended for; so far as I know they are only to be seen on the roads of Kansu. We now learned that they were beacon towers, another relic of the rebellion and its suppression, by means of which

T. T. 8

718 signals could be sent great distances in a very short of time.

From Hsikung Yi to Anting, another short stage 487/133 the road follows up the ravine for ten li, and then cl long steep hill by zigzags. On reaching the summit no immediate descent the other side, but the path along a high ridge with extensive views over th [361] mountains all around, finally dropping steeply to An a valley running north-west. Anting Hsien (now kn Tinghsi) is an important district city lying at the j of three valleys, and, commanding several roads south, east and west, was formerly an important centre. There is more water available here, and conse the country is much more fertile and the people qu off. Loess country in this rainless region is either or a garden according to the amount of water avail irrigation, and from here on to Lanchou, though become more and more sterile, the irrigated vall wonderfully green and fertile.

From Anting to Lanchou is a march of four shor of about 60 li each. The road runs down the val several prosperous hamlets for 45 li to the village of T whence it strikes west up a side valley to the gosting of Ch'enk'ou Yi, the end of the stage. From here it a gully for a few li and then climbs a steep loess hill the summit of a ridge along which it winds for four hours' march, with finally a steep descent to th market village of Kantsao Tien, lying amongst irrigated fields at the junction of three valleys. south-west rises a high range of mountains, beyond lie Titao and the T'ao-River. From here on to Lanc irrigated valleys, bounded by desert hills, are highly tive, and the crops several weeks ahead of those in the region we had traversed since crossing the Liupan

From Kantsao Tien a good road runs down the cu valley for 70 li to Chinchia Yai, a large village a [361] station, and the end of the stage. The district city Hsien lies just off the road, 25 li to the south. Chinchia Yai the valley soon contracts to a stony rav after 20 li debouches suddenly on to the gorges of the River, which here rolls its turgid waters between pre

721

721 INSTIGATION OF WAR.--frequency of war (e.g., common, rare, unknown); military preparedness; scale, severity, and duration of wars; small-scale military operations (e.g., raids for slaves or cattle, headhunting, privateering); conception of war (e.g., as glorious, as holy, as wrong but inevitable, as less debilitating than peace); prevalent motives for waging war (e.g., vengeance, self-defense, aggrandizement; prestige); predominance of offensive or defensive warfare; material gains through war (e.g., booty, trophies, slaves, women, mercantile advantages, territory); decision as to war (e.g., deliberations, negotiations); manifestos; declarations of war, attacks without warning; etc. See also:

of the necessary means and the physical possibility of getting to
Mecca.
c. The Way of God (Jihad). In addition to the obligations mentioned, in many passages the Koran further enjoins believers to "strive in the Way of God." The duty is formulated in general terms in Sura ii, v. 186, between the regulations of the fast and pilgrimage: "Fight in the Way of God against those who fight against you, but do not commit aggression. . . Slay them wherever you find them, and expel them from where they have expelled you, for sedition is more grievous than slaying. . . Fight against them until sedition is no more and allegiance is rendered to God alone; but if they make an end, then commit no aggression save against the evil-doers."
A distinction is drawn between warfare against the pagans, on the one hand, and against the Jews and Christians on the other:
"When the sacred months are over, kill those who ascribe partners to God wherever you find them; seize them, encompass them, and ambush them; then if they repent and observe prayer and pay alms, let them go their way." [Sura ix, v. 5]
"Fight against those who believe not in God nor in the last day, who prohibit not what God and His Apostle have prohibited and who refuse allegiance to the True Faith from among those who have received the Book, until they humbly pay tribute out of hand." [Sura ix, v. 29]
"As for those who are slain in the Way of God, they are not dead but living in the presence of their Lord; their needs are provided, rejoicing in the bounty which God has given them." [Sura iii, vv. 163-4]
Besides these major issues of doctrine, ritual and obligations, the Koran contains a large body of religious and ethical teachings and legal injunctions. For example, wine, pork, gambling and usury are forbidden along with the making of images or representations and a number of the practices of pagan Arabia. Marriage, dowry, divorce, the guardianship of orphans, and inheritance are all regulated in detail. Penalties are laid down for certain crimes such as stealing, homicide and murder as well as for a few minor offenses. Slavery is accepted as an institution, but certain limitations are placed upon the rights of owners over slaves and good treatment of slaves is enjoined. Fraud, perjury and slander are repeatedly and severely condemned, and rules of social behavior are laid down in several passages. All these and other regulations explicitly detailed in the Koran served as foundations for a more elaborate set of rules and regulations upon which the structure of the Shari'a, the Islamic law, was erected by later generations.

PREFACE

The following chapters give some account of a series of journeys through the North-Western Provinces of China, undertaken in connection with the Anglo-Chinese Opium Treaty and other matters requiring investigation on the spot in conjunction with Chinese officials.

Shensi and Kansu are not very well known to foreigners generally owing to their isolation and to the absence of any towns open to foreign trade therein; but they contain many regions well worth visiting, and Kansu especially, with its profusion of game, European climate, and interesting mixed population of Chinese, Mahomedans, Tibetans, and Mongols, is in many respects one of the most attractive of the eighteen Provinces.

We were greatly indebted to the Chinese officials, both those who accompanied us and those of the districts through which we passed, for their constant courtesy and assistance, which did much to mitigate the hardships of these long journeys through the mountains and deserts of the North West. In all we covered a distance of 14,200 li (about 4000 miles) by road in Shensi and Kansu, the journeys occupying some ten months of almost continuous travel, divided over two summers.

This book was written three years ago, in 1917, when affairs in China were in great disorder after the troubles consequent on the collapse of Yuan Shih-k'ai's imperial dream in 1916. Unfortunately the hopes that China would soon pull herself together again and put her house in order have not yet been realised, and the country continues to drift on down stream, torn by internal strife and preyed upon by countless hordes of brigands and those Frankenstein monsters, the Armies of the North and South, created by the militarists for their own profit and advancement.

Conditions in Shensi have become worse rather than better during the past two years. The neighbouring Province of Szechuan, usually the chief bone of contention between North and South, after changing hands again and again,

[P. v]

vi

PREFACE

lies settled down towards the end of 1917 in possession of the Southerners. Shensi then became the principal scene of conflict between the Northern and Southern Armies, and during 1918 and 1919 the Province suffered terribly at the hands of the rival forces, in most cases indistinguishable from the brigand hordes. Towns and villages were again pillaged and burnt, and the countryside laid waste. The Military Governor, who *more sinico* started his career as a Southern revolutionary, but subsequently gravitated towards the reactionary North and became one of the staunchest of the Northern militarists, remains in power, very vicissitudes and is still in the saddle; but the next two most prominent officials in the Province at the time of our visits, both progressive and enlightened men, have since met with a violent end at the hands of one side or the other.

Kansu has remained peaceful. General Ma An-liang died in the summer of 1918, and is said to have been succeeded, as Head of the Moslems of the North West, by General Ma Fu-hsiang.

The remarks about the successful suppression of opium cultivation, which reached its high-water mark in 1916 and 1917, contained in Chapter XI unfortunately no longer hold good." At the time of writing the poppy is again being extensively cultivated in the distant provinces of the interior, notably in Shensi and Szechuan, under the open encouragement of the local officials, who derive their principal revenues from the taxation of the opium produced. In the spring of 1919 the writer travelled for days through districts in Western Szechuan, where the cultivation of opium had previously been completely eradicated, without ever being out of sight of the countless fields of red and white poppy in full bloom; the price of opium was everywhere rapidly falling, and the populations of the out of the way cities were again sodden with the drug. This flagrant violation of the country's treaty engagements is not the fault of the Central Government, who continue to do their best to carry out suppression of production and consumption. But the various semi-independent military chiefs in the distant interior care nothing for the edicts of the Peking administration or for China's treaty obligations, and aim only at their own enrichment.

N.W. China AF13

frontier territory" and embrace all of Chinese Turkistan and Dungari (Ili). Since this time there has been only one governor in Hsingan fu, the ancient capital of the kingdom, a fu t'ai or a hsin fu for Shensi. 631

Thus Lanchow fu has become administratively a very important, if not the most important, city of Central Asia. It belongs to the few places which were left to the emperor in the great Mohammedan struggles of 1862-1873, when an independent Islamic-Turkish kingdom arose under the Sart Yakub Beg and when in Kansu, Hochow which lies a two-days' journey west of Lanchow fu, as well as Kin tse pu, the oasis of Tung fu hsiang mentioned in the last chapter, became centers of a large Islamic-Chinese insurrection. The fact that the Mohammedan leaders of the insurrection did not succeed in occupying this junction made it easier for General Tso Tsung tang to recapture the provinces which had for years been lost to China. 721

The Mohammedans succeeded only once during the struggles lasting hundreds of years in breaking through the city gates, but even then (1781, according to the chronicle of Lanchow fu) the Hui hui of Hochow and the Salars could not hold it for long. In all their battles the Mohammedans of China always lacked far-sighted leaders, and their politics always foundered because of their purposelessness and the petty egoism and greed of individuals.

The city of Lanchow fu is surrounded by what according to Chinese ideas is an only moderately strong wall which, however, to the bands of Mohammedan mullahs, armed with short pikes and swords, may have represented an imposing obstacle. According to my observations, the city lies 1, 520 meters above sea level. (1) 712

1. Michaelis 1, 473 meters; Fotahin 1, 495 meters; Kreitner-Loczy 1, 594; Rockhill, first journey: 1, 669 meters (?); second journey: 1, 575 meters; Grenard 1, 494 meters; Filchner 1, 600 meters (?).

It lies in the upper part of a fertile alluvial plain which is many kilometers long and wide, through most of which the Hwang Ho flows as a broad stream. Red clay mountains covered over with loess rise up south and west of the city quite close to the surrounding walls, and were fortified during the Mohammedan wars of the 19th century. The photograph of the city which in Plate XLIII shows its location was taken from the northernmost point of these mountains and the outermost one in relation to the river.

N.W. China AF13

tiles of the roof beams and between the tiles the sun came in. Fortunately the weather was fair when I visited the house. 631

I was ushered into the same room in which during the previous year the "war of 6/6e de" had begun. I sat on the same wide bench, on the same cushion covered with shabby red cotton material on which His Buddhistic Holiness, the much-feared Tibetan lama, the incarnation of the black monastery had sat the year before and exchanged honeyed, false words with the then ting of Kue de. He had come at the request of the Chinaman in order to bid farewell as a friend before setting out on a long journey, and had just received a large yüan bau, a piece of silver weighing about two kilograms, from the hands of the ting for whom he was supposed to buy incense and Indian dates in Lhasa. His retinue, about 300 armed men, awaited him on the plain outside the city. The two talked for hours. The Chinaman even wanted the Tibetan to dine with him. But the errand, the honeyed words, the invitation, all that had been merely a snare and a delusion. 721

The holy lama was known to be the head of a robber tribe which made life miserable for the poor city dwellers. His men had their tribal headquarters below Kue de, to the right of the Hwan; He, behind high, steep mountains, in ravines which were accessible only by means of /268/ narrow paths and only in single file. From here they kept the whole countryside in a state of terror. No one could travel peaceably across the country. The largest caravans were plundered. The inhabitants of the city were on the point of deserting it. The city's commerce, its entire significance were destroyed. Right in front of its gates the bullocks and donkeys of the Chinese were snatched away from the ploughs. Anyone who proceeded to offer resistance was shot down. Finally in 1905 a young, newly-arrived ting had the courage to defend the interests of his subjects. After giving a report of the situation to the central government, he was given the power to call the incarnation to task. He invited the great lama to his house. And when the invitation was accepted and the lama's coming announced a few days in advance, one courier after another galloped to Hsining with the request for further authority. The ting asked permission to arrest the lama. He asked for troops. But for days no answer was forthcoming. The amban lacked the courage to take over the responsibility. In fact, he was inclined to side with the Tibetans. The ting sent to Lanchowfu, and from there he telegraphed to Peking the detailed itinerary of the lama's path to Lanchow fu it takes a rider two days, even if he can change

N.W. China AF13

N.W. China AF13

721 horses ten times. So the ting could have waited a long time. Meanwhile everything was in readiness. His men had been secretly armed, his gates guarded. Nevertheless things would probably not have come to a show-down if the brother of the lama who was waiting down in the yamen courtyard had not grown suspicious, had he not succeeded in getting into the guest room and calling to his brother that he had been lured into a trap and that he should flee. In a flash, the incarnation grasped the situation. / With the large piece of silver which he was still holding in his hands he knocked down the ting and made for the door on his brother's heels. Now, it is customary in China that during a visit the yamen attendants stand at the door. There were ten of these and they blocked the lama's escape and sought to tie him up. He was a giant of a man, splendid, muscular, built like a god - so I was told by all my informants. Armed only with the piece of silver he threw aside those men whom opium and idleness and weakened, and he would surely have escaped if the ting had not carried a small revolver concealed in his garments and, beside himself with humiliation over what had happened to him, he shot at the holy lama. That same evening the incarnation died of his wounds in the courtyard of the yamen.

726 In the general confusion, the brother had succeeded in fleeing the city and bringing news to the tribe of what was happening in the yamen. They responded like bees that have been induced of their queen, for their all, their sacred incarnation, their god, had been killed. However, there could be no thought of storming the city. Capturing a Chinese loam fort was still a precarious matter for a tribe of horsemen. Thus, after a few wild demonstrations, they retired to their hills in order to prepare properly for the war, to grind powder and cast bullets. The rifle-makers of this race were known far and wide. Some of their master craftsmen had even ventured to make imitations of our modern guns. It was lucky for the Chinese that the tribe had been able to get only very little steel. /267/

At first the war had cost considerable bloodshed. Shortly after the murder of the lama a Chinese division marching from Hsining fu via the Lao ye Shan to Kue de, fell into an ambush and lost thirty men. However, a large battle never took place. In an earlier chapter I have briefly referred to the outcome of the war, that the cannons were brought from Lanchow and that the Tibetans were finally obt-argued by the Chinese mediators a few months before my visit, without too much bloodshed.

722

722 WARTIME ADJUSTMENTS--emergency adjustments (e. g., martial law); wartime restrictions; disposition and behavior of noncombatants (e. g., removal to place of security, mobilization for war industries, observance of special taboos); means of maintaining civilian morale; civilian defense activities; economic readjustments to war; etc. See also:

Rationing	436	Public finance	682
Price controls	438	Government regulation	686
Wartime extension of political authority	642	Conscription	702

done in public welfare. The information about the situation in the Northwest has to be inferred mostly from what is available to us about China proper, keeping in mind that Chinese policies in Sinkiang have never achieved a fulfillment comparable with the fulfillment they have achieved in China proper.

It was only during the Sino-Japanese War (1937-1945) that the Nationalist Government established a Ministry of Social Affairs. This Ministry organized in each province, including Sinkiang, a Bureau of Social Affairs for relief and welfare works. Institutions were set up to take care of the aged, orphans, the disabled, disabled veterans and beggars.

The relief organs in the Northwest sponsored by the Ministry of Social Affairs were restricted to free medical service centers; organs maintained by provincial governments were mainly experimental relief stations, which were responsible for a variety of relief work. Municipal and district governments maintained, in addition to general relief organs (90 for the entire Northwest; 57 of these were located in the provinces Chinghai and Ningheia, which had Moslem governors), children's relief centers (17) and a sprinkling of other institutions. There were several dozens of private Chinese Charity Associations active in the Northwest during the war.

Furthermore, the National Government joined efforts with some religious and humanitarian bodies and organized the National Relief Commission. During the war, this Commission was particularly active in disaster relief. Large appropriations were earmarked for the famine in Shensi in the years 1943 and 1944. Contributions to this province as well as to the provinces of Kansu and Ningheia were largely used for the resettlement of and the starting of reclamation projects by disaster victims of Shensi as well as of Honan province.

The activities of the National Relief Commission included care for war orphans and refugee children. Five hundred of them were sent to Sinkiang and one thousand were resettled in Chinghai. Furthermore, a Juvenile Northwest War Area Service Corps was organized to accommodate graduates from War Refugee Children's Schools.

The National Child Welfare Association, founded by H. H. Kung, also maintained a Child Welfare Camp at Hei-hsien, Shensi.

Among the service corps operated by the Friends of the Wounded Society, organized under the New Life Movement Association, one had a base in Shensi. These corps worked in hospitals and convalescent camps. They provided deiousting, laundry and sewing services etc. and special dieting.

The welfare work of Christian missions contributed to alleviate much distress. There were few large Protestant missionary

/Chinese, Chinese Moslems and Sedentary Tibetans/

individual activity. In all matters relating to the village-owned woodlands and pasturelands, as well as in all matters regulating the time of planting, harvesting, etc., the Tibetan village acts with a solidarity and unanimity that is comparatively lacking in a Chinese village community, although that community also owns communal wood lots and pastures.

The sedentary Tibetans in the Northwest, according to Ekvall, were quite friendly toward the Chinese. The Tibetan country with which Ekvall is familiar "has again and again been a most effective refuge for those fleeing from the three great Mohammedan rebellions" and from other local troubles. The Tibetans, like many unsophisticated peoples, are rather soft-hearted toward refugees, especially if they be destitute. By Tibetan custom the right of refuge has become one of the basic rights, and when it is reinforced by the claims of acquaintance and the functioning of the "guest-host" system this right of refuge can open a path into the most exclusive of Tibetan communities.

The sedentary Tibetans are short of males. For this reason, in every instance intermarriage is between a Chinese man and a Tibetan woman - never between a Tibetan man and a Chinese woman. This means that the Tibetans put more value on their men than on their women. They can afford to give up a woman, but not a man.

Attitudes of the Chinese in the Northwest toward the present regime again differ widely. The so-called Shen-Kan-Ning Border Area was the core area of the Yenan regime. Communist policies and maneuvers were experienced here for almost a decade and a half before they were applied to other parts of China. It will be remembered that the strategy of the Yenan period differed considerably from later usages. An initially sceptically favorable attitude of the rural population seemed at that time justified. Those who joined the party or the army did so with enthusiasm and a sense of mission. (Compare, however, section Political Dynamics on their later fate). Regions outside the Border Areas did not enjoy this "privilege". To the pronounced conservatism of the rural population in other parts of Shensi and Kansu, Communist innovations which were in contrast to their traditions and interests came as a heavily felt shock. Their passivity and submissiveness on the other hand kept them from voicing open discontent. Apathy would probably be the right term to represent the rural people's attitude toward the new regime.

724

724 LOGISTICS--wartime procurement of military supplies; logistic planning; organization of land, sea, and air transport; expediting of supplies; depots, dumps, and supply trains; etc. See also:

Land transport	49	Military vehicles, naval vessels, and military aircraft	71
Water and air transport	50	Organized commissariat and supply services	708

years, ceased to be the leading metropolis, dropping in rank to a city of secondary importance. This decline of the Northwest had been in process since the end of the Han dynasty and had accelerated during the T'ang. The decreasing productivity of the land made it harder and harder to maintain large bodies of troops to defend the Northwest frontier. Supplies for the defense forces, not to say for campaigns to the Far West had to be brought up by canals from the Southeast, a tenuous system which, once obstructed, would constrain the withdrawal of Chinese troops from far-flung outposts in the Northwest and render abortive any attempt at their recovery.

000 II. The Succession of Steppe Empires

A. The Scythians

Historically, the first empire to break out of the steppes was founded by the Scythians. They are supposed to have been a North-Iranian people, who nomadized in what is today's Turkestan and Western Siberia. The Greek historian, Herodotus, has left a rather intimate description of their manners and folkways. They are mentioned also in Assyrian, Persian and Indian sources (under the name Saka). Of the three groups of Scythians who inhabited respectively the Ferghana-Kashgar area, the lower reaches of the Syr Darya, and western Siberia north and northeast of the Caspian Sea, it was the last that set events in motion. In the second half of the eighth century B.C. this group fell upon the Cymmerians, a Thraco-Phrygian people settled north of the Black Sea. This conquest catalyzed a migration of nations, the echo of which was heard even by the prophets of Israel. It was the first known inroad of the steppe nomads into the southern cultural world.

The Scythian Empire continued until the third century B.C. Its southward drive under the leadership of Ishpakai was stopped by the Assyrians in 678 B.C. Ishpakai's successors, Bartatua and Madyes, expanded their empire towards the south and the west. In ca. 628 B.C., however, they were repulsed by the Medes under Kyaxares. The Persians under Cyrus battled against the Scythians in the region east of Khiva in ca. 529 B.C. and 15 years later under Darius in the southern Ukraine. The Scythians finally were decimated by the Sarmathians, another North-Iranian nomadic tribe, who pushed the Scythians into the Crimea towards the end of the third century B.C.

There is abundant archeological evidence of the Scythian Empire. Their particular art style, the so-called animal style, set the pattern for subsequent craftsmen of the steppe. Its influence was felt all over Central Asia well into the confines of early Chinese dynasties.

726

726 WARFARE--wartime mobilization; departure of troops (e. g., public ceremonies, rituals for securing supernatural aid, exhortations to bravery); military expeditions (e. g., marching, scouts, protection of flanks and rear, camping, mounting of guards, foraging, billeting); types of combat (e. g., skirmishes, surprise attacks, assaults, pitched battles, siege operations); joining battle (e. g., choice of time and place, ritual preliminaries and precautions); deploying and coordination of forces; special characteristics of naval and air combat; military conventions and rules of war (e. g., flag of truce); personal encounters (e. g., duels between champions); termination of combat (e. g., after first casualty, after desperate last stand); tactical withdrawals; flight and pursuit; surrender; etc. See also:

Religious practices	70	International law	648
War songs	688	Organization of army or war party	701

668 625

1. The secret service

The command of the police system on mainland China rests with the national headquarters of the Chinese Communist Party. Nominally it is the Chinese Communist Party Central Committee, but the real power is in the hands of the small group which forms the Political Bureau. In turn this bureau is influenced greatly by the Secretariat and the secretary-general. When the secretary-general is strong he may even dominate the bureau. It usually makes the decisions on policy. The secret police service's executive body is centered around the Social Department of the Central Committee of the Party. This Department has a direct system of organization within the Party. In large areas (such as the former northwest region) or in special areas (such as Sinkiang Uighur Autonomous Region), there is a Social Department subordinate to the Party's "Central Committee Sub-bureau." From this level down, like the Party local organization, there is a social department or social secretary at each level to take charge of the secret service in the corresponding area.

668 625 647

668 625

2. Other police systems

Built around this Party secret service system, are numerous other separate, but not entirely independent, systems of police forces. The most important is the regular police. Organizationally, this is a branch of the People's government. Its central headquarters is the Ministry of Public Security under the Government Administration Council. From this level down there is a branch office of the department at every level of the People's government. This branch commands the regular police forces.

645 647

The United Front Department system which extends to the provincial and municipal levels, is designed for two purposes. Negatively, it infiltrates into the organizations of the people and watches their functions. Positively, it dominates and utilizes the people's organizations to promote the Party program.

The system of People's control is similar. Here, people are used as spies for the Party. The People's Procurator system is slightly different. It is a prosecuting government organ. Since prosecution needs the investigation of facts, inevitably this sytem is involved in the police system.

645 648

The spy system under the Ministry of Foreign Affairs also has a dual purpose. Positively, this system infiltrates into foreign territories to conspire for future conquests. Negatively, it is used to detect and prevent possible agitations which may disturb public order in mainland China.

668 625 708 726

The police and spy system among the military forces can be divided into two parts. The system of political defense is used to weed out potential political enemies inside the army, while the scout and spy system is mainly used to detect military enemies. Both of these systems have branches in the field army and the army areas.

721 horses ten times. So the ting could have waited a long time. Meanwhile everything was in readiness. His men had been secretly armed, his gates guarded. Nevertheless things would probably not have come to a show-down if the brother of the lama who was waiting down in the yamen courtyard had not grown suspicious, had he not succeeded in getting into the guest room and calling to his brother that he had been lured into a trap and that he should flee. In a flash, the incarnation grasped the situation. With the large piece of silver which he was still holding in his hands he knocked down the ting and made for the door on his brother's heels. Now, it is customary in China that during a visit the yamen attendants stand at the door. There were ten of these and they blocked the lama's escape and sought to tie him up. He was a giant of a man, splendid, muscular, built like a god - so I was told by all my informants. Armed only with the piece of silver he threw aside those men whom opium and idleness and weakened, and he would surely have escaped if the ting had not carried a small revolver concealed in his garments and, beside himself with humiliation over what had happened to him, he shot at the holy lama. That same evening the incarnation died of his wounds in the courtyard of the yamen.

• 726 In the general confusion, the brother had succeeded in fleeing the city and bringing news to the tribe of what was happening in the yamen. They responded like bees that have been robbed of their queen, for their all, their sacred incarnation, their god, had been killed. However, there could be no thought of storming the city. Capturing a Chinese loam fort was still a precarious matter for a tribe of horsemen. Thus, after a few wild demonstrations, they retired to their hills in order to prepare properly for the war, to grind powder and cast bullets. The rifle-makers of this tribe were known far and wide. Some of their master craftsmen had even ventured to make imitations of our modern guns. It was lucky for the Chinese that the tribe had been able to get only very little steel. /267/

At first the war had cost considerable bloodshed. Shortly after the murder of the lama a Chinese division marching from Hsining fu via the Lao ye Shan to Kue de, fell into an ambush and lost thirty men. However, a large battle never took place. In an earlier chapter I have briefly referred to the outcome of the war, that the cannons were brought from Lanchow and that the Tibetans were finally out-argued by the Chinese mediators a few months be-

This war followed the pattern that had been established for millennia in China. The people from Lanchow fu set out for war without any kind of plan, and hoped for some kind of solution short of open battle, either by means of endless negotiations, orders and counter-orders from the distant throne, or primarily by the presence of an army. 726

The good ting, a man of action, was, of course, immediately discharged, lost his position and his honors because he could not pay for the whole war himself. A few years later I saw the young, vigorous and intelligent man still waiting patiently but not very hopefully in Lanchow fu for a settlement in his favor of the long-drawn-out civil suit against his superiors. But if Ru da lao ye should ever get another post, he will surely never again help an oppressed people! To me the most characteristic aspect of the whole thing was the fact that in Kue de shop-keepers, my host and many farmers spoke in the most exalted terms of Ting Ru as their savior, but no one turned a hair for the dishonored one. Unless one had a great deal of money in Old China, one did not dare be a person of action. One had to keep strictly to wu wei, i.e., not take any action and simply let things happen. 631

The present ting of Kue de turned out to be a very cultivated literary man and an archaeologist. He had a great understanding for the oldest Chinese characters. He had not bought his rank. He had, already in the 'sixties, brilliantly passed his state examinations, and later, too, he was famous for his classical poetry and the number of his classical quotations, so that it seems strange that he never took the higher state examinations and achieved a still higher position. But, of course, he was not a rich man's son.

An hour after my visit in the yamen, the ting called on me at my inn. As a present he brought me a poem more than a square meter in size, which he had composed himself and written with his own hand, partly in Old Chinese symbols. It depicted the dangers of the Ts'ao ti, that is, of Tibet, in the blackest colors imaginable. He predicted that I would never escape if I ventured to go there. It almost seemed to me as though the amban had advised me to go to Kue de only in order to have me talk to this man. The refrain was always: Lasciate ogni speranza, voi ch'entrate, as though the old mandarin had, with his opium-stained fingers, turned the leaves of Dante's Divine Comedy and as though the haughty Chinaman who disdains anything foreign had copied some of the great poet's most gruesome passages. 538

C 133

and on its southern slope the priests of Rao gomba have their shabby huts of loam. The northern part of the Nima long is bordered by a long fold of chalk which, characterized by countless steep, white rocks, can be recognized hundreds of kilometers in a N 55° W direction and borders the horizon in the northern part of Tschang La. A great many unusual mountain formations has stirred the imagination of the inhabitants, has caused legends to arise and erected thrones to the gods. In the Radang country the Ani lhakang (pronounced: el hagu) is conspicuous. It lies on the border of Radang and Sare and roughly has an altitude of 4,500 meters. North of it is the beginning of the territory of the notorious Täwo kiang ts'a and the feudal state of the Dshoni tu se.

C 726

We had just crossed the rDo ro ford and were busy putting on our boots and trousers when three horsemen, mounted on dashing steeds, came toward us, a gentleman, a priest, and a servant. The servant led a pack horse by its bridle, which carried a few blankets, as well as a tea pot, cooking pot and flour bag. The gentleman had pulled a good-looking hat made of lynx skin down over his ears and wore a blue pulo cloak with small white crosses on it and with a 20 centimeter wide border of Yün nan leopard skins; his left ear-lobe was pulled down with a heavy gold ring to such an extant that he had to have a small leather strap over the outer part of the ear to carry the weight. Tschemotscho recognized the gentleman and called to him after he had already ridden past, silently and with a sinister look. It was the bon of Chamä, and he was coming from the military encampment of Täwo Kiang ts'a. All the rulers of the 12-Bu had been summoned by the Sung pan officer to help end the war. Two days ago the men from Täwo kiang ts'a had given in and the bon was now on his way home. However, those from Radang had, after settlement of the Täwo affair, demanded 400 taels from the Lanchow hsie tai. This colonel had permitted his soldiers to tear the wood for their fires from the walls and roofs of the Radang winter houses, instead of looking for it in the woods. The hsie tai had laughed at the demand of the men from Radang and so the 280 warriors of the little tribe had set out yesterday, had attacked the 3,000 Kansu and Szechwan soldiers and had driven them behind the massive stone walls of their camp with stone slings, whips and matchlocks. After this bold attack they had taken the horses away from the cavalry. With 89 horses as booty they returned home to their tents which lay on the Nima long, east of the little lake of Mou Ts'o. However, we did not learn all these details immediately from the Bon. All we heard as we rode through the river was a call to Tschemotscho: "Are you crazy? With so few men you surely cannot think of attacking Radang? Or don't you know that there is a fight going on here? Can't you hear the shooting? Look north to the foot of the chalk mountains. See the long line, see the stone wall which the women and children of Radang are erecting at the backs of the fighters, behind the dark masses from which clouds of white smoke detach themselves. The Chinese want to get their horses back. If you let yourself be caught by Radang, they will welcome you as hostages, and if there are dead among them, they will take revenge on you." And from the opposite shore of the nDam Tschü we could hear: "And Radang is right."

C 726.

The tsung ye had scarcely had a word interpreted to him before he had torn off /297/ his beautiful red velvet coat-of-arms and stuffed it in my clothes bag. Our large red flag fared even worse. So quickly was it taken down from its long lance that it was torn to shreds, and Tschemotscho bent over deftly and pushed it into a hare's burrow by the wayside. Ma Sche tschang's, the corporal's, beautiful red uniform with the red tails was awkwardly folded and forced between the wooden strips of his large umbrella; he cursed hideously because his master had given him nothing but this weapon against the rain. Meanwhile the battle on the edge of the Nima long, at the foot of the chalk mountains, continued amid a great deal of shouting and wasting of powder. The Chinese had broken up camp while it was still night, followed the Geku Valley and had now, when we saw them, crossed a grassy pass in the chalk mountains, from which point they had a view of the high plain of Nima long and the plain in which flow the nDam Chu and the Me Chu. Through my field glasses I clearly saw their red coats, saw how they hesitated to climb down the gentle slope, how only a few courageous ones farther to the right followed the shallow bed of a dried-up seam of water, and how the Tibetans, on the other hand, with their sharp eyes espied every advantage and crept from one stone to another. We were not quite two kilometers distant from the Tibetans when we were able to turn at right angles toward the west. Very low hills hid us from the tents of Radang, which we passed at a distance of about 500 meters. The horses which had been taken from the Chinese stood tethered in the middle of a large circle of black tents. But the herds of yak and sheep the Radang people had left to graze on the heights through which we rode, as though nothing had happened. We saw only two old men and two priests who were tending them.

C 487

On the first day one reaches the land of the Samsa who are supposed to be very bad robbers; on the second day one gets to the Laringo or Larungo hsi tsang who once plundered the Holderer-Futterer expedition; from there in /299/ another three days one reaches the headwaters of the Tao Ho or Lŏ Chu and the Da ts'ang Mongols and without effort reaches the Tsei Chu along which live the Horsun Tibetans with their 800 families. After another two days one reaches Ratsong and the Ts'ien hu country of Lutsang (Tibetans) and the sphere of influence of Kue de ting. Another day's march takes one to the Wan schu tribe and two days later to the T'san and then to the city of Kue de.

TC 726

/299/ At Lhamo se the lively monastery brook which has already come far from the west from the grass lands, turns north for two kilometers and then again at right angles to the east. Not too far from the second bend lies the small monastery of Kosaniba. Behind it are the winter houses of the Radang and there, at the timber line, we came upon the encampment of Chinese troops, which consisted of rounded stone walls with poor loopholes, inside which the Chinese lived in inadequate tents and barracks. However, the officers and soldiers were still for the most part off to the "war" against the Radang, only the generalissimo of Szechwan along with 800 men had not gone into the field. Those who were left behind were angry and in an irritable mood and made me feel unmistakably that they were not at all edified by my appearance. The relationship between the two provincial contingents also left much to be desired. The plan of attack against the horse thieves was not designed to reap martial laurels. Caution is the better part of valor. The Chinese officers did not dare undertake anything independently, and always glanced helplessly sideways toward their superiors and to the wishes of the central government whose commands betrayed obvious suspicion as to the ability of their subordinates. The military rabble from Kansu had met with bitter opposition and from now on they wanted simply to feign attacks while the leader of the Sung pan soldiers who kept neutral in this new dispute, thought he would play the role of middleman. The war against Täwo kiang ts'a (written: Tăo rgya mts'a) which was supposed to number 800 warriors, had also ended only by means of schang leang. The leaders were, to be sure, well advised from the very beginning and had attempted to push through from

N.W.ChinaAF13

above, from the open, treeless steppe and not by the direct route into the ravines of Täwo. But since, at the initial advance, 15 horsemen of the front detachment had fallen into ambush and were partly cut down and partly captured, the action during the rest of the summer months consisted only of threats until finally, with the help of the neighboring chieftains, and only because of the presence of troops, it was sche tsing schuo h'au leao, i.e., it was settled with talk. The Täwo agreed to a partial disarmament and gave up 100 swords, 50 fork guns and 50 lances, but were permitted to keep the goods amounting to 12,000 ounces of silver which they had stolen from the Chinese merchants and on account of which the summons had come from Lanchow; there was not one single decisive action during the long summer on the part of an expedition that was almost as large as that of the English who marched into Lhasa in 1904. My escort had counted on getting new food supplies among their comrades. Behind my back they had traded in my supplies at Rao gomba so that only two rations were left. But the camp was itself short of rations because of the Radang incident. For everybody /300/ had thought the war was over and they would soon go home. No one had sent supplementary supplies. Thus my heroes nowhere found a merciful hand that would replace the rice and tsamba they had sold. However, because of the scant supplies I, too, unfortunately, suffered and was forced to cover the final distance at top speed. Within two hours we were again mounted and after three days in the saddle from morning till night we reached Tao tschou.

Our first day's ride lasted until far into the night and took us over a plateau, through valley pockets and across flat passes where the waters that run eastward through the Täwo Kiang ts'a territory, separate from those that flow north to the Tao Ho. Broad areas of steeply bent gray-green sandstone and slate with an east-west strike continued to interchange with wedged-in patches of crumbled white calcium carbonate; above this in many places there was a horizontal layer of hard, red Nagelfluh. The highest point we reached shortly before twilight at a pass of 3,765 meters. The mountain ridges here have an average height of somewhat over 4,000 meters. It was all good pasture land. For the time being there was no more forest from Kosaniba and the Chinese encampment on.

On the second day we had to go up and down steep inclines across the source waters of the Tao Ho tributaries and again climb a watershed of 3,800 meters. But by noon we reached a narrow wood ravine and entered the valley of the Wong Chu which breaks through the

361 also in Dzungaria. There a large expanse of pasture land
233 prevails more in the south along the northern foothill slope
311 of the Tien-shan than the north along the southern side of the Altai.

N
161 C. Population Trend and Its Significance

1. The Changing Trend of the Northwest in Comparison with Other Major Regions.

The population of the Northwest as in the rest of the country has been on the increase in spite of the limited arable and irrigable land resulting from inadequate rainfall, and the mountainous terrain, as well as the frequent earthquakes in
N
[731] Kansu and repeated Moslem disturbances. It was reported that more than 246,000 people were killed by the great earthquake
[165] of Hai-yüan, Ching-ning, and Tung-wei in eastern Kansu in
[669] December, 1920, and the Moslem uprisings of 1861-1874, 1895, and 1944. Long before the 1953 census was taken, there has been an incessant influx of people in large numbers. A gradual increase is marked by various estimates and reports.
S
[161] For example, in regard to the population estimation of Sinkiang Province, the Ministry of Internal Affairs in 1910 gave the figure of 2,670,000 and 2,519,579 in 1923; the record taken from "Le Temps" of April 5, 1934, is around 5,000,000. According to a nation-wide regional survey taken by the Agricultural College of Nanking University in the period from 1928-1933, the annual rate of natural increase of the Northwest was at 11.5 per thousand which was exceeded only by the North China Plain, as illustrated by Table XII.[1,2,A]

N
163 According to the 1953 census report for the nation as a
165 whole, the average birth rate is thirty-seven per thousand, average death rate, seventeen, and average annual natural increase, twenty.

Table XII clearly indicates that the annual natural increase rate of the Northwest is due to a smaller death rate rather than a higher birth rate as compared with other regions. This might be the result of a healthier, drier climate rather than better living conditions or medical care. The 1953 census report gives an even larger natural increase for the nation due to a higher birth rate and a lower death rate. The gradual
N
161 population increase of the Northwestern provinces is also shown by Table XIII.[2,A] this table shows a considerable increase for the provinces of Shensi and Kansu (including Ninghsia)
S
[161] especially. As for Chinghai and Sinkiang, although the increase is not so pronounced, nearly one third of a million for the former and 1.1 million increase for the latter are indicated. These bring a total increase of over thirteen million (more than half the original number in seven years) for the four

1,2,A [See pp. 135-136--Analyst]

/The Han Chinese/

*563 minority tribes or bandits, and lately there have been skir-
*[175] mishes between the warlords and between the Nationalists and
[651] the Communists. These disturbances have not only deprived the people of normal livelihood but also increased their financial burden, as they have been taxed heavily by both the government
[731] and the warlords to support the fighting armies. Moreover, the region is susceptible to the disasters of flood and famine. The
[167] corruption in officialdom, the banditry, the armies and the disasters have caused people of means to leave the region and make
[463] their homes elsewhere. Of course there are officials and rich merchants who have authority in political and economic matters, but it may be said that the majority of those left behind are small business men and poor farmers who stay on their land and struggle for a living.

*563 131 It should be noted that the southeast part of Northwest China is the place where Chinese civilization and culture developed and matured. This region, around the Wei and Lo Rivers, referred to as Kuang-chung, was the most prosperous and well-developed part of China during many of the Imperial dynasties. According to Communist geographical division, Kuang-chung, the area within Shensi Province, is included in the Northwest region. It is a region of fertile soil, where Han Chinese farmers have made their homes for countless generations. The regions to the north and west are populated by the Chinese Moslems, the Mon-
[441] gols and the Tibetans. As this is the case, many Han Chinese
[439] who remained in the Northwest became merchants who traveled north to Mongolia and west to Sinkiang with their caravan trade. There are also soldiers and prisoners who had settled here generations ago.

*563 342 Village dwellings are the conventional types of mud huts. Some live in caves, the rich in elaborate caves with fine furnishings, the very poor in caves scooped out of the porous yel-
[369] low earth cliffs. In cities and towns where the wealthy merchants dwell, one of course finds the traditional big brick home with several courtyards, as well as modern two-story houses. But in Pao-chi, most of the people live in caves with regular doors and windows, dug out of the cliffs.

*563 262 The eating habits of these people are slightly different from those of the Han Chinese in other parts of China, in that more flour than rice is consumed. Rich people have no difficulty in
[556] obtaining all the delicacies they desire. Meat, eggs, fruits, fowl, rice, flour and vegetables are their common fare, but the poor people can afford only barley flour, millet and salted vegetables for their daily diet. Tou-fu, soybean cake, is consumed
*563 291 by rich and poor alike. Clothing in this region resembles that worn by Chinese in other parts of the country. Among nomads and the poor, sheepskin coats are very common. They are worn with the fur side inside.

PUBLIC WELFARE

I. Introduction

657 Welfare work in China's Northwest has to be conducted for the benefit of two distinct categories of people in need. The poor are composed of those whose problems arose out of inadequate standards of living. They include the aged and disabled, the orphans and other destitute or handicapped people. Marginal cases of this category are the underprivileged groups of society, who might maintain themselves, even though precariously, in years of abundance but who become relief cases as soon as their balance of life is disturbed. Chinese concepts of charity and charity organizations normally available to this category are discussed in the Public Welfare Section of the General Handbook.

657 731 The second category however, the victims of natural disasters, poses a special problem in the Northwest. As has been demonstrated in other Sections of this Handbook, the maintainence of agriculture in the Northwest is more dependent upon conservancy and irrigation projects than in other regions of China. During the last period of the Imperial era, many of these projects have fallen into disrepair, thus exposing the area to more critical inundations and droughts. Reports from the Imperial period reveal that there were fourteen severe inundations in the province of Shensi during the hundred years 1800-1900 and seven in Kansu. The same century brought sixteen severe droughts to Shensi and nine to Kansu. The droughts of 1877 which encompassed both provinces, of 1900/01 in Shensi, and of 1908/09 in Kansu were catastrophes of a national extent.

The frequency and severity of earthquakes in the Northwest adds to the problems of the region, particularly since in many areas of the region people live in loess caves. The great earthquake of 1879 which hit both Shensi and Kansu, the one of 1881 in Kansu and the ones of 1892 in the Kucha district of Sinkiang and the Hsi-ning district of Chinghai are still in everybody's memory, even though the twenties of our century have again brought two devastating earthquakes.

[669] Nor is this all. During the last hundred years the Northwest has been ravaged by rebellions and civil wars almost without interruption. Several of these events left in their wake a vast number of displaced and needy people, who added to the problems of emergency and disaster relief.

II. Welfare Among the Moslems

794 735 799 A. The Distribution of Welfare Responsibilities

Most of the efforts in the field of public welfare among the

by the laymen. Temples frequently maintain free hostels for travellers, and one can count on any layman to provide food, shelter, road guidance, and any kind of help to needy passers-by. It is even customary for a Mongol to leave food in front of his tent during the time he is on an outing. This hospitality is extended to destitutes and refugees also, by Mongols as well as Tibetans, irrespective of the creed of the receiver.

IV. Welfare Efforts Under the Republic, Particularly Under the National Government

With the coming of the Chinese Republic, the realization grew that welfare was a public matter. Although it took time until the rudiments of an organization were set up to implement this realization, the government at best acted to the limits of its possibilities to bring relief in the case of natural catastrophes. During the great famine in the Northwest, caused by protracted droughts and earthquakes in 1928/29, the government organized a special commission to handle relief. The relief work of this commission was financed partly by fixed government grants, special loans and by solicited special contributions from Chinese cities, provinces and private organizations and individuals as well as by organizing a rather successful drive for funds abroad. The role played by the China Famine Relief Commission in this as well as in similar instances is discussed in the Social Welfare Section of the General Handbook.

The realization grew however that with regard to natural disasters, prevention work might be of greater importance than relief. One of the projects that grew out of this realization might be mentioned here, the Wei-pei irrigation project in Shensi. This project was conceived jointly by the Shensi provincial authorities and the China International Famine Relief Commission in the twenties. Actual work commenced in December 1930 and was completed in June 1932. Ninety thousand acres of land have been reclaimed b this combined conservancy and irrigation project. The maintenance of the system was later taken over by the National Economic Council.

In the late thirties this Council was particularly active in irrigation and reclamation schemes in the Northwest. It was responsible for the sponsoring or subsidizing of several large-scale projects in Shensi, Kansu and Ninghsia Provinces.

Unfortunately, there is very little information available on the efforts on the part of the Chinese administration in the field of public welfare in the Northwest, both under the National Government and under the present Communist regime. From the little material we have the general impression is that the local efforts of the Moslem community encompass most of the work done in public welfare.

degree that the Tibetan community as a whole exerts an influence on the Chinese migrants within it. The movement of migrants is unilaterally from the Chinese communities into the Tibetan country. The Tibetans go into Chinese sections to visit, but they do not attempt to settle down and make their way among the people. Most of the Chinese who go to the Tibetan sections intend to stay. This one-sided movement of migrants is attributable chiefly to two causes. Population pressure makes the fallow fields of the Tibetan villages very tempting to the land-hungry Chinese. Moreover, for a number of reasons, the Tibetan country is the traditional refuge for the Chinese of nearby communities whenever rebellion or banditry is rife. The Chinese, with their large families, constitute a population reservoir from which the overflow passes into any group which lacks a similarly strong population pressure. The Tibetans, and especially the village people of the Choni district in the Northwest, offer no such resistance, for unquestionably their population is decreasing. Then, the Tibetan country repeatedly has been a most effective shelter for refugees from the Moslem rebellions and from the disturbances caused by bandits and contending armies. In such circumstances the closely-integrated Tibetan community acts more promptly and efficiently to defend itself than does the Chinese community. By habit, the Tibetans are armed to an extent unknown among the Chinese. The Tibetans are rather soft-hearted toward refugees, especially if they are destitute. By Tibetan custom the right of refuge has been a basic one, and when it is reinforced by the claims of acquaintance and the functioning of the "guest-host system" this right of refuge can open a path into the most exclusive Tibetan communities.

The process of contact between the Chinese and the Tibetans is also contained within the mechanics of intermarriage, which is of two kinds: the matrilocal, in which the Chinese man takes his place as son-in-law in the Tibetan home, and the patrilocal, in which through his wife's connections he is able to set up his own home in the Tibetan community. When a young Chinese is taken into a Tibetan home as a son-in-law, he naturally becomes as much like a Tibetan as he can. If other factors do not bring him into further contact with Chinese culture, he may become very much of a Tibetan. His children will be brought up as Tibetans. After a generation of two only a Tibetan nickname may remain to indicate the Chinese ancestry in the family. However, when a Chinese man marries a Tibetan wife and establishes his own home, he generally attempts to set up a Chinese home and to maintain the Chinese mode of living and outlook. This is true especially if any Chinese members of his family - mother, brothers, or other relatives live with him. Thus, the family serves to push the Chinese frontier into the Tibetan country. A single Chinese living in a Tibetan community sooner

done in public welfare. The information about the situation in the Northwest has to be inferred mostly from what is available to us about China proper, keeping in mind that Chinese policies in Sinkiang have never achieved a fulfillment comparable with the fulfillment they have achieved in China proper.

It was only during the Sino-Japanese War (1937-1945) that the Nationalist Government established a Ministry of Social Affairs. This Ministry organized in each province, including Sinkiang, a Bureau of Social Affairs for relief and welfare works. Institutions were set up to take care of the aged, orphans, the disabled, disabled veterans and beggars.

The relief organs in the Northwest sponsored by the Ministry of Social Affairs were restricted to free medical service centers; organs maintained by provincial governments were mainly experimental relief stations, which were responsible for a variety of relief work. Municipal and district governments maintained, in addition to general relief organs (90 for the entire Northwest; 57 of these were located in the provinces Chinghai and Ninghsia, which had Moslem governors), children's relief centers (37) and a sprinkling of other institutions. There were several dozens of private Chinese Charity Associations active in the Northwest during the war.

Furthermore, the National Government joined efforts with some religious and humanitarian bodies and organized the National Relief Commission. During the war, this Commission was particularly active in disaster relief. Large appropriations were earmarked for the famine in Shensi in the years 1943 and 1944. Contributions to this province as well as to the provinces of Kansu and Ninghsia were largely used for the resettlement of and the starting of reclamation projects by disaster victims of Shensi as well as of Honan province.

The activities of the National Relief Commission included care for war orphans and refugee children. Five hundred of them sere sent to Sinkiang and one thousand were resettled in Chinghai. Furthermore, a Juvenile Northwest War Area Service Corps was organized to accommodate graduates from War Refugee Children's Schools.

The National Child Welfare Association, founded by H. H. Kung, also maintained a Child Welfare Camp at Hei-hsien, Shensi.

Among the service corps operated by the Friends of the Wounded Society, organized under the New Life Movement Association; one had a base in Shensi. These corps worked in hospitals and convalescent camps. They provided delousing, laundry and sewing services etc. and special dieting.

The welfare work of Christian missions contributed to alleviate much distress. There were few large Protestant missionary

/Chinese, Chinese Moslems and Sedentary Tibetans/

*563 621 184 individual activity. In all matters relating to the village-owned woodlands and pasturelands, as well as in all matters regulating the time of planting, harvesting, etc., the Tibetan village acts with a solidarity and unanimity that is comparatively lacking in a Chinese village community, although that community also owns communal wood lots and pastures.

*563 722 727 The sedentary Tibetans in the Northwest, according to Ekvall, were quite friendly toward the Chinese. The Tibetan country with which Ekvall is familiar "has again and again been a most effective refuge for those fleeing from the three great Mohammedan rebellions" and from other local troubles. The Tibetans, like many unsophisticated peoples, are rather soft-hearted toward refugees, especially if they be destitute. By Tibetan custom the right of refuge has become one of the basic rights, and when it is reinforced by the claims of acquaintance and the functioning of the "guest-host" system this right of refuge can open a path into the most exclusive of Tibetan communities.

*563 162 [562] The sedentary Tibetans are short of males. For this reason, in every instance intermarriage is between a Chinese man and a Tibetan woman - never between a Tibetan man and a Chinese woman. This means that the Tibetans put more value on their men than on their women. They can afford to give up a woman, but not a man.

829 *668 197 [159] Attitudes of the Chinese in the Northwest toward the present regime again differ widely. The so-called Shen-Kan-Ning Border Area was the core area of the Yenan regime. Communist policies and maneuvers were experienced here for almost a decade and a half before they were applied to other parts of China. It will be remembered that the strategy of the Yenan period differed considerably from later usages. An initially sceptically favorable attitude of the rural population seemed at that time justified. Those who joined the party or the army did so with enthusiasm and a sense of mission. (Compare, however, section Political Dynamics on their later fate). Regions outside the Border Areas did not enjoy this "privilege". To the pronounced conservatism of the rural population in other parts of Shensi and Kansu, Communist innovations which were in contrast to their traditions and interests came as a heavily felt shock. Their passivity and submissiveness on the other hand kept them from voicing open discontent. Apathy would probably be the right term to represent the rural people's attitude toward the new regime.

T 133 In the region of the Hsining River we again traveled between loess-covered red clay mountains to the town of Ping tschung yi and then through the so-called Hsiao hsia (small gorge), both of them places where in the last Mohammedan war there were bloody clashes.

C 797 361 On December 25, I was in the city of Hsining fu. I soon found a pretty, albeit dirty, but at any rate homey inn, and that evening I could already spend with Mr. and Mrs. Ridley, the English missionaries of the China Inland Mission, to whom so many Tibetan travelers are indebted. With two boys of five and three years and their adorable little daughter who was then six months old, the courageous couple were again living all alone among the Chinese in the rude frontier town in which they already in 1895 lived through the terrible four-month siege by the Mohammedans. The last European whom Mr. and Mrs. Ridley had seen, had come through Hsining fu a half year before. I found a large Christmas tree in their simple Chinese house, and on that evening I was even permitted to appear as "Grandfather Christmas" with a long white beard, with a stick and a rod and a well-filled sack, and help give the children the type of Christmas celebrated in their homeland. I would not have dreamed of all this on the night before when in the pitch dark I was still sitting on my pony in a temperature of 15° and in a dry, biting mountain wind, until I finally found a hut on the gates of which we had to knock for a long time before we were admitted.

C 727 Of course, nothing had changed in Hsining fu since I had left it in November 1904 together with Mr. and Mrs. Filchner. Chinese cities probably do not change much anyway. There was meantime only the small war that was taking place on the Hwang Ho below the city of Kue de ting and the city had not yet calmed down during the first few days after my arrival. An anxiously-awaited execution order had just arrived from Peking and, at the imperial command, a few leaders of the hostile party, an aristocratic Salar and a few Tibetan chiefs and lamas were now being beheaded just outside the west gate. This was a big event because of the importance of the persons. Many people had gathered from far and near for this performance and the soldiers who were in charge of the execution were very frightened. They purposely walked back and forth excitedly while the preparations were going on and meanwhile one of them on whom the executioner's sword had heretofore not been seen, knocked off all the heads in such a way that no one could tell who actually did it.

C 175 361

Hor) of the Koko Nor, for Nepal and /305/ the Indian border countries, but also for China and its Tan emperors, and when his tu fan as the Chinese called his subjects - under his eight successors (given the title of btsan bo), or rather under their mayors of the palace again and again invaded Kansu. With great effort the Chinese had recaptured the city of Sche bu tsch'eng as early as 729, but after only a short time (741) lost it again. Thereupon Emperor Hsüan Tsung had the city besieged again and again. Finally at the siege of 749 the Chinese stormed the short stretch of wall for three days and nights without pause and wore down the small garrison sufficiently so that it could be overrun. Of 60,000 soldiers who took up this siege, more than half were said to have remained. After this attack the fortifications were destroyed completely. But this occupation of the territory of Sche bu tsch'eng by the Chinese was also of brief duration. The tu fan took advantage of the difficulty in which the Tang dynasty found itself because of the rebel Nan lu schan, and already in 763 they entered the imperial city of Hsingan fu along with the rest of the Tu ku hun, after not only Tao tschou, Min tschou, Ho tschou, but also Lanchow and Tsinchow, in short the entire Lung yu or present-day Kansu fell into their hands.

T C 727

If the superiors of the high command in the Two war[3] had spoken the forceful language with which Li sheng[4] was addressed, this war would also have ended in the glory of Chinese weapons, but at that time the Manchu knew only half-way measures. So the gentleman colonel /Plate LXVIII faces p. 304 in the original text./ /305/ came out of the Tibetan country on September 20 with waving banners and sat happy and proudly smiling on his steed whose long tail - according to the Asiatic idea, a horse's chief ornament - had been completely cut off. Little Radang had yielded nothing until it was paid its 450 taels, and even then it dared, or rather had the temerity to deliver the stolen horses with their manes cut off in derision and with bloody tail stumps. The merchants' guild of Tao tschou fumed with rage at the cowardly act of the officers. "It would have been better if the expedition had never taken place," they grumbled. For this reason the colonel did not stay long in the city. On the march his troops looked very good and offered a pleasing picture, although

*175 to the southeast, were interested in the recovery of Turkestan. They had a purely defensive policy for the northwest land frontier. They fortified the passes in the Kansu Corridor and conciliated the Uighur inhabitants of Turkestan by granting them honors and privileges and not interfering with their governments.

The Ming court was more concerned with the Mongols in the north. The strongest of these were the Oirats who at first submitted and then rebelled. The Yung-lo emperor personally led a series of expeditions into Mongolia and succeeded in holding them in check. But as the military strength of Ming China ebbed after his death, their power increased. In 1449, one of their chiefs, Esen, inflicted a disastrous defeat on the Ming forces and took the Ming emperor as prisoner. At the height of their power, the Oirats controlled an area as far west as the northern portion of Tienshan, as far south as Kansu and as far east as Chahar.

Throughout the Ming period, there were incessant encroachments by the Oirat, but the most serious were those led by Altan Khan in the 16th century. In his three major invasions of China, his horsemen despoiled the provinces of Shansi, Ninghsia and Kansu and extended the orbit of his power from Uriangghai in the north to Chinghai and Tibet in the south. He built a vast, though evanescent Mongol empire. Finally, in his old age he accepted a title from the Ming court and halted his raids on China.

Thus, for about eight hundred years from the latter part of the T'ang to the beginning of the Ch'ing, the extent of the Chinese empire did not go beyond the Kansu Corridor and the vast region of the Northwest was free of Chinese rule. During this long period, the Chinese were not only unable to recover Turkestan [167] but they were also uninterested in its recovery. The advance of the border peoples into China's North and Northwest pushed the Chinese to the South and Southeast. Gradually, with the rise of the southeastern coastlands as the cultural and economic centers of China and with the development of maritime travel, there was greater intercourse between China and the outside world by sea. The nation turned towards the Southeast to face the sea and the importance of the Kansu Corridor declined to that of the backdoor of China.

*175 13 487 Another reason for the reorientation was economic. Climatic changes resulting in increased aridity led to the shrinkage of the chain of oases that formed the caravan routes. This made travel difficult, and the desiccation of the soil reduced the fertility of the Wei River valley, once the home of Chinese civilization and the base for China's imperialist expansion. Natural calamities, *175 73 166 such as floods, droughts, pestilence, and famine, and the devastation of wars added to the impoverishment of the area and quickened the shift of population centers from the Northwest to the *175 633 Southeast. Sian (Ch'ang-an) the capital of China for two thousand

done in public welfare. The information about the situation in the Northwest has to be inferred mostly from what is available to us about China proper, keeping in mind that Chinese policies in Sinkiang have never achieved a fulfillment comparable with the fulfillment they have achieved in China proper.

It was only during the Sino-Japanese War (1937-1945) that the Nationalist Government established a Ministry of Social Affairs. This Ministry organized in each province, including Sinkiang, a Bureau of Social Affairs for relief and welfare works. Institutions were set up to take care of the aged, orphans, the disabled, disabled veterans and beggars.

The relief organs in the Northwest sponsored by the Ministry of Social Affairs were restricted to free medical service centers; organs maintained by provincial governments were mainly experimental relief stations, which were responsible for a variety of relief work. Municipal and district governments maintained, in addition to general relief organs (90 for the entire Northwest; 57 of these were located in the provinces Chinghai and Ninghsia, which had Moslem governors), children's relief centers (37) and a sprinkling of other institutions. There were several dozens of private Chinese Charity Associations active in the Northwest during the war.

Furthermore, the National Government joined efforts with some religious and humanitarian bodies and organized the National Relief Commission. During the war, this Commission was particularly active in disaster relief. Large appropriations were earmarked for the famine in Shensi in the years 1943 and 1944. Contributions to this province as well as to the provinces of Kansu and Ninghsia were largely used for the resettlement of and the starting of reclamation projects by disaster victims of Shensi as well as of Honan province.

The activities of the National Relief Commission included care for war orphans and refugee children. Five hundred of them were sent to Sinkiang and one thousand were resettled in Chinghai. Furthermore, a Juvenile Northwest War Area Service Corps was organized to accommodate graduates from War Refugee Children's Schools.

The National Child Welfare Association, founded by H. H. Kung, also maintained a Child Welfare Camp at Hei-hsien, Shensi.

Among the service corps operated by the Friends of the Wounded Society, organized under the New Life Movement Association; one had a base in Shensi. These corps worked in hospitals and convalescent camps. They provided delousing, laundry and sewing services etc. and special dieting.

The welfare work of Christian missions contributed to alleviate much distress. There were few large Protestant missionary

241 433 Oil seed bearing crops are also raised but in small quantities compared with the output from other parts of China. One reason for this is the lack of markets with a resultant slight incentive to expand and promote the planting of oil seed bearing crops. The following figures are in 1,000 metric tons and 1,000 hectares and are an average for the years 1931-1939. (T. H. Shen, pp. 248-249.)

Province	Soybean	Peanuts	Sesame	Cottonseed	Rapeseed
Ninghsia	2	-	negligible	-	1
Chinghai	-	-	-	-	21
Kansu	38	negligible	negligible	9	25
Shensi	46	12	17	86	51

Acreage in 1,000 hectares (1 hectare = 2.471 acres)

Province	Soybean	Peanuts	Sesame	Cottonseed	Rapeseed
Ninghsia	2	-	negligible	-	31
Chinghai	2	-	-	-	34
Kansu	38	negligible	1	13	54
Shensi	56	9	38	267	141

Besides the geographical and climatic limitations to farming, insects, diseases, and rodents seriously limit crop production. The black smut of wheat, barley, millet, proso-millet, and kaoliang is reported to cause losses of from twenty to eighty per cent of the crops. Yellow rust of wheat causes a loss of twenty per cent. Leaf cur of tobacco at Lanchow in Kansu decreases the yield and affects the quality of the crop. A kind of marmot, locally called the "yellow rat" was a great menace during the drought years 1928-1931. [136] [731]

241 731 The region is frequently subject to earthquakes, droughts, and famines which make farming extremely precarious. Calamities destroyed twenty per cent or more of the crop on the average annually during the period 1904-1929 and in 1930 a great famine swept through the region. Yet according to the population statistics and the total land area, there is no problem of population pressure, at least relatively. In addition, there is the possibility of increasing returns from the land under cultivation if existent farming techniques were improved and innovations introduced, i.e., use of fertilizer, better irrigation facilities, better seeds, etc.

241 489 But the biggest factors preventing increased returns in the Northwest have been the absence of transport facilities and financial assistance; i.e., the inability of the Nationalist Government to provide extensive loans at low interest rates. J. L. Buck points out that the absence of transport and communications to link the Northwest with other parts of China has accounted for the very small quantities of livestock and agricultural produce which have been exported and has hindered the development of local markets. With the growth of transportation, communications, better market facilities, etc., the possibility of increasing returns to agri-

of breaking through into the water below. On these occasions the driver is always compelled to leave the litter-side, and controls his beasts from a distance by means of shouted directions, enforced by skilfully-thrown stones. A pebble alighting on the mule's nose warns him to back, while one hitting him in the hind-quarters is equivalent to an order to move on. In spite of the undoubted understanding existing between man and beast, there is a moment of extreme nervous tension on the part of the occupant of a litter, when the ice collapses and the startled animal crashes into water of quite uncertain depth. From the moment, however, that we took the well-made road leading over the mountain, the anxieties of the valley were (temporarily) at an end, and we were free to enjoy the fine views which every turn of the road revealed to us. The short-cut downhill was less pleasant, for the road was so steep as to be only just negotiable.

The next few days brought us near to the centre of devastation by the great earthquake of January 1921. The face of the land had been completely altered by the mighty upheaval, and its surface still suggested the semblance of boiling mud suddenly petrified. In one place a mountain had been removed, in another a large lake of brackish water had suddenly appeared. Scarcely a human habitation was to be seen, for the cliffs had overwhelmed all the cave-dwellings which formerly the industry of man had hollowed out. Nevertheless, the road over which we travelled was newly-made, while huts had already begun to appear at intervals. They were poor little places, composed of four mud walls, a mud roof, a mud bed, and a mud trough at the back where a few sheep could be fed, and the children we met were almost naked, in spite of the then extreme cold. A missionary in charge of the relief works assured us

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

that two hundred thousand people had perished in the disaster.

Before reaching Lanchow we crossed a wide river by means of a well-built and handsome bridge, which had also been constructed with famine relief funds, and which now provided the means for saving scores of lives, a heavy yearly toll having hitherto been exacted by the treacherous mountain torrent.

On leaving the town of Tsingningchow we travelled for seven days before touching another Mission station —a tremendous gap in the chain, so it seemed to us in those days, unused as we were then to the wider horizons of the Great North-West. Half-way stood the little market-town of Anting, to which Mission authorities had directed our attention as the possible goal of our quest; but as we walked through its streets with every perception alert, we felt the firm conviction that our appointed destination lay still farther ahead.

One of our litter-men was a Moslem—proud and cantankerous, as all of his kind. A somewhat grimy white, woollen cap was the badge of his belief, and at brief intervals he would raise his head and sing a wild snatch of the 'Song of the Wandering Dove,' a weird melody greatly loved by the men of his race, and sung by them in eulogy of home when on a journey, the barbaric intervals of which produced a most dramatic effect in those lonely gullies. An altercation frequently arose between this man and the others, on the subject of the choice between Moslem or Gentile inns, the former being distinguished by the painted sign of a teapot, and the mystic words: 'KIAO MEN' (member of the assembly). The boasted 'cleanliness' of the Moslem inn is, however, not visible to the naked eye, but manifests itself otherwise, namely, in endless bickerings with the travellers on matters of purification connected

AF13 Northwest China AF13

Whether in winter or in summer, whether by litter 491
or by cart, the Kansu roads present dangers to the traveller. In hot weather thunderstorms or cloudbursts in the hills are not unusual, and on these occasions mountain torrents will rush down with such force as to carry everything before them, nor have a cart and mules any power to withstand the strength of the spate. Each of the large rivers is so subject to fluctuations of stream, and unexpected currents, that each year some of the more reckless villagers lose their lives by drowning. In winter the rivers are ice-bound, and supply the traveller with many a nerve-racking experience, as we found when it was necessary to cross the ice in darkness, avoiding, by the help of a tiny lantern, the deep holes and fissures.

The last day before entering Liangchow, and the two days after leaving it, are days of torture, owing to the stony nature of the road. Even the very streets [363]
of the town are as stony as the famous Portland pebble beach. Liangchow was the last outpost held by 797
foreign missionaries in North-West China, and has been occupied by the China Inland Mission for the past forty years. Six days further on lies the city of Kanchow, and here lived a Chinese missionary and doctor who, five years previously, had taken up his residence there. From him and from his Church-officers we had received a most cordial invitation to pay them a visit, and having accepted to do so, we were soon on the march once more.

We delayed, however, a few days in the little town of 733 •
Yungchang, distant two stages from Liangchow, the inhabitants of which have sunk to the lowest imaginable depth through opium smoking. Communal life here is not regulated, as in other places, by the meal hours, but by the recurring period at which the craving for the drug grips the population with invisible but relentless tentacles, so that on every *kang* the little lamp is

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

733 simultaneously lit, the pipe produced, and the pillows spread for the wretched feast. This town might easily [443 237] be one of the most prosperous of Kansu, being the centre of the lamb-skin trade, and at mid-January the merchants come from all quarters to buy the tiny, soft skins of the lambs, killed on the fourteenth day of their existence. Large sums of money change hands in Yungchang, yet all is consumed in smoke, and spent upon that which satisfieth not. The men are gaunt and [567] dishevelled, the women keep indoors for lack of decent clothing, and Yungchang supplies the slave market with its required commodity of little girls for the great cities.

167 We were leaving our inn one morning, when some Chinese called our attention to the fact that a foreigner, 'one of your own people,' was begging at the door. We found a crowd collected round a ragged Russian, who was begging his way to Peking. The road over which we were travelling was the *Via Dolorosa* of the Russian refugees, who, driven forth by poverty or unwillingness to register their acceptance of the Soviet rule, find themselves homeless exiles on the face of the globe. For some months before our arrival a great stream of suffering humanity poured down this highway, in every stage of poverty and utter destitution. Until the great war of 1914, the peoples of the East were under the delusion that race-solidarity, which in them supersedes the instinct of individual nationality (strong though that be), was also impregnable in the West. From this time, however, European prestige was entirely shattered ; and the sight of homeless, penniless whites swelling the ranks of Chinese beggars, and of helpless women becoming the concubines of Chinese men, was a violation of their sense of fitness : nor have the common people ever recovered from the shock caused by these unthought-of proceedings.

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

largely attended, as many as eighty men and women registering in one locality. The majority were illiterate. We therefore considered it best to insist on all students becoming first of all proficient in the Government Phonetic Script, by means of which system an illiterate can be taught to read in twenty days. During the three years we spent in Kansu, five hundred and twenty-three pupils learnt this Script in our classes.

The villages of Kansu are often exceedingly poor, and in one of the places we visited the people had sunk so low as to be threatened with extinction by famine. A few miles away from this village the wide Heh ho—Black River—rushes out of a mountain gorge, its waters being then turned into the large irrigation-canals which convey them to the various districts. Quarrels, resulting in lawsuits between the principal villages, had led to the loss of their rights on the river by this settlement. For three years no water had been allowed to come that way, and as rain is so scarce in North-West Kansu no farming can be done without irrigation. As deep poverty seized these unfortunate people, opium-smoking became their only possible luxury, and they were soon plunged in unspeakable degradation. Dr. Kao, with a band of young Christian men, hearing of their miserable condition, paid them a visit. He found their irrigation-canal having been dry for three years was now completely choked with all kinds of débris. Apathy had fallen on the village elders, and the whole situation appeared hopeless. A meeting was convened, to which all the men came, and was opened and addressed by Dr. Kao. He told them of the love of God for each one of them, and of the saving power of the Lord Jesus Christ to free them from even the craving for opium. 'You must repent, pray, and work,' he said. 'We will now together acknowledge

3:Cable & French M-5 (1926) 1927

distant. We made a détour to visit this, and questioned a band of workmen we found on its border, raking the white crust into glittering mounds. They informed us that every year, in the month of April, the water wells up to its highest level, gradually retreating during the summer, and leaving behind the crystals, which are so clean and pure as to require no further process than that of being exposed to the sun's rays. Strange to say, however, the spring of drinking-water used by the villagers is perfectly sweet.

The inhabitants of Salt Lake village possess the right to a certain tax on every cartload of salt exported, but as usual opium has killed all initiative, and these unhappy people are reduced to an abject state of poverty. The miserable houses, however, are constructed of very endurable material, the blocks being of sun-dried, bituminous clay dug from the borders of the lake, and which are much harder than the kiln-burnt bricks commonly used in Kansu.

It had been reported to us that a Christian Chinese couple resided here, the husband being the official recently appointed by the Chinese Government to receive the salt tax. This lady and gentleman hearing we were there, invited us to their house and we were cordially welcomed into a delightful Christian home. It was indeed pleasant to sit down at a well-served table, and to enjoy once again Christian fellowship and intercourse. These refined people were living under conditions of the utmost isolation, where all food-supplies had to be brought from Kaotai, as it is impossible to grow any grain or vegetables; indeed, the neighbourhood produces no commodity of any description whatever except salt.

And now at length we finally touched the extreme southern border of our objective, and passed, without

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

bid her farewell, before she would permit the sacred words to pass her lips she washed her face and combed her thin hair, feeling it to be disrespectful to the One True God to address Him unprepared. Such a soul as this, met with on the road of life, one can never forget. She was ripe for the Call; and she heard it, and was glad.

The next city is Ansi, which also bids fair to disappear under the encroaching sands, as these have already drifted round it as high as the top of the wall. It is a cold, storm-swept place, exposed on every side, and with neither coal nor wood obtainable. The wind is said to blow every day in the year, but in the winter it is so fiercely terrible that all shops are closed, and everything is at a standstill. Every household then lives, eats, and sleeps on its dung-warmed *kang*, nor is it surprising that so many while away the weary hours with the fumes of the opium-pipe. Ansi lies at the cross-roads, where the great track from Suchow turns off towards Hami and Eastern Turkestan, meeting also the main road to the Oasis of Tunhwang, four stages to the south-west. The fame of Tunhwang had already reached us. We had entertained at Suchow a party of American archaeologists from Harvard University, who had recently been there for the purpose of seeing its art treasures. Not being able, however, to fulfil their purpose, they were returning to Peking, carrying away a rather unfortunate impression of the Tunhwang population, and they warned us that we should find them turbulent and somewhat rough-spoken. This did not alarm us, however, as our search was for treasure of a different kind, which called for excavation of another, and less obvious nature.

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

The geographical position of the city is such as to render it a very important centre, standing as it does where roads from Lhasa, Mongolia, India and South Siberia all converge. Merchants from Khotan, Yarkand and Kashgar travel this way, and it is not infrequent to meet a caravan of sixty donkeys which have travelled fifty days over the southern border of the Takla-Makan desert. Tunhwang is a town which has, under various names, taken an important place in the history of the territory now known as North-West Kansu. In 165 B.C. there is record of its inhabitants being overcome in battle, and dispersed, reappearing later as the Indo-Scythians of the Punjab. Its more ancient name was Shachow—City of the Sands—and it is frequently marked by this name, on maps, at the present time. In A.D. 400 it was the capital of the State of Western Liang. It has been held by Tibetans, and used by the Chinese as an extreme outpost of defence against the Huns. Documents in the Indian, Khoroshti and Brahmi scripts had been excavated in the district, as well as in an unknown script resembling Aramaic.

Of the original city nothing now remains but a ruined wall, and an enclosure mostly cultivated by market-gardeners. In its stead has grown up a smaller town, on the opposite side of the river, the eastern suburb of which has become the business quarter, and is chiefly occupied by Moslem Turkis, who are now gradually possessing themselves of the land, so that it is common to see the scarlet dress and fluttering veil of the Moslem women at work in the fields. The reason for this change in the population is not far to seek, opium and its deadly influences being the cause. Rich and poor, old and young, farmers, tradesmen and artisans are all neglecting their employment for the opium-pipe, and it is freely admitted that the people

THROUGH JADE GATE

733 of the place are on the downward grade, being unable 513 any more to hold their own with the Moslems, who are forbidden by the laws of their religion to indulge in this vice, and so easily get its victims into their hands. Nevertheless, the memories of past prosperity, and the present post of importance held by the Military Commander, impart a certain consciousness of self-respect to the inhabitants of Tunhwang, so that the visitor cannot fail to be impressed by the dignified bearing of the populace in this isolated spot.

983 Among our first visitors were two women from Kashgar. They were remarkably picturesque, and with splendid physique and deportment. They wore long, straight gowns of brilliant-coloured cloth, and a finely-woven veil falling below the waist, which softened the strong, handsome features, and gave them a most attractive appearance. They immediately mounted the *kang* barefoot, and it was a sight to see the face of Mrs. Liu—a model of Chinese propriety—as they slipped off their shoes, and the shapely feet were exposed. However, as they spoke Chinese fluently, she was soon in happy conversation with them. These ladies insisted that we should come that very afternoon to return their visit in their own home, and in an hour's time sent two charming children, wearing miniature Wellington boots, to escort us there. They led us safely past several ferocious dogs, through a spacious courtyard, to a living-room, where the whole family was assembled, the patriarch of the group being an Ahung, which corresponds to a Levite among the Israelites. After we had been seated for about half-an-hour, during which time they all listened attentively to the Gospel Story, a woman-servant appeared bearing a large dish of boiled lamb, the joints of which, being of the minutest size, were easily handled. The hostess,

VIEWING BLACK GOBI

is dreary beyond words. The visit of a traveller is 494 their only touch with the outer world, and though in ordinary times and at certain seasons the caravans pass to and fro in large numbers, yet there are many months of wintry weather when there is scarcely a human being on the road. No wonder, then, that their most valued 733 possession is the harvest reaped from the field of opium, which supplies them with their sole luxury of life. Here, as in every other place, we visited each family, sat 494 with them, talked with them, proclaimed Christ as Saviour and King, and distributed a text each. Each family had now some Christian literature, which we hoped would be read during the long and dreary Gobi winter days and nights. In the afternoon of which I refer we had an interesting interview with the man whose life we had saved. We found him to be only twenty-eight years of age, a native of Hangchow in Shensi, very well educated, and also fairly well off with sufficient money for all his expenses, having come to 'Kow Wai 'hoping to secure a good post. His gratitude to our party knew no bounds, and the villagers kept reiterating to him how lucky he was to have picked up, as during these weeks when the roads were almost deserted, already several pedestrians had been found dead from thirst.

We left at sunset for the next stage, which was to 133 Hunghuyuan—' The Park of Tamarisks '—a charm- 491 ing though deceptive name, and we reached it over ground which by night could have been mistaken for snowfields, the alkali deposit lying in a thick crust on the surface and making it soft and spongy. There 361 were only four souls in Hunghuyuan, namely, one man employed as courier by the post-office, and a woman and her two sons. Of the three inns, two had been 485 abandoned by their owners, who found they could make

[Residents of Petuntze--Analysis]

/Chinese Moslems (Dungans)/

religious teachings. According to the religious code it is obligatory for a man of means to contribute a certain amount of his wealth to public charity. Next to worship, this is the most important duty in Moslem society. The original idea of helping the poor and needy evolved into a tax (ten per cent on agricultural produce and two and one-half per cent on animals) collected from all believers for religious and public welfare purposes. Another form of alms, the sadaqa, is a voluntary offering. Public welfare with the face to the sun, after the [illegible] fee is deducted, includes freeing slaves, assistance to persons who become indebted for good reasons, making holy war to defend the people and the faith, and aiding needy travelers.

During the month of Ramadan (fasting) donations and offerings are collected for public welfare purposes. The amount is not fixed, but at this season of the year a severe shock to public responsibility is strong among these people. Not only do they give regular alms-gifts to the needy in their own communities, but they help the needy in other parts of the faith.

The Hajila, or those who have completed the pilgrimage to Mecca, are highly respected in the Moslem community, and wear special badges to mark their distinction. The opportunity to journey to Mecca is the dream of all Moslems.

c. Virtue.

It is important for the individual to cultivate the true concept of peace and submission. The concept of peace involves such things as mutual cooperation and aid among mankind, mutual understanding among religions and peaceful co-existence of nations to achieve world brotherhood. The concept of submission means to submit completely and faithfully to Allah's teachings, sacrificing self-interest for the promotion of happiness for mankind.

Personal cleanliness, both internal and external, is most important. Internal cleanliness is eating halal food, and external is thought to develop a clean soul, free of evil thoughts and immoral conduct.

d. Social superiority.

The Chinese Moslems regard themselves as a special group, superior to their Chinese neighbors. As students and officials, their attitude toward respect for the emperor and for Confucius has, in the past, been one of compromise. Compelled by law to conform, they excused themselves on the grounds that they did not personally set out to their hearts. The old and the new sects of Chinese Moslems, although bitterly hostile toward each other and at times engaged in armed conflict, on the whole present a united front toward the Chinese and the rest of the world.

735 POVERTY--prevalence and definition of poverty; causes (e.g., low income, unemployment, sickness, alcoholism, improvidence, indolence); social attitudes toward poverty; begging and beggars; poor relief (e.g., almsgiving, private charity, public relief); special institutions for the poor (e.g., almshouses); support of institutions (e.g., municipal, ecclesiastical, private endowment); etc. See also:

Social classification	M	Housing	361

Laborers		Income	536
Wages		Standards and levels of living	511

are precisely stated in the Koran, it is certain that they were well established before Muhammad's death. Each casualty of a fixed number of bowings (rak'ah), the bowing itself consisting of seven movements with their appropriate recitations: (1) the recitation of the phrase "Allahu akbar" (God is most Great) with the hands open on each side of the face; (2) the recitation of the Fatihah or opening sura of the Koran followed by another passage or passages, while standing upright; (3) bowing from the hips; (4) straightening up; (5) gliding to the knees and a first prostration with the face to the ground; (6) sitting back on the haunches; (7) a second prostration.

The set times are at daybreak, fajr (two rak'ahs); noon, zuhr (four rak'ahs); midafternoon, asr (four rak'ahs); after sunset, maghrib (three rak'ahs), and in the early part of the night, isha (four rak'ahs). At each of these prayers one should be said and the ritual observed by every believer wherever he may be. By preference they should be performed congregationally in a masjid (mosque) under the leadership of an imam. The imam and the worshippers should face in the Islamic religious law west northwest, which is toward Mecca.

The Koran also mentions the noon prayer on Friday as the principal congregational prayer of the week, and enjoins the suspension of work during its performance. At this time a special communication, called a [illegible], usually by the imam. (The deliverer of this ceremony is called the khatib. He is not necessarily the imam, but may be one of the leaders in the community.)

Tahara, the ablution before prayer, is strictly enjoined and the ritual is defined in Sura v. v. 9: "When you rise up to prayer, wash your faces, and your hands to the elbows; and wipe your heads and your feet to the ankles." This is the lesser ablution, to be performed before every prayer. The greater ablution is the ghusl or bathing of the body, which should be done before the Friday service or special holiday service, and after sexual intercourse (including the ceremonies are described specifically).

b. Alms (Zakat). With the observance of prayer the Koran regularly enjoins the giving of alms (sakat) as the outward sign of piety and as a means of salvation. A distinction is made between sadaqat, which is a free-will offering, and zakat, the obligatory contribution, presumably at the rate of one-fortieth of the annual revenue in money or kind. The zakat is to be exacted form all who enter into the brotherhood of Islam; but it is not a tax. The objectives on which the revenues from zakat is to be spent are defined (in Sura ix. v. 60) as being: the poor, the needy; those employed in its collection, debtors, wayfarers, and the "Way of God."

/Chinese Moslems/

any should oversleep and fail to eat the necessary food before daybreak.

The regular practice of Zakat is practically unknown to the Chinese Moslem community. Only during the month of Ramadan, when charity is extended to the poor and donations are given to the ching are alms given in a form resembling Zakat. There is no fixed amount given and the act itself is purely voluntary. The only term at sadaqa (voluntary alms) given is the sadaqa el-fitr given in the three days of Id el Fitr (the Moslem New Year).

These offerings can be made in cash or in goods.

In the early days of the Northwest the practice of pilgrimage to Mecca was observed. The Hajis, [illegible] accumulated the resources necessary to Mecca. We highly respected in their communities. Pilgrimage has decreased considerably in the past few years. The Moslem Delegation (mongue) under the leadership of an imam. The imam and the worshippers face in the Islamic religious law west northwest which is toward Mecca.

Id el-Fitr, the New Year, is the best observed of the different Moslem holidays. It is observed during the first three days of the tenth month. Special services are held in the different Moslem communities, and great feasts are given to celebrate the occasion.

In general the Chinese Moslems do abstain from pork and wine as their religion commands. They will not eat meat that has not been killed in the approved Moslem fashion. Many of the merchants, carters and others who travel carry their own utensils, and often, where there are no Moslem communities, carry their own food that is prohibited by their religion.

The influence of the general Chinese beliefs on the Moslems has been noted by many, particularly by D'Ollone. Ancestor worship is one of the non-Moslem Chinese belief..It is not restricted to domestic worship but extends to religious devotion to the graves of ancestors, which are designed to assure the peace of the deceased and are a scene of devotion every anniversary. The Moslems of the Northwest have been as influenced by these traditions that, in the secrecy of their homes, most of them burn incense in front of the ancestors' tablets. In evidence of this custom, D'Ollone brought back two vases which served the purpose of ancestor worship. Both of these vases belonged to Chinese Moslems, and had Moslem religious inscriptions in Arabic. The practice of pilgrimage to the well kept tombs of the ancestors is also found among the Chinese Moslems of Kansu. Some of the bigger tombs are quite elaborate and include, besides the monuments, a mosque, school halls and lodging places.

PUBLIC WELFARE

I. Introduction

657 Welfare work in China's Northwest has to be conducted for the benefit of two distinct categories of people in need. The poor are composed of those whose problems arose out of inadequate standards of living. They include the aged and disabled, the orphans and other destitute or handicapped people. Marginal cases of this category are the underprivileged groups of society, who might maintain themselves, even though precariously, in years of abundance but who become relief cases as soon as their balance of life is disturbed. Chinese concepts of charity and charity regulations normally available to this category are discussed in the Public Welfare Section of the General Handbook.

659 The second category however, the victims of natural disasters, poses a special problem in the Northwest. As has been demonstrated in other Sections of this Handbook, the maintenance of agriculture in the Northwest is more dependent upon conservancy and irrigation projects than on other regions of China. During the last period of the Imperial era, many of these projects have fallen into disrepair, thus exposing the entire agricultural foundations and droughts. Reports from the Imperial period reveal that there were fourteen severe inundations in the province of Shensi during the hundred years 1800-1900 and seven in Kansu. The same century brought sixteen severe droughts to Shensi and nine to Kansu. The droughts of 1877 which encompassed the years of 1900/01 in Shensi, and of 1908/09 in Kansu were catastrophes of a national extent.

The frequent and overwhelming disasters in the Northwest adds to the problems of the region, particularly since in many areas of the region people live in loess caves. The great earthquake of 1879 which hit both Shensi and Kansu, the one of 1881 in Kansu and the one of 1892 in the Kuchu district of Sinkiang and the Hsi-ning district of Chinghai are still in everybody's memory, even though the twenties of our century have again brought two devastating earthquakes.

Nor is this all. During the last hundred years the Northwest has been ravaged by rebellions and civil wars almost without interruption. Several of these events left in their wake vast number of displaced and needy people, who added to the problems of emergency and disaster relief.

II. Welfare Among the Moslems

A. The Distribution of Welfare Responsibilities

Most of the efforts in the field of public welfare among the

Moslems of the Northwest were done by the Moslems themselves and not by the Chinese administration. The law of Islam provides for a rather extensive system of, and general concepts on the administration of public welfare. It is not so much through a system of governmental institutions that the needy were taken care of in the Moslem communities, but through the regulations of Islam. The concept of public welfare is found in the Koran and was transmitted to the people through the laws and obligations specified in the religious writings of Islam. In the Islamic law there is no clear conception of the separation of state and religious institutions. The functions in both political and religious realms are merged and interwoven. The religious organizations, even though precariously, in years of abundance but who become relief cases as soon as their balance of life is disturbed. Chinese concepts of charity and charity regulations normally available to this category are discussed in the Public Welfare Section of the General Handbook.

The second category however, the victims of natural disasters, poses a special problem in the Northwest. As has been demonstrated in other Sections of this Handbook, the maintenance of agriculture in the Northwest is more dependent upon conservancy and irrigation projects than on other regions of China. During the last period of the Imperial era, many of these projects have fallen into disrepair, thus exposing the entire agricultural foundations and droughts. Reports from the Imperial period reveal that there were fourteen severe inundations in the province of Shensi during the hundred years 1800-1900 and seven in Kansu. The same century brought sixteen severe droughts to Shensi and nine to Kansu. The droughts of 1877 which encompassed the years of 1900/01 in Shensi, and of 1908/09 in Kansu were catastrophes of a national extent.

The frequent and overwhelming disasters in the Northwest adds to the problems of the region, particularly since in many areas of the region people live in loess caves. The great earthquake of 1879 which hit both Shensi and Kansu, the one of 1881 in Kansu and the one of 1892 in the Kuchu district of Sinkiang and the Hsi-ning district of Chinghai are still in everybody's memory, even though the twenties of our century have again brought two devastating earthquakes.

Nor is this all. During the last hundred years the Northwest has been ravaged by rebellions and civil wars almost without interruption. Several of these events left in their wake vast number of displaced and needy people, who added to the problems of emergency and disaster relief.

II. Welfare Among the Moslems

A. The Distribution of Welfare Responsibilities

Most of the efforts in the field of public welfare among the

charitable deeds, and only the well-earned wealth should be given in charity. Those who give secretly are praised more highly than those who publicize their gifts.

Obligatory charity is collected by officials who are appointed by the community to carry out this task. The individual donator is not at liberty to calculate and spend his zakat in any way he wants, but it is collected by the officials and spent by the community.

Zakat is a charge on accumulated wealth, and particularly in this manner redistributes a portion of the accumulated wealth of the few to those who have none in the community. A part of the amassed wealth of every individual is taken away annually and distributed among the poor and the needy. Zakat is payable on all cash hoardings, or hoardings in gold and silver, as well as on any form of capital, whether in the shape of cash or kind.

The items of expenditure of zakat are stated by the Koran to be the following. "Alms are only for the poor and the needy, and the officials appointed over them, and those whose hearts are made to incline to truth, and captives, and those in debt, and in the way of Allah, and the wayfarer; it is an ordinance from Allah, and Allah is the knowing and the Wise" (9:60).

The recipients of the benefits of zakat can be divided into three main categories: (1) those who need help, (2) the officials appointed for the collection and disbursement of the fund, and (3) a part is required to be spent in the way of Allah.

Six kinds of people fall under the first heading; the poor who, on account of some physical and mental defect, are unable to earn their bread because of their deficiencies; the poor who have no resources but when given some help can earn their livelihood; new converts to Islam who are deprived of means of subsistence; those who are captives and are deprived of freedom; debtors who are unable to pay their debts; and lastly, the travellers who are stranded in a foreign country or in a distant place and who are unable to reach their homes.

The second kind of expenditure involves the maintenance of an establishment and office for the collection of zakat, and includes the salaries of those who collect the money and distribute it.

The third heading includes those in the way of Allah, which means usually those who fight a Holy War in the name of Allah against the enemies of Islam.

Besides the institution of zakat, there are two others of similar nature designed to collect obligatory charity. Both of these are connected with Moslem festivals. The idea is that whenever the Moslem is in his happiest mood, he must never forget the distress of his poorer brethren. The first of these institutions is the sadaqat-al Fitr, a charity connected with id-al-Fitr, the Moslem New Year. Every Moslem on this occasion is required to give away in charity a certain amount of food, the value of

which varies according to one's wealth. This food must be donated by every Moslem in the community who is not poor, and distributed among those who need it. The second institution is that connected with id-al-Adaha, on which occasion the poorer members of the community are fed with the meat of the sacrificed animals, and the skins of these animals are sold, and the sum thus realized spent on the propagation of Islam.

These then are the concepts applied to welfare work among the Moslems of the Northwest. As has been seen: the imperial board of welfare institutes is entirely religious. This religious basis of welfare work was natural enough among the Chinese Moslems (Hui) particularly in those provinces, such as Ninghsia and Chinghai, where the social power was in the hands of Moslem leaders. In these cases welfare activities would be supported strongly and with a certain efficiency by Moslem wealth, but would pertain in most cases to the Moslem population only.

With regard to the bonding of welfare cases among non-Moslem Chinese, reference is made in the section on Public Welfare of the General Handbook.

III Welfare Among Lamaists

The concept of charity is alien to original Buddhism; it has no part in its ancient teachings. Almsgiving (dana) is the only charitable activity that is occasionally mentioned in earlier writings. It is there termed as one of the "lucky things," with which to promote one's own self-perfection and salvation, even though it has no place in the eightfold path. Later on, rules concerning the attitude in which alms should be given were worked out, the theory being that the merit of the gift grows with the merit of the donor. The best gift of all, however, is the gift of Dharma (truth). The only entity who practised charity in anything like our sense of the word was the Bodhisattva, for whom, and for whom only, compassion was the cardinal principle. Every considération is laid aside and even meditation is neglected for it.

These basic doctrines have not prevented later schools of Buddhism in China from developing charitable and welfare work both through the temples themselves and through Buddhist sponsored or co-sponsored laymen's associations (see China General, Public Welfare). The Lamaist church, however, has stuck closer to the original concepts and hardly a trace of charitable or welfare work emanating from or sponsored by the lamaseries can be detected.

There exists, though, one concept common to both Lamaist peoples, through which the situation is mitigated. This is the concept of hospitality. Under this concept many charitable and welfare functions are carried out by the lamaseries as well as

735

A CHINESE BEGGAR.

"All too familiar is the sight of the corpse of a man frozen to death on the side path."

[FACING P. 10]

10 THROUGH JADE GATE

conditions unspeakably wretched, they yet cared not at all, for they had temporarily banished reality, and moved among elusive shadows, until the sentinel grey dawn should recall them to the grim world of Fact.

735 The largest city through which we passed was Pingliang. On the steps of a temple outside the city gate, we saw a motley crew of several hundred beggars basking in the midday sunshine. They displayed such a variety of physical ills, and provided such an exhibition of tatterdemalion garments, as to make one question how existence under such conditions could be endured. Nor can the life of a Kansu beggar hold any sense of security or hope of alleviation. All too familiar is the sight, on a winter's morning, of the naked corpse of a man, woman or child, frozen to death on the side path; and there is no one to remove the corpse, unless it be the tradesman, under whose frontage he sought shelter and died. The gathering which we witnessed at Pingliang was an assembly of the Beggars' Trade(less) Union, when they collect an enforced contribution from each business house in the town—a tax which none dared refuse, since their appointed Head controlled a band of defenders, who were ready to deal summarily with any shopkeeper who might offer a blow in lieu of alms. The police were helpless in face of this Corporation; and thus the beggar asserted his right to live.

For an hour our litters threaded their way through the crowded streets before we reached the Mission Compound, where we were the guests of a Swedish missionary and his wife, Mr. and Mrs. Törnvall. Our hearts warmed with admiration for the unassuming man, on whose face long suffering had left indelible marks. With him we visited the spacious buildings of

After I had had my presents handed over, the conversation turned to European weapons and the dasnak who already had a number of Russian and English repeater guns, made every effort to buy some of my weapons. When I showed no inclination to comply with his wishes, the atmosphere became strained and I hurried to take my leave. /350/

The Barun dsasak (Plate LXXV), like all Dam Mongols, cannot be relied upon. The floor for which I had paid him up in the Wulaseta Valley, was still not ground when I came to Barun kurh, and I was obliged to wait two days before I could get it. It was ground in handmills by old women and widows.

There were a great many beggars and cripples loafing about in the dasnak's courtyard. They mumbled their Om mani padme hung and plucked at their rosaries without ceasing. There were people coming and going all the time who paid tribute to the dasnak, and my companions were always amazed at how obsequious the Mongols were towards their ruler. Whereas the rest Tibetan shows very little respect toward hir chieftain, the ordinary Mongol is bound by strict etiquette. He may never sit down with crossed legs before his prince, he must bend his right knee and remain in a half squatting, half kneeling position. If he is not invited to sit down he remains standing with his legs together. He must take his sword in his left hand and may not leave it sticking diagonally in his belt as he usually does.

The Mongol princes have incomparably greater pomp than the chieftains of the Tibetan nomads. I have already spoken of the princes' right of preemption. Besides that, the dasnak owns his entire country, he annually apportions the pastures and also the arable land among his subjects and for this he receives his tithe in the form of animals and grain. Moreover, he demands several days of gratuitous service from each family, which the wealthier ones may pay off in the form of added taxes. On his part he feels himself responsible only to the Emperor. He always supports a few lamas and gives large gifts to the monasteries. In many things he is the only source of supply for his subjects. He had large supplies stored in his warehouses in Barunkurh. In them I saw pulo from Shigatze, lambskins from Lhasa, Nepalese amulet boxes, peacock feathers from India, saffron from Kashmir, Indian dates and coconut, Tibetan stag-antlers and pouches of musk, as well as American cotton materials, boots from Dardsat, tea and the many little things with which the Chinese furnish the nomads of the highlands.

While I was staying there a huge felt yurt was erected in the courtyard of the dasnak, measuring 10 meters in diameter. The tribal

736

establishments in the Northwest prior to the war. (See Section on Religion). During the war, however, religiously sponsored welfare work also spread to the Northwest. Among the more active organizations, the Friends' Ambulance Unit (FAU) which came to China in 1941 is to be mentioned. Catholic missionary organs also did much welfare work in the Northwest. The outstanding welfare contribution of the Catholics is their maintenance of orphanages, particularly for girls. In 1933 there existed three Catholic orphanages in Sian (Shensi), six in Lanchou (Kansu) and one in Ch'un-k'o (Kansu) in which altogether 480 orphans were cared for. During the war, the number of orphanages grew to eleven in Shensi, twenty in Kansu (including Ninghsia) and one in Chinghai and Sinkiang. In these institutions altogether 1,750 orphans found shelter and relief. Under the Communists these Catholic orphanages attracted particularly vicious attacks. No data are available from the Northwest; if, however, events in other parts of China can be generalized, it has to be assumed that some of these orphanages survive. In addition eleven homes for the old were maintained by Catholic missionaries in the Northwest with over two hundred inmates. Also the Catholic Relief Service campaign of Feng-hsiang Shensi must be mentioned.

As the provinces of the Northwest were not occupied by the Japanese during World War II, UNRRA activities did not extend to this region.

V. Chinese Communist Welfare Projects

From the information that we get from the Communist press and propaganda, the Chinese Communist Government has launched an extensive program of public welfare, dedicated in particular to the raising of standards and security of the working class. It is not surprising that a Communist regime emphasizes the working classes in such an extent, since it claims that its ideological bases rest on this class. Life and medical insurance programs, better working conditions in factories and construction jobs, and the training of working people are included in the Communist program. According to the Labor Insurance Law of 1951 (revised in 1953) workers were guaranteed from sixty to one hundred percent of their wages in case of injury or illness (including non-occupational ones) for their first six months of absence, after six months, they were to receive from forty to sixty percent of their wages from the labor insurance fund. Their jobs are secured for them upon recovery. Women had special provision for childbirth, upon which they received eight weeks of paid vacation and their jobs were held for them. Also by the management provisions for workers' future at old age, and the future of their families in case of accident was guaranteed as well.

736 DEPENDENCY--incidence of dependency (e.g., orphans, widows, deserted and divorced wives, families of defectives and alcoholics, families of invalids and criminals); attitudes toward dependency; care and support of dependents (e.g., adoption, support by relatives, private charity, public relief); special institutions for dependents (e.g., orphanages), etc. See also:

Social insurance, public assistance, etc.		Status of widow	589
Private welfare agencies		Adoption	590
Insurance	636	Treatment of motherless infants	592
Leprosy	587		

If this law is fully implemented, it provides security for the workers and their families. However, we have no knowledge of how close to the letter of the law the practice of the government is. Nor do we know what percentage of the workers enjoy the benefit of the law.

Child-welfare is highly valued in China, whose future rests on the health and upbringing of its children. Therefore, extensive child-welfare programs have been adopted. Since the Communist society demands that women participate in industrial and construction works and contributed to the economic development of the country, provisions had to be made to take adequate care of their children. For this purpose many nurseries were established which provide a place for the children during the day time. Government orphanages were established as well--supplementing the already existing institutions. The aged, however, do not receive as much attention in the Communist society as they are viewed as being of no productive value to the society.

737

737 OLD AGE DEPENDENCY--incidence of dependency for the aged of both sexes; care and support of the aged (e.g., support by relatives, private charity, public relief, institutionalization); special institutions for the aged (e.g., old people's homes); support of institutions (e.g., private, municipal, fraternal, ecclesiastical); etc. See also:

that two hundred thousand people had perished in the disaster.

Before reaching Lanchow we crossed a wide river by means of a well-built and handsome bridge, which had also been constructed with famine relief funds, and which now provided the means for saving scores of lives, a heavy yearly toll having hitherto been exacted by the treacherous mountain torrent.

On leaving the town of Tsingningchow we travelled for seven days before touching another Mission station —a tremendous gap in the chain, so it seemed to us in those days, unused as we were then to the wider horizons of the Great North-West. Half-way stood the little market-town of Anting, to which Mission authorities had directed our attention as the possible goal of our quest; but as we walked through its streets with every perception alert, we felt the firm conviction that our appointed destination lay still farther ahead.

One of our litter-men was a Moslem—proud and cantankerous, as all of his kind. A somewhat grimy white, woollen cap was the badge of his belief, and at brief intervals he would raise his head and sing a wild snatch of the 'Song of the Wandering Dove,' a weird melody greatly loved by the men of his race, and sung by them in eulogy of home when on a journey, the barbaric intervals of which produced a most dramatic effect in those lonely gullies. An altercation frequently arose between this man and the others, on the subject of the choice between Moslem or Gentile inns, the former being distinguished by the painted sign of a teapot, and the mystic words: 'KIAO MEN' (member of the assembly). The boasted 'cleanliness' of the Moslem inn is, however, not visible to the naked eye, but manifests itself otherwise, namely, in endless bickerings with the travellers on matters of purification connected

743

743 HOSPITALS AND CLINICS--number and availability of special institutions for medical care; organization and operation of clinics and hospitals; personnel (e.g., administrative and medical staffs, nurses, orderlies, technicians); equipment; special services; charges and fees; sources of financial support (e.g., governmental, ecclesiastical, private); ambulatory clinics. See also:

Institutions for the care of defectives 732
Care of alcoholics and drug addicts 733
Sanatoriums, convalescent homes, mental institutions, and lepro series 734

The first department devoted most of its time to preventing epidemics, innoculating people against possible epidemics (such as typhoid, typhus, smallpox, cholera) and preventing animal diseases. The National Department of Health was concerned with the promotion of regional health and sanitation institutes. Experimental stations for public health were opened in Kansu. In the Northwest the health programs of the Nationalist Government were launched in the last part of the 1930's. The numbers of hospitals recorded in the Northwest during 1936 are as follows:

	Hospitals	Beds
Shensi	7	263
Kansu	10	124
Chinghai	3	22

The Sino-Japanese war interfered with the progress of the health programs in the Northwest. However, some of the war results proved beneficial. During the war two medical schools were transferred to the Northwest. Sian has had a medical school since 1940 when the famous Medical School of National Peiping University was transferred there. It was not retransferred to Peiping after the war. A medical school was started in Lanchow after the war as part of the National Lanchow University. In 1942 the Northwest Hospital was established at Lanchow, where, in 1944, over 30,000 outpatients and over a thousand inpatients were treated. Much medical field work was done during the war and a few army hospitals were opened in the Northwest. Hsi-ning also started a school hospital and a city-hospital during the war. A special health center was opened at Ting-yüan-ying for the Alashan Mongols.

V. Health and Sanitation Under the Communists

The necessity to extend the work done in the medical field in the Northwest was clearly recognized by the Communist Government. According to the Chinese Communist reports from Peking, Northwest China, included in the overall program adopted by the Party to improve health and sanitation, has made relative progress in the field of public health.

The overall health policies of the Communist Government were adopted in 1950 by the First All-China Health Conference. This Conference stressed the following three principles as the guiding lines: (1) concentration on the health of the workers, farmers and soldiers; (2) emphasis on the means of prevention rather than cure of disease; and (3) uniting the modern and old-style doctors. The latter measure was decided upon because of the tremendous shortage of qualified doctors trained in modern methods to meet the needs of the huge population of China, the problem being more acute in remote regions.

A special conference entitled "The All-China Conference on the

Health of the Various Nationalities in the Country," was convened by representatives of the Tibetan, Moslem, Yi, Uighur, Mongol, and Han nationalities, representatives of the health administrative organs of the Central People's Government and the various administrative regions, the representatives of the nationalities affairs, authorities of the various administrative regions, leaders of the medical preventive service corps to the national minority areas, and specially invited delegates of all nationalities.

"The Conference will undertake special studies in the diseases which most seriously endanger the health of the people in the national minority areas, such as venereal diseases, malaria, women's and infants' ailments (colds, measles, smallpox, puerperal fever), and thus to proceed to the decision on a definite policy for the work of promoting the health of the national minorities.

The Conference is expected to reach decisions also on various necessary measures for building up a public health system in the minority areas, such as the organization of health machineries, the fostering of health cadres, and the propaganda on health matters among the population." (NCNA Peking, August 24, 1951).

The need for professional medical help in the Northwest was one of the most urgent problems facing the Communist Government in the implementation of its health program. Young students from Central China with some medical knowledge were encouraged to go to the aid of the national minorities in the Northwest. "Go West" is the slogan of the day, and is considered to be a true pioneering act.

The primary attention is given to the workers, particularly those working on big governmental projects. "In the mountainous region of Szechwan, Shensi and Kansu Provinces, workers on reconstruction receive medical care. For each billeting camp of 1,000 of more a clinic staffed with 5 to 8 doctors and nurses is operating. Four regular hospitals have been opened in Chengtu and other cities along the line especially for road workers." (FBIS, No. 61, March 29, 1955).

In April, 1955, a new medical college was opened in Sinkiang to meet some of the problems of lack of medical personnel. Clinics were opened in various parts of the Sinkiang Autonomous Region to combat the most common diseases in the area. Particular emphasis was placed on curing and preventing venereal diseases.

"From June to October, four health service teams dispatched by the venereal disease prophylactic and therapeutic clinic of Sinkiang Uighur Autonomous Region gave free treatment to some 3,000 peasants and nomads of var ous nationalities. In addition to the prophylactic and therapeutic stations already established in the various counties, another well-equipped outpatient department has been added in Urumchi. The clinic has enrolled 60

S
743 students from the nationalities to learn prophylactic and therapeu-
744 tic work." (FBIS, November 30, 1955).
668
177 Particular attention has also been paid to the Tibetan region as a whole and to Chinghai Province. About health programs developed in Tibet we have the following information: "Over
N
650 5 million yüan have been allocated by the Central People's Gov-
* 744 ernment to develop health work in the Tibet region during the past
744 four years. During this time hospitals have been built in Lhasa
177 and Chamdo; in addition, clinics and mobile medical teams have
¥ 668 given service to patients in small towns and remote areas.
177 Incomplete statistics show that free medical treatment and innoculation reached 963,000 people. In the same period, 170 Tibetans have been trained as medical workers. The Central People's Government has sent more than 400 doctors and nurses from other parts of the country to the region.

Plans were drawn up at a regional health conference of leading members of Tibet's health organizations and representatives of the Ministry of Public Health to establish more clinics and mobile medical teams and to train 50 to 80 Tibetan medical workers in the coming two years." (FBIS 181, September 16, 1955).

In Chinghai province itself, the Provincial Health Office administers the health program. Health clinics have been established in different parts of the province. The work here is more
N
744 difficult because of the many nomadic tribes in the steppes. The
743 Communists have aimed to train people among the nomads to take
¥ 668 the position of medical personnel in their tribe. Progress in this
177 area is slower. Some of the bigger already established clinics have been converted to hospitals.

According to their reports, on the whole, the progress made by the Communist Government in the field of health and sanitation is quite impressive. The first positive steps toward improving the health and sanitation conditions have been taken, but there is still much to be done in the future.

744

744 PUBLIC HEALTH AND SANITATION--organized measures for the prevention and control of infectious diseases and epidemics; degree of development and adequacy of public health services; specialized personnel (e.g., sanitary engineers, quarantine officers, inspectors); public health laboratories; public health activities (e.g., milk and meat inspection, imposition and enforcement of quarantines, control and extermination of disease vectors, sanitation); special control programs (e.g., yellow fever, venereal disease); public health legislation (e.g., pure food and drug acts); etc. See also:

/The Chinese/
N
* 563 by half a million people - even if they live mainly on rice - is
164 bound to be formidable. No sewage system of any kind exists; its
262 place is taken by an old established guild of public servants who
S can be seen every morning in large numbers making their way
524 through the streets. The casks or buckets which dangle from
364 the bamboo poles across their shoulders smell no better than you would expect them to. They are always full to the brim and their contents, which are eventually sold to truck gardens on the outskirts of the city, are a constant threat to the legs of the
S passers-by.... The buckets in which they carry their night
145 soil down the hill are used, after being briskly rinsed, to carry
312 their water up."

Besides producing a very unpleasant picture, this description brings out the very serious problems connected with the lack of a proper sewage system. It also points out the many possibilities for spreading contagious diseases and infections.

N
* 563 Tuberculosis is quite prevalent in China. Epidemic diseases
164 are common also, such as typhoid and paratyphoid fevers, cholera
165 and smallpox. Malaria and the two kinds of dysenteries, amoebic
644 and bacillary also are present. Death at childbirth, both of infants
S and mothers, is quite high, because of the lack of adequate sani-
563 tary precautions during childbirth and the practices of the mid-
165 wives, who do nothing to prevent infection of both mother and
644 child.

S Winfield in his book states that "seventy-five per cent of all
165 deaths in China are due to preventable diseases that are under control in the West; there are about 15 million deaths each year in China, of which 11,750,000 are due to preventable diseases." (China: The Land and the People, p. 111).

D. Medical Personnel

The lack of Western-trained doctors, nurses, pharmacists
753 and dentists in the Northwest is an extremely serious problem.
* 563 Most people, because of the shortage of medical personnel, still
753 go to the local herb-doctors. (A full description of the traditional
563 Chinese science of medicine is given in the General Handbook). In many less acute cases, people either neglect to do anything or attempt to treat themselves by unscientific methods.

S E. Efforts of the Government
744 The Nationalist Government was aware of the serious shortage
* of medical personnel and equipment in all of China, including the Northwest. Two national organizations were established in the 1930's to deal with these problems: The Department of Public Health under the Ministry of the Interior, which had a Northwestern Office for the Prevention of Epidemics, and the National Health Department under the National Economic Council, which also had an office in the Northwest.

N
* 744 Health of the Various Nationalities in the Country," was convened
668 by representatives of the Tibetan, Moslem, Yi, Uighur, Mongol,
177 and Han nationalities, representatives of the health administrative organs of the Central People's Government and the various administrative regions, the representatives of the nationalities affairs, authorities of the various administrative regions, leaders of the medical preventive service corps to the national minority areas, and specially invited delegates of all nationalities.

"The Conference will undertake special studies in the diseases which most seriously endanger the health of the people in the national minority areas, such as venereal diseases, malaria, women's and infants' ailments (colds, measles, smallpox, puerperal fever), and thus to proceed to the decision on a definite policy for the work of promoting the health of the national minorities.

The Conference is expected to reach decisions also on various necessary measures for building up a public health system in the minority areas, such as the organization of health machineries, the fostering of health cadres, and the propaganda on health matters among the population." (NCNA Peking, August 24, 1951).

The need for professional medical help in the Northwest was
N one of the most urgent problems facing the Communist Government
759 in the implementation of its health program. Young students from Central China with some medical knowledge were encouraged to go to the aid of the national minorities in the Northwest. "Go West" is the slogan of the day, and is considered to be a true pioneering act.

N The primary attention is given to the workers, particularly
752 those working on big governmental projects. "In the mountainous
* 668 region of Szechwan, Shensi and Kansu Provinces, workers on
177 reconstruction receive medical care. For each billeting camp of 1,000 of more a clinic staffed with 5 to 8 doctors and nurses is operating. Four regular hospitals have been opened in Chengtu and other cities along the line especially for road workers." (FBIS, No. 61, March 29, 1955).

S In April, 1955, a new medical college was opened in Sinkiang
744 to meet some of the problems of lack of medical personnel.
743 Clinics were opened in various parts of the Sinkiang Autonomous
668 Region to combat the most common diseases in the area. Particu-
177 lar emphasis was placed on curing and preventing venereal diseases.

"From June to October, four health service teams dispatched by the venereal disease prophylactic and therapeutic clinic of Sinkiang Uighur Autonomous Region gave free treatment to some 3,000 peasants and nomads of various nationalities. In addition to the prophylactic and therapeutic stations already established in the various counties, another well-equipped outpatient department has been added in Urumchi. The clinic has enrolled 60

S
743 students from the nationalities to learn prophylactic and therapeu-
744 tic work." (FBIS, November 30, 1955).
668
177 Particular attention has also been paid to the Tibetan region as a whole and to Chinghai Province. About health programs developed in Tibet we have the following information: "Over
N
650 5 million yüan have been allocated by the Central People's Gov-
* 744 ernment to develop health work in the Tibet region during the past
744 four years. During this time hospitals have been built in Lhasa
177 and Chamdo; in addition, clinics and mobile medical teams have
¥ 668 given service to patients in small towns and remote areas.
177 Incomplete statistics show that free medical treatment and innoculation reached 963,000 people. In the same period, 170 Tibetans have been trained as medical workers. The Central People's Government has sent more than 400 doctors and nurses from other parts of the country to the region.

Plans were drawn up at a regional health conference of leading members of Tibet's health organizations and representatives of the Ministry of Public Health to establish more clinics and mobile medical teams and to train 50 to 80 Tibetan medical workers in the coming two years." (FBIS 181, September 16, 1955).

In Chinghai province itself, the Provincial Health Office administers the health program. Health clinics have been established in different parts of the province. The work here is more
N
744 difficult because of the many nomadic tribes in the steppes. The
743 Communists have aimed to train people among the nomads to take
¥ 668 the position of medical personnel in their tribe. Progress in this
177 area is slower. Some of the bigger already established clinics have been converted to hospitals.

According to their reports, on the whole, the progress made by the Communist Government in the field of health and sanitation is quite impressive. The first positive steps toward improving the health and sanitation conditions have been taken, but there is still much to be done in the future.

745

745 SOCIAL INSURANCE--prevalent types of social insurance (e.g., retirement pensions, old age pensions, sickness and maternity benefits, unemployment benefits); contributions (e.g., from employers, beneficiaries, government); administration of funds; premiums and payments; industrial and business pension and benefit systems; social insurance legislation; systems sponsored and operated by the state (e.g., socialized medicine); etc. See also:

747 199 establishments in the Northwest prior to the war. (See Section on Religion). During the war, however, religiously sponsored welfare work also spread to the Northwest. Among the more active organizations, the Friends' Ambulance Unit (FAU) which came to China in 1941 has to be mentioned; Catholic missionary 747 199 organs also did much welfare work in the Northwest. The out- 736 standing welfare contribution of the Catholics is their maintenance of orphanages, particularly for girls. In 1933 there existed three Catholic orphanages in Sian (Shensi), six in Lanchou (Kansu) and one in Ch'in-chou (Kansu) in which altogether 480 orphans were cared for. During the war, the number of orphanages grew to eleven in Shensi, twenty in Kansu (including Ninghsia) and one each in Chinghai and Sinkiang. In these institutions altogether 2,758 orphans found shelter and relief. Under the Communists these Catholic orphanages attracted particularly vicious attacks. No data are available from the Northwest; if, however, events in other parts of China can be generalized, it has to be assumed that none of these institutions survives. In addition eleven homes for the old were maintained by Catholic missionaries in the Northwest with over two hundred inmates. Also the Catholic refugee camps at Feng-hsiang, Shensi must be mentioned.

747 248 As the provinces of the Northwest were not occupied by the Japanese during World War II, UNRRA activities did not extend to this region.

V. Chinese Communist Welfare Projects

94 668 199 From the information that we get from the Communist press and propaganda, the Chinese Communist Government has launched an extensive program of public welfare, dedicated in particular to the raising of standards and security of the working class. It is no wonder that the Communist regime emphasizes the working classes to such an extent, since it claims that its ideological bases rest on this class. Life and medical insurance programs, better working conditions in factories and construction jobs, and welfare facilities for the working people are included in the Communist program. According to the Labor Insurance Law 745 428 of 1951 (revised in 1953) workers were guaranteed from sixty to 668 199 one hundred percent of their wages in case of injury or illness (including non-occupational ones) for their first six months of absence; after six months, they were to receive from forty to sixty percent of their wages from the labor insurance fund. Their jobs are secured for them upon recovery. Women had special provision for childbirth, upon which they received eight weeks of paid vacation and the expenses of the birth were taken on by the management. Provisions for the workers' future at old age, and the future of their families in case of accident was guaranteed as well.

745 668 199 If this law is fully implemented, it provides security for the workers and their families. However, we have no knowledge of how close to the letter of the law the practice of the government is. Nor do we know what percentage of the workers enjoy the benefit of this law.

855 668 199 Child-welfare is highly valued in China, whose future rests on the health and upbringing of its children. Therefore, extensive child-welfare programs have been adopted. Since the Communist society demands that women participate in industrial and construction works and contributed to the economic development of the country, provisions had to be made to take adequate care of their children. For this purpose many nurseries were established which provide a place for the children during the day 736 time. Government orphanages were established as well, supplementing the already existing institutions. The aged, however, 737 668 199 do not receive as much attention in the Communist society since they are viewed as being of no productive value to the society.

747

747 PRIVATE WELFARE AGENCIES--private fund-raising organizations (e.g., community chests); private, semi-private, fraternal, and ecclesiastical operating relief agencies (e.g., Red Cross, Salvation Army, family welfare organizations); welfare institutions not elsewhere described (e.g., settlement houses, city missions, day nurseries, church community houses); organization, administration, financial support, and activities of each type; etc. See also: Institutions caring for specific types of defectives, dependents, and delinquents . . . 73 Church welfare work 700

114 687 done in public welfare. The information about the situation in the Northwest has to be inferred mostly from what is available to us about China proper, keeping in mind that Chinese policies in Sinkiang have never achieved a fulfillment comparable with the fulfillment they have achieved in China proper.

635 It was only during the Sino-Japanese War (1937-1945) that 645 the Nationalist Government established a Ministry of Social 651 Affairs. This Ministry organized in each province, including Sinkiang, a Bureau of Social Affairs for relief and welfare works. Institutions were set up to take care of the aged, orphans, the disabled, disabled veterans and beggars.

645 The relief organs in the Northwest sponsored by the Ministry of Social Affairs were restricted to free medical service centers; organs maintained by provincial governments were mainly experimental relief stations, which were responsible for a variety of relief work. Municipal and district governments maintained, in addition to general relief organs (90 for the entire Northwest; 57 of these were located in the provinces Chinghai and Ninghsia, which had Moslem governors), children's relief centers (37) and a sprinkling of other institutions. There were several dozens of private Chinese Charity Associations active in the Northwest during the war.

657 Furthermore, the National Government joined efforts with 747 some religious and humanitarian bodies and organized the 738 National Relief Commission. During the war, this Commission was particularly active in disaster relief. Large appropriations were earmarked for the famine in Shensi in the years 1943 and 1944. Contributions to this province as well as to the provinces of Kansu and Ninghsia were largely used for the resettlement of and the starting of reclamation projects by disaster victims of Shensi as well as of Honan province.

657 The activities of the National Relief Commission included 746 care for war orphans and refugee children. Five hundred of them 651 were sent to Sinkiang and one thousand were resettled in Ching- 722 hai. Furthermore, a Juvenile Northwest War Area Service 721 Corps was organized to accommodate graduates from War Refugee Children's Schools.

The National Child Welfare Association, founded by H. H. Kung, also maintained a Child Welfare Camp at Hei-hsien, Shensi.

Among the service corps operated by the Friends of the Wounded Society, organized under the New Life Movement Association; one had a base in Shensi. These corps worked in hospitals and convalescent camps. They provided delousing, laundry and sewing services etc. and special dieting.

747 The welfare work of Christian missions contributed to alleviate 747 much distress. There were few large Protestant missionary

* 747 199 establishments in the Northwest prior to the war. (See Section on Religion). During the war, however, religiously sponsored welfare work also spread to the Northwest. Among the more active organizations, the Friends' Ambulance Unit (FAU) which came to China in 1941 has to be mentioned; Catholic missionary 747 199 organs also did much welfare work in the Northwest. The out- 736 standing welfare contribution of the Catholics is their maintenance of orphanages, particularly for girls. In 1933 there existed three Catholic orphanages in Sian (Shensi), six in Lanchou (Kansu) and one in Ch'in-chou (Kansu) in which altogether 480 orphans were cared for. During the war, the number of orphanages grew to eleven in Shensi, twenty in Kansu (including Ninghsia) and one each in Chinghai and Sinkiang. In these institutions altogether 2,758 orphans found shelter and relief. Under the Communists these Catholic orphanages attracted particularly vicious attacks. No data are available from the Northwest; if, however, events in other parts of China can be generalized, it has to be assumed that none of these institutions survives. In addition eleven homes for the old were maintained by Catholic missionaries in the Northwest with over two hundred inmates. Also the Catholic refugee camps at Feng-hsiang, Shensi must be mentioned.

747 248 As the provinces of the Northwest were not occupied by the Japanese during World War II, UNRRA activities did not extend to this region.

V. Chinese Communist Welfare Projects

94 668 199 From the information that we get from the Communist press and propaganda, the Chinese Communist Government has launched an extensive program of public welfare, dedicated in particular to the raising of standards and security of the working class. It is no wonder that the Communist regime emphasizes the working classes to such an extent, since it claims that its ideological bases rest on this class. Life and medical insurance programs, better working conditions in factories and construction jobs, and welfare facilities for the working people are included in the Communist program. According to the Labor Insurance Law 745 428 of 1951 (revised in 1953) workers were guaranteed from sixty to 668 199 one hundred percent of their wages in case of injury or illness (including non-occupational ones) for their first six months of absence; after six months, they were to receive from forty to sixty percent of their wages from the labor insurance fund. Their jobs are secured for them upon recovery. Women had special provision for childbirth, upon which they received eight weeks of paid vacation and the expenses of the birth were taken on by the management. Provisions for the workers' future at old age, and the future of their families in case of accident was guaranteed as well.

75 SICKNESS--general statements covering several aspects of sickness. Ideas of the causation of sickness, with methods of cure, and with specialists in the treatment of disease, including bodily injuries and functional or neurotic ailments will be filed below in the appropriate three digit category.

/Tibetans of Chingahi/

gories and the apportionment of the traditional Buddhist 404 is not standardized.) There are further breakdowns of what might go wrong with what aspects of the human body and the human mind or spirit, to the point where each infinitesimal ailment has its own specific cause and cure, or impossibility of curing. The medicinal treatments involve acupuncture, plasters, herbs, roots, crushed bone, excreta, potions, incantations and numerous other elements. It is a very complex system. When a Tibetan needs medical aid, he must first seek out a lama, present him with a scarf and a gift, and have this lama (who is not a doctor) cast the dice. The dice reveal the portion of the canon that contains reference to the manpa who is needed. The manpa, or specialist, may turn out to be a Christian medical missionary who has been successful in effecting cures (cf. Rijnhart, pp. 163-64). Sometimes there may be some suspicion of fee-splitting. Generally the prescriptions and treatment bear little relation to our own medical knowledge. However, the Tibetans are pragmatists and will seek their cures from those who have established a reputation for success, be they Westerners, Tibetan Buddhist or Bon doctors, or any others. Wherever Western medical science has filtered through, few Tibetans hesitate to make use of it, often simultaneously with their own. Mongol medical science is derived from the Tibetan Buddhist sources. However, more particular Mongol data on health and sanitation can be found in the IMAR Handbook.

III. The Chinese

A. The Diet of the Chinese

The Chinese diet does not contain milk or any milk products. The usual beverage is tea. The principal animals raised for food are pigs, chickens and ducks. In the Northwest, however, mutton has become a very common dish. The Moslems substitute beef for pork. In the Northwest the main grain products are wheat and millet. Rice is also eaten in abundance, being brought generally from southern and central China. Most proteins are derived from soybeans, peanuts and sweet potatoes. The food prepared for special feasts, and the kind eaten by the upper classes, differs considerably from the average Chinese meal, consisting of at least four-fifths meat, fish or fowl. The Chinese method of cooking preserves the vitamins contained in the vegetables, since they are never permitted to linger over the fire or in water.

B. Chinese Concepts of Disease

Most of the people do not know the different values of the various food products. Although many might wish to improve their daily diet with more meats and fish, they cannot afford to do so. The people in general, and particularly in the Northwest, have no

751

751 PREVENTIVE MEDICINE--conception of health and hygiene; health regimen; protective measures (e.g., sun tan lotion, amulets, charms, spells, prophylaxis, immunization); etc. See also:

/The Tibetans/

are arranged for guests. Barley is spread on the ground, sweets and fruits on a low table. The bride, fully dressed, is led in to sit between her parents. The family returns the courtesy of friends and relatives by giving them katags. Then the bride rides a horse or walks to her new home, accompanied by relatives of both families. The newlyweds sit together to go through the formality of a meal with wine and meat, then receive congratulations and katags from the guests. The katags given by elders are worn around the neck; those from persons of equal status are slipped inside the robe.

When the ceremony is complete, the husband entertains with a feast. Guests customarily take home meat or sweets after they have eaten their fill. On the following day, members of both families dress in their best and go for an outing. They visit the monasteries, but do not enter. The celebration usually lasts for three days, with feasting, drinking, singing and dancing.

The birth of a child is celebrated with a small party on the third day. Though girls are not ill-received, boys are generally preferred. The moment a child is born, a very small quantity of barley flour mixed with butter is put into his mouth to make him strong and tough. A tiny piece of butter is placed on the vein of his crown to protect him from the wind, which, according to Tibetan doctors, is responsible for one-third of all human ailments. A thick solution of butter is given to the mother for the same purpose. Tibetan women prefer to nurse their own babies.

The child receives a name when it is one month old. The name may be given by the parent, but preferably by a high lama. With a few exceptions there seems to be no distinction between names for males and females. High lamas always give their own names to children as a blessing. It is often on the name-giving day that a baby is taken on its first outing, to a temple to give offerings to Buddha. Birthdays are not ordinarily celebrated.

"Feeding the birds" is a common form of burial in nomadic areas of Tibet. The corpse is taken out for the vultures to eat, the idea being that the deceased then rises to heaven in the stomachs of the birds.

When a person falls ill, the lamas are summoned to chant sutras to drive away the evil spirits. If it appears that the patient has no chance of recovery, the lamas are asked to chant sutras to assist him to be born again in the "land of purity." Before the patient draws his last breath, he is bound into a bundle, and as soon as he is dead he is placed in a corner of the tent by the entrance. Butter lamps and offerings are placed beside him, and lamas keep vigil day and night, chanting incessant prayers.

Funeral rites are held on the third day after death. Women are not permitted to attend.

HEALTH AND SANITATION

I. Introduction

For the purposes of this section the region has been divided into three groups: (1) the Turkic people of Sinkiang (including the Eastern Turks, Kirghiz and Kazakhs), (2) the Tibetans of Chinghai and (3) the Chinese of the Northwest (including both Hans and Moslems).

Measured by Western standards, the area as a whole lacks most modern facilities for maintaining high standards of health and sanitation. The shortage of trained personnel in the fields of medicine, dentistry and nursing is quite acute. These conditions may be due partly to the geographical location of the area, being in the deep hinterland, away from the center of China, and generally lacking a sufficient water supply. The common man's ignorance of the basic facts of health and sanitation contributes greatly to the spread of disease and to the lack of precautionary measures against the occurrence of certain diseases.

However, the local population, while living under what we consider unsanitary conditions, has built immunities to many diseases, to which a Westerner, living under the same conditions, would easily succumb. Some habits that we consider dangerous in spreading disease may actually be without any harmful consequences to the local people.

II. The Turkic Peoples of Sinkiang

A. The Diet of the Turkic People

The daily diet of the sedentary Eastern Turkis consists mostly of mutton and rice, with vegetables, both boiled and fried, including onions, potatoes, turnips, carrots and spinach, many forms of soups, and pilaus. Tea is the staple beverage, served with sugar and without milk. Bread, in the shape of circular rolls indented at the top, constitutes an important item in the diet. A variety of fruits, including melons, apples, pears, apricots, peaches, nectarines, pomegranates, plums, cherries, and mulberries, grow in profusion in Turkestan and are abundant during the summer.

The common people eat only twice during the day; in the morning and in the evening. The wealthy people frequently have feasts and eat a great abundance and variety of foods. Many of them suffer from abnormal obesity as a result of overeating and lack of exercise. A common proverb in Sinkiang warning against the folly of this type of behavior is the following, "He who eats sparingly eats ten times, but he who eats too much eats but once."

The diet of the Kirghiz and the Kazakhs, the nomadic Turks, differs somewhat from that of the sedentary Eastern Turks. Their diet is composed mainly of milk and mutton. From flour and

*563 262 on special occasions, enjoy many Chinese dishes, or Tibetan adaptations of them. One of the most popular dishes is a sort of steamed dumpling stuffed with meat. Another is whole mutton, [273] semi-raw or roasted and eaten off the bone. A favorite beverage is a mildly fermented beer of barley or other grain. A more spirituous liquor is also widely appreciated.

Vegetables are scarce and usually are purchased from the Chinese or Chinese Moslems on the Sino-Tibetan border. At that they are limited mostly to potatoes and onions. The nomadic Tibetans have little fondness for green vegetables and accept them to a lesser extent than do the sedentary groups.

*563 164 B. The Predominant Diseases Among the Tibetans

The most common diseases include the venereal diseases, stomach and intestinal disorders, rheumatism, eye and skin diseases and tuberculosis. Perhaps because of the cold climate, the high altitude and the consequent absence of flies, and the use of animal manure instead of night-soil for fertilizing the fields, cholera, typhoid and similar excrement-borne diseases are rare.

The incidence of some diseases seems correlated to whether the people are nomadic or sedentary. For example, Ekvall (1939) reports a higher incidence of syphillis among the agricultural Tibetans, and a somewhat higher gonorrhea rate among the nomads. Leprosy is practically unknown among the nomads but is very common among the farmers. One can infer that rheumatism would be more frequent among the nomads than among the farmers because of the former's greater exposure to chills and dampness. In common with other Tibetans and peoples of the inland areas whose supply of salt is from Tibet's salt lakes, goiters are prevalent. The digestive ailments may be attributed to the frequent inclusion of foreign matter, such as sheep wool or yak hair, in the food, and also to some of the methods used in food preparation. The eye ailments, can be traced in part to the venereal disease rates, in part to the hazards of wind, dust, smoke, and snow-glare on the high plateaus. The skin troubles may be traceable to the customs of rarely washing more than the hands and face, of never completely removing one's clothes, and the numerous population that shares the sheepskin garment with its human host.

Other health hazards among the Tibetans include infections of accidental and non-accidental wounds (many a child has suffered severe burns) incurred in raids. The Tibetans seem to have an extremely low resistance to epidemic diseases such as smallpox, scarlet fever and influenza. Ekvall reports that the Tibetans even [751] suffered violent reactions to vaccination, quite out of proportion to their neighbors, the Chinese and Chinese Moslems. However, [758] this low resistance is accompanied by a high fear of these infections. The tradition of strict quarantine, even to the point of

/Tibetans of Chingahi/

gories and the apportionment of the traditional Buddhist 404 is not standardized.) There are further breakdowns of what might go wrong with what aspects of the human body and the human mind or spirit, to the point where each infinitesimal ailment has its own specific cause and cure, or impossibility of curing. The medicinal treatments involve acupuncture, plasters, herbs, roots, crushed bone, excreta, potions, incantations and numerous other elements. It is a very complex system. When a Tibetan needs medical aid, he must first seek out a lama, present him with a scarf and a gift, and have this lama (who is not a doctor) cast the dice. The dice reveal the portion of the canon that contains reference to the manpa who is needed. The manpa, or specialist, may turn out to be a Christian medical missionary who has been successful in effecting cures (cf. Rijnhart, pp. 163-64). Sometimes there may be some suspicion of fee-splitting. Generally the prescriptions and treatment bear little relation to our own medical knowledge. However, the Tibetans are pragmatists and will seek their cures from those who have established a reputation for success, be they Westerners, Tibetan Buddhist or Bon doctors, or any others. Wherever Western medical science has filtered through, few Tibetans hesitate to make use of it, often simultaneously with their own. Mongol medical science is derived from the Tibetan Buddhist sources. However, more particular Mongol data on health and sanitation can be found in the IMAR Handbook.

III. The Chinese

A. The Diet of the Chinese

The Chinese diet does not contain milk or any milk products. The usual beverage is tea. The principal animals raised for food are pigs, chickens and ducks. In the Northwest, however, mutton has become a very common dish. The Moslems substitute beef for pork. In the Northwest the main grain products are wheat and millet. Rice is also eaten in abundance, being brought generally from southern and central China. Most proteins are derived from soybeans, peanuts and sweet potatoes. The food prepared for special feasts, and the kind eaten by the upper classes, differs considerably from the average Chinese meal, consisting of at least four-fifths meat, fish or fowl. The Chinese method of cooking preserves the vitamins contained in the vegetables, since they are never permitted to linger over the fire or in water.

B. Chinese Concepts of Disease

Most of the people do not know the different values of the various food products. Although many might wish to improve their daily diet with more meats and fish, they cannot afford to do so. The people in general, and particularly in the Northwest, have no

/The Chinese/

knowledge of sanitation and elementary health regulations. Their concepts of health and disease rest mainly on the traditional beliefs. The concept that dominates most of their thinking about the human body and its health is that of the Two Principles of yang and yin. These are philosophical concepts of the origin of all things. The yang principle represents the male and the yin represents the female. They stand for opposite poles - heaven and earth, sun and moon, day and night, heat and cold, life and death, positive and negative, strong and weak.

In medicine, everything is classified as yang or yin. The exterior of the body - the skin - is yang, while the interior is yin. The back is yang, while the abdomen is yin. The heart and liver are yang while the spleen, lungs and kidneys are yin. A disease, accordingly, is yang when due to external causes and yin when due to internal causes. Respiratory diseases, fever, and diseases affecting the upper part of the body are yang diseases. Chills and afflictions of the lower body, and circulatory diseases are yin diseases. When the yin predominates, one suffers from yang disease; when the yang is in excess yin results. These two principles must be kept in mind when treating the disease, since the drugs and herbs are also divided into these two classes.

Another Chinese concept concerning health is that of the existence of the Five Elements - metal, wood, water, fire and earth. According to this belief, the human body is composed of a mixture of the five elements. So long as the proportions of these five elements remain in order, health results. If the balance is disturbed, disease follows.

These beliefs are common mainly among the uneducated population, the rural and the lower classes of the urban population. In most cases, the higher classes have a Western knowledge of the basic elements of health and sanitation and know the basic facts of human physiology and the causes of transmission of diseases. Illiteracy and ignorance is much greater in the Northwest region than along the Pacific Coast. Thus, in the Northwest, the beliefs are widespread and most Western ideas have not penetrated into the larger part of the population.

Unfortunately, we do not have figures on the birth and death rate in Northwest China. The figures for all of China are given in the chapter on "Health and Sanitation" of the General China Handbook.

C. Predominant Diseases Among the Chinese

The most common diseases are the fecal-borne ones. They are spread through the use of human waste as fertilizer. Andre Migot, who travelled through Northwest China in 1946, dwells on this problem in his description of a typical middle-sized town in this area (Tibetan Marches, p. 51): "Then there is the problem of sanitation. The total volume of human excrement produced every day

753

753 THEORY OF DISEASE--extent of the attribution of disease to natural causes, to sorcery, and to supernatural aggression; prevalent theories of the supernatural causation of disease (e.g., soul loss, spirit possession, object intrusion, poison, evil eye, violation of taboos, pollution or contagion); special notions about loathsome diseases (e.g., leprosy); scientific theories of disease (e.g., transmission through germs); etc. See also:

abandonment of the sick, is very strong, and to some extent helps limit the spread of contagious disease. (Cf. also Rijnhart, 1902).

The Tibetans are apt to attribute diseases to spirits, such as the sa-ndre, (earth-spirits), demons and wrongdoing in this or previous lives. The sa-ndre are especially feared, because they afflict those who disturb the ground with leprosy; hence, the high incidence of that dread disease among the farmers and its absence among the nomads. Demons or devils are the sources of the epidemic diseases and the reason for the imposition of the strict quarantine of their victims. Like their diseases the devils are highly contagious. But, except for these ailments that have known causes, the Tibetan will consult a doctor or someone whose home remedies have proved successful. Under the latter category would be included the various Christian missionaries and explorers, traders, etc., who frequented Chinghai.

C. The Local Doctors

"...the treatment given by the native doctors generally means an increase of agony to the sufferer. For headaches large sticking plaster are applied to the patient's head and forehead; for rheumatics often a needle is buried in the arm or shoulder; a tooth is extracted by tying a rope to it and jerking it out...; a sufferer with stomach-ache may be subjected to a good pounding, or to the application of a piece of wick soaked in burning butter grease; or if medicine is to be taken internally it will consist probably of a piece of paper on which a prayer is written, rolled up into the form of a pellet, and if this fails to produce the desired effect another pellet is administered, composed of the bones of some pious priest." (Rijnhart, 1902, p. 34).

Actually, Tibetan medical science is one of the ten major subjects that, according to Buddhist classification, constitute the whole of human knowledge. One of the nation's main medical schools is located near Lhasa. Some of the major academic monasteries also have medical schools and the person with the title of manpa (sman-pa, doctor) is respected as highly learned. The medical lore that is studied is that of ancient India. It is primarily scientific, in that it is based on rational explanations of physiology and pathology. The religious aspects are superficial additions that do not affect too seriously the basically scientific approach. There are different categories of disease apportioned according to whether the sickness is the result of something wrong in this life, in the previous life, or a combination of previous lives and the present; whether the patient is male, female, child or desexed. Then there are afflictions common to all regardless of sex or age. These number 404 categories, 101 being attributed to each of the four major elements, organs or vices, depending upon the interpretation. (The original Brahmanical medicine had only 101 cate-

are arranged for guests. Barley is spread on the ground, sweets and fruits on a low table. The bride, fully dressed, is led in to sit between her parents. The family returns the courtesy of friends and relatives by giving them katags. Then the bride rides a horse or walks to her new home, accompanied by relatives of both families. The newlyweds sit together to go through the formality of a meal with wine and meat, then receive congratulations and katags from the guests. The katags given by elders are worn around the neck; those from persons of equal status are slipped inside the robe.

When the ceremony is complete, the husband entertains with a feast. Guests customarily take home meat or sweets after they have eaten their fill. On the following day, members of both families dress in their best and go for an outing. They visit the monasteries, but do not enter. The celebration usually lasts for three days, with feasting, drinking, singing and dancing.

The birth of a child is celebrated with a small party on the third day. Though girls are not ill-received, boys are generally preferred. The moment a child is born, a very small quantity of barley flour mixed with butter is put into his mouth to make him strong and tough. A tiny piece of butter is placed on the vein of his crown to protect him from the wind, which, according to Tibetan doctors, is responsible for one-third of all human ailments. A thick solution of butter is given to the mother for the same purpose. Tibetan women prefer to nurse their own babies.

The child receives a name when it is one month old. The name may be given by the parent, but preferably by a high lama. With a few exceptions there seems to be no distinction between names for males and females. High lamas always give their own names to children as a blessing. It is often on the name-giving day that a baby is taken on its first outing, to a temple to give offerings to Buddha. Birthdays are not ordinarily celebrated.

"Feeding the birds" is a common form of burial in nomadic areas of Tibet. The corpse is taken out for the vultures to eat, the idea being that the deceased then rises to heaven in the stomachs of the birds.

When a person falls ill, the lamas are summoned to chant sutras to drive away the evil spirits. If it appears that the patient has no chance of recovery, the lamas are asked to chant sutras to assist him to be born again in the "land of purity." Before the patient draws his last breath, he is bound into a bundle, and as soon as he is dead he is placed in a corner of the tent by the entrance. Butter lamps and offerings are placed beside him, and lamas keep vigil day and night, chanting incessant prayers.

Funeral rites are held on the third day after death. Women are not permitted to attend.

/The Tibetans/

N *563 764 [534] are not permitted to attend. The body is carried by friends and relatives to the customary spot, and on the way, those in the procession blow whistles to attract the vultures. The clothes are removed from the corpse, and one of the men slits open the chest and belly to attract the birds. After they have eaten these areas, the birds are driven away and a man cuts the flesh from the bones and places the small pieces on the ground. The birds eat it. When only the skeleton is left, the mourners crush the bones with rocks so the birds can eat them. When nothing remains the mourners are satisfied. The deceased has been proved a worthy person.

N *563 *755 4. Popular beliefs

When a person falls ill, a doll of clay is made to resemble him and dressed in similar clothes. The sick person's name is written on the doll, and it is thrown out onto the steppe. It is N [716] believed that the chiktur (evil spirit) will find the doll (khuner dzolik) and be deceived into thinking the sick person has died. He will then leave the patient in peace.

N *563 789 Tibetans are great believers in fortune telling. One way to learn one's fortune is to give his date of birth to a fortune teller, usually a lama, who will consult his rosaries and then advise on such matters as the best days for going on a pilgrimage, the possibilities of getting a job, or the advisability of starting a business.

Another way is to whisper one's thoughts to a wooden fire poker, then secretly place it near someone. The fortune can be deduced from the conversation of that person.

A professional fortune teller asks his customer to place his hand in a sleeve, then tells his fortune from the finger joints. The third joint of the index finger means lion, the third joint of the middle finger, wolf. Both these joints may indicate a journey. The first joint of the index finger means mountain, which is interpreted as continuous living in the same place.

N *563 533 5. Recreation

The Tibetans have no form of organized amusement or recreation, but they love to sing. The young sing mostly love songs, which are composed spontaneously as they are sung. They have religious songs in praise of Buddha. They even express congratulations and good wishes in song.

S 563 181 H. The Western Mongols or Torguts

Values and customs of the Western Mongols are based on the same traditions as those of the Eastern Mongols (See IMAR Handbook). Some differences exist, however, that are worthy of discussion:

000 The Torguts are noted for their courage and warlike character, but they are a friendly, good-humored, helpful people. As

RELIGION

I. Historical Background of the Religions of Inner Asia

791 795 Various religions have been strong in the Northwest, among them Shamanism, Buddhism, Nestorianism, Manichaeism, Confucianism, Taoism and Islam. The latter is the predominant religion among the Turks and the Dungans. Buddhism is the religion of the Mongols, Mongours, Shira Yögür and Tibetans. Nestorianism and Manichaeism have become extinct, but Confucianism and Taoism are still alive in Chinese communities (see China Handbook).

791 A. Shamanism

* 756 Shamanism is a pagan faith based upon concepts of demons and spirits, with whom the Shaman, or priest, attempts to maintain contact by either sending his soul to them or receiving them into his own soul. The Shaman usually functions in a self-induced trance, produced by taking alcholic beverages, toadstool powder, et cetera. A high percentage of Shamans suffer from various neuroses, severe forms of hysteria, or epilepsy, and the selection of a new Shaman may be based upon such manifestations of a deviant personality. Sometimes, however, the position of Shaman is hereditary.

756 The Shaman is regarded as a mediator between man and the supernatural. He exercises his magic powers for such purposes as healing, rain-making, success in hunting, prevention of accidents, and divination. In central Asia, the common methods of divination are by the flight of birds and by scapulimancy, or interpretation of cracks on the shoulderblade of a sheep which has been treated over a fire. While functioning in his supernatural capacity, the Shaman wears a distinctive dress, usually a long robe decorated with metal discs, small bells and the claws of the totem birds.

The training of a Shaman is long and involved, and he usually does not reach full professional status until the age of forty or fifty. Shamanists have no ecclesiastical organization, but rank Shamans on the basis of their success in dealing with the supernatural.

756 Besides the various ghosts, ancestral and animal spirits and 779 other lesser supernatural beings, the Shamanists recognise a supreme being, the Tengri, who is the universe personified, God and heaven. He is the fountain of life, as he gives man his 787 soul, and the fate of all peoples depends upon him. The Altaic 776 people believe that the Tengri observes all and everything; no

791 796 one can hide from his all-seeing eyes, nor flee his judgment.

791 795 This was the autochthonous religion of the Central Asiatic steppe regions. It has been proved that Shamanism appeared among the Hsiung-nu of the third century B.C., as a cult idol-791 izing heaven and certain holy mountains. The T'u-ch'üeh of the * [756] sixth century A.D. worshipped the originator of heaven and earth as their highest god, and sacrificed horses, cattle and sheep to him. This ancient so-called Tengri cult looks upon the world as a construction of layers. The upper seventeen layers form the realm of heaven, the world of light, and in the uppermost layer resides the Supreme Being, whom heaven and earth must obey. The lower seventh to ninth layers constitute the world of darkness, the place of damnation for sinners. Virtuous souls, on the other hand, are received into the world of light. Between these upper and lower realms is the world of the living.

Turkic mythology tells of a child-protecting diety, Umai, and 776 good genii who populate the soil and water (yer-sub), especially 791 fountains and mountains, holy places (idug). This cult became 791 legalized and later was regulated by the Jassa (code) of Chingis Khan. The veneration and adoration of air and water played an important role, and was a distinctive phenomenon. For this reason, the Jassa forbade the Islamic ritual washings of body and clothes except in certain cases. Priests prophesied the future. The Kül Tegin inscriptions (one of the oldest Turkic runic written monuments) reflect the Turco-Mongolian cosmogeny and the concept of morality: The order of heaven is the subjecting and peaceful ordering of the peoples of the "four corners of the earth."

791 This same Tengri cult was carried to Europe by the Chazars 795 and Avars. The Shamanism of the latter is evident in the prac-791 tices handed down to posterity by Theophylaktos Simokatta, a Byzantinian historiographer of the seventh century. In China, which was conquered by the Ju-chen in the twelfth century A.D., a large part of the influence of the Ju-chen statesman, Wan-yen Wu-shih, was due to his Shamanistic "brotherhood."

More precise information about the Mongols' religious con-791 cepts prior to the thirteenth century is not available. Even in 795 later times, Mongol Shamanism remained essentially unchanged 791 and the major religions had only a negligible influence upon it. 756 Mongols hide from thunder, they are careful to avoid muddy streams and springs, which are believed to be inhabited by spirits, and they take refuge on holy mountains. According to Islamic writers and Nestorian missionaries, the object of such ascents is to come nearer to Tengri. Doffing the cap and belt is a sign of humility before the omnipotence of Tengri. Thus, when he was pursued by the Merkits, the young Chingis Khan fled to Burkhan Khaldun, an especially holy mountain today called

Ken-tai, on the headwaters of the Onon River, and there implored Tengri for grace and mercy. According to Vladimirzov, the name "Chingis Khan" should be traced back to Chinggiz, the god of light. His elevation and promotion to the position of Great Khan (Khagan) of all the Turko-Mongol peoples of Central Asia was confirmed by religious omens, circumstances and conditions. For example, there was Mu-kua-li's prediction that a revenging hero would be chosen (Chingis Khan) in the same place (Kharaqorum) in which the last Mongol received the title of Khan, i.e., "receiver (recipient) of the mandate of the blue heaven." The superstitiously feared Shaman, Kökču, could ride his dapple-gray horse into the heavens and converse with the spirits. It was he who announced to the assembly (Qurultai) empowered with making the decision that the "eternal blue heavens" had ordained Chingis Khan as Khagan of the world, and that, henceforth, he would be known as "Khagan through the eternal heavens." Even the Mongol banner of the nine yak tails, which is the symbol of the house of the spirit of the "golden chains" (altan uruq), expressed the religious mission of conquering the world. Later Chingis Khan had Kökču, as well as his own blood brother, Jamuga, murdered. The deed was accomplished, however, without the spilling of blood, because, accor ling to Shamanism, the soul resides in the blood. Before starting out on the decisive campaign against North China, Chingis Khan remained in his tent for three days with his belt loosened. When he emerged on the fourth day, he proclaimed to the worshipping people that Tengri had accorded victory to him.

Chingis Khan and all his successors were Tengri's representatives on earth; their command was his command; rebellion against them was rebellion against him. When Güyük prepared to invite the Pope through his emissary, John of Plano Carpini, he called upon heaven (as highest representation of divinity and as the arbitrator among all religions) to bear witness to his divine power.

The worship of Tengri did not rule out attempts by the Mongols to placate other representations of the godhead. This wish for double insurance led to the lenient and favorable treatment accorded to the priests of foreign religions and to the famous Mongol tolerance. After a thousand-year process of penetration, Shamanism was finally overcome by the major religions of the bordering states. It is, however, still alive among the Tungus tribes of Manchuria and the Inner Mongolian Autonomous Region, among the Alashan Mongols, among the Tibetans of South Chinghai and finally, among those Turks who live in the mountainous regions of Sinkiang. It is noteworthy that, to a certain degree, Shamanism is compatible with Islam and Buddhism.

757

757 MEDICAL THERAPY--extent of differentiation of medical from magical and mental therapy; home remedies and self-medication; resorting to a specialized practitioner (e.g., circumstances, arrangements, payments); diagnosis (e.g., examination for symptoms, diagnostic aids); consultations; therapeutic principles (e.g., counterirritation, homeopathy); therapeutic methods (e.g., bloodletting, administration of cathartics and emetics, medication); prescribed regimen (e.g., rest, diet, isolation); remedies for specific complaints (e.g., fevers, colds, toothache, indigestion, rheumatism, infectious diseases); etc. See also:

*563 262 on special occasions, enjoy many Chinese dishes, or Tibetan adaptations of them. One of the most popular dishes is a sort of steamed dumpling stuffed with meat. Another is whole mutton, [203] semi-raw or roasted and eaten off the bone. A favorite beverage is a mildly fermented beer of barley or other grain. A more spirituous liquor is also widely appreciated.

Vegetables are scarce and usually are purchased from the Chinese or Chinese Moslems on the Sino-Tibetan border. At that they are limited mostly to potatoes and onions. The nomadic Tibetans have little fondness for green vegetables and accept them to a lesser extent than do the sedentary groups.

*563 164 B. The Predominant Diseases Among the Tibetans

The most common diseases include the venereal diseases, stomach and intestinal disorders, rheumatism, eye and skin diseases and tuberculosis. Perhaps because of the cold climate, the high altitude and the consequent absence of flies, and the use of animal manure instead of night-soil for fertilizing the fields, cholera, typhoid and similar excrement-borne diseases are rare.

The incidence of some diseases seems correlated to whether the people are nomadic or sedentary. For example, Ekvall (1939) reports a higher incidence of syphillis among the agricultural Tibetans, and a somewhat higher gonorrhea rate among the nomads. Leprosy is practically unknown among the nomads but is very common among the farmers. One can infer that rheumatism would be more frequent among the nomads than among the farmers because of the former's greater exposure to chills and dampness. In common with other Tibetans and peoples of the inland areas whose supply of salt is from Tibet's salt lakes, goiters are prevalent. The digestive ailments may be attributed to the frequent inclusion of foreign matter, such as sheep wool or yak hair, in the food, and also to some of the methods used in food preparation. The eye ailments, can be traced in part to the venereal disease rates, in part to the hazards of wind, dust, smoke, and snow-glare on the high plateaus. The skin troubles may be traceable to the customs of rarely washing more than the hands and face, of never completely removing one's clothes, and the numerous population that shares the sheepskin garment with its human host.

Other health hazards among the Tibetans include infections of accidental and non-accidental wounds (many a child has suffered severe burns) incurred in raids. The Tibetans seem to have an extremely low resistance to epidemic diseases such as smallpox, scarlet fever and influenza. Ekvall reports that the Tibetans even [751] suffered violent reactions to vaccination, quite out of proportion to their neighbors, the Chinese and Chinese Moslems. However, * [758] this low resistance is accompanied by a high fear of these infections. The tradition of strict quarantine, even to the point of

*563 164 abandonment of the sick, is very strong, and to some extent helps limit the spread of contagious disease. (Cf. also Rijnhart, 1902).

* [758] The Tibetans are apt to attribute diseases to spirits, such as *563 the sa-ndre, (earth-spirits), demons and wrongdoing in this or 164 previous lives. The sa-ndre are especially feared, because they 753 afflict those who disturb the ground with leprosy; hence, the high 776 incidence of that dread disease among the farmers and its absence among the nomads. Demons or devils are the sources of the epidemic diseases and the reason for the imposition of the strict quarantine of their victims. Like their diseases the devils are highly contagious. But, except for these ailments that have known [759] causes, the Tibetan will consult a doctor or someone whose home remedies have proved successful. Under the latter category would be included the various Christian missionaries and explorers, traders, etc., who frequented Chinghai.

759 C. The Local Doctors

757 "...the treatment given by the native doctors generally means an increase of agony to the sufferer. For headaches large sticking *563 plaster are applied to the patient's head and forehead; for rheumatics often a needle is buried in the arm or shoulder; a tooth is extracted by tying a rope to it and jerking it out...; a sufferer with stomach-ache may be subjected to a good pounding, or to the application of a piece of wick soaked in burning butter grease; or if medicine is to be taken internally it will consist probably of a piece of paper on which a prayer is written, rolled up into the form of a pellet, and if this fails to produce the desired effect another pellet is administered, composed of the bones of some pious priest." (Rijnhart, 1902, p. 34).

75 Actually, Tibetan medical science is one of the ten major *563 subjects that, according to Buddhist classification, constitute the whole of human knowledge. One of the nation's main medical schools is located near Lhasa. Some of the major academic monasteries also have medical schools and the person with the title of manpa (sman-pa, doctor) is respected as highly learned. The medical lore that is studied is that of ancient India. It is primarily scientific, in that it is based on rational explanations of physiology and pathology. The religious aspects are superficial additions that do not affect too seriously the basically scientific approach. There are different categories of disease apportioned according to whether the sickness is the result of something wrong in this life, in the previous life, or a combination of previous lives and the present; whether the patient is male, female, child or desexed. Then there are afflictions common to all regardless of sex or age. These number 404 categories, 101 being attributed to each of the four major elements, organs or vices, depending upon the interpretation. (The original Brahmanical medicine had only 101 cate-

These number 404 categories, 101 being attributed to each of the four major elements, organs or vices, depending upon the interpretation. (The original Brahmanical medicine had only 101 cate-

846 The position of women is probably most clearly expressed in the fact that for forty days after a woman has given birth she is considered unclean. She may not leave her hut for ten days and may not even sit out in her yard, for she is unworthy for the sun to shine upon. During the first ten days even the husband is considered impure and may not associate with anyone. If he is a shopkeeper, custom forces him to close his shop during this interval or, if he does not wish to do this, to hire a substitute for this period, /242/ but he himself may not enter his shop or his place of business. For this reason many Chinese husbands quickly set out on a journey when a birth in the family is imminent, in order to avoid the suspicion of uncleanness.

764 Only a few days after my return from the Gum bum monastery my landlord in whose spacious buildings I had rented the third and last courtyard with its adjoining small house, died. His body was laid out for the next few days directly in front of my separate courtyard entrance, and there all the various funeral ceremonies took place so that I could view the entire proceeding at leisure. The [609] family of the deceased had immigrated only a few generations before from Shensi, and so they were still considered strangers, they came from "down below," as the people of Hsining say. Thus, there were not many relatives and the family was not wealthy, so that everything was relatively simple and was done as quickly as possible. Nevertheless, according to our conceptions the ceremoniousness was tremendous.

●763 The man had reached a ripe old age and had then died very quickly. But his relatives had succeeded in observing the etiquette of putting on his shroud, a long, padded silk gown, while he was still alive and also in moving him from his bed beside the stove onto a small bench and laying him out in the center room of the main house, so that his soul might more easily find its way out into the open. Thus, at the very last minute his sons had proved themselves pious children. Immediately after the man died money 764 775 was placed in his mouth, so that he should not be mute when reborn, but he was neither washed nor were his eyelids closed. During the first few days he lay in the death chamber as though he had been forgotten, and the doors and windows of the room were wide open. All I heard during the day was the man's name being called and the words "father" and "grandfather," and on the first evening a long train of Taoist priests set out from the house, bearing many lanterns, and gongs, triangles and drums through the streets of the

*563 621 631 must have had few, if any, effects upon everyday life, or the village units would not have been so important in the local administrative system. The very common pattern of market-town surrounded by
*563 361 632 443 farm villages exists in the Northwest. Like those in China Proper, the Northwest market towns are the outgrowth of those villages which are situated on main roads or at strategic points. The market towns fill the same kind of social, economic and cultural roles here as they do in other parts of the country.

*563 621 In areas where both Chinese and Chinese-speaking Moslem farmers live, there are three types of rural communities. The first includes the all-Chinese villages which greatly resemble the villages in North China. From twenty to thirty families constitute the average population in these villages. When some pecu- [443] liar quality, such as its location on a well-travelled road, makes a [632] village acceptable to an entire district, it becomes a market town. Eventually it may grow to the proportions of a city. Whenever the village grows so large that those whose fields lie on the periphery can no longer go back and forth each day, it begins to break up. The families with the very distant fields become the nucleus of a new settlement.

*563 621 791 In a Chinese village communal life is exhibited in several ways. One is by religious observance, particularly the conduct of the ritual connected with ancestor-worship and veneration of the past. At stated times throughout the year - especially at the New Year, and during the second, fifth, and eighth moons - festivals honoring certain deities or commemorating religious events are held. Such a festival is always a communal matter. All contribute money for [794] the furnishing of trappings proper to the affair, some are concerned with organizing the celebration, others carry images in the procession, and still others collaborate with the priests, - Buddhist or Taoist, - in the performance of the various ceremonies. Such religious festivals are not altogether a matter of the calendar, for additional services are often held in times of drought or other community disasters.

*563 545 621 The village or community theatrical is another communal activity. Generally the plays are given for the enjoyment of the people. The entire community shares the responsibilities and enjoys the fun.
*563 621 769 [764] In small Chinese hamlets in the Northwest even a funeral is very much a community affairs. Virtually everyone has a part in the mourning, feasting, burying, and attendant religious activities. Also annually in early spring during the feast of Ch'ing-ming, the Chinese in the Northwest, as in other parts of China, decorate the graves, make various offerings of food and drink, burn paper money and incense, and bewail the dead. The graveyards are not necessarily communal, but Ch'ing-ming is observed universally and no one can abstain from participation without arousing comment

/Chinese Moslems (Dungans)/

the other. Then he turns over any seven pages of the Koran, and from the seventh word of the seventh line of the seventh page, takes the name. When a male child reaches his seventh birthday he is circumcised and taught to worship.

c. Marriage

The marriage customs of the Chinese Moslems, with the exception of the wedding ceremony itself, are the same as those of the Chinese. The bridegroom is accompanied by his father to the bride's home, where the ceremony is performed. The Ahung reads from the Koran, in a manner similar to that of the Christian marriage service, then asks the couple whether they agree to the union.

In Koko Nor (Chinghai) the bride is customarily covered with a piece of red cloth after the ceremony, then lifted by her uncle or brother into the sedan chair and sent to the groom's home. Upon arriving there she is lifted out by her relatives. She wears a veil on the first day and hides in her chamber while relatives and guests sing, dance and feast in celebration. On the second day she receives guests, bowing to each one. Meanwhile the guests present their gifts and congratulations.

Exogamic marriage is permissable to the extent that a man may marry a Han Chinese woman, who is supposed by marriage to become a Moslem. Before such a marriage the girl must submit to elaborate purification ceremonies to cleanse her from the defilement of her own home. The Ahung officiates at the wedding and the Chinese custom of worshiping heaven and earth is not performed.

d. Funeral and burial

The funeral customs of the Chinese Moslems are more distinct from those of the Chinese. The dead body is washed ceremoniously by religious leaders from the mosque, who take the garments of the deceased for themselves. The body is then swathed in white bandages, each limb being bandaged separately. Correct performance of this rite is very important. Well-to-do people sprinkle incense on the cloth used for bandages. The wealthy also place large quantities of musk and camphor in the grave. The corpse is placed upon a board under which are the bands necessary for lowering it into the grave, then covered with a bottomless coffin for the trip to the cemetery. The coffin is never interred. The corpse is placed in the grave with head to the north, feet to the south and face toward Mecca.

When the deceased is a woman, only members of the family may look on when the coffin is removed, and only blood relatives, preferably sons, may descend into the grave to arrange the body.

There are elaborate instructions concerning death. Rituals include the recitation of prayers as death approaches, the

/Chinese Moslems (Dungans)/

making of a will, the giving of alms, rites at the grave, and the recitation of prayers and giving of alms on certain days after death, and on the first, second and third anniversaries.

The Moslems have their own burial grounds. The mounds raised over the graves are rectangular, not round as in the case of the Chinese. The top of the filled grave must be at least five inches (half a Chinese foot) above the surrounding earth, lest the location be forgotten. A stone may be erected in front of the grave, but the name of the deceased may not be engraved upon it.

e. Festivals and holidays

Many of the religious festivals are more pagan than Moslem, especially those which are seasonal and therefore not connected with the Moslem calendar. Their celebrations are merely popular gatherings for feasting and enjoyment.

The Moslem New Year (Yengi Yil) celebrates the breaking of the Ramadan fast. The festival takes place during the first three days of the tenth month by the Moslem calendar. Special services are held in the mosques. The people bathe and dress in their best clothes. It is a time of greeting, well-wishing, feasting, visiting and gift-giving. For the Moslems and the Chinese alike, the New Year celebration is the greatest holiday of the year.

5. Present day conditions

According to a speech delivered by Burkhan, chairman of the Preparatory Committee of the China Islamic Association, at the Conference of the Asian and Pacific Regions, on October 18, 1952, the Islam religion as well as the customs and habits of its followers are fully respected by the Communist regime. Chinese Moslems are free to practice their faith without interference. It is also said that official circulars from Peking have ordered the people to continue the observance of their important festivals. The tax on the slaughter of cattle for Moslem consumption is abolished, and official holidays are granted on Moslem holidays.

In accordance with the Agrarian Reform Law, the mosques may retain their land holdings if the local populace so desire. It is also reported that when the land reform movement was carried out in the Northwest, the land of the mosques was in most cases left untouched. There was also a report of an organized Hajji to Mecca in 1952, which for reasons unknown failed to reach its goal. Special government regulations give Moslem workers in public organizations and educational institutions time off on the more important religious festival days. In military units, factories and schools, consideration is also given to the habits and customs of cadres, soldiers, workers and students of the Moslem faith.

/The Tibetans/

are arranged for guests. Barley is spread on the ground, sweets and fruits on a low table. The bride, fully dressed, is led in to sit between her parents. The family returns the courtesy of friends and relatives by giving them katags. Then the bride rides a horse or walks to her new home, accompanied by relatives of both families. The newlyweds sit together to go through the formality of a meal with wine and meat, then receive congratulations and katags from the guests. The katags given by elders are worn around the neck; those from persons of equal status are slipped inside the robe.

When the ceremony is complete, the husband entertains with a feast. Guests customarily take home meat or sweets after they have eaten their fill. On the following day, members of both families dress in their best and go for an outing. They visit the monasteries, but do not enter. The celebration usually lasts for three days, with feasting, drinking, singing and dancing.

The birth of a child is celebrated with a small party on the third day. Though girls are not ill-received, boys are generally preferred. The moment a child is born, a very small quantity of barley flour mixed with butter is put into his mouth to make him strong and tough. A tiny piece of butter is placed on the vein of his crown to protect him from the wind, which, according to Tibetan doctors, is responsible for one-third of all human ailments. A thick solution of butter is given to the mother for the same purpose. Tibetan women prefer to nurse their own babies.

The child receives a name when it is one month old. The name may be given by the parent, but preferably by a high lama. With a few exceptions there seems to be no distinction between names for males and females. High lamas always give their own names to children as a blessing. It is often on the name-giving day that a baby is taken on its first outing, to a temple to give offerings to Buddha. Birthdays are not ordinarily celebrated.

"Feeding the birds" is a common form of burial in nomadic areas of Tibet. The corpse is taken out for the vultures to eat, the idea being that the deceased then rises to heaven in the stomachs of the birds.

When a person falls ill, the lamas are summoned to chant sutras to drive away the evil spirits. If it appears that the patient has no chance of recovery, the lamas are asked to chant sutras to assist him to be born again in the "land of purity." Before the patient draws his last breath, he is bound into a bundle, and as soon as he is dead he is placed in a corner of the tent by the entrance. Butter lamps and offerings are placed beside him, and lamas keep vigil day and night, chanting incessant prayers.

Funeral rites are held on the third day after death. Women are not permitted to attend.

/The Chinese/

by half a million people - even if they live mainly on rice - is bound to be formidable. No sewage system of any kind exists; its place is taken by an old established guild of public servants who can be seen every morning in large numbers making their way through the streets. The casks or buckets which dangle from the bamboo poles across their shoulders smell no better than you would expect them to. They are always full to the brim and their contents, which are eventually sold to truck gardens on the outskirts of the city, are a constant threat to the legs of the passers-by.... The buckets in which they carry their night soil down the hill are used, after being briskly rinsed, to carry their water up."

Besides producing a very unpleasant picture, this description brings out the very serious problems connected with the lack of a proper sewage system. It also points out the many possibilities for spreading contagious diseases and infections.

Tuberculosis is quite prevalent in China. Epidemic diseases are common also, such as typhoid and paratyphoid fevers, cholera and smallpox. Malaria and the two kinds of dysenteries, amoebic and bacillary also are present. Death at childbirth, both of infants and mothers, is quite high, because of the lack of adequate sanitary precautions during childbirth and the practices of the midwives, who do nothing to prevent infection of both mother and child.

Winfield in his book states that "seventy-five per cent of all deaths in China are due to preventable diseases that are under control in the West; there are about 15 million deaths each year in China, of which 11,750,000 are due to preventable diseases." (China: The Land and the People, p. 111).

D. Medical Personnel

The lack of Western-trained doctors, nurses, pharmacists and dentists in the Northwest is an extremely serious problem. Most people, because of the shortage of medical personnel, still go to the local herb-doctors. (A full description of the traditional Chinese science of medicine is given in the General Handbook). In many less acute cases, people either neglect to do anything or attempt to treat themselves by unscientific methods.

E. Efforts of the Government

The Nationalist Government was aware of the serious shortage of medical personnel and equipment in all of China, including the Northwest. Two national organizations were established in the 1930's to deal with these problems: The Department of Public Health under the Ministry of the Interior, which had a Northwestern Office for the Prevention of Epidemics, and the National Health Department under the National Economic Council, which also had an office in the Northwest.

Health of the Various Nationalities in the Country," was convened by representatives of the Tibetan, Moslem, Yi, Uighur, Mongol, and Han nationalities, representatives of the health administrative organs of the Central People's Government and the various administrative regions, the representatives of the nationalities affairs, authorities of the various administrative regions, leaders of the medical preventive service corps to the national minority areas, and specially invited delegates of all nationalities.

"The Conference will undertake special studies in the diseases which most seriously endanger the health of the people in the national minority areas, such as venereal diseases, malaria, women's and infants' ailments (colds, measles, smallpox, puerperal fever), and thus to proceed to the decision on a definite policy for the work of promoting the health of the national minorities.

The Conference is expected to reach decisions also on various necessary measures for building up a public health system in the minority areas, such as the organization of health machineries, the fostering of health cadres, and the propaganda on health matters among the population." (NCNA Peking, August 24, 1951).

The need for professional medical help in the Northwest was one of the most urgent problems facing the Communist Government in the implementation of its health program. Young students from Central China with some medical knowledge were encouraged to go to the aid of the national minorities in the Northwest. "Go West" is the slogan of the day, and is considered to be a true pioneering act.

The primary attention is given to the workers, particularly those working on big governmental projects. "In the mountainous region of Szechwan, Shensi and Kansu Provinces, workers on reconstruction receive medical care. For each billeting camp of 1,000 of more a clinic staffed with 5 to 8 doctors and nurses is operating. Four regular hospitals have been opened in Chengtu and other cities along the line especially for road workers." (FBIS, No. 61, March 29, 1955).

In April, 1955, a new medical college was opened in Sinkiang to meet some of the problems of lack of medical personnel. Clinics were opened in various parts of the Sinkiang Autonomous Region to combat the most common diseases in the area. Particular emphasis was placed on curing and preventing venereal diseases.

"From June to October, four health service teams dispatched by the venereal disease prophylactic and therapeutic clinic of Sinkiang Uighur Autonomous Region gave free treatment to some 3,000 peasants and nomads of various nationalities. In addition to the prophylactic and therapeutic stations already established in the various counties, another well-equipped outpatient department has been added in Urumchi. The clinic has enrolled 60

762

762 SUICIDE--incidence of suicide; motives (e.g., humiliation, thwarted love); common methods (e.g., jumping, drowning, shooting, poison); stereotyped methods (e.g., suttee, hara-kiri); justifications; attitude toward suicides; etc. See also:

Personality disorders . . . . . 158 Punishment of attempted suicide 682

lished to pass out judgments. Cases of suicide among students thus treated have been reported.

Another factor which influenced education was the austerity movement, which cut deeply into the already meager equipment, facilities and supplies of the schools. For instance, in Shensi some schools had provided some teachers with single rooms with twenty square meters of floor space, or about thirteen by fifteen and one-half feet, to serve both as bedroom and office. This was criticized as luxurious and wasteful, and the size of a teacher's room was reduced to three and one-half square meters or less than six feet square. The size of campuses was also cut down mercilessly. A well-known educator, Feng Yu-lan, recently complained: "When a professor finds enough space to lay down his body, he would find no more room to lay down his books." (Jen-min Jih-pao, Peking, January 15, 1956.)

Claims that school attendance has greatly increased are numerous in the Communist press. The figures given, however, are either meaningless or contradictory, so no attempt has been made here to trace this increase.

Extra-curricular activities included a summer camp for the students in the Northwest, which took place at Mei-hsien, Shensi, from August 1 to 31, 1952. The participants were selected from students of different places, including 150 from Shensi, 110 from Kansu, 100 from Sian, 20 from Ninghsia, 20 from Chinghai, an indefinite number from Sinkiang and 80 from the colleges and universities. To be selected, a student had to be: progressive in thought; good in school work; active in all kinds of social activities inside and outside the school; healthy, without contagious diseases. Girl students and students of the minority groups had priority. The whole program of the camp was sponsored by the New Democratic Youth League.

Athletic competitions are also sponsored. From August 10 to 17, 1953, there was a Northwest China track and field meeting at Sian. Gathered for the competition were 351 athletes from 12 nationalities, representing 5 provinces and a municipality.

2. Higher education

Institutions of higher education in the Northwest under the Communists can be divided roughly into three groups. The first group includes universities and colleges in the normal sense. The second includes political training institutes. The third includes the institutions for the minority nationalities.

The following institutions were listed in 1952:

Northwest University, Sian, Shensi
Lanchou University, Lanchou, Kansu
Northwest Engineering College, Hsien-yang, Shensi
Northwest Agricultural College, Wu-kung, Shensi
Northwest Normal College, Lanchou, Kansu

There are elaborate instructions concerning death. Rituals include the recitation of prayers as death approaches, the

/Chinese Moslems (Dungans)/

making of a will, the giving of alms, rites at the grave, and the recitation of prayers and giving of alms on certain days after death, and on the first, second and third anniversaries.

The Moslems have their own burial grounds. The mounds raised over the graves are rectangular, not round as in the case of the Chinese. The top of the filled grave must be at least five inches (half a Chinese foot) above the surrounding earth, lest the location be forgotten. A stone may be erected in front of the grave, but the name of the deceased may not be engraved upon it.

e. Festivals and holidays

Many of the religious festivals are more pagan than Moslem, especially those which are seasonal and therefore not connected with the Moslem calendar. Their celebrations are merely popular gatherings for feasting and enjoyment.

The Moslem New Year (Yengi Yil) celebrates the breaking of the Ramadan fast. The festival takes place during the first three days of the tenth month by the Moslem calendar. Special services are held in the mosques. The people bathe and dress in their best clothes. It is a time of greeting, well-wishing, feasting, visiting and gift-giving. For the Moslems and the Chinese alike, the New Year celebration is the greatest holiday of the year.

5. Present day conditions

According to a speech delivered by Burkhan, chairman of the Preparatory Committee of the China Islamic Association, at the Conference of the Asian and Pacific Regions, on October 18, 1952, the Islam religion as well as the customs and habits of its followers are fully respected by the Communist regime. Chinese Moslems are free to practice their faith without interference. It is also said that official circulars from Peking have ordered the people to continue the observance of their important festivals. The tax on the slaughter of cattle for Moslem consumption is abolished, and official holidays are granted on Moslem holidays.

In accordance with the Agrarian Reform Law, the mosques may retain their land holdings if the local populace so desire. It is also reported that when the land reform movement was carried out in the Northwest, the land of the mosques was in most cases left untouched. There was also a report of an organized Hajji to Mecca in 1952, which for reasons unknown failed to reach its goal. Special government regulations give Moslem workers in public organizations and educational institutions time off on the more important religious festival days. In military units, factories and schools, consideration is also given to the habits and customs of cadres, soldiers, workers and students of the Moslem faith.

*563 585 are arranged for guests. Barley is spread on the ground, sweets and fruits on a low table. The bride, fully dressed, is led in to sit between her parents. The family returns the courtesy of friends and relatives by giving them katags. Then the bride rides a horse or walks to her new home, accompanied by relatives of both families. The newlyweds sit together to go through the formality of a meal with wine and meat, then receive congratulations and katags from the guests. The katags given by elders are worn around the neck; those from persons of equal status are slipped inside the robe.

When the ceremony is complete, the husband entertains with a feast. Guests customarily take home meat or sweets after they have eaten their fill. On the following day, members of both families dress in their best and go for an outing. They visit the monasteries, but do not enter. The celebration usually lasts for three days, with feasting, drinking, singing and dancing.

*563 844 852 [562] [751] The birth of a child is celebrated with a small party on the third day. Though girls are not ill-received, boys are generally preferred. The moment a child is born, a very small quantity of barley flour mixed with butter is put into his mouth to make him strong and tough. A tiny piece of butter is placed on the vein of his crown to protect him from the wind, which, according to Tibetan doctors, is responsible for one-third of all human ailments. [853] A thick solution of butter is given to the mother for the same purpose. Tibetan women prefer to nurse their own babies.

*563 553 852 [793] The child receives a name when it is one month old. The name may be given by the parent, but preferably by a high lama. With a few exceptions there seems to be no distinction between names for males and females. High lamas always give their own names to children as a blessing. It is often on the name-giving day that a baby is taken on its first outing, to a temple to give offerings to Buddha. Birthdays are not ordinarily celebrated.

*563 764 "Feeding the birds" is a common form of burial in nomadic areas of Tibet. The corpse is taken out for the vultures to eat, the idea being that the deceased then rises to heaven in the stomachs of the birds.

*563 [755] [793] When a person falls ill, the lamas are summoned to chant sutras to drive away the evil spirits. If it appears that the patient has no chance of recovery, the lamas are asked to chant sutras to assist him to be born again in the "land of purity."

*563 763 764 Before the patient draws his last breath, he is bound into a bundle, and as soon as he is dead he is placed in a corner of the tent by the entrance. Butter lamps and offerings are placed beside him, and lamas keep vigil day and night, chanting incessant prayers.

*563 764 563 Funeral rites are held on the third day after death. Women are not permitted to attend.

/The Tibetans/

N
+563 are not permitted to attend. The body is carried by friends and
• 764 relatives to the customary spot, and on the way, those in the
[534] procession blow whistles to attract the vultures. The clothes are removed from the corpse, and one of the men slits open the chest and belly to attract the birds. After they have eaten these areas, the birds are driven away and a man cuts the flesh from the bones and places the small pieces on the ground. The birds eat it. When only the skeleton is left, the mourners crush the bones with rocks so the birds can eat them. When nothing remains the mourners are satisfied. The deceased has been proved a worthy person.

N
+563 4. Popular beliefs
755

When a person falls ill, a doll of clay is made to resemble him and dressed in similar clothes. The sick person's name is written on the doll, and it is thrown out onto the steppe. It is
N believed that the chiktur (evil spirit) will find the doll (khuner
[996] dzolik) and be deceived into thinking the sick person has died. He will then leave the patient in peace.

N
+563 Tibetans are great believers in fortune telling. One way to
789 learn one's fortune is to give his date of birth to a fortune teller, usually a lama, who will consult his rosaries and then advise on such matters as the best days for going on a pilgrimage, the possibilities of getting a job, or the advisability of starting a business.

Another way is to whisper one's thoughts to a wooden fire poker, then secretly place it near someone. The fortune can be deduced from the conversation of that person.

A professional fortune teller asks his customer to place his hand in a sleeve, then tells his fortune from the finger joints. The third joint of the index finger means lion, the third joint of the middle finger, wolf. Both these joints may indicate a journey. The first joint of the index finger means mountain, which is interpreted as continuous living in the same place.

N
+563 5. Recreation
533

The Tibetans have no form of organized amusement or recreation, but they love to sing. The young sing mostly love songs, which are composed spontaneously as they are sung. They have religious songs in praise of Buddha. They even express congratulations and good wishes in song.

S
563 H. The Western Mongols or Torguts
181

Values and customs of the Western Mongols are based on the same traditions as those of the Eastern Mongols (See IMAR Handbook). Some differences exist, however, that are worthy of discussion:

The Torguts are noted for their courage and warlike charac-
• 000 ter, but they are a friendly, good-humored, helpful people. As

346 (eighth century A.D.) and a Sung edition of the Tripitaka. It
708 gained its name through the Buddhist monk Wei-ko (Sung times) who used to stay there overnight and was called the Sleeping Dragon.

Another one is the K'ai-yüan-ssu, built in 713 A.D., which is adorned with many famous inscriptions and also was once famed for its library. Few religious relics are left now at this place, which has become a center of high-class girl entertainers instead.

One of the landmarks of Sian is the Glazed Tile Pagoda, Hua-t'a, built during the times of the Five Dynasties. Other famous pagodas in the neighborhood are the Great Swallow Pagoda, Ta-yen-t'a, belonging to the temple Ta Tz'u-en-ssu, in which the pilgrim Hsüan-tsang was active, and the Small Swallow Pagoda, Hsiao-yen-t'a, built in the beginning of the eighth century.

The best-known Taoist temple was the Ying-hsiang-kuan, which was made the main center of Taoist devotion by Emperor Jui of T'ang in 708 A.D. at a period when the Imperial house of T'ang showed pride in its alleged descendence from Lao-tzu, the great patriarch of Taoist religion. In Kuomintang times the temple was converted into a school.

708 The plain around Sian is dotted with many tombs of past
(X4) emperors. These artificial hills are held in great reverence by the local population and many myths have taken their origin here even though it is not known whose august remains these hills cover.

708 Shensi is also the site of one of the Five Sacred Mountains of
823 China, which formed part of the Imperial cult and to which regularly Imperial sacrifices were offered. The worship of these mountains belongs to the oldest religious traditions of China. All through historic times down to and including the last dynasty, the Emperors went there in person for regular services or at least had themselves represented by topmost officialdom. At least since T'ang times large temples were erected to the spirit of these mountains. They were, however, not only
(788) depositories of memories of this official cult, but as pilgrimage centers of organized groups and individuals, they have accumulated religious traditions and historical relics devoted to all sections of the population.

Even though the Western Peak, Hua-shan, has to cede priority to the Eastern, T'ai-shan, it always was, and still is, one of the most important centers of pious activities. Numerous temples, shrines, caves and pavillions testify to this fact. Most
(346) of them are outside institutionalized Imperial ritual, but are maintained by local religious groups or sects and by the donations of visiting pilgrims in search of delivery from some bodily or spiritual troubles.

Turkestan or Tibet, at any time during the past few hundred years. Hsienyang is also famous as one of the old capitals of China, having been the seat of no less a person than the Emperor who designed the Great Wall, and who, being annoyed by the supercilious conservatism of the Chinese scholars of those days, buried several hundreds of them alive, and burnt all their books; for which act his name is execrated by the scholars of today.

Starting out from Hsienyang we left the high road to Kansu, which we had followed two years previously, on the right hand, and continued across the level plain to Hsingp'ing Hsien, another short march of 50 li. This is a second class district city lying on a wheat and cotton-growing plain sloping from the north down towards the Wei River.

The next stage to Wukung Hsien is a distance of 90 li, still across the plain. Thirty li out, just beyond the village of Mawei, the local magistrate who was accompanying us suddenly dragged us off the road to visit a dilapidated little temple in the fields, which turned out to be the tomb of a notorious Imperial concubine known to every educated Chinese as Yang Kuei-fei. She was strangled here by her consort, the Emperor, to satisfy his troops in about 170 A.D.; I forget the details of the story, which every Chinese knows. There was nothing to be seen inside the temple except the usual ancient individual busy taking rubbings of inscriptions. Central Shensi is full of these objects of historical interest, dating back sometimes two or three thousand years. Wukung district is entered beyond the walled village of Tungfufeng, which lies half-way, and the plain now begins to rise imperceptibly and becomes the usual undulating loess plateau; so that there is a sudden drop to reach the city of Wukung Hsien lying in a valley a hundred feet or so below the level of the loess. Three streams, from near Fenghsiang, Linyu, and Yungshou, unite here to form a pea-soupy river flowing south to join the Wei. Wukung, a second-class district city, is quite a prosperous little place with busy streets and well-stocked shops.

From Wukung the road climbs out of the valley and runs across the loess uplands to the west. All along this road the traveller is accompanied on his left hand by the

846 The position of women is probably most clearly expressed in the fact that for forty days after a woman has given birth she is considered unclean. She may not leave her hut for ten days and may not even sit out in her yard, for she is unworthy for the sun to shine upon. During the first ten days even the husband is considered impure and may not associate with anyone. If he is a shopkeeper, custom forces him to close his shop during this interval or, if he does not wish to do this, to hire a substitute for this period, /242/ but he himself may not enter his shop or his place of business. For this reason many Chinese husbands quickly set out on a journey when a birth in the family is imminent, in order to avoid the suspicion of uncleanness.

764 Only a few days after my return from the Gum bum monastery my landlord in whose spacious buildings I had rented the third and last courtyard with its adjoining small house, died. His body was laid out for the next few days directly in front of my separate courtyard entrance, and there all the various funeral ceremonies took place so that I could view the entire proceeding at leisure. The family of the deceased had immigrated only a few generations before from Shensi, and so they were still considered strangers, they came from "down below," as the people of Hsining say. Thus, there were not many relatives and the family was not wealthy, so that everything was relatively simple and was done as quickly as possible. Nevertheless, according to our conceptions the ceremoniousness was tremendous.

763 The man had reached a ripe old age and had then died very quickly. But his relatives had succeeded in observing the etiquette of putting on his shroud, a long, padded silk gown, while he was still alive and also in moving him from his bed beside the stove onto a small bench and laying him out in the center room of the main house, so that his soul might more easily find its way out into the open. Thus, at the very last minute his sons had proved themselves pious children. Immediately after the man died money 764 775 was placed in his mouth, so that he should not be mute when reborn, but he was neither washed nor were his eyelids closed. During the first few days he lay in the death chamber as though he had been forgotten, and the doors and windows of the room were wide open. All I heard during the day was the man's name being called and the words "father" and "grandfather," and on the first evening a long train of Taoist priests set out from the house, bearing many lanterns, and gongs, triangles and drums through the streets of the

city, and making a fiendish racket. Behind the priests came a sedan chair on the seat of which was a board with the name of the deceased. The sedan chair was followed by a table with all kinds of offerings and behind this tottered the son and the grandson in a stooped position, dressed in coarse white hemp mourning clothes and supported by friends and hired servants. They were still obliged to look for the gui, i.e., the soul of the deceased. For this purpose they halted at all corners and crossroads, called his name and searched the ground industriously. For the Chinese imagine that death sets in because the soul has left the body, and that the body would be able to go on living if only the soul or gui would or could find its way back. The gui is politely invited to return. (1) 764 775

1. It is doubtful whether gui (kwei) can be translated "soul" in our sense, for the ordinary folk-philosophy of Kansu teaches that a human being has three gui and seven schen (spirits). The three gui are thought of as having substance and belonging to the Yin principle (see page 33, footnote 1), whereas the seven schen are without substance and belong to the Yang principle. One of the three gui stays with the bones after death while the second, with the help of the Taoist priests, clings to the death tablet bearing the name of the deceased. In time these two vanish. /243/ The third gui is the only one that is immortal. It is also used by the Chinese in a Buddhistic way, it must pass through hell and is later, on occasion, reborn. But because many Chinese do not know anything about Buddhistic teachings of reincarnation, it is often said that this third soul lives on unseen with the family; it "haunts" the living and can bring them harm or be useful to them.

/243/ On the third day the corpse was placed in the coffin which was over 2 meters long and constructed of beams 2 1/2 inches thick. Like the shroud, the coffin had been bought many years before and stored in a corner of the house. The feet of the corpse were tied together and its head placed on a brick. Every day after sunrise the relatives with their wives now gathered together in the death chamber around the coffin for half an hour and wailed so loud that all the neighbors heard it. At the same time tea and sweets were laid out on a table covered with a white cloth in front of the coffin, liquor was poured out and candles and incense burned. When the half hour 764

764 was up the howling and wailing ceased as suddenly as it had begun, tears were dried, and people went about their business or began eating, and after another twenty-four hours the lamentations were taken up again.

[793] On the sixth day the Taoist priests again came to the house and set up tents and canopies in the courtyard outside my door. (1)

1. I did not observe that the Chinese of Northwest China used Buddhistic priests in this connection. Lama priests are used only in places where Chinese are intermingled with Tibetans. But Hsining fu is a Chinese city in which, besides Chinese, there are only a few Manchu and Tu ren living.

Musicians appeared and also cooks who had to cook for the many guests and relatives who came to express sympathy. Meanwhile the priests had prepared a passport to the kingdom of the dead, a written eulogy on gray paper, and this was now sent after the dead man into the world of spirits, that is, it was burned amid all kinds of invocations. There were also a few paper dolls representing servants, one-half life size, burned and large paper silver coins and much copper money which was also stamped out of paper, so that the deceased was given a very good dowry to take along. (2)

775

2. De Groot, The Religious System of China, Vol. I, p. 80, reports that in the province of Fu kien in South China which is largely Buddhistic, the Chinese assume that each birth means the release of some poor soul from Hades. There souls always were obliged to pay a large ransom to the god of death and his executioner before they could be freed. In order to be able to pay this sum the souls have to borrow money from other souls and therefore the soul of every person who has died, as soon as it returns to Hades, is hounded by its creditors to pay its old debts, for the creditors were also trying to get the ransom money together so that they could return to earth as soon as possible. They also believe it is very useful to send copper coins along immediately, for of course a poor soul just returning from the earth does not know the current exchange in Hades copper money and is therefore cheated by the money changers down there and suffers great losses before he can get change! This

conception enables us to get an insight into Chinese folk psychology. 775

The monotonous sing-song and reciting of prayers and invocations lasted three days, and with each word the leading priest who appeared in a yellow gown embroidered with blue dragons, beat upon a "fish head," a hollow wooden globe with a slit in it, while his companions produced an ear-splitting noise with gongs, bells and drums, /244/ which was far inferior to the lamaistic music of the Tibetan monasteries and compared more nearly with caterwauling or with the noise accompanying the Upper Bavarian practice of meting out to offenders of the public morals summary punishment by masked private citizens. Under the supervision of the priests there were more gifts placed on a table in front of the coffin which stood in the open door of the house. Food was also placed on the table, a whole slaughtered pig, a cock, a jug of liquor, loaves of bread filled with vegetables and sweets. Later the priests ordered the tea and liquor to be poured on the ground. 764 [533]

It would lead me too far afield if I were to give a detailed description of the circumstantial ceremony which lasted three days. In the main, funerals are very much alike in the various parts of the Chinese kingdom. One of the souls of the deceased was conjured by the priest into a piece of wood about 1/2 meter long and very narrow and then the coffin was closed. A great many people appeared, acquaintances and strangers, and followed before the coffin while lay musicians with one-string fiddles and small trumpets produced a different kind of racket, if possible even more woeful. The members of the family dressed in white coarse mourning clothes made of sacking and in mourning hats with their bare feet in sandals, knelt on either side of the coffin and each time a kowtow was offered in condolence they acknowledged it by touching their foreheads to the ground. Each person who expressed his sympathy by a kowtow and a small present was handed food and liquor by the relatives of the deceased, and the whole procedure, service to the spirits, kowtow, lay music and the partaking of food, took place in the court in front of the door of my room. All the street beggars, even the convicts from the yamen with their heavy iron chains and stakes and their wide, collar-like wooden bang came into the courtyard, made their kowtow and were thanked by being given food.

Thus, the funeral cost the family much more than they had in cash. I was not at all surprised, therefore, when on the very first

764 day after the death of his father, the son asked me for a small loan and for an advance on my rent.

000 Then, just after the coffin had been carried out of the yard gate amid a large display of fireworks, the twenty-five soldiers of the amban who had left twelve days before for the Koko Nor in order to pursue the Tibetan robbers, arrived and drove my stolen horses and yaks into my courtyard. Even the old bitch I had bought two days before the attack was returned to me. But of my equipment only a few broken saddles and a battered tea kettle and half an ice skate were returned, the rest of the things had found other homes. The soldiers refused to tell me who the robbers had been. All they said was that the culprits were "wild Tibetans from the south." They said that three days before the attack on me a band of about 30 or 40 robbers had attacked and robbed a Tibetan tribe of Koko Nor and stolen 150 horses, but that the tribe pursued and defeated them and the robbers lost their entire booty as well as three men. "You ran into this robber band, sir; they spied on you for two days before they attacked. But your /245/ defense made such an impression on them that they later released the stolen animals. We found your ponies about 10 kilometers from the place where you were attacked, and they were quietly grazing in a valley. We also found three dead men there, unclothed and frozen stiff."

On that same evening the amban sent me a message saying that it was evident the robbers were not men of his tribe, that this winter an unusual number of robbers had come to the lake from the south, and that therefore he could not pursue the matter further.

It is no small matter to keep eight yaks in a large Chinese city. And everyone who knows China will understand that I was not a little frightened when the animals were driven into my dwelling. Many of the citizens had never seen these clumsy black ruminants and so they besieged my inn all day long. It was out of the question for me to keep the animals in the city and when I wanted to sell them the butchers offered me one tael apiece (three marks) because they believed that I would have to get rid of the animals at any price. I therefore hired a man to drive the animals a good day's journey south of Hsining fu and pasture them there in the mountains. The ponies, however, I did not allow out of my sight and took them all with me on my next excursions.

361 [543] I first went to a large fair that is given every year during the first ten days of the second Chinese month in the vicinity of Wei yüan bu.

080 cartload of loess soil, and at last proceed with the putting of our house in order. A fireplace built entirely of mud-bricks, into which a grating of half-a-dozen iron bars was fixed, made a very satisfactory cooking-stove, and a paraffin-oil tin let into the back served as a boiler. We also set up an iron stove we had brought with us, at great labour and expense, but which proved to be not only an immense comfort but an absolutely vital necessity, when the real depth of winter came upon us.

322 We visited several carpenters' shops in the hope of finding ready-made furniture, such as a table, bench, or • 767 stool, but the only articles for sale were, in every case, nothing but coffins. Red, black, blue, varnished or unvarnished coffins were temptingly ranged before us, but for the living, nought! Fortunately, however, our kind landlord came to the rescue by lending us a table and three stools, while the coffin-shop supplied us with as many planks as we required. These, supported on bricks and packing-cases, made the dresser, bookcase, writing-table and beds. A side-shelter was next transformed into a sleeping apartment for our women students, and thus, all being in order, we fondly imagined ourselves comfortably settled, but the neighbours shook their heads sagely, saying: 'Wait till the winds come!'

132 Our happy illusions were soon dispelled, for one night, not long after, we were suddenly awakened by the alarming roar of a tremendous gale, shaking the boughs of the poplar-trees and stripping off every leaf that remained. This preliminary onslaught was then quickly followed by an unearthly yell as the whole force of the tempest descended upon the city, carrying with it volumes of sand that whipped and cut against our pavilion like a volley of musketry. Without a moment's interruption the gusts swept in through the

Within the household, the composition is similar to that of the nomadic tent, although there may be less non-kin hangers-on and a higher frequency of joint-family occupancy. Should the family be a polygynous one, the wives will live in the one house, instead of each having her own. In some cases, the actual family may be divided into nomads and farmers with full occupancy of the house occurring only during the winter season. When this happens, usually the father and one son care for the herds while the other sons remain on the farm. Upon the death of the father, the properties (i.e., the herds and the fields) are no longer kept together and the fission of the family occurs.

N *563 592 [595]

N [768]

C. The Mongours

N *563 M 193 565

At least until 1949 Mongour social organization retained a reflection of the land allocated by Chingis Khan to his sons, brothers and leading generals. As may be seen clearly in Mongour social structure, the definite differentiation between nobility and subject population resulted from these allocations. The nobles are very much concerned with their claims of descent either from the imperial family or from other noble "founding ancestors" whereas the commoner population shows little concern with its genealogical pattern. However, the subject population is closely related to the noble rulers, in a way that was partly tribal but later became feudal.

N *563 M 565 [901]

Each noble was obliged to furnish a definite number of troops depending on the size of the territory and the population of which he was the nominal head. It appears likely that the Monguor social groupings began to form as early as Yüan and Mongol rule. Generally speaking, the Monguor commoners are descendants of families that were already subject commoners in the Mongol period, with later additions of families of Chinese and Tibetan origin. There are 17 Monguor clans and four general types of clan leaders. Some of these clans were originally formed by descendants of the Yüan dynasty (Ch'i and Lu clans), and others by military commanders, who though commoners by birth, were given subject families to rule over, as a reward for their services.

M [619]

N *563 M 614 554 M [428]

Each genealogical register of the clans starts with the appointment of a T'u-ssu, (the office of the T'u-ssu, clan chief, being elective or hereditary). The present rank of T'u-ssu was first created by appointment in the Ming dynasty. Each T'u-ssu, with his offspring, forms a unit known as his "bone." Since primogeniture prevails in Monguor social organization, the oldest son of the T'u-ssu inherits the clan leadership after his father's death.

769

769 CULT OF THE DEAD--avoidance of graves and cemeteries; propitiation of ghosts and ancestors; recurrent feasts of the dead; maintaining relations with the long dead; ancestor worship; household cults; hero worship; etc. See also:

all Buddhists) they have a strong feeling of belonging together. Nevertheless the Mongols are fully aware that their former power is declining more and more every decade and that their pastures are constantly diminishing because of the encroachment of agriculture and Chinese migration pressure. The establishment of the Inner Mongolian Autonomous Region (to which the Edzin Gol and Alashan areas have recently been added) and the organization of several autonomous chou for the Mongols of Sinkiang, Kansu and Chinghai, might restore to a small degree the hope for recovery of their lost strength and political power, a hope which has been stimulated during the Sino-Japanese war. In addition, the organization of those autonomies will certainly raise their feeling of security, and might east the widespread desperation of Mongolian leaders who have anticipated the final decline of the Mongols as an ethnic group and a linguistic unit because of rapid sinification and loss of pasture land, and therefore loss of cattle, the only life resource of the average Mongol. It is difficult to say what effect the Communist regime will have on the ethnic group of the Mongols. So far, the Mongolian indigenous culture has been fostered by the Communist regime, but there is little doubt that, when it comes, the complete transition of the Mongolian society into a Communistic society will not be carried out without resistance and ensuing hatred. It is unthinkable that the average Mongol, who for centuries has adhered to the simple pattern of nomadic life (owning cattle individually and only pastures collectively) will agree with the policy of bolshevization. It can be easily conceived that deprivation of their cattle will mean the end of the nomadic Mongolian society as such. What has been said about the Mongols may very well be true also for the Kazakhs and Kirghiz.

IV. Dominant Social Motives.

The dominant social motive of the average citizen of the Northwest depends largely on his ethnic group affiliation. Starting with the majority, the Chinese, it should be repeated that they are diligent and industrious farmers whose whole energies must be used in order to maintain their families, who cooperatively toil in the fields and earn just enough to live on. In such a setup little room is left for cultural and religious ambitions; although ancestor worship is sincerely practiced it is difficult to say whether this kind of worship is a true religious phenomenon or only a reflection of the traditional respect toward elders and parents. The religious behavior

must have had few, if any, effects upon everyday life, or the village units would not have been so important in the local administrative system. The very common pattern of market-town surrounded by farm villages exists in the Northwest. Like those in China Proper, the Northwest market towns are the outgrowth of those villages which are situated on main roads or at strategic points. The market towns fill the same kind of social, economic and cultural roles here as they do in other parts of the country.

In areas where both Chinese and Chinese-speaking Moslem farmers live, there are three types of rural communities. The first includes the all-Chinese villages which greatly resemble the villages in North China. From twenty to thirty families constitute the average population in these villages. When some peculiar quality, such as its location on a well-travelled road, makes a village acceptable to an entire district, it becomes a market town. Eventually it may grow to the proportions of a city. Whenever the village grows so large that those whose fields lie on the periphery can no longer go back and forth each day, it begins to break up. The families with the very distant fields become the nucleus of a new settlement.

In a Chinese village communal life is exhibited in several ways. One is by religious observance, particularly the conduct of the ritual connected with ancestor-worship and veneration of the past. At stated times throughout the year - especially at the New Year, and during the second, fifth, and eighth moons - festivals honoring certain deities or commemorating religious events are held. Such a festival is always a communal matter. All contribute money for the furnishing of trappings proper to the affair, some are concerned with organizing the celebration, others carry images in the procession, and still others collaborate with the priests, - Buddhist or Taoist, - in the performance of the various ceremonies. Such religious festivals are not altogether a matter of the calendar, for additional services are often held in times of drought or other community disasters.

The village or community theatrical is another communal activity. Generally the plays are given for the enjoyment of the people. The entire community shares the responsibilities and enjoys the fun. In small Chinese hamlets in the Northwest even a funeral is very much a community affairs. Virtually everyone has a part in the mourning, feasting, burying, and attendant religious activities. Also annually in early spring during the feast of Ch'ing-ming, the Chinese in the Northwest, as in other parts of China, decorate the graves, make various offerings of food and drink, burn paper money and incense, and bewail the dead. The graveyards are not necessarily communal, but Ch'ing-ming is observed universally and no one can abstain from participation without arousing comment

*563 and a certain degree of reproach. On the other hand, prompt ob-
62 servance of the rites at least creates a feeling of fellowship. It
• 769 is primarily a personal matter, but nevertheless, the entire
community responds, just as in the case of the spring planting,
and for the same reason. Each finds comradeship in working
with the others in whatever concerns the welfare of the community.

*563 There are farm villages in which live only Chinese Moslems.
621 Physically, the community structure is similar to a Chinese vil-
184 lage. These Moslem villagers live in the same kind of houses and
795 do the same kind of farming. The streets of the villages also have
a similar arrangement. But the Moslem people's religious-com-
munal life is distinctively different from that of a Chinese village.
[346] In every Moslem village there is a small public building that is
[871] used as a mosque. In this building the children of the village gather
at regular periods to receive religious instruction. They learn
the Arabic alphabet and phonetics so that they are able to read
the sounds of necessary prayers and religious formulas, even if
[785] they cannot understand them. The Moslems are very faithful in
[796] their observance of the fast of Ramadan. During the fast, they
eat nothing between sunrise and sunset. At night they eat a com-
munal feast. The community fires blaze all night and people call
and shout to each other. Before darkness falls, pious bearded
men say their prayers in public places. One or two of the elders
may preach the points of theology, quoting the Koran in oddly
mutilated Arabic. On such an occasion the Moslems refer to them-
selves as "we" and to the Chinese in the nearby villages as "they"
[794] As in the case of the Chinese temple, the building and upkeep of
the mosque is a communal matter. Assessments are made and
cooperative effort is initiated; and, of course, as a project, it
rivals and competes with the Chinese temple.

The Moslem villages are comparatively more organized, or show more community spirit, than the Chinese villages. Like their Chinese counterparts, the Moslem villages are administered by their village elders who always intervene in the meager relations between the villagers and the local or county government. The county government makes no distinction between Chinese and Chinese Moslem villages. The two types of villages have almost no
[578] relations with each other. There is always antagonism between
Chinese and Moslem villages. The two peoples have been and
[798] still are mutually practicing segregation. Factors which are re-
sponsible for the antagonism or segregation are mostly religious
habits and ideals. In addition, while the Chinese have a higher
population gain, the Moslems are economically more successful.
Both of these facts may be sources of jealousy.

*563 However, in numerous economic activities, there is non-
184 admitted cooperation or division of labor between the Chinese
628 and the Chinese Moslems. This has held true especially for
Moslem enterprise and Chinese skill.

/Nomadic Moslems of Sinkiang/

S
563 to live at his own home if its near, otherwise the bride's parents
585 lend him an aq-oi. He visits the bride every week or ten days.
These visits are supposedly secret. Her father must not see the
bridegroom entering or leaving his bride's tent.

When the aq-oi is ready, the bridegroom takes the bride away to his own place, over some show of resistance made by the girl's relatives.

S
563 After a year, the girl can divorce her husband by returning
586 the price paid for her. Divorce is not very common among the
nomads, and the price paid for it is much higher than that among
the Turkis of the plains. The bride's father would usually be
very reluctant to return the price paid for his daughter except for
extremely grave reasons.

IV. The Chinese Moslems

N
121 Little information is available on the family structure and
59 relationships among the Chinese Moslems. The family relations,
[779] as in all other Moslem communities, are supposed to be regulated
by the Shari'a (Moslem law) but the details of the code are not well
known to the Chinese Moslems, nor are they observed with great
care as far as they are known. What alterations have been produced
by the influence of the surrounding Chinese is not known from the
meagre amount of available information. Many of the Chinese
N Moslems observe the traditions of ancestor worship that form such
• 769 an important unifying factor in Chinese family life. Often they
*563 possess ancestral tablets which stand side by side with Moslem
778 religious objects.

N
*563 Intermarriage between the Chinese and Chinese Moslems oc-
582 curs often under certain conditions. The fact that the woman is
799 not Moslem is not an obstacle to marriage with a Moslem; it is
even thought to be meritorious to bring women of other faiths over
to the true religion by marrying them. On the other hand, Moslem
women are strictly forbidden to marry a man of another faith.
The non-Moslem women who marry Moslems, although officially
converted to Islam, in many cases bring their religious customs
to the family, and the children are reared with both traditions and
beliefs.

N
The main differences between the Chinese and Chinese Moslems
*563 appear to be in the ceremonies of marriage and divorce. A Mos-
582 lem priest usually is invited to preside over these occasions. In
586 addition to the Chinese-style ceremony, the Moslem priest will
783 recite a few prayers over the newly-wed couple or will give an
184 additional affirmation to the dissolution of an unsuccessful marriage.

N
In general, the Chinese Moslems have much more in common
*563 with the Chinese than they do with their Turkic coreligionists.
184 The law and traditions of the country play a more important part
in governing the family relations, than the religious law.

/The Han Chinese/

with the fur side inside.

The Chinese home is still governed by the patriarchal tradition. The ancestral tablets stand in the place of honor. Ancestor worship, which includes the belief that the spirits of those who have gone before are always present, profoundly affects the details of family life and holds the members together, not so much by affection as by obligation and a sense of mutual responsibility within the clan.

At the New Year, in the shabby mud hut as well as in the elaborate living room of a wealthy home, the family makes obeisance to the elders in exacting ritual. The essential relationships which govern social intercourse are rigidly practiced. The individual maintains a close tie with his family, for he finds in it the satisfaction of fulfilling the demands of tradition. A male Chinese considers his home a place which Heaven has entrusted to him, to hand down to posterity.

The annual festivals, such as the seasonal celebrations of the New Year, the Dragon Festival, the Moon Festival, et cetera, are celebrated in more or less the same manner as by the people of other regions. Customs regarding birth, marriage, funerals and burial are also similar; in some places the ritual is more rigid and conservative. The distinguishing factor here is in the simple home life, as well as in social relations. The attitude toward life is more practical because of poverty and necessary thrift. The preservation of "face" is not regarded as so essential to prestige and social status. For example, Chinese people in other parts of the country may have elaborate funerals for their parents to maintain the prestige of the family, despite resulting financial worries.

B. The Chinese Moslems (Dungans)

1. The People

Actually the Moslems are predominantly Chinese. In Asia the Chinese Moslems are referred to as Dungans, but in Kansu Province they are called Hui-hui. Dungan is not a Chinese word, but a term used by the Turks of Sinkiang in referring to the Chinese Moslems.

These people settled thickly in Sinkiang Province, where they form the bulk of both the trading communities and the farmers. In addition to Chinese they speak a Turkish dialect, and they distinguish themselves from the Moslems of North China who, except for their religion, have been almost totally assimilated by the Chinese.

The Chinese Moslems are a much more courageous people than the local Han Chinese. The Kansu men of this area are considered the most timid of the sturdy North China stock. It is said that the Kansu men never have ambition, while the other Northerners are never without it.

/Chinese Moslems (Dungans)/

the other. Then he turns over any seven pages of the Koran, and from the seventh word of the seventh line of the seventh page, takes the name. When a male child reaches his seventh birthday he is circumcised and taught to worship.

c. Marriage

The marriage customs of the Chinese Moslems, with the exception of the wedding ceremony itself, are the same as those of the Chinese. The bridegroom is accompanied by his father to the bride's home, where the ceremony is performed. The Ahung reads from the Koran, in a manner similar to that of the Christian marriage service, then asks the couple whether they agree to the union.

In Koko Nor (Chinghai) the bride is customarily covered with a piece of red cloth after the ceremony, then lifted by her uncle or brother into the sedan chair and sent to the groom's home. Upon arriving there she is lifted out by her relatives. She wears a veil on the first day and hides in her chamber while relatives and guests sing, dance and feast in celebration. On the second day she receives guests, bowing to each one. Meanwhile the guests present their gifts and congratulations.

Exogamic marriage is permissable to the extent that a man may marry a Han Chinese woman, who is supposed by marriage to become a Moslem. Before such a marriage the girl must submit to elaborate purification ceremonies to cleanse her from the defilement of her own home. The Ahung officiates at the wedding and the Chinese custom of worshiping heaven and earth is not performed.

d. Funeral and burial

The funeral customs of the Chinese Moslems are more distinct from those of the Chinese. The dead body is washed ceremoniously by religious leaders from the mosque, who take the garments of the deceased for themselves. The body is then swathed in white bandages, each limb being bandaged separately. Correct performance of this rite is very important. Well-to-do people sprinkle incense on the cloth used for bandages. The wealthy also place large quantities of musk and camphor in the grave. The corpse is placed upon a board under which are the bands necessary for lowering it into the grave, then covered with a bottomless coffin for the trip to the cemetery. The coffin is never interred. The corpse is placed in the grave with head to the north, feet to the south and face toward Mecca.

When the deceased is a woman, only members of the family may look on when the coffin is removed, and only blood relatives, preferably sons, may descend into the grave to arrange the body.

There are elaborate instructions concerning death. Rituals include the recitation of prayers as death approaches, the

/Chinese Moslems (Dungans)/

making of a will, the giving of alms, rites at the grave, and the recitation of prayers and giving of alms on certain days after death, and on the first, second and third anniversaries.

The Moslems have their own burial grounds. The mounds raised over the graves are rectangular, not round as in the case of the Chinese. The top of the filled grave must be at least five inches (half a Chinese foot) above the surrounding earth, lest the location be forgotten. A stone may be erected in front of the grave, but the name of the deceased may not be engraved upon it.

e. Festivals and holidays

Many of the religious festivals are more pagan than Moslem, especially those which are seasonal and therefore not connected with the Moslem calendar. Their celebrations are merely popular gatherings for feasting and enjoyment.

The Moslem New Year (Yengi Yil) celebrates the breaking of the Ramadan fast. The festival takes place during the first three days of the tenth month by the Moslem calendar. Special services are held in the mosques. The people bathe and dress in their best clothes. It is a time of greeting, well-wishing, feasting, visiting and gift-giving. For the Moslems and the Chinese alike, the New Year celebration is the greatest holiday of the year.

5. Present day conditions

According to a speech delivered by Burkhan, chairman of the Preparatory Committee of the China Islamic Association, at the Conference of the Asian and Pacific Regions, on October 18, 1952, the Islam religion as well as the customs and habits of its followers are fully respected by the Communist regime. Chinese Moslems are free to practice their faith without interference. It is also said that official circulars from Peking have ordered the people to continue the observance of their important festivals. The tax on the slaughter of cattle for Moslem consumption is abolished, and official holidays are granted on Moslem holidays.

In accordance with the Agrarian Reform Law, the mosques may retain their land holdings if the local populace so desire. It is also reported that when the land reform movement was carried out in the Northwest, the land of the mosques was in most cases left untouched. There was also a report of an organized Hajji to Mecca in 1952, which for reasons unknown failed to reach its goal. Special government regulations give Moslem workers in public organizations and educational institutions time off on the more important religious festival days. In military units, factories and schools, consideration is also given to the habits and customs of cadres, soldiers, workers and students of the Moslem faith.

/Chinese Moslems/

any should oversleep and fail to eat the necessary food before daybreak.

The regular practice of Zakat is practically unknown to the Chinese Moslem community. Only during the month of Ramadan, when charity is extended to the poor and donations are given to the shung are alms given in a form resembling Zakat. There is no fixed amount given and the act itself is purely voluntary. The only form of sadaqa (voluntary alms) given is the sadaqa el-fitr given in the three days of Id el Fitr (the Moslem New Year). These offerings can be made in cash or in goods.

Particularly among the Chinese Moslems of the Northwest the practice of pilgrimage to Mecca was observed. The Hajjis, or those who completed their pilgrimage to Mecca, were highly respected in their communities. Pilgrimage has decreased considerably in the last years. The Hajj organized by the China Islamic Society in 1952 did not reach Mecca; they went as far as Pakistan and returned to Peking, for reasons that were not specified.

Id el-Fitr, the New Year, is the best observed of the different Moslem holidays. It occurs during the first three days of the tenth month. Special services are held in the different Moslem communities, and great feasts are given to celebrate the occasion.

In general the Chinese Moslems do abstain from pork and wine as their religion commands. They will not eat meat that has not been killed in the approved Moslem fashion. Many of the merchants, carters and others who travel carry their own utensils, and often, where there are no Moslem communities, carry their own food so as to avoid food that is prohibited by their religion.

The influence of the general Chinese beliefs on the Moslems has been noted by many, particularly by D'Ollone. Ancestor worship is the core of the non-Moslem Chinese belief. It is not restricted to domestic worship but extends to religious devotion to the graves of the ancestors, which are designed to assure the peace of the deceased and are a scene of devotion every anniversary. The Moslems of the Northwest have been so influenced by these traditions that, in the secrecy of their homes, most of them burn incense in front of the ancestors' tablets. In evidence of this custom, D'Ollone brought back two vases which served the purpose of ancestor worship. Both of these vases belonged to Chinese Moslems, and had Moslem religious inscriptions in Arabic. The practice of pilgrimage to the well kept tombs of the ancestors is also found among the Chinese Moslems of Kansu. Some of the bigger tombs are quite elaborate and include, besides the monuments, a mosque, school halls and lodging places.

or Ching-chiao pei in Chinese, which stands at Sian, varifies the fact that this church had been established among the Chinese people of Shensi Province. This early Christian movement in Northwest China suffered persecution and died out. In modern times both the Catholic and Protestant Churches came to the Northwest. Most of their converts have been Chinese. Until the Communist period the Catholic Church had been very strong in one place in Ninghsia Province. It rendered many kinds of service to its members and had a much stronger control over them than did the local government. To a great extent it had trespassed the jurisdiction of the government, which had created considerable resentment and suspicion among the authorities and the general populace. (See Social Structure.)

Though subscribing to all important religions in varying proportions, the Chinese in the Northwest, like those in other provinces, seem rather materialistic. Nowhere among them is there found a religious fervor and devotion which characterize both the Moslems and the Tibetans of this part of Asia. However, the religious atmosphere is very strong in all aspects of communal life, which are always cloaked with some religious rite. For example, the village or community theatrical has a great deal of religious implication. Although unlike the miracle plays and so-called devil dances of the Tibetans, the plays are usually straight drama, frequently historical, the primary significance of the presentation is a religious one. They give the gods pleasure and thus dispose them favorably toward the people of the community. Even the mask and the animal plays of the New Year's celebration have a definite religious significance.

Chinese home life is also mixed with religious or semi-religious feelings. Regardless of its wealth or locale, a Chinese home will have its ancestral tablets in the place of honor. The tablets represent those who have gone and keeps them and their memory always present. Those living now are only the present custodians of the family name.

"This belief. . . holds the members of one household together with strands which are not so much woven by affection as by a sense of mutual responsibility within a clan. . .

"At New Year the shack living room, miserable though it be, is the scene of the most exact rituals when, in absolutely correct order, each member of the family makes obeisance to the elders; the feasts fixed by the Chinese calendar are scrupulously observed, and I have known a man to carry a watermelon for days across the desert in order that at the Feast of the Moon, in the most desolate of wayside stages, he might put an old rickety table in the courtyard and offer the melon, cut in slices, to the Queen of Heaven.

"The traditions, the rituals, the basic and essential relationships which govern men's intercourse, control the small circle living in such far-away places as rigidly as they control the family which dwells in one of China's great cities. Both act according to principles laid down by ancestors, whose control is so subtle and so little questioned as to leave no room for the spontaneous and the unusual." (Cable and French, The Gobi Desert, 165-166.)

Chinese settlers in Sinkiang of course reflect the religious characteristics of their origin. Among the old settlers, who came into the country with Tso Tsung-t'ang, the secret society tradition is still strong. Merchants, mostly from Tientsin, almost universally belong to the Tsai-li sect which forbids its adherents indulgence in drinking and smoking.

IV. Religion under the Communists

A. Islam

When they were fighting for the supremacy of China in the years following World War II and when they first came to power in 1949, the Chinese Communists promised religious freedom to the national minorities in an effort to gain their support. Article 53 of the Common Program of the CPPCC, promulgated in September, 1949, stated that "the national minorities shall have freedom to develop their dialects and languages, to preserve or reform their traditions, customs and religious beliefs." Mosques were promised exemption from taxes and Article 3 of the Agrarian Reform Law, published in June 1950, which decreed the confiscation of the land belonging to ancestral shrines, Buddhist temples and Christian churches and schools, provided for the retention of land by the mosques, subject to the wishes of local Moslem residents. As a further effort to win over the Moslem population of the Northwest, the Government Administration Council issued in December, 1950, a directive permitting the observance of the festivals of Id-el-Fitr, Corban and Molid Nabawi. It abolished tax on the slaughter of cattle for celebration of these festivals and permitted holidays for cadres, soldiers, workers and students of Moslem faith. State trading companies were instructed to sell daily necessities to the Moslems, during these festivals, at reduced prices.

These pronouncements made up the sum total of what the propaganda of the Chinese Communists called the "policy of benevolence" toward the national minorities. They were given tremendous publicity which served to overshadow the grimmer and more gory record of persecution of the Moslem peoples in the Northwest. The reasons for the ostensible policy of toler-

ness" of this road, and certainly what with the ravages of brigands and the natural infertility of the soil, the few inhabitants were poor to the verge of starvation. Yenan seems to be the centre of the most desolate area, by far the poorest region I have traversed in China outside the actual deserts.

Chungpu, a poor little third class district city half in ruins, lies on the side of a hill, with a sacred grove of very ancient trees behind it, which present a remarkable sight in this treeless country. Near by is a small temple containing the tomb of the Emperor Huang Ti, who reigned some 4000 years ago, which illustrates the great antiquity of these little Shensi towns.

The next day's stage to Loch'uan Hsien is a trying march through the loess. The track follows down the valley to the east for 20 li, and then turning north climbs up through a gully on to the plateau a few hundred feet above, across which it runs for an hour's march to the hamlet of Antzu T'ou, whence it drops into the valley of the Lo River. This stream resembles the Ching Ho, a muddy torrent twenty yards wide, and flows in a narrow valley some hundreds of feet below the level of the loess plateau. It is crossed by a ferry at the hamlet of Chiaoho K'ou, and the path then climbs steeply out of the valley again and runs across the plateau in a N.E. direction for three hours' march to reach the district city of Loch'uan. The latter is the usual little third class Hsien city of Northern Shensi, but appeared to be rather more prosperous than its neighbours and to show less signs of the ravages of brigands. It lies on the loess plateau, intersected as usual by colossal rifts, the heads of some of which are so close to the city that they threaten to engulf it in a few years time. These towns and villages on the loess plateau are quite unapproachable except by the existing roads owing to the rifts which open up all around, and could be held by a few men against an army; perhaps that is why Loch'uan appeared comparatively immune from brigand raids.

From Loch'uan to Fu Chou is another exhausting march in the loess of 75 li. The track runs N.E. across the plateau for an hour's march until it is held up by a huge cañon with the usual perpendicular walls. Climbing in and out of

Italy combined, but the population of the whole Northwest Region is only about thirty-five million.

Northwest China is an area of 1,232,159 square miles, one third the size of all China, with a population only 5.8 percent of the nation's total. It represents, however, a great complexity both geographically, culturally, and ethnically.

The region is characterized, even more than the nation as a whole, as a unity with diversity. Its entity is partially cultural with a predominant religion of Islam and a common historical as well as political background. While climatic conditions are relatively uniform, ranging from semi-arid to arid of the extreme temperate continental type, its physiographic features very considerably. In addition to the thickly peopled humid and mild Han-chung Basin in Southern Shensi, there are large low-lying rich fertile riverine plains along the Wei-ho, Huang-shui, and some parts of the main Yellow River, as around Lanchou of Kansu and near Yin-chuan (Ninghsia) plus the Ili valley of Sinkiang and numerous small oases scattered along the foot of the snow-capped high mountain ranges of Nan-shan or Chi-lien, Kunlun, and Tien-shan. They are thickly populated areas either in large stretches or isolated pockets. Next come the vast plateaus and deserts of Alashan, Khara Gobi, Takla Makan, and Northeastern Dzungaria forming an extension of the Great Gobi of the Mongolian plateau. Each of them is enormous, e.g., Takla Makan desert occupies half of the Tarim Basin (910,000 square kilimeters). They are practically uninhabited except for a few small oases scattered here and there. Next are the arid and semi-arid upland basins of Tsaidam and Koko Nor in the province of Chinghai and Southern Dzungaria of northern Sinkiang. The semi-arid steppes are occupied by pastoral nomads, while the ared portion is either inhospitable or very thinly populated. Last come the lofty mountains. Some of them are snow-capped with alpine pastures and forests like Tien-shan, Nan-shan and the Altai mountains. Some of them are barren and rugged like the Kunlun, Bayan Khara, and Altyn-tagh. The former provide natural bases for the development of transhumance and lumbering, while the latter precludes any permanent human settlement, except for a few high mountain passes which are occasionally traversed by traders and travelers, such as across the mountains of Kunlun, Bayan Khara and the Pamir.

As to historical and political relations with China, there are two distinct parts. Shensi and Kansu (excluding Ninghsia) are the sites of ancient Chinese culture - the archaeological finds of the "Oracle Bones" of the Shang Dynasty and the Yang-sha pottery in Shensi and Kansu date back at least to one to two millennia B.C. The Wei-ho valley plain is the cradle of Chinese civiliation.

*563 631 6) Muru Dzasak, 40 families, (Tafel: Ha-tung Dzasak)
7) Charagolchin Dzasak, 4 families (Tafel: presumably Damba Dzasak)
8) Baga-nor Dzasak, 1 family (Tafel: [illegible])
9) Khalkha Dzasak, [illegible] families (Tafel: [illegible])
10) Tsunkuk Dzasak, 60 families (Tafel: probably Tsinkuk Gung)
11) Barun Dzasak, 280 families (Tafel: Harun)
12) Tsun Dzasak, 300 families (Tafel: Dzun)

3. Probable extinction

*563 [162] [191] According to M. Hermanns, the total population of the Chinghai Mongols does not exceed 18,000 people. Since the Mongols of the Chinghai region have very few children - two at the most - and since sinification as well as Tibetanization appears to be rapid, the extinction of the Chinghai Mongols is to be expected in the near future.

IV. The Tibetans of the Northwest

A. General Characteristics

The province of Chinghai is inhabited by sixty-six Tibetan tribes, called by the Chinese "tame" in contrast to the "wild" tribes inhabiting the Koko-nor region.

Lattimore and Father Schram point out that the Tibetan tribes easily subdivide into new tribes which observe strict clan exogamy. The Tibetans are Lamaist-Buddhists of the Yellow Hat Sect in the *563 northern districts and of the Red Hat Sect in the southern districts. • 791 Shamanism is also still existant among the Tibetans. Some Tibetans 795 living in the district of Hsün-hua have become Moslems.

B. Physical Characteristics

*563 142 The Tibetans belong to a race which is called protosinide. Their characteristic features are: middle to tall stature and very muscular. The legs are considerably longer than the legs of the Mongoloids. The color of the skin is light brown and the facial skin copperish red. The lips are thin. The nose is long and prominent. The head is large and long. Round heads appear only among the Ngo-loks. The face shows a sharp relief. Usually they lack the Mongoloid eyefold. Eye color is generally brown. Body hair is considerably stronger, thicker and denser than among the Chinese or Mongols.

*563 241 233 C. Economic Activities

The Tibetans are either nomads who breed yaks and sheep or farmers who cultivate oats, peas, wheat, cabbage, and turnips. They use the same agricultural tools as the Chinese farmers.

their victims, whose every attitude expressed the very acme of agony. At last, having received its due, the spirit was seen preparing for a new incarnation, as the Wheel of Life revolving had now a fresh rebirth to distribute. This time the protagonist is to enter the body of a pig; and here the artist reached the highest degree of plastic talent. Though it were but to wallow in the mire, the prospect of once more breathing the fresh air, of basking in the kindly rays of the sun, and of living the familiar life of earth, filled the hunted spirit with untold joy, marvellously indicated by the glance thrown over the shoulder, as the porcine snout descended like a mask upon the features.

An old priest was superintending a party of worshippers, who had come to burn gold and silver paper folded to represent money, this being considered suitable to be offered as votive-sacrifices for the dead. These people had lately lost a father, and picturing him as wandering through such an abode of pain, were now doing all they possibly could to come to his assistance. Leading the group was a young man, his son, who doubtless in all matters of daily life showed himself to be far-sighted and intelligent, but who now, with a mind blinded by heathenism, sought to impress upon the torturers the fact that he was in a position to buy off his father's doom by such large sums of mock-coinage as any god might be flattered to receive. The smoke rose, and the spirit-treasure passed out of sight. The gods would doubtless now see to it that part, at least, of the debtor's bill was paid!

Our immediate business was to let the people of Suchow know of our arrival, and very soon, by means of posters, the news was spread, and the words: 'The Christians have come!' were on the lips of all. It was greatly to our advantage that the whole city happened

77

77 RELIGIOUS BELIEFS--general statements about several types of religious beliefs and ideologies. The behavioral and organizational aspects of religion are treated, respectively, under 78 and 79.

RELIGION

I. Historical Background of the Religions of Inner Asia

Various religions have been strong in the Northwest, among them Shamanism, Buddhism, Nestorianism, Manichaeism, Confucianism, Taoism and Islam. The latter is the predominant religion among the Turks and the Dungans. Buddhism is the religion of the Mongols, Mongours, Shira Yegur and Tibetans. Nestorianism and Manichaeism have become extinct, but Confucianism and Taoism are still alive in Chinese communities (see China Handbook).

A. Shamanism

Shamanism is a pagan faith based upon concepts of demons and spirits, with whom the Shaman, or priest, attempts to maintain contact by either sending his soul to them or receiving them into his own soul. The Shaman usually functions in a self-induced trance, produced by taking alcoholic beverages, toadstool powder, et cetera. A high percentage of Shamans suffer from various neuroses, severe forms of hysteria, or epilepsy, and the selection of a new Shaman may be based upon such manifestations of a deviant personality. Sometimes, however, the position of Shaman is hereditary.

The Shaman is regarded as a mediator between man and the supernatural. He exercises his magic powers for such purposes as healing, rain-making, success in hunting, prevention of accidents, and divination. In central Asia, the common methods of divination are by the flight of birds and by scapulimancy, or interpretation of cracks on the shoulderblade of a sheep which has been treated over a fire. While functioning in his supernatural capacity, the Shaman wears a distinctive dress, usually a long robe decorated with metal discs, small bells and the claws of the totem birds.

The training of a Shaman is long and involved, and he usually does not reach full professional status until the age of forty or fifty. Shamanists have no ecclesiastical organization, but rank Shamans on the basis of their success in dealing with the supernatural.

Besides the various ghosts, ancestral and animal spirits and other lesser supernatural beings, the Shamanists recognize a supreme being, the Tengri, who is the universe personified, God and heaven. He is the fountain of life, as he gives man his soul, and the fate of all peoples depends upon him. The Altaic people believe that the Tengri observes all and everything; no

one can hide from his all-seeing eyes, nor flee his judgment.

This was the autochthonous religion of the Central Asiatic steppe regions. It has been proved that Shamanism appeared among the Hsiung-nu of the third century B.C., as a cult idolizing heaven and certain holy mountains. The T'u-ch'üeh of the sixth century A.D. worshipped the originator of heaven and earth as their highest god, and sacrificed horses, cattle and sheep to him. This ancient so-called Tengri cult looks upon the world as a construction of layers. The upper seventeen layers form the realm of heaven, the world of light, and in the uppermost layer resides the Supreme Being, whom heaven and earth must obey. The lower seventh to ninth layers constitute the world of darkness, the place of damnation for sinners. Virtuous souls, on the other hand, are received into the world of light. Between these upper and lower realms is the world of the living.

Turkic mythology tells of a child-protecting diety, Umai, and good genii who populate the soil and water (yer-sub), especially fountains and mountains, holy places (idug). This cult became legalized and later was regulated by the Jassa (code) of Chingis Khan. The veneration and adoration of air and water played an important role, and was a distinctive phenomenon. For this reason, the Jassa forbade the Islamic ritual washings of body and clothes except in certain cases. Priests prophesied the future. The Kül Tegin inscriptions (one of the oldest Turkic runic written monuments) reflect the Turco-Mongolian cosmogeny and the concept of morality: The order of heaven is the subjecting and peaceful ordering of the peoples of the "four corners of the earth."

This same Tengri cult was carried to Europe by the Chazars and Avars. The Shamanism of the latter is evident in the practices handed down to posterity by Theophylaktos Simokatta, a Byzantinian historiographer of the seventh century. In China, which was conquered by the Ju-chen in the twelfth century A.D., a large part of the influence of the Ju-chen statesman, Wan-yen Wu-shih, was due to his Shamanistic "brotherhood."

More precise information about the Mongols' religious concepts prior to the thirteenth century is not available. Even in later times, Mongol Shamanism remained essentially unchanged and the major religions had only a negligible influence upon it. Mongols hide from thunder, they are careful to avoid muddy streams and springs, which are believed to be inhabited by spirits, and they take refuge on holy mountains. According to Islamic writers and Nestorian missionaries, the object of such ascents is to come nearer to Tengri. Doffing the cap and belt is a sign of humility before the omnipotence of Tengri. Thus, when he was pursued by the Merkits, the young Chingis Khan fled to Burkhan Khaldun, an especially holy mountain today called

771

771 GENERAL CHARACTER OF RELIGION--conception of what constitutes religion; differentiation of the sacred and the profane; distinctions drawn between religion and superstition; relation of religion to the unknown and the unpredictable; relative prominence of magical and anthropomorphic elements; evidence of the expression of projective mechanisms in religious beliefs; primary orientation of the religious system (e.g., ancestor worship, nature worship, totemism, ritualism, mysticism, redemptive religion); social and individual role of religion (e.g., services and disservices); incidence of faith, indifference, and skepticism; existence of nonsupernatural ideologies supported with a faith akin to that in religion (e.g., ethical systems, political philosophies); etc. See also:

GENERAL CHARACTER OF THE SOCIETY

1. General Introduction

The Northwest of China, consisting of the four provinces: Shensi, Kansu, Chinghai, and Sinkiang, part of which is now called the Sinkiang-Uighur Autonomous Region, comprises an area of 1.3 million square miles, (almost a third of all China), in which thirty-six million people live. There are at least four different racial types (Turanides, Sinides, Mongoloides and Tangutides) and more than a dozen different ethnic groups: Eastern Turks or New Uighur (Chin. Wei-wu-erh), Chinese (chin. Han), Chinese Muslims (chin. Han-hui or Tung-kan-hui, Engl. Dungans), Kazakhs (chin. Ha-sa-k'o), Kirghiz (chin. Chi-erh-chi-ssu) Uzbeks (chin. Wu-tzu-pieh-k'o), Tatars (chin. T'a-t'a-erh), Tajiks (chin. T'a-chi-k'o), Western Mongols or Oirats (chin. Ölöt or simply Meng-ku), Sarigh-Uighurs (chin. Tung-hsiang-hui-hui), Shera Yögur (chin. Tu-jen), Monguors (chin. also Tu-jen), Salars (chin. Sa-la), Tibetans (chin. Hsi-fan), Manchu (chin. Man), Sibo (chin. Hsi-po) and Solons (chin. So-lun). The last three ethnic groups, the Manchus, Sibos, and Solons are persistently listed in Communist censuses, although it has been proved that they are non-existent as linguistic units, or as separate ethnic groups. Numerically, the Chinese constitute the overwhelming majority in the Northwest (about thirty million).

While the Turks of the Northwest (i.e. New Uighurs, Kazakhs, Kirghiz, Uzbeks, Tatars and Salars) are rather firm believers in Islam (Mohammedanism), the Western Mongols, Sarigh-Uighurs (the latter are Turks), Shera Yögur, and Tibetans are faithful Buddhists of the northern form, also called Lama Buddhism, and the Chinese believe in a variety of religious or philosophical systems: Confucianism, Taoism, Buddhism, and even Demonism and Animism.

The economic pattern of the Northwest as well displays an enormous variety; we find nomadic pastoralism among the Kazakhs, Kirghiz, Western Mongols, and Tibetans, intensive horticulture among the New Uighur of the oasis-belt of Sinkiang, agriculture by means of irrigation (kariz system. See chapter about agriculture) among Chinese (only fifteen percent of the North west agriculture is without any irrigation), sedentary Turks and Mongols, and a mixture of primitive agriculture and pastoralism among some Tibetan and Mongolian Tribes of Chinghai and Kansu. The Turkic and the Chinese Muslims are the bearers of the trade along the old "silk roads" of Sinkiang, Chinghai and Kansu. The urban centers of the Northwest are also centers of petty industry and handicraft. The newest

SN 563 [795] all Buddhists) they have a strong feeling of belonging together. Nevertheless the Mongols are fully aware that their former power is declining more and more every decade and that their pastures are constantly diminishing because of the encroachment of agriculture and Chinese migration pressure. The establishment of the Inner Mongolian Autonomous Region (to which the Edzin Gol and Alashan areas have recently been added) and the organization of several autonomous chou for the Mongols of Sinkiang, Kansu and Chinghai, might restore to a small degree the hope for recovery of their lost strength and political power, a hope which has been stimulated during the Sino-Japanese war. In addition, the organization of those autonomies will certainly raise their feeling of security, and might east the widespread desperation of Mongolian leaders who have anticipated the final decline of the Mongols as an ethnic group and a linguistic unit because of rapid sinification and loss of pasture land, and therefore loss of cattle, the only SN 563 668 1779 life resource of the average Mongol. It is difficult to say what effect the Communist regime will have on the ethnic group of the Mongols. So far, the Mongolian indigenous culture has been fostered by the Communist regime, but there is little doubt that, when it comes, the complete transition of the Mongolian society into a Communistic society will not be carried out without resistance and ensuing hatred. It is unthinkable that the average Mongol, who for centuries has adhered to the simple pattern of nomadic life (owning cattle individually and only pastures collectively) will agree with the policy of bolshevization. It can be easily conceived that deprivation of their cattle will mean the end of the nomadic Mongolian society as such. What has been said about the Mongols may very well be true also for the Kazakhs and Kirghiz.

SN 181 IV. Dominant Social Motives.

The dominant social motive of the average citizen of the Northwest depends largely on his ethnic group affiliation. Starting with the majority, the Chinese, it should be repeated that they are diligent and industrious farmers whose whole energies must be used in order to maintain their families, who SN 181 cooperatively toil in the fields and earn just enough to live on. In such a setup little room is left for cultural and religious ambitions; although ancestor worship is sincerely practiced 771 [769] it is difficult to say whether this kind of worship is a true religious phenomenon or only a reflection of the traditional respect toward elders and parents. The religious behavior

SN 181 of the average Chinese seems to be fatalistic, considering ● 991 Providence or Heaven to determine his fortune in life. In general, the average Chinese is rather indifferent in religious matters, although he might be sensitive if someone looked askance on his belief in local spirits, demons, and gods, SN but this is merely a matter of tradition rather than religion. 181 The Chinese is strongly individualistic and usually dislikes to be ordered around and governed; he ardently defends his own opinions. His inclination for social groupings is obvious. Wherever Chinese live, they soon form integrated communities and at times of distress or in critical situations they are ready to help each other collectively, a characteristic tendency found especially within the extended family, which as a rule feels itself responsible as a whole for debts, misdeeds, etc., of any member. The Chinese are reported to be basically anti-militaristic, although this may be more a traditional attitude of the literati than a sound fact, considering only the last fifty years of Chinese history. However, a Chinese proverb says, "From good iron do not make nails; from good men do not make soldiers." To toil his fields in peace, to make a living this way, and to raise his children, whom he deeply loves, and not to be interfered with by state and government, can be described as the average conception of SN the "good life." The average Chinese of the Northwest lives 342 in simple mud or stone houses (in the Yellow River area, 35 caves of the adjacent loess hills), stove, k'ang, and ancestor SN altar being almost the only furniture.

517 Culture, art, and literature were primarily fostered by 571 the richer merchants, land and water owners, and, of course, 565 the officials and scholars. These groups represented, up to 423 1949, an economically powerful class who owned a considerable part of the land and the water rights. Chinese officials of the SN frontier provinces had a reputation for being extremely money- 565 minded. The Chinese gentry, consisting of former officials 571 and degree holders, who were in many cases at the same time 423 holders of land or watter rights, have been abolished as a 178 class, while large parts of the academic strata, the intelligentsia, 668 became more or less the Communist avantgarde of China, showing the same phenomenon which appeared in Yugoslavia, Bulgaria, Czechoslovakia, Italy, etc., before and during the Second World War, where the intelligentsia showed a deep SN inclination towards Communism.

563 In regard to the nomadic minorities of the Northwest (Kirghiz, 233 Kazakhs, Mongols and Tibetans) the dominant social motives are two fold, and can be subdivided into an economic and a religious one, equally strong. The whole economic life of the nomads is centered around their livestock. The nomad's life

S
N
563 depends on his herds: they are his only resource, his only
233 wealth, and his only pride. When two nomads meet, whether
[521] they are Kazakhs, Kirghiz, Mongols, or Tibetans, the first
[554] subject that comes up is their cattle. Among nomads, social
[422] status is established by the possession of horses, camels,
and livestock in general, and only secondarily determine l
by titles or descent. This is especially true for the Kirghiz,
Kazakhs and Tibetans, and to a lesser degree for the
Mongols, among whom aristocratic birth (real or imagined)
S plays an important role.
N
The average nomad's life can be described as follows: he
[342] lives in a roomy felt tent, furnished with house altar, in the
[352] case of Buddhists, or with an artistically made book-stand
[353] for the Quran in the case of Muslims, and some chests and
carpets. The whole family takes care of the livestock, and
periodically the migration unit moves during the summer time
S from pasture to pasture, preserving the richest and most
N
[521] protected grazing land for the winter time. The weather
plays a fatal role in the welfare of the nomad's livestock, and
every so often a migration unit (the ail, the aul, the ayir,
S the omoq, otoq, xotn, or uruq, the ulus or even the aimaq)
N
[614] loses its livestock. In this case, those clans which still own
[426] enough livestock divide their herds and lend part of them to
[496] those who suffered the loss. Collective cooperation is exer-
cised in this respect by Kazakhs, Kirghiz and Mongols,
while the nomadic Tibetans, in a similar situation, have quite
S a reputation for robbing neighboring tribes of their livestock.
N
The nomadic way of life, the close contact with nature and
563 dependence on nature promotes animism, shamanism, and spir-
771 itualism, which goes hand in hand with the prevailing religions
of Islam (in the case of the Kirghiz, Kazakhs, Salars, and
some Tibetan clans) and Buddhism (in the case of the Mongols,
Tibetans, and Sarigh-Uighurs). As a general rule, the nomadic
Kirghiz and Kazakh are not very fanatic or ardent Muslims, and
neither are the Mongols very pious Buddhists, but still, both
S feel strongly about their religious although they are rather lax
N
[792] in their observance. No matter how poor a Buddhistic nomad
[794] is, he voluntarily supports and feeds wandering lamas,
invites several on major occasions (birth, death, and marriage
if the bride's father can afford it), pays them, and finally is
accustomed to the old tradition of giving a small percentage of
his livestock every year to Buddhistic monasteries. All
nomads are very superstitious, and the relationship between
cause and effect is often misinterpreted, e.g., in the case
of disease or weather. It is safe to say that the dominant
motives of the nomads are economic in the first place and
religious in the second place.

V. Individualistic and Collectivistic Bents and Traditions

The nomadic society of the Kirghiz, Kazakhs and Mongols shows collectivistic trends insofar as the pastures are always owned collectively and the livestock can be taken care of and protected only cooperatively. In periods of war and uprisings, the livestock had to be protected militarily, which was one reason why the military organization of the nomads, introduced by Chingis Khan, survived up to the twentieth century. Here we can say that the nomadic Kirghiz and Kazakh still shows a tremendous martial spirit, especially the Kazakhs who fought the Communists in 1949 and 1950 in a heroic way in spite of the fact that they were outnumbered from the very beginning.

As a matter of fact, the Mongols show much less martial spirit than neighboring Kirghiz, Kazakh and especially Tibetans, who constantly rise up here and there, becoming a major nuisance for Peking, although they are hopelessly outnumbered by Chinese Communist Troops. Many explorers agree independently that the Mongols, once intrepid, dauntless, unafraid, frightful and terrifying warriors, make now the impression of being inefficient soldiers, timid, downhearted, and discouraged (so Rockhill, Howorth, Tafel, Vladimirtsov, Hedin, Futterer, and Filchner). Russian scholars, above all B. Vladimirtsov in his Le Regime Social Des Mongols, Le feodalisme Nomade, Paris 1948, blame Buddhism for the disappearance of the martial spirit and courage of the Mongols. This opinion is, however, contradicted by the fact that Tibetans, who have been influenced by Buddhism some centuries longer than the Mongols, are well-known as tough and cunning fighters and apparently fearless and daring insurgents.

Almost every Tibetan family has at least one son in a monastery. They faithfully pay their tributes to these monasteries where their sons live as novices or monks. The monasteries are the only cultural centers of the nomads. Kumbum might be named as a magnificent example in regard to external architectural beauty as well as internal wealth in respect to its library, printing house, and the spiritual value of its schools and its Lamaistic academies.

There are many reasons to believe that the Communist regime is determined to abolish nomadism and to make the nomads sedentary or at least semi-sedentary. The first step was the erection of permanent winter sites. The attitude of the nomads toward the regime seems to be ambivalent. The erection of veterinary stations for the livestock and the extension of additional irrigated pastures certainly are measures approved by the nomads but on the other hand the threatening

outlook on life, which results in a remarkable internal social stability of family and community at the expense of personal ease. The greatest Islamist of our time, Carl Brockelmann, once called the Quran "die Heeredienstvorschrift für die Mohammedaner" ("the army regulation book for the Muslims"), and indeed the Quran is not only the condensation of Muslimic religion and philosophy but also the code of laws and the "code of practical regulations" concerning the practical daily life of the average Muslim. From childhood on those "regulations" are drilled and hammered in to the people. The Quran becomes the basis from which everything is judged. The conclusion, that the Muslims do show a strong inclination for doctrinal behavior, is rather justified.

If we describe the nomad as a logical and realistic individual to whom neurosis and psychosis are in general alien, one certainly should not forget that there has been still room for romance in his life: first and foremost, the Muslimic nomads as well as the Buddhistic nomads (the Mongols) dreamed and still dream of the creation of their own empire in which they are the masters and not the Chinese. The Mongols still mourn for their once powerful and grand empire "where the hoof of the brave horse was the only sound and the roaring and bellowing of camels and cows the only noise" and where the Khan of the Khans, the Khakhan, the Great King, resides in Qaraqorum, the scene of the Great qurultai (constitutional and legislative assembly), ruling the Mongolian tribes and leading the Mongolian armies, in the name and as the representative and vicar of the "Eternal Blue Heaven," the ruler over the universe.

While in the folklore and literature of the Muslimic nomads the Golden Horde and the Chagatai Empire (Chagatai Ulus), Batur Khan and Timur Lenk (Tamerlane) are oft-repeated subjects, the Mongolian folklore abounds in painting the deeds of Chingis Khan and is excessive in describing the adventurous greatness of the former Mongolian Empire.

The Buddhistic conception of palingenesis and reincarnation add another romantic feature to the life of the average Mongol and Tibetan and the belief of the Muslim (after having become a hajji, a pilgrim, or even better, a hazze, one who fought as a soldier against the "non-believers") that he would enter the paradise of heaven (or better one of the seven heavens, the seventh, only when he sacrificed his life to Allah in combat), is a deep-rotted romantic conception.

As we said, the life of the Buddhistic nomad is centered around his tent and his herds, so to speak, the outer sphere of his life, but the inside sphere is absorbed deeply by religion,

in the case of Tibetans more than in the case of the Mongols and Turks.

While the attitude of the average Northwest Chinese is rather indifferent to national problems, at least as long as his economic position is not unfavorably affected, his approach to individual problems is characterized by a distinct realism and opportunism.

The provinces of Kansu and Shensi, almost exclusively populated by Chinese, are, in comparison with the provinces of China proper, less progressive in regard to education and general living standard; therefore the frontier Chinese is more conservative but also more suspicious and distrustful when faced with innovations and reforms. He relies more upon himself, seeking and expecting less help from the bureaucracy.

Generally speaking, the frontier Chinese can be divided into the following groups: the descendants of those who were exiled and ostracized for political reasons during the Manchu period, further on, the descendants of criminals who were sent to the frontier areas as workmen, and last but not least, the colonist (the overwhelming majority), partly adventurers and desperados and partly surplus population of China proper and finally descendants of former garrison troops and merchants from China proper who were condemned to frontier service, desperately looking for new cultivable land.

Among the Chinese of the Northwest, those living in Shensi and Kansu belong to the oldest settlers. Detached and severed from his old homeland, the frontier Chinese is more versatile and more open-minded towards unusual and unaccustomed situations. The old Confucian ethics in regard to family life and relationship with neighbors is still very strong.

The frontier Chinese is possessed by a romantic feeling for his old country. His position at an outpost in a remote area makes him see the old homeland in an euphemistic light.

The frontier Chinese has to prove true and to stand the test more than the Chinese of China proper, which creates a healthy measure of self criticism without falling into the neurotic error of self-laceration. The frontier Chinese is difficult to influence since he is more unrestrained and less bound to his environment than the Chinese of China proper.

The obvious propagandistic success of the Communists in the Northwest does not contradict the above-mentioned phenomena, because the Communistic propaganda proceeds in an atmosphere of terror and the Chinese, as a born realist and opportunist, inclines to rationalize his pretended acceptance of propaganda.

GEOGRAPHICAL BACKGROUND

I. The Physical Setting

A. Location and Importance.

Lanchou, the capital of Kansu, is the geographic center of China. If one draws a horizontal line from west to east and a vertical line from south to north, he finds that the northwest quarter of China just covers the whole area of Sinkiang, Kansu, and Chinghai or Koko Nor. Owing to scanty rainfall, a great part of the area is a vast desert, dotted with oases and strips of cultivation, It is generally classified as the interior continental desert and steppe region of China.

From the viewpoint of geographic location, Northwest China, especially Kansu Province, is a transitional zone of cultural variations. Religions, for example, are different. From Kansu northwestward to Sinkiang, the majority of the inhabitants are Mohammedans. Contrarily, southeastward to China proper, there is more Buddhism and Christianity. Again, Kansu furnishes a natural boundary for economies. From the eastern end of Kansu southeastward the area is mainly agricultural, while the area northwest from Kansu is largely a pastoral region. People there are adapted to a nomadic life with a relatively self-sufficient economy. As a result, the trading activity is small. It is limited to a small village or an isolated oasis.

The area is adjacent to the Mongolian People's Republic on the north and northwest and the Tibetan Plateau on the southwest. Moreover, it lies in the path of direct communication with Soviet Russia through the narrow plain of the Kansu Corridor by way of Sinkiang in the extreme northwest. It is an important part of China as a strategic pivot linking Asia and Europe and it is the great joint between Inner Asia and the Pacific coast.

B. Surface Features.

The physical features of northwest China generally may be classified as plateaus. However, viewed in terms of the present relief of Kansu, the high lands are all located along the southern border of the province. They are generally called the Ch'i-lien-shan, the Nan-shan, or the Southern Mountains. This mountain range forms the natural boundary between Kansu to the north and Chinghai to the south. There are a few passes situated in this mountain range with an average height of 12,900 feet. The length of the Chi-lien-shan is roughly estimated at 570 miles. Its east end is dissected by the streams of the upper Yellow River into a few isolated

V. The Chinese Moslems

A. Population

*563 795 [162] According to Paul Cwick, there are about 100,000 Chinese Moslems living in Sinkiang, about 300,000 in Ning-hsia, about 1,500,000 in Kansu and about 138,000 in Chinghai. For China as a whole the total figure amounts to 3,599,350.

1. Physical characteristics and economic activities

*563 795 144 142 The overwhelming majority of Chinese Moslems seem to be of Chinese extraction, but undoubtedly there are Chinese Moslems of Turkish and Indo-European extraction. The latter origin can be deduced from statements made by Father Cwick. He says that many Chinese Moslems of Chinghai have blond hair, blue eyes and prominent eagle-noses. Filchner says that the Hui-hui (the Chinese term for the Moslems) are different from the Chinese, having taller and stronger bodies, oval skull shape and prominent noses.

*563 795 181 Fuad Kazak states that the Chinese Moslems (also called Dungans) also differ from the Chinese in terms of their martial tendencies. Certainly their numerous uprising affirm this statement. Father Schram reports some Chinese sayings about the Chinese Moslems: "One Moslem asleep is more intelligent than ten wide awake Chinese," or; "The food of the Moslems is tasteful, but their words are not to be trusted," and "out of ten Moslems nine are thieves." All report concordantly that the Chinese Moslems are very eager, keen, shrewd, and successful traders and merchants, farmers and innkeepers. They are known for their skilled salesmanship [441] "in the grain trade and the buying and selling of horses, mules, oxen, sheep, wool, hides and lamb skins." (Schram) [505] The Chinese Moslems also have a near monopoly on the boat and raft traffic of the upper course of the Yellow River.

2. Religion

*563 795 791 Some of the Chinese Moslems believe in the Sunna tradition and part believe in the Shia. Many Chinese Moslems still exercise Suflsm (mystical submergence into the idea of God, mystical meditations and so forth). While the Sunna-believers stick to the traditional Islamic interpretation and the commandments of the Koran, the Shia-believers do not recognize hereditary religious leadership. Since everybody "who is graced by God" can become a religious leader, the Shia believers are split into many groups.

3. Relations with other groups

a. Chinese

*563 795 186 The Chinese consider the Chinese Moslems as foreigners and even barbarians. The animosity between these two groups is extraordinarily violent. The Chinese Moslems have never missed an occasion to annihilate the Chinese as, for instance, in the second half of the eighteenth century when the northwest of China

must have had few, if any, effects upon everyday life, or the village units would not have been so important in the local administrative system. The very common pattern of market-town surrounded by farm villages exists in the Northwest. Like those in China Proper, the Northwest market towns are the outgrowth of those villages which are situated on main roads or at strategic points. The market towns fill the same kind of social, economic and cultural roles here as they do in other parts of the country.

In areas where both Chinese and Chinese-speaking Moslem farmers live, there are three types of rural communities. The first includes the all-Chinese villages which greatly resemble the villages in North China. From twenty to thirty families constitute the average population in these villages. When some peculiar quality, such as its location on a well-travelled road, makes a village acceptable to an entire district, it becomes a market town. Eventually it may grow to the proportions of a city. Whenever the village grows so large that those whose fields lie on the periphery can no longer go back and forth each day, it begins to break up. The families with the very distant fields become the nucleus of a new settlement.

In a Chinese village communal life is exhibited in several ways. One is by religious observance, particularly the conduct of the ritual connected with ancestor-worship and veneration of the past. At stated times throughout the year - especially at the New Year, and during the second, fifth, and eighth moons - festivals honoring certain deities or commemorating religious events are held. Such a festival is always a communal matter. All contribute money for the furnishing of trappings proper to the affair, some are concerned with organizing the celebration, others carry images in the procession, and still others collaborate with the priests, - Buddhist or Taoist, - in the performance of the various ceremonies. Such religious festivals are not altogether a matter of the calendar, for additional services are often held in times of drought or other community disasters.

The village or community theatrical is another communal activity. Generally the plays are given for the enjoyment of the people. The entire community shares the responsibilities and enjoys the fun. In small Chinese hamlets in the Northwest even a funeral is very much a community affair. Virtually everyone has a part in the mourning, feasting, burying, and attendant religious activities. Also annually in early spring during the feast of Ch'ing-ming, the Chinese in the Northwest, as in other parts of China, decorate the graves, make various offerings of food and drink, burn paper money and incense, and bewail the dead. The graveyards are not necessarily communal, but Ch'ing-ming is observed universally and no one can abstain from participation without arousing comment

RELIGION

I. Historical Background of the Religions of Inner Asia

Various religions have been strong in the Northwest, among them Shamanism, Buddhism, Nestorianism, Manichaeism, Confucianism, Taoism and Islam. The latter is the predominant religion among the Turks and the Dungans. Buddhism is the religion of the Mongols, Mongours, Shira Yogurs and Tibetans. Nestorianism and Manichaeism have become extinct, but Confucianism and Taoism are still alive in Chinese communities (see China Handbook).

A. Shamanism

Shamanism is a pagan faith based upon concepts of demons and spirits, with whom the Shaman, or priest, attempts to maintain contact by either sending his soul to them or receiving them into his own soul. The Shaman usually functions in a self-induced trance, produced by taking alcoholic beverages, toadstool powder, et cetera. A high percentage of Shamans suffer from various neuroses, severe forms of hysteria, or epilepsy, and the selection of a new Shaman may be based upon such manifestations of a deviant personality. Sometimes, however, the position of Shaman is hereditary.

The Shaman is regarded as a mediator between man and the supernatural. He exercises his magic powers for such purposes as healing, rain-making, success in hunting, prevention of accidents, and divination. In central Asia, the common methods of divination are by the flight of birds and by scapulimancy, or interpretation of cracks on the shoulderblade of a sheep which has been treated over a fire. While functioning in his supernatural capacity, the Shaman wears a distinctive dress, usually a long robe decorated with metal discs, small bells and the claws of the totem birds.

The training of a Shaman is long and involved, and he usually does not reach full professional status until the age of forty or fifty. Shamanists have no ecclesiastical organization, but rank Shamans on the basis of their success in dealing with the supernatural.

Besides the various ghosts, ancestral and animal spirits and other lesser supernatural beings, the Shamanists recognize a supreme being, the Tengri, who is the universe personified, God and heaven. He is the fountain of life, as he gives man his soul, and the fate of all peoples depends upon him. The Altaic people believe that the Tengri observes all and everything, no

one can hide from his all-seeing eyes, nor flee his judgment.

This was the autochthonous religion of the Central Asiatic steppe regions. It has been proved that Shamanism appeared among the Hsiung-nu of the third century B.C., as a cult idolising heaven and cermin holy mountains. The T'u-ch'üeh of the sixth century A.D. worshipped the originator of heaven and earth as their highest god, and sacrificed horses, cattle and sheep to him. This ancient so-called Tengri cult looks upon the world as a construction of layers. The upper seventeen layers form the realm of heaven, the world of light, and in the uppermost layer resides the Supreme Being, whom heaven and earth must obey. The lower seventh to ninth layers constitute the world of darkness, the place of damnation for sinners. Virtuous souls, on the other hand, are received into the world of light. Between these upper and lower realms is the world of the living.

Turkic mythology tells of a child-protecting diety, Umai, and good genii who populate the soil and water (yer-sub), especially fountains and mountains, holy places (idug). This cult became legalised and later was regulated by the Jassa (code) of Chingis Khan. The veneration and adoration of air and water played an important role, and was a distinctive phenomenon. For this reason, the Jassa forbade the Islamic ritual washings of body and clothes except in certain cases. Priests prophesied the future. The Kül Tegin (nscriptions (one of the oldest Turkic runic written monumenti) reflect the Turco-Mongolian cosmogeny and the concept of morality: The order of heaven is the subjecting and peaceful ordering of the peoples of the "four corners of the earth."

This same Tengri cult was carried to Europe by the Chazars and Avars. The Shamanism of the latter is evident in the practices handed down to posterity by Theophylaktos Simokatta, a Byzantinian historiographer of the seventh century. In China, which was conquered by the Ju-chen in the twelfth century A.D., a large part of the influence of the Ju-chen statesman, Wan-yen Wu-shih, was due to his Shamanistic "brotherhood."

More precise information about the Mongols' religious concepts prior to the thirteenth century is not available. Even in later times, Mongol Shamanism remained essentially unchanged and the major religions had only a negligible influence upon it. Mongols hide from thunder, they are careful to avoid muddy streams and springs, which are believed to be inhabited by spirits, and they take refuge on holy mountains. According to Islamic writers and Nestorian missionaries, the object of such ascents is to come nearer to Tengri. Doffing the cap and belt is a sign of humility before the omnipotence of Tengri. Thus, when he was pursued by the Merkits, the young Chingis Khan fled to Burkhan Khaldun, an especially holy mountain today called

Ken-tai, on the headwaters of the Onon River, and there implored Tengri for grace and mercy. According to Vladimirzov, the name "Chingis Khan" should be traced back to Chinggis, the god of light. His elevation and promotion to the position of Great Khan (Khagan) of all the Turko-Mongol peoples of Central Asia was confirmed by religious omens, circumstances and conditions. For example, there was Mu-kua-li's prediction that a revenging hero would be chosen (Chingis Khan) in the same place (Kharaqorum) in which the last Mongol received the title of Khan, i.e., "receiver (recipient) of the mandate of the blue heaven." The superstitiously feared Shaman, Kökchu, could ride his dapple-gray horse into the heavens and converse with the spirits. It was he who announced to the assembly (Qurultai) empowered with making the decision that the "eternal blue heavens" had ordained Chingis Khan as Khagan of the world, and that, henceforth, he would be known as "Khagan through the eternal heavens." Even the Mongol banner of the nine yak tails, which is the symbol of the house of the spirit of the "golden chains" (altan uruq), expressed the religious mission of conquering the world. Later Chingis Khan had Kökchu, as well as his own blood brother, Jamuga, murdered. The deed was accomplished, however, without the spilling of blood, because, according to Shamanism, the soul resides in the blood. Before starting out on the decisive campaign against North China, Chingis Khan remained in his tent for three days with his belt loosened. When he emerged on the fourth day, he proclaimed to the worshipping people that Tengri had accorded victory to him.

Chingis Khan and all his successors were Tengri's representatives on earth; their command was his command; rebellion against them was rebellion against him. When Güyük prepared to invite the Pope through his emissary, John of Plano Carpini, he called upon heaven (as highest representation of divinity and as the arbitrator among all religions) to bear witness to his divine power.

The worship of Tengri did not rule out attempts by the Mongols to placate other representations of the godhead. This wish for double insurance led to the lenient and favorable treatment accorded to the priests of foreign religions and to the famous Mongol tolerance. After a thousand-year process of penetration, Shamanism was finally overcome by the major religions of the bordering states. It is, however, still alive among the Tungus tribes of Manchuria and the Inner Mongolian Autonomous Region, among the Alashan Mongols, among the Tibetans of South Chinghai and finally, among those Turks who live in the mountainous regions of Sinkiang. It is noteworthy that, to a certain degree, Shamanism is compatible with Islam and Buddhism.

According to official tradition, the Spirit of Hua-shan is Shan-sheng, one of the descendants of P'an-ku, the mythical creator of the world. Many other genii have, however, been connected with this mountain. According to the oldest legendary records, it was a female spirit, the Holy Mother, Sheng-mu, who was propitiated here to bring forth the all-important rain; but she also received sacrifices and prayers to accord victory in battle. More recent and still prevalent legendary traditions make the Hua-shan one of the centers of the cult of the Jade Maiden (Yü-nü) whose blessings are sought for the propagation of male offspring.

It might be added that the Hua-shan with its rugged peaks and valleys, adorned with rare forests and intimate expressions of the pious sense of centuries, belongs to the most scenic spots of all China.

The great temple at the foot of the mountain, one of the most magnificent products of Chinese architecture, has been transformed into an arsenal in Kuomintang times.

B. Religious Attitudes in the Northwest

In general the Chinese in the Northwest adhere to the so-called "Three Great Religions," Confucianism, Buddhism and Taoism all play important parts in their religious system. In specific regions, Christianity, particularly the Catholic Church, has strong footholds among the local Chinese people. Where the people belong to the tradition of Chinese history and culture, scholarship and tradition have strengthened the cult of ancestor worship and the ideals and practices of Confucianism. There the blending of Confucian teachings, Buddhist ethics and Taoist principles predominates in the religious complex of the local inhabitants. In the border communities, strongly influenced by the nearby Tibetans, the Chinese include a large amount of Buddhistic observance and practice in their religious activities. They persist in styling themselves Confucianist in religious matters, but they devote their time and money to the performance of Buddhist ritual. It is reported that the Chinese of these areas are appreciably more religious than those of the more typically Chinese communities. Taoism is sandwiched into this all-embracing system of magical practices, necromancy and aberrant forms of philosophy.

Christianity first came to China through the Northwest and established its headquarters in Ch'ang-an (present Sian), the national capital during the Tang Dynasty. Missionaries of the Nestorian Church first brought Christianity to the trade routes in the present Northwest. The decisive, historically dated record in Chinese and in Syriac called the Nestorian monument,

or Ching-chiao pei in Chinese, which stands at Sian, varifies the fact that this church had been established among the Chinese people of Shensi Province. This early Christian movement in Northwest China suffered persecution and died out. In modern times both the Catholic and Protestant Churches came to the Northwest. Most of their converts have been Chinese. Until the Communist period the Catholic Church had been very strong in one place in Ninghsia Province. It rendered many kinds of service to its members and had a much stronger control over them than did the local government. To a great extent it had trespassed the jurisdiction of the government, which had created considerable resentment and suspicion among the authorities and the general populace. (See Social Structure.)

Though subscribing to all important religions in varying proportions, the Chinese in the Northwest, like those in other provinces, seem rather materialistic. Nowhere among them is there found a religious fervor and devotion which characterize both the Moslems and the Tibetans of this part of Asia. However, the religious atmosphere is very strong in all aspects of communal life, which are always cloaked with some religious rite. For example, the village or community theatrical has a great deal of religious implication. Although unlike the miracle plays and so-called devil dances of the Tibetans, the plays are usually straight drama, frequently historical, the primary significance of the presentation is a religious one. They give the gods pleasure and thus dispose them favorably toward the people of the community. Even the mask and the animal plays of the New Year's celebration have a definite religious significance.

Chinese home life is also mixed with religious or semi-religious feelings. Regardless of its wealth or locale, a Chinese home will have its ancestral tablets in the place of honor. The tablets represent those who have gone and keeps them and their memory always present. Those living now are only the present custodians of the family name.

"This belief. . . holds the members of one household together with strands which are not so much woven by affection as by a sense of mutual responsibility within a clan. . .

"At New Year the shack living room, miserable though it be, is the scene of the most exact rituals when, in absolutely correct order, each member of the family makes obeisance to the elders; the feasts fixed by the Chinese calendar are scrupulously observed, and I have known a man to carry a watermelon for days across the desert in order that at the Feast of the Moon, in the most desolate of wayside stages, he might put an old rickety table in the courtyard and offer the melon, cut in slices, to the Queen of Heaven.

"The traditions, the rituals, the basic and essential relationships which govern men's intercourse, control the small circle living in such far-away places as rigidly as they control the family which dwells in one of China's great cities. Both act according to principles laid down by ancestors, whose control is so subtle and so little questioned as to leave no room for the spontaneous and the unusual." (Cable and French, The Gobi Desert, 165-166.)

Chinese settlers in Sinkiang of course reflect the religious characteristics of their origin. Among the old settlers, who came into the country with Tso Tsung-t'ang, the secret society tradition is still strong. Merchants, mostly from Tientsin, almost universally belong to the Tsai-li sect which forbids its adherents indulgence in drinking and smoking.

IV. Religion under the Communists

A. Islam

When they were fighting for the supremacy of China in the years following World War II and when they first came to power in 1949, the Chinese Communists promised religious freedom to the national minorities in an effort to gain their support. Article 53 of the Common Program of the CPPCC, promulgated in September, 1949, stated that "the national minorities shall have freedom to develop their dialects and languages, to preserve or reform their traditions, customs and religious beliefs." Mosques were promised exemption from taxes and Article 3 of the Agrarian Reform Law, published in June 1950, which decreed the confiscation of the land belonging to ancestral shrines, Buddhist temples and Christian churches and schools, provided for the retention of land by the mosques, subject to the wishes of local Moslem residents. As a further effort to win over the Moslem population of the Northwest, the Government Administration Council issued in December, 1950, a directive permitting the observance of the festivals of Id-el-Fitr, Corban and Molid Nabawi. It abolished tax on the slaughter of cattle for celebration of these festivals and permitted holidays for cadres, soldiers, workers and students of Moslem faith. State trading companies were instructed to sell daily necessities to the Moslems, during these festivals, at reduced prices.

These pronouncements made up the sum total of what the propaganda of the Chinese Communists called the "policy of benevolence" toward the national minorities. They were given tremendous publicity which served to overshadow the grimmer and more gory record of persecution of the Moslem peoples in the Northwest. The reasons for the ostensible policy of toler-

/Chinese, Chinese Moslems and Sedentary Tibetans/

apparent trade of innkeeping was simply a cover for another and more lucrative business." (p. 73).

Like the Chinese, the sinicized Moslems are very much concerned with the problem of offspring. To them continuity of life is bound up with that prolongation of existence which a son secures, one who carries on the life which he owes to his parents. This is a completely Chinese concept. The Chinese-speaking Moslems cannot understand and would certainly not accept the Christian faith that life after death is God's gift, that one does not depend upon a son and his worship, and that immortality means the soul or spirit living eternally in Heaven. Miss Cable records in her book: "We talked often of these things, but it was hard for them to understand what I told them, and they would turn it off with one excuse or another, 'She is different from us', they said, 'her life is given up to God's work and her merit will secure her an entrance to Paradise'. Some envied, some pitied, some just stared and made no effort to understand, others summed it up in these words: 'Eastern ways are for the East, Western ways are for the West.'" (p. 75).

The Chinese-speaking Moslems in the Northwest, in spite of their having taken up a considerable amount of the Chinese way of life, are deeply conscious of racial and religious inadaptability to Chinese rules. Most of them are always rebellious. They alwasy think that they are oppressed or unfairly treated by the Chinese authorities. For this reason, Moslem revolts occur in the Northwest frequently. For example, the immediate cause of the the 1930 revolt was, according to Miss Cable's account, the suspicion of the Moslems that the Chinese Government was to change their age-old social and political system and that the Chinese population in the area goat many advantages at the expense of the Moslems. Up to 1930 the Moslems in the Hami district of Sinkiang were always governed by a ruler of their own race, religion and speech. The last one of their rulers was Khan Maksud Shah. This ruler died during the year 1930. The Chinese Sinkiang Government took this opportunity to end the Moslem system and the succession of the Khan was not allowed to continue. Maksud's son, Nazir, heir to the throne was summoned to report at Urumchi, then capital of the Sinkiang Provincial Government, and Yolbars, the Tiger Prince, was ordered to appear with him. This was bad news for the Moslem inhabitants. Later, a word came from the capital that the young prince had been made a prisoner in his own lodging, and that there were to be many changes in the standing of the Turki people. When Yolbars returned to Hami he left Nazir in Urumchi, and arrived in company with a band of Chinese officials who at once sat down to business and drew up a list of changes which were to be introduced in the administration of the Moslem community. The old administration

in the Constitution of the People's Republic of China. There are many followers of religions in China. It would be unwise, the spokesman argued, to offend them all. He repeatedly emphasized, however, that the world outlook of the Marxists is in every way contradictory to that of religious believers. The solution is, "the religious believers must abide by the Constitution and the law. The policy of freedom of worship must not be allowed to be used as a pretext for carrying out counter-revolutionary activities,... We must publicize among the masses of the Youth the materialistic world outlook... The youths should thus be given an ideological founcation... to make them into...atheists and the heroic fighters of the Socialist construction undertaking." (Ibid., p. 28).

The Communists believe that by turning the young people against religion, all religion will eventually be eliminated when the present believers die. However, the Communists will tolerate or even participate in religious activities for reasons of expediency. In Northwest China where the influence of Islam and Lamaism is great, the Communists have gone all out to woo the Moslems and the lamas. For instance, when the Communist army marched into Ninghsia and Kansu, the commander of their First Field Army, Pleng Te-huai, issued a special order to the whole field army to honor the Moslem religious habits. Not only were the Mosques not to be damaged, but the order even demanded that every soldier wash his hands before he drew water from a well. In numerous cases, the Communists spent much money to repair the mosques and the lama temples. In the Soviet China stage the Communists had disqualified every monk as a citizen, (see above).

Obviously, the general civil rights promise in the Communist Constitution are restricted. Mao Tse-tung's statements in his "On People's Democratic Dictatorship" leave no doubt about this point.

E. Practices

Some instances of infractions of these rights may serve as examples. In 1951 some faculty members of the Provincial First Middle School at Sian, Shensi, grumbled in private talks about the "land reform." They said, "In the country, if you have two bowls of rice to eat, you will not have peace." because of this, Vice-Commissioner Lu Ch'in-liang of the Bureau of Culture and Education of Shensi Province wrote a special article and published it in the local newspaper. He severely criticized the tolerance of the administrators and accused the school of being a hiding place for counter-revolutionary ideas and opinions. Special groups were organized by the Northwest People's Supervisory Committee and the Northwest Department of Education to investigate the school. A special criticism was published in the nation-wide Party magazine, Hsüeh-hsi. As usual, this would indicate that a serious purge took place.

4. Cultural corps

In the army, cultural work corps promoted propaganda by means of entertainment. In local dances and songs, the Cultural Work Corps of the Fifth Army (originally the Sinkiang National Army) in the summer of 1951 promoted the Party's Nationality policy and the Resist-America Aid-Korea movement in Sinkiang. They visited various villages and regularly attracted an audience of from three or four thousand to ten thousand people. The members included thirteen minority groups living in Sinkiang. Some of them went to Peking in 1953 and presented a performance of 21 acts before the audience in the capital.

The visit was returned by the Central Nationality Dancing Corps of Peking which sent a performing team of 140-odd members to Sinkiang in April, 1955 to celebrate the establishment of the Sinkiang Uighur Autonomous Region. It spent more than half a year in Sinkiang and returned to Peking on November 13 after having visited ten special districts, three autonomous chou, seven counties, two state farms, three mines in Sinkiang and two cities (Lanchow and Su-chou) in Kansu. It performed 112 times before audiences of various nationalities totalling more than 439,000 people.

IV. The Methods of Propaganda.

Besides those already mentioned, the Communists are using many other methods of propaganda. Parading, signature drives, circulation of pictures and pictorial stories, large-scale welcome meetings for important personnel sent from Peking, lantern slides and movies produced by the Party and the government, theater activities such as opera, drama, dance, and concerts all have been used as means of propaganda. The public accusation meeting is another form. No matter what the main target of a particular accusation meeting may be, whether a landlord or the U.S.A., the accusation always carries out the propaganda of the day, whether it be the Resist-America Aid-Korea movement or land reform. Other kinds of meetings are equally useful. "Model Peasants Rallies," held in the main farming districts of Sinkiang are the place to promote propaganda for increasing production as well as for denouncing germ warfare.

A. Festivals

Festivals are always good opportunities for promoting propaganda. In Northwest China where most of the minority groups are followers of the Moslem religion, the Islamic festivals are used as a time to express the thoughtfulness of the Communist government. For instance, during their celebration of the three major Moslem festivals of the year, the butchery tax on beef and mutton consumed by Mohammedan communities is exempted. Further-

under the Ma family in Chinghai Province started with their father, Ma Lin, who devoted his efforts toward the promotion of education within the province. After Ma Lin died, his brother, Ma Ch'i, took over the administration. But when the war with Japan began in 1937, Ma Pu-fang was given the position of governor of Chinghai, and at the same time he shouldered the tasks of leading the Kuomintang and commanding the troops within that province.

Ma Pu-fang was a career army officer. He started as a commanding officer of a batallion, and gradually climbed up to the post of commander of an army. When his uncle, Ma Ch'i, was governor of Chinghai before the Sino-Japanese War, he became a member of the provincial government. When he finally took over the administrative job in Chinghai in 1937, he was one of the youngest governors in China.

For more than thirteen years, 1937-1950, he held the position of governorship. During his administration, particularly during the war years, he aimed at the following six main tasks: First, he organized the Pao-chia system not only among the Chinese and Moslems, but also among the Mongols and Tibetans in his province. Second, he trained the local militia for the purpose of maintaining local order. Third, he was very strict in carrying out the policy of elimination of opium. Fourth, he conducted the movement of compulsory education aiming at the total elimination of illiteracy within Chinghai. As a result of his policy, in a single year more than a hundred thousand people learned to read. In addition, there were 8 middle normal schools, 131 primary schools and 805 grade schools in that province. The fifth task was to construct highways, and during his administration, more than two thousand kilometers of highways were constructed. The sixth point was afforestation. Every person was compelled to plant five to ten trees a year, and as a result, more than seven million trees had been planted during those war years.

Being a Moslem himself and realizing the complexity of religions in Chinghai, Ma Pu-fang was cautious in his handling of different religious groups. On the whole he worked toward religious harmony, and his policy was one of equal treatment toward all tribes. He chose his personnel regardless of religion or race, on the basis of capacity and personality. Thus he was generally trusted by all religious groups in his province.

When the Communists began their campaign in 1949, they pushed their way to the Northwest. Ma Pu-fang was appointed director of the Administrative Headquarters of the Northwest, succeeding General Chang Chih-chung. Joining forces with Ma Hung-k'uei, he directed the defense of the Northwest. Unfortunately, all his attempts failed and by October, 1949, the

in the Lumi kingdom. (5) In this, they say, perfect happiness is to 771

to be found even on earth and from there you can without effort ascend to heaven. In the Lumi kingdom a great emperor reigns, they say, who is emperor of all Mohammedans; pillage and murder never occur there and, neither the emperor and his subjects nor the officials there are ever guilty of injustice. "The emperor of Lumi is our emperor, too," say all the Hui hui in Kansu, and they began their countless uprisings so that they might really belong to him.

In the year 1895, at the instigation of a few wealthy Mohammedans, there was no fighting carried on around the city of Ho tschou. Thus, there are still a great many mosques preserved here; the oldest and largest of them were, however, already destroyed after the uprising in the '70s. But in the territory of the Salar a little farther to the northwest, through which I came on my further journey, there was a good deal of fighting in 1895. These Salar, remnants of a /102/ Turkish group which last emigrated to China from the West - in the Ming period, it seems - allegedly under the leadership of a mullah who is buried west of the city of Hsin hoa, are said to come from what is today Russian Turkistan. The center of their country and the place from which their eight gun (1) into which

/The Chinese/

knowledge of sanitation and elementary health regulations. Their concepts of health and disease rest mainly on the traditional beliefs. The concept that dominates most of their thinking about the human body and its health is that of the Two Principles of yang and yin. These are philosophical concepts of the origin of all things. The yang principle represents the male and the yin represents the female. They stand for opposite poles - heaven and earth, sun and moon, day and night, heat and cold, life and death, positive and negative, strong and weak.

In medicine, everything is classified as yang or yin. The exterior of the body - the skin - is yang, while the interior is yin. The back is yang, while the abdomen is yin. The heart and liver are yang while the spleen, lungs and kidneys are yin. A disease, accordingly, is yang when due to external causes and yin when due to internal causes. Respiratory diseases, fever, and diseases affecting the upper part of the body are yang diseases. Chills and afflictions of the lower body, and circulatory diseases are yin diseases. When the yin predominates, one suffers from yang disease; when the yang is in excess yin results. These two principles must be kept in mind when treating the disease, since the drugs and herbs are also divided into these two classes.

Another Chinese concept concerning health is that of the existence of the Five Elements - metal, wood, water, fire and earth. According to this belief, the human body is composed of a mixture of the five elements. So long as the proportions of these five elements remain in order, health results. If the balance is disturbed, disease follows.

These beliefs are common mainly among the uneducated population, the rural and the lower classes of the urban population. In most cases, the higher classes have a Western knowledge of the basic elements of health and sanitation and know the basic facts of human physiology and the causes of transmission of diseases. Illiteracy and ignorance is much greater in the Northwest region than along the Pacific Coast. Thus, in the Northwest, the beliefs are widespread and most Western ideas have not penetrated into the larger part of the population.

Unfortunately, we do not have figures on the birth and death rate in Northwest China. The figures for all of China are given in the chapter on "Health and Sanitation" of the General China Handbook.

C. Predominant Diseases Among the Chinese

The most common diseases are the fecal-borne ones. They are spread through the use of human waste as fertilizer. Andre Migot, who travelled through Northwest China in 1946, dwells on this problem in his description of a typical middle-sized town in this area (Tibetan Marches, p. 51): "Then there is the problem of sanitation. The total volume of human excrement produced every day"

colossal Warrior-Guardians, who, javelin in hand, offered defiance to any visitor that might question the supremacy of the gods within. '*What? So you have come too?*' were the words which confronted us, and which seemed even to be audible, so startling was the impression made. Yes, we had come; and we knew full well it would be a battle to the blood between the forces here represented and those for which we stood. It was, therefore, with a sense of solemnity that we entered to find ourselves at once in 'the Courts of Hell'—for that is the name given to this shrine where the horrors of the Buddhist Place of Torment are realistically portrayed in clay-modelled figures, crudely coloured, but astonishingly vigorously done. The story begins by the spirit of a man, who having just died, finds himself divested of all fleshly covering, and must now in consequence start on his weary peregrination through the Underworld, where, for each sin committed in the body, the soul must now receive an exact retribution. In the next scene various other discarnate individuals knelt before the presiding Deity, while the doings of each one during their earth-life were weighed in accurately-adjusted scales. Around, more hapless beings underwent different tortures; some being dipped in a sea of blood, others sawn asunder between two planks, while others again were crushed like grain between upper and nether millstones. The covetous eyes were gouged out; the slanderous tongue was torn from the roots; and grappling-hooks fastened into the flesh of the lustful, peeled off the skin in ribbons. Here and there slender bridges, hanging over fearful chasms, were crossed by trembling pilgrims, whose escape from unknown consequences depended on the poise earned by former self-denials, and everywhere the minions of the merciless Judge gloatingly watched the sufferings of

THE CHALLENGE 89

their victims, whose every attitude expressed the very acme of agony. At last, having received its due, the spirit was seen preparing for a new incarnation, as the Wheel of Life revolving had now a fresh rebirth to distribute. This time the protagonist is to enter the body of a pig; and here the artist reached the highest degree of plastic talent. Though it were but to wallow in the mire, the prospect of once more breathing the fresh air, of basking in the kindly rays of the sun, and of living the familiar life of earth, filled the hunted spirit with untold joy, marvellously indicated by the glance thrown over the shoulder, as the porcine snout descended like a mask upon the features.

An old priest was superintending a party of worshippers, who had come to burn gold and silver paper folded to represent money, this being considered suitable to be offered as votive-sacrifices for the dead. These people had lately lost a father, and picturing him as wandering through such an abode of pain, were now doing all they possibly could to come to his assistance. Leading the group was a young man, his son, who doubtless in all matters of daily life showed himself to be far-sighted and intelligent, but who now, with a mind blinded by heathenism, sought to impress upon the torturers the fact that he was in a position to buy off his father's doom by such large sums of mock-coinage as any god might be flattered to receive. The smoke rose, and the spirit-treasure passed out of sight. The gods would doubtless now see to it that part, at least, of the debtor's bill was paid!

719 782

Our immediate business was to let the people of Suchow know of our arrival, and very soon, by means of posters, the news was spread, and the words: 'The Christians have come!' were on the lips of all. It was greatly to our advantage that the whole city happened 527

AF13 Northwest China AF13

the muleteers now came to the rescue ; and in a short time all was in order, so that, apart from the fact that the feet and legs of man and beast were encased in a sheath of thick mud, which gradually hardened to the consistency of plaster of Paris, no damage was done.

The Sian plain is a fertile land, with vast wheat-fields, where in late autumn the persimmon groves make a beautiful picture. The widespreading foliage of dark glossy leaves, symmetric in form, together with the golden fruit hanging in profusion from the bending boughs, are very distinctive features. The wayside food, also, was the best we had met with in China, and before long we entered the pear-growing district around Pinchow, where extensive orchards stretch for miles on all sides. Here, besides filling every chink of our luggage with the pears, we considerably added to that elastic quantity known as 'hand-baggage,' and for several days we pillowed our heads on lumpy sacks of the fruit.

A few hours before entering the border of Kansu, we passed a number of booths in which were sold numerous small articles carved from the wood of the jujube tree (*Zizyphus jujuba*), which supplies a fine quality of dark, red wood pleasing to the eye, and so hard as to be almost indestructible. A plantation of these trees surrounds a temple backed by enormous rock, on which has been carved the figure of a gigantic sitting Buddha. After wandering around and between its huge feet, we climbed the many flights of steps leading to a gallery on a level with the prodigious face. This Buddha forms one of a group of three colossal images, the chief of which, within Tibetan fastnesses, stands—with foot thrust forward—waiting for the appointed hour when he must move towards his sleeping brother, reposing outstretched, in a temple of distant Kansu. Him he must

AF13 Northwest China AF13

rouse, and together they will then join the Shensi sitter, when, their band being complete, they will accomplish their long-appointed mission of raising mankind.

At nightfall we passed the Kansu border. The first incident which made us aware of this fact was an official proclamation with the two Chinese ideographs, meaning Kansu, heading it. Simultaneously the character of the road changed, and we found ourselves moving in the darkness through an avenue of stately trees, our hearts beating high, for we had now reached the Province indicated on our 'Sealed Orders,' although we knew not as yet the locality to which we were going.

That night, our first in Kansu, our bed was in a stable. Merely a cave hollowed out of the loess-cliff, it held a little mud *kang*,[1] on which the travelling carter was wont to sleep while the mules fed at his side. The walls were black with the dirt of generations, the floor was littered with damp stable-manure, and our hand-luggage was laid in the manger. The door was a low, irregular aperture ; no opening had been left for a window ; the flicker of the linseed-oil lamp filled the cave with heavy shadows, and though the night was very cold the *kang* had not been warmed.

We had often tried to picture the real conditions of the inn at Bethlehem, and it seemed to us that night that we had come much nearer to their realisation.

By the side of our cave, raised three feet from the ground, was a small hollowed recess, about the size of a large baker's oven. The opening was screened by a filthy, hanging rag, and within lay three men, tasting the sensuous enjoyment of the opium pipe. The space was so small that the feet of the smokers were thrust outside, and though the night was bitter and their

[1] A brick or mud bed heated with a fire.

Here the Akkas live and pray, and communicate with the rest of the world only in winter when the lake is frozen over. It is an island that rises up in rock formations with hills that are covered with grass pastures. In the clear winter air the island seemed very near and it seemed to me I could see everything that was on it from the road I was on. It is supposed to be eight li around.

Nine kilometers from the south shore of the lake and 18 kilometers to the west of the large island of Ts'o ning there are still more cliffs rising up over the surface of the lake. They are white in color and are called Tsaghan khada by the Mongols. Among them is the rock which, according to the legend, one of the bad spirits, named Tscheger sämo, threw toward Ts'o ning in order to destroy the island or at least move it from the spot.

It was, so the story goes, around the time when unsuccessful attempts were made to erect temples and monasteries in Lhasa. The buildings always collapsed and the Tibetan king therefore sent his vassals all over the world in order to discover the reason for this misfortune. One of the lamas that had been sent out met an old, blind holy man in the plain now covered by the Koko Nor. The old man, in senile loquacity, said that at the spot where the king was trying to erect his temples there was a large subterranean sea. The latter would flow from Lhasa over into this direction as soon as an emissary of the king would find out about it. Scarcely was the secret revealed when the two heard the surging of the water and the emissary of the king could barely escape on his horse, while the old man was swallowed up by the waves. The water would even have flooded all the mountains if some divinity had not had mercy and taken a huge rock and stopped up the hole out of which the water was flowing. This rock is the sacred island Ts'o ning. However, the bad Titan was angry /81/ that the water did not cause more destruction and he wanted to throw stones to move Ts'o ning and re-open the hole. Fortunately for all mankind he did not hit Ts'o ning. The stones which he threw toward Ts'o ning from the shore, all fell into the water half way to the island and there they can still be seen.

According to a Chinese version a woman once wanted to fetch water from a well where the island is today and forgot to put the lid on the well. So the water rose up and covered the entire plain. A god, Wo fo (Buddha), finally had mercy and threw a slab, the island, onto the magic spring.

There were magnificent grass pastures covering the entire south shore of the lake from the water's edge up to the rounded peaks that

outlook on life, which results in a remarkable internal social stability of family and community at the expense of personal ease. The greatest Islamist of our time, Carl Brockelmann, once called the Quran "die Hevrediensvorschrift für die Mohammedaner" ("the army regulation book for the Muslims"), and indeed the Quran is not only the condensation of Muslimic religion and philosophy but also the code of laws and the "code of practical regulations" concerning the practical daily life of the average Muslim. From childhood on those "regulations" are drilled and hammered in to the people. The Quran becomes the basis from which everything is judged. The conclusion, that the Muslims do show a strong inclination for doctrinal behaviors is rather justified.

If we describe the nomad as a logical and realistic individual to whom neurosis and psychosis are in general alien, one certainly should not forget that there has been still room for romance in his life: first and foremost, the Muslimic nomads as well as the Buddhistic nomads (the Mongols) dreamed and still dream of the creation of their own empire in which they are the masters and not the Chinese. The Mongols still mourn for their once powerful and grand empire "where the hoof of the brave horse was the only sound and the roaring and bellowing of camels and cows the only noise" and where the Khan of the Khans, the Khakhan, the Great King, resides in Qaraqorum, the scene of the Great qurultai (constitutional and legislative assembly), ruling the Mongolian tribes and leading the Mongolian armies, in the name and as the representative and vicar of the "Eternal Blue Heaven," the ruler over the universe.

While in the folklore and literature of the Muslimic nomads the Golden Horde and the Chagatai Empire (Chagatai Ulus), Batur Khan and Timur Lenk (Tamerlane) are oft-repeated subjects, the Mongolian folklore abounds in painting the deeds of Chingis Khan and is excessive in describing the adventurous greatness of the former Mongolian Empire.

The Buddhistic conception of palingenesis and reincarnation add another romantic feature to the life of the average Mongol and Tibetan and the belief of the Muslim (after having become a hajji, a pilgrim, or even better, a hazze, one who fought as a soldier against the "non-believers") that he would enter the paradise of heaven (or better one of the seven heavens, the seventh only when he sacrificed his life to Allah in combat), is a deep-rotted romantic conception.

As we said, the life of the Buddhistic nomad is centered around his tent and his herds, so to speak, the outer sphere of his life, but the inside sphere is absorbed deeply by religion,

Today the city of Ho (1) tschou itself consists mainly of the

1. Pronounced like H'e with a very sharp guttural sound.

southern suburb of Nan kwan. That is where the mosques and the large Mohammedan shops are. The actual city of Ho tschou, on the other hand, is pure Chinese. The Mohammedans are forbidden, under penalty of death, to live inside the city. There are always many hundreds of soldiers garrisoned on the city wall (Plate XXXVI), and one finds there stables for the horses of officers and men. The wall is kept in excellent repair. But since not very many Chinese live here, there are large areas inside the walls that are deserted. All the life goes on outside. There we find closely built-up streets, for the most part with two-story houses as in Di dao, surrounded by a wall which today is destroyed. I estimate that Ho tschou proper and its suburb has a population of 30,000 and of these over two-thirds are Mohammedans. (2) There is not another city within the 18

2. The entire district is said to have had 85,526 families, according to the census of 1831.

provinces of the Chinese empire that has a similarly strong Moham-
771 medan aspect. And yet there are many things that are entirely
[782] different here from other genuinely Mohammedan countries. In Ho tschou and environs I never saw a Hui hui who spread out his prayer rug in a courtyard or out in the open to pray when the muezzins (3)

3. The muezzins like the mullahs are always called ah'un in Kansu. The word comes from East Turkish where ahon means the scholar. Even these Ahun are not always circumcized. Most Chinese Mohammedans do not know anything about circumcision.

called out. The Ho tschou Mohammedans, like the ones that have become still more Chinese, are very superficial in their religion and can scarcely execute the prescribed ablutions without making a mistake. It seldom happens that one of them makes a pilgrimage to Mecca. Only a few of them even know the name of the city. Most of them only know about "Kerbe" (4) and that this is a place

795 'P'ags-pa. After his conversion, the Great Khan, Tümen Sasaq-
171 tu (1557-1593), of the Chahar area, promulgated a Buddhist code
175 of law. His second successor, Legdan, built a Buddhist temple and had the Buddhist compilation of the Tanjur translated. The "Living Buddha" settled at Urga in 1602 and was succeeded by a chain of reincarnations until 1924. In 1620, the Khoshuts, inhabitants of present-day Dzungaria, broke away from Shamanism. Buighabu Bātur also adhered to Yellow Sect Lamaism. As a reward for leading the "holy league" of Oirats who defeated a Red Sect prince's attack on Lhasa, the Dalai Lama ordained Gushi-Khan, the Buighabu's brother, as "vicar" of the Yellow Church. After the Ordos and the Chahar, the Tümet and Khalkha, having adopted Buddhism, also lost their warlike characteristics. In contrast to the "secret history" of 1240, the history of the Ordos prince, Sanang Setsen (1662) dealt not with the conquest of the world but with the conquest of souls.

175 C. The Lamaism of Chinghai
795 The province of Chinghai, or Amdo as the Tibetans refer to
792 it, has played a very significant role throughout the history of Lamaism. From Chinghai came the first new stirrings of Buddhism after the religious persecution by the apostate king, Langdarma. The great reformer, founder of the ruling (Yellow) sect, the Gelugpa, came from this border area. The immediate excuses for China's marching into Lhasa usually have been supplied by events here. Both the present and the late Penchen Lamas had spent considerable periods of exile or semi-exile in one of the most famous monasteries of the area, Kumbum. Cen-
[648] turies ago the Chinese system of Ambans at Lhasa was insti-
[795] tuted after a Chinese army had marched as escort for a disputed reincarnation of the Dalai Lama. This Dalai had been born south of Amdo, but had spent his years at Kumbum. As a meeting place of Mongols, Tibetans and Chinese, the area has also played a vital role, religiously and politically, in matters concerning Mongolia and China.

795 Lamaism has played a role in Chinghai equal to the role that
792 the province has played in the religion. According to Ekvall (1939), one out of every three males in the area is a monk. Lhasa has never succeeded in achieving the secular rule of this region; as a result, all sects of Lamaism including the various unreformed sects and the non-Buddhist Bonist sects have continued to flourish. However, the two largest monasteries, Kum-
792 bum and Labrang, adhere to the Yellow Church. Kumbum had held the pride of place as the site where the great reformer
[669] Tsong-kha-pa was born. After the Moslem rebellions in the last century, however, the population of Kumbum dropped. Until recently it had to bow to Labrang in respect to numbers. Between

city, and making a fiendish racket. Behind the priests came a sedan chair on the seat of which was a board with the name of the deceased. The sedan chair was followed by a table with all kinds of offerings and behind this tottered the son and the grandson in a stooped position, dressed in coarse white hemp mourning clothes and supported by friends and hired servants. They were still obliged to look for the gui, i.e., the soul of the deceased. For this purpose they halted at all corners and crossroads, called his name and searched the ground industriously. For the Chinese imagine that death sets in because the soul has left the body, and that the body would be able to go on living if only the soul or gui would or could find its way back. The gui is politely invited to return. (1)

764
775

1. It is doubtful whether gui (kwei) can be translated "soul" in our sense, for the ordinary folk-philosophy of Kansu teaches that a human being has three gui and seven schen (spirits). The three gui are thought of as having substance and belonging to the Yin principle (see page 33, footnote 1), whereas the seven schen are without substance and belong to the Yang principle. One of the three gui stays with the bones after death while the second, with the help of the Taoist priests, clings to the death tablet bearing the name of the deceased. In time these two vanish. /243/ The third gui is the only one that is immortal. It is also used by the Chinese in a Buddhistic way, it must pass through hell and is later, on occasion, reborn. But because many Chinese do not know anything about Buddhistic teachings of reincarnation, it is often said that this third soul lives on unseen with the family; it "haunts" the living and can bring them harm or be useful to them.

/243/ On the third day the corpse was placed in the coffin which was over 2 meters long and constructed of beams 2 1/2 inches thick. Like the shroud, the coffin had been bought many years before and stored in a corner of the house. The feet of the corpse were tied together and its head placed on a brick. Every day after sunrise the relatives with their wives now gathered together in the death chamber around the coffin for half an hour and wailed so loud that all the neighbors heard it. At the same time tea and sweets were laid out on a table covered with a white cloth in front of the coffin, liquor was poured out and candles and incense burned. When the half hour

764

764 was up the howling and wailing ceased as suddenly as it had begun, tears were dried, and people went about their business or began eating, and after another twenty-four hours the lamentations were taken up again.

[793] On the sixth day the Taoist priests again came to the house and set up tents and canopies in the courtyard outside my door. (1)

1. I did not observe that the Chinese of Northwest China used Buddhistic priests in this connection. Lama priests are used only in places where Chinese are intermingled with Tibetans. But Hsining fu is a Chinese city in which, besides Chinese, there are only a few Manchu and Tu ren living.

Musicians appeared and also cooks who had to cook for the many guests and relatives who came to express sympathy. Meanwhile the priests had prepared a passport to the kingdom of the dead, a written eulogy on gray paper, and this was now sent after the dead man into the world of spirits, that is, it was burned amid all kinds of invocations. There were also a few paper dolls representing servants, one-half life size, burned and large paper silver coins and much copper money which was also stamped out of paper, so that the deceased was given a very good dowry to take along. (2)

775

2. De Groot, The Religious System of China, Vol. I, p. 80, reports that in the province of Fu kien in South China which is largely Buddhistic, the Chinese assume that each birth means the release of some poor soul from Hades. There souls always were obliged to pay a large ransom to the god of death and his executioner before they could be freed. In order to be able to pay this sum the souls have to borrow money from other souls and therefore the soul of every person who has died, as soon as it returns to Hades, is hounded by its creditors to pay its old debts, for the creditors were also trying to get the ransom money together so that they could return to earth as soon as possible. They also believe it is very useful to send copper coins along immediately, for of course a poor soul just returning from the earth does not know the current exchange in Hades copper money and is therefore cheated by the money changers down there and suffers great losses before he can get change! This

conception enables us to get an insight into Chinese folk psychology.

775

The monotonous sing-song and reciting of prayers and invocations lasted three days, and with each word the leading priest who appeared in a yellow gown embroidered with blue dragons, beat upon a "fish head," a hollow wooden globe with a slit in it, while his companions produced an ear-splitting noise with gongs, bells and drums, /244/ which was far inferior to the lamaistic music of the Tibetan monasteries and compared more nearly with caterwauling or with the noise accompanying the Upper Bavarian practice of meting out to offenders of the public morals summary punishment by masked private citizens. Under the supervision of the priests there were more gifts placed on a table in front of the coffin which stood in the open door of the house. Food was also placed on the table, a whole slaughtered pig, a cock, a jug of liquor, loaves of bread filled with vegetables and sweets. Later the priests ordered the tea and liquor to be poured on the ground.

764
[533]

It would lead me too far afield if I were to give a detailed description of the circumstantial ceremony which lasted three days. In the main, funerals are very much alike in the various parts of the Chinese kingdom. One of the souls of the deceased was conjured by the priest into a piece of wood about 1/2 meter long and very narrow and then the coffin was closed. A great many people appeared, acquaintances and strangers, and kowtowed before the coffin while lay musicians with one-string fiddles and small trumpets produced a different kind of racket, if possible even more woeful. The members of the family dressed in white coarse mourning clothes made of sacking and in mourning hats with their bare feet in sandals, knelt on either side of the coffin and each time a kowtow was offered in condolence they acknowledged it by touching their foreheads to the ground. Each person who expressed his sympathy by a kowtow and a small present was handed food and liquor by the relatives of the deceased, and the whole procedure: service to the spirits, kowtows, lay music and the partaking of food, took place in the court in front of the door of my room. All the street beggars, even the convicts from the yamen with their heavy iron chains and stakes and their wide, collar-like wooden kang came into the courtyard, made their kowtow and were thanked by being given food.

Thus, the funeral cost the family much more than they had in cash. I was not at all surprised, therefore, when on the very first

/The Sedentary Tibetans/

*563 621 [622] [623] [632] [792] There is more rigidity about the village organization. The sedentary Tibetans generally have a formally selected village headman. But again the council of elders has considerable authority. Groups of villages are organized into a larger unit, nor is it uncommon for villages and encampments to be joined together in such a larger unit. A monastery is more apt to have authority over a group of villages than over the strictly nomadic people. However, like the nomads, the sedentary [622] Tibetans give very little recognition to any authority beyond that of the ecclesiastical or lay chief of the "tribe". Ma Ho-t'ien, in his Diary of Travels in the Border Region of Kansu, Chinghai and Tibet makes frequent reference to the inability of the Chinese officials to exert any sort of authority over the border-Tibetans and other sources also record the absence of any effective government beyond the local level.

The village itself represents a very tightly-knit organization, economically and politically, as well as physically. [423] Houses, housesites and the fields belong to the individual families, but the grazing lands and forests are community property. Use of the pastureland is available to all, but the village may place certain restrictions on the quantities of timber that may be taken for specific purposes.

*563 621 241 [787] [292] Just as the nomads act simultaneously in moving their encampments from one site to another, so the sedentary Tibetans also insist on simultaneous group action within the village. The first day of spring planting, determined by horoscope, sees all the villagers proceeding to their individual fields in their best clothing. The fields are ploughed simultaneously. The seeds are sown at the same time in each field. And, when harvest time comes, all the fields must be completely harvested in the time that it takes the smallest field to be harvested with a small hand sickle. If one's fields are too large one hires extra help. During the course of the growing season all the villagers periodically parade through the fields carrying the holy books on their heads. These communal activities have both religious and economic bases.

[787] From the viewpoint of the religion, if the days have been selected as auspicious, they are auspicious for the community's members as a whole. It is when the spirits of the ground, [776] the demons of hail and misfortune can be allayed or propitiated [782] that determines the best days for performing the needed tasks. From the viewpoint of economics, when the ground has been plowed and the seeds planted, the fields are encircled by a community fence to prevent onslaughts by roaming animals.

[625] A community watchman also stands guard. It also means that [486] the villagers can collect a tax from caravans that pass through [651] their lands. Once the fields have been harvested, the community

/The Tibetans/

N *563 764 [534] are not permitted to attend. The body is carried by friends and relatives to the customary spot, and on the way, those in the procession blow whistles to attract the vultures. The clothes are removed from the corpse, and one of the men slits open the chest and belly to attract the birds. After they have eaten these areas, the birds are driven away and a man cuts the flesh from the bones and places the small pieces on the ground. The birds eat it. When only the skeleton is left, the mourners crush the bones with rocks so the birds can eat them. When nothing remains the mourners are satisfied. The deceased has been proved a worthy person.

N *563 755 4. Popular beliefs

When a person falls ill, a doll of clay is made to resemble him and dressed in similar clothes. The sick person's name is written on the doll, and it is thrown out onto the steppe. It is [776] believed that the chiktur (evil spirit) will find the doll (khuner dzolik) and be deceived into thinking the sick person has died. He will then leave the patient in peace.

N *563 789 Tibetans are great believers in fortune telling. One way to learn one's fortune is to give his date of birth to a fortune teller, usually a lama, who will consult his rosaries and then advise on such matters as the best days for going on a pilgrimage, the possibilities of getting a job, or the advisability of starting a business.

Another way is to whisper one's thoughts to a wooden fire poker, then secretly place it near someone. The fortune can be deduced from the conversation of that person.

A professional fortune teller asks his customer to place his hand in a sleeve, then tells his fortune from the finger joints. The third joint of the index finger means lion, the third joint of the middle finger, wolf. Both these joints may indicate a journey. The first joint of the index finger means mountain, which is interpreted as continuous living in the same place.

N *563 533 5. Recreation

The Tibetans have no form of organized amusement or recreation, but they love to sing. The young sing mostly love songs, which are composed spontaneously as they are sung. They have religious songs in praise of Buddha. They even express congratulations and good wishes in song.

S 563 181 H. The Western Mongols or Torguts

Values and customs of the Western Mongols are based on the same traditions as those of the Eastern Mongols (See IMAR Handbook). Some differences exist, however, that are worthy of discussion:

000 The Torguts are noted for their courage and warlike character, but they are a friendly, good-humored, helpful people. As

RELIGION

I. Historical Background of the Religions of Inner Asia

791 795 Various religions have been strong in the Northwest, among them Shamanism, Buddhism, Nestorianism, Manichaeism, Confucianism, Taoism and Islam. The latter is the predominant religion among the Turks and the Dungans. Buddhism is the religion of the Mongols, Mongours, Shira Yögür and Tibetans. Nestorianism and Manichaeism have become extinct, but Confucianism and Taoism are still alive in Chinese communities (see China Handbook).

A. Shamanism

791 756 Shamanism is a pagan faith based upon concepts of demons and spirits, with whom the Shaman, or priest, attempts to maintain contact by either sending his soul to them or receiving [787] [203] [216] them into his own soul. The Shaman usually functions in a self-induced trance, produced by taking alcoholic beverages, toadstool powder, et cetera. A high percentage of Shamans suffer [158] from various neuroses, severe forms of hysteria, or epilepsy, and the selection of a new Shaman may be based upon such manifestations of a deviant personality. Sometimes, however, the [428] position of Shaman is hereditary.

756 The Shaman is regarded as a mediator between man and the supernatural. He exercises his magic powers for such purposes as healing, rain-making, success in hunting, prevention of [787] accidents, and divination. In central Asia, the common methods of divination are by the flight of birds and by scapulimancy, or interpretation of cracks on the shoulderblade of a sheep which [242] has been treated over a fire. While functioning in his supernatural capacity, the Shaman wears a distinctive dress, usually a long robe decorated with metal discs, small bells and the claws of the totem birds.

The training of a Shaman is long and involved, and he usually does not reach full professional status until the age of forty or fifty. Shamanists have no ecclesiastical organization, but rank Shamans on the basis of their success in dealing with the supernatural.

756 77 Besides the various ghosts, ancestral and animal spirits and other lesser supernatural beings, the Shamanists recognize a supreme being, the Tengri, who is the universe personified, God and heaven. He is the fountain of life, as he gives man his 171 776 soul, and the fate of all peoples depends upon him. The Altaic people believe that the Tengri observes all and everything; no

171 996 one can hide from his all-seeing eyes, nor flee his judgment.

171 175 77 [1956] This was the autochthonous religion of the Central Asiatic steppe regions. It has been proved that Shamanism appeared among the Hsiung-nu of the third century B.C., as a cult idolizing heaven and certain holy mountains. The T'u-ch'üeh of the sixth century A.D. worshipped the originator of heaven and earth as their highest god, and sacrificed horses, cattle and sheep to him. This ancient so-called Tengri cult looks upon the world as a construction of layers. The upper seventeen layers form the realm of heaven, the world of light, and in the uppermost layer resides the Supreme Being, whom heaven and earth must obey. The lower seventh to ninth layers constitute the world of darkness, the place of damnation for sinners. Virtuous souls, on the other hand, are received into the world of light. Between these upper and lower realms is the world of the living.

996 171 771 Turkic mythology tells of a child-protecting diety, Umai, and good genii who populate the soil and water (yer-sub), especially fountains and mountains, holy places (idug). This cult became legalized and later was regulated by the Jassa (code) of Chingis Khan. The veneration and adoration of air and water played an important role, and was a distinctive phenomenon. For this reason, the Jassa forbade the Islamic ritual washings of body and clothes except in certain cases. Priests prophesied the future. The Kül Tegin inscriptions (one of the oldest Turkic runic written monuments) reflect the Turco-Mongolian cosmogeny and the concept of morality: The order of heaven is the subjecting and peaceful ordering of the peoples of the "four corners of the earth."

771 956 171 This same Tengri cult was carried to Europe by the Ghazars and Avars. The Shamanism of the latter is evident in the practices handed down to posterity by Theophylaktos Simokatta, a Byzantinian historiographer of the seventh century. In China, which was conquered by the Ju-chen in the twelfth century A.D., a large part of the influence of the Ju-chen statesman, Wan-yen Wu-shih, was due to his Shamanistic "brotherhood."

771 175 171 956 More precise information about the Mongols' religious concepts prior to the thirteenth century is not available. Even in later times, Mongol Shamanism remained essentially unchanged and the major religions had only a negligible influence upon it. Mongols hide from thunder, they are careful to avoid muddy streams and springs, which are believed to be inhabited by spirits, and they take refuge on holy mountains. According to Islamic writers and Nestorian missionaries, the object of such ascents is to come nearer to Tengri. Doffing the cap and belt is a sign of humility before the omnipotence of Tengri. Thus, when he was pursued by the Merkits, the young Chingis Khan fled to Burkhan Khaldun, an especially holy mountain today called

has persisted to this day. The Koran and Hadith were the basic foundations on which the Shari'a evolved. The law was developed by Moslem jurists who, by different rational devices (e.g. analogy, consensus), adapted the principles of the Koran to fit many new situations, and supplemented the law when the Koran could not suffice.

B. The Principles of Islam

The whole of the religion of Islam is briefly summed up in the shahada, or the profession of faith (which is considered the primary duty of every Moslem)—La illaha illallah, i.e., there is but one God; Muhammadun rasulu-llah, i.e., Muhammad is the Apostle of God. The shahada is not found in this composite form anywhere in the Koran, but its two halves occur separately and are its constant theme. "O you who believe, believe in God and His Apostle and the Book which He has sent down formerly. Whoever denies God and His Angels and His Books and His Apostle and the Last Day has strayed far from Truth." (Sura iv, v. 135).

One of the essential elements of Islam is an uncompromising monotheism. The true belief demands ikhlas, the giving of one's whole and unmixed allegiance to God. Its opposite, which is considered the gravest sin that Moslems can commit, is shirk, the ascribing of partners to God and the worship of any other than him. Of the different forms of shirk, idolatry is denounced as the gravest.

Islam conceives of God as existing at all times and to eternity. "Call not any other God but Allah; there is no God but He. Everything shall perish except His Being. To Him belongs the rule and to Him you shall be brought back for judgment." (Sura XXVIII, v.88.) Along with the terrible and majestic aspects of God as Creator, Supreme Power, Judge and Avenger, the Koran also stresses His bounty and loving kindness.

The doctrine of angels also exists in the Koran. In the imagery of the Koran, the angels are represented generally as God's messengers. They are, like men, His creatures and servants and worship Him constantly; they bear up His Throne, descend with His decrees on the Night of Power, record men's actions, receive their souls when they die, and witness for or against them at the Last Judgment, and guard the gates of Hell.

With the doctrine of angels there is also the doctrine of devils although the devils are represented as rebellious Jinn rather than fallen angels. The Jinns, like men, are created out of fire instead of earth; there are believers and infidels among them, and the unbelievers will be judged with men and condemned to Hell. The rebellious Jinns are called shaitans; they lead men astray, oppose the Prophets and try to overhear what is dis-

cussed in Heaven. They teach men sorcery and will serve men who can rule them by these devices. The leader of these evil spirits is called "The Shaitan" or Iblis. His fall from a place among the angels was due to his refusal to worship Adam on God's command; for this he was accursed till the Day of Resurrection and given authority over those of mankind whom he seduced.

Next to the unity of God, the doctrine of the Apostles, as the shahada indicates, is the central doctrine of the Koran. Moslems are required to believe in the Apostles without distinction The last of the Prophets is Muhammad, who is God's Apostle to all mankind. The doctrine preached by all the Prophets is essentially one and the same, although in matters of detail there has been a gradual evolution in their messages toward the final and perfect revelation.

As for Muhammad himself, the Koran repeatedly disclaims on his behalf anything that is superhuman. He was but a mortal man, commissioned with the sole duty of conveying God's warning and message of salvation. He had no knowledge beyond what was revealed to him, and he had been granted no miraculous powers.

Faith in life after death is the last of the basic principles of Islam. The word usually used to indicate it in the Koran is al-akhira. The Koran does not speak only of a life after death, but impresses on believers the importance of life on earth as a basis for the future life. The Last Day, the Day of Resurrection and Judgment, will be the time when men's future fate will be decided by God. This day will come suddenly at a time known only to God. On that day the graves will open and men will be called to account for their deeds. Each man's angel shall bear witness to his record, his deeds will be weighed in the balance, and his book will be placed in his hand, the right hand of the blessed and the left hand of the damned.

Then the blessed, the God-fearing men and women, the humble and the charitable, the forgiving, those who have suffered and been persecuted for God's sake, those who have fought in the way of God, shall be summoned to enter the Garden of Paradise, where they shall dwell forever by flowing rivers, praising God, reclining on silken couches, enjoying heavenly food and drink and the company of dark-eyed maidens. Those who have sinned against God and men are condemned to eternal punishment in the flames of Hell.

C. The Rituals of Islam

a. Prayer (Salat). The observance of the ritual prayers is repeatedly emphasized as one of the essential religious duties. Although neither the ceremonies nor the five set times of prayer

/Chinese, Chinese Moslems and Sedentary Tibetans/

apparent trade of innkeeping was simply a cover for another and more lucrative business." (p. 73).

Like the Chinese, the sinicized Moslems are very much concerned with the problem of offspring. To them continuity of life is bound up with that prolongation of existence which a son secures, one who carries on the life which he owes to his parents. This is a completely Chinese concept. The Chinese-speaking Moslems cannot understand and would certainly not accept the Christian faith that life after death is God's gift, that one does not depend upon a son and his worship, and that immortality means the soul or spirit living eternally in Heaven. Miss Cable records in her book: "We talked often of these things, but it was hard for them to understand what I told them, and they would turn it off with one excuse or another. 'She is different from us', they said, 'her life is given up to God's work and her merit will secure her an entrance to Paradise'. Some envied, some pitied, some just stared and made no effort to understand, others summed it up in these words: 'Eastern ways are for the East, Western ways are for the West.'" (p. 75).

The Chinese-speaking Moslems in the Northwest, in spite of their having taken up a considerable amount of the Chinese way of life, are deeply conscious of racial and religious inadaptability to Chinese rules. Most of them are always rebellious. They alwasy think that they are oppressed or unfairly treated by the Chinese authorities. For this reason, Moslem revolts occur in the Northwest frequently. For example, the immediate cause of the the 1930 revolt was, according to Miss Cable's account, the suspicion of the Moslems that the Chinese Government was to change their age-old social and political system and that the Chinese population in the area goat many advantages at the expense of the Moslems. Up to 1930 the Moslems in the Hami district of Sinkiang were always governed by a ruler of their own race, religion and speech. The last one of their rulers was Khan Maksud Shah. This ruler died during the year 1930. The Chinese Sinkiang Government took this opportunity to end the Moslem system and the succession of the Khan was not allowed to continue. Maksud's son, Nazir, heir to the throne was summoned to report at Urumchi, then capital of the Sinkiang Provincial Government, and Yolbars, the Tiger Prince, was ordered to appear with him. This was bad news for the Moslem inhabitants. Later, a word came from the capital that the young prince had been made a prisoner in his own lodging, and that there were to be many changes in the standing of the Turki people. When Yolbars returned to Hami he left Nazir in Urumchi, and arrived in company with a band of Chinese officials who at once sat down to business and drew up a list of changes which were to be introduced in the administration of the Moslem community. The old administration

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

colossal Warrior-Guardians, who, javelin in hand, offered defiance to any visitor that might question the supremacy of the gods within. '*What? So you have come too?*' were the words which confronted us, and which seemed even to be audible, so startling was the impression made. Yes, we had come; and we knew full well it would be a battle to the blood between the forces here represented and those for which we stood. It was, therefore, with a sense of solemnity that we entered[1] to find ourselves at once in 'the Courts of Hell'—for that is the name given to this shrine where the horrors of the Buddhist Place of Torment are realistically portrayed in clay-modelled figures, crudely coloured, but astonishingly vigorously done. The story begins by the spirit of a man, who having just died, finds himself divested of all fleshly covering, and must now in consequence start on his weary peregrination through the Underworld, where, for each sin committed in the body, the soul must now receive an exact retribution. In the next scene various other discarnate individuals knelt before the presiding Deity, while the doings of each one during their earth-life were weighed in accurately-adjusted scales. Around, more hapless beings underwent different tortures; some being dipped in a sea of blood, others sawn asunder between two planks, while others again were crushed like grain between upper and nether millstones. The covetous eyes were gouged out; the slanderous tongue was torn from the roots; and grappling-hooks fastened into the flesh of the lustful, peeled off the skin in ribbons. Here and there slender bridges, hanging over fearful chasms, were crossed by trembling pilgrims, whose escape from unknown consequences depended on the poise earned by former self-denials, and everywhere the minions of the merciless Judge gloatingly watched the sufferings of

[1] [a temple in Suchow -- Analyst]

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

their victims, whose every attitude expressed the very acme of agony. At last, having received its due, the spirit was seen preparing for a new incarnation, as the Wheel of Life revolving had now a fresh rebirth to distribute. This time the protagonist is to enter the body of a pig; and here the artist reached the highest degree of plastic talent. Though it were but to wallow in the mire, the prospect of once more breathing the fresh air, of basking in the kindly rays of the sun, and of living the familiar life of earth, filled the hunted spirit with untold joy, marvellously indicated by the glance thrown over the shoulder, as the porcine snout descended like a mask upon the features.

An old priest was superintending a party of worshippers, who had come to burn gold and silver paper folded to represent money, this being considered suitable to be offered as votive-sacrifices for the dead. These people had lately lost a father, and picturing him as wandering through such an abode of pain, were now doing all they possibly could to come to his assistance. Leading the group was a young man, his son, who doubtless in all matters of daily life showed himself to be far-sighted and intelligent, but who now, with a mind blinded by heathenism, sought to impress upon the torturers the fact that he was in a position to buy off his father's doom by such large sums of mock-coinage as any god might be flattered to receive. The smoke rose, and the spirit-treasure passed out of sight. The gods would doubtless now see to it that part, at least, of the debtor's bill was paid!

Our immediate business was to let the people of Suchow know of our arrival, and very soon, by means of posters, the news was spread, and the words: 'The Christians have come!' were on the lips of all. It was greatly to our advantage that the whole city happened

846 The position of women is probably most clearly expressed in the fact that for forty days after a woman has given birth she is considered unclean. She may not leave her hut for ten days and may not even sit out in her yard, for she is unworthy for the sun to shine upon. During the first ten days even the husband is considered impure and may not associate with anyone. If he is a shopkeeper, custom forces him to close his shop during this interval or, if he does not wish to do this, to hire a substitute for this period /242/ but he himself may not enter his shop or his place of business For this reason many Chinese husbands quickly set out on a journey when a birth in the family is imminent, in order to avoid the suspicion of uncleanness.

764 Only a few days after my return from the Gum bum monastery my landlord in whose spacious buildings I had rented the third and last courtyard with its adjoining small house, died. His body was laid out for the next few days directly in front of my separate courtyard entrance, and there all the various funeral ceremonies took place so that I could view the entire proceeding at leisure. The [609] family of the deceased had immigrated only a few generations before from Shensi, and so they were still considered strangers, they came from "down below," as the people of Hsining say. Thus, there were not many relatives and the family was not wealthy, so that everything was relatively simple and was done as quickly as possible. Nevertheless, according to our conceptions the ceremoniousness was tremendous.

763 The man had reached a ripe old age and had then died very quickly. But his relatives had succeeded in observing the etiquette of putting on his shroud, a long, padded silk gown, while he was still alive and also in moving him from his bed beside the stove onto a small bench and laying him out in the center room of the main house, so that his soul might more easily find its way out into the open. Thus, at the very last minute his sons had proved 764 themselves pious children. Immediately after the man died money ● 775 was placed in his mouth, so that he should not be mute when reborn, but he was neither washed nor were his eyelids closed. During the first few days he lay in the death chamber as though he had been forgotten, and the doors and windows of the room were wide open. All I heard during the day was the man's name being called and the words "father" and "grandfather," and on the first evening a long train of Taoist priests set out from the house, bearing many lanterns, and gongs, triangles and drums through the streets of the

cussed in Heaven. They teach men sorcery and will serve men who can rule them by these devices. The leader of these evil spirits is called "The Shaitan" or Iblis. His fall from a place among the angels was due to his refusal to worship Adam on God's command; for this he was accursed till the Day of Resurrection and given authority over those of mankind whom he seduced.

Next to the unity of God, the doctrine of the Apostles, as the shahada indicates, is the central doctrine of the Koran. Moslems are required to believe in the Apostles without distinction The last of the Prophets is Muhammad, who is God's Apostle to all mankind. The doctrine preached by all the Prophets is essentially one and the same, although in matters of detail there has been a gradual evolution in their messages toward the final and perfect revelation.

As for Muhammad himself, the Koran repeatedly disclaims on his behalf anything that is superhuman. He was but a mortal man, commissioned with the sole duty of conveying God's warning and message of salvation. He had no knowledge beyond what was revealed to him, and he had been granted no miraculous powers.

Faith in life after death is the last of the basic principles of Islam. The word usually used to indicate it in the Koran is al-akhira. The Koran does not speak only of a life after death, but impresses on believers the importance of life on earth as a basis for the future life. The Last Day, the Day of Resurrection and Judgment, will be the time when men's future fate will be decided by God. This day will come suddenly at a time known only to God. On that day the graves will open and men will be called to account for their deeds. Each man's angel shall bear witness to his record, his deeds will be weighed in the balance, and his book will be placed in his hand, the right hand of the blessed and the left hand of the damned.

Then the blessed, the God-fearing men and women, the humble and the charitable, the forgiving, those who have suffered and been persecuted for God's sake, those who have fought in the way of God, shall be summoned to enter the Garden of Paradise, where they shall dwell forever by flowing rivers, praising God, reclining on silken couches, enjoying heavenly food and drink and the company of dark-eyed maidens. Those who have sinned against God and men are condemned to eternal punishment in the flames of Hell.

C. The Rituals of Islam

a. Prayer (Salat). The observance of the ritual prayers is repeatedly emphasized as one of the essential religious duties. Although neither the ceremonies nor the five set times of prayer

1: Washington S-4 (no date) 1956 AF13 Northwest China AF13

728 According to official tradition, the Spirit of Hua-shan is
796 Shan-sheng, one of the descendants of P'an-ku, the mythical
823 creator of the world. Many other genii have, however, been con-
[782] nected with this mountain. According to the oldest legendary records, it was a female spirit, the Holy Mother, Sheng-mu, who was propitiated here to bring forth the all-important rain; but she also received sacrifices and prayers to accord victory in battle. More recent and still prevalent legendary traditions make the Hua-shan one of the centers of the cult of the Jade Maiden (Yü-nü) whose blessings are sought for the propagation of male offspring.

823 It might be added that the Hua-shan with its rugged peaks and valleys, adorned with rare forests and intimate expressions of the pious sense of centuries, belongs to the most scenic spots of all China.

346 The great temple at the foot of the mountain, one of the most
712 magnificent products of Chinese architecture, has been trans-
178 formed into an arsenal in Kuomintang times.

B. Religious Attitudes in the Northwest

791 In general the Chinese in the Northwest adhere to the so-called "Three Great Religions." Confucianism, Buddhism and Taoism all play important parts in their religious system. In specific regions, Christianity, particularly the Catholic Church, has strong footholds among the local Chinese people. Where the people belong to the tradition of Chinese history and culture, scholarship and tradition have strengthened the cult of ancestor worship and the ideals and practices of Confucianism. There the blending of Confucian teachings, Buddhist ethics and Taoist principles predominates in the religious complex of the local
[177] inhabitants. In the border communities, strongly influenced by the nearby Tibetans, the Chinese include a large amount of Buddhistic observance and practice in their religious activities. They persist in styling themselves Confucianist in religious matters, but they devote their time and money to the performance of Buddhist ritual. It is reported that the Chinese of these areas are appreciably more religious than those of the more typically Chinese communities. Taoism is sandwiched into this all-embracing system of magical practices, necromancy and aberrant forms of philosophy.

797 Christianity first came to China through the Northwest and established its headquarters in Ch'ang-an (present Sian), the national capital during the Tang Dynasty. Missionaries of the Nestorian Church first brought Christianity to the trade routes
[211] in the present Northwest. The decisive, historically dated record in Chinese and in Syriac called the Nestorian monument,

/Tibetans of Chinghai/

*563 abandonment of the sick, is very strong, and to some extent helps 164 limit the spread of contagious disease. (Cf. also Rijnhart, 1902).

[758] The Tibetans are apt to attribute diseases to spirits, such as *563 the sa-ndre, (earth-spirits), demons and wrongdoing in this or 164 previous lives. The sa-ndre are especially feared, because they 753 afflict those who disturb the ground with leprosy; hence, the high 776 incidence of that dread disease among the farmers and its absence among the nomads. Demons or devils are the sources of the epidemic diseases and the reason for the imposition of the strict quarantine of their victims. Like their diseases the devils are highly contagious. But, except for these ailments that have known [759] causes, the Tibetan will consult a doctor or someone whose home remedies have proved successful. Under the latter category would be included the various Christian missionaries and explorers, traders, etc., who frequented Chinghai.

759 C. The Local Doctors

757 "...the treatment given by the native doctors generally means *563 an increase of agony to the sufferer. For headaches large sticking plaster are applied to the patient's head and forehead; for rheumatics often a needle is buried in the arm or shoulder; a tooth is extracted by tying a rope to it and jerking it out...; a sufferer with stomach-ache may be subjected to a good pounding, or to the application of a piece of wick soaked in burning butter grease; or if medicine is to be taken internally it will consist probably of a piece of paper on which a prayer is written, rolled up into the form of a pellet, and if this fails to produce the desired effect another pellet is administered, composed of the bones of some pious priest." (Rijnhart, 1902, p. 34).

75 Actually, Tibetan medical science is one of the ten major *563 subjects that, according to Buddhist classification, constitute the whole of human knowledge. One of the nation's main medical schools is located near Lhasa. Some of the major academic monasteries also have medical schools and the person with the title of manpa (sman-pa, doctor) is respected as highly learned. The medicaf lore that is studied is that of ancient India. It is primarily scientific, in that it is based on rational explanations of physiology and pathology. The religious aspects are superficial additions that do not affect too seriously the basically scientific approach. There are different categories of disease apportioned according to whether the sickness is the result of something wrong in this life, in the previous life, or a combination of previous lives and the present; whether the patient is male, female, child or desexed. Then there are afflictions common to all regardless of sex or age. These number 404 categories, 101 being attributed to each of the four major elements, organs or vices, depending upon the interpretation. (The original Brahmanical medicine had only 101 cate-

through a sort of local government. In other parts of China 000 the Mahomedans are mostly indistinguishable externally 142 from the rest of the Chinese population; but in Kansu, apart from the Salas, who are of a distinctly Central Asiatic type, my experience was that the faces of most of the Mahomedans 291 are somehow different from the Chinese; they are in any case usually rendered noticeable by their white caps. Foreign scholars attach importance to the early Arab intercourse by sea, but all the Chinese with whom I discussed the question of Islam in China agreed that it came overland from Central Asia, and this is probably true of the North and North West at any rate, which, apart from Yunnan, are the regions where Mahomedanism counts.

The Mahomedan population of Kansu, decimated by 797 the great rebellion, is now recovering and increasing again 162 as the result of many years of comparative peace. Apart from natural increase by births and, after the Chinese fashion, by adoptions, there are a certain number of conversions; these are due rather to expediency than to religious conviction, but the converts having once adopted Islam, appear usually to become good and zealous Moslems. The Chinese as a race seem to require stiffening by a virile religion of some kind, and the effects of Mahomedanism on the characters of those among them who embrace it appear remarkable, and give rise to curious speculations.

It may briefly be stated here that the Mahomedans of 186 North West China, in spite of their religious connection with Turkey and the intrigues of enemy agents, have throughout the War remained absolutely loyal to the Chinese Government.

The relations between the Moslems and the foreign 797 missionaries are comparatively good, so long as religious 776 questions are not concerned. Even in religious matters they agree with the foreigner up to a certain point, since they consider that both they and the missionaries worship the only true God, in contrast to the idolatrous Chinese. It is only when the divinity of Jesus, whom they regard as a prophet but not divine, is raised that they join issue with the foreigner, and then they become inexorably hostile. The 797 early history of Protestant missions in China contains many references to assistance received from the Mahomedans

which permits of a more solid structure than elsewhere. 361 The collapse of these mud dwelling-houses is frequent; 346 we ourselves were roused one morning by an ominous 342 thud, and ran out just in time to see Molly, with an injured air and covered with dust, led from the ruins of her stable which had fallen down around her.

Among the temples[1] none is so highly valued by the 346 citizens as the Hall of the Sleeping Buddha. The figure 778 is one hundred and twenty feet in length, about forty 532 feet high, and is firmly believed by the Kanchow populace to be the largest image of Buddha in the world. It is made of earth and plastered with a composition of lime and paper pulp. Entirely devoid of artistic merit, it is merely a colossal figure, reclining with the head resting on the right hand, and enormous, outstretched feet with huge, round toes of regular form. A gallery runs round the upper part of the hall from which a downward view can be obtained. The city also contains a Chorten (relic tomb) about one hundred and fifty feet high, which holds the remains of a noted Living Buddha who died in the locality. The Chorten is considered to symbolise the five elements into which the body is resolved at death—earth, water, fire, air, and ether.

In another temple is a brass horse and rider of great 346 antiquity. This statue is viewed with reverence, as it 778 is believed to have been miraculously conveyed to 532 Kanchow by a great flood of the Black River. Outside 776 this temple is a splendid, bubbling spring of water, called the Ih Chuan, and said to be the first spring of sweet water to the west of the Yellow River. It feeds a tank where sacred goldfish disport themselves, and has been venerated for centuries. Close to our own residence was the beautiful Temple of the Spacious Hills. We often walked there in the evening, when the

[1] T.J.G. [at Kanchow -- Analyst]

flowery trees and shrubs, roses and peonies, made the garden fragrant. The temple held a fine set of china figures representing the Pa Hsien. These are the Eight Genii, the men of the hills, who once lived on earth, but now, free from the grosser claims of the flesh, still retain the capacity for such minor delights as strolling leisurely in beautiful surroundings, or even those of eating and drinking. When in the flesh, although they practised asceticism, it was not to such a degree as to secure complete etherisation. They are not immortal, but enjoy a prolonged and easeful life. The little figures look their best standing on the old lacquered table in the sombre shrine, and the gay gardens provide an appropriate setting to these unaspiring beings.

Above the porch was a fresco which showed—hanging in graceful attitude over a balcony rail—the form of the Kwan in—Goddess of Mercy—with an infant in her lap. The pose, coiffure, and background were so Western that it might have been a fresco in the porch of an Italian Church. This was not the only place in which we saw pictures which bore a distinct trace of Nestorian tradition and influence, and this is not surprising considering that in the thirteenth century, Marco Polo still found groups of Nestorian Christians, both in Kanchow and in Suchow.

Close by the Temple of the Spacious Hills was a quiet courtyard, where ten Buddhist nuns lived in community. They were all deficient, either physically or mentally, blind, deaf or short-witted. Their feet were unbound and their hair cropped. They were in receipt of a pension, and gave themselves up to reciting long liturgies. Their services were valued at funerals, where they intone prayers for the departed. We often called in and sat for an hour, and they loved to see our Scripture pictures, and listen to the Bible stories.

The floor was of very loosely trampled earth, and there was no ceiling, the roof being merely of pine-wood rafters, boarded on the outside. Strange to relate, even these bright premises were not free from the universal hauntings, for on the verandah stood a sedan-chair which inspired such terror to the whole family that none would venture to sit in it. Some months previously Mr. Chang had celebrated his birthday with a banquet, to which he had invited all his relatives and friends. Having feasted not wisely but too well, he sat down in this chair, and throwing out his chest disported himself with the typical gestures of a Chinese Mandarin. While the younger men of the party carried him joyously to and fro, he made suitable faces, saying: 'Now do I look like a Mandarin?' After a few minutes of this sport he stepped out from the chair, when, to the horror of the whole party, it was found that his mouth remained permanently twisted on one side; and as an added terror a few days later his wife developed a similar affliction.

It was most unfortunate that the time of our moving in coincided with the prolonged period, during which the god controlling the element of Earth forbids mankind to disturb his dominion. We were therefore implored not to build our kitchen stove, not to plaster a wall, nor even to mix the mud necessary to stop the crevices through which the wind was whistling, until this season expired. Courtesy demanded that we should not outrage the feelings of our kind host, but we decisively informed him that as Christians we were entirely freed from the power of demons, and the bondage of such superstitions.

His reply was: 'That is true and right, and I know that none of these things can harm *you*, because you are under the complete protection of your God. I, on the other hand, am under the power of these influences, and it would be highly dangerous for me, or for you, to take a midway position, for then we would be removed from protection, and consequently exposed to the assaults of both forces.'

The whole time of our residence in Suchow, Chang-si-yeh's pavilion remained our home, and we became much attached to it.

CHAPTER XVII

THE CHALLENGE

Our new home was situated in the best residential quarter of the town. Most of the neighbouring families had beautiful gardens like our own, and between us and the western city wall stood all the most important temples, to which plantations of young trees added a great charm. The neighbourhood was quiet, and free from business traffic, Suchow possessing no gate on the western side. Twenty miles distant is situated the frontier fortress of Kiayükwan, where the Great Wall ends, and of which the popular saying is: 'Kiayükwan is the West Gate of Suchow.' As the deities of wind and water (Feng shui) would be deeply insulted if the wall were pierced, the inhabitants of Suchow would be terrified at such an action, fearing the destruction of the city by flood.

Our first walk was to a temple standing in large grounds, and approached by a splendid poplar avenue. We were discussing, as we proceeded, the details of the new life ahead, when our eyes were riveted by an inscription over the temple door, hanging between two

5: Tafel--348 T-3 (1905-1908) 1914 AJ1 Tibet
N.W. China AF 13

and reports there the way things have gone for the family throughout the year. Thus, this day is very important and is called the Little New Year. On this day he is offered sweets, rice and other things and while his picture is being burned in the fire the entire family calls after him: "Sir Kitchen God, Sir Kitchen God, do not report anything bad about us!" In the real New Year's night he returns from heaven and that is when people again paste his picture on their walls.

776 ● 782

a little epigram or a Chinese symbol of luck and wealth on all my chests as well as my saddles, on the baskets, bags, hammers, on my camera, in fact even on the broomstick which I had bought two days before and on the shovel, in short, on everything I possessed. Even in the rubbish heap there was a special piece of paper for the important god of rubbish. My three horses had red ribbons braided into their manes and wore a piece of wide red cloth on their foreheads; all this was part of the New Year's greeting of my servants. And everyone exchanged wishes of "Fa ts'ai ba! fa ts'ai ba! may you be rich!"

527 777

My New Year's call to the amban was undertaken together with Mr. Ridley, and on this occasion I saw the old gentleman for the first time. As is customary in China, he greeted us in the vestibule and then led us, amid many bows and the most ingratiating smiles, into his guest room. From the moment we arrived he talked incessantly and it was perfectly obvious that he made every effort not to give us a chance to speak. He did not trust us. He was afraid of a complaint which would have lowered him in the eyes of his men. We were scarcely able to give him our New Year's greetings. He avoided any kind of dialogue and kept repeating how sorry he was that I had been attacked in his territory and that the hsiĕ dia did not take better care of me. It was all their fault. He would have our guide severely punished. His soldiers were on their way to fetch my things. (2) And he said if I were going to travel again in his

574

2. As a matter of fact, they did set out three days later for the Koko Nor and brought back all my animals, but unfortunately none of the irreplaceable equipment.

province I should by all means let him know in time so that he could give me a military escort. "I shall give you soldiers to take along. I ding wo ba ni sung. You may depend on it, I shall have you

777

777 LUCK AND CHANCE--concept of good and bad luck; ideas about chance and probability; things associated with good or bad luck (e.g., lucky objects, luck-bringing formulas, lucky and unlucky numbers, propitious and unlucky days); techniques for controlling luck (e.g., wearing of luck amulets, reciting of lucky formulas); conception of fate; etc. See also:

ably become detached, and had then fallen down. Such an incident would, of necessity, be viewed by the Chinese with dismay, the only possible course open, in order to avoid calamity, being to spread a feast before the gods, and then restore the tablet to its place of honour. The gentleman had, however, in the meantime become a Christian, and on making enquiry found that the day on which he first entered the Mission premises at Suchow was the self-same day on which the tablet had fallen. His answer, therefore, to the priest was as follows: 'You may act as you please with your own temple, but as for me and my house we will serve the Lord.'

000

On the evening of our departure from Chikinpu, so as to shorten the journey, we decided to follow a side-path leading over rough ground, and also across a river, before rejoining the main, desert track. When we had gone about three miles our servant suddenly discovered the loss of a large packet of books, which had, apparently, fallen from the back of the cart. Ineffectual search was made until sunset, by which time the carters became reluctant to pursue a strange path by the fading light, so they suggested that, by adding five miles to the journey, we could follow another route which was more frequented than the shorter one. We, however, decided to return to the inn, although we knew that by so doing we should violate every Chinese instinct, the popular idea being, that to retrace one's steps is to court ill-luck. But the next day, both Christians and heathen alike recognised the fact that we had been protected by a Divine Power, for we then learnt, that had we proceeded on our way we must inevitably have arrived at a certain spot just when a band of brigands, sweeping down from the hills, had attacked the caravans travelling that night. We were

484 777 ●

579

000

426 then my friends, too, appeared dressed in silks and velvets and all their children, as good breeding demanded, wore new shoes. I now learned that the man had been cautious enough to store a few chests of his belongings in my little courtyard, with the help of my servants, and he had now brought them back to his apartment again. Nor was the man by any means bankrupt. All he lacked at the moment was cash to cover all his debts.

527 574 At the first cock's crow, long before day, my servants came back from the New Year's celebration with their families and offered me their New Year's kowtow for which one's employees always receive a major gift of money. The first official callers, among them the hsien and a few officers of the city who were acquaintances of mine, also stood at my door at six in the morning just as the sun was rising. They were on their way back from the temples where they had delivered offerings and congratulations to the official state deities and the emperor. In China I learned the meaning of New Year's calls on acquaintances, and good luck wishes. Surely no Chinese would be impressed by our European manner of doing this. Beginning with the first day of the new year, the inhabitants of China are on their feet from morning till night and hasten from one to the other of their acquaintances in order to express their good wishes in the form of a kowtow. On the morning of New Year's day everyone washes his face and appears in holiday garb which should be new if possible, and all doors, all door posts and implements are freshly pasted with luck-bringing words and sayings. The paper which is used for this is fire-red, unless the family happens to be in mourning. (1) Thus,

527 777

1. Like the color of the Yang, see footnote to p. 33.

on New Year's in China everything looks pretty and orderly, and above all, indescribably gay. On my house, too, the servants had during the night pasted new pictures of the gate deities on the outside of all the doors, and over the hearth they had put a fresh picture of the kitchen /207/ god Ts'ao ye (1), and when I awoke there was

776 782

1. Also called Ts'ao wang ye. This is the chief deity of the family. He is below the city god and the almighty god of heaven, the supreme Chinese deity, and of course, also below the emperor, the son of heaven. He guards the fire and the domestic hearth. On the twenty-third or twenty-fourth day of the last calendar month he ascends to heaven and reports there the way things have gone for the family throughout the year. Thus, this day is very important and is called the Little New Year. On this day he is offered sweets, rice and other things and while his picture is being burned in the fire the entire family calls after him: "Sir Kitchen God, Sir Kitchen God, do not report anything bad about us!" In the real New Year's night he returns from heaven and that is when people again paste his picture on their walls.

776 782

a little epigram or a Chinese symbol of luck and wealth on all my chests as well as my saddles, on the baskets, bags, hammers, on my camera, in fact even on the broomstick which I had bought two days before and on the shovel, in short, on everything I possessed. Even in the rubbish heap there was a special piece of paper for the important god of rubbish. My three horses had red ribbons braided into their manes and wore a piece of wide red cloth on their foreheads; all this was part of the New Year's greeting of my servants. And everyone exchanged wishes of "Fa ts'ai ba! fa ts'ai ba! may you be rich!"

527 777

My New Year's call to the amban was undertaken together with Mr. Ridley, and on this occasion I saw the old gentleman for the first time. As is customary in China, he greeted us in the vestibule and then led us, amid many bows and the most ingratiating smiles, into his guest room. From the moment we arrived he talked incessantly and it was perfectly obvious that he made every effort not to give us a chance to speak. He did not trust us. He was afraid of a complaint which would have lowered him in the eyes of his men. We were scarcely able to give him our New Year's greetings. He avoided any kind of dialogue and kept repeating how sorry he was that I had been attacked in his territory and that the hsiê dia did not take better care of me. It was all their fault. He would have our guide severely punished. His soldiers were on their way to fetch my things. (2) And he said if I were going to travel again in his

574

2. As a matter of fact, they did set out three days later for the Koko Nor and brought back all my animals, but unfortunately none of the irreplaceable equipment.

province I should by all means let him know in time so that he could give me a military escort. "I shall give you soldiers to take along. I ding wo ba ni sung. You may depend on it, I shall have you

morass) the whole of the party made its way on foot to a wretched hovel, where on the damp ground, amidst indescribable dirt, we spent the night. Incidentally, we discovered that we were expected at this house; and that the carter was smuggling illicit goods to his friends under cover of our tracts. The next day the mules were changed for oxen. 'There are rivers ahead,' said the man, in a confidential whisper; 'nothing like oxen for crossing water. This, my nephew, (here he indicated a lad of about sixteen) 'understands the fords thoroughly, and he will now take you on for the rest of the way.'

Knowing there could be no danger from rivers at this season of the year, but feeling that we might, at this rate, never reach our destination at all, we accepted the new arrangement, trusting 'Welcome Home' to see us safely through; and late that afternoon, in a snowstorm, we reached Kinta.

It proved to be an interesting place, colonised two hundred years ago by people from Taiyüanfu, in Shansi, and though small, yet from its position on well-watered land of large extent, it is a place of importance.

The Golden Tower, from which Kinta takes its name, is in Indian style, as are also many of the temple frescoes and wooden idols of the cities north-west of Kanchow, showing that at one time Indian art had strongly imprinted its mark in the Province of Kansu. The dome of the tower is said to have originally been covered with pure gold, which was stripped off by the Moslems and replaced by brass; and this having in turn been stolen, the whole tower was subsequently whitewashed, as it is to-day.

In the spring the temples all hold separate festivals in honour of their respective gods, and we were in Kinta when the *Cheng Wang* (protective deity of the

town) was carried into the country in a sedan-chair. Here he was required to bless the sown fields, and also to call in his subordinate demons, whom he holds in check while the grain is ripening, lest they work mischief on the peasants, but whom he again releases after all the crops are gathered in. He was escorted by a big official procession, to the sound of pipes and cymbals; but so soon as the idol was safely deposited in the village shrine, where it was to spend a few days, the whole company made a rush for the courtyard, where we were staying, and listened attentively for over an hour to our singing and preaching.

One other afternoon was spent in the house of a man whom we had first met at Suchow, at the New Year's festival. He had then heard us speak, and being much interested had bought a copy of the New Testament. On learning that we had now arrived at Kinta, he invited us to his home in order that we might meet the women of his family. We were received by them with a deference that was almost reverential, the younger members of the house, dressed in their festive garments, being ordered to kneel before us; and it was with the greatest difficulty we prevented their doing us homage as to 'Holy Women.' Mrs. Ma, the wife, was a vegetarian of the third generation; neither her grandmother not her mother having ever broken the vow of a most rigid asceticism, which forbade their tasting any condiment to relieve the insipidity of the dough-string diet, or even the refreshment of a cup of tea. We found her to be extraordinarily understanding in spiritual things, and she responded with an alert mind to the story of the suffering Saviour.

She showed her confidence in us to a remarkable degree, by consenting to take a meal with us the following day, when she returned our call, feeling sure

we would give her nothing that was forbidden by her vow.

The day before we left Kinta, the temple of the Goddess of Mercy was crowded with women worshippers —young brides beseeching the gift of a son; while mothers who had received a child during the past year, now brought it to be placed under her protection. The baby, covered by a red scarf, was held in its mother's arms under an immense iron bell, when she produced her offering, namely, a handkerchief full of mixed grain. The bell was then struck; the priest took out some of the grain and scattered it over the child's head, with the words, '*May the Goddess of Mercy protect thee; may the God of Plenty endow thee;*' then, yellow paper having been burnt, and its ashes smeared over the child's forehead, the priestly incantation was ended, and the mother went away, satisfied that all that could be done to protect the little life from ill-luck and demons had been successfully carried out.

A few days later we visited a famous group of temples known as Wenshu Miao—'The Halls of Learning'—situated only twenty miles from Suchow, at the mouth of the main Pass through the Southern Hills, and where festivals are held for both Chinese and Tibetans during the spring months. Hundreds of shrines stand on the mountain-side and numerous guest-houses have been built to accommodate the thousands of pilgrims who gather each year, on the first day of the fourth moon. From early dawn carts full of women, followed later in the day by military processions, escorting the chief officials of the town, followed one another up the stony valley in unbroken succession.

The shrines are connected by a labyrinth of small, steep paths which wind in and out around and over the hillside, at each turn of the road revealing a temple,

426 then my friends, too, appeared dressed in silks and velvets and all their children, as good breeding demanded, wore new shoes. I now learned that the man had been cautious enough to store a few chests of his belongings in my little courtyard, with the help of my servants, and he had now brought them back to his apartment again. Nor was the man by any means bankrupt. All he lacked at the moment was cash to cover all his debts.

527 574 At the first cock's crow, long before day, my servants came back from the New Year's celebration with their families and offered me their New Year's kowtow for which one's employees always receive a major gift of money. The first official callers, among them the hsien and a few officers of the city who were acquaintances of mine, also stood at my door at six in the morning just as the sun was rising. They were on their way back from the temples where they had delivered offerings and congratulations to the official state deities and the emperor. In China I learned the meaning of New Year's calls on acquaintances, and good luck wishes. Surely no Chinese would be impressed by our European manner of doing this. Beginning with the first day of the new year, the inhabitants of China are on their feet from morning till night and hasten from one to the other of their acquaintances in order to express their good wishes in the form of a kowtow. On the morning of New Year's day everyone washes his face and appears in holiday garb which should be new if possible, and all doors, all door posts and implements are freshly pasted with luck-bringing words and sayings. The paper which is used for this is fire-red, unless the family happens to be in mourning. (1) Thus,

527 777

1. Like the color of the Yang, see footnote to p. 33.

on New Year's in China everything looks pretty and orderly, and above all, indescribably gay. On my house, too, the servants had during the night pasted new pictures of the gate deities on the outside of all the doors, and over the hearth they had put a fresh picture of the kitchen /207/ god Ts'ao ye (1), and when I awoke there was

776 782

S 563 585 to live at his own home if its near, otherwise the bride's parents lend him an aq-oi. He visits the bride every week or ten days. These visits are supposedly secret. Her father must not see the bridegroom entering or leaving his bride's tent.

When the aq-oi is ready, the bridegroom takes the bride away to his own place, over some show of resistance made by the girl's relatives.

S 563 586 After a year, the girl can divorce her husband by returning the price paid for her. Divorce is not very common among the nomads, and the price paid for it is much higher than that among the Turkis of the plains. The bride's father would usually be very reluctant to return the price paid for his daughter except for extremely grave reasons.

IV. The Chinese Moslems

N 121 59 [779] Little information is available on the family structure and relationships among the Chinese Moslems. The family relations, as in all other Moslem communities, are supposed to be regulated by the Shari'a (Moslem law) but the details of the code are not well known to the Chinese Moslems, nor are they observed with great care as far as they are known. What alterations have been produced by the influence of the surrounding Chinese is not known from the meagre amount of available information. Many of the Chinese Moslems observe the traditions of ancestor worship that form such an important unifying factor in Chinese family life. Often they possess ancestral tablets which stand side by side with Moslem religious objects.

N 769 *563 778

N *563 582 797 Intermarriage between the Chinese and Chinese Moslems occurs often under certain conditions. The fact that the woman is not Moslem is not an obstacle to marriage with a Moslem; it is even thought to be meritorious to bring women of other faiths over to the true religion by marrying them. On the other hand, Moslem women are strictly forbidden to marry a man of another faith. The non-Moslem women who marry Moslems, although officially converted to Islam, in many cases bring their religious customs to the family, and the children are reared with both traditions and beliefs.

N *563 585 586 793 184 The main differences between the Chinese and Chinese Moslems appear to be in the ceremonies of marriage and divorce. A Moslem priest usually is invited to preside over these occasions. In addition to the Chinese-style ceremony, the Moslem priest will recite a few prayers over the newly-wed couple or will give an additional affirmation to the dissolution of an unsuccessful marriage.

N *563 184 In general, the Chinese Moslems have much more in common with the Chinese than they do with their Turkic coreligionists. The law and traditions of the country play a more important part in governing the family relations, than the religious law.

792 the two monasteries there has been a total of five to seven thousand monks. These monks came not only from the immediate area, but were attracted by the prestige or teachings of the monasteries from Mongolia and other areas on the Chinese border.

792 871 Labrang prides itself on being one of the six major academic monasteries in all Tibet. Ma Ho-t'ien even claims for it more complete systems of education and organization than are to be found at the central Tibetan centers of Ganden, Sera and Tashihlumpo. But this pride is modified by the fact that an academic degree of Geshe from Labrang is not actually recognized in Tibet proper. The Labrang incarnations, Chia-mu-yang, have generally gone to Depung in Lhasa to receive instructions.

792 [798] Kumbum can rest on its laurels as a place of holy pilgrimage. Within its grounds is the rock associated with Tsong-kha-pa's birth; so too is there the famed tree that supposedly sprang from the shorn locks of the Great Reformer. Both monasteries [423] own much land and represent great wealth. Some has come in the form of the accumulated gifts and donations of the pious. [651] Still more is representative of taxes imposed over the years on their local subjects, for, like many of the smaller monasteries, these two are the seats of secular rule as well as religious reverence.

792 701 In return for the gifts and other revenue, however, the monasteries perform many functions for their subjects and believers. In the turbulent conflicts between Moslems, Chinese and Tibetans, the monasteries have represented the effective military force of the area. Rijnhart, Ekvall, Ma and others who have been present in crises have all reported the efficacy of the fighting monks. Their strongholds serve as banks for the wealth of all in danger from looting; their armed force stands for the safety of Chinese, Tibetans and foreigners who seek refuge. Nor is there any perceptible hesitancy about the prospects of taking life when the lama war cry, "Sha-sa, sha-sa" (Eat meat, eat meat!), summons the monks to arms. Sometimes these armies [669] were aroused by major crises, such as those of the Moslem rebellions in the late 1800's. They have also done battle against the Communists in the 1930's. And when no greater danger threatens, they are apt to do battle among themselves on an inter-sect or local rivalry basis.

792 795 But the hold of the monasteries cannot be measured solely in terms of the social and political roles they fulfill. The religion of Lamaism is a very tenacious one. The complete conversion of Tibetans to another faith, be it Christianity or Islam, remains on a very small scale. Within the Lamaist structure, the hold of the older sects is the strongest, especially in areas that have remained outside the control of Lhasa. And underneath

SN 795 782 182 796 203

/Chinese Moslems/

any should oversleep and fail to eat the necessary food before daybreak.

SN 795 735 431

The regular practice of Zakat is practically unknown to the Chinese Moslem community. Only during the month of Ramadan, when charity is extended to the poor and donations are given to the ahung are alms given in a form resembling Zakat. There is no fixed amount given and the act itself is purely voluntary. The only form of sadaqa (voluntary alms) given is the sadaqa el-fitr given in the three days of Id el Fitr (the Moslem New Year). These offerings can be made in cash or in goods.

SN 795 988

Particularly among the Chinese Moslems of the Northwest the practice of pilgrimage to Mecca was observed. The Hajjis, or those who completed their pilgrimage to Mecca, were highly respected in their communities. Pilgrimage has decreased considerably in the last years. The Hajj organized by the China Islamic Society in 1952 did not reach Mecca; they went as far as Pakistan and returned to Peking, for reasons that were not specified.

SN 795 796

Id el-Fitr, the New Year, is the best observed of the different Moslem holidays. It occurs during the first three days of the tenth month. Special services are held in the different Moslem communities, and great feasts are given to celebrate the occasion.

SN 795 262

In general the Chinese Moslems do abstain from pork and wine as their religion commands. They will not eat meat that has not been killed in the approved Moslem fashion. Many of the merchants, carters and others who travel carry their own utensils, and often, where there are no Moslem communities, carry their own food so as to avoid food that is prohibited by their religion.

SN 795 769 177

The influence of the general Chinese beliefs on the Moslems has been noted by many, particularly by D'Ollone. Ancestor worship is the core of the non-Moslem Chinese belief. It is not restricted to domestic worship but extends to religious devotion to the graves of the ancestors, which are designed to assure the peace of the deceased and are a scene of devotion every anniversary. The Moslems of the Northwest have been so influenced by these traditions that, in the secrecy of their homes, most of them burn incense in front of the ancestors' tablets. In evidence of this custom, D'Ollone brought back two vases which served the purpose of ancestor worship. Both of these vases belonged to Chinese Moslems, and had Moslem religious inscriptions in Arabic. The practice of pilgrimage to the well kept tombs of the ancestors is also found among the Chinese Moslems of Kansu. Some of the bigger tombs are quite elaborate and include, besides the monuments, a mosque, school halls and lodging places.

N 795 788 796

/Chinese moslems/

referring to "those who pray openly," contrasted with Khafira (identified as the Old Sect) or "those who pray secretly."

All the sects described above belong to the Sunni order; there are extremely few Shi'is among the Chinese Moslems. These sects have retained continuous hostility, which has manifested itself in violence, at times even resulting in bloodshed.

H. The Salars

The Salars are another group of Moslems, distinct from the Dungans, who live in China. They differ considerably from the Chinese Moslems in appearance, and they speak a form of corrupt Turkish.

The Salars live in Hsin-hua-t'ing on the right bank of the Huang-ho, and in the surrounding villages. They are also found on the road from Sining to Ho-chou. In religion they are Sunnis of the Hanefite School. They are not very strict in their observance of the different Moslem rites, and are known to be heavy drinkers. Although they do not observe the rites of Islam in a strict manner, they feel very strongly about their belonging to the world Moslem community and are quite fanatic in this respect. They have participated in many of the rebellions against the Han Chinese in the Northwest. Their clergy, who are greatly respected, are leaders of the Salar community.

Unlike the Chinese Moslems, the Salars have not assimilated many of the customs and beliefs of the Chinese. They do not burn incense nor pay special reverence to their ancestors. They have a much better knowledge of the Arabic language than have the Dungans, and even the lowest classes are acquainted with the Arabic alphabet. They are said to have received their present form of religion from Ma Ming-hsin (Muhammad Amin).

III. Religious Life of the Chinese in the Northwest

A. Sites of Religious Traditions

The Northwest includes what was once the economic and administrative center of the Chinese Empire. In the city of Sian and its surroundings, some of the older relics of religious institutions can still be seen. The memory of the great culture heroes of the past is particularly strong here and many of them are still worshipped in temples and shrines. Foremost among them is the Great Yü, tamer of the flood, who, according to legend, made life in this region possible by draining the excess water off through the narrows of T'ung-kuan. Among the famous Buddhist temples of Sian is the Wo-lung-ssu (The Temple of the Sleeping Dragon) which was built in Han times and has been a place of continuous reverence by emperors and peasants ever since. It contained a famous mural of the Kuanyin by Wu Tao-zu

(eighth century A.D.) and a Sung edition of the Tripitaka. It gained its name through the Buddhist monk Wei-ko (Sung times) who used to stay there overnight and was called the Sleeping Dragon.

Another one is the K'ai-yüan-ssu, built in 713 A.D., which is adorned with many famous inscriptions and also was once famed for its library. Few religious relics are left now at this place, which has become a center of high-class girl entertainers instead.

One of the landmarks of Sian is the Glazed Tile Pagoda, Hua-t'a, built during the times of the Five Dynasties. Other famous pagodas in the neighborhood are the Great Swallow Pagoda, Ta-yen-t'a, belonging to the temple Ta Tz'u-en-ssu, in which the pilgrim Hsüan-tsang was active, and the Small Swallow Pagoda, Hsiao-yen-t'a, built in the beginning of the eighth century.

The best-known Taoist temple was the Ying-hsiang-kuan, which was made the main center of Taoist devotion by Emperor Jui of T'ang in 708 A.D. at a period when the Imperial house of T'ang showed pride in its alleged descendence from Lao-tzu, the great patriarch of Taoist religion. In Kuomintang times the temple was converted into a school.

The plain around Sian is dotted with many tombs of past emperors. These artificial hills are held in great reverence by the local population and many myths have taken their origin here even though it is not known whose august remains these hills cover.

Shensi is also the site of one of the Five Sacred Mountains of China, which formed part of the Imperial cult and to which regularly Imperial sacrifices were offered. The worship of these mountains belongs to the oldest religious traditions of China. All through historic times down to and including the last dynasty, the Emperors went there in person for regular services or at least had themselves represented by topmost officialdom. At least since T'ang times large temples were erected to the spirit of these mountains. They were, however, not only depositories of memories of this official cult, but as pilgrimage centers of organized groups and individuals, they have accumulated religious traditions and historical relics devoted to all sections of the population.

Even though the Western Peak, Hua-shan, has to cede priority to the Eastern, T'ai-shan, it always was, and still is, one of the most important centers of pious activities. Numerous temples, shrines, caves and pavillions testify to this fact. Most of them are outside institutionalized Imperial ritual, but are maintained by local religious groups or sects and by the donations of visiting pilgrims in search of delivery from some bodily or spiritual troubles.

According to official tradition, the Spirit of Hua-shan is Shan-sheng, one of the descendants of P'an-ku, the mythical creator of the world. Many other genii have, however, been connected with this mountain. According to the oldest legendary records, it was a female spirit, the Holy Mother, Sheng-mu, who was propitiated here to bring forth the all-important rain; but she also received sacrifices and prayers to accord victory in battle. More recent and still prevalent legendary traditions make the Hua-shan one of the centers of the cult of the Jade Maiden (Yü-nü) whose blessings are sought for the propagation of male offspring.

It might be added that the Hua-shan with its rugged peaks and valleys, adorned with rare forests and intimate expressions of the pious sense of centuries, belongs to the most scenic spots of all China.

The great temple at the foot of the mountain, one of the most magnificent products of Chinese architecture, has been transformed into an arsenal in Kuomintang times.

B. Religious Attitudes in the Northwest

In general the Chinese in the Northwest adhere to the so-called "Three Great Religions." Confucianism, Buddhism and Taoism all play important parts in their religious system. In specific regions, Christianity, particularly the Catholic Church, has strong footholds among the local Chinese people. Where the people belong to the tradition of Chinese history and culture, scholarship and tradition have strengthened the cult of ancestor worship and the ideals and practices of Confucianism. There the blending of Confucian teachings, Buddhist ethics and Taoist principles predominates in the religious complex of the local inhabitants. In the border communities, strongly influenced by the nearby Tibetans, the Chinese include a large amount of Buddhistic observance and practice in their religious activities. They persist in styling themselves Confucianist in religious matters, but they devote their time and money to the performance of Buddhist ritual. It is reported that the Chinese of these areas are appreciably more religious than those of the more typically Chinese communities. Taoism is sandwiched into this all-embracing system of magical practices, necromancy and aberrant forms of philosophy.

Christianity first came to China through the Northwest and established its headquarters in Ch'ang-an (present Sian), the national capital during the Tang Dynasty. Missionaries of the Nestorian Church first brought Christianity to the trade routes in the present Northwest. The decisive, historically dated record in Chinese and in Syriac called the Nestorian monument,

ness" of this road, and certainly what with the ravages of brigands and the natural infertility of the soil, the few inhabitants were poor to the verge of starvation. Yenan seems to be the centre of the most desolate area, by far the poorest region I have traversed in China outside the actual deserts.

Chungpu, a poor little third class district city half in ruins, lies on the side of a hill, with a sacred grove of very ancient trees behind it, which present a remarkable sight in this treeless country. Near by is a small temple containing the tomb of the Emperor Huang Ti, who reigned some 4000 years ago, which illustrates the great antiquity of these little Shensi towns.

The next day's stage to Loch'uan Hsien is a trying march through the loess. The track follows down the valley to the east for 20 li, and then turning north climbs up through a gully on to the plateau a few hundred feet above, across which it runs for an hour's march to the hamlet of Antzu T'ou, whence it drops into the valley of the Lo River. This stream resembles the Ching Ho, a muddy torrent twenty yards wide, and flows in a narrow valley some hundreds of feet below the level of the loess plateau. It is crossed by a ferry at the hamlet of Chiaoho K'ou, and the path then climbs steeply out of the valley again and runs across the plateau in a N.E. direction for three hours' march to reach the district city of Loch'uan. The latter is the usual little third class Hsien city of Northern Shensi, but appeared to be rather more prosperous than its neighbours and to show less signs of the ravages of brigands. It lies on the loess plateau, intersected as usual by colossal rifts, the heads of some of which are so close to the city that they threaten to engulf it in a few years time. These towns and villages on the loess plateau are quite unapproachable except by the existing roads owing to the rifts which open up all around, and could be held by a few men against an army; perhaps that is why Loch'uan appeared comparatively immune from brigand raids.

From Loch'uan to Fu Chou is another exhausting march in the loess of 75 li. The track runs N.E. across the plateau for an hour's march until it is held up by a huge cañon with the usual perpendicular walls. Climbing in and out of

arranged that we should spend July among them under canvas, in Tibetan territory.

CHAPTER IX

A SPRING CAMPAIGN

MARCO POLO wrote of the city of Kanchow, where he made long residence, and once held office as Governor, as the ' city which holds more gods than men.' This local saying is still constantly on the lips of its inhabitants, who take great pride in the fact that its temples and shrines are so numerous as never to have been accurately numbered.

The town is beautifully placed and abundantly watered. It contains several lakes, which being overgrown with reeds supply material for an important mat-plaiting industry. Besides these larger expanses of water, there are a number of ponds fed by underground springs, dependent upon the melting snow from the Tibetan mountains. In these ponds the water rises and falls in a most unexpected way, so that sometimes their banks are surrounded by children fishing, while at others they become the highway of city traffic. The streets are bordered with fine poplar, acacia, and willow trees, which flourish splendidly, throwing their roots deep into the hidden sources.

As one would expect, the people are in all things superstitious and religious. All the wealthy homes have a private shrine, which is often a handsome hall, where the ancestral tablets are preserved, and where incense is burned to the family idols. At sunset each day the sound of bells rises on every side, as the woman of each household touches the rope which sets in motion

which permits of a more solid structure than elsewhere. The collapse of these mud dwelling-houses is frequent; we ourselves were roused one morning by an ominous thud, and ran out just in time to see Molly, with an injured air and covered with dust, led from the ruins of her stable which had fallen down around her.

Among the temples none is so highly valued by the citizens as the Hall of the Sleeping Buddha. The figure is one hundred and twenty feet in length, about forty feet high, and is firmly believed by the Kanchow populace to be the largest image of Buddha in the world. It is made of earth and plastered with a composition of lime and paper pulp. Entirely devoid of artistic merit, it is merely a colossal figure, reclining with the head resting on the right hand, and enormous, outstretched feet with huge, round toes of regular form. A gallery runs round the upper part of the hall from which a downward view can be obtained. The city also contains a Chorten (relic tomb) about one hundred and fifty feet high, which holds the remains of a noted Living Buddha who died in the locality. The Chorten is considered to symbolise the five elements into which the body is resolved at death—earth, water, fire, air, and ether.

In another temple is a brass horse and rider of great antiquity. This statue is viewed with reverence, as it is believed to have been miraculously conveyed to Kanchow by a great flood of the Black River. Outside this temple is a splendid, bubbling spring of water, called the Ih Chuan, and said to be the first spring of sweet water to the west of the Yellow River. It feeds a tank where sacred goldfish disport themselves, and has been venerated for centuries. Close to our own residence was the beautiful Temple of the Spacious Hills. We often walked there in the evening, when the

[1 T.J.G. [at Kanchow -- 2 Analyst]]

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

flowery trees and shrubs, roses and peonies, made the garden fragrant. The temple held a fine set of china figures representing the Pa Hsien. These are the Eight Genii, the men of the hills, who once lived on earth, but now, free from the grosser claims of the flesh, still retain the capacity for such minor delights as strolling leisurely in beautiful surroundings, or even those of eating and drinking. When in the flesh, although they practised asceticism, it was not to such a degree as to secure complete etherisation. They are not immortal, but enjoy a prolonged and easeful life. The little figures look their best standing on the old lacquered table in the sombre shrine, and the gay gardens provide an appropriate setting to these unaspiring beings.

Above the porch was a fresco which showed—hanging in graceful attitude over a balcony rail—the form of the Kwan in—Goddess of Mercy—with an infant in her lap. The pose, coiffure, and background were so Western that it might have been a fresco in the porch of an Italian Church. This was not the only place in which we saw pictures which bore a distinct trace of Nestorian tradition and influence, and this is not surprising considering that in the thirteenth century, Marco Polo still found groups of Nestorian Christians, both in Kanchow and in Suchow.

Close by the Temple of the Spacious Hills was a quiet courtyard, where ten Buddhist nuns lived in community. They were all deficient, either physically or mentally, blind, deaf or short-witted. Their feet were unbound and their hair cropped. They were in receipt of a pension, and gave themselves up to reciting long liturgies. Their services were valued at funerals, where they intone prayers for the departed. We often called in and sat for an hour, and they loved to see our Scripture pictures, and listen to the Bible stories.

other hand, am under the power of these influences, and it would be highly dangerous for me, or for you, to take a midway position, for then we would be removed from protection, and consequently exposed to the assaults of both forces.'

The whole time of our residence in Suchow, Chang-si-yeh's pavilion remained our home, and we became much attached to it.

CHAPTER XVII

THE CHALLENGE

Our new home was situated in the best residential quarter of the town. Most of the neighbouring families had beautiful gardens like our own, and between us and the western city wall stood all the most important temples, to which plantations of young trees added a great charm. The neighbourhood was quiet, and free from business traffic, Suchow possessing no gate on the western side. Twenty miles distant is situated the frontier fortress of Kiayükwan, where the Great Wall ends, and of which the popular saying is: 'Kiayükwan is the West Gate of Suchow.' As the deities of wind and water (Feng shui) would be deeply insulted if the wall were pierced, the inhabitants of Suchow would be terrified at such an action, fearing the destruction of the city by flood.

Our first walk was to a temple standing in large grounds, and approached by a splendid poplar avenue. We were discussing, as we proceeded, the details of the new life ahead, when our eyes were riveted by an inscription over the temple door, hanging between two

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

colossal Warrior-Guardians, who, javelin in hand, offered defiance to any visitor that might question the supremacy of the gods within. '*What? So you have come too?*' were the words which confronted us, and which seemed even to be audible, so startling was the impression made. Yes, we had come; and we knew full well it would be a battle to the blood between the forces here represented and those for which we stood. It was, therefore, with a sense of solemnity that we entered,[1] to find ourselves at once in 'the Courts of Hell'—for that is the name given to this shrine where the horrors of the Buddhist Place of Torment are realistically portrayed in clay-modelled figures, crudely coloured, but astonishingly vigorously done. The story begins by the spirit of a man, who having just died, finds himself divested of all fleshly covering, and must now in consequence start on his weary peregrination through the Underworld, where, for each sin committed in the body, the soul must now receive an exact retribution. In the next scene various other discarnate individuals knelt before the presiding Deity, while the doings of each one during their earth-life were weighed in accurately-adjusted scales. Around, more hapless beings underwent different tortures; some being dipped in a sea of blood, others sawn asunder between two planks, while others again were crushed like grain between upper and nether millstones. The covetous eyes were gouged out; the slanderous tongue was torn from the roots; and grappling-hooks fastened into the flesh of the lustful, peeled off the skin in ribbons. Here and there slender bridges, hanging over fearful chasms, were crossed by trembling pilgrims, whose escape from unknown consequences depended on the poise earned by former self-denials, and everywhere the minions of the merciless Judge gloatingly watched the sufferings of

[1] [a temple in Suchow -- Analyst]

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

we would give her nothing that was forbidden by her vow.

The day before we left Kinta, the temple of the Goddess of Mercy was crowded with women worshippers—young brides beseeching the gift of a son; while mothers who had received a child during the past year, now brought it to be placed under her protection. The baby, covered by a red scarf, was held in its mother's arms under an immense iron bell, when she produced her offering, namely, a handkerchief full of mixed grain. The bell was then struck; the priest took out some of the grain and scattered it over the child's head, with the words, '*May the Goddess of Mercy protect thee; may the God of Plenty endow thee;* then, yellow paper having been burnt, and its ashes smeared over the child's forehead, the priestly incantation was ended, and the mother went away, satisfied that all that could be done to protect the little life from ill-luck and demons had been successfully carried out.

A few days later we visited a famous group of temples known as Wenshu Miao—'The Halls of Learning'—situated only twenty miles from Suchow, at the mouth of the main Pass through the Southern Hills, and where festivals are held for both Chinese and Tibetans during the spring months. Hundreds of shrines stand on the mountain-side and numerous guest-houses have been built to accommodate the thousands of pilgrims who gather each year, on the first day of the fourth moon. From early dawn carts full of women, followed later in the day by military processions, escorting the chief officials of the town, followed one another up the stony valley in unbroken succession.

The shrines are connected by a labyrinth of small, steep paths which wind in and out around and over the hillside, at each turn of the road revealing a temple,

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

and anyone following the maze will pass hundreds of shrines in the course of his pilgrimage. The ambition of each worshipper is to visit as many idols as possible, and to light a stick of incense and burn paper before each. It is an amazing feat for women who are crippled by bandages and tiny shoes, and many of whom are no longer young, to climb these precipitous paths, sometimes even on hands and knees, in order to reach an apparently inaccessible rock-shrine, yet this is accomplished even over roads made slippery by rain.

Some of the chasms are crossed by rickety wooden bridges which bear such names as 'The Heavenly Road,' or 'The Short Cut to Paradise,' and here old women are helped by husband or son who carries the basket of incense and a pile of votive-paper.

Most of the shrines[1] are modern, but the original cluster of buildings dates from the time of the Emperor Chien Lung, and there are a very few, excavated in the hill, of a much older date, which contain frescoes similar to those found in the famous 'Caves of the Thousand Buddhas' at Tunhwang. At dark on the last evening, bonfires are lighted on every prominence, in which all the remaining incense and paper is burnt, in honour of the gods of the earth, spaces, and mountains.

The crowds were by this time accustomed to the sight of the white tent, and the people streamed in and out, listening to the addresses and buying the books. In preparation for the festival the students posted carefully selected passages of Scripture in each of the many shrines, and twelve months later, when we revisited Wenshu Miao, not one of these had been defaced or destroyed.

A week later was the Tibetan gathering, and we drove out once more over that stony road. We had

The self-appointed guardian of the Caves of the Thousand Buddhas is an interesting man, who by his own unaided efforts has enormously improved the place—a Taoist priest, from the Province of Hupeh, he came twenty-eight years ago on a begging pilgrimage to Chienfutung, which in those times was nothing but a barren waste with a trickling brook losing itself in the sand. Wang-tao-shi—for that is his name—soon utilised this water for irrigation; he planted all the trees with his own hands, and sowed enough crops for his maintenance and that of his acolytes. He also erected a large, commodious rest-house, containing a lofty, cool hall surrounded by sleeping-cells, all spotlessly clean; while he himself occupied one small room adjoining a tiny kitchen. In order to repair the caves he has made frequent begging expeditions, and has also from time to time received large sums in exchange for certain old manuscripts, now in the possession of various museums; but he has never enriched himself, all being spent on the upkeep of the temples. The caves have been hollowed out by hand from the almost perpendicular cliff, which they have honeycombed, and each contains some particular representation of Buddha, by whose name it is distinguished; such as, 'The Temple of the Precious Three'; 'The Hall of the Solitary Buddha'; 'The Shrine of Sakimuni.' The walls are all frescoed, and extraordinarily well-preserved owing to the dryness of the climate; and as the façade has broken away in places, many of the upper shrines have now no frontage at all, so that they can be seen from the valley below. The atmosphere is marvellously clear, and they present an exceedingly fine effect. This breaking-away has also had the advantage of letting in the brilliant daylight to the shrines, some of which would be wholly inaccessible if it were not that small doors of communi-

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

cation have been opened through a long vista of grottoes; one could, therefore, wander on almost interminably. The paintings cover a great period of time, some dating back to the Han dynasty (202 B.C.–A.D. 265), others to the Sung (A.D. 960–1280), and many of the best to the Tang period (A.D. 618–905).

A good number have been covered over by more recent stencil-work, the various layers of the colouring being clearly visible where the doors have been cut through. A very usual pattern for covering the walls is made by the use of innumerable small clay medallions, which viewed from a distance seem to present a geometrical design, but which on inspection are found to consist of a draped figure of Buddha sitting in an attitude of contemplation.

Most of the large idols were in raised alcoves, sometimes approached through an ante-chapel, in which were life-sized figures in flowing garments, their heads outlined against gilt haloes, or flame-bundles. The most delightful decorations represented family scenes in Paradisaic Gardens, where dainty ladies leant over lakes, or stood on camel-back bridges, watching the birds circling round the lotus tanks, while happy children ate ambrosial fruits.

Episodes from the life of Buddha recurred in many forms, as also illustrations of the delights awaiting those who attain to the joys of the Buddhist heaven. The ceilings were not arched, as one would expect in cave-dwellings, but were cut out to a square, the sides of which sloped upwards about five feet to form a smaller square. Anyone accustomed to the Chinese measure used for grain will understand that this is the shape of an inverted '*dou*.' We saw several colossal figures nearly a hundred feet high, one of which is enclosed in a roofless hall with head open to the elements, and another

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

is an unusual representation of the Buddha reclining in the final state of Nirvana. A detailed account, as well as splendid pictures of these wonderful caves, can be seen in Sir Aurel Stein's record[1] of his visit to Tunhwang in 1907, when in company with the old guardian, Wang-tao-shi, he opened up a temple containing a mass of manuscripts of priceless value. These were written not only in the Chinese, Tibetan and Sanskrit languages, but also in Uigur script, which is a derivative of Syriac writing, in Runic Turki, and in a peculiar form of Syriac script as employed in Manichaean writing. The variety and quantity of these manuscripts showed they must have formed part of some ancient monastic library. Specimens of hand-painted silk banners brought from Chienfutung by Sir Aurel Stein may be seen in the British Museum, and many extremely ancient and interesting records of Tunhwang find their place to-day in the King's Library of that building.

On entering one of the larger temples, we were startled by the appearance of a Figure so totally unlike those which surrounded it as immediately to rivet our attention. It was that of a man standing by a tree, the face of which wore an expression so benign, sorrowful, and strikingly human as to cause us to remark to one another that it might have been intended to represent the Lord Jesus Christ. We were therefore particularly interested, on returning to Tunhwang, when we were asked the question by the students if we had noticed that they had given our Jesus a place in their Pantheon.

At the extreme southern end the caves contained more modern work, and the terrifying grotesques of the Chinese temple came into evidence once more. Here we entered a shrine whose deity was surrounded by a banner proclaiming it to be 'The Pitiless One.' On

[1] *Ruins of Desert Cathay*, Sir Aurel Stein.

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

either side stood an attendant, one of which was a gaunt brown shape of terror sent forth to induce men to commit suicide by taking opium. His was a dread figure indeed, but not to be compared with the second, which represented the female instigator of suicide, by means of cutting the throat. She carried no emblem to make her mission clear, but every line of her insinuating face and bold, compelling eye, suggested the Power of Evil, able to break down the last hesitation in the mind which contemplated this dreadful deed; and Chinese women have since told us that many a bride has cut her throat after a visit to that shrine. The consummate horror of this representation so impressed us, that we can well believe it.

Chienfutung habitually stands solitary, but for the visit of an occasional pilgrim, except during one week of the year, when thousands of worshippers crowd its temples, and the air is heavy with burning incense. Streams of small-footed women risk their necks on the precipitous, crumbling paths leading to the upper galleries, nor will they, in spite of the utmost fatigue, leave one single temple unvisited, lest having done so much, they should fail to conciliate that last, final deity whose malice might be incurred by neglect!

CHAPTER XXV

THE LAKE OF THE CRESCENT MOON

We returned to Tunhwang so enthusiastic about the art treasures of 'The Hall of the Thousand Buddhas' that our visitors urged us to make a second expedition to another beauty spot of the locality, Yüehyachüan—'The Lake of the Crescent Moon.' 'Chienfutung is

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

rest-house in the midst of a group of trees, the whole picture being reflected in the water, wherein numbers of little black ducks with white beaks disported themselves, dipping and reappearing continually. The little divers found the current to be so strong, that as soon as they reached the western extremity they rose above the water and trusted to their wings for the return journey rather than battle against the stream.

There is another curious phenomenon, the facts of which we were able to test. We were told to slide down the sandhill propelling ourselves by movements of our hands. This we found to be a very simple and effective way of descent, as the whole warm dry surface moved with us. At a certain point a loud, clear, vibrating sound responded to our movements, resembling the twang of a mighty musical instrument, which sound seemed to proceed from the very centre of the hill.

Another name for the locality is 'The Door of Thunder,' from the extraordinary sounds that sometimes are heard, when the whole valley echoes and re-echoes with a noise like that of rolling drums, and when the sand, moved by the vibration, starts rolling, and continues to roll for hours on end. It is most amazing that this little lake and its surrounding temples should not long ago have been buried under the sandhills. Certain it is that, however fierce the wind, it always carries the sand away from the surface of the water; were it otherwise one windy season must be enough to alter the whole aspect of the scene.

'The Side Door of Paradise' is a name frequently used by Buddhist pilgrims when speaking of this lake. Only a few hundred yards from the rest-house is a sand-choked depression, with temple buildings almost wholly submerged by drifting sand, and here was formerly a sheet of water as clear as that of the Crescent

I [At the Lake of the Crescent Moon --Analyst]

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

Lake itself. Its purity was offended by the act of two women, who determined to force an entrance to Paradise by the crystal gate of these pure waters. Throwing aside their garments they plunged beneath the surface and were never seen again, but the lake immediately receded and allowed the shifting dune to cover it!

The popular idea of buried buildings and great subterranean caverns, which account for all these mysterious effects, are probably correct, nor is it surprising that many tales are related to account for them. The whole neighbourhood is full of interest, and some day, doubtless, will be called upon to give up its secrets to scientific excavators.

Just when we were leaving the rest-house, a lama came towards us, having travelled barefoot from the sacred mountain of Shansi, prostrating himself at every few steps. It was near sunset; his red and yellow robes were soiled, and he himself weary and travel-stained, so that he was now calling in at this temple for a night's shelter. We stopped and spoke to him, and then all sat down by the wayside to talk.

'From what Province do you come, lama?' we enquired.

'From Utai Mountain, in Shansi,' he answered, 'and the road is long; it has taken me six months to reach here.'

'And where are you going?'

'To Lhasa, through those mountains,' waving his hand in the direction of the Southern Hills.

'What is the purpose of your pilgrimage?'

'To fulfil a vow made many years ago.'

We handed him a copy of St. John's Gospel, in which he at once read aloud the opening words: *'In the beginning was the Word, and the Word was with God, and*

3:Cable & French M-5 (1926) 1927 AF13 Northwest China AF13
~~Sinkiang-A1-1~~

more we prepared to enter on a stage which was completely new to us, and which we were warned held difficulties greater than any which we had already faced.

CHAPTER XXXII

VIEWING BLACK GOBI

EACH afternoon of our stay at Ansi we wandered out through the North Gate to a little bridge which spanned the irrigation canal, and looked over the limitless expanse of grey grit mixed with small black pebbles, across which the next stage of the journey must be taken. This was Black Gobi, a plain so windswept as to have lost its sandy surface, which has been carried away by the gales and deposited elsewhere. When the hour of our departure arrived and our carts rolled out by that same North Gate, leaving behind us the last city of Kansu, we knew that we must prepare ourselves for a series of arduous stages, and that we should not see another walled town until we reached Hami. It was 5.30 p.m. when we left the inn, and though we had tried to make it an easy day, the number of callers had added to the inevitable fatigue of repacking, and we were weary before we started. As soon as we were out of the oasis we realised that the black, gritty surface was not as resisting as we had hoped, and the cart-wheels dragged heavily from the first.

Three miles from the town gate we passed a temple, and as was our custom got down from the carts in order to visit it, as well as the priest in charge. To our surprise we found the door fastened from within by a heavy stone, and were unable to get an answer to our knocking and calling. Our carters refused to be balked

~~Sinkiang-A1-1~~

by a disobliging priest, and between them succeeded in dislodging the boulder. We entered a spacious and well-kept temple-court containing a well, by the side of which stood a bucket and well-rope. We passed from shrine to shrine without discovering any sign of life, but a few moments later a call from one of the men brought us to a little outhouse, where we found the guardian lying on his *kang* in the grip of raging fever, too weak to move, and being quite alone, had no means whatever of communication with the city. All that our men could do was to draw a bucket of water, which with a few loaves of bread we left within his reach, and later on, when we passed the postman, we sent a message back to the Ansi postmaster telling him of the priest's predicament, and begging for help to be sent.

We travelled all the night, and dawn found us at a landmark where a few arid mounds broke the landscape. The place was called Siyaotz—'Four Caves'—the name indicating four caverns which had been hollowed in the hillside, such as might serve to save a traveller's life in the event of high winds or blizzards. There was no point in delaying here more than a few moments to breathe the animals, which were already showing signs of fatigue, although we had accomplished little more than half our stage. But there is no possibility of delay on these hard marches, for the energy produced by the last feed soon ebbs, and consequently the Gobi roads are all marked by the bleaching bones of mules and camels, abandoned by their owners when too exhausted to keep up with the caravan.

The second half of the journey was now made doubly hard by the burning rays of the sun, added to which the grit was looser than before, so that after each short pull of twenty steps the flagging animals would stand still, needing to be urged again and again to make fresh

N.W. China AF13

624 se of the so-called Tu jen (2) living in the city. Every day he places

2. A Chinese word, literally: "earth-people," meaning oldest inhabitants.

the insignia of his power in front of the door of his house, like a
685 petty Chinese official or a police officer. Everyone who passes the houses sees two kang (3) and a stick for administering bastinadoes

3. The kang. Chinese kia (popularly known as dia-dia in Kansu) is the rectangular piece of wood, weighing 20 pounds and about 60 centimeters in length, through which the head of a convict is stuck. The Chinese fear it less as a punishment than as a mark of shame, and it is used primarily in cases of petty thievery. The conviction lasts from one to two months, and this collar often may not be taken off at night. But the convicted person may go walking with it if he feels like it and if he has been granted bail or is a property owner.

which are used as punishment or to extract confessions. This represents the power which the li tu se still exercise over their subjects,
346 the Tu jen. The yamen of these tu se is very small. But close be-
● 778 side it under a three-tiered roof (Plate L) sits a colossal clay Buddha in the midst of a rambling group of buildings which have long since crumbled except for the foundation walls. In any case this structure stems from ancient times (perhaps Ming?) and was the temple of the Tu jen. A large part of the property around the temple still belongs to the Tu jen. There are many inhabitants of Hsining who maintain that the building containing the giant Buddha was not built as a temple but as a palace of the li tu se when they were still independent, around the time of the Sung Dynasty (11th
624 century). A rather large part of the city belongs to the Tu jen who
651 pay taxes to their kings and not to the Chinese officials.

The holder of the position of li tu se in Hsining was a young man in his early twenties who, in complete contrast with his father, enjoyed very little esteem. And rightly so! For, within a few years /171/ he had spent his father's entire fortune in drinking and gambling, and was now heavily in debt. Even his father had little power left over his subjects; the Chinese mandarins have now become even more the rulers. They now gather a tenth of the produce

5: Tafel--301 T-3 (1905-1908) 1914 AJ1 Tibet

● 778
755

Fig. 13. A Yidam, one of the tutelary gods, holding a prayer bell and Dordyi (bronze). The figure is placed upon the mouth of a sick person who takes his medicines through the mouth of the god.

527 The object of worship is as everywhere in the kingdom, a life-
●778 size model of a bullock made of clay, and beside it stands the figure
788 of a woman made of paper. After the mandarins have kowtowed to this latter image, it is always driven back as quickly as possible to the hsien yamen. But people try to break the image of the bullock and every farmer tries to get a piece of it; anyone who is lucky enough to do so may be sure that his harvest will be good that year(1)

1. See in this connection: De Groot, Fêtes annuelles d'Emoui (Vol. I, p. 90): "The reception of spring. The origin of the custom of carrying the spring ox to the fields has become lost in the night of the times."

The people of Hsining fu know almost nothing about the meaning of this ancient custom. In fact, the ordinary Chinese can tell you very little about their mythology and most of it is confused. The bullock, so the people of Hsining fu say, was formerly an emperor of China and the girl at its side, the emperor's younger sister. The emperor was carried away by his sister's charms and married her, and as a punishment for that the gods turned him into a bullock, while his sister was obliged to follow him as his driver all her life. The people seek to destroy the bullock because of the emperor's shameful behavior. But because the bullock represents an emperor, the yamen servants must guard it.

527 After this festival which, by the way, is not celebrated on the same day each year, the larger businesses again open their shutters. The Chinese like to have wealthy people as their first customers. This means good luck for the rest of the year. I was again forced to admire the Chinese on the afternoon and evening of this holiday. In spite of all the commotion of the festival, there was no excess anywhere, not a case of noisy drunkenness anywhere. Even the uncultivated Chinaman has much better manners than we usually assume, if there does not happen to be a famine or the confusion of war to make life difficult for him.

* * * * * *

N.W. China AF 3
Kalmyk

563 ribbon is decorated with white shells, deep-red corals, silver discs
302 and pieces of amber sewn on it. Like the Tibetan women, they wear a caftan that opens on the side, and the men, too, dress like their neighbors, the Tibetans. The faces of the Mongols are rather differ-
[142] ent from those of the Tibetans. They are broad and their noses are also wide. My men thought they were much better looking than the Fan tse. I, however, did not agree with this. Even with my taste which was corrupted as a result of my Asiatic environment, I could not admire these faces that looked as though they had been flattened out with a roller.

● 778 July 6. The Mongols are very devout Buddhists. Near the very
563 first yurts on Schang territory there stood mani rdyayu - they looked very gay like our May poles - consisting of four tall poles forming a large square around a taller /338/ center pole. There were garlands of cloth shreds, red, blue, green, yellow and white, completely covered with prayers, stretching from pole to pole (Plate LXXVIII). At the top of the center one cedar twigs swayed in the wind, and their resinous fragrance pleases the heavenly ones. Next to this there was an altar on which today, the day of the full moon, cedar-
[795] and thuja-leaves and tsamba were being burned. At noon the family
[789] lama blew his horn; a procession of men, women and maidens approached the altar, fell down before it, prayed, circled again and again around the mani rdyayu, clockwise, according to the rules of the yellow sect, "the way the moon rotates around the earth," and prostrated themselves countless times after each time around, hoping to obtain peace, release from demons, and for their herds, freedom from disease and death.

563 For this exorcism my nearest neighbor in Camp 51, a well-to-do
792 Mongol, (1) had invited the incarnation from Tangsker, a monastery

1. A man is here considered well-to-do if he has 8 to 10 horses, including mares and foals, 20-30 yak cattle and 400 sheep, whereas near Dankar a man is not considered well off unless he has 40 horses, 60-70 yak cattle and close to 1,000 sheep and goats.

of which I learned for the first time here, and which lies far off on the Hwang Ho, many travel-days farther than the oft-mentioned Rardscha gomba. The journey of the holy man from his lamasery to Tsaidam lasted many months, but he had been undertaking it for several years already, and he stayed two or three months each

782
T16

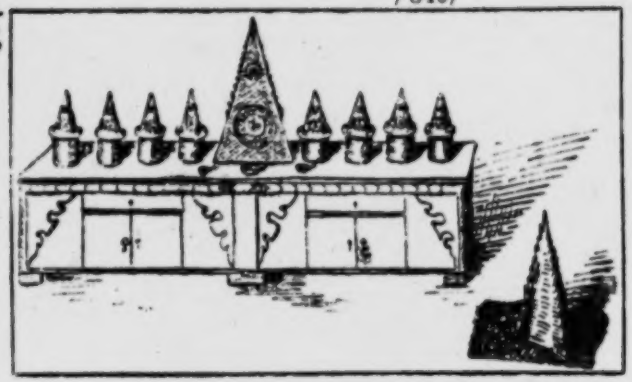

Fig. 20. Sacrificial table with Yidam, Smonlam hkor and gTorma (made of tsamba dough and butter).

C
854

not be carried off by evil spirits. There were other boys whose parents had arranged their hair like that of girls in order to deceive the evil spirits, for in China not even the devil bothers about a poor little worthless mite of a girl. The important thing for humans and therefore also for the forces of evil is the son and heir who will offer prayers and sacrifices on the future grave of his still-living father.

C
718

We passed little wooden boxes that reminded us of European mail boxes. But nobody thought of mail at that time in Dankar. The boxes bore the label: "Remember paper with writing on it!" and were set up - as everywhere in the kingdom of 18 provinces - so that people would not commit the sin of stepping on printed or written paper which is sacred, as everyone knows. There was a huge proclamation stuck to the first Chinese house we passed. It was signed by the ting of Dankar and proclaimed to the people that the Dalai Lama of Urga had moved to Gum bum. The people should willingly pay the required contributions /83/, and if the Fan tse accompanying the Lama should be impudent, they should not immediately pay them back in kind.

C
203

T
792

Life in the city of Dankar had changed very much. It was the time when the nomads were in the habit of trading in their year's supply of grain. Besides, at the news of the arrival of the Dalai Lama, hundreds and thousands of pilgrims had arrived who were following him to Gum bum. Day by day the largest yak- and camel-caravans arrived in the suburbs and again departed from the large market place as fast as they could. Once 60 camels marched by on the way to Lhasa, bearing gifts which the high priest had received in Mongolia. Most of the gifts consisted of silver, guns and cartridges. On the backs of the animals gay yellow flags fluttered, bearing the Chinese insignia of Hsi tien (western heaven), that is to say: Central Tibet, and with that everything crossed the border duty-free. The lofty lord seemed to have made good use of his time.

The Dalai Lama lived in the Gum bum monastery, but a large part of his retinue stayed in the city of Dankar where the Lhasa government in any case always had resident commissars. It is difficult to say whether the latter represent largely commercial or political interests.

T
766

Around this time a younger brother of the Dalai Lama died in the city of Dankar. His body was cremated in a desolate mountain gorge north of the city, and everything was carried out with the greatest luxury, fit for a real prince. He was bound together in a

THE FAMILY

S N 121 59 563 1. Introduction

Northwest China is heavily populated by national minorities. In the province of Sinkiang, the Chinese even form a minority group and the Turkic Moslems constitute the majority. Therefore, in a discussion of the family in this area, general statements applying to the population as a whole would not apply, but a distinction has to be made between several different ethnic elements.

For the purposes of the present section, the following rough division suggests itself: (a) Turkic sedentary Moslems; (b) Turkic nomadic Moslems; (c) the Dungans or Chinese Moslems; (d) the Tibetans; (e) the Mongours; (f) the Mongols, and (g) the Chinese. The last two groups are discussed in detail in their respective handbooks, the IMAR Handbook and the General Handbook of China.

S N 779 59 183 581 Among all Moslems Islam forms the ideal concept of the family. In Islamic society the institution of the family has always been one of primary importance. The family is considered the basic essential of human civilization. Having a family, and being a dutiful member of one, is not only regarded as necessary, but is expressly a religious obligation. Marriage, the step leading to the establishment of a family, is a sacred contract into which each Moslem must enter. A Moslem who, without just reason, does not marry and does not establish a family, is considered almost as a heretic.

S N 59 182 [554] [589] The family's function is primarily for reproduction of the group and the continuation of the family. The institution of the family, furthermore, provides security and peace of mind for its members. The family man is respected and esteemed in Moslem society; he is considered honorable and trustworthy. An unmarried man is likely to be looked upon with some suspicion and distrust.

S N 59 779 183 Since the family plays such a significant role in Moslem society, there is great emphasis on its unity and closeness. This is probably best expressed in the following quotation from the Koran, "...and Allah has made wives for you from yourselves and has given you sons and daughters from your wives." This closeness resulting from the blood relationship is extended to all other phases of family life.

S N 593 S N [829] Love and compassion should underlie all the relationships within the family. In relations between a man and his wife, or wives, between one kin to another, love is stressed as the basis. A man's behavior within his family reflects his attitude toward society as a whole. If there is love in his heart for his family, he will also have compassion for others and be of service to society.

S N 592 593 In the family, the man's position is always superior to that of the woman, regardless of his age. The wife is, accordingly, put in an inferior position to that of her husband, being under his control completely. The head of the house holds unquestioned authority

S 563 585 to live at his own home if its near, otherwise the bride's parents lend him an aq-oi. He visits the bride every week or ten days. These visits are supposedly secret. Her father must not see the bridegroom entering or leaving his bride's tent.

When the aq-oi is ready, the bridegroom takes the bride away to his own place, over some show of resistance made by the girl's relatives.

S 563 586 After a year, the girl can divorce her husband by returning the price paid for her. Divorce is not very common among the nomads, and the price paid for it is much higher than that among the Turkis of the plains. The bride's father would usually be very reluctant to return the price paid for his daughter except for extremely grave reasons.

IV. The Chinese Moslems

N 121 59 [779] Little information is available on the family structure and relationships among the Chinese Moslems. The family relations, as in all other Moslem communities, are supposed to be regulated by the Shari'a (Moslem law) but the details of the code are not well known to the Chinese Moslems, nor are they observed with great care as far as they are known. What alterations have been produced by the influence of the surrounding Chinese is not known from the meagre amount of available information. Many of the Chinese

N 769 *563 778 Moslems observe the traditions of ancestor worship that form such an important unifying factor in Chinese family life. Often they possess ancestral tablets which stand side by side with Moslem religious objects.

N *563 582 797 Intermarriage between the Chinese and Chinese Moslems occurs often under certain conditions. The fact that the woman is not Moslem is not an obstacle to marriage with a Moslem; it is even thought to be meritorious to bring women of other faiths over to the true religion by marrying them. On the other hand, Moslem women are strictly forbidden to marry a man of another faith. The non-Moslem women who marry Moslems, although officially converted to Islam, in many cases bring their religious customs to the family, and the children are reared with both traditions and beliefs.

N *563 585 586 793 184 The main differences between the Chinese and Chinese Moslems appear to be in the ceremonies of marriage and divorce. A Moslem priest usually is invited to preside over these occasions. In addition to the Chinese-style ceremony, the Moslem priest will recite a few prayers over the newly-wed couple or will give an additional affirmation to the dissolution of an unsuccessful marriage.

N *563 184 In general, the Chinese Moslems have much more in common with the Chinese than they do with their Turkic coreligionists. The law and traditions of the country play a more important part in governing the family relations, than the religious law.

S N 563 291 S N [292]

/Chinese Moslems (Dungans)/

within the railings in the mosque and read the Koran, wear white or green turbans, the leader's turban being more elaborate, with a tassel hanging down the back. Common people wear pointed octagonal caps of white, red or black, the color distinguishing the sect to which they belong.

Some women dress differently from the Chinese women, and wear a sort of turban hat. Ordinarily their dresses are in dark colors, but they may wear gay colors for festivals. According to ancient custom they must veil their faces in the presence of men, but this custom was abandoned long ago.

S N [369]

In cities and towns where the Chinese Moslems dress exactly like the Han Chinese, the men can be distinguished by their physical build and features, but the women are not easily recognized.

S N 563 463

d. Occupation

Most Chinese Moslems are business men and traders, and most of them also farm. As farmers they are not equal to the Han Chinese, but they excel in dealing with cattle and everywhere they monopolize the beef and sheep trade. They are also merchants, bakers, workers in jade, money changers, and inn and restaurant keepers.

S N 563 265 262

Outside a Moslem-owned restaurant there hangs a sign displaying a water pot surmounted by a dress hat, and two Chinese characters, Hui-hui. The pot signifies ceremonial cleanliness and guarantees that no pork is used. The hat indicates respect to customers. There are also two Chinese characters on the tea pot, meaning "Pure and True."

S N 563 463 799 784

Formerly their religion forebade the Moslems to become money-lenders, barbers, fortune-tellers, actors, or servants or apprentices to the Chinese. How strictly the people now observe this taboo is not known.

3. Social values

S N 563 186 183

a. Group spirit

The we-feeling is very strong among the Dungans. The whole group will sacrifice time and money for an individual oppressed by outsiders, and fight for him until justice prevails. Endowed with a courageous nature, the Moslem man is willing to sacrifice his life for the welfare of the group.

S N 563 571 186 183 [576] [196]

This spirit is shown by overt expression in daily social relationships. The Chinese title Lao-piao (old cousin) is applied even to a stranger of the same religious faith. The word old signifies respect; cousin signifies blood relationship. Hence Lao-piao indicates a feeling of closeness toward all members of the faith. Another expression of this feeling is found in the saying that "every Moslem in the world belongs to the same family."

S N 563 183 799 431

b. Concept of charity

Many of the values in Chinese Moslem society are based upon

795 171 175 sculpture by Arghun. Under Özbek Khan (1312-1340) and Jani Bek (1340-1357) Islam conquered the "realm (empire) of the Golden Horde" of southern Russia. Later there followed the Inner Asian Khanac Chaghatai which stuck longest to the Jassa Laws of Chingis Khan.

As far as Central Asia was concerned, the conversion of the masses occurred under Tughluq (1347-1363) and Chingis Khan's greatest successor, Timur (Tamerlan), who wanted to recreate the Great Mongolian Empire and who founded his empire completely on Islam. However, his plans for the invasion of China never materialized.

II. The Position of Islam in Northwest China

A. The Sources of Islam

• 799 The original source from which all principles and ordinances of Islam are drawn is the Koran, the Holy Book which, according to Moslem belief, was revealed to the Prophet Muhammad by God through his Angel Gabriel. Although the Koran does not contain a systematic exposition of Moslem beliefs or rituals, yet taken as a whole, there emerges from it a consistent body of doctrine and of practical obligations. Through the ages these have remained the core and inspiration of Moslem religious life.

The Koran is not the only source of the Islamic religion. The sunna (custom) of the Prophet and the interpretation of his different ways of behavior also constitute an extremely important source for the religion. At first the sunna of the Prophet was handed down in the form of a short narrative, called a hadith (story), told by his Companions. The whole corps of sunna collected and handed down soon received the general name of hadith. The hadith was first transmitted orally. Later it was collected and written down. The tradition was invaded on a vast scale by forgeries. However, the serious students of the hadith became aware of the danger of incorporating many of these tales which contained elements foreign to Islam. They established different methods of control by which to attempt to sift out the genuine traditions from the mass of forgeries.

799 671 The Shari'a is the third important source of Islam. It embodies Islamic juristic studies and doctrines, which evolved into a rather coherent body of laws and regulations. The law contained in the Shari'a is not restricted to religious regulations, but envelops all phases of life. Yet it is considered a part of the religious doctrine, for one of the characteristics of Islam is that law is considered part of the religion, and there is no clear distinction between the two. In the Koran, both legal and religious aspects were interwoven. The connection between law and religion established by Muhammad and adopted by his followers

779 671 has persisted to this day. The Koran and Hadith were the basic foundations on which the Shari'a evolved. The law was developed by Moslem jurists who, by different rational devices (e.g. analogy, consensus), adapted the principles of the Koran to fit many new situations, and supplemented the law when the Koran could not suffice.

779 B. The Principles of Islam

The whole of the religion of Islam is briefly summed up in the shahada, or the profession of faith (which is considered the primary duty of every Moslem)—La illaha illallah, i.e., there is but one God; Muhammadun rasulu-llah, i.e., Muhammad is the Apostle of God. The shahada is not found in this composite form anywhere in the Koran, but its two halves occur separately and are its constant theme. "O you who believe, believe in God and His Apostle and the Book which He has sent down formerly. Whoever denies God and His Angels and His Books and His Apostle and the Last Day has strayed far from Truth." (Sura iv, v. 135).

779 796 One of the essential elements of Islam is an uncompromising monotheism. The true belief demands ikhlas, the giving of one's whole and unmixed allegiance to God. Its opposite, which is considered the gravest sin that Moslems can commit, is shirk, the ascribing of partners to God and the worship of any other than him. Of the different forms of shirk, idolatry is denounced as the gravest.

Islam conceives of God as existing at all times and to eternity. "Call not any other God but Allah; there is no God but He. Everything shall perish except His Being. To Him belongs the rule and to Him you shall be brought back for judgment." (Sura XXVIII, v.88.) Along with the terrible and majestic aspects of God as Creator, Supreme Power, Judge and Avenger, the Koran also stresses His bounty and loving kindness.

The doctrine of angels also exists in the Koran. In the imagery of the Koran, the angels are represented generally as God's messengers. They are, like men, His creatures and servants and worship Him constantly; they bear up His Throne, descend with His decrees on the Night of Power, record men's actions, receive their souls when they die, and witness for or against them at the Last Judgment, and guard the gates of Hell.

With the doctrine of angels there is also the doctrine of devils although the devils are represented as rebellious Jinn rather than fallen angels. The Jinns, like men, are created out of fire instead of earth; there are believers and infidels among them, and the unbelievers will be judged with men and condemned to Hell. The rebellious Jinns are called shaitans; they lead men astray, oppose the Prophets and try to overhear what is dis-

SN 563 153 779 155 outlook on life, which results in a remarkable internal social stability of family and community at the expense of personal ease. The greatest Islamist of our time, Carl Brockelmann, once called the Quran "die Heeredienstvorschrift für die Mohammedaner" ("the army regulation book for the Muslims"), and indeed the Quran is not only the condensation of Muslimic religion and philosophy but also the code of laws and the "code of practical regulations" concerning the practical daily life of the average Muslim. From childhood on those "regulations" are drilled and hammered in to the people. The Quran becomes the basis from which everything is judged. The conclusion, that the Muslims do show a strong inclination for doctrinal behavior, is rather justified.

SN 563 153 185 [158] If we describe the nomad as a logical and realistic individual to whom neurosis and psychosis are in general alien, one certainly should not forget that there has been still room for romance in his life: first and foremost, the Muslimic nomads as well as the Buddhistic nomads (the Mongols) dreamed and still dream of the creation of their own empire in which they are the masters and not the Chinese. The Mongols still mourn for their once powerful and grand empire "where the hoof of the brave horse was the only sound and the roaring and bellowing of camels and cows the only noise" and where the Khan of the Khans, the Khakhan, the Great King, resides in Qaraqorum, the scene of the Great qurultai (constitutional and legislative assembly), ruling the Mongolian tribes and leading the Mongolian armies, in the name and as the representative and vicar of the "Eternal Blue Heaven," the ruler over the universe.

SN 563 538 While in the folklore and literature of the Muslimic nomads the Golden Horde and the Chagatai Empire (Chagatai Ulus), Batur Khan and Timur Lenk (Tamerlane) are oft-repeated subjects, the Mongolian folklore abounds in painting the deeds of Chingis Khan and is excessive in describing the adventurous greatness of the former Mongolian Empire.

SN 563 775 771 [829] The Buddhistic conception of palingenesis and reincarnation add another romantic feature to the life of the average Mongol and Tibetan and the belief of the Muslim (after having become a hajji, a pilgrim, or even better, a hazze, one who fought as a soldier against the "non-believers") that he would enter the paradise of heaven (or better one of the seven heavens, the seventh, only when he sacrificed his life to Allah in combat), is a deep-rotted romantic conception.

SN 563 771 As we said, the life of the Buddhistic nomad is centered around his tent and his herds, so to speak, the outer sphere of his life, but the inside sphere is absorbed deeply by religion,

S N 592 593 over the members of the household. Full obedience and respect is expected from the children, who are obliged to take care of their parents when the latter reach old age.

S N 595 Islam allows a man to have more than one wife. The truly religious person will not exceed four wives.

799 S N 779 829 Islam grew in a tribal society and retained many of the loyalty concepts relating to the tribes. After his own family, a man owes loyalty to his tribe. This attitude is strongly reflected in the religious writings. As Islam spread, these concepts were carried to societies, other than those residing in the Arabian Peninsula.

II. The Sedentary Moslems of Sinkiang

S 121 592 ### A. Family Organization

In this discussion the concept of family refers to a unit consisting of members related to each other by blood, marriage or adoption and having a common budget and common property. Persons remaining in the family and those temporarily absent are included. Servants or relatives temporarily visiting with the family are considered members of the household, but not members of the family unit.

S 592 563 Among the Turkic Moslems of Sinkiang the family consists of a man, his wife or wives, and their unmarried children. In some cases it may also include their divorced or widowed daughters. Occasionally the married sons stay with their family for a short period. Each family unit occupies its own separate house. One may have a few households to take care of, in the case that one has more than one wife. Polygamy is permitted according to Islamic law. However, the majority of the men and particularly the peasants, cannot afford to keep more than one wife at a time. Wealthier people and well-to-do travelling merchants often have more than one household. Each wife is usually kept in a different section of town, or in different towns altogether (this is the case when the husbands are merchants and officials who travel to a great extent). The familiar harem of other Moslem countries hardly exists as such in Sinkiang. The individualism of the women, the freedom allowed to them and their jealous nature and temperament make it impossible for a man to keep more than one wife under the same roof. This factor complicates the nature of the nuclear structure of the family, and sometimes results in one man's having similar obligations to more than one household.

S 595 563 S [562] [152] Families usually are large, regardless of their wealth or poverty. It is considered a disgrace for a woman not to have many children. This is one reason why a man often prefers to marry a divorced woman with child (a son preferably), who has already proved her ability to bear children.

/Chinese Moslems (Dungans)/

religious teachings. According to the religious code it is obligatory for a man of means to contribute a certain amount of his wealth to public charity. Next to worship, this is the most important duty in Moslem society. The original idea of helping the poor and needy evolved into a tax (ten per cent on agricultural produce and two and one-half per cent on animals) collected from all believers for religious and public welfare purposes. Another form of alms, the sadaqa, is a voluntary offering. Public welfare supported by the tax, after the collector's fee is deducted, includes freeing slaves, assistance to persons who became indebted for good reason, making holy war to defend the people and the faith, and aiding needy travelers.

During the month of Ramadan (fasting) donations and offerings are collected for public welfare purposes. The amount is not fixed, and the act of giving is voluntary. A sense of public responsibility is strong among these people. Not only do they give regular allowances to the needy in their own communities, but they help needy outsiders of their own faith.

The Hajjis, or those who have completed the pilgrimage to Mecca, are highly respected in the Moslem community, and wear special badges to mark their distinction. The opportunity to journey to Mecca is the dream of all Moslems.

c. Virtue

It is important for the individual to cultivate the true concept of peace and submission. The concept of peace involves such ideals as mutual cooperation and aid among mankind, mutual understanding among religions and peaceful co-existence of nations to achieve world brotherhood. The concept of submission means to submit oneself wholly to Allah and follow his teachings, sacrificing self-interest for the promotion of happiness for mankind.

Personal cleanliness, both internal and external, is most important. Cleanliness in eating habits and personal hygiene is thought to develop a clean soul, free of evil thoughts and immoral conduct.

d. Racial superiority

The Chinese Moslems regard themselves as a special group, superior to their Chinese neighbors. As students and officials, their attitude toward respect for the emperor and for Confucius has, in the past, been one of compromise. Compelled by law to conform, they excused themselves on the grounds that they did so outwardly but not in their hearts. The old and the new sects of Chinese Moslems, although bitterly hostile toward each other and at times engaged in armed conflict, on the whole present a united front toward the Chinese and the rest of the world.

/Chinese Moslems (Dungans)/

4. Customs

S N 563 779 782 [793] a. Religious rites

According to religious rules, the Moslems are supposed to pray five times daily (sunrise, noon, afternoon, sunset and midnight), facing in the direction of Mecca. Few of the Chinese Moslems besides the Mullahs and Ahungs adhere strictly, but pray only once or twice a day. To be valid, prayers should be performed in the mosque, but those who find it impossible to go to the mosques may pray wherever they are. The call to prayer (adhan) is made by the Ahung, or religious leader, and the believers join in saying the adhan. Daily noon prayer is popular, and the Friday service is the most fully attended.

S N [562] Public worship cannot be performed by fewer than four persons. Women may not attend the mosques where the men pray. In some places, women have their own mosques and women Ahung to direct the prayers and Friday services. Women always worship as individuals and not as a congregation, though there may be a number of women gathered together.

S N 563 779 782 783 The Moslems must be clean when they attend any religious ceremony. Hands and face must be washed, and bathing before worship is common. For this reason all mosques of importance have bathing places annexed. The Moslem becomes unclean by touching such objects as dishes containing pork or any meat not killed according to ritual, pigs, dogs, wine or excrement.

S N 563 779 782 785 779 [203] The thirty-day fast of Ramadan is fairly strictly observed. During this period one is not to eat between sunrise and sunset, and such things as smoking, drinking and sexual contact are also forbidden. In many places, a messenger goes about the Moslem quarters calling out the times for observing or breaking the fast, lest someone oversleep or fail to prepare and eat the necessary food before daybreak. The end of the fast is celebrated by a feast.

The aged, ill, insane, travelers, women who are pregnant, menstruating or nursing, persons doing heavy labor or whose lives are in danger are excused from the fast, but if or when they are able they must make up for it. The purpose of the fast is to help the believers maintain pure and pious lives. Fasting is considered meritorious at other times too, except on Friday, Saturday and Sunday.

S N 563 553 852 [788] b. Naming

Within seven days after the birth of a child, he must be given a Koranic name, or Ching-ming (religious name). For this occasion a feast is prepared, and the poor are fed. If the child is a male and the family wealthy enough, two sheep are killed for the occasion. If the child is a girl, only one sheep is killed. To arrive at the name, the father holds the child with its face toward Mecca and repeats a prayer in one ear of the child, then

II. Artistic and Intellectual Expression among the Tibetans of Northwest China

N
*563
199
53

A. Introduction

Chinghai is the most heavily Tibetan-populated area in Northwest China. Culturally, it is very much a part of Tibet proper, although being a border region, its Tibetan inhabitants have come often into close contact with the Chinese and have been greatly influenced by them. The most famous of the Tibetan cultural centers in the area are the Kumbum and Labrang monasteries, where much traditional Lamaist literature and art have been found and are still being produced. The great majority of the Tibetans in the area, however, are members of nomadic tribes, who are largely ignorant of the many cultural treasures of the monasteries. These tribes are the seat of Tibetan folk cultures—song, dance and epic literature. (The distinction between the strictly religious artistic and intellectual expressions and the unwritten folk culture is present through Tibet, and is not peculiar to this area alone.)

N
[192]

N
*563
538
199

B. Tibetan Literature

Tibetan literature is almost exclusively religious in character. It centers around the religious Buddhist texts translated from Sanskrit into Tibetan, and attempts to explain them, analyze them, relate the lives of saints, eulogize convents and glorify events which are an expression of religious feelings. There are not many secular works, as traditionally the culture was, and has largely remained, the privilege of the monks. The center of Tibetan culture is to be found in the monasteries, and the scholars are the lamas reared and trained in these institutions.

N
[192]

N
*[195]

The Lamaist scriptures, which are faithful translations from Sanskrit texts (Indian, Kashmiri and Nepalese), and a few also from Chinese, were made mostly in the eighth and ninth, eleventh and thirteenth centuries A.D. None of these Tibetan translations, however, seem to have been printed until comparatively recent times.

The Lamaistic scriptures consist of two great collections, the canon and the commentaries (the kah-gyur and the Tangyur). The great code, the Kah-gyur, or "The Translated Com-

/The Tibetans/

mandment," is so called because it was translated from the ancient Indian language. The code extends to one hundred and eight volumes of about a thousand pages each. The Kah-gyur is divisible into three great sections: the Dul-va (Discipline), the Do (sermons), and the Ch'os-non-pa (metaphysics). These three sections are considered to be the antidotes for the three original sins; thus the discipline cleanses from lust, the sermons from ill will, and the wisdom from stupidity.

The Tibetan commentary or Tan-gyur is a great cyclopedic compilation of all sorts of literary works, written mostly by ancient Indian scholars and some learned Tibetans, in the first few centuries after the introduction of Buddhism into Tibet. There are two hundred and twenty-five volumes. It is divided into two classes, the rGyud and mDo. The rGyud is mostly on rituals and ceremonies and the mDo on science and literature.

The indigenous works composed in Tibet are for the most part devoted to sacred subjects. The secular books exist, as a rule, in manuscript form, as the printing is in the hands of the monks. The sacred books can be divided into (a) apocryphal and (b) authentic and quasi authentic. The apocryphal works are the most numerous and most popular. Chief among them are the fictitious "revelations" or Terma books. Other common apocryphal works are the manuscripts possessed by the monasteries which gave a more or less legendary account of the history of the monastery.

The authentic books include many religious chronologies and records. Most of these biographies and records are legendary, especially those of the earlier Lamas and Indian monks. Some of the later ones dealing with more modern personages are of a somewhat more historical character, but are also overloaded with legends.

The leading ritualistic manuals of the various sects are of a more or less authentic character and small pocket editions of these prayer books and hymns are very numerous.

By looking outside the monastic circles, little can be found: on the one hand, the elaboration of chronicles and genealogies of noble families, on the other, sacred plays, arbitrarily adapted to the people's psychology, temperament and understanding, by actors always ready to modify their literary origin. Folk songs and epics also originated by the people outside the monasteries. A collection of proverbs and drinking songs can be found in "The Precious Rosary" (rin-ch'en-p'ren-wa). The folk tales of the people (sgruns) are fabulous. The best known of these is that of Gésar. (Waddell suggests a possibility that the name may be derived from Caesar, or from Czar.)

Among the secular works of Tibetan literature, the most popular is the epos of Gesar, the national epic poem of the

Those students who go through six to ten years of continuous studies may become ahungs, mudarris (teachers) or ustāḡh (honorary title of recognized teachers). Generally, the erudition of these teachers does not seem to be very high. Hence idioms like "ahmaq min mu-allim kittāb" (more stupid than a school teacher).

Islamic laws regulate strictly the position and conduct of a teacher. He has to be married; he is permitted to teach only in public places (hānūt) with big windows, so the community can watch his activities; he is not allowed to use children as servants or engage them otherwise except in school work without the consent of their parents. Occasionally, however, parents have their children serve the teacher instead of paying the regular fees.

Kashgar has a fairly well-known school, the Wanglyq Medrese, whose fame was not confined to Sinkiang alone when Bohā'eddīn Makhdūm taught there, but spread as far as Istanbul and Cairo. Another famous Moslem scholar, Rāmetulla Akhun, the leading jurist ('ilmi fiqh) of his time, taught at Wanglyq. The Kichiq Orda (Little Castle) Medrese in Yarkand was also a well-known seat of higher learning. Also called Yeshil (Green) Medrese, it was founded by Baisi Bēk, the hākim (judge or physician) in 1820. While the quality of the medreses of Kashgar and Yarkand have steadily declined during the last decades, the medrese of Aqsu has maintained its reputation to the present because the core of its faculty are scholars from Afghanistan who received their training at the Al-Khazar University in Cairo.

2. Monastic academies of Lamaism

The high number of Buddhist monasteries all over Northwest China and their enormous monk population of course colored the whole educational system of the Northwest. These monasteries were not only institutions of higher learning, but they also served as libraries and printing houses.

Kumbum (Tib.: sKu-'bum-Byams-pa-gling; Chinese: T'a-erh-ssu) was the chief monastery in the Northwest. It was customary in Chinghai for every Tibetan family to send its second son to this monastery. At the age of eight the boy was admitted after a strange ceremony, which included questions like the following: Are you a debtor or a slave? Are you a hermaphrodite? Are you a demon or an all-knowing spirit? Did you ever treat your parents badly? Did you ever rob or steal? Did you ever belong to a heretic sect? After having answered these questions satisfactorily he received five objects, which henceforth were his only property: an alms-bowl, underwear, a tunic, a mattress and a water sieve. Then one of the ordained lamas was presented to him as his future tutor, whom his

family were to pay, and the boy's welfare depended largely upon the amount his parents were able to pay. Sons of poor families who could pay perhaps only one yak a year had to do menial work as water carriers, cow-dung collectors, straw and grass carriers, housekeepers and so forth, to pay for their lessons.

The years between eight and eighteen, the usual length of the novitiate, were given to attending an elementary school where the pupil learned to read, write and recite prayers. He was to learn forty chapters of the Kanjur from memory. During this time he was called a bande, or novice. Then he might enter the "Lamaistic college" to become a getsul, a stage between a novice and a fully ordained bLama. Or he might return to his home village or camp to become a house lama, of whom there are thousands, who are supported by a single family. If he chose to become a getsul he might continue to study and become a gelong, a fully ordained lama, entitled to wear the precious yellow tunic with a black collar.

Kumbum has four colleges: a philosophical college, a college of church service and occult sciences, a college of canonical literature and a school of medicine. One must go through the philosophical college before he may enroll in the college of church service and occult sciences, and must go through these two successfully before he may enter the college of canonical literature. The usual characteristics of those who enter the school of medicine are a pathological personality, epilepsy or other abnormality.

The philosophical college (Tib.: tsan-nyid) offers the study of the Kanjur. [The Kanjur consists of one hundred volumes subdivided into one thousand eighty-three chapters. Volumes one to thirteen contain the chapters about conversion and reclaiming (Tib.: dul-wa), the discipline and moral duties of the monks. The volumes from fourteen to thirty-four constitute the Prajñāpāramitā, which deals with the "road to virtue" leading to the "other shore," to Buddhahood and to that subtile and "transcendental wisdom" which is "without any characteristics," through which "all differences, contrasts, antagonisms, contraries, antithesis and contradistinctions" disappear, where all categories of thinking are empty, where heart and mind become silent like "the surface of a tranquil and placid sea." Volumes thirty-five to thirty-eight are called the Club of the Buddhas, volumes thirty-nine to forty-four are called Construction of the Precious Stones, and the volumes forty-five to seventy-six contain narrations on how to gain the nirvana. The volumes seventy-seven to ninety-eight contain the tantrus and dharanis, sentence of anathemas and magic formulas, and the last two volumes are the exegetics and exposition of the tantras and dharanis.]

The philosophical college does not procede according to the

arrangement of the Kanjur but starts, strangely enough, with the most difficult chapters, the abhidharma, metaphysics (Tib.: C'os-mnon-pa, clear doctrine), and difficult sutras. Each student gets an additional private tutor, who explains difficult passages of the matter under study.

When the weather permits, teaching is conducted in the open in the so-called chör-ra. Otherwise instruction takes place in a temple hall.

An important part of instruction is frequent disputations between the teacher-monks and the students, under the supervision of the abbot, khan-po. These loquatious duels give occasion for the students to show how much they know and how much they have memorized.

In the course of time the students are taught ts'ad (logic), bzo (technique), rtsis (astrology), snan nags (rhetoric), sgra (grammar) and adul-ba (monastic rules). After having mastered the whole material the student receives the degree of dka-bcu (a man who has passed the ten examinations).

To complete the work of the philosophical college takes more than a decade. Then the dka-bcu can either procede to the next college to gain the title of snags-rams-pa (master of the tantric sciences) or to another monastery where other famous teachers are found.

To receive the title of snags-rams-pa, the monk must study large parts of the Tanjur, a gigantic 225 volume collection of theological, philological, ethical, alchemistic tractates and a tremendous amount of occult tantras.

Another center of monastic studies was Labrang in Kansu, one of the foremost monasteries of the Yellow Sect. This monastery is divided into what might be called six different colleges. In the first, known as Wen-hsi-t'ang, five different sutras are taught. The second college is primarily concerned with the continuation of the studies in the first, but the difficulty of the curriculum increases. In the fifth and sixth colleges the esoteric sutras are taught. There are separate colleges for sciences of medicine. Most monks, however, never learned more than a few prayers. The Labrang monastery showed some concern with modern times by introducing courses in animal husbandry and the manufacture of agricultural by-products. Like other monastic academies, however, it has remained primarily a center of religious learning.

B. Nationality Education under the Republic

The period of the Republic was characterized by the fact that the government attempted to bring the Chinese educational system as far as possible into the area of the nationalities. Education became one factor in the general policy of assimilation.

779

779 THEOLOGICAL SYSTEMS--elaborated systems of religious beliefs (e.g., totemism, pantheism); state religions; revealed religions (e.g., Buddhism, Christianity, Mohammedanism); sacred books; content of complex systems of dogma and theology; association of theological systems with ethics and philosophy; etc.

SN 563 668 233 deprivation of livestock and the progressing industrialization are certain to be the source of increasing discontent among the nomads.

SN 563 181 In summing up, the nomads are extremely freedom-conscious. Freedom of the individual is expressed by the everlasting dream of every nomad which finds its expression in the conception of the free rider who recognizes nothing but "the eternal power of the eternal heaven" (Mongolian saying), and who possesses nothing but his felt tent, his highly esteemed and valued horses and his herds. But, no doubt, the Communists will succeed as they did in Soviet Russia in destroying the picture of the independent rider of the steppes of Central Asia, the cradle of so many different peoples and magnificent cultures.

Within their own social structure and social units, the SN (668) Nomads combine harmoniously individualistic and collectivistic trends of their pattern of life. Communistic collectivization can be imposed upon them by force, of course, but they will hardly accept it in their minds.

SN VI. Approach to Individual and National Problems

563 181 153 The nomads of the Northwest work hard for their existence. It is easily understood that they need their whole energy for maintaining such a life, which is a constant struggle against the hardships of land, weather and against the centuries-old uncertain political environment. Under such circumstances SN the nomads developed very realistic minds. A realistic 563 153 577 mind is implicitly logical in regard to political or daily matters of life, although the realization of the unpredictable inclemencies or favors of surrounding Nature gave rise to an illogical or, in terms of Jung's depth philosophy, a translogical conception of the relationship between man and Nature, whose favorable or unfavorable phenomena were brought into connection with their "good andbad" deeds, whereby "good and bad" do not have the same connotation as they do in our society; polygamy in the case of the Kirghiz, Kazakhs, Eastern Turks, polyandry in the case of the Tibetans, or murder of a personal dependent in the case of Kazakhs, for example, are never considered as "bad" deeds, but killing a louse, in the case of a Mongol, or killing of a yak calf (even if it is sick or hurt) in the case of Tibetans, are considered SN "bad" deeds.

563 153 709 155 The nomadic Muslims (Kirghiz, Kazakhs, Salars and some Islamized Tibetan clans) as well as the sedentary Muslims (New-Uighurs, Uzbeks, Tatars, Tajiks, Chinese Muslims or Dungans) have on account of their religion a rather doctrinal

cussed in Heaven. They teach men sorcery and will serve men who can rule them by these devices. The leader of these evil spirits is called "The Shaitan" or Iblis. His fall from a place among the angels was due to his refusal to worship Adam on God's command; for this he was accursed till the Day of Resurrection and given authority over those of mankind whom he seduced.

Next to the unity of God, the doctrine of the Apostles, as the shahada indicates, is the central doctrine of the Koran. Moslems are required to believe in the Apostles without distinction The last of the Prophets is Muhammad, who is God's Apostle to all mankind. The doctrine preached by all the Prophets is essentially one and the same, although in matters of detail there has been a gradual evolution in their messages toward the final and perfect revelation.

As for Muhammad himself, the Koran repeatedly disclaims on his behalf anything that is superhuman. He was but a mortal man, commissioned with the sole duty of conveying God's warning and message of salvation. He had no knowledge beyond what was revealed to him, and he had been granted no miraculous powers.

Faith in life after death is the last of the basic principles of Islam. The word usually used to indicate it in the Koran is al-akhira. The Koran does not speak only of a life after death, but impresses on believers the importance of life on earth as a basis for the future life. The Last Day, the Day of Resurrection and Judgment, will be the time when men's future fate will be decided by God. This day will come suddenly at a time known only to God. On that day the graves will open and men will be called to account for their deeds. Each man's angel shall bear witness to his record, his deeds will be weighed in the balance, and his book will be placed in his hand, the right hand of the blessed and the left hand of the damned.

Then the blessed, the God-fearing men and women, the humble and the charitable, the forgiving, those who have suffered and been persecuted for God's sake, those who have fought in the way of God, shall be summoned to enter the Garden of Paradise, where they shall dwell forever by flowing rivers, praising God, reclining on silken couches, enjoying heavenly food and drink and the company of dark-eyed maidens. Those who have sinned against God and men are condemned to eternal punishment in the flames of Hell.

C. The Rituals of Islam

a. Prayer (Salat). The observance of the ritual prayers is repeatedly emphasised as one of the essential religious duties. Although neither the ceremonies nor the five set times of prayer

779 788 782 are precisely stated in the Koran, it is certain that they were well established before Muhammad's death. Each consists of a fixed number of bowings (rak'ah), the bowing itself consisting of seven movements with their appropriate recitations: (1) the recitation of the phrase "Allahu akbar" (God is most Great) with the hands open on each side of the face; (2) the recitation of the Fatihah or opening sura of the Koran followed by another passage or passages, while standing upright; (3) bowing from the hips; (4) straightening up; (5) gliding to the knees and a first prostration with the face to the ground; (6) sitting back on the haunches; (7) a second prostration.

The set times are at daybreak, fajr (two rak'ahs); noon, zuhr (four rak'ahs); midafternoon, asr (four rak'ahs); after sunset, maghrib (three rak'ahs), and in the early part of the night, isha (four rak'ahs). At these times, prayers should be said and the ritual observed by every believer wherever he may be. By preference they should be performed congregationally in a masjid (mosque) under the leadership of an imam. The imam and the worshippers face toward the qibla, the prescribed direction, which is toward Mecca.

The Koran also mentions the noon prayer on Friday as the principal congregational prayer of the week, and enjoins the suspension of work during its performance. At this time a special ceremony (kutba) is delivered, usually by the imam. (The deliverer of this ceremony is called the khatib. He is not necessarily the imam, but may be one of the leaders in the community.)

779 782 783 Tahara, the ablution before prayer, is strictly enjoined and the ritual is defined in Sura v, v. 9: "When you rise up to prayer, wash your face, and your hands to the elbows and wipe your heads and your feet to the ankles." This is the lesser ablution, to be performed before every prayer. The greater ablution is a complete washing of the body, which should be done before the Friday service or special holiday service, and after becoming unclean (incidents of uncleanliness are defined specifically).

779 735 431 b. Alms (Zakat). With the observance of prayer the Koran regularly enjoins the giving of alms (zakat) as the outward sign of piety and as a means of salvation. A distinction is made between sadaqat, which is a freewill offering, and zakat, the obligatory contribution, presumably at the rate of one-fortieth of the annual revenue in money or kind. The zakat is to be exacted form all who enter into the brotherhood of Islam; but it is not a tax. The objectives on which the revenue from zakat is to be spent are defined (in Sura ix, v. 60) as being: the poor, the needy; those employed in its collection, debtors, wayfarers, and the "Way of God."

779 785 c. Fasting (Saum). Fasting, according to Islam, is primarily a spiritual discipline. Satisfying one's thirst and hunger are considered great temptations, and a chance is given to man to overcome his temptation.

[796] Moslems are required to fast for twenty-nine or thirty days of the month of Ramadan, the ninth month of the lunar year. Fasting begins at the appearance of the moon of Ramadan and ends on the appearance of the new moon of Shawwal (the tenth month). Fasting is to be observed with complete abstinence from food and drink during the hours of daylight. The fast is broken after sunset and during the hours of the night. The last meal should be taken before sunrise. The Koran and the Hadith make special mention of people who are exempted from fasting. The Koran mentions those who are sick and those on a journey. This is not an absolute exemption, as the sick man and the traveler are required to fast later, when the sickness has gone or the journey has ended. Hadith also gives extension or exemption to certain classes of people who, because of some physical disability or the performance of heavy labor, are not able to fast. In addition, fasting is included among the expiations for various offenses.

779 788 d. Pilgrimage (Hajj). As an institution the hajj existed from a very remote antiquity, before the advent of Islam. The sacredness of Mecca was established in the Koran by Muhammad and given strong connection with the names of Abraham and Ishmael.

[175] In the first and second years of the Hejira (Muhammad's exodus from Mecca to Medina, 622-23 A.D.) full directions relating to the hajj were given by the Prophet. The traditional days in Dhu'l Hijja (the twelfth month) and the traditional ceremonies: going in circuit round the Kaaba; running between the two small eminences of Safa and Marwa in the vicinity; assembling on the ninth day of the month at the hill of Ararat; offering sacrifices of sheep and camels at Mina on the way back to Mecca—all were retained and prescribed in the Koran. Other traditional usages, including the kissing of the Black Stone set in the walls of the Kaaba, and the stoning of the pillars representing the Devil in the vicinty of Mina, though not mentioned explicitly, were observed by Muhammad in his pilgrimages and so were incorporated into the Moslem rite.

[783] As before prayer the worshipper must be ritually clean, so also before making the pilgrimage the worshipper must be in a [302] state of ritual consecration (ihram). This involves shaving the [292] head and discarding ordinary clothing before entering the territory of Mecca, putting on instead two plain sheets and leaving the face and the head uncovered.

Although the pilgrimage constitutes a religious obligation for every Moslem, the obligation is explicitly limited by possession

779 [788] of the necessary means and the physical possibility of getting to Mecca.

e. The Way of God (Jihad). In addition to the obligations mentioned, in many passages the Koran further enjoins believers to "strive in the Way of God." The duty is formulated in general terms in Sura ii, v. 186., between the regulations of the fast and pilgrimage: "Fight in the Way of God against those who fight against you, but do not commit aggression. . . Slay them wherever you find them, and expel them from whence they have expelled you, for sedition is more grievous than slaying. . . Fight against them until sedition is no more and allegiance is rendered to God alone; but if they make an end, then commit no aggression save against the evil-doers."

A distinction is drawn between warfare against the pagans, on the one hand, and against the Jews and Christians on the other:

"When the sacred months are over, kill those who ascribe partners to God wherever you find them; seize them, encompass them, and ambush them; then if they repent and observe prayer and pay alms, let them go their way." [Sura ix, v. 5]

779 721 798 "Fight against those who believe not in God nor in the last day, who prohibit not what God and His Apostle have prohibited and who refuse allegiance to the True Faith from among those who have received the Book, until they humbly pay tribute out of hand." [Sura ix, v. 29]

"As for those who are slain in the Way of God, they are not dead but living in the presence of their Lord their needs supplied, rejoicing in the bounty which God has given them." [Sura iii, vv. 163-4]

779 [262] [681] [567] [681] [671] Besides these major issues of doctrine, ritual and obligations, the Koran contains a large body of religious and ethical teachings and legal injunctions. For example, wine, pork, gambling and usury are forbidden along with the making of images or representations and a number of the practices of pagan Arabs. Marriage, dowry, divorce, the guardianship of orphans, and inheritance are all regulated in detail. Penalties are laid down for certain crimes such as stealing, homicide and murder as well as for a few minor offenses. Slavery is accepted as an institution, but certain limitations are placed upon the rights of owners over slaves and good treatment of slaves is enjoined. Fraud, perjury and slander are repeatedly and severely condemned, and rules of social behavior are laid down in several passages. All these and other regulations explicitly detailed in the Koran served as foundations for a more elaborate set of rules and regulations upon which the structure of the Shari'a, the Islamic law, was erected by later generations.

N D. The Sects of Islam

N 795 The two major sects of Islam are the Sunna and the Shi'a. Both of these camps are divided internally into numerous subsects, a discussion of which will not be included in this chapter.

N 795 798 The schism between the Sunna and Shi'a occurred first on the political question of the legitimate succession to Muhammad's leadership in the Islamic world. The Sunnis claimed that the Caliphs were the legitimate heads of the Islamic community. The Shi'a followers repudiated the first three Caliphs, Abu Bakr, Omar and Uthman, as usurpers, and declared Ali, Muhammad's son-in-law, to be the true successor, and his house to be the only source for the selection of future Caliphs.

The Shi'a sect seceded on a purely political basis, but it also began to develop its own characteristics in matters relating to religious doctrine. It spread widely in Persia and Iraq and assimilated a great amount of the esoteric non-Moslem doctrines which prevailed among the newly converted Moslems.

N 779 795 798 In particular, a special doctrine concerning the nature of political leadership of Islam divides the Sunnis and the Shi'is. The Shi'is attribute to the Imam (the political leader) a spiritual function which the orthodox Sunni theologians never granted to their Caliphs. This doctrine of the Imamate gradually crystallized into definite theological form. The Imams acquired a superhuman character and their decisions on both political and theological questions are not to be contested.

N 795 The mystical movement in Islam, Sufism, found followers in both camps, and is popular mainly among the masses of the people.

S E. The Turkic Moslems of Sinkiang

S 563 795 The majority of the population of Sinkiang is Moslem by religion. The Moslems include the Eastern Turkis, the Kirghiz and Kazakh nomadic tribes, a small number of Chinese Moslems and a few Afghans, Indians and Tajiks, most of whom reside only temporarily in Sinkiang.

The Turks of Sinkiang are Sunnis of the Hanefite School. Unlike the Chinese Moslems, they have maintained close ties with the rest of the Moslem world. The idea of the cohesiveness of all believers is very strong in Islam. The Turks of Sinkiang not only feel strong national ties with their Turkic brothers in Western Turkestan, but they also consider themselves an integral part of the Moslem world community. In the past they recognized as the chief of all believers (emir el mu'minin) the Khan of Bukhara, and they looked to the Sultan of Constantinople as the political leader of Islam.

S 779 Sinkiang can be called a Moslem country, but it has features which are peculiar to it, and which have greatly changed the

779 which varies according to one's wealth. This food must be
431 donated by every Moslem in the community who is not poor,
735 and distributed among those who need it. The second institution
794 is that connected with Id al-Adsha, on which occasion the poorer members of the community are fed with the meat of the sacrificed animals, and the skins of those animals are sold, and the sum thus realized spent on the propagation of Islam.

These then are the concepts applied to welfare work among the Moslems of the Northwest. As has been seen: the impetus toward welfare activities is entirely religious. This religious basis of welfare work was somewhat modified among the Chinese Moslems (Hui) particularly in those provinces, such as Ninghsia and Chinghai, where the secular power was in the hands of Moslem leaders. In these cases welfare activities would be supported strongly and with a certain efficiency by the worldly arm, but would pertain in most cases to the Moslem population only.

With regard to the handling of welfare cases among non-Moslem Chinese, reference is made in the section on Public Welfare of the General Handbook.

III Welfare Among Lamaists

The concept of charity is alien to original Buddhism; it has no part in its ancient teachings. Almsgiving (dāna) is the only charitable activity that is occasionally mentioned in earlier writings. It is there termed as one of the "lucky things," with which to promote one's own self-perfection and salvation, even though it has no place in the eightfold path. Later on, rules concerning the attitude in which alms should be given were worked out, the theory being that the merit of the gift grows with the merit of the donee. The best gift of all, however, was the gift of Dharma (truth). The only entity who practided charity in anything like our sense of the word was the Bodhisatva, for whom, and for whom only, compassion was the cardinal principle. Every consideration is laid aside and even meditation neglected for its sake.

These basic doctrines have not prevented later schools of Buddhism in China from developing charitable and welfare work both through the temples themselves and through Buddhist sponsored or co-sponsored laymen's associations (see China General, Public Welfare). The Lamaist church, however, has stuck closer to the original concepts and hardly a trace of charitable or welfare work emanating from or sponsored by the lamaseries can be detected.

574 There exists, though, one concept common to both Lamaist
794 peoples, through which the situation is mitigated. This is the
485 concept of hospitality. Under this concept many charitable and
792 welfare functions are carried out by the lamaseries as well as

N.W. China AFJ

from the Chinese way, but the clothes of the men were different. 563
They preferred small octagonal blue, white or black caps and long garments which were worn like a caftan. It became more and more evident in all the faces we saw that foreign blood predominated here. The color of their skin had grown lighter. More and more often I saw red cheeks, brownish mustaches which were trimmed somewhat, hooked and somewhat narrower noses, eyelids with an at least horizontal axis and a much more pronounced arcus superciliaris than in the Mongolian type. The region around Ho tschou is densely popu- [361]
lated; countless villages are scattered all over and in all of them the Mohammedans strongly predominate. (1) And no wonder! For I

1. Today no Mohammedans are permitted to live in and around the city of Di dao tschou; their settlements begin on the other side of the Tao Ho. On the way from Di dao to Ho tschou I saw many goiters, otherwise North China does not have many cases of it. Goiters begin to appear in the valleys of the Tsin ling, and in certain places there they are so frequent that almost every adult and especially all women carry around such an appendage.

was now nearing the stronghold of Mohammedanism in China proper. 563
What stories the Chinese soldiers who escorted me knew about the 579
towns along the way and the year 1895 when the Hui hui had rebelled! What hair-raising deeds had been committed on both sides! Whenever they fell into each other's hands, no matter what age or what sex, they killed one another. Whole communities were exterminated. The rebellious bands of Mohammedan farmers moved along from village to village. But the leading mullahs acted thoughtlessly. Their troops were so poorly armed that even smaller town walls stood firm if they were half-way decently defended.

It is astonishing that there are still so many Mohammedans in 563
existence after all the rebellions which were always quelled amid 779
rivers of blood. /161/ When I approached the city of Ho tschou itself I thought I was in a Mohammedan country. From the tops of the many minarets the muezzins were calling the hour of prayer. Well-spoken Arabic syllables reached my ear; countless old mosques /dscha mu (Arabic-Chinese)/ stood among groups of beautiful trees and many bearded mullahs without pigtails moved about in the throng.

N.W.China AF13
Tu ren

563 (1260-1368) and still continues. The Tu ren of Wei yüan bu are a very
[779] peculiar little group. Many of them say they believe in only one
god. But, like the Chinese, they are also Buddhists. But besides
791 that they have shaman priests similar to the Bönbo, who are primari-
789 ly concerned with making the weather and exorcizing hail. On the
way from Hsining to Wei yüan bu one constantly comes across small
loam towers and numerous small heaps of stones which the hail
exorcisers have erected for the protection of the fields.

563 Most of the Tu ren men dress like Chinese, but some of them
[291] also wear, like the Tibetans, caftan-like wool skirts that reach
142 halfway to the ground and they wrap their legs up to the knees with
gray or blue bands like the poor people of North China. It is very
difficult, in fact, impossible, to distinguish a Tu ren from a
Chinese by the cast of his features or his build (Plate LIV). They
may be smaller on the average and have broader faces than the
Chinese. But just as among us Europeans one recognizes persons of
different nationalities only by certain external characteristics and
by their language, so it is with all the Mongoloid peoples at the
opposite end of Eurasia. There is no truly significant difference in
physical structure which would exclude misjudgment or confusion.

563 The men wore the Manchurian-Mongolian queue - which is
[302] taken for granted among faithful subjects of the emperor - and for
the rest they shaved just as much of their heads around this queue
[162] as the Chinese did. There are today still many thousands of them
(allegedly 20,000 families). In the Hsining prefecture alone the
number of their princes (tu se) equals more than 12, formerly it
[651] was 16 or 18. These princes receive gifts and land tax from their
subjects, administer justice and represent their subjects in dealings
with Chinese officials. They submitted as early as 1372 in the
fourth year of the reign of the first Ming emperor (Hung wu) and
[551] in return their old noble families were established. Beside their
Mongolian names they have Chinese surnames and three of their
tu se are called Li, two Ch'i, others Yi, Chen, Wang, Na Chao,
Chu, etc., and all of them have remained faithful since the Yüan
dynasty, just as though they were real Chinese. During the Mo-
hammedan rebellions they suffered exactly like the Chinese.

563 There are also Tu ren living on the old highway between Lan-
342 chow and Hsining fu, in the region of the confluence of the Da
tung ho and the Hsining Ho, where they are scattered among
Chinese and Mohammedans in individual villages. These are

782

782 PROPITIATION--practices reflecting a sense of dependence and a desire to ingratiate or influence the supernatural; repudiation and intimidation; obeisances (e.g., bowing, genuflection); laudation; prayer; sacrifice (e.g., libations, food sacrifices, animal and human sacrifice, symbolic and vicarious sacrifices); vows; burning of incense; decoration of religious edifices; endowing of shrines and temples; etc. See also:

/The Sedentary Tibetans/

+563 There is more rigidity about the village organization. The
621 sedentary Tibetans generally have a formally selected village
[622] headman. But again the council of elders has considerable
[623] authority. Groups of villages are organized into a larger unit,
[632] nor is it uncommon for villages and encampments to be joined
[792] together in such a larger unit. A monastery is more apt to
have authority over a group of villages than over the strictly
nomadic people. However, like the nomads, the sedentary
[622] Tibetans give very little recognition to any authority beyond
that of the ecclesiastical or lay chief of the "tribe". Ma Ho-
t'ien, in his Diary of Travels in the Border Region of Kansu,
Chinghai and Tibet makes frequent reference to the inability
of the Chinese officials to exert any sort of authority over the
border-Tibetans and other sources also record the absence of
any effective government beyond the local level.

The village itself represents a very tightly-knit organiza-
tion, economically and politically, as well as physically.
[423] Houses, housesites and the fields belong to the individual
families, but the grazing lands and forests are community
property. Use of the pastureland is available to all, but the
village may place certain restrictions on the quantities of
timber that may be taken for specific purposes.

+563 Just as the nomads act simultaneously in moving their
621 encampments from one site to another, so the sedentary
241 Tibetans also insist on simultaneous group action within the
[787] village. The first day of spring planting, determined by horo-
[292] scope, sees all the villagers proceeding to their individual
fields in their best clothing. The fields are ploughed simul-
taneously. The seeds are sown at the same time in each field.
And, when harvest time comes, all the fields must be com-
pletely harvested in the time that it takes the smallest field
to be harvested with a small hand sickle. If one's fields are
too large one hires extra help. During the course of the
growing season all the villagers periodically parade through
the fields carrying the holy books on their heads. These com-
munal activities have both religious and economic bases.
[787] From the viewpoint of the religion, if the days have been
selected as auspicious, they are auspicious for the communi-
[796] ty's members as a whole. It is when the spirits of the ground,
[782] the demons of hail and misfortune can be allayed or propitiated
that determines the best days for performing the needed tasks.
From the viewpoint of economics, when the ground has been
plowed and the seeds planted, the fields are encircled by a
community fence to prevent onslaughts by roaming animals.
[625] A community watchman also stands guard. It also means that
[486] the villagers can collect a tax from caravans that pass through
[651] their lands. Once the fields have been harvested, the community

/Chinese Moslems (Dungans)/

4. Customs

S N a. Religious rites

563 779 782 According to religious rules, the Moslems are supposed to pray five times daily (sunrise, noon, afternoon, sunset and midnight), facing in the direction of Mecca. Few of the Chinese Moslems besides the Mullahs and Ahungs adhere strictly, but pray only once or twice a day. To be valid, prayers should be performed in the mosque, but those who find it impossible to go to the mosques may pray wherever they are. The call to prayer (adhan) is made by the Ahung, or religious leader, and the believers join in saying the adhan. Daily noon prayer is popular, and the Friday service is the most fully attended.

S N [793]

Public worship cannot be performed by fewer than four persons. Women may not attend the mosques where the men pray. In some places, women have their own mosques and women Ahung to direct the prayers and Friday services. Women always worship as individuals and not as a congregation, though there may be a number of women gathered together.

S N [562]

S N 563 779 782 783 The Moslems must be clean when they attend any religious ceremony. Hands and face must be washed, and bathing before worship is common. For this reason all mosques of importance have bathing places annexed. The Moslem becomes unclean by touching such objects as dishes containing pork or any meat not killed according to ritual, pigs, dogs, wine or excrement.

S N 563 796 782 783 779 [203] The thirty-day fast of Ramadan is fairly strictly observed. During this period one is not to eat between sunrise and sunset, and such things as smoking, drinking and sexual contact are also forbidden. In many places, a messenger goes about the Moslem quarters calling out the times for observing or breaking the fast, lest someone oversleep or fail to prepare and eat the necessary food before daybreak. The end of the fast is celebrated by a feast.

The aged, ill, insane, travelers, women who are pregnant, menstruating or nursing, persons doing heavy labor or whose lives are in danger are excused from the fast, but if or when they are able they must make up for it. The purpose of the fast is to help the believers maintain pure and pious lives. Fasting is considered meritorious at other times too, except on Friday, Saturday and Sunday.

S N b. Naming

563 553 852 Within seven days after the birth of a child, he must be given a Koranic name, or Ching-ming (religious name). For this occasion a feast is prepared, and the poor are fed. If the child is a male and the family wealthy enough, two sheep are killed for the occasion. If the child is a girl, only one sheep is killed. To arrive at the name, the father holds the child with its face toward Mecca and repeats a prayer in one ear of the child, then

S N [788]

779 796 cussed in Heaven. They teach men sorcery and will serve men who can rule them by these devices. The leader of these evil spirits is called "The Shaitan" or Iblis. His fall from a place among the angels was due to his refusal to worship Adam on God's command; for this he was accursed till the Day of Resurrection and given authority over those of mankind whom he seduced.

779 796 792 Next to the unity of God, the doctrine of the Apostles, as the shahada indicates, is the central doctrine of the Koran. Moslems are required to believe in the Apostles without distinction The last of the Prophets is Muhammad, who is God's Apostle to all mankind. The doctrine preached by all the Prophets is essentially one and the same, although in matters of detail there has been a gradual evolution in their messages toward the final and perfect revelation.

As for Muhammad himself, the Koran repeatedly disclaims on his behalf anything that is superhuman. He was but a mortal man, commissioned with the sole duty of conveying God's warning and message of salvation. He had no knowledge beyond what was revealed to him, and he had been granted no miraculous powers.

779 795 Faith in life after death is the last of the basic principles of Islam. The word usually used to indicate it in the Koran is al-akhira. The Koran does not speak only of a life after death, but impresses on believers the importance of life on earth as a basis for the future life. The Last Day, the Day of Resurrection and Judgment, will be the time when men's future fate will be decided by God. This day will come suddenly at a time known only to God. On that day the graves will open and men will be called to account for their deeds. Each man's angel shall bear witness to his record, his deeds will be weighed in the balance, and his book will be placed in his hand, the right hand of the blessed and the left hand of the damned.

Then the blessed, the God-fearing men and women, the humble and the charitable, the forgiving, those who have suffered and been persecuted for God's sake, those who have fought in the way of God, shall be summoned to enter the Garden of Paradise, where they shall dwell forever by flowing rivers, praising God, reclining on silken couches, enjoying heavenly food and drink and the company of dark-eyed maidens. Those who have sinned against God and men are condemned to eternal punishment in the flames of Hell.

779 788 782 C. The Rituals of Islam

a. Prayer (Salat). The observance of the ritual prayers is repeatedly emphasized as one of the essential religious duties. Although neither the ceremonies nor the five set times of prayer

779 788 782 are precisely stated in the Koran, it is certain that they were well established before Muhammad's death. Each consists of a fixed number of bowings (rak'ah), the bowing itself consisting of seven movements with their appropriate recitations: (1) the recitation of the phrase "Allahu akbar" (God is most Great) with the hands open on each side of the face; (2) the recitation of the Fatihah or opening sura of the Koran followed by another passage or passages, while standing upright; (3) bowing from the hips; (4) straightening up; (5) gliding to the knees and a first prostration with the face to the ground; (6) sitting back on the haunches; (7) a second prostration.

The set times are at daybreak, fajr (two rak'ahs); noon, zuhr (four rak'ahs); midafternoon, asr (four rak'ahs); after sunset, maghrib (three rak'ahs), and in the early part of the night, isha (four rak'ahs). At these times, prayers should be said and the ritual observed by every believer wherever he may be. By preference they should be performed congregationally in a masjid (mosque) under the leadership of an imam. The imam and the worshippers face toward the qibla, the prescribed direction, which is toward Mecca.

The Koran also mentions the noon prayer on Friday as the principal congregational prayer of the week, and enjoins the suspension of work during its performance. At this time a special ceremony (kutba) is delivered, usually by the imam. (The deliverer of this ceremony is called the khatib. He is not necessarily the imam, but may be one of the leaders in the community.)

779 782 783 Tahara, the ablution before prayer, is strictly enjoined and the ritual is defined in Sura v, v. 9: "When you rise up to prayer, wash your face, and your hands to the elbows and wipe your heads and your feet to the ankles." This is the lesser ablution, to be performed before every prayer. The greater ablution is a complete washing of the body, which should be done before the Friday service or special holiday service, and after becoming unclean (incidents of uncleanliness are defined specifically).

779 735 431 b. Alms (Zakat). With the observance of prayer the Koran regularly enjoins the giving of alms (zakat) as the outward sign of piety and as a means of salvation. A distinction is made between sadaqat, which is a freewill offering, and zakat, the obligatory contribution, presumably at the rate of one-fortieth of the annual revenue in money or kind. The zakat is to be exacted form all who enter into the brotherhood of Islam; but it is not a tax. The objectives on which the revenue from zakat is to be spent are defined (in Sura ix, v. 60) as being: the poor, the needy; those employed in its collection, debtors, wayfarers, and the "Way of God."

/Chinese Moslems/

000 acter Hui signifying "to return."

S N 795 361 The Chinese Moslems live in small, closely knit communities, organized around the mosques. The Moslem community is usually set apart from the general Chinese community. The Moslems may form a whole village, or a certain suburb or section of town. The communities are organized on a local basis and there is no higher religious authority that unites all the communities. The mosques, the religious and social centers of the Moslem communities, are maintained independently.

S N 795 182 At least ostensibly, the religious attitude of the Chinese Moslims is characterized by moderation. They make concessions to the ruling power, hoping thus to gain security for person and property. The more capable and resolute of those who enter into government service take part in the ceremonial of the national cult.

S N 795 794 [346] The Moslems in the Northwest do not publicly practice their religion, nor do they advertise it. In some cases their mosques are dissimulated, so that they cannot be distinguished easily from other houses in the village. They are quite lax in their observances of the different rituals connected with Islam. The Chinese Moslems do not regularly attend religious services in the mosque. Aside from the ahung (the religious leader of the [793] Chinese Moslem community) and the extremely orthodox people [782] they do not pray five times a day, but once or twice at most. The noon service is the most popular one, and the place of worship is limited to the mosque. The manner of calling for prayer differs in China from that in Western Asia. The Muazzin does not chant the call to prayer. He stands on the roof of the mosque and shouts the invitation to prayer and may strike a special wooden instrument called ta-p'an-tzu. Most Moslems will ignore the worship time if it interferes with their daily business. Except for some minor differences, the prayer ceremony is conducted in a manner similar to that in Western Asia.

S N [562] Women are not allowed to attend the mosques where the men pray. In some of the larger communities, the women may have a mosque of their own, but in most places they worship individually.

The Friday service draws the best attendance, although certainly not all nor even the majority of believers. On this day the sermon is delivered by the Khatib, a special person, not necessarily a religious leader, elected for the purpose. It is usually in Arabic, and few of those present can understand it.

S N 795 785 792 203 [184] The Fast of Ramadan is one of the rituals which is observed with a degree of strictness in Moslem communities throughout China. In many places there are special messengers who go about the Moslem quarters calling out the times for observing and breaking the fast. Messengers also go around at night lest

I: Washington S-4 (no date) 1956 AF13 Northwest China AF13

According to official tradition, the Spirit of Hua-shan is Shan-sheng, one of the descendants of P'an-ku, the mythical creator of the world. Many other genii have, however, been connected with this mountain. According to the oldest legendary records, it was a female spirit, the Holy Mother, Sheng-mu, who was propitiated here to bring forth the all-important rain; but she also received sacrifices and prayers to accord victory in battle. More recent and still prevalent legendary traditions make the Hua-shan one of the centers of the cult of the Jade Maiden (Yü-nü) whose blessings are sought for the propagation of male offspring.

It might be added that the Hua-shan with its rugged peaks and valleys, adorned with rare forests and intimate expressions of the pious sense of centuries, belongs to the most scenic spots of all China.

The great temple at the foot of the mountain, one of the most magnificent products of Chinese architecture, has been transformed into an arsenal in Kuomintang times.

B. Religious Attitudes in the Northwest

In general the Chinese in the Northwest adhere to the so-called "Three Great Religions." Confucianism, Buddhism and Taoism all play important parts in their religious system. In specific regions, Christianity, particularly the Catholic Church, has strong footholds among the local Chinese people. Where the people belong to the tradition of Chinese history and culture, scholarship and tradition have strengthened the cult of ancestor worship and the ideals and practices of Confucianism. There the blending of Confucian teachings, Buddhist ethics and Taoist principles predominates in the religious complex of the local inhabitants. In the border communities, strongly influenced by the nearby Tibetans, the Chinese include a large amount of Buddhistic observance and practice in their religious activities. They persist in styling themselves Confucianist in religious matters, but they devote their time and money to the performance of Buddhist ritual. It is reported that the Chinese of these areas are appreciably more religious than those of the more typically Chinese communities. Taoism is sandwiched into this all-embracing system of magical practices, necromancy and aberrant forms of philosophy.

Christianity first came to China through the Northwest and established its headquarters in Ch'ang-an (present Sian), the national capital during the Tang Dynasty. Missionaries of the Nestorian Church first brought Christianity to the trade routes in the present Northwest. The decisive, historically dated record in Chinese and in Syriac called the Nestorian monument,

1: Washington S-4 (no date) 1956 AF13 Northwest China AF13

797 or Ching-chiao pei in Chinese, which stands at Sian, varifies
[211] the fact that this church had been established among the Chinese
people of Shensi Province. This early Christian movement in
[798] Northwest China suffered persecution and died out. In modern
times both the Catholic and Protestant Churches came to the
Northwest. Most of their converts have been Chinese. Until the
Communist period the Catholic Church had been very strong in
one place in Ninghsia Province. It rendered many kinds of
service to its members and had a much stronger control over
them than did the local government. To a great extent it had
trespassed the jurisdiction of the government, which had cre-
ated considerable resentment and suspicion among the authori-
ties and the general populace. (See Social Structure.)

771 Though subscribing to all important religions in varying pro-
portions, the Chinese in the Northwest, like those in other
provinces, seem rather materialistic. Nowhere among them is
there found a religious fervor and devotion which characterize
both the Moslems and the Tibetans of this part of Asia. How-
ever, the religious atmosphere is very strong in all aspects of
communal life, which are always cloaked with some religious
771 rite. For example, the village or community theatrical has a
536 great deal of religious implication. Although unlike the miracle
545 plays and so-called devil dances of the Tibetans, the plays are
usually straight drama, frequently historical, the primary sig-
nificance of the presentation is a religious one. They give the
gods pleasure and thus dispose them favorably toward the people
of the community. Even the mask and the animal plays of the
New Year's celebration have a definite religious significance.

Chinese home life is also mixed with religious or semi-
771 religious feelings. Regardless of its wealth or locale, a Chinese
769 home will have its ancestral tablets in the place of honor. The
[353] tablets represent those who have gone and keeps them and their
memory always present. Those living now are only the present
custodians of the family name.

"This belief. . . holds the members of one household togeth-
[512] er with strands which are not so much woven by affection as by
[614] a sense of mutual responsibility within a clan. . .

"At New Year the shack living room, miserable though it be,
771 is the scene of the most exact rituals when, in absolutely cor-
796 rect order, each member of the family makes obeisance to the
592 elders; the feasts fixed by the Chinese calendar are scrupulous-
782 ly observed, and I have known a man to carry a watermelon for
days across the desert in order that at the Feast of the Moon,
in the most desolate of wayside stages, he might put an old
rickety table in the courtyard and offer the melon, cut in slices,
to the Queen of Heaven.

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

lawlessness of the past few years, which fact, however, only 439
makes its commercial prosperity all the more remarkable. It
evidently owes its importance to its position as the most
westerly outpost of Chinese trade in this direction, and like
Kueihua Ch'eng, is one of the starting-points for caravans
going west. The Mahomedans appear to form an important
element in the trading community. There was no civil
official at the time of our visit, but a large garrison of
soldiers; the inhabitants seem a rough lot, as is to be
expected in a frontier town.

At Paot'ou our river journey came to an end and we 133
hired carts to convey our baggage to Kueihua Ch'eng, 487
distant four marches, the usual stages being, Salach'i 90 li,
T'aossu Ho 70 li, Pihsuehchi 90 li, and Kueihua Ch'eng
80 li. The road runs east across an undulating cultivated
plain accompanied by the Tach'ing Shan range on the north.
Except for some marshy patches of grass land which have
to be crossed, the going is good, and I have never known
Chinese carts to travel faster, our ponies frequently having
to trot to keep up with them. The traffic was surprisingly
busy on the road which evidently carried a bigger trade than
any trail in Kansu. The inhabitants are apparently all 563
Chinese, but at a farm where we stopped for a meal the
owner and his wife though dressed in Chinese clothes could
only speak Mongol; and another sign of the former Mongol
population is a picturesque lamasery on the mountain side, 792
which from its appearance might equally well have been
situated on the Kokonor border. The Mongol lamas are 796
very like their Tibetan colleagues, as is shown by the
accompanying photographs (see frontispiece) of a so-called 535
Devil Dance, which were taken at a big monastery in
Eastern Inner Mongolia, and represent the "Dance of the
Black Hat," the commonest religious dance in Tibet. It
represents an incident in Tibetan history namely the killing
of King Glangdarma, the notorious persecutor of Buddhism,
by the lama Dpalgirdarje in A.D. 842; the lama danced before
the King in the costume shown in the photographs, con-
cealing in his broad sleeves a bow and arrow. The photo- 796
graphs facing pages 200 and 202, which were taken at the 782
same Mongolian monastery, also represent purely Tibetan
ceremonies, namely the *torma* offering for warding off

devils, and the circumambulation of the monastery by the figure of the coming Buddha seated in a car drawn by an elephant, in this case a mock one. The extent of Asia covered by that curious form of Buddhism known as Tibetan Lamaism is very large, stretching as it does from the northern frontiers of India to the southern borders of Siberia, and from Ladak to the confines of Manchuria.

Kueihua Ch'eng is another busy commercial town serving a hinterland extending to Kashgar, Kobdo, Ili, and Uliassutai. Near by lies the old Manchu garrison fortress of Suiyuan, which gives its name to the new territory of Suiyuan; the latter includes parts of Inner Mongolia and Northern Shansi, and has its counterpart further east in the territory of Chahar, comprising portions of Eastern Inner Mongolia and the Kalgan and Jehol regions of Chihli. These territories are administered on military lines. Kueihua is a good starting-point for a big-game shooting trip into the mountains further north, where remarkably fine sheep, a sort of *Ovis argali*, and wapiti can be secured, as well as the roe-deer and goral common in North China. With the Kalgan railway extension pushing on towards Kueihua, this is some of the best and most accessible big game ground in China nowadays.

We changed our carts at Kueihua Ch'eng and hired new ones to take us through the mountains to railhead at Feng Chen, distant four long marches. The first stage is a march of 90 li to the mountain village of Shihjen Wan, the trail continuing east across the plain for six or seven hours and then running up a shallow valley for the rest of the way. Many of the higher mountain slopes were snow-clad, though the season of the year was only late September. On the following day another long march of 90 li up a valley and over a low pass brought us to the hamlet of Wuli Pa, lying on a sort of plateau of moorland country, the beginning of the grass lands of Eastern Inner Mongolia. It snowed heavily most of the day and we arrived cold, wet, and tired to find the roughest of accommodation in a large cart inn. The third stage is still longer, called 110 li, to the village of T'ienchʻeng Ts'un, but the trail lying partly across grass country one can travel fast. The road descends through flat open valleys to a lake, where good wild-fowl shooting

which a tiny spring kept overflowing. Green mosses lined the bed of the crystalline rivulet, and the diamond drops reflected the sunshine. The wheel turned with a subdued creak, which seemed almost like the murmuring of the prayer inscribed on its lines of chamfered edges—Om mani padme hum—'Hail thou jewel in the lotus flower'—the offering of a blinded people to its undiscerned god.

A mile apart from each other stand two walled cities, the more imposing of the two being the Manchu town formerly occupied by the pensioners of the ruling dynasty, but which now consists of a great enclosure of uninhabited or ruined houses, so that in a space equal to the area of a large town, at the present hour only six or eight families are living. Of the remaining former inhabitants many have been massacred, others have fled, and the ranks of the beggars have been replenished by these truly unfortunate people. The Chinese city consists of quiet streets busy only on market days, the shops of which being so poorly provided with the necessities of life that vegetables are brought a three days' journey to be sold here. Its western wall is flanked by a suburban thoroughfare composed of inns, wheelwrights' and blacksmiths' shops, which, together with food-vendors, supply all the necessities of traveller, carter, and muleteer. Some very fine temples crown the summits of the surrounding hills, and parties of Tibetans riding to and fro on the Sining road, leave offerings of silken *khada*[1] hanging to the idols, before which their obeisance has been made.

In the first home which we visited in Pingfan we met a man who was courier to a woman-magistrate of the aboriginal tribes. Her residence was in Liencheng—Lotus City—but she constantly visited Pingfan on

[1] Votive scarves.

[1] [Valley of Pingfan -- Analyst]

steamed rice containing the fruit of the jujube tree is popular, and dried apricots, macerated in water, are in demand as a cooling drink. Not far off are long tables sheltered by an awning, where men will sit for hours sipping tea and playing cards.

Within the temple buildings[1] the idols are dressed up in gay silks, and each family on arrival presents itself at the various shrines to make obeisance, and burn incense. Thin sheets of yellow paper, on which are inscribed petitions to the gods, are lighted at the shrine lamp, waved in the air, and wafted upwards, the manner and height of ascent indicating the favour or displeasure of the deities. Some of the older women, who have practised asceticism for a lifetime and are prepared for any self-abnegation so that they may in the next incarnation obtain a more auspicious rebirth, perform elaborate rituals with touching devotion.

On such a fête-day all the temple treasures and silken embroideries are on view, as also magnificent peacock-feather screens and umbrellas. The din of voices from vendors and visitors is completely overwhelmed when once the theatrical musicians commence their performance. Cymbals, pipes, and drums sound their loudest, while above them soars the shrill falsetto voice of the stage managers, announcing the details of the performance.

The temple grounds are beautifully kept. The fragrant tree-peony opens its blossoms when the peach and pear trees drop their petals, and all through the summer months a succession of beautiful flowers decorates the fancy landscapes of the temple gardens, miniature lakes and bridges supplying a foreground to sacred mountains arranged on the same small scale. The whole scene, from the turquoise sky, the snow-clad mountain ranges and the gorgeous profusion of flowers,

1 [of Kanchow on Festival Days--Analyst]

their victims, whose every attitude expressed the very acme of agony. At last, having received its due, the spirit was seen preparing for a new incarnation, as the Wheel of Life revolving had now a fresh rebirth to distribute. This time the protagonist is to enter the body of a pig; and here the artist reached the highest degree of plastic talent. Though it were but to wallow in the mire, the prospect of once more breathing the fresh air, of basking in the kindly rays of the sun, and of living the familiar life of earth, filled the hunted spirit with untold joy, marvellously indicated by the glance thrown over the shoulder, as the porcine snout descended like a mask upon the features.

An old priest was superintending a party of worshippers, who had come to burn gold and silver paper folded to represent money, this being considered suitable to be offered as votive-sacrifices for the dead. These people had lately lost a father, and picturing him as wandering through such an abode of pain, were now doing all they possibly could to come to his assistance. Leading the group was a young man, his son, who doubtless in all matters of daily life showed himself to be far-sighted and intelligent, but who now, with a mind blinded by heathenism, sought to impress upon the torturers the fact that he was in a position to buy off his father's doom by such large sums of mock-coinage as any god might be flattered to receive. The smoke rose, and the spirit-treasure passed out of sight. The gods would doubtless now see to it that part, at least, of the debtor's bill was paid!

Our immediate business was to let the people of Suchow know of our arrival, and very soon, by means of posters, the news was spread, and the words: 'The Christians have come!' were on the lips of all. It was greatly to our advantage that the whole city happened

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

we would give her nothing that was forbidden by her vow.

The day before we left Kinta, the temple of the Goddess of Mercy was crowded with women worshippers —young brides beseeching the gift of a son; while mothers who had received a child during the past year, now brought it to be placed under her protection. The baby, covered by a red scarf, was held in its mother's arms under an immense iron bell, when she produced her offering, namely, a handkerchief full of mixed grain. The bell was then struck; the priest took out some of the grain and scattered it over the child's head, with the words, '*May the Goddess of Mercy protect thee; may the God of Plenty endow thee;* then, yellow paper having been burnt, and its ashes smeared over the child's forehead, the priestly incantation was ended, and the mother went away, satisfied that all that could be done to protect the little life from ill-luck and demons had been successfully carried out.

A few days later we visited a famous group of temples known as Wenshu Miao—'The Halls of Learning'—situated only twenty miles from Suchow, at the mouth of the main Pass through the Southern Hills, and where festivals are held for both Chinese and Tibetans during the spring months. Hundreds of shrines stand on the mountain-side and numerous guest-houses have been built to accommodate the thousands of pilgrims who gather each year, on the first day of the fourth moon. From early dawn carts full of women, followed later in the day by military processions, escorting the chief officials of the town, followed one another up the stony valley in unbroken succession.

The shrines are connected by a labyrinth of small, steep paths which wind in and out around and over the hillside, at each turn of the road revealing a temple,

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

last watch before dawn dragged itself slowly out. There was no telegraph wire to cheer us, there being no line to Tunhwang, so we were dependent for guidance on a landmark erected at each half-stage, and which by daylight was visible for many miles. At last our carter stopped at a tiny hut; the men thundered on the door until an old woman opened it, and in a few minutes a crackling wood fire restored life and hope, as we stood round it in the little hovel reeking with opium fumes. Presently the old dame, seeing how perished we were with cold, threw a handful of dried leaves into a pot of boiling water, and ladled us out an infusion, in whose restorative powers she professed the greatest belief. It may have been the herb, or the fire, or her kindness, or perhaps the combination of all three, but most certainly we were presently able to go on our way with new strength.

It took us six hours to reach the gates of Tunhwang, and in the bitter cold of the hour before sunrise we were fortunate enough to pick up a bundle of straw, dropped from a peasant's cart, to which we set light, and after warming ourselves, went on invigorated. All round the city are large orchards of a park-like character, watered by rushing streams, and planted with thousands of trees, a great proportion being pear trees, for the fruit of which the place is celebrated. The early frosts had already touched the leaves, and the whole scene was ablaze as with golden flames. It was the fourteenth day of the eighth moon (October 1st), the eve of the Moon Festival, when offerings of every description of fruit are made to that luminary, and the street stalls were piled with 'moon cakes,' apples, grapes and nectarines—an attractive spectacle to us after our weary journey.

The geographical position of the city is such as to

779 charitable deeds, and only the well-earned wealth should be
431 given as charity. Those who give secretly are praised more
735 highly than those who publicize their gifts.
744 Obligatory charity is collected by officials who are appointed by the community to carry out this task. The individual donator is not at liberty to calculate and spend his zakat in any way he wants, but it is collected by the officials and spent by the community.

Zakat is a charge on accumulated wealth, and particularly in this manner redistributes a portion of the accumulated wealth of the few to those who have none in the community. A part of the amassed wealth of every individual is taken away annually and distributed among the poor and the needy. Zakat is payable on all cash hoardings, or hoardings in gold and silver, as well as on any form of capital, whether in the shape of cash or kind.

The items of expenditure of zakat are stated by the Koran to be the following: "Alms are only for the poor and the needy, and the officials appointed over them, and those whose hearts are made to incline to truth, and captives, and those in debt, and in the way of Allah, and the wayfarer; it is an ordinance from Allah, and Allah is the knowing and the Wise" (9;60).

The recipients of the benefits of zakat can be divided into three main categories: (1) those who need help; (2) the officials appointed for the collection and disbursement of the fund; and (3) a part is required to be spent in the way of Allah.

Six kinds of people fall under the first heading: the poor who, on account of some physical and mental defect, are unable to earn their bread because of their deficiencies; the poor who have no resources but when given some help can earn their livelihood; new converts to Islam who are deprived of means of subsistence; those who are captives and are deprived of freedom; debtors who are unable to pay their debts; and lastly, the travellers who are stranded in a foreign country or in a distant place and who are unable to reach their homes.

The second kind of expenditure involves the maintenance of an establishment and office for the collection of zakat, and includes the salaries of those who collect the money and distribute it.

The third heading includes those in the way of Allah, which means usually those who fight a Holy War in the name of Allah against the enemies of Islam.

Besides the institution of zakat, there are two others of similar nature designed to collect obligatory charity. Both of these are connected with Moslem festivals. The idea is that whenever the Moslem is in his happiest mood, he must never forget the distress of his poorer brethren. The first of these institutions is the sadaqat-al Fitr, a charity connected with Id el-Fitr, the Moslem New Year. Every Moslem on this occasion is required to give away in charity a certain amount of food, the value of

I: Washington S-4 (no date) 1956 AF13 Northwest China AF13

PUBLIC WELFARE

I. Introduction

657 Welfare work in China's Northwest has to be conducted for the benefit of two distinct categories of people in need. The poor are composed of those whose problems arose out of inadequate standards of living. They include the aged and disabled, the orphans and other destitute or handicapped people. Marginal cases of this category are the underprivileged groups of society, who might maintain themselves, even though precariously, in years of abundance but who become relief cases as soon as their balance of life is disturbed. Chinese concepts of charity and charity organizations normally available to this category are discussed in the Public Welfare Section of the General Handbook.

657 731 The second category however, the victims of natural disasters, poses a special problem in the Northwest. As has been demonstrated in other Sections of this Handbook, the maintainence of agriculture in the Northwest is more dependent upon conservancy and irrigation projects than in other regions of China. During the last period of the Imperial era, many of these projects have fallen into disrepair, thus exposing the area to more critical inundations and droughts. Reports from the Imperial period reveal that there were fourteen severe inundations in the province of Shensi during the hundred years 1800-1900 and seven in Kansu. The same century brought sixteen severe droughts to Shensi and nine to Kansu. The droughts of 1877 which encompassed both provinces, of 1900/01 in Shensi, and of 1908/09 in Kansu were catastrophes of a national extent.

The frequency and severity of earthquakes in the Northwest adds to the problems of the region, particularly since in many areas of the region people live in loess caves. The great earthquake of 1879 which hit both Shensi and Kansu, the one of 1881 in Kansu and the ones of 1892 in the Kucha district of Sinkiang and the Hsi-ning district of Chinghai are still in everybody's memory, even though the twenties of our century have again brought two devastating earthquakes.

[669] Nor is this all. During the last hundred years the Northwest has been ravaged by rebellions and civil wars almost without interruption. Several of these events left in their wake a vast number of displaced and needy people, who added to the problems of emergency and disaster relief.

II. Welfare Among the Moslems

794 735 799 A. The Distribution of Welfare Responsibilities

Most of the efforts in the field of public welfare among the

794 Moslems of the Northwest were done by the Moslems themselves
735 and not by the Chinese administration. The law of Islam provieds
• 779 for a rather extensive system of, and general concepts on the administration of public welfare. It is not so much through a system of government institutions that the needy were taken care of, but by the religious regulations of Islam. The concept of public welfare is found in the Koran and was transmitted to the people through the laws and obligations specified in the religious writings of Islam. In the Islamic law there is no clear conception of the separation of state and religious institutions. The functions in both political and religious realms are merged and interwoven. The provisions for public welfare are an outstanding example for such a merging of state and church functions. Charity and donations to the needy are regarded as a religious duty and the financial resources necessary to sustain those in need are in the form of an obligatory religious donation, the collection of which is administered by officials, which in an Islamic state constitute a part of the administration. A department of public welfare is specified in the Islamic religious laws to be one of the departments of the Islamic State. However, since the majority of the Moslem peoples, including the Moslems of Sinkiang, do not live in an Islamic State, the functions of the state became the responsibility of the local religious community.

779 B. The Concept of Charity in Islamic Writings

Charity towards man, in its widest sense, is laid down in the Koran as the second great pillar on which the structure of Islam stands (the first obligation being that of regular prayers). Benevolence to other people is stressed constantly throughout the Koran, the most frequently recurring words designating charity being infaq (meaning spending benevolently), ishan (doing good), zakat (purification), and sadaqah (derived from the root sidq which means truth and has come to signify a charitable deed). Benevolence to other men includes the feeding of the poor, the emancipation of slaves, the care of orphans who have no kinsmen. Small good deeds such as helping a man load his animal or saying a good word are considered also as charitable.

779 Charity is of two kinds: it can be voluntary or obligatory.
431 Voluntary charity is usually known as sadaqah, while the obligatory
794 charity is mentioned in the Koran as zakat.
735 Voluntary charity is to be administered so that no idea of the superiority of the giver or the inferiority of the receiver is conveyed: "As for those who spend their wealth in the way of Allah, then do not follow up what they have spent with reproach or injury, they shall have their reward from their Lord." Or, "Kind speech and forgiveness is better than charity followed by injury." Love of God should be the motivation for those who do

N.W. China AF 13

and reports there the way things have gone for the family throughout the year. Thus, this day is very important and is called the Little New Year. On this day he is offered sweets, rice and other things and while his picture is being burned in the fire the entire family calls after him: "Sir Kitchen God, Sir Kitchen God, do not report anything bad about us!" In the real New Year's night he returns from heaven and that is when people again paste his picture on their walls. 776 782

a little epigram or a Chinese symbol of luck and wealth on all my chests as well as my saddles, on the baskets, bags, hammers, on my camera, in fact even on the broomstick which I had bought two days before and on the shovel, in short, on everything I possessed. Even in the rubbish heap there was a special piece of paper for the important god of rubbish. My three horses had red ribbons braided into their manes and wore a piece of wide red cloth on their foreheads; all this was part of the New Year's greeting of my servants. And everyone exchanged wishes of "Fa ts'ai ba! fa ts'ai ba! may you be rich!" 527 777

My New Year's call to the amban was undertaken together with Mr. Ridley, and on this occasion I saw the old gentleman for the first time. As is customary in China, he greeted us in the vestibule and then led us, amid many bows and the most ingratiating smiles, into his guest room. From the moment we arrived he talked incessantly and it was perfectly obvious that he made every effort not to give us a chance to speak. He did not trust us. He was afraid of a complaint which would have lowered him in the eyes of his men. We were scarcely able to give him our New Year's greetings. He avoided any kind of dialogue and kept repeating how sorry he was that I had been attacked in his territory and that the hsiē dia did not take better care of me. It was all their fault. He would have our guide severely punished. His soldiers were on their way to fetch my things. (2) And he said if I were going to travel again in his 574

2. As a matter of fact, they did set out three days later for the Koko Nor and brought back all my animals, but unfortunately none of the irreplaceable equipment.

province I should by all means let him know in time so that he could give me a military escort. "I shall give you soldiers to take along. I ding wo ba ni sung. You may depend on it, I shall have you

see it?

That is where Hoang schang (emperor) burns incense and makes offerings to the mighty spirit. Five or six years ago I was there with Be tschai sche (3). At that place he lighted a few small Chinese

3. The equivalent of Bi tieh sche, commissar, a Chinese form of the Manchurian title bitheschi for the official who was sent from Hsining to Dscherkundo in Yü schu every three years, and who at the same time made an offering at the Sea of Stars in the name of the emperor.

incense candles and burned some yellow sacrificial paper. This must be done every three years at the command of the great emperor in Tsching tsch'eng. (4) Six white sheep are also dedicated to the great

4. Literally, "capital," the most common name for Peking among the Kansu people.

spirit each time, so that he will protect the great lowland in the south of China from floods. Each of us brought along a stone and added it to the obo; then we threw ourselves on the ground facing the Kuenlun Mountain and touched the earth three times with our foreheads, just like our Schu be (5) and like Be tschai sche. But the Mongol leaders

5. Probably corresponding to the officer's rank of captain of the green banner in the Manchu empire.

burned cedar twigs and rode around the obo.

Then we released the six sacrificial sheep. And on we went toward the south. After ten days we came to the first tents of "Those with the Red Hats." (6)

6. Hung mao tse- "those with the red hats" (namely, lama) is what the Hsining-Chinese call the K'am Tibetans who are under the administration of Hsining. (In the Hsining dialect tse equals te.)

/15/ "South of the obo is an old battlefield," Tschang went on to report, "and to this day the Hung mao tse (the red-hatted ones) sing of it:

The great number of stone slabs that were covered all over with Tibetan writing showed that our predecessors had traveled slowly. In the lonely valley were to be seen walls 10 to 20 meters long of mani rdo mgum (mani rdo hbum, i.e., 100,000 mani stones). While their caravan animals were resting, devout monks on their pilgrimage to Lhasa once carved these prayer reliefs, with the crudest implements, but so deep and so painfully neat as though they were afterwards not to be piled one on top of another, but openly displayed for all the world to judge who could do best. Decades of snow and ice have since then continued working on them and the bright colors are almost washed out. (Plate VII)

After my Tsch'eng had seen the prayer stones, he began to look for the Yang tse kiang every day. For the custom of carving these reliefs so laboriously is not common among the Koko Nor Tibetans; they are more often found near the Yangtze River.

We were on the way to the Hsi t'ien, the heaven of the west. For many hours Tsch'eng continued to tell us the story of Tang sen and how it was through him that the mani stones came to the banks of the Yangtze.

The Legend of Tang sen

During the T'ang dynasty in China there lived a petty official by the name of Tsch'eng guan wei, and he had a wife whose name was Yi man t'ang (2). This man had an /24/ elder brother whose name

2. I have written the names as my people pronounced them.

was Yi k'ai Shan and who was a very important official. When the couple were transferred to another place they had to travel by boat, and after they had sailed two or three days the boatman attacked the official Tsch'eng at night, bound him, and threw him overboard. But then the rapacious boatman married the woman. She was carrying a child in her womb and for the sake of it she accepted the robber's proposal. Thus they traveled on and after a month they came to the place where the official Tsch'eng was supposed to have entered his new office. With the help of the murdered man's papers, the murderer now got the job.

Four or five months later the woman gave birth to the child of Tsch'eng, but the husband's murderer was not aware of it. Right after it was born, she bit off the child's big toe, packed the child

361 701 563 Today the city of Ho (1) tschou itself consists mainly of the

1. Pronounced like H'e with a very sharp guttural sound.

southern suburb of Nan kwan. That is where the mosques and the large Mohammedan shops are. The actual city of Ho tschou, on the other hand, is pure Chinese. The Mohammedans are forbidden, under penalty of death, to live inside the city. There are always many hundreds of soldiers garrisoned on the city wall (Plate XXXVI), and one finds there stables for the horses of officers and men. The wall is kept in excellent repair. But since not very many Chinese live here, there are large areas inside the walls that are deserted. All the life goes on outside. There we find closely built-up streets, for the most part with two-story houses as in Di dao, surrounded by a wall which today is destroyed. I estimate that Ho tschou proper and its suburb has a population of 30,000 and of these over two-thirds are Mohammedans. (2) There is not another city within the 18

2. The entire district is said to have had 85,526 families, according to the census of 1831.

provinces of the Chinese empire that has a similarly strong Mohammedan aspect. And yet there are many things that are entirely different here from other genuinely Mohammedan countries. In Ho tschou and environs I never saw a Hui hui who spread out his prayer rug in a courtyard or out in the open to pray when the muezzins (3)

771 [782]

3. The muezzins like the mullahs are always called ah'un in Kansu. The word comes from East Turkish where ahon means the scholar. Even these Ahun are not always circumcized. Most Chinese Mohammedans do not know anything about circumcision.

called out. The Ho tschou Mohammedans, like the ones that have become still more Chinese, are very superficial in their religion and can scarcely execute the prescribed ablutions without making a mistake. It seldom happens that one of them makes a pilgrimage to Mecca. Only a few of them even know the name of the city. Most of them only know about "Kerbe" (4) and that this is a place

4. Kaaba, the cubiform holy of holies in the mosque at Mecca.

from the tu se fields into their barns. I shall come back to the subject of the Tu jen later when my journey takes me through their country. In and around the city of Hsining there are only a few Tu jen living today. 624 651

The city of Hsining fu is now almost entirely Chinese. Even in the erstwhile very important eastern suburb, the Tung kwan which was destroyed by the Chinese in 1895, Mohammedans are no longer permitted to live with their families; they may only conduct their businesses there. Since 1896 specific sections and valleys in the mountains have been assigned to Mohammedan families. The only thing that is waived today is the decree that was for years carried out very strictly, namely, that Mohammedans wishing to visit the inner part of the city were obliged to have a stamp put on their cheeks as they entered the city gate. 563

The inhabitants still vividly recalled the horrible battles with the Mohammedans. Hsining was therefore also a military city. There were five ying (battalions) stationed here and the largest and most beautiful yamen was that of the general (tschen tai) who had a rather large arsenal. In it incense was lit on the first and fifteenth of every month to the deliverer of the city, an old ko lu pu pau (a Krupp cannon), and officers and soldiers fell to the ground in a kowtow before the rusty cannon. This weapon was the soul of the defense in the year 1895. Human blood was officially smeared around the mouth of the cannon in order to make it voracious and thirst after Mohammedan blood. The natives said: "It has a soul just like a human being," and they undoubtedly had a much more definite image than our native recruits do when we teach them to speak of the "soul" of the axis of a gun or cannon. 701 [782]

The tsch'eng schu ying, the military governor of the city who is also the keeper of the keys to the city gates and commander of the so-called middle battalion, (1) as well as the hsien, the prefect, 701 712

1. The Chinese provincial army consisted only of the green banners, the lü ying. In peace time one seldom heard of the larger associations, the tschen piao (brigades), the hsie (regiments), because the Chinese provincial army (I am not speaking of the troops on the coast) was used as a police troop and was garrisoned in various places. The primary important military unit is the ying camp or battalion that is under the command of a major (yu tschi) or a captain (du se or schu be).

426 then my friends, too, appeared dressed in silks and velvets and all their children, as good breeding demanded, wore new shoes. I now learned that the man had been cautious enough to store a few chests of his belongings in my little courtyard, with the help of my servants, and he had now brought them back to his apartment again. Nor was the man by any means bankrupt. All he lacked at the moment was cash to cover all his debts.

527 574 At the first cock's crow, long before day, my servants came back from the New Year's celebration with their families and offered me their New Year's kowtow for which one's employees always receive a major gift of money. The first official callers, among them the hsien and a few officers of the city who were acquaintances of mine, also stood at my door at six in the morning just as the sun was rising. They were on their way back from the temples where they had delivered offerings and congratulations to the official state deities and the emperor. In China I learned the meaning of New Year's calls on acquaintances, and good luck wishes. Surely no Chinese would be impressed by our European manner of doing this. Beginning with the first day of the new year, the inhabitants of China are on their feet from morning till night and hasten from one to the other of their acquaintances in order to express their good wishes in the form of a kowtow. On the morning of New Year's day everyone washes his face and appears in holiday garb which should be new if possible, and all doors, all door posts and implements are freshly pasted with luck-bringing words and sayings. The paper which is used for this is fire-red, unless the family happens to be in mourning. (1) Thus, 527 777

1. Like the color of the Yang, see footnote to p. 33.

on New Year's in China everything looks pretty and orderly, and above all, indescribably gay. On my house, too, the servants had during the night pasted new pictures of the gate deities on the outside of all the doors, and over the hearth they had put a fresh picture of the kitchen /207/ god Ts'ao ye (1), and when I awoke there was

776 792

1. Also called Ts'ao wang ye. This is the chief deity of the family. He is below the city god and the almighty god of heaven, the supreme Chinese deity, and of course, also below the emperor, the son of heaven. He guards the fire and the domestic hearth. On the twenty-third or twenty-fourth day of the last calendar month he ascends to heaven

N.W.China AF 13
Tu ren

563 down their back their hair is spread out on a little piece of wood
291 which terminates in a plate. The latter is decorated with colored beads and cowrie shells and sticks out horizontally (Plate LIII). It is 20-25 centimeters in diameter. In order to make themselves
[302] even more beautiful and colorful, the young peasant women paint a round red disk on their Mongolian cheeks which are tanned a deep brown from the strong mountain sun. Thus, the spectacle with which one is confronted at the fairs in Wei yüan ban is in point of color and gaiety not inferior to that of the temple festival at Gum bum.

527 The chief holiday of the Tu ren occurs annually during the second
563 Chinese month and falls on the days when the rivers which have been frozen during the cold season begin to thaw, but before the field work begins. It is at the same time the annual fête of Mother Earth. The Tu ren as well as many other inhabitants of the region gather together with their wives and children for eight to ten days in order to drink, sing and play. The gathering-place is a meadow
[346] south of the walls of the town, beside old Chinese graves. There
[669] is a large temple there in pure Chinese style with two courtyards, one behind the other, and beside it a second smaller Chinese temple has been erected for the manes of the Chinese who were killed during the last rebellion. In 1896 several hundred men fell into an ambush in front of Wei yüan bu and were killed to a man by the Dungan in hand-to-hand fighting. (It was almost always a hand-
[211] to-hand battle.) Now each man's name is written on a small wooden tablet and they are set up on a long table-like structure of loam on the back wall of the temple. A young man had entered the
[782] temple with me. He lighted two thin incense sticks in front of one of the narrow wooden tablets and kowtowed three times before it. He was honoring the names of a close relative. There were incense candles burning in front of many of the other little tablets.

The festival at Wei yüan bu itself strikes the visitor as very worldly. Very few people pay any attention to the offerings, the cakes of wheat flour, the /251/ loaves of bread (1), the eggs,

252 1. The Tu ren, like the Mohammedans of Lanchow and Hochow, bake a leavened bread in small, round copper pans. Into the bread dough they mix the ashes of some kind of grass which is found near Tsing yüan and as far up as Di dao and which is burned in the fall in a sort of charcoal kiln. Otherwise only steamed, unleavened bread is eaten throughout West China

flour, the heads of slaughtered pigs which, according to ancient custom, are set up by the community in front of the picture of the god in the main temple of the fair ground. But there are crowds of people on the square where the eating shops and the booths for the sale of all kinds of bright-colored materials and ribbons have been erected, and where the liquor sellers and the men who rent tobacco pipes are to be found, and especially on the meadow which is several acres large where the gamblers assemble. (Plate LVI). For ten days from early in the morning until late in the afternoon a Chinese theater group performs on a Chinese stage. The Tu ren community makes possible these performances through local assessments and through half-voluntary contributions of the wealthier populace, as is the case with Chinese festivities, and the individual spectator need not pay admission. The part of the theater where the audience gathers is not marked off specially from the rest of the fair grounds. People can come and go as they please, can set up a tent to protect themselves from the sun, or bring chairs and tables. The wives of the more well-to-do, especially the Chinese women who attend the festival view the performance from their private carriages whose large sun roofs cut off the view even more than the largest hats of ladies on European race tracks. The stage is built of tiles with an arched roof, closed on three sides and - exactly as in China proper - is next to the main temple, as though it were a part of it. The stage faces the entrance to the temple, for the Eastern Asiatic is of the opinion that theatrical performances are particularly meritorious and pleasing to the gods, and that therefore the stage must be placed so that the gods can watch the performance. For in Tibet today theatrical performances are a part of the cult - as we saw in the last chapter - and this is the way it was in former times in China. Today, however, the connection is somewhat external. The Chinese theater has for a long time also presented secular plays, pranks and love dramas, and is by no means satisfied as are present-day Tibetan plays, merely with the presentation of horrible images of the gods which, according to the priests, will punish mankind unless they are appeased with gifts and assessments of all kinds.

527 563 563 527 545 [556] [782]

A Tibetan incarnation, an old cozy-looking holy man with a nice pot-belly, who came from a monastery not far from Wei yüan ou, seemed to think there was no harm in sitting for days on end in front of the theater on the open meadow where the festival was held.

N.W. China AFIJ
Kalmyk

summer with the Mongols. The holy man came riding up early in the morning, accompanied by three akkas, and for many hours he read prayers, invocations and exorcisms in the Mongol's yurt. When he departed all the members of the family humbly kissed the hem of his garment and the three akkas followed him with a yak and 28 sheep. - Indeed, summer resorts prove lucrative for the holy men! 563 792

In our little group it was also a day of prayer and sacrifice. Lao Sung who had recovered along with the rest of us from his illness up at the Tschürnong redeemed a pledge today. He had bought the sheep which he had promised the gods for his recovery. He built an altar of earth and stones behind the tent and before it he sang his daily invocation: 782 539

Lama la stiapsumdschiū
Songrdyi la stiapsumdschiū
Tschu la stiapsumdschiū
Ginden la stiapsumdschiū
Guntschok sum la stiapsumdschiū
Yidam tschüngkordye
Lha tsok kordang dye ba
mam la ptscha tsalo-o
- - - - - - - - - - - -
- - - - - - - - - - - -

If he spoke very rapidly he could say the entire prayer in twenty minutes. (2) Thereupon he burned thuja leaves together with cow

2. The beginning of the prayer btsoktschito... and the supplication to the sGrolma. Every little lama novice and every layman or "black man" (Tibetan: mi nag) knows this prayer by heart and is supposed to repeat it if possible 21 times a day. The above lines roughly translated are: I implore all the lamas, /339/ I implore all the priests, I implore all the deities, I pray to all that is holy. I beseech the trinity of the gods. I kowtow in the dust before the lord of the tutelary gods, before the assembly of the gods, all the holy ones and their pupils...

dung. /339/ Meanwhile the slaughtering of the sheep was undertaken. It was first consecrated according to the Tibetan rite and then killed according to Mohammedan rites. While Lao Sung was still praying, Lao Tscheng brought burning cedar leaves on our serving ladle and exposed the animal to smoke with these; according to his own words, 782

782 he purified the animal. Then the horns and ears were sprinkled with water until the animal shook itself, a sign that the gods accepted it as a sacrifice. Then it was handed over to the Mohammedans. To complete the offering, the Fan tse Me threw clotted scraps of blood into the air with the ladle when the animal was being dismembered. If I had not had any Mohammedans with me, the men from Kue de would have killed the animal according to the Tibetan custom, they would have slowly strangled it with a rope pulled over its nostrils. When the animal was cut up, it did not take long before the sacrificial lamb was converted into blood sausages and sausages for frying.

782 264 It was dark when the meal was served. A ewer of horse-milk brandy had been bought in the neighboring yurt for the occasion. The sky had become more and more overcast, there was only a little light from the resinous cedar wood, and in numerous tents and yurts in the valley friendly fires beckoned. When we had dined Tsch'eng got up and gave a speech, using many high-flown words and similes, and saying that Sung had now paid his wether and that now no one could accuse him of having infected us with his disease up in the highlands. Then the men sang their melodious songs into the night. 782 539 They sang melancholy Mongolian songs and light Tibetan couplets:

"Aláchimo! Maiden!
Like a chain of gold stretched across a river from yonder shore,
Like a chain of gold stretched across a river from the hither side,
Like a bridge with golden arches, heaven has united us with cords of gold." (1)

1. In the dialect of the Koko Nor Tibetans:
Tschü par re sege re
Tso tschü re sege re
Sang song be re se sa tsu tsa re
Li dyen dyi sege tenn da re.

or, a song teasing his beloved:

"Aláchimo! Maiden!
I have a cap of fox fur and a cap of lamb's wool.
If I do not wear the fox fur cap but the lamb's wool cap
I am just as happy.
I have a long sword and I have a short sword.
Whether I wear the long sword or the short sword in my belt,

[text continues on p. 569]

Kalmyk

I am equally happy.
Once I had a lady love, and now I have a new lady love. 782 539
I love them both equally well!"

From time to time came an answering long drawn-out trill of a shrill vibration from a reed pipe from some far-off yurt. In between there was the sudden meowing lament of a /340/ wolf from up on the heights. The chorus of dogs in the valley became wild and answered with harsh barks. Nor was the answer to the strong east wind long in coming. At midnight it began to rain and that put an end to our feast to the gods.

But Sung's sacrifice of a sheep was not yet considered adequate. 782 789
Eight akkas of the Gelugba sect were requested to exorcise all evil and remove it from us through prayer. Before they arrived eight smonlam hkor, cone-shaped figures 10 centimeters high and a yidam (tutelary god), a triangular pyramid, were kneaded out of tsamba dough. Twenty pounds of tsamba were required. Three white solar disks made of butter were stuck to the front of the yidam and the dough for it was colored red so that it looked like bloody meat. The smonlam were white and were finished off by being smeared with butter. When these things were made, a dorma (gtorma) 25 centimeters high was fashioned from dough. It was a slender, three-sided object with notched edges resembling flames and produced by means of a thread (see Fig. 20 and Plate LI).

When the akkas appeared at daybreak, the smonlam hkor with their yidam were placed on a chest to the rear of the tent. The dorma was placed on a rush mat in a corner on the floor. The eight priests read the smonlam prayers all day long, until twelve o'clock at night, to the accompaniment of cymbals and drums, and my Buddhists repeatedly kowtowed and threw barley and spirits over the yidam. On the second day the white tsamba-smonlam were burned upon the altar, together with thuja leaves. The red yidam was divided up among everyone and eaten. The dorma was now carefully lifted up and carried in solemn procession around the corner of the nearest mountain where Sung meanwhile had lit a large fire. When the procession arrived there everyone began to yell wildly and shoot off their guns, and after three vigorous exclamations of "Pfui!" on the part of the priests, Tsch'eng threw the dorma into the blazing fire. Now all the lay people shot their guns into the fire a few times, then everyone quickly ran back to the camp site and the monks were each given a khádar and silver, according to their rank and dignity, because they had rid us of all disease-bringing agents and evil

776

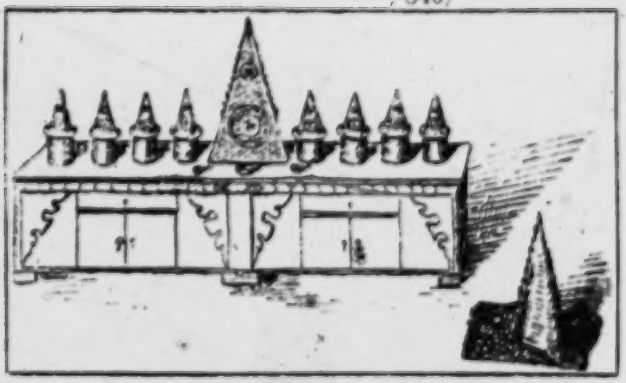

Fig. 20. Sacrificial table with Yidam, Smonlam hkor and gTorma (made of tsamba dough and butter).

782 789 influences (in Chinese the ceremony is called: sung gui, in Tibetan: dorma p'en). (1)

1. Rockhill has already described the end of this ceremony in his Land of the Lamas, pp. 113 and 114. From wealthy Tibetans the priests /341/ demand 50 and more pounds to make the tsamba figures. This offering is carried out once a year mostly at New Year, by each family. In Southeast Tibet a bullock's head of tsamba is also usually placed beside the gtorma (probably to represent Yama). There the bullock's head and gtorma are brought to the fire amid the shooting of guns; at the Chinese frontier "crackers" are shot off. In both places cries of "Pfui" are uttered during the procession.

137 /341/ In the woods of Schang and among the Rengan Fan tse I met for the first time the green da hoang (Chinese), literally: the great yellowness, namely, rhubarb, the mother-plant of our well-known and trusty home remedy. The flower clusters were at this time, the beginning of July, more than 2 meters and in some cases 3 meters tall and covered with pinkish blossoms. The leaves which were deeply slit and tapered off into pointed lobes, had red-speckled stems. Old plants spread their thick foliage over several square meters of ground and from the tangle of leaves which was two-thirds of a meter high and often looked like a bush, arose individual slender, tall flower clusters. If one digs out these stalks one finds rhizomes up to the size of a bullock head, and in with the roots there are still clusters of young, smaller plants.

The plant grows between thickets and limestone rocks and prefers damp places of wooded areas. But I also found it in moist places of sandstone slopes covered only with grass. It is found up to 4,100 meters. The lowest border of its common habitat is 2,800 meters. (1)

1. A few days before my departure from Hsining I received a letter from Professor Tschirch from the Pharmacological Institute of the University of Bern. He called my attention to the fact that there is still uncertainty about the origin of the common medicinal plant, rhubarb, from a botanical as well as a geographical point of view. He asked me to send him bulbs and

643 291 that it hung down below their knees. They all had silver-mounted swords made in Lhasa in their belts and almost all of them wore red and blue mandarin buttons and pheasant feathers on their Manchu hats. I served my guests tea, tsamba and mutton in my tent. My Mohammedan Han had to act as my interpreter, for the dsassak pretended he understood only Mongolian. After the customary amenities, he came out with the purpose of his visit. He had heard that I had come through infected areas and he was afraid his yak herds would become infected if I traveled farther up the valley with my caravan. He also implored me not to hunt in his territory. He and his people had taken a vow not to harm any wild animal for two years. They hoped in this way to win the favor of the local spirits. For this he promised to give me barley and wheat flour inexpensively in his village and to transport a part of my collections back to Hsining fu. After his call, the dsassak rode off over the stony path, to his home in the plain 40 kilometers distant.

563 342 574 I had obviously gained prestige through the dsassak's visit. He had been accompanied by a young Mongol named Dyoba Dyentsen (Plate LXXVI) whose yurt stood only a short hour's distance from me and who now invited me to visit him, as did his neighbor. I started my round of visits at the yurt of my nearest neighbor. As I approached, the whole family came bursting out of their round, dirty-white beehive. We greeted each other before the door very deliberately with low bows, until finally I, as the first person, stumbled through the wide open narrow, double-winged wooden door common to all Mongol yurts, and over the high threshold into the dim room. Here the wife and the grown daughter served me a peaked mound of tsamba decorated with flecks of butter and arranged with loving care on gaily-trimmed wooden plates and bowls. I was also given first-class tschürra, the skin of milk which had been carefully gathered, and the tail piece of the most-recently killed mutton, with the bristly tail attached, - in short, I was entertained like a high-ranking lama. [576] When I was ready to leave, all the members of the family dashed out of the yurt, then came my servants, and I had to be the last to leave the tent-house. This is ancient Mongolian etiquette.

563 437 [772] But I was even more elaborately received by Dyoba Dyentsen. He was /347/ a young unmarried man in his late twenties, who was able to read and write Mongolian and Tibetan. He was a wanda, a priest who had not taken his examination, and the son of a family who, according to local standards, was considered wealthy. When I rode to his yurt, a sheep was killed in my honor. Dyoba had a

1 [ie., of Barun.-Anal.:ed]

are eating their mutton and kyang meat raw, and they knead their flour with cold water instead of with butter tea. Even these easily satisfied people find that such a diet lies heavy in their stomachs. 000

On the evening of the second day, therefore, Tsch'eng laid a huge wild-yak horn on a large pile of white quartz fragments which he had gathered, blew his shell horn and burned fragrant cedar leaves which he had carefully dried and carried with him. Everyone fell to the ground /14/ and prayed to the spirits for clear weather and dry dung that would enable them to have better food. 782

And behold, the local spirit recognized and delighted in the unexpected fragrance; soon after it cleared. Soon all the discomforts of the weather, all teeth-chattering during the two wet days were forgotten when, the following morning, in bright sunshine we were able to cross the last flat pass to the "sea of stars" (Plate V). My grumbling companions of the night before had again become the singing choir of old. The Kuenlun song of my Hsining people sounded gaily across the source waters of the Hwang Ho:

"Whether I stand at the source of the Hwang Ho,
Or pitch my tent on the Kuenlun,
Even to the ends of the earth
I am thine, beloved, and think of thee."

"Hayä!", an exclamation of awe came from the row of riders as we stood on the top of this pass. Tschang who had passed through here in the escort of a Manchu official who was traveling to K'am, explained the region to those who were seeing it for the first time:

"Look, down there where the sun sparkles in all those pools, that is 'skarma t'and' (the plain of stars); my East Tatar (1) master told

1. The Hsining people always referred to the Manchu as dung da da (East Tatar).

me that in our language of the middle garden (2) the place is called

2. In the Hsining dialect tschung yüan was China.

Sing su h'ai (sea of stars).

There in the southwestern part of this plain is the snow-covered mountain of Kuenlun Shan; that is where the spirit of the Yellow River lives.

On the low hill that extends from the east way into the plain of stars, the huge heap of stones, the Obo, do you see it, do you not

/Chinese Moslems (Dungans)/

4. Customs

a. Religious rites

S N 563 779 782 [793] According to religious rules, the Moslems are supposed to pray five times daily (sunrise, noon, afternoon, sunset and midnight), facing in the direction of Mecca. Few of the Chinese Moslems besides the Mullahs and Ahungs adhere strictly, but pray only once or twice a day. To be valid, prayers should be performed in the mosque, but those who find it impossible to go to the mosques may pray wherever they are. The call to prayer (adhan) is made by the Ahung, or religious leader, and the believers join in saying the adhan. Daily noon prayer is popular, and the Friday service is the most fully attended.

S N [562] Public worship cannot be performed by fewer than four persons. Women may not attend the mosques where the men pray. In some places, women have their own mosques and women Ahung to direct the prayers and Friday services. Women always worship as individuals and not as a congregation, though there may be a number of women gathered together.

S 563 779 782 The Moslems must be clean when they attend any religious ceremony. Hands and face must be washed, and bathing before worship is common. For this reason all mosques of importance have bathing places annexed. The Moslem becomes unclean by touching such objects as dishes containing pork or any meat not killed according to ritual, pigs, dogs, wine or excrement.

S N 563 797 785 779 [203] The thirty-day fast of Ramadan is fairly strictly observed. During this period one is not to eat between sunrise and sunset, and such things as smoking, drinking and sexual contact are also forbidden. In many places, a messenger goes about the Moslem quarters calling out the times for observing or breaking the fast, lest someone oversleep or fail to prepare and eat the necessary food before daybreak. The end of the fast is celebrated by a feast.

The aged, ill, insane, travelers, women who are pregnant, menstruating or nursing, persons doing heavy labor or whose lives are in danger are excused from the fast, but if or when they are able they must make up for it. The purpose of the fast is to help the believers maintain pure and pious lives. Fasting is considered meritorious at other times too, except on Friday, Saturday and Sunday.

b. Naming

S N 563 553 852 S N [788] Within seven days after the birth of a child, he must be given a Koranic name, or Ching-ming (religious name). For this occasion a feast is prepared, and the poor are fed. If the child is a male and the family wealthy enough, two sheep are killed for the occasion. If the child is a girl, only one sheep is killed. To arrive at the name, the father holds the child with its face toward Mecca and repeats a prayer in one ear of the child, then

/Chinese Moslems (Dungans)/

S N 563 852 [553] [788] the other. Then he turns over any seven pages of the Koran, and from the seventh word of the seventh line of the seventh page, takes the name. When a male child reaches his seventh birthday he is circumcised and taught to worship.

c. Marriage

S N 563 582 582 [791] The marriage customs of the Chinese Moslems, with the exception of the wedding ceremony itself, are the same as those of the Chinese. The bridegroom is accompanied by his father to the bride's home, where the ceremony is performed. The Ahung reads from the Koran, in a manner similar to that of the Christian marriage service, then asks the couple whether they agree to the union.

N * 563 585 In Koko Nor (Chinghai) the bride is customarily covered with a piece of red cloth after the ceremony, then lifted by her uncle or brother into the sedan chair and sent to the groom's home. Upon arriving there she is lifted out by her relatives. She wears a veil on the first day and hides in her chamber while relatives and guests sing, dance and feast in celebration. On the second day she receives guests, bowing to each one. Meanwhile the guests present their gifts and congratulations.

S N 563 582 585 [783] ● Exogamic marriage is permissable to the extent that a man may marry a Han Chinese woman, who is supposed by marriage to become a Moslem. Before such a marriage the girl must submit to elaborate purification ceremonies to cleanse her from the defilement of her own home. The Ahung officiates at the wedding and the Chinese custom of worshiping heaven and earth is not performed.

d. Funeral and burial

S N 563 764 The funeral customs of the Chinese Moslems are more distinct from those of the Chinese. The dead body is washed ceremoniously by religious leaders from the mosque, who take the garments of the deceased for themselves. The body is then swashed in white bandages, each limb being bandaged separately. Correct performance of this rite is very important. Well-to-do people sprinkle incense on the cloth used for bandages. The wealthy also place large quantities of musk and camphor in the grave. The corpse is placed upon a board under which are the bands necessary for lowering it into the grave, then covered with a bottomless coffin for the trip to the cemetery. The coffin is never interred. The corpse is placed in the grave with head to the north, feet to the south and face toward Mecca.

When the deceased is a woman, only members of the family may look on when the coffin is removed, and only blood relatives, preferably sons, may descend into the grave to arrange the body.

S N 563 763 764 There are elaborate instructions concerning death. Rituals include the recitation of prayers as death approaches, the

779 are precisely stated in the Koran, it is certain that they were
788 well established before Muhammad's death. Each consists of a
782 fixed number of bowings (rak'ah), the bowing itself consisting of seven movements with their appropriate recitations: (1) the recitation of the phrase "Allahu akbar" (God is most Great) with the hands open on each side of the face; (2) the recitation of the Fatihah or opening sura of the Koran followed by another passage or passages, while standing upright; (3) bowing from the hips; (4) straightening up; (5) gliding to the knees and a first prostration with the face to the ground; (6) sitting back on the haunches; (7) a second prostration.

The set times are at daybreak, fajr (two rak'ahs); noon, zuhr (four rak'ahs); midafternoon, asr (four rak'ahs); after sunset, maghrib (three rak'ahs), and in the early part of the night, isha (four rak'ahs). At these times, prayers should be said and the ritual observed by every believer wherever he may be. By preference they should be performed congregationally in a masjid (mosque) under the leadership of an imam. The imam and the worshippers face toward the qibla, the prescribed direction, which is toward Mecca.

The Koran also mentions the noon prayer on Friday as the principal congregational prayer of the week, and enjoins the suspension of work during its performance. At this time a special ceremony (kutba) is delivered, usually by the imam. (The deliverer of this ceremony is called the khatib. He is not necessarily the imam, but may be one of the leaders in the community.)

779 Tahara, the ablution before prayer, is strictly enjoined and
782 the ritual is defined in Sura v, v. 9: "When you rise up to
783 prayer, wash your face, and your hands to the elbows and wipe your heads and your feet to the ankles." This is the lesser ablution, to be performed before every prayer. The greater ablution is a complete washing of the body, which should be done before the Friday service or special holiday service, and after becoming unclean (incidents of uncleanliness are defined specifically).

779 b. Alms (Zakat). With the observance of prayer the Koran
735 regularly enjoins the giving of alms (zakat) as the outward sign
431 of piety and as a means of salvation. A distinction is made between sadaqat, which is a free-will offering, and zakat, the obligatory contribution, presumably at the rate of one-fortieth of the annual revenue in money or kind. The zakat is to be exacted from all who enter into the brotherhood of Islam; but it is not a tax. The objectives on which the revenue from zakat is to be spent are defined (in Sura ix, v. 60) as being: the poor, the needy, those employed in its collection, debtors, wayfarers, and the "Way of God."

779 c. Fasting (Saum). Fasting, according to Islam, is primarily a
785 spiritual discipline. Satisfying one's thirst and hunger are considered great temptations, and a chance is given to man to overcome his temptation.

[796] Moslems are required to fast for twenty-nine or thirty days of the month of Ramadan, the ninth month of the lunar year. Fasting begins at the appearance of the moon of Ramadan and ends on the appearance of the new moon of Shawwal (the tenth month). Fasting is to be observed with complete abstinence from food and drink during the hours of daylight. The fast is broken after sunset and during the hours of the night. The last meal should be taken before sunrise. The Koran and the Hadith make special mention of people who are exempted from fasting. The Koran mentions those who are sick and those on a journey. This is not an absolute exemption, as the sick man and the traveler are required to fast later, when the sickness has gone or the journey has ended. Hadith also gives extension or exemption to certain classes of people who, because of some physical disability or the performance of heavy labor, are not able to fast. In addition, fasting is included among the expiations for various offenses.

779 d. Pilgrimage (Hajj). As an institution the hajj existed from a
788 very remote antiquity, before the advent of Islam. The sacredness of Mecca was established in the Koran by Muhammad and given strong connection with the names of Abraham and Ishmael.

[105] In the first and second years of the Hejira (Muhammad's exodus from Mecca to Medina, 622-23 A.D.) full directions relating to the hajj were given by the Prophet. The traditional days in Dhu'l Hijja (the twelfth month) and the traditional ceremonies: going in circuit round the Kaaba; running between the two small eminences of Safa and Marwa in the vicinity; assembling on the ninth day of the month at the hill of Ararat; offering sacrifices of sheep and camels at Mina on the way back to Mecca—all were retained and prescribed in the Koran. Other traditional usages, including the kissing of the Black Stone set in the walls of the Kaaba, and the stoning of the pillars representing the Devil in the vicinty of Mina, though not mentioned explicitly, were observed by Muhammad in his pilgrimages and so were incorporated into the Moslem rite.

[783] As before prayer the worshipper must be ritually clean, so also before making the pilgrimage the worshipper must be in a
[302] state of ritual consecration (ihram). This involves shaving the
[292] head and discarding ordinary clothing before entering the territory of Mecca, putting on instead two plain sheets and leaving the face and the head uncovered.

Although the pilgrimage constitutes a religious obligation for every Moslem, the obligation is explicitly limited by possession

front towards the Chinese and the rest of the world, and in this unity (as also in the case of the unity of the Catholic Church) lies their amazing strength today. I have heard the Chinese compare both Islam and the Catholic Church to vast world-wide secret societies bound together for purposes of mutual benefit and protection against the rest of mankind. At present the Moslems of North West China, though unsupported by the Treaties of any Foreign Powers, and in spite of the terrible set back after the rebellion, have acquired by their own efforts a privileged and independent position, and indeed are now the principal power in the province.

The various sects and classes seem to differ a good deal in the strictness of their observance of the tenets of their religion. Abstention from pork seems universal, and many abstain also from wine, opium, and even tobacco. The Ramadan fast is carefully kept by the upper classes, but not so strictly by the lower. Every Moslem appears to have an Arabic as well as a Chinese name, but a knowledge of the former language is confined to a few Ahongs and scholars. The Koran is read in Arabic. All classes hold keenly to their religion, and their religious centres are visited from time to time by priests from Turkey, Arabia, and Central Asia. They keep aloof from the Chinese, whom they consider unclean, and do not usually frequent the Government schools. They occasionally take Chinese wives, but the latter have to be cleansed before marriage externally and internally by a course of baths and water drinking. The veiling of their women is not, I believe, practised in other parts of China, but in Kansu we saw veiled women on two or three occasions, each time travelling on the road. The superiority of the Moslems over the Chinese in regard to housing, food, personal cleanliness, and general standard of living is marked, and their spotlessly clean and well-kept mosques (*Lipai Ssu*) are in striking contrast to the dirty and dilapidated temples of the Chinese. These mosques are Chinese-style buildings, and in this respect as in most others they have created a Chinese Mahomedan Church. Though the magistrates in the Mahomedan districts are Chinese, they usually refrain from any interference with the Mahomedans, who appear to manage their own affairs through a sort of local government.

3:Cable & French M-5 (1926) 1927

that two hundred thousand people had perished in the disaster.

Before reaching Lanchow we crossed a wide river by means of a well-built and handsome bridge, which had also been constructed with famine relief funds, and which now provided the means for saving scores of lives, a heavy yearly toll having hitherto been exacted by the treacherous mountain torrent.

On leaving the town of Tsingningchow we travelled for seven days before touching another Mission station —a tremendous gap in the chain, so it seemed to us in those days, unused as we were then to the wider horizons of the Great North-West. Half-way stood the little market-town of Anting, to which Mission authorities had directed our attention as the possible goal of our quest; but as we walked through its streets with every perception alert, we felt the firm conviction that our appointed destination lay still farther ahead.

One of our litter-men was a Moslem—proud and cantankerous, as all of his kind. A somewhat grimy white, woollen cap was the badge of his belief, and at brief intervals he would raise his head and sing a wild snatch of the 'Song of the Wandering Dove,' a weird melody greatly loved by the men of his race, and sung by them in eulogy of home when on a journey, the barbaric intervals of which produced a most dramatic effect in those lonely gullies. An altercation frequently arose between this man and the others, on the subject of the choice between Moslem or Gentile inns, the former being distinguished by the painted sign of a teapot, and the mystic words: 'KIAO MEN' (member of the assembly). The boasted 'cleanliness' of the Moslem inn is, however, not visible to the naked eye, but manifests itself otherwise, namely, in endless bickerings with the travellers on matters of purification connected

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

with material or cooking utensils. The suspicious atmosphere created was always most irksome to us, feeling as we did that our cleanliness much exceeded the demands made by these self-righteous Pharisees.

The *kang* on which we slept was of a different construction from those we had met with elsewhere, this being due to the fact that the only fuel obtainable on this journey is animal droppings. These *kangs* were covered with movable boards, under which a hollow space is left for piling up the dry horse-dung, which, once set alight, will smoulder for hours. The fumes are laden with a nauseating smell, which so permeates the traveller's bedding and clothing as to be noticeable for weeks. These same fumes produce an extraordinary effect on the woodwork of the room, which rapidly gains a surface equal in colour and polish to the best old oak. The clothes of the people had now changed from indigo-dyed cotton to undyed sheep's wool. In every hamlet the older men sat in the sun spinning yarn, or knitting socks for themselves on two needles; this is accomplished by means of a diagonal down the centre of the foot and a seam at the back. The better-dressed boys wore garments of white felt. No seam was necessary in the whole coat, as it was shaped in the making to the size and form of the wearer. The felt is home-made, and many times we saw men treading out the macerated wool which is moulded to the shape required and dried in the sun. Shoes, coats and hats are made in this way, and whole villages are given up to the industry.

Lanchow, the capital of Kansu, is reached through a maze of narrow gullies. It is beautifully situated on the swift-flowing Yellow River, and is backed by the Blue Lotus Hills. Its streets are wide and crowded, and its population cosmopolitan. A splendid iron

784

784 AVOIDANCE AND TABOO--practices reflecting impulses to escape from fear or anxiety; techniques for avoiding malevolent spirits (e.g., flight, disguise, deception, disparagement); concept of taboo; imposition and removal of taboos; prevalent types of taboos (e.g., food taboos, property taboos, status taboos, word and name taboos, totemic taboos, sex taboos, reproductive taboos, therapeutic taboos, mortuary taboos); systematization of taboos; general discussion of taboos; list of taboos; specific taboos not classifiable elsewhere; supernatural punishments for violations of taboos and other offenses; etc. Since taboos commonly represent the negative aspects of cultural norms, information on taboos may be found under many categories, only a few of which are indicated in the cross-references below.

within the railings in the mosque and read the Koran, wear white or green turbans, the leader's turban being more elaborate, with a tassel hanging down the back. Common people wear pointed octagonal caps of white, red or black, the color distinguishing the sect to which they belong.

Some women dress differently from the Chinese women, and wear a sort of turban hat. Ordinarily their dresses are in dark colors, but they may wear gay colors for festivals. According to ancient custom they must veil their faces in the presence of men, but this custom was abandoned long ago.

In cities and towns where the Chinese Moslems dress exactly like the Han Chinese, the men can be distinguished by their physical build and features, but the women are not easily recognized.

d. Occupation

Most Chinese Moslems are business men and traders, and most of them also farm. As farmers they are not equal to the Han Chinese, but they excel in dealing with cattle and everywhere they monopolize the beef and sheep trade. They are also merchants, bakers, workers in jade, money changers, and inn and restaurant keepers.

Outside a Moslem-owned resaurant there hangs a sign displaying a water pot surmounted by a dress hat, and two Chinese characters, Hui-hui. The pot signifies ceremonial cleanliness and guarantees that no pork is used. The hat indicates respect to customers. There are also two Chinese characters on the tea pot, meaning "Pure and True."

Formerly their religion forebade the Moslems to become money-lenders, barbers, fortune-tellers, actors, or servants or apprentices to the Chinese. How strictly the people now observe this taboo is not known.

3. Social values

a. Group spirit

The we-feeling is very strong among the Dungans. The whole group will sacrifice time and money for an individual oppressed by outsiders, and fight for him until justice prevails. Endowed with a courageous nature, the Moslem man is willing to sacrifice his life for the welfare of the group.

This spirit is shown by overt expression in daily social relationships. The Chinese title Lao-piao (old cousin) is applied even to a stranger of the same religious faith. The word old signifies respect; cousin signifies blood relationship. Hence Lao-piao indicates a feeling of closeness toward all members of the faith. Another expression of this feeling is found in the saying that "every Moslem in the world belongs to the same family."

b. Concept of charity

Many of the values in Chinese Moslem society are based upon

front towards the Chinese and the rest of the world, and in this unity (as also in the case of the unity of the Catholic Church) lies their amazing strength today. I have heard the Chinese compare both Islam and the Catholic Church to vast world-wide secret societies bound together for purposes of mutual benefit and protection against the rest of mankind. At present the Moslems of North West China, though unsupported by the Treaties of any Foreign Powers, and in spite of the terrible set back after the rebellion, have acquired by their own efforts a privileged and independent position, and indeed are now the principal power in the province.

The various sects and classes seem to differ a good deal in the strictness of their observance of the tenets of their religion. Abstention from pork seems universal, and many abstain also from wine, opium, and even tobacco. The Ramadan fast is carefully kept by the upper classes, but not so strictly by the lower. Every Moslem appears to have an Arabic as well as a Chinese name, but a knowledge of the former language is confined to a few Ahongs and scholars. The Koran is read in Arabic. All classes hold keenly to their religion, and their religious centres are visited from time to time by priests from Turkey, Arabia, and Central Asia. They keep aloof from the Chinese, whom they consider unclean, and do not usually frequent the Government schools. They occasionally take Chinese wives, but the latter have to be cleansed before marriage externally and internally by a course of baths and water drinking. The veiling of their women is not, I believe, practised in other parts of China, but in Kansu we saw veiled women on two or three occasions, each time travelling on the road. The superiority of the Moslems over the Chinese in regard to housing, food, personal cleanliness, and general standard of living is marked, and their spotlessly clean and well-kept mosques (*Lipai Ssu*) are in striking contrast to the dirty and dilapidated temples of the Chinese. These mosques are Chinese-style buildings, and in this respect as in most others they have created a Chinese Mahomedan Church. Though the magistrates in the Mahomedan districts are Chinese, they usually refrain from any interference with the Mahomedans, who appear to manage their own affairs through a sort of local government.

785

785 ASCETICISM--practices reflecting tendencies of self-abasement or self-torture; mortification of the flesh (e.g., flagellation, hooks-winging, bed of spikes); fasting; sexual renunciation (e.g., continence); renunciation of comforts (e.g., vows of poverty, wearing sackcloth); abandonment of worldly affairs (e.g., becoming a beggar or hermit); etc. See also:

Personality	15	Suicide	762
Control of hunger	281	Ascetics	792
Mutilation	304	Idealization of continence and chastity	830

and a certain degree of reproach. On the other hand, prompt observance of the rites at least creates a feeling of fellowship. It is primarily a personal matter, but nevertheless, the entire community responds, just as in the case of the spring planting, and for the same reason. Each finds comradeship in working with the others in whatever concerns the welfare of the community.

There are farm villages in which live only Chinese Moslems. Physically, the community structure is similar to a Chinese village. These Moslem villagers live in the same kind of houses and do the same kind of farming. The streets of the villages also have a similar arrangement. But the Moslem people's religious-communal life is distinctively different from that of a Chinese village.

In every Moslem village there is a small public building that is used as a mosque. In this building the children of the village gather at regular periods to receive religious instruction. They learn the Arabic alphabet and phonetics so that they are able to read the sounds of necessary prayers and religious formulas, even if they cannot understand them. The Moslems are very faithful in their observance of the fast of Ramadan. During the fast, they eat nothing between sunrise and sunset. At night they eat a communal feast. The community fires blaze all night and people call and shout to each other. Before darkness falls, pious bearded men say their prayers in public places. One or two of the elders may preach the points of theology, quoting the Koran in oddly mutilated Arabic. On such an occasion the Moslems refer to themselves as "we" and to the Chinese in the nearby villages as "they" As in the case of the Chinese temple, the building and upkeep of the mosque is a communal matter. Assessments are made and cooperative effort is initiated; and, of course, as a project, it rivals and competes with the Chinese temple.

The Moslem villages are comparatively more organized, or show more community spirit, than the Chinese villages. Like their Chinese counterparts, the Moslem villages are administered by their village elders who always intervene in the meager relations between the villagers and the local or county government. The county government makes no distinction between Chinese and Chinese Moslem villages. The two types of villages have almost no relations with each other. There is always antagonism between Chinese and Moslem villages. The two peoples have been and still are mutually practicing segregation. Factors which are responsible for the antagonism or segregation are mostly religious habits and ideals. In addition, while the Chinese have a higher population gain, the Moslems are economically more successful. Both of these facts may be sources of jealousy.

However, in numerous economic activities, there is non-admitted cooperation or division of labor between the Chinese and the Chinese Moslems. This has held true especially for Moslem enterprise and Chinese skill.

/Chinese Moslems (Dungans)/

4. Customs

a. Religious rites

According to religious rules, the Moslems are supposed to pray five times daily (sunrise, noon, afternoon, sunset and midnight), facing in the direction of Mecca. Few of the Chinese Moslems besides the Mullahs and Ahungs adhere strictly, but pray only once or twice a day. To be valid, prayers should be performed in the mosque, but those who find it impossible to go to the mosques may pray wherever they are. The call to prayer (adhan) is made by the Ahung, or religious leader, and the believers join in saying the adhan. Daily noon prayer is popular, and the Friday service is the most fully attended.

Public worship cannot be performed by fewer than four persons. Women may not attend the mosques where the men pray. In some places, women have their own mosques and women Ahung to direct the prayers and Friday services. Women always worship as individuals and not as a congregation, though there may be a number of women gathered together.

The Moslems must be clean when they attend any religious ceremony. Hands and face must be washed, and bathing before worship is common. For this reason all mosques of importance have bathing places annexed. The Moslem becomes unclean by touching such objects as dishes containing pork or any meat not killed according to ritual, pigs, dogs, wine or excrement.

The thirty-day fast of Ramadan is fairly strictly observed. During this period one is not to eat between sunrise and sunset, and such things as smoking, drinking and sexual contact are also forbidden. In many places, a messenger goes about the Moslem quarters calling out the times for observing or breaking the fast, lest someone oversleep or fail to prepare and eat the necessary food before daybreak. The end of the fast is celebrated by a feast.

The aged, ill, insane, travelers, women who are pregnant, menstruating or nursing, persons doing heavy labor or whose lives are in danger are excused from the fast, but if or when they are able they must make up for it. The purpose of the fast is to help the believers maintain pure and pious lives. Fasting is considered meritorious at other times too, except on Friday, Saturday and Sunday.

b. Naming

Within seven days after the birth of a child, he must be given a Koranic name, or Ching-ming (religious name). For this occasion a feast is prepared, and the poor are fed. If the child is a male and the family wealthy enough, two sheep are killed for the occasion. If the child is a girl, only one sheep is killed. To arrive at the name, the father holds the child with its face toward Mecca and repeats a prayer in one ear of the child, then

c. Fasting (Sawm). Fasting, according to Islam, is primarily a spiritual discipline. Satisfying one's thirst and hunger are considered great temptations, and a chance is given to man to overcome his temptation.

Moslems are required to fast for twenty-nine or thirty days of the month of Ramadan, the ninth month of the lunar year. Fasting begins at the appearance of the moon of Ramadan and ends on the appearance of the new moon of Shawwal (the tenth month). Fasting is to be observed with complete abstinence from food and drink during the hours of daylight. The fast is broken after sunset and during the hours of the night. The last meal should be taken before sunrise. The Koran and the Hadith make special mention of people who are exempted from fasting. The Koran mentions those who are sick and those on a journey. This is not an absolute exemption, as the sick man and the traveler are required to fast later, when the sickness has gone or the journey has ended. Hadith also gives extension or exemption to certain classes of people who, because of some physical disability or the performance of heavy labor, are not able to fast. In addition, fasting is included among the expiations for various offenses.

d. Pilgrimage (Hajj). As an institution the hajj existed from a very remote antiquity, before the advent of Islam. The sacredness of Mecca was established in the Koran by Muhammad and given strong connection with the names of Abraham and Ishmael. In the first and second years of the Hejira (Muhammad's exodus from Mecca to Medina, 622-23 A.D.) full directions relating to the hajj were given by the Prophet. The traditional days in Dhu'l Hijja (the twelfth month) and the traditional ceremonies: going in circuit round the Kaaba; running between the two small eminences of Safa and Marwa in the vicinity; assembling on the ninth day of the month at the hill of Ararat; offering sacrifices of sheep and camels at Mina on the way back to Mecca—all were retained and prescribed in the Koran. Other traditional usages, including the kissing of the Black Stone set in the walls of the Kaaba, and the stoning of the pillars representing the Devil in the vicinty of Mina, though not mentioned explicitly, were observed by Muhammad in his pilgrimages and so were incorporated into the Moslem rite.

As before prayer the worshipper must be ritually clean, so also before making the pilgrimage the worshipper must be in a state of ritual consecration (ihram). This involves shaving the head and discarding ordinary clothing before entering the territory of Mecca, putting on instead two plain sheets and leaving the face and the head uncovered.

Although the pilgrimage constitutes a religious obligation for every Moslem, the obligation is explicitly limited by possession

/Chinese Moslems/

acter Hui signifying "to return."

The Chinese Moslems live in small, closely knit communities, organized around the mosques. The Moslem community is usually set apart from the general Chinese community. The Moslems may form a whole village, or a certain suburb or section of town. The communities are organized on a local basis and there is no higher religious authority that unites all the communities. The mosques, the religious and social centers of the Moslem communities, are maintained independently.

At least ostensibly, the religious attitude of the Chinese Moslims is characterized by moderation. They make concessions to the ruling power, hoping thus to gain security for person and property. The more capable and resolute of those who enter into government service take part in the ceremonial of the national cult.

The Moslems in the Northwest do not publicly practice their religion, nor do they advertise it. In some cases their mosques are dissimulated, so that they cannot be distinguished easily from other houses in the village. They are quite lax in their observances of the different rituals connected with Islam. The Chinese Moslems do not regularly attend religious services in the mosque. Aside from the ahung (the religious leader of the Chinese Moslem community) and the extremely orthodox people they do not pray five times a day, but once or twice at most. The noon service is the most popular one, and the place of worship is limited to the mosque. The manner of calling for prayer differs in China from that in Western Asia. The Muazzin does not chant the call to prayer. He stands on the roof of the mosque and shouts the invitation to prayer and may strike a special wooden instrument called ta-p'an-tzu. Most Moslems will ignore the worship time if it interferes with their daily business. Except for some minor differences, the prayer ceremony is conducted in a manner similar to that in Western Asia.

Women are not allowed to attend the mosques where the men pray. In some of the larger communities, the women may have a mosque of their own, but in most places they worship individually.

The Friday service draws the best attendance, although certainly not all nor even the majority of believers. On this day the sermon is delivered by the Khatib, a special person, not necessarily a religious leader, elected for the purpose. It is usually in Arabic, and few of those present can understand it.

The Fast of Ramadan is one of the rituals which is observed with a degree of strictness in Moslem communities throughout China. In many places there are special messengers who go about the Moslem quarters calling out the times for observing and breaking the fast. Messengers also go around at night lest

/Chinese Moslems/

any should oversleep and fail to eat the necessary food before daybreak.

The regular practice of Zakat is practically unknown to the Chinese Moslem community. Only during the month of Ramadan, when charity is extended to the poor and donations are given to the ahung are alms given in a form resembling Zakat. There is no fixed amount given and the act itself is purely voluntary. The only form of sadaqa (voluntary alms) given is the sadaqa el-fitr given in the three days of Id el Fitr (the Moslem New Year). These offerings can be made in cash or in goods.

Particularly among the Chinese Moslems of the Northwest the practice of pilgrimage to Mecca was observed. The Hajjis, or those who completed their pilgrimage to Mecca, were highly respected in their communities. Pilgrimage has decreased considerably in the last years. The Hajj organized by the China Islamic Society in 1952 did not reach Mecca; they went as far as Pakistan and returned to Peking, for reasons that were not specified.

Id el-Fitr, the New Year, is the best observed of the different Moslem holidays. It occurs during the first three days of the tenth month. Special services are held in the different Moslem communities, and great feasts are given to celebrate the occasion.

In general the Chinese Moslems do abstain from pork and wine as their religion commands. They will not eat meat that has not been killed in the approved Moslem fashion. Many of the merchants, carters and others who travel carry their own utensils, and often, where there are no Moslem communities, carry their own food so as to avoid food that is prohibited by their religion.

The influence of the general Chinese beliefs on the Moslems has been noted by many, particularly by D'Ollone. Ancestor worship is the core of the non-Moslem Chinese belief. It is not restricted to domestic worship but extends to religious devotion to the graves of the ancestors, which are designed to assure the peace of the deceased and are a scene of devotion every anniversary. The Moslems of the Northwest have been so influenced by these traditions that, in the secrecy of their homes, most of them burn incense in front of the ancestors' tablets. In evidence of this custom, D'Ollone brought back two vases which served the purpose of ancestor worship. Both of these vases belonged to Chinese Moslems, and had Moslem religious inscriptions in Arabic. The practice of pilgrimage to the well kept tombs of the ancestors is also found among the Chinese Moslems of Kansu. Some of the bigger tombs are quite elaborate and include, besides the monuments, a mosque, school halls and lodging places.

3:Cable & French M-5 (1926) 1927

a carillon of nine bells, hanging over the shrine. Simultaneously one catches the monotonous tone of a hollow, wooden drum, shaped like a crab, the beating of which declares, in triple rhythm, that the ultimate issue of earth, matter, and even life itself, is VOID.

'Earth is void! All is void! I am void!' This is the message of the drum to every human heart in that city of unnumbered gods.

The most rigorous asceticism rules the lives of many Kanchow women. Not content with being under a vegetarian vow, as is usually understood, they so fear any subtle indulgence of the appetite, that even onions, garlic, vinegar and red pepper, the necessary condiments to flavour the insipid dough-string diet, are eschewed. During the spring months almost each day sees the recurrence of some festival, which draws the crowds alternately to each temple in the neighbourhood. Theatrical troops move from fair to fair, repeating their performances to the never-failing concourse of village people, whose bullock-carts are parked in a wide semi-circle facing the stage, and in which the women sit the whole day long exposed to the heat of the sun. Most of the younger women and girls adorn themselves for the occasion with paint and powder, until the face is converted into an expressionless mask. Their hair is beautifully dressed and decorated with artificial flowers. Most of the small children are stamped on the forehead, nose, and chin with minute geometrical patterns, traced in red circles.

Just out of earshot of the stage, the food-vendors pitch their stalls, where cooked eatables of all descriptions are on sale. Pork fried and stewed in a thick gravy, is served up in small saucers and eaten with chopsticks, as also fried meat-dumplings, garnished with vinegar and red pepper. A large mould of

3:Cable & French M-5 (1926) 1927

steamed rice containing the fruit of the jujube tree is popular, and dried apricots, macerated in water, are in demand as a cooling drink. Not far off are long tables sheltered by an awning, where men will sit for hours sipping tea and playing cards.

Within the temple buildings the idols are dressed up in gay silks, and each family on arrival presents itself at the various shrines to make obeisance, and burn incense. Thin sheets of yellow paper, on which are inscribed petitions to the gods, are lighted at the shrine lamp, waved in the air, and wafted upwards, the manner and height of ascent indicating the favour or displeasure of the deities. Some of the older women, who have practised asceticism for a lifetime and are prepared for any self-abnegation so that they may in the next incarnation obtain a more auspicious rebirth, perform elaborate rituals with touching devotion.

On such a fête-day all the temple treasures and silken embroideries are on view, as also magnificent peacock-feather screens and umbrellas. The din of voices from vendors and visitors is completely overwhelmed when once the theatrical musicians commence their performance. Cymbals, pipes, and drums sound their loudest, while above them soars the shrill falsetto voice of the stage managers, announcing the details of the performance.

The temple grounds are beautifully kept. The fragrant tree-peony opens its blossoms when the peach and pear trees drop their petals, and all through the summer months a succession of beautiful flowers decorates the fancy landscapes of the temple gardens, miniature lakes and bridges supplying a foreground to sacred mountains arranged on the same small scale. The whole scene, from the turquoise sky, the snow-clad mountain ranges and the gorgeous profusion of flowers,

/The Sedentary Tibetans/

*563 621 [622] [623] [632] [792] [422] There is more rigidity about the village organization. The sedentary Tibetans generally have a formally selected village headman. But again the council of elders has considerable authority. Groups of villages are organized into a larger unit, nor is it uncommon for villages and encampments to be joined together in such a larger unit. A monastery is more apt to have authority over a group of villages than over the strictly nomadic people. However, like the nomads, the sedentary Tibetans give very little recognition to any authority beyond that of the ecclesiastical or lay chief of the "tribe". Ma Ho-t'ien, in his Diary of Travels in the Border Region of Kansu, Chinghai and Tibet makes frequent reference to the inability of the Chinese officials to exert any sort of authority over the border-Tibetans and other sources also record the absence of any effective government beyond the local level.

The village itself represents a very tightly-knit organization, economically and politically, as well as physically. [423] Houses, housesites and the fields belong to the individual families, but the grazing lands and forests are community property. Use of the pastureland is available to all, but the village may place certain restrictions on the quantities of timber that may be taken for specific purposes.

*563 62 241 [787] [792] Just as the nomads act simultaneously in moving their encampments from one site to another, so the sedentary Tibetans also insist on simultaneous group action within the village. The first day of spring planting, determined by horoscope, sees all the villagers proceeding to their individual fields in their best clothing. The fields are ploughed simultaneously. The seeds are sown at the same time in each field. And, when harvest time comes, all the fields must be completely harvested in the time that it takes the smallest field to be harvested with a small hand sickle. If one's fields are too large one hires extra help. During the course of the growing season all the villagers periodically parade through the fields carrying the holy books on their heads. These communal activities have both religious and economic bases. [787] From the viewpoint of the religion, if the days have been selected as auspicious, they are auspicious for the community's members as a whole. [796] It is when the spirits of the ground, the demons of hail and misfortune can be allayed or propitiated [782] that determines the best days for performing the needed tasks. From the viewpoint of economics, when the ground has been plowed and the seeds planted, the fields are encircled by a community fence to prevent onslaughts by roaming animals. [625] A community watchman also stands guard. It also means that [486] the villagers can collect a tax from caravans that pass through [651] their lands. Once the fields have been harvested, the community

/Tibetans of Chinghai/

*563 avoid increased assessments.

592 [782] The relationships between husband and wife have no religious basis. The Tibetan woman has a great degree of freedom: she [562] has an opportunity to choose her mate. Women also have certain [584] property rights, which give them a more secure position in the household and in the society as a whole. However, a Tibetan woman does not enjoy full equality with the men.

*563 592 The family is held together chiefly by economic factors. Frequent migrations and the scarcity of sources of livelihood necessitate close family cooperation. Individual opportunities are practically non-existent, except for joining the clergy. Otherwise it [591] is very rare for a son to leave his father's household, and start living on his own. This may occur, when a son wants to marry against the wishes of his parents; or when a younger brother is dissatisfied with his secondary position in the family and does not get along with his eldest brother.

*563 595 593 Where fraternal polyandry is practiced, the relationships between the brothers are naturally very close. They all are concerned with and derive a living from a common property. They all share the same house and the same wife.

*563 582 [614] The Tibetans are not very conscious of the existence of a clan system but they do have some regulations influencing their relationships within the framework of the clan. They cannot marry their blood relations of the degree of first and second cousins on either side. A younger brother is permitted to marry the widow of his elder brother and the father is permitted to marry the widow of his son. The children of tribal chiefs have to conclude marriage *563 619 with people from the same social level of other tribes. Allegiance to the tribe is stressed. Tribal relationships involve many obligations from its individual members, as well as prerogatives derived from belonging to this social and political grouping.

B. Marriage and Divorce Customs

*563 582 584 The Tibetan boys marry around the age of 16-20 and usually take a girl a year or two younger than they are. Marriage either may be arranged for the couple by their parents or contracted by themselves. The first is true particularly for the children of tribal chiefs and high officials. To find one who matches them in power and status, marriage must be arranged with another chiefly family. This is usually done through the parents.

*563 584 Should the parents select a mate for their child, the boy's father looks for a bride for his son. When he has a girl in mind, he sends a middle man to her father to discuss the matter. If [787] her family is interested, the boy's and girl's horoscopes are given to the lamas who decide if the two parties fit harmoniously. After the lamas have given their approval, the next step in concluding the marriage is taken. The bridegroom's family sends gifts to

/The Tibetans/

*563 574 576 right side. The honored seat is the one farthest from the door. After the guests are seated the hostess will brew tea, place a wooden box in front of the guests, and serve tsamba and butter. The guests take their eating bowls out of their robes.

[521] At dinner parties, conversation takes place before the meal. It is proper and right for the guests to say farewell and leave immediately after dinner.

c. Position of women

*563 562 796 The position of women in Tibetan society is very low. They have no place in matters of religion, and are permitted to participate in few religious rituals. They are permitted to enter the monastery on the Memorial Day of Sakyamuni, which occurs on the fifteenth day of the fourth month. At sunrise, all women put on their best clothing with all their trimmings and ornaments, and gather outside the monastery. The women of each village form into a group, and the groups take turns going inside the temple and turning the prayer wheel. Men and boys stand by to witness the spectacle. On this day, women fast until sundown.

d. Customs

*563 527 88 [362] [792] [574] [431] On the third day of the first month each year, a coming-of-age festival is held for all girls of fifteen or sixteen. Girls do their hair in the adult style, dress in their best, and visit the households of relatives and friends, who present them with gifts. After a ceremony, the girls may participate in all mixed social functions, and they may also have any sort of relationship with men. After the coming-of-age ceremony, a girl may ask any man she likes to spend the night in her tent.

*563 584 [787] [675] Tibetan marriage follows much the same customs as in traditional China. Proposals are made through go-betweens, who are usually relatives of the families. It is important that the horoscopes of bride and bridegroom be in harmony. When the parents and the young couple give consent, gifts of wine and katags are exchanged and a contract is drawn up giving the terms on which the alliance is to be made.

*563 583 584 The family receiving a bride or a "male bride" (The male bride is a man who marries into the bride's family, leaving his own home and joining hers.) pays the family for the bride in money or jewels, and also pays a sum to meet the expenses of the engagement party. Katags are exchanged between the relatives of the two families to signify mutual consent and wishes for a happy union. The bride usually has a dowry in cash or in livestock, land and goods, depending upon the means of the family.

*563 585 Before the wedding day, the families of the bride and bridegroom prepare a feast to entertain relatives and friends, who bring gifts for the couple. The bride's family builds a tent for the ceremony, decorating it with pillows and comfortable seats

/The Tibetans/

are not permitted to attend. The body is carried by friends and relatives to the customary spot, and on the way, those in the procession blow whistles to attract the vultures. The clothes are removed from the corpse, and one of the men slits open the chest and belly to attract the birds. After they have eaten these areas, the birds are driven away and a man cuts the flesh from the bones and places the small pieces on the ground. The birds eat it. When only the skeleton is left, the mourners crush the bones with rocks so the birds can eat them. When nothing remains the mourners are satisfied. The deceased has been proved a worthy person.

4. Popular beliefs

When a person falls ill, a doll of clay is made to resemble him and dressed in similar clothes. The sick person's name is written on the doll, and it is thrown out onto the steppe. It is believed that the chuktur (evil spirit) will find the doll (khuner dzolik) and be deceived into thinking the sick person has died. He will then leave the patient in peace.

Tibetans are great believers in fortune telling. One way to learn one's fortune is to give his date of birth to a fortune teller, usually a lama, who will consult his rosaries and then advise on such matters as the best days for going on a pilgrimage, the possibilities of getting a job, or the advisability of starting a business.

Another way is to whisper one's thoughts to a wooden fire poker, then secretly place it near someone. The fortune can be deduced from the conversation of that person.

A professional fortune teller asks his customer to place his hand in a sleeve, then tells his fortune from the finger joints. The third joint of the index finger means lion, the third joint of the middle finger, wolf. Both these joints may indicate a journey. The first joint of the index finger means mountain, which is interpreted as continuous living in the same place.

5. Recreation

The Tibetans have no form of organized amusement or recreation, but they love to sing. The young sing mostly love songs, which are composed spontaneously as they are sung. They have religious songs in praise of Buddha. They even express congratulations and good wishes in song.

H. The Western Mongols or Torguts

Values and customs of the Western Mongols are based on the same traditions as those of the Eastern Mongols (See IMAR Handbook). Some differences exist, however, that are worthy of discussion.

The Torguts are noted for their courage and warlike character, but they are a friendly, good-humored, helpful people. As

RELIGION

I. Historical Background of the Religions of Inner Asia

Various religions have been strong in the Northwest, among them Shamanism, Buddhism, Nestorianism, Manichaeism, Confucianism, Taoism and Islam. The latter is the predominant religion among the Turks and the Dungans. Buddhism is the religion of the Mongols, Mongours, Shira Yögür and Tibetans. Nestorianism and Manichaeism have become extinct, but Confucianism and Taoism are still alive in Chinese communities (see China Handbook).

A. Shamanism

Shamanism is a pagan faith based upon concepts of demons and spirits, with whom the Shaman, or priest, attempts to maintain contact by either sending his soul to them or receiving them into his own soul. The Shaman usually functions in a self-induced trance, produced by taking alcoholic beverages, toadstool powder, et cetera. A high percentage of Shamans suffer from various neuroses, severe forms of hysteria, or epilepsy, and the selection of a new Shaman may be based upon such manifestations of a deviant personality. Sometimes, however, the position of Shaman is hereditary.

The Shaman is regarded as a mediator between man and the supernatural. He exercises his magic powers for such purposes as healing, rain-making, success in hunting, prevention of accidents, and divination. In central Asia, the common methods of divination are by the flight of birds and by scapulimancy, or interpretation of cracks on the shoulderblade of a sheep which has been treated over a fire. While functioning in his supernatural capacity, the Shaman wears a distinctive dress, usually a long robe decorated with metal discs, small bells and the claws of the totem birds.

The training of a Shaman is long and involved, and he usually does not reach full professional status until the age of forty or fifty. Shamanists have no ecclesiastical organization, but rank Shamans on the basis of their success in dealing with the supernatural.

Besides the various ghosts, ancestral and animal spirits and other lesser supernatural beings, the Shamanists recognize a supreme being, the Tengri, who is the universe personified, God and heaven. He is the fountain of life, as he gives man his soul, and the fate of all peoples depends upon him. The Altaic people believe that the Tengri observes all and everything; no

/Tibetans of Chinghai/

gories and the apportionment of the traditional Buddhist 404 is not standardized. There are further breakdowns of what might go wrong with what aspects of the human body and the human mind or spirit, to the point where each infinitesimal ailment has its own specific cause and cure, or impossibility of curing. The medicinal treatments involve acupuncture, plasters, herbs, roots, crushed bone, excreta, potions, incantations and numerous other elements. It is a very complex system. When a Tibetan needs medical aid, he must first seek out a lama, present him with a scarf and a gift, and have this lama (who is not a doctor) cast the dice. The dice reveal the portion of the canon that contains reference to the manpa who is needed. The manpa, or specialist, may turn out to be a Christian medical missionary who has been successful in effecting cures (cf. Rijnhart, pp. 163-64). Sometimes there may be some suspicion of fee-splitting. Generally the prescriptions and treatment bear little relation to our own medical knowledge. However, the Tibetans are pragmatists and will seek their cures from those who have established a reputation for success, be they Westerners, Tibetan Buddhist or Bon doctors, or any others. Wherever Western medical science has filtered through, few Tibetans hesitate to make use of it, often simultaneously with their own. Mongol medical science is derived from the Tibetan Buddhist sources. However, more particular Mongol data on health and sanitation can be found in the IMAR Handbook.

III. The Chinese

A. The Diet of the Chinese

The Chinese diet does not contain milk or any milk products. The usual beverage is tea. The principal animals raised for food are pigs, chickens and ducks. In the Northwest, however, mutton has become a very common dish. The Moslems substitute beef for pork. In the Northwest the main grain products are wheat and millet. Rice is also eaten in abundance, being brought generally from southern and central China. Most proteins are derived from soybeans, peanuts and sweet potatoes. The food prepared for special feasts, and the kind eaten by the upper classes, differs considerably from the average Chinese meal, consisting of at least four-fifths meat, fish or fowl. The Chinese method of cooking preserves the vitamins contained in the vegetables, since they are never permitted to linger over the fire or in water.

B. Chinese Concepts of Disease

Most of the people do not know the different values of the various food products. Although many might wish to improve their daily diet with more meats and fish, they cannot afford to do so. The people in general, and particularly in the Northwest, have no

1: Washington S-4 (no date) 1956 AF13 Northwest China AF13
Sinkiang Af1

who are recalcitrant in maintaining their reactionary standing and military and government officials of the former Chiang government still cling to the shameful and parasitical way of life without engaging themselves in proper employment but commit various practices of thieft and swindling. Some ruffians indulge in drinking and assaulting women. Some illegal prostitutes and professional gamblers convert their brothels and gambling houses into dens for robbers, thieves, and ruffians, and into hotbeds for nourishing crimes. Some unscrupulous second-hand goods dealers and hotel keepers collude with burglarious elements to dispose of spoils and even act as chief planner of crimes. More serious still, a batch of habitual thieves who sneakily move around various places even collaborate with one another to commit theft and robbery in an organized manner, using arms to threaten people and to carry out violence. Some culprits refuse to repent during reform through labor and even escape from jails to continue their crimes. Some burglarious elements who sneaked into our province from other provinces and who also belonged to the categor of counter-revolutionaries carry out their counter-revolutionary sabotage activities in the form of criminal offense or impose themselves as military and government personnel to commit extortion and blackmailing. Some ruffians even intensified their activities to rob and rape women."

12. "An address delived by Hsi-jao-chia-ts'o, a deputy from Chinghai, at the 2nd meeting of the 1st session of the National Congress:

"'Recently, in some nomadic areas (in Chinghai) we discovered rumors spread by the enemies, saying, "To start cooperatives in nomadic areas is just another form of confiscation of cattle and sheep." It definitely hurt the productive morale of the people....

"'Furthermore, there are numerous counter-revolutionary elements carrying on sabotage under the cover of religion. This is often discovered in the area of minority groups. For instance in some nomadic areas in Chinghai, people rumored that a Heavenly mandate had descended, saying that the world would be destroyed soon. The people would suffer in great calamities, etc. It was a disguise of the devil to disturb the common people... But a lot of those who had faith but were short of wisdom believed it.... They interrupted their productive activities and devoted their time wholly on chanting Buddhist scriptures every day, hoping that by doing so they may escape from the disasters....

"'The counter-revolutionists are so active that we cannot afford to neglect them. We must get rid of the idea that everything is in order.... We must suppress them.'" (Hsin-hua yueh-pao, 1955, No. 8, p. 69.)

13. In the Hsin-hua yueh-pao, 1955, No. 8, p. 197, there appeared

"An address delivered by Sun Tso-ping, a deputy from Chinghai,

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

entirely without iron, even to a single nail, in its whole structure. The great wooden wheels, which were eight feet high, lifted it bodily over the deep rivers, and the hood, which was covered with grass-matting, reminded us of a French peasant's waggon. This distinguished vehicle only cost us about fifty shillings, and was thoroughly satisfactory. Animals to draw it were more difficult to obtain. The cart-mule of Kansu seems chronically aged, lean, and sore of back. It was, consequently, a great prize to secure eventually a shaft-horse lately come from Urumchi, as it was therefore already inured to the medicinal waters of the desert oases, which are too often the cause of death to animals. On such long journeys, mules are generally much to be preferred to horses, since on arrival at the inns the former lie down in the dust immediately to roll themselves dry, and will then quietly go to their feed, requiring no further attention, whereas horses, if they are to be kept in health, demand constant care. As far as Kiayükwan the road was familiar to us, and we spent several days in that place, seeing many acquaintances made during our last visit. Tradition exacts from every traveller a curious custom, namely, that on leaving the Barrier, pebbles should be thrown against the outer side of the Great Wall, portions of which are actually worn away by the constant shower of missiles. If the traveller is to return in safety the pebble should rebound towards the thrower, but if not, it drops into the already high heap, and the man goes his way onward with a heavy heart. Owing to some obscure acoustic property, each pebble, when it hits the Wall, produces a twittering sound, something like the cheeping of little chickens! Every one heard it distinctly, and it is said to occur nowhere else.

The stones thrown by our party being satisfactorily

788

788 RITUAL--practices reflecting relief of anxiety through performance of repetitive or obsessionally precise symbolic acts; compulsive gestures (e.g., sign of the cross); repetitive behavior (e.g., tolling of bells, burning of candles, sprinkling with holy water); recital of stereotyped formulas (e.g., blessings); mechanical praying (e.g., with rosary, with prayer wheel); recitation of litanies and liturgies (e.g., credos, masses); processions; making of pilgrimages; etc. See also:

Propitiation 782

Elaboration of rituals into extended ceremonies 796

/Chinese Moslems (Dungans)/

S N 563 183 379 431 (651) religious teachings. According to the religious code it is obligatory for a man of means to contribute a certain amount of his wealth to public charity. Next to worship, this is the most important duty in Moslem society. The original idea of helping the poor and needy evolved into a tax (ten per cent on agricultural produce and two and one-half per cent on animals) collected from all believers for religious and public welfare purposes. Another form of alms, the sadaqa, is a voluntary offering. Public welfare supported by the tax, after the collector's fee is deducted, includes freeing slaves, assistance to persons who became indebted for good reason, making holy war to defend the people and the faith, and aiding needy travelers.

S N 563 796 935 During the month of Ramadan (fasting) donations and offerings are collected for public welfare purposes. The amount is not fixed, and the act of giving is voluntary. A sense of public responsibility is strong among these people. Not only do they give regular allowances to the needy in their own communities, but they help needy outsiders of their own faith.

S N 563 788 554 The Hajjis, or those who have completed the pilgrimage to Mecca, are highly respected in the Moslem community, and wear special badges to mark their distinction. The opportunity to journey to Mecca is the dream of all Moslems.

c. Virtue

S N 563 577 714 It is important for the individual to cultivate the true concept of peace and submission. The concept of peace involves such ideals as mutual cooperation and aid among mankind, mutual understanding among religions and peaceful co-existence of nations to achieve world brotherhood. The concept of submission means to submit oneself wholly to Allah and follow his teachings, sacrificing self-interest for the promotion of happiness for mankind.

S N 563 515 Personal cleanliness, both internal and external, is most important. Cleanliness in eating habits and personal hygiene is thought to develop a clean soul, free of evil thoughts and immoral conduct.

d. Racial superiority

S N 563 186 The Chinese Moslems regard themselves as a special group, superior to their Chinese neighbors. As students and officials, their attitude toward respect for the emperor and for Confucius has, in the past, been one of compromise. Compelled by law to conform, they excused themselves on the grounds that they did so outwardly but not in their hearts. The old and the new sects of Chinese Moslems, although bitterly hostile toward each other and at times engaged in armed conflict, on the whole present a united front toward the Chinese and the rest of the world.

S N (698)

/Chinese Moslems (Dungans)/

4. Customs

S a. Religious rites

N According to religious rules, the Moslems are supposed to
563 pray five times daily (sunrise, noon, afternoon, sunset and
779 midnight), facing in the direction of Mecca. Few of the Chinese
782 Moslems besides the Mullahs and Ahungs adhere strictly, but pray only once or twice a day. To be valid, prayers should be performed in the mosque, but those who find it impossible to go to the mosques may pray wherever they are. The call to prayer
S (adhan) is made by the Ahung, or religious leader, and the be-
N lievers join in saying the adhan. Daily noon prayer is popular,
[793] and the Friday service is the most fully attended.

Public worship cannot be performed by fewer than four per-
S sons. Women may not attend the mosques where the men pray.
N In some places, women have their own mosques and women
[562] Ahung to direct the prayers and Friday services. Women always worship as individuals and not as a congregation, though there may be a number of women gathered together.

S The Moslems must be clean when they attend any religious
N ceremony. Hands and face must be washed, and bathing before
563 worship is common. For this reason all mosques of importance
779 have bathing places annexed. The Moslem becomes unclean by
782 touching such objects as dishes containing pork or any meat not
783 killed according to ritual, pigs, dogs, wine or excrement.

S The thirty-day fast of Ramadan is fairly strictly observed.
N During this period one is not to eat between sunrise and sunset,
563 and such things as smoking, drinking and sexual contact are also
779 forbidden. In many places, a messenger goes about the Moslem
782 quarters calling out the times for observing or breaking the fast,
783 lest someone oversleep or fail to prepare and eat the necessary
779 food before daybreak. The end of the fast is celebrated by a
[203] feast.

The aged, ill, insane, travelers, women who are pregnant, menstruating or nursing, persons doing heavy labor or whose lives are in danger are excused from the fast, but if or when they are able they must make up for it. The purpose of the fast is to help the believers maintain pure and pious lives. Fasting is considered meritorious at other times too, except on Friday, Saturday and Sunday.

S b. Naming

N Within seven days after the birth of a child, he must be given
563 a Koranic name, or Ching-ming (religious name). For this oc-
553 casion a feast is prepared, and the poor are fed. If the child is a
852 male and the family wealthy enough, two sheep are killed for the
S occasion. If the child is a girl, only one sheep is killed. To
N arrive at the name, the father holds the child with its face
[788] toward Mecca and repeats a prayer in one ear of the child, then

/Chinese Moslems (Dungans)/

the other. Then he turns over any seven pages of the Koran, and from the seventh word of the seventh line of the seventh page, takes the name. When a male child reaches his seventh birthday he is circumcised and taught to worship.

c. Marriage

The marriage customs of the Chinese Moslems, with the exception of the wedding ceremony itself, are the same as those of the Chinese. The bridegroom is accompanied by his father to the bride's home, where the ceremony is performed. The Ahung reads from the Koran, in a manner similar to that of the Christian marriage service, then asks the couple whether they agree to the union.

In Koko Nor (Chinghai) the bride is customarily covered with a piece of red cloth after the ceremony, then lifted by her uncle or brother into the sedan chair and sent to the groom's home. Upon arriving there she is lifted out by her relatives. She wears a veil on the first day and hides in her chamber while relatives and guests sing, dance and feast in celebration. On the second day she receives guests, bowing to each one. Meanwhile the guests present their gifts and congratulations.

Exogamic marriage is permissable to the extent that a man may marry a Han Chinese woman, who is supposed by marriage to become a Moslem. Before such a marriage the girl must submit to elaborate purification ceremonies to cleanse her from the defilement of her own home. The Ahung officiates at the wedding and the Chinese custom of worshiping heaven and earth is not performed.

d. Funeral and burial

The funeral customs of the Chinese Moslems are more distinct from those of the Chinese. The dead body is washed ceremoniously by religious leaders from the mosque, who take the garments of the deceased for themselves. The body is then swathed in white bandages, each limb being bandaged separately. Correct performance of this rite is very important. Well-to-do people sprinkle incense on the cloth used for bandages. The wealthy also place large quantities of musk and camphor in the grave. The corpse is placed upon a board under which are the bands necessary for lowering it into the grave, then covered with a bottomless coffin for the trip to the cemetery. The coffin is never interred. The corpse is placed in the grave with head to the north, feet to the south and face toward Mecca.

When the deceased is a woman, only members of the family may look on when the coffin is removed, and only blood relatives, preferably sons, may descend into the grave to arrange the body.

There are elaborate instructions concerning death. Rituals include the recitation of prayers as death approaches, the

779 cussed in Heaven. They teach men sorcery and will serve men
776 who can rule them by these devices. The leader of these evil
spirits is called "The Shaitan" or Iblis. His fall from a place
among the angels was due to his refusal to worship Adam on
God's command; for this he was accursed till the Day of Resur-
rection and given authority over those of mankind whom he
seduced.

779 Next to the unity of God, the doctrine of the Apostles, as the
776 shahada indicates, is the central doctrine of the Koran. Mos-
792 lems are required to believe in the Apostles without distinction
The last of the Prophets is Muhammad, who is God's Apostle to
all mankind. The doctrine preached by all the Prophets is es-
sentially one and the same, although in matters of detail there
has been a gradual evolution in their messages toward the final
and perfect revelation.

As for Muhammad himself, the Koran repeatedly disclaims on his behalf anything that is superhuman. He was but a mortal man, commissioned with the sole duty of conveying God's warning and message of salvation. He had no knowledge beyond what was revealed to him, and he had been granted no miraculous powers.

779 Faith in life after death is the last of the basic principles of
775 Islam. The word usually used to indicate it in the Koran is al-
akhira. The Koran does not speak only of a life after death, but
impresses on believers the importance of life on earth as a
basis for the future life. The Last Day, the Day of Resurrec-
tion and Judgment, will be the time when men's future fate will
be decided by God. This day will come suddenly at a time known
only to God. On that day the graves will open and men will be
called to account for their deeds. Each man's angel shall bear
witness to his record, his deeds will be weighed in the balance,
and his book will be placed in his hand, the right hand of the
blessed and the left hand of the damned.

Then the blessed, the God-fearing men and women, the humble and the charitable, the forgiving, those who have suffered and been persecuted for God's sake, those who have fought in the way of God, shall be summoned to enter the Garden of Paradise, where they shall dwell forever by flowing rivers, praising God, reclining on silken couches, enjoying heavenly food and drink and the company of dark-eyed maidens. Those who have sinned against God and men are condemned to eternal punishment in the flames of Hell.

779 C. The Rituals of Islam
a. Prayer (Salat). The observance of the ritual prayers is re-
• 788 peatedly emphasized as one of the essential religious duties.
782 Although neither the ceremonies nor the five set times of prayer

779 are precisely stated in the Koran, it is certain that they were
• 788 well established before Muhammad's death. Each consists of a
782 fixed number of bowings (rak'ah), the bowing itself consisting of seven movements with their appropriate recitations: (1) the recitation of the phrase "Allahu akbar" (God is most Great) with the hands open on each side of the face, (2) the recitation of the Fatihah or opening sura of the Koran followed by another passage or passages, while standing upright; (3) bowing from the hips; (4) straightening up, (5) gliding to the knees and a first prostration with the face to the ground; (6) sitting back on the haunches; (7) a second prostration.

The set times are at daybreak, fajr (two rak'ahs); noon, zuhr (four rak'ahs); midafternoon, asr (four rak'ahs); after sunset, maghrib (three rak'ahs), and in the early part of the night, isha (four rak'ahs). At these times, prayers should be said and the ritual observed by every believer wherever he may be. By preference they should be performed congregationally in a masjid (mosque) under the leadership of an imam. The imam and the worshippers face toward the qibla, the prescribed direction, which is toward Mecca.

The Koran also mentions the noon prayer on Friday as the principal congregational prayer of the week, and enjoins the suspension of work during its performance. At this time a special ceremony (kutba) is delivered, usually by the imam. (The deliverer of this ceremony is called the khatib. He is not necessarily the imam, but may be one of the leaders in the community.)

779 Tahara, the ablution before prayer, is strictly enjoined and
782 the ritual is defined in Sura v, v. 9: "When you rise up to
783 prayer, wash your face, and your hands to the elbows and wipe your heads and your feet to the ankles." This is the lesser ablution, to be performed before every prayer. The greater ablution is a complete washing of the body, which should be done before the Friday service or special holiday service, and after becoming unclean (incidents of uncleanliness are defined specifically).

779 b. Alms (Zakat). With the observance of prayer the Koran
735 regularly enjoins the giving of alms (zakat) as the outward sign
431 of piety and as a means of salvation. A distinction is made between sadaqat, which is a freewill offering, and zakat, the obligatory contribution, presumably at the rate of one-fortieth of the annual revenue in money or kind. The zakat is to be exacted form all who enter into the brotherhood of Islam; but it is not a tax. The objectives on which the revenue from zakat is to be spent are defined (in Sura ix, v. 60) as being: the poor, the needy; those employed in its collection, debtors, wayfarers, and the "Way of God."

779 c. Fasting (Saum). Fasting, according to Islam, is primarily a
785 spiritual discipline. Satisfying one's thirst and hunger are considered great temptations, and a chance is given to man to overcome his temptation.

[796] Moslems are required to fast for twenty-nine or thirty days of the month of Ramadan, the ninth month of the lunar year. Fasting begins at the appearance of the moon of Ramadan and ends on the appearance of the new moon of Shawwal (the tenth month). Fasting is to be observed with complete abstinence from food and drink during the hours of daylight. The fast is broken after sunset and during the hours of the night. The last meal should be taken before sunrise. The Koran and the Hadith make special mention of people who are exempted from fasting. The Koran mentions those who are sick and those on a journey. This is not an absolute exemption, as the sick man and the traveler are required to fast later, when the sickness has gone or the journey has ended. Hadith also gives extension or exemption to certain classes of people who, because of some physical disability or the performance of heavy labor, are not able to fast. In addition, fasting is included among the expiations for various offenses.

779 d. Pilgrimage (Hajj). As an institution the hajj existed from a
• 788 very remote antiquity, before the advent of Islam. The sacredness of Mecca was established in the Koran by Muhammad and given strong connection with the names of Abraham and Ishmael.

[105] In the first and second years of the Hejira (Muhammad's exodus from Mecca to Medina, 622-23 A.D.) full directions relating to the hajj were given by the Prophet. The traditional days in Dhu'l Hijja (the twelfth month) and the traditional ceremonies: going in circuit round the Kaaba; running between the two small eminences of Safa and Marwa in the vicinity; assembling on the ninth day of the month at the hill of Ararat; offering sacrifices of sheep and camels at Mina on the way back to Mecca—all were retained and prescribed in the Koran. Other traditional usages, including the kissing of the Black Stone set in the walls of the Kaaba, and the stoning of the pillars representing the Devil in the vicinty of Mina, though not mentioned explicitly, were observed by Muhammad in his pilgrimages and so were incorporated into the Moslem rite.

[783] As before prayer the worshipper must be ritually clean, so
[302] also before making the pilgrimage the worshipper must be in a
[292] state of ritual consecration (ihram). This involves shaving the head and discarding ordinary clothing before entering the territory of Mecca, putting on instead two plain sheets and leaving the face and the head uncovered.

Although the pilgrimage constitutes a religious obligation for every Moslem, the obligation is explicitly limited by possession

779 of the necessary means and the physical possibility of getting to
(788) Mecca.

e. The Way of God (Jihad). In addition to the obligations mentioned, in many passages the Koran further enjoins believers to "strive in the Way of God." The duty is formulated in general terms in Sura ii, v. 186., between the regulations of the fast and pilgrimage: "Fight in the Way of God against those who fight against you, but do not commit aggression. . . Slay them wherever you find them, and expel them from whence they have expelled you, for sedition is more grievous than slaying. . . Fight against them until sedition is no more and allegiance is rendered to God alone; but if they make an end, then commit no aggression save against the evil-doers."

A distinction is drawn between warfare against the pagans, on the one hand, and against the Jews and Christians on the other:

"When the sacred months are over, kill those who ascribe partners to God wherever you find them; seize them, encompass them, and ambush them; then if they repent and observe prayer and pay alms, let them go their way." [Sura ix, v. 5]

779 "Fight against those who believe not in God nor in the last
721 day, who prohibit not what God and His Apostle have prohibited
778 and who refuse allegiance to the True Faith from among those who have received the Book, until they humbly pay tribute out of hand." [Sura ix, v. 29]

"As for those who are slain in the Way of God, they are not dead but living in the presence of their Lord their needs supplied, rejoicing in the bounty which God has given them." [Sura iii, vv. 163-4]

779 Besides these major issues of doctrine, ritual and obligations, the Koran contains a large body of religious and ethical
(262) teachings and legal injunctions. For example, wine, pork, gambling and usury are forbidden along with the making of images or representations and a number of the practices of pagan Arabs. Marriage, dowry, divorce, the guardianship of orphans,
(681) and inheritance are all regulated in detail. Penalties are laid down for certain crimes such as stealing, homicide and murder
(567) as well as for a few minor offenses. Slavery is accepted as an institution, but certain limitations are placed upon the rights of owners over slaves and good treatment of slaves is enjoined.
(681) Fraud, perjury and slander are repeatedly and severely condemned, and rules of social behavior are laid down in several
(671) passages. All these and other regulations explicitly detailed in the Koran served as foundations for a more elaborate set of rules and regulations upon which the structure of the Shari'a, the Islamic law, was erected by later generations.

/Chinese Moslems/

S N 795 785 782 253 any should oversleep and fail to eat the necessary food before daybreak.

The regular practice of Zakat is practically unknown to the Chinese Moslem community. Only during the month of Ramadan, when charity is extended to the poor and donations are given to the ahung are alms given in a form resembling Zakat. There is no fixed amount given and the act itself is purely voluntary. The only form of sadaqa (voluntary alms) given is the sadaqa el-fitr given in the three days of Id el Fitr (the Moslem New Year). These offerings can be made in cash or in goods.

S N 795 788 Particularly among the Chinese Moslems of the Northwest the practice of pilgrimage to Mecca was observed. The Hajjis, or those who completed their pilgrimage to Mecca, were highly respected in their communities. Pilgrimage has decreased considerably in the last years. The Hajj organized by the China Islamic Society in 1952 did not reach Mecca; they went as far as Pakistan and returned to Peking, for reasons that were not specified.

S N 795 716 Id el-Fitr, the New Year, is the best observed of the different Moslem holidays. It occurs during the first three days of the tenth month. Special services are held in the different Moslem communities, and great feasts are given to celebrate the occasion.

S N 795 262 In general the Chinese Moslems do abstain from pork and wine as their religion commands. They will not eat meat that has not been killed in the approved Moslem fashion. Many of the merchants, carters and others who travel carry their own utensils, and often, where there are no Moslem communities, carry their own food so as to avoid food that is prohibited by their religion.

S N 795 769 777 The influence of the general Chinese beliefs on the Moslems has been noted by many, particularly by D'Ollone. Ancestor worship is the core of the non-Moslem Chinese belief. It is not restricted to domestic worship but extends to religious devotion to the graves of the ancestors, which are designed to assure the peace of the deceased and are a scene of devotion every anniversary. The Moslems of the Northwest have been so influenced by these traditions that, in the secrecy of their homes, most of them burn incense in front of the ancestors' tablets. In evidence of this custom, D'Ollone brought back two vases which served the purpose of ancestor worship. Both of these vases belonged to Chinese Moslems, and had Moslem religious inscriptions in Arabic. The practice of pilgrimage to the well kept tombs of the ancestors is also found among the Chinese Moslems of Kansu. Some of the bigger tombs are quite elaborate and include, besides the monuments, a mosque, school halls and lodging places.

N 795 788 778

346 (eighth century A.D.) and a Sung edition of the Tripitaka. It
778 gained its fame through the Buddhist monk Wei-ko (Sung times) who used to stay there overnight and was called the Sleeping Dragon.

Another one is the K'ai-yüan-ssu, built in 713 A.D., which is adorned with many famous inscriptions and also was once famed for its library. Few religious relics are left now at this place, which has become a center of high-class girl entertainers instead.

One of the landmarks of Sian is the Glazed Tile Pagoda, Hua-t'a, built during the times of the Five Dynasties. Other famous pagodas in the neighborhood are the Great Swallow Pagoda, Ta-yen-t'a, belonging to the temple Ta Tz'u-en-ssu, in which the pilgrim Hsüan-tsang was active, and the Small Swallow Pagoda, Hsiao-yen-t'a, built in the beginning of the eighth century.

The best-known Taoist temple was the Ying hsiang-kuan, which was made the main center of Taoist devotion by Emperor Jui of T'ang in 708 A.D. at a period when the Imperial house of T'ang showed pride in its alleged descendence from Lao-tzu, the great patriarch of Taoist religion. In Kuomintang times the temple was converted into a school.

778 The plain around Sian is dotted with many tombs of past
(K4) emperors. These artificial hills are held in great reverence by the local population and many myths have taken their origin here even though it is not known whose august remains these hills cover.

778 Shensi is also the site of one of the Five Sacred Mountains of
823 China, which formed part of the Imperial cult and to which regularly Imperial sacrifices were offered. The worship of these mountains belongs to the oldest religious traditions of China. All through historic times down to and including the last dynasty, the Emperors went there in person for regular services or at least had themselves represented by topmost officialdom. At least since T'ang times large temples were erected to the spirit of these mountains. They were, however, not only
(788) depositories of memories of this official cult, but as pilgrimage centers of organized groups and individuals, they have accumulated religious traditions and historical relics devoted to all sections of the population.

Even though the Western Peak, Hua-shan, has to cede priority to the Eastern, T'ai-shan, it always was, and still is, one of the most important centers of pious activities. Numerous
(346) temples, shrines, caves and pavillions testify to this fact. Most of them are outside institutionalized Imperial ritual, but are maintained by local religious groups or sects and by the donations of visiting pilgrims in search of delivery from some bodily or spiritual troubles.

#668 of Muslim-Hui, Uighurs (Sarigh-Uighur), Kazaks, Uzbeks, Tatars,
658 and Tung-hsiang nationalities. (NCNA Peking, August 4, 1952).
#563 A 45 member delegation from 15 different nationalities of
484 Northwest China arrived in Peking yesterday to take part in the coming October 1st National Day celebrations....

The Northwest delegation, headed by Mainor, an Uigur woman, included the following 15 nationalities: Han, Hui, Uigur, Kazakh, Mongolian, Tibetan, Tunghsiang, (Sarigh-Uighur), Uzbek, Manchu, Tartar, Solon, Khalhas (Kirgiz), Tajik, Sibo and Russian." (NCNA Peking, September 24, 1952).

#668 3. Minority group organizations
#563 Various nation-wide organizations such as the China Buddhist
794 Association, the Chinese Islamic Association, the Chinese Moslem Cultural Association, and the China-Soviet Friendship Association were organized with numerous minority and local leaders as members and sponsors. The local chapters also have propaganda departments. For instance, the Tibetan Buddhists in Chinghai, under the leadership of Hsi-jao-chia-ts'o contributed 728,750,000 for the Resist-America Aid Korea movement in the year 1951 alone. Some monasteries signed patriotic compacts and launched programs of propaganda on current events. According to Hsi-jao-chia-ts'os report,

"The next step is to expand the propaganda work, mobilize the lamas to organize propaganda teams, make use of temple fairs or festivals for propaganda activities, and carry the propaganda deep into the rural villages and nomadic regions.... In pushing the autonomous work in the minority region, Buddhism should give more active support and preach the nationality policy of the People's Government." (Sian, Ch'un-chung jih-pao, November 23, 1951.)

[788] Besides the Buddhists, the Moslems are used to promote the
[648] Communist programs, not only in Northwest China, but some were organized into pilgrim groups to visit Mecca and the Moslem nations in the Near East in order to win the friendship of these nations for Red China.

#668 The special effort to create Sino-Soviet Friendship Associa-
648 tions in northwest China can be seen in the following incomplete figures. By September of 1951, Sino-Soviet Friendship Association organizations had been organized in four provinces, four municipalities, thirty-six administrative districts and 157 hsien in northwest China. There were 1,314 branch associations and 417 sub-branch associations with a total membership of 336,610 of all nationalities. The purpose of this association is to tell the people of the merits of the USSR.

Obviously a special attempt has been made in Northwest China to capture the minorities with propaganda.

can be covered in three long marches. The road, a broad tree-lined cart track, lies up the valley plain of the Wei River, with the great barrier range of the Ch'inling Shan on the left hand and the river on the right. The plain is one vast wheat-field, dotted with peculiar walled farms, each a formidable little fortress in itself; they are relics of the great Mahomedan rebellion and form a characteristic feature of the landscape in most parts of Shensi and Kansu. Nowadays the Mahomedans of Shensi are a negligible quantity, the majority having withdrawn westwards into Kansu, where they form an exceedingly important and powerful element in the population.

Forty li from T'ungkuan the district city of Huayin Hsien is reached, the inns lying in the suburb of Huayin Miao, five li east of the walled town. This latter village is the starting-point for the sacred mountain, the Hua Shan, a portion of the Ch'inling range. Seventy li further on the empty city of Hua Chou is passed, and 50 li beyond that Weinan Hsien, the centre of a particularly rich agricultural district, is reached.

The traffic on the roads of this fertile and populous plain is very great, and it is one of the absurdities of modern China that no railway should yet connect Hsian, the metropolis of the North West, with the coast. Railway construction on the plains of Central Shensi means little more than laying the rails on the necessary embankment and building a number of small bridges across the streams which flow down from the Ch'inling Shan into the Wei River. And while these rich and populous plains in the centre of China are innocent of every vestige of railway construction, a line has been built at great difficulty and expense through the mountains north of Peking past Kalgan to end in the air beyond Tatung in Northern Shensi. The Hsian line is a section of the Belgian Lung Hai railway referred to above, which has for the moment come to a stop at Kuanyint'ang in Honan. Failing railways the construction of a few good trunk roads fit for motor traffic would be of enormous advantage to the province and could be undertaken, as far as the plains of Central Shensi are concerned, at comparatively small cost. There can scarcely be another civilized country in the world which would be

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF1.

trough below the surrounding level of the valley. Just beyond Hsitachai the path leaves the T'ao River, along which another track runs direct to Choni, and turns up a side valley to the north to reach a semi-Tibetan hamlet called Shanch'a, 80 li from Min Chou, where we passed the night in the house of the headman. Pheasants were abundant in this picturesque and well-wooded valley.

At Shanch'a the path turns up a side ravine leading after an hour's march to an easy pass, whence there is a descent for another hour into a bare valley, followed by a rise over a second low pass, and a descent to New T'ao Chou in another bare open valley, a march of 40 li in all. New T'ao Chou (now called Lintan Hsien) is the official town, as opposed to Old T'ao Chou, distant 60 li, the commercial town, and is an empty shell of a city of no importance. About half the few buildings inside the walls had been destroyed by the White Wolf rebels the year previously. We were accommodated in a temple which the magistrate had fitted up temporarily as his yamen. The city lies in a bare open valley some 20 li or so north of the T'ao River in a region of treeless hills of loess, red clay, and red sandstone. This somewhat dreary belt of bare red hills intervenes practically all along this border between the loess of Kansu proper and the pine forests and grass lands of the Kokonor country, and corresponds roughly to a similar Mahomedan wedge between Chinese and Tibetans. The red hills round New T'ao Chou are cultivated and dotted with villages, mostly Mahomedan. The Moslems extend from here along the border to their real strongholds round Ho Chou and Hsünhua, and thence north of the Yellow River to beyond Hsining. We were travelling round the two T'ao Chous during the season of summer thunderstorms (early July), and usually experienced several daily, some very severe and rather alarming in this elevated region. On one occasion hurrying into a Mahomedan farmhouse for shelter we found the inhabitants at prayer as though in a mosque; this custom of using private houses for prayer is, I was told, confined to the followers of the "New Sect," which is very extended and influential in Kansu. Our sudden intrusion was not resented in the least, and on this, as on every other occasion when I met Mahomedans in Kansu, we were

[FACING p. 171]

water was carrying considerable ice-floes, but one day, at a narrow part of the bed some miles further down, they were arrested, and in a few hours the whole river was piled up, mass on mass, with ice. The impact was so powerful that blocks were flung wildly about in all directions, and with one mighty solidifying spasm the iron grip closed upon the waters, and the Yellow River was ice-bound for months.

CHAPTER IV

LANCHOW TO LIANGCHOW

THE journey from Lanchow to Liangchow can, under favourable conditions, be accomplished in one week. Half-way between lies the town of Pingfan, at the angle where the cross-roads leading westwards to Sining and Kokonor meet the main North-West road.

A few miles outside Lanchow we traversed the dry bed of an ancient inland-sea, circular in form. The high-water mark showed clearly far overhead near the top of the surrounding cliffs, where the stone was worn into the shape of pillars. The bed was strewn with finest sand, and all the water procurable was very salt. It was here that we met the first herd of yak, which was being driven to Lanchow for slaughter, as a large amount of the beef sold in these cities of the North-West is yak meat.

The fourth day brought us to the Pingfan valley, down which a watercourse rushed between banks of ice, supplying the power to work a number of flour mills which were grinding, even though their structure was hung with enormous icicles. Here, for the first time, we passed a prayer-wheel, erected below a basin

AF13 Northwest China AF13

which a tiny spring kept overflowing. Green mosses lined the bed of the crystalline rivulet, and the diamond drops reflected the sunshine. The wheel turned with a subdued creak, which seemed almost like the murmuring of the prayer inscribed on its lines of chamfered edges—Om mani padme hum—'Hail thou jewel in the lotus flower'—the offering of a blinded people to its undiscerned god.

A mile apart from each other stand two walled cities, the more imposing of the two being the Manchu town formerly occupied by the pensioners of the ruling dynasty, but which now consists of a great enclosure of uninhabited or ruined houses, so that in a space equal to the area of a large town, at the present hour only six or eight families are living. Of the remaining former inhabitants many have been massacred, others have fled, and the ranks of the beggars have been replenished by these truly unfortunate people. The Chinese city consists of quiet streets busy only on market days, the shops of which being so poorly provided with the necessities of life that vegetables are brought a three days' journey to be sold here. Its western wall is flanked by a suburban thoroughfare composed of inns, wheelwrights' and blacksmiths' shops, which, together with food-vendors, supply all the necessities of traveller, carter, and muleteer. Some very fine temples crown the summits of the surrounding hills, and parties of Tibetans riding to and fro on the Sining road, leave offerings of silken *khada*[1] hanging to the idols, before which their obeisance has been made.

In the first home which we visited in Pingfan we met a man who was courier to a woman-magistrate of the aboriginal tribes. Her residence was in Liencheng—Lotus City—but she constantly visited Pingfan on

[1] Votive scarves.

arranged that we should spend July among them under canvas, in Tibetan territory.

CHAPTER IX

A SPRING CAMPAIGN

MARCO POLO wrote of the city of Kanchow, where he made long residence, and once held office as Governor, as the 'city which holds more gods than men.' This local saying is still constantly on the lips of its inhabitants, who take great pride in the fact that its temples and shrines are so numerous as never to have been accurately numbered.

The town is beautifully placed and abundantly watered. It contains several lakes, which being overgrown with reeds supply material for an important mat-plaiting industry. Besides these larger expanses of water, there are a number of ponds fed by underground springs, dependent upon the melting snow from the Tibetan mountains. In these ponds the water rises and falls in a most unexpected way, so that sometimes their banks are surrounded by children fishing, while at others they become the highway of city traffic. The streets are bordered with fine poplar, acacia, and willow trees, which flourish splendidly, throwing their roots deep into the hidden sources.

As one would expect, the people are in all things superstitious and religious. All the wealthy homes have a private shrine, which is often a handsome hall, where the ancestral tablets are preserved, and where incense is burned to the family idols. At sunset each day the sound of bells rises on every side, as the woman of each household touches the rope which sets in motion

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

a carillon of nine bells, hanging over the shrine. Simultaneously one catches the monotonous tone of a hollow, wooden drum, shaped like a crab, the beating of which declares, in triple rhythm, that the ultimate issue of earth, matter, and even life itself, is VOID.

'Earth is void! All is void! I am void!' This is the message of the drum to every human heart in that city of unnumbered gods.

The most rigorous asceticism rules the lives of many Kanchow women. Not content with being under a vegetarian vow, as is usually understood, they so fear any subtle indulgence of the appetite, that even onions, garlic, vinegar and red pepper, the necessary condiments to flavour the insipid dough-string diet, are eschewed. During the spring months almost each day sees the recurrence of some festival, which draws the crowds alternately to each temple in the neighbourhood. Theatrical troops move from fair to fair, repeating their performances to the never-failing concourse of village people, whose bullock-carts are parked in a wide semicircle facing the stage, and in which the women sit the whole day long exposed to the heat of the sun. Most of the younger women and girls adorn themselves for the occasion with paint and powder, until the face is converted into an expressionless mask. Their hair is beautifully dressed and decorated with artificial flowers. Most of the small children are stamped on the forehead, nose, and chin with minute geometrical patterns, traced in red circles.

Just out of earshot of the stage, the food-vendors pitch their stalls, where cooked eatables of all descriptions are on sale. Pork fried and stewed in a thick gravy, is served up in small saucers and eaten with chopsticks, as also fried meat-dumplings, garnished with vinegar and red pepper. A large mould of

N.W. China AF13

527 778 788 The object of worship is as everywhere in the kingdom, a life-size model of a bullock made of clay, and beside it stands the figure of a woman made of paper. After the mandarins have kowtowed to this latter image, it is always driven back as quickly as possible to the hsien yamen. But people try to break the image of the bullock and every farmer tries to get a piece of it; anyone who is lucky enough to do so may be sure that his harvest will be good that year(1)

1. See in this connection: De Groot, Fêtes annuelles d'Emoui (Vol. I, p. 90): "The reception of spring. The origin of the custom of carrying the spring ox to the fields has become lost in the night of the times."

The people of Hsining fu know almost nothing about the meaning of this ancient custom. In fact, the ordinary Chinese can tell you very little about their mythology and most of it is confused. The bullock, so the people of Hsining fu say, was formerly an emperor of China and the girl at its side, the emperor's younger sister. The emperor was carried away by his sister's charms and married her, and as a punishment for that the gods turned him into a bullock, while his sister was obliged to follow him as his driver all her life. The people seek to destroy the bullock because of the emperor's shameful behavior. But because the bullock represents an emperor, the yamen servants must guard it.

527 After this festival which, by the way, is not celebrated on the same day each year, the larger businesses again open their shutters. The Chinese like to have wealthy people as their first customers. This means good luck for the rest of the year. I was again forced to admire the Chinese on the afternoon and evening of this holiday. In spite of all the commotion of the festival, there was no excess anywhere, not a case of noisy drunkenness anywhere. Even the uncultivated Chinaman has much better manners than we usually assume, if there does not happen to be a famine or the confusion of war to make life difficult for him.

Kanchow home and work were definitely located. The land, however, was no more than a rough, irregular space, but the position being good, the shabby little house upon it was soon repaired, and made into a possible dwelling-place for Mrs. Kao and the children, who now came from Lanchow to join him. The open space then required to be enclosed by a wall, and in this job Dr. Kao took an energetic share, each morning, before the dispensary opened, driving down to the riverside and bringing back a load of stones for the foundations.

In the course of the next few years a convenient dispensary, waiting-room and guest-hall were built, and school-court and adequate class-rooms had been added[1] about the time of our arrival. The Mission Compound thus became the most attractive building in the city, for, not only was the daily Peking newspaper posted outside the main entrance, but a blackboard, holding special items of news, hung beside it, while the front of the building was decorated with Christian posters constantly changed or renewed. Just inside the front door was the book-room, where Christian papers and a library were accessible to anyone who cared to use them; here visitors, too, were received, and everyone was welcome; moreover, the large space without was planted with trees, and was sanded to make a playground for the Kanchow street children.

Shortly before we arrived a small additional strip of land, adjoining the premises, had also been purchased; the owner of which, after the deed was signed, was, as always, dissatisfied with the deal, therefore, according to custom, set out to terrify the purchaser by the use of a ritual which had never before been known to fail in securing at least a substantial *douceur*. Accordingly, one morning he sent a relative on ahead to announce

[1] [to the Mission at Kanchow -- Analyst]

his arrival, and also his intention of sitting on this piece of land to 'bask in the sun.' A few minutes later a strange figure could be seen walking down the street, one half of the face blacked while the other was white, and with party-coloured garments covering his limbs—the whole representing one of the greatly dreaded deities acting as Judge in the Buddhist Courts of Hell.

Naturally all the neighbours flocked to see the fun.

'What do you want?' asked Dr. Kao.

'Just to sit and bask in the court,' was the answer.

'But the courtyard is mine.'

'So it is. I sold it to my loss, but what did you give me for the air and the sun? I did not sell those, they are still mine.' A bystander here whispered to Kao, 'You *must* give him money, and get rid of him. You bought the land too cheap, and he will certainly bring ill-luck. It is a Kanchow custom; but give him money and he will depart without bringing a curse on you.'

The answer to this was a front door thrown wide open, and a cordial invitation to the sun-basker to enter, for, not only were sun and air at his disposal, but the element of water also, with which the doctor was immediately prepared to wash his face!

Needless to say, the Presiding Genius of the Courts of Hell beat a hasty retreat, and never troubled the dauntless Christians again.

CHAPTER VIII

A CHINESE COMMUNITY

It is quite evident that a man of this calibre could not fail to attract kindred spirits. To see one whose qualifications placed him high in the ranks of citizenship,

N.W. China AF13
Tu ren.

563 (1260-1368) and still continues. The Tu ren of Wei yüan bu are a very
[779] peculiar little group. Many of them say they believe in only one
god. But, like the Chinese, they are also Buddhists. But besides
791 that they have shaman priests similar to the Bönbo, who are primari-
789 ly concerned with making the weather and exorcizing hail. On the
way from Hsining to Wei yüan bu one constantly comes across small
loam towers and numerous small heaps of stones which the hail
exorcisers have erected for the protection of the fields.

563 Most of the Tu ren men dress like Chinese, but some of them
[291] also wear, like the Tibetans, caftan-like wool skirts that reach
142 halfway to the ground and they wrap their legs up to the knees with
gray or blue bands like the poor people of North China. It is very
difficult, in fact, impossible, to distinguish a Tu ren from a
Chinese by the cast of his features or his build (Plate LIV). They
may be smaller on the average and have broader faces than the
Chinese. But just as among us Europeans one recognizes persons of
different nationalities only by certain external characteristics and
by their language, so it is with all the Mongoloid peoples at the
opposite end of Eurasia. There is no truly significant difference in
physical structure which would exclude misjudgment or confusion.

563 The men wore the Manchurian-Mongolian queue - which is
[302] taken for granted among faithful subjects of the emperor - and for
the rest they shaved just as much of their heads around this queue
[162] as the Chinese did. There are today still many thousands of them
(allegedly 20,000 families). In the Hsining prefecture alone the
number of their princes (tu se) equals more than 12, formerly it
[651] was 16 or 18. These princes receive gifts and land tax from their
subjects, administer justice and represent their subjects in dealings
with Chinese officials. They submitted as early as 1372 in the
fourth year of the reign of the first Ming emperor (Hung wu) and
[551] in return their old noble families were established. Beside their
Mongolian names they have Chinese surnames and three of their
tu se are called Li, two Ch'i, others Yi, Chen, Wang, Na Chao,
Chu, etc., and all of them have remained faithful since the Yüan
dynasty, just as though they were real Chinese. During the Mo-
hammedan rebellions they suffered exactly like the Chinese.

563 There are also Tu ren living on the old highway between Lan-
342 chow and Hsining fu, in the region of the confluence of the Da
tung ho and the Hsining Ho, where they are scattered among
Chinese and Mohammedans in individual villages. These are

N.W. China AFS
Kalmyk

563 ribbon is decorated with white shells, deep-red corals, silver discs
[302] and pieces of amber sewn on it. Like the Tibetan women, they wear a caftan that opens on the side, and the men, too, dress like their neighbors, the Tibetans. The faces of the Mongols are rather differ-
[142] ent from those of the Tibetans. They are broad and their noses are also wide. My men thought they were much better looking than the Fan tse. I, however, did not agree with this. Even with my taste which was corrupted as a result of my Asiatic environment, I could not admire these faces that looked as though they had been flattened out with a roller.

778 July 6. The Mongols are very devout Buddhists. Near the very
563 first yurts on Schang territory there stood mani rdyayu - they looked very gay like our May poles - consisting of four tall poles forming a large square around a taller /338/ center pole. There were garlands of cloth shreds, red, blue, green, yellow and white, completely covered with prayers, stretching from pole to pole (Plate LXXVIII). At the top of the center one cedar twigs swayed in the wind, and their resinous fragrance pleases the heavenly ones. Next to this there was an altar on which today, the day of the full moon, cedar-
[175] and thuja-leaves and tsamba were being burned. At noon the family
[789] lama blew his horn; a procession of men, women and maidens approached the altar, fell down before it, prayed, circled again and again around the mani rdyayu, clockwise, according to the rules of the yellow sect, "the way the moon rotates around the earth," and prostrated themselves countless times after each time around, hoping to obtain peace, release from demons, and for their herds, freedom from disease and death.

563 For this exorcism my nearest neighbor in Camp 51, a well-to-do
792 Mongol, (1) had invited the incarnation from Tangsker, a monastery

1. A man is here considered well-to-do if he has 8 to 10 horses, including mares and foals, 20-30 yak cattle and 400 sheep, whereas near Dankar a man is not considered well off unless he has 40 horses, 60-70 yak cattle and close to 1,000 sheep and goats.

of which I learned for the first time here, and which lies far off on the Hwang Ho, many travel-days farther than the oft-mentioned Rardscha gomba. The journey of the holy man from his lamasery to Tsaidam lasted many months, but he had been undertaking it for several years already, and he stayed two or three months each

I am equally happy.
Once I had a lady love, and now I have a new lady love.
I love them both equally well!"

From time to time came an answering long drawn-out trill or a shrill vibration from a reed pipe from some far-off yurt. In between there was the sudden meowing lament of a /340/ wolf from up on the heights. The chorus of dogs in the valley became wild and answered with harsh barks. Nor was the answer to the strong east wind long in coming. At midnight it began to rain and that put an end to our feast to the gods.

But Sung's sacrifice of a sheep was not yet considered adequate. Eight akkas of the Gelugba sect were requested to exorcise all evil and remove it from us through prayer. Before they arrived eight smonlam hkor, cone-shaped figures 10 centimeters high and a yidam (tutelary god), a triangular pyramid, were kneaded out of tsamba dough. Twenty pounds of tsamba were required. Three white solar disks made of butter were stuck to the front of the yidam and the dough for it was colored red so that it looked like bloody meat. The smonlam were white and were finished off by being smeared with butter. When these things were made, a dorma (gtorma) 25 centimeters high was fashioned from dough. It was a slender, three-sided object with notched edges resembling flames and produced by means of a thread (see Fig. 20 and Plate LI).

When the akkas appeared at daybreak, the smonlam hkor with their yidam were placed on a chest to the rear of the tent. The dorma was placed on a rush mat in a corner on the floor. The eight priests read the smonlam prayers all day long, until twelve o'clock at night, to the accompaniment of cymbals and drums, and my Buddhists repeatedly kowtowed and threw barley and spirits over the yidam. On the second day the white tsamba-smonlam were burned upon the altar, together with thuja leaves. The red yidam was divided up among everyone and eaten. The skeleton was carefully lifted up and carried in solemn procession around the corner of the nearest mountain where Sung meanwhile had lit a large fire. When the procession arrived there everyone began to yell wildly and shoot off their guns, and after three vigorous exclamations of "Pfui!" on the part of the priests, Tch'eng threw the dorma into the blazing fire. Now all the lay people shot their guns into the fire a few times, then everyone quickly ran back to the camp site and the monks were each given a khadar and silver, according to their rank and dignity, because they had rid us of all disease-bringing agents and evil

[text continues on p.571]

782 influences (in Chinese the ceremony is called: sung gui, in Tibetan:
789 dönna g'en). (1)

1. Rockhill has already described the end of this ceremony in his Land of the Lamas, pp. 113 and 114. From wealthy Tibetans the priests get /341/ demand for more and more pounds to make the tsamba figures. This offering is carried out once a year mostly at New Year, by each family. In Southeast Tibet a bullock's head of tsamba is also usually placed beside the gtorma (probably to represent Yama). There the bullock's head and gtorma are brought to the fire amid the shooting of guns; at the Chinese frontier "crackers" are shot off. In both places cries of "Pfui" are uttered during the procession.

137 /341/ In the woods of Schang and among the Rengan Fan tse I met for the first time the green da hoang (Chinese), literally: the great yellowness, namely, rhubarb, the mother-plant of our well-known and trusty home remedy. The flower clusters were at this time, the beginning of July, more than 2 meters and in some cases 3 meters tall and covered with pinkish blossoms. The leaves which were deeply slit and tapered off into pointed lobes, had red-speckled stems. Old plants spread their thick foliage over several square meters of ground and from the tangle of leaves which was two-thirds of a meter high and often looked like a bush, arose individual slender, tall flower clusters. If one digs out these stalks one finds rhizomes up to the size of a bullock head, and in with the roots there are still clusters of young, smaller plants.

The plant grows between dirty limestone rocks and prefers damp places of wooded areas. But I also found it in moist places of sandstone slopes covered only with grass. It is found up to 4,100 meters. The lowest border of its common habitat is 2,800 meters. (1)

1. A few days before my departure from Hsining I received a letter from Professor Tschirch from the Pharmacological Institute of the University of Bern. He called my attention to the fact that there is still uncertainty about the origin of the common medicinal plant, rhubarb, from a botanical as well as a geographical point of view. He asked me to send him bulbs and

V. Individualistic and Collectivistic Bents and Traditions

The nomadic society of the Kirghiz, Kazakhs and Mongols shows collectivistic trends insofar as the pastures are always owned collectively and the livestock can be taken care of and protected only cooperatively. In periods of war and uprisings, the livestock had to be protected militarily, which was one reason why the military organization of the nomads, introduced by Chingis Khan, survived up to the twentieth century. Here we can say that the nomadic Kirghiz and Kazakh still show a tremendous martial spirit, especially the Kazakhs who fought the Communists in 1949 and 1950 in a heroic way in spite of the fact that they were outnumbered from the very beginning.

As a matter of fact, the Mongols show much less martial spirit than neighboring Kirghiz, Kazakh and especially Tibetans, who constantly rise up here and there, becoming a major nuisance for Peking, although they are hopelessly outnumbered by Chinese Communist Troops. Many explorers agree independently that the Mongols, once intrepid, dauntless, unafraid, frightful and terrifying warriors, make now the impression of being inefficient soldiers, timid, downhearted, and discouraged (so Rockhill, Howorth, Tafel, Vladimirtsov, Hedin, Futterer, and Filchner). Russian scholars, above all B. Vladimirtsov in his Le Regime Social Des Mongols, Le feodalisme Nomade, Paris 1948, blame Buddhism for the disappearance of the martial spirit and courage of the Mongols. This opinion is, however, contradicted by the fact that Tibetans, who have been influenced by Buddhism some centuries longer than the Mongols, are well-known as tough and cunning fighters and apparently fearless and daring insurgents.

Almost every Tibetan family has at least one son in a monastery. They faithfully pay their tributes to these monasteries where their sons live as novices or monks. The monasteries are the only cultural centers of the country. Sometimes might be named as a magnificent example in regard to external architectural beauty as well as internal wealth in respect to its library, printing house, and the spiritual value of its schools and its Lamaistic academies.

There are many reasons to believe that the Communist regime is determined to abolish nomadism and to make the nomads sedentary or at least semi-sedentary. The first step was the erection of permanent winter sites. The attitude of the nomads toward the regime seems to be ambivalent. The erection of veterinary stations for the livestock and the extension of additional irrigated pastures certainly are measures approved by the nomads but on the other hand the threatening

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

we would give her nothing that was forbidden by her vow.

The day before we left Kinta, the temple of the Goddess of Mercy was crowded with women worshippers —young brides beseeching the gift of a son; while mothers who had received a child during the past year, now brought it to be placed under her protection. The baby, covered by a red scarf, was held in its mother's arms under an immense iron bell, when she produced her offering, namely, a handkerchief full of mixed grain. The bell was then struck; the priest took out some of the grain and scattered it over the child's head, with the words, '*May the Goddess of Mercy protect thee; may the God of Plenty endow thee;* then, yellow paper having been burnt, and its ashes smeared over the child's forehead, the priestly incantation was ended, and the mother went away, satisfied that all that could be done to protect the little life from ill-luck and demons had been successfully carried out.

A few days later we visited a famous group of temples known as Wenshu Miao—'The Halls of Learning'—situated only twenty miles from Suchow, at the mouth of the main Pass through the Southern Hills, and where festivals are held for both Chinese and Tibetans during the spring months. Hundreds of shrines stand on the mountain-side and numerous guest-houses have been built to accommodate the thousands of pilgrims who gather each year, on the first day of the fourth moon. From early dawn carts full of women, followed later in the day by military processions, escorting the chief officials of the town, followed one another up the stony valley in unbroken succession.

The shrines are connected by a labyrinth of small, steep paths which wind in and out around and over the hillside, at each turn of the road revealing a temple,

3:Cable & French M-3 (1926) 1927
AF13 Northwest China AF13

and anyone following the maze will pass hundreds of shrines in the course of his pilgrimage. The ambition of each worshipper is to visit as many idols as possible, and to light a stick of incense and burn paper before each. It is an amazing feat for women who are crippled by bandages and tiny shoes, and many of whom are no longer young, to climb these precipitous paths, sometimes even on hands and knees, in order to reach an apparently inaccessible rock-shrine, yet this is accomplished even over roads made slippery by rain.

Some of the chasms are crossed by rickety wooden bridges which bear such names as 'The Heavenly Road,' or 'The Short Cut to Paradise,' and here old women are helped by husband or son who carries the basket of incense and a pile of votive-paper.

Most of the shrines[1] are modern, but the original cluster of buildings dates from the time of the Emperor Chien Lung, and there are a very few, excavated in the hill, of a much older date, which contain frescoes similar to those found in the famous 'Caves of the Thousand Buddhas' at Tunhwang. At dark on the last evening, bonfires are lighted on every prominence, in which all the remaining incense and paper is burnt, in honour of the gods of the earth, spaces, and mountains.

The crowds were by this time accustomed to the sight of the white tent, and the people streamed in and out, listening to the addresses and buying the books. In preparation for the festival the students posted carefully selected passages of Scripture in each of the many shrines, and twelve months later, when we revisited Wenshu Miao, not one of these had been defaced or destroyed.

A week later was the Tibetan gathering, and we drove out once more over that stony road. We had

[1] [at Wenshu Miao, see p. 107 -- Analyst]

3:Cable & French M-S (1926) 1927
AF13 Northwest China AF13

either side stood an attendant, one of which was a gaunt brown shape of terror sent forth to induce men to commit suicide by taking opium. His was a dread figure indeed, but not to be compared with the second, which represented the female instigator of suicide, by means of cutting the throat. She carried no emblem to make her mission clear, but every line of her insinuating face and bold, compelling eye, suggested the Power of Evil, able to break down the last hesitation in the mind which contemplated this dreadful deed; and Chinese women have since told us that many a bride has cut her throat after a visit to that shrine. The consummate horror of this representation so impressed us, that we can well believe it.

Chienfutung habitually stands solitary, but for the visit of an occasional pilgrim, except during one week of the year, when thousands of worshippers crowd its temples, and the air is heavy with burning incense. Streams of small-footed women risk their necks on the precipitous, crumbling paths leading to the upper galleries, nor will they, in spite of the utmost fatigue, leave one single temple unvisited, lest having done so much, they should fail to conciliate that last, final deity whose malice might be incurred by neglect!

CHAPTER XXV

THE LAKE OF THE CRESCENT MOON

We returned to Tunhwang so enthusiastic about the art treasures of 'The Hall of the Thousand Buddhas' that our visitors urged us to make a second expedition to another beauty spot of the locality, Yüehyachüan—'The Lake of the Crescent Moon.' 'Chienfutung is

574 escorted!" he repeated over and over again, not even giving me a chance to ask for it. Then, suddenly interrupting himself, he asked us politely but firmly to drink our tea and because we pretended not to hear him, he repeated his request. There was nothing for it but to take up the tea cup and "Tso-aa!" Departure! cried the doormen at the same instant. Throughout China the invitation to drink one's tea is only an invitation to leave, and if a guest reaches for the teapot which must always be placed beside him when he comes for a visit, then everyone knows that it is time to depart. Within less than five minutes /208/ we again found ourselves in the doorway. In spite of our doubtful reception I was blissful, for what more could I wish than a small escort for my further journeys. At that time I still had confidence in the words of the higher Manchu officials, all of whom had received me well and treated me with friendliness, and I still had the best opinion of the amban, especially because he had returned my New Year's gifts with a large, costly dinner which, however, he had had served to me at my inn. But
[437] this is not an unusual custom in China. In larger cities it is also often customary to make out notes to some restaurant for a dinner of four or eight persons. These notes one may give away to someone else without embarrassment, and it sometimes happens that the tenth man into whose hands the promissory note falls really takes advantage of it, even though he may not know the first man who is actually paying for the dinner.

527 541 788 On the fifth day of the New Year shortly after sunrise the general and all the officers of the city set out to fetch the god of entertainment. A gala sedan chair which bore the written character Si (entertainment) was placed in a temple outside the east gate. In front of this letter, which was more than a meter high, the general and the men accompanying him fell on their knees in the dust of the road and kowtowed three times. Later on, the letter on his sedan chair was brought to the city in solemn procession and then placed in the general's yamen. There it remains throughout the year and is a guarantee that in the coming year there shall be no lack of entertainment and theatrical performances of all kinds in the city.

On the tenth day of the New Year the so-called spring festival was celebrated in Hsining fu. Scarcely was the sun up on that day when all the streets leading to the east gate were crowded with people. The Chinese farmers with their wives and children poured into the city from distant places. All the roofs of the main street were covered with representatives of the fair sex whose faces were

[text continues ... 354]

painted white. And the heads of families who stood below in the street offered them sweets and refreshments from time to time. This was not too difficult, for all the houses in Hsining fu are one-storied and low besides. Around eight in the morning the prefect (fu) and the sub-prefect (hsien) solemnly proceeded to a temple outside the east gate where they expressed their veneration for the dragon (1) and the

527
541
788

1. De Groot, Fêtes annuelles d'Emoui (Paris 1886, Vol. I, p. 36): "The dragon is the symbol of rain, of fecundity and also of imperial dignity." - In my journey through Hu peh I saw, at the end of the first Chinese month, dragon processions moving through the fields, in order to bring about a fruitful year.

cow and the goddess of the earth. Then they returned home with equal pomp. In front marched a lion made of colored paper and cloth and a man who danced about with a sun (yang), then followed two dragons with snapping jaws (Plate XLV). Each of the dragons was represented by twelve men who walked in single file. Behind the dragon rode the amban's cavalry men, producing dreadful sounds on their half-broken and dented trombones, which would have surely caused even Jericho's wall to fall. Twenty horsemen carried huge gaily-colored flags which almost covered horses and riders (Plate XLV). Then came /209/ infantrymen of the general, two by two, carrying German guns, model 71-84, whose sights and muzzles were decorated with new red paper cushions. In the muzzles they had the stoppers which are never lacking on Chinese guns. All the yamen secretaries followed in their best clothes, then halberdiers, yamen servants with imaginary weapons, with coats of mail containing the trident and morning star, after these came the higher town clerks in fur coats and mounted. Finally came the hsien, father and mother of the city, in an open sedan chair carried by eight men. He was dressed in a large cloak of lynx, and sat stiff and immovable like a doll or an idol. Close behind the chief personage there followed only four soldiers, then the crowd pressed up close behind in motley confusion. In similar fashion, except if possible with a larger advance procession, the Hsining fu, the prefect, also marched through the streets. The latter wore a huge sable fur which was so elegant it was almost a spectacle in itself. Only these two civil officials are obliged to appear at this festival. All the officers as well as the dao tai and the amban do not appear at all.

*563 encampment, or they may consist of a group of friends or relatives.
221 Some go only to the neighboring farmers, but more gain is to be
[437] found in the trade at the border. Winter also is the time for weaving the yak hair cloth, for preparing and repairing equipment, and for visiting and gossip. The period of high festivity is approaching.
*563 The traders return from their travels and the nomads flow en
221 masse to the monastery centers for the observation of the mid-
796 winter festival. During the festivals religion is combined with both
• 792 pleasure and business. Almost every family has its representa-
[443] tives among the monks so that family reunions heighten the gaiety
[584] of the season. Trade is brisk for the monastery centers are also market towns. Maidens contract alliances with the swashbuckling young nomads, and some of these affairs ripen into marriages. Business of another nature may also be contracted at this time.
*563 Once the spring movements commence, the nomads find it advisable
221 to travel with a minimum of baggage both for actual convenience of
579 movement, and to lessen the loss incurred should a raid occur.
[792] Thus advantage is taken of this opportunity to store one's valuables
[488] in the care of the monastery, and more particularly with a monk related to the owner. From mid-winter until the horses are too jaded in early spring, the major occupation can only be described as robbery and attempted robbery. Large-scale caravans from other parts of Tibet and from China make the most desirable prey.

*563 Ekvall and Yu reported that the winter grazing grounds belonged
423 to the encampment, and that the territories in which the pastures
621 were located, and assigned, were the property of the larger units
619 (or tribes, as they are sometimes called) consisting of a number of encampments. The winter hay fields were individual's own property.
*563 These units might be under the jurisdiction of a chief or they might
423 form a rather loose confederation without marked central authority.
622 In some instances the actual "chief" might be one of the local
[792] monasteries, whose head will exercise civil authority over the laity. Infrequently a chief might even control several larger units, in which case he would be referred to as gyalpo or "king." But
*563 even the most nearly autocratic chief exercised caution in asserting
622 his position, lest a disgruntled encampment, or some tents, might
628 leave his jurisdiction for the welcoming embrace of some other chief. The latter would then have complete information necessary for conducting a successful foray against the first group. Thus, just as within the encampment, the actual authority in these larger units rested in the hands of a council of elders, representing each of the component encampments.

*563 Although there are clans in Tibet which have played important
614 roles in the history of some of the ruling families, they perform
[621] no major function among the Tibetan nomads. The encampment is not based on clan affiliation. Such affiliations even cross the lines of the larger units. (Cf. Ekvall, 1939 and Yu, 1947). The clan

873 875 794 [554] Those students who go through six to ten years of continuous studies may become ahungs, mudarris (teachers) or ustādh (honorary title of recognized teachers). Generally, the erudition of these teachers does not seem to be very high. Hence idioms like "ahmaq min mu-allim kittāb" (more stupid than a school teacher).

[779] Islamic laws regulate strictly the position and conduct of a teacher. He has to be married; he is permitted to teach only in public places (hānūt) with big windows, so the community can watch his activities; he is not allowed to use children as servants or engage them otherwise except in school work without the consent of their parents. Occasionally, however, parents have their children serve the teacher instead of paying the regular fees.

Kashgar has a fairly well-known school, the Wanglyq Medrese, whose fame was not confined to Sinkiang alone when Bohā'eddīn Makhdūm taught there, but spread as far as Istanbul and Cairo. Another famous Moslem scholar, Rāmetulla Akhun, the leading jurist ('ilmi fiqh) of his time, taught at Wanglyq. The Kichiq Orda (Little Castle) Medrese in Yarkand was also a well-known seat of higher learning. Also called Yeshil (Green) Medrese, it was founded by Baisi Bāk, the hākim (judge or physician) in 1820. While the quality of the medreses of Kashgar and Yarkand have steadily declined during the last decades, the medrese of Aqsu has maintained its reputation to the present because the core of its faculty are scholars from Afghanistan who received their training at the Al-Khazar University in Cairo.

2. Monastic academies of Lamaism

• 792 871 794 The high number of Buddhist monasteries all over Northwest China and their enormous monk population of course colored the whole educational system of the Northwest. These monasteries were not only institutions of higher learning, but they also served as libraries and printing houses.

* [563] Kumbum (Tib.: sKu-'bum-Byams-pa-gling; Chinese: T'a-erh-ssu) was the chief monastery in the Northwest. It was customary in Chinghai for every Tibetan family to send its second son to this monastery. At the age of eight the boy was admitted after a strange ceremony, which included questions like the following: Are you a debtor or a slave? Are you a hermaphrodite? Are you a demon or an all-knowing spirit? Did you ever treat your parents badly? Did you ever rob or steal? Did you ever belong to a heretic sect? After having answered these questions satisfactorily he received five objects, which henceforth were his only property: an alms-bowl, underwear, a [875] tunic, a mattress and a water sieve. Then one of the ordained lamas was presented to him as his future tutor, whom his

• 792 794 871 [895] family were to pay, and the boy's welfare depended largely upon the amount his parents were able to pay. Sons of poor families who could pay perhaps only one yak a year had to do menial work as water carriers, cow-dung collectors, straw and grass carriers, housekeepers and so forth, to pay for their lessons.

792 794 872 The years between eight and eighteen, the usual length of the novitiate, were given to attending an elementary school where the pupil learned to read, write and recite prayers. He was to learn forty chapters of the Kanjur from memory. During this time he was called a bande, or novice. Then he might enter

792 794 873 the "Lamaistic college" to become a getsul, a stage between a novice and a fully ordained bLama. Or he might return to his home village or camp to become a house lama, of whom there are thousands, who are supported by a single family. If he chose to become a getsul he might continue to study and become a gelong, a fully ordained lama, entitled to wear the precious yellow tunic with a black collar.

Kumbum has four colleges: a philosophical college, a college of church service and occult sciences, a college of canonical literature and a school of medicine. One must go through the philosophical college before he may enroll in the college of church service and occult sciences, and must go through these two successfully before he may enter the college of canonical literature. The usual characteristics of those who enter the [158] school of medicine are a pathological personality, epilepsy or other abnormality.

792 794 873 779 The philosophical college (Tib.: tsan-nyid) offers the study of the Kanjur. [The Kanjur consists of one hundred volumes subdivided into one thousand eighty-three chapters. Volumes one to thirteen contain the chapters about conversion and reclaiming (Tib.: dul-wa), the discipline and moral duties of the monks. The volumes from fourteen to thirty-four constitute the Prajñāpāramitā, which deals with the "road to virtue" leading to the "other shore," to Buddhahood and to that subtile and "transcendental wisdom" which is "without any characteristics," through which "all differences, contrasts, antagonisms, contraries, antithesis and contradistinctions" disappear, where all categories of thinking are empty, where heart and mind become silent like "the surface of a tranquil and placid sea." Volumes thirty-five to thirty-eight are called the Club of the Buddhas, volumes thirty-nine to forty-four are called Construction of the Precious Stones, and the volumes forty-five to seventy-six contain narrations on how to gain the nirvana. The volumes seventy-seven to ninety-eight contain the tantras and dharanis, sentence of anathemas and magic formulas, and the last two volumes are the exegetics and exposition of the tantras and dharanis.]

The philosophical college does not procede according to the

792 arrangement of the Kanjur but starts, strangely enough, with
794 the most difficult chapters, the abhidharma, metaphysics (Tib.:
873 C'os-mnon-pa, clear doctrine), and difficult sūtras. Each
[779] student gets an additional private tutor, who explains difficult passages of the matter under study.

When the weather permits, teaching is conducted in the open in the so-called chör-ra. Otherwise instruction takes place in a temple hall.

[876] An important part of instruction is frequent disputations between the teacher-monks and the students, under the supervision of the abbot, khan-po. These loquatious duels give occasion for the students to show how much they know and how much they have memorized.

In the course of time the students are taught ts'ad (logic), bzo (technique), rtsis (astrology), snan nags (rhetoric), sgra (grammar) and adul-ba (monastic rules). After having mastered the whole material the student receives the degree of dka-bcu (a man who has passed the ten examinations).

To complete the work of the philosophical college takes more than a decade. Then the dka-bcu can either procede to the next [554] college to gain the title of snags-rams-pa (master of the tantric sciences) or to another monastery where other famous teachers are found.

[779] To receive the title of snags-rams-pa, the monk must study large parts of the Tanjur, a gigantic 225 volume collection of theological, philological, ethical, alchemistic tractates and a tremendous amount of occult tantras.

Another center of monastic studies was Labrang in Kansu, one of the foremost monasteries of the Yellow Sect. This monastery is divided into what might be called six different colleges. In the first, known as Wen-hsi-t'ang, five different sutras are taught. The second college is primarily concerned with the continuation of the studies in the first, but the difficulty of the curriculum increases. In the fifth and sixth colleges the esoteric sutras are taught. There are separate colleges for sciences of medicine. Most monks, however, never learned more than a few prayers. The Labrang monastery [177] showed some concern with modern times by introducing courses in animal husbandry and the manufacture of agricultural by-products. Like other monastic academies, however, it has remained primarily a center of religious learning.

B. Nationality Education under the Republic

658 The period of the Republic was characterized by the fact that
871 the government attempted to bring the Chinese educational sys-
179 tem as far as possible into the area of the nationalities. Educa-
*563 tion became one factor in the general policy of assimilation.

658 schools.
871
*175 In Ninghsia: Two training classes for Mongolian and Tibetan teachers and fourteen primary schools.

563 Special attention was paid to the education of the lamas in the
658 great monastery of Labrang, at Hsia-ho in Kansu. The Mongol-
792 ian and Tibetan Affairs Commission organized a Tibetan Peo-
871 ple's Cultural Association which helped to set up a vocational school and a political training class for young lamas. In the field of political instruction, the Central Political Institute also established a Mongolian-Tibetan School at Sining, in Chinghai, with a branch at Suchou, in Kansu.

*175 During the war against Japan, with the migration of the
166 coastal population inland, universities and middle schools from
871 Peking and other places moved to the Northwest. When the war
[648] front was more or less stabilized after 1938, the Northwest en-
[658] joyed a comparatively stable peace. These "immigrants" built up cultural centers such as Ch'eng-ku, Ku-lu-pa in Shensi; and with the mass education movement promoted by the National Government, education in the northwest was greatly improved both in quantity and in quality.

658 Under the school system of the National Government, chil-
872 dren started school when they were a full six years old. Before that age they might go to kindergarten if there were such facilities and if the parents could afford it. But at six the government required every child to attend the first grade. The free and compulsory education covered the first four grades, which were called junior primary school. The fifth and sixth grades were classified as senior primary school. A school with all six grades was called a complete or central primary school. In the Northwest, the National Government made a real effort during the war to push toward the goal of one junior primary school in every pao (approximately one hundred families) and one central primary school in every town or hsiang (administrative village). By the end of the war, all children with the exception of those in really remote areas had a chance to attend a junior primary school, even though some of these schools were of low caliber. As the central primary schools were limited in number, only the luckier ones who either lived close by or were financially better
658 off could enter the fifth and sixth grades. After graduation from
873 the sixth grade, there was quite a hurdle to clear before one could enter the secondary schools. Entrance examinations were difficult because the facilities were so limited that only selected children could be admitted. The secondary schools included three types: the middle schools; the vocational schools, and the normal schools. The middle schools were meant for a selected [804] group, as preparation for more advanced studies. The vocational schools offered training in agriculture, industry, commerce

792 795 all the forms of Lamaism, especially in Chinghai, the strong strain of Bon, the pre-Buddhist religion, continues in a modified but still openly non-Buddhist form.

795 175 D. Manichaeism

Manichaeism reached the steppe people by way of Persia and China. Mo-yen-cho (759-780), the Uigur Khagan, accompanied by Manichaean missionaries, returned from the conquered Lo-yang. He was converted and on the inscription of Khara Balasaghun he was referred to as "Mani's emanation." After the Kirghiz forced the Uigurs to flee from the Orkhon region to the Turfan area, Manichaeism waned among the latter and they soon adopted the Buddhism found in their new domain. Rudiments of Manichaeism were to be found up to the time of Chingis Khan.

795 175 191 E. Christianity

From time to time, Christianity has played a significant role in Inner Asia. Due to Methodius and Kyrillus (759-780), it exerted powerful force among the former inhabitants of today's southern Russia. The empire of Khara-Khitai in Eastern Turkestan furthered both Buddhism and Nestorianism. Among the Turkic Naimans, Nestorianism came into existence but not in sufficient strength to overshadow Shamanism. The Turkic tribe of the Kereits (almost as influential as the Naimans) is said to have become Christian about 1,000 A.D. Their Khan contacted the metropolit of Merv, Ebejesü. When the Khan of the Naimans, Küčlük, had been driven away to Kashgaria (1214), his Nestorian education became obvious when he permitted the Moslems to become either Buddhists (considering the faith of his wife, who was the daughter of Gur-Khan) or Nestorians.

The Mongols were considerably influenced by Christian traditions because of the Kereits' and the Naimans' intense interest in their faith. The Great Khan Güyük (1246-1248) was in favor of Nestorianism. His chief advisor, Khadag, and his chancellor, Chin-Kai, were Nestorians. The Great Khan Möngke (1251-1259) was educated by his Nestorian mother, who was the Kereit princess, Surgaqtani, and had Bulghai, a Kereit Nestorian, as his advisor. Even at the beginning of the Iranian Mongolian Empire of the Ilkhans, Christian traces were considerable.

Hülägüs' wife, a niece of the last king of the Kereit, was a Nestorian. The military leader, Kitbugha, who was defeated at Ain Jalūt (in Palestine), was another early adherent to this religion. In many respects the conquest of Persia resembled an anti-Islamic crusade. The indigenous Christians' aid proved effective whereas that of the occidental Christians was requested in vain. As in the case of the empire of the "Golden Horde" (Batus' son, Sartaq, was a Nestorian), these Christian outposts

779 cussed in Heaven. They teach men sorcery and will serve men
776 who can rule them by these devices. The leader of these evil spirits is called "The Shaitan" or Iblis. His fall from a place among the angels was due to his refusal to worship Adam on God's command; for this he was accursed till the Day of Resurrection and given authority over those of mankind whom he seduced.

779 Next to the unity of God, the doctrine of the Apostles, as the
776 shahada indicates, is the central doctrine of the Koran. Mos-
792 lems are required to believe in the Apostles without distinction The last of the Prophets is Muhammad, who is God's Apostle to all mankind. The doctrine preached by all the Prophets is essentially one and the same; although in matters of detail there has been a gradual evolution in their messages toward the final and perfect revelation.

As for Muhammad himself, the Koran repeatedly disclaims on his behalf anything that is superhuman. He was but a mortal man, commissioned with the sole duty of conveying God's warning and message of salvation. He had no knowledge beyond what was revealed to him, and he had been granted no miraculous powers.

779 Faith in life after death is the last of the basic principles of
795 Islam. The word usually used to indicate it in the Koran is al-akhira. The Koran does not speak only of a life after death, but impresses on believers the importance of life on earth as a basis for the future life. The Last Day, the Day of Resurrection and Judgment, will be the time when men's future fate will be decided by God. This day will come suddenly at a time known only to God. On that day the graves will open and men will be called to account for their deeds. Each man's angel shall bear witness to his record, his deeds will be weighed in the balance, and his book will be placed in his hand, the right hand of the blessed and the left hand of the damned.

Then the blessed, the God-fearing men and women, the humble and the charitable, the forgiving, those who have suffered and been persecuted for God's sake, those who have fought in the way of God, shall be summoned to enter the Garden of Paradise, where they shall dwell forever by flowing rivers, praising God, reclining on silken couches, enjoying heavenly food and drink and the company of dark-eyed maidens. Those who have sinned against God and men are condemned to eternal punishment in the flames of Hell.

779 C. The Rituals of Islam
786 a. Prayer (Salat). The observance of the ritual prayers is re-
782 peatedly emphasized as one of the essential religious duties. Although neither the ceremonies nor the five set times of prayer

/Chinese Moslems/

The Chinese Moslem community differs from the Turkic Moslem community mainly in the organization of the community around the mosque and in the peculiar position the ahung holds in the community. The ahung holds the central position in both the religious and the social life. In principle, the Islamic community has no professional priests, but in China the ahung has actually taken the place of one. The Imam, whose office is important in Western Asia and Eastern Turkestan, where he has leadership in religious life, has lost his pre-eminent position in China. So has the Muazzin (the one who calls people for prayer) and the Mufti (the teacher of law). At present these positions have been practically abolished. Those who hold the title have no particular importance in the community. These titles are inherited and are not conferred by virtue of any knowledge of Islamic affairs. The ahung is the only real Moslem scholar in the Chinese Moslem community. He is nominated to this position by virtue of his knowledge of the details and philosophy of the religion. He trains students, the Khalifa, to become the future ahungs and to continue to maintain Islamic life in China.

G. Chinese Moslem Sects

After the pilgrims had established some contact with the rest of the Moslem world, there were attempts, many of them springing in the Northwest, to reform Islam in China. The first well-known attempt of this sort was made by Muhammad Amin, known in China as Ma Ning-hsia, who in 1781 appeared among the Salars and introduced some reforms concerning the rituals of Islam, correcting some of the practices which seemed not to be in accordance with those he had observed in Mecca.

However, of all the most notoriously successful is the sect of Ma Hua-lung, the hsin-chiao or the new doctrine, as contrasted with the traditional religion practiced by the Chinese Moslems, Lao-chiao or the old doctrine.

The new sect is to be set apart from the rest of Islam in China. In spite of the Islamic Chinese tradition regarding religious leaders, their being chosen by the community to serve it, and known only to their adherents, Ma Hua-lung's name was known far beyond his immediate followers. To some he was a prophet, and others detested him as an impostor.

The nature of Ma Hua-lung's teachings still remains somewhat of a mystery. There is a tendency to regard them as endorsements of Shi'ism, or perhaps as an unusually bold representation of Sufism (mysticism in Islam). However, the notices of D'Ollone show that actually they are genuinely Sunni in character and not a variety of the mystical philosophy widely diffused throughout Central Asia. Ma Hua-lung was regarded as an incarnation of the Spirit—a sheng jen (holy man, prophet)

S N 795 795 792 185 equal to or even higher than Muhammad himself. Most of his followers were uneducated. They believed that he had divine revelations since, without instruction, he had answers to all questions and appeared to know many things. As the founder of a new sect, he had to prescribe certain external forms by which his adherents might be distinguished from others. The differences he ordered are best described by W. T. Chan in the following passage:

"The New Sect insists that a certain chapter of the Koran should be recited once only instead of three times as held by the Old Sect, that at prayer clasped hands should be raised once instead of twice, that after a meal there is no need to raise clasped hands in greeting, and that in singing the praise of Allah the voice should be low instead of high. With reference to religious service, the New Sect does not allow any substituting for an ahung in preaching, whereas the Old Sect permits such an arrangement. The two sects also disagree on the basis for calculating the period of fasting, with the New Sect adhering strictly to the Arabic method and the Old Sect following the Chinese lunar Calendar. The New Sect believes that at funerals the mourners should take off their shoes, and stand on a mat while praying for the dead, whereas the Old Sect holds fast to the tradition of standing on the ground with the shoes on. The New Sect also directs that the corpse be laid on the ground, whereas the Old Sect insists on its being on a platform. There is also a disagreement as to whether there should be an honoraria for preachers. In short, the New Sect insists on returning to Islamic traditions, but the Old Sect prefers to keep the customs that have developed in China through the centuries." (Religious Trends in Moslem China, p. 193.)

S N 795 792 [669] Being partly dedicated to ideas of forming a Moslem state in the Northwest, independent of China proper, Ma Hua-lung played a very important role in the Moslem rebellion during the nineteenth century.

S N [578] After the death of Ma Hua-lung, friction developed in his sect. His son-in-law, Ma Ta-hsi, and his grandson, Ma Hi-hsi, fought each other for the sacred inheritance. Ma Ta-hsi had the advantage of numbers and his place of residence, Cha-ku, became an important religious center.

S N 795 Chang distinguished another sect existing in the Northwest, which he identifies as the New New Sect. Unfortunately there is not much evidence as to its nature. He also mentions a Sufi order in the Northwest called Che-ho-yeh (corruption of Jahrivah). The latter is described as "having an abbot, like the Buddhist lama. It is heavily superstitious and is generally despised by other schools." D'Ollone and Hartmann, however, identify this sect as that of Ma Hua-lung, the name Jahriva

/The Nomadic Tibetans/

The clan as such owns no property. It serves only as a geneological record of importance in determining who are not legitimate marriage mates. The clans are patrilineal, but the clan affiliations of both parents limit the choice of possible spouses.

Beyond the larger unit, Ekvall states "...the Tibetans acknowledge no law or control beyond that of the tribe. About seventy years ago some of these tribes paid token-taxes to the Chinese government as a sort of yearly tribute, but even that has gone out of practice; and, though in a vague way the Tibetans acknowledge the 'emperor's household,' i.e., the Chinese government... to all practical purposes Chinese law is completely ineffective in the region. Not only are the tribes independent of the Chinese government but they are even more independent of each other...." (1939 p. 50-51.)

Lhasa has almost as little influence as Peking. It has no political control over the area, but it still remains the prime ecclesiastical authority and the goal of every prospective pilgrim-trader, i.e., every Tibetan.

Despite the rigors, the feuds and the dangers of Tibetan nomadic life, it presents a very strong attraction for both the nomadic and the sedentary Tibetan. By attaching himself to a nomadic encampment a young and poor ex-farmer can become a social, as well as a literal, climber. Success and prestige are measured in terms of influence and wealth. The high road to these is the road of the nomad, with his herds and his golden opportunities to acquire wealth rapidly by removing it from its previous owner and by trading. With his wealth, regardless of how acquired, he can be lavish with gifts and donations to a monastery. This lavishness combined with the ability to entertain guests liberally, adds to the individual's influence and with influence he has prestige, therefore success. The sedentary man or woman who succeeds in making himself valuable to a nomadic tent is well on the way to becoming a self-made nomad.

II. The Sedentary Peoples

A. The New Uighurs (Eastern Turks)

Some socio-historical considerations are necessary for a better understanding of New Uighur social structure. No clear concepts about the transformation of the New Uighur to a sedentary population have been advanced to this time. However, the following hypotheses are presented. Until the eighth century the New Uighurs (or simply the Uighurs, as they were known at that time), were a predominantly nomadic people. After the collapse of the middle Turkic empire in 744 A.D. Chinese influences upon all the Turkic peoples in Sinkiang became increasingly stronger. This is brought

/The Sedentary Tibetans/

There is more rigidity about the village organization. The sedentary Tibetans generally have a formally selected village headman. But again the council of elders has considerable authority. Groups of villages are organized into a larger unit, nor is it uncommon for villages and encampments to be joined together in such a larger unit. A monastery is more apt to have authority over a group of villages than over the strictly nomadic people. However, like the nomads, the sedentary Tibetans give very little recognition to any authority beyond that of the ecclesiastical or lay chief of the "tribe". Ma Ho-t'ien, in his Diary of Travels in the Border Region of Kansu, Chinghai and Tibet makes frequent reference to the inability of the Chinese officials to exert any sort of authority over the border-Tibetans and other sources also record the absence of any effective government beyond the local level.

The village itself represents a very tightly-knit organization, economically and politically, as well as physically. Houses, housesites and the fields belong to the individual families, but the grazing lands and forests are community property. Use of the pastureland is available to all, but the village may place certain restrictions on the quantities of timber that may be taken for specific purposes.

Just as the nomads act simultaneously in moving their encampments from one site to another, so the sedentary Tibetans also insist on simultaneous group action within the village. The first day of spring planting, determined by horoscope, sees all the villagers proceeding to their individual fields in their best clothing. The fields are ploughed simultaneously. The seeds are sown at the same time in each field. And, when harvest time comes, all the fields must be completely harvested in the time that it takes the smallest field to be harvested with a small hand sickle. If one's fields are too large one hires extra help. During the course of the growing season all the villagers periodically parade through the fields carrying the holy books on their heads. These communal activities have both religious and economic bases. From the viewpoint of the religion, if the days have been selected as auspicious, they are auspicious for the community's members as a whole. It is when the spirits of the ground, the demons of hail and misfortune can be allayed or propitiated that determines the best days for performing the needed tasks. From the viewpoint of economics, when the ground has been plowed and the seeds planted, the fields are encircled by a community fence to prevent onslaughts by roaming animals. A community watchman also stands guard. It also means that the villagers can collect a tax from caravans that pass through their lands. Once the fields have been harvested, the community

/Turkic Peoples of Sinkiang/

"Play your dunbra, dance and sing,
People of different nationalities are now closely knit,
Let's sing the praise of Mao Tse-tung,
Ai, let's sing of Mao Tse-tung!
Our beautiful fields and gardens, our dear native land!"
(Songs of New China, Foreign Languages Press, Peking, 1953.)

II. Artistic and Intellectual Expression among the Tibetans of Northwest China

A. Introduction

Chinghai is the most heavily Tibetan-populated area in Northwest China. Culturally, it is very much a part of Tibet proper, although being a border region, its Tibetan inhabitants have come often into close contact with the Chinese and have been greatly influenced by them. The most famous of the Tibetan cultural centers in the area are the Kumbum and Labrang monasteries, where much traditional Lamaist literature and art have been found and are still being produced. The great majority of the Tibetans in the area, however, are members of nomadic tribes, who are largely ignorant of the many cultural treasures of the monasteries. These tribes are the seat of Tibetan folk cultures—song, dance and epic literature. (The distinction between the strictly religious artistic and intellectual expressions and the unwritten folk culture is present through Tibet, and is not peculiar to this area alone.)

B., Tibetan Literature

Tibetan literature is almost exclusively religious in character. It centers around the religious Buddhist texts translated from Sanskrit into Tibetan, and attempts to explain them, analyze them, relate the lives of saints, eulogize convents and glorify events which are an expression of religious feelings. There are not many secular works, as traditionally the culture was, and has largely remained, the privilege of the monks. The center of Tibetan culture is to be found in the monasteries, and the scholars are the lamas reared and trained in these institutions.

The Lamaist scriptures, which are faithful translations from Sanskrit texts (Indian, Kashmiri and Nepalese), and a few also from Chinese, were made mostly in the eighth and ninth, eleventh and thirteenth centuries A.D. None of these Tibetan translations, however, seem to have been printed until comparatively recent times.

The Lamaistic scriptures consist of two great collections, the canon and the commentaries (the kah-gyur and the Tangyur). The great code, the Kah-gyur, or "The Translated Com-

/The Tibetans/

*563 538 Tibetans. There are a few versions of the fabulous history of Gasar, of which the version told in Kham is most frequently recited. There are several manuscripts of the Gasar legend, but none of them is complete. The Gasar saga is mostly recited orally, by the wandering bards, who can recite long passages from memory, and by the people themselves, as every Tibetan can recite a few verses of the Gasar epos. It is particularly popular among the nomadic Tibetans. The legend seems to have had its origin in the Pon time, prior to the conversion of Tibet to Buddhism.

*563 532 [177] C. Tibetan Art

Tibetan art is divided into two categories, the religious and the secular. The influence of India can be recognized in the first category, while Chinese influence is dominant in the things pertaining to worldly life, as the cultured society in Tibet modeled its manners upon those of the court of Peking, which for centuries occupied the suzerian position.

The religious art is expressed mostly in works of sculpture and painting. The most popular and unusual of the creations of the Tibetan artists have been the tankas. The tankas are scroll paintings, or occasionally embroidered pictures, which first came to use in about the tenth century. Before that time, painting was mostly confined to frescoes on the walls of temples or monasteries or in caves. These tankas are hung in the temples and at family altars in homes. They are also carried by the Lamas in religious processions. They often portray a deity, group of deities, or scenes from the life of Buddha or the saints. Often they depict stories which the Lamas use to illustrate their sermons.

The tankas are usually painted on canvas, sometimes on [792] paper, rarely on silk. The artists are Lamas, who spend many years in training before they attempt to work independently.

Images are also made for religious purposes. They can be of gold, silver, copper or bronze; or sometimes they are of wood, stone, clay or butter. They are often studded with turquoise, coral and pearls. The artists either sculpture them by hand or make them in molds and finish them by hand.

The votive tablets are another category of religious objects which requires the work of special artists for its production. [792] They are made by the Lamas, after a set pattern from which they are not allowed to deviate. These tablets are sometimes sold to the worshippers or pilgrims, or they may be made by order of wealthy donors and presented to a particular temple. The cruder ones are made of clay, with the figure of the deity or group of deities impressed on the face. More elaborate tablets are polychromed and gilded. A few are made of bronze,

*563 532 copper or silver. The clay votive tablets are made in molds, and finished and colored by hand. The metal tablets are also made in molds and are finished with hand tools.

Other ritual objects are made by the Lama artists, such as the cups for offerings of butter water, incense and perfume; objects for the altar (such as holy water vases), amulets and charms. The technique for making these ritual objects and the materials used are prescribed, the Buddhist canon containing the rules for making these objects.

• [792] The Kumbum monastery in Chinghai is particularly noted for its work in copper and other metals.

*563 532 294 Other objects which require skilled artists and craftsmen are the robes and masks used by the Lama dancers in the mystery plays on festival days. Especially embroidered and brocaded robes of bright colors are prepared for the actors. Masks are constructed to fit over the head and rest on the shoulders of the dancers. Some masks are very elaborate and grotesque. The brocaded robes are Chinese in origin, but the masks and headdresses are Tibetan.

[777]

*563 531 532 415 352 Objects of daily use employed by the common people, such as interior fittings and furnishings of houses, windowframes, tables, carpets and food vessels, are often made and decorated by skilled artisans. They all bear a strong influence of Chinese motifs. The rugs in Tibetan houses exhibit patterns which are derived from Chinese prototypes. A favorite color scheme of these rugs is a combination of light blue, warm brown and white. The little tea tables found in Tibetan homes are called chogtse. Those which are not plain are either painted gaily with bunches of flowers on flat panels, or, more rarely, carved with dragons and then painted. Most of the eating utensils, such as bowls, pots, jugs, cups and teapots, carry interesting designs. Shoes are usually skillfully decorated, and so are other works of leather like mule trappings.

[791]

*563 533 792 D. Music and Dance

Music and dance play an important part in the religious worship, as well as in the lighter amusements of life. The classical music of the temples consists of a solemn though animated style of chanting and of orchestral interludes, played with long copper trumpets, with the rhythm supplemented by a multitude of percussion instruments. The hymns are always sung by memory, but there also exists written forms of them. The notation is in the nature of a graph of the rising and falling voice; large curves convey the basic tunes, while smaller loops represent melodic ornamentation. The words of the songs are articulated with great clarity and are given the right stress while the bodies of the monks sway gently to the rhythm.

795 'P'ags-pa. After his conversion, the Great Khan, Tümen Sasaq-
171 tu (1557-1593), of the Chahar area, promulgated a Buddhist code
175 of law. His second successor, Legdan, built a Buddhist temple and had the Buddhist compilation of the Tanjur translated. The "Living Buddha" settled at Urga in 1602 and was succeeded by a chain of reincarnations until 1924. In 1620, the Khoshuts, inhabitants of present-day Dzungaria, broke away from Shamanism. Buighabu Bātur also adhered to Yellow Sect Lamaism. As a reward for leading the "holy league" of Oirats who defeated a Red Sect prince's attack on Lhasa, the Dalai Lama ordained Gushi-Khan, the Buighabu's brother, as "vicar" of the Yellow Church. After the Ordos and the Chahar, the Tümet and Khalkha, having adopted Buddhism, also lost their warlike characteristics. In contrast to the 'secret history" of 1240, the history of the Ordos prince, Sanang Setsen (1662) dealt not with the conquest of the world but with the conquest of souls.

175 C. The Lamaism of Chinghai
795 The province of Chinghai, or Amdo as the Tibetans refer to
792 it, has played a very significant role throughout the history of Lamaism. From Chinghai came the first new stirrings of Buddhism after the religious persecution by the apostate king, Langdarma. The great reformer, founder of the ruling (Yellow) sect, the Gelugpa, came from this border area. The immediate excuses for China's marching into Lhasa usually have been supplied by events here. Both the present and the late Penchen Lamas had spent considerable periods of exile or semi-exile in one of the most famous monasteries of the area, Kumbum. Cen-
(648) turies ago the Chinese system of Ambans at Lhasa was insti-
[795] tuted after a Chinese army had marched as escort for a disputed reincarnation of the Dalai Lama. This Dalai had been born south of Amdo, but had spent his years at Kumbum. As a meeting place of Mongols, Tibetans and Chinese, the area has also played a vital role, religiously and politically, in matters concerning Mongolia and China.

795 Lamaism has played a role in Chinghai equal to the role that
792 the province has played in the religion. According to Ekvall (1939), one out of every three males in the area is a monk. Lhasa has never succeeded in achieving the secular rule of this region; as a result, all sects of Lamaism including the various unreformed sects and the non-Buddhist Bonist sects have continued to flourish. However, the two largest monasteries, Kum-
792 bum and Labrang, adhere to the Yellow Church. Kumbum had held the pride of place as the site where the great reformer
[669] Tsong-kha-pa was born. After the Moslem rebellions in the last century, however, the population of Kumbum dropped. Until recently it had to bow to Labrang in respect to numbers. Between

792 the two monasteries there has been a total of five to seven thousand monks. These monks came not only from the immediate area, but were attracted by the prestige or teachings of the monasteries from Mongolia and other areas on the Chinese border.

792 871 Labrang prides itself on being one of the six major academic monasteries in all Tibet. Ma Ho-t'ien even claims for it more complete systems of education and organization than are to be found at the central Tibetan centers of Ganden, Sera and Tashihlumpo. But this pride is modified by the fact that an academic degree of Geshe from Labrang is not actually recognized in Tibet proper. The Labrang incarnations, Chia-mu-yang, have generally gone to Depung in Lhasa to receive instructions.

792 [798] [423] [651] Kumbum can rest on its laurels as a place of holy pilgrimage. Within its grounds is the rock associated with Tsong-kha-pa's birth; so too is there the famed tree that supposedly sprang from the shorn locks of the Great Reformer. Both monasteries own much land and represent great wealth. Some has come in the form of the accumulated gifts and donations of the pious. Still more is representative of taxes imposed over the years on their local subjects, for, like many of the smaller monasteries, these two are the seats of secular rule as well as religious reverence.

792 701 In return for the gifts and other revenue, however, the monasteries perform many functions for their subjects and believers. In the turbulent conflicts between Moslems, Chinese and Tibetans, the monasteries have represented the effective military force of the area. Rijnhart, Ekvall, Ma and others who have been present in crises have all reported the efficacy of the fighting monks. Their strongholds serve as banks for the wealth of all in danger from looting; their armed force stands for the safety of Chinese, Tibetans and foreigners who seek refuge. Nor is there any perceptible hesitancy about the prospects of taking life when the lama war cry, "Sha-sa, sha-sa" (Eat meat, eat meat!), summons the monks to arms. Sometimes these armies [669] were aroused by major crises, such as those of the Moslem rebellions in the late 1800's. They have also done battle against the Communists in the 1930's. And when no greater danger threatens, they are apt to do battle among themselves on an inter-sect or local rivalry basis.

792 795 But the hold of the monasteries cannot be measured solely in terms of the social and political roles they fulfill. The religion of Lamaism is a very tenacious one. The complete conversion of Tibetans to another faith, be it Christianity or Islam, remains on a very small scale. Within the Lamaist structure, the hold of the older sects is the strongest, especially in areas that have remained outside the control of Lhasa. And underneath

S 795 798 668 177 civil marriage, marriage and divorce ceased to be an important function administered by the qadi.

Thousands of religious scholars and intellectuals, denounced as counter-revolutionaries, were arrested. The people's courts tried some thirty thousand Moslems, sentencing some to death and others to life imprisonment. Soviet forces were reported to have joined the Chinese Communist troops in suppressing the anti-Communist uprisings, in which it is estimated that 130,000 Moslems were slaughtered, 260,000 sentenced to forced labor and 150,000 fled from Sinkiang. [Figures based on Hikmah (Indonesian weekly), July 23, 1955, in Missionary Bulletin, January, 1954, and report of Mochtar Gazali, member of the Executive Council of the Federation of Indonesian Moslem Labor, in Missionary Bulletin, July 1953.]

S [648] [669]

But the persecutions have failed to wipe out opposition from large segments of the Moslem population. As late as the spring of 1956, it was still charged that "counter-revolutionaries" were hiding in religious circles and "under the cloak of religion they carried out various kinds of destructive activities." (Report of Su Chen-yung, vice director of the Bureau of Public Security, Kansu People's Government, in Kansu jih-pao, March 15, 1956.)

N 795 • 792 * 668 177 B. Lamaism

As was the case with Islam, the present regime has also tried to placate Lamaism as a device to attract the loyalties of the Lamaistic peoples, the Mongols and the Tibetans. Famous Lama temples were kept in a good state of repair, Lamaist priests and dignitaries received subvention and a certain restraint was shown toward interfering with strictly religious practices (for details see IMAR Handbook, Religion). More particularly, the two highest priests of Tibetan Lamaism, the Dalai Lama and the Panchen Lama, both 'teen-agers, by the way, were kept at Peking for long periods of time and shown around at international gatherings.

N 795 792 * 563 * 668 177 Attitudes toward Lamaism as a religion and an institution differ somewhat in the Mongolian and the Tibetan contexts. Generally speaking, it can be said that among the Mongols the influence of Lamaism was on the wane. Even among those Mongols who stuck to their traditions and maintained loyalty to their princes, there was a tendency to break loose gradually from the leading-strings of the Lamaseries. Already in pre-Communist times, progressive Mongols supported this movement. The Regent of the Alashan Mongols, for instance, had made it a rule to submit Lama novices to compulsory secular education and military training in order to educate them out of Lamaism. No reports are available on how Mongolian Lamas have reacted to

the Communist soft-glove treatment. It is known, however, that they are used widely as Communist propaganda agents.

In Tibet, on the other hand, and that includes the Tibetan parts of Chinghai, the position of Lamaism is infinitely stronger. There was no sign of weakening in the adherence to the old faith, and militant Lamas were always in a position to incite the lay population to concerted action. This has again been shown in the recent rebellious outburst in Tibet, which seems to be particularly strong in Southern Chinghai. Occurring at a time when the Dalai Lama was back in Lasa and the first steps had been taken to grant Tibet "autonomy" status (Reuters, April 26, 1956), this outburst is all the more surprising as it sets off the leading Lamaist clergy not only from the Peking regime but also from their spiritual head. Ruthless suppression measures which included the bombing of Lamaseries have thus far apparently not succeeded in quelching the rebellion. Mention is made of a Tibetan Resistance Party (Mim ang, literally, People's Organization) led by Lamaist clergy and joined by officials, traders and other laymen (Himalayan Times, Kalimpong, May 13, 1956: New York Times, June 30, 1956; AP, July 7, 1956).

C. The Fate of Christianity

Christian missionary activities and Christian establishments in the Northwest have been predominantly Catholic. The Communists had some dealings with Catholic priests and Catholic communities in the Yenan period. The staunchly anti-Communist stand of the Catholic Church had at that time given rise to friction and incidents, even though the Communists still wanted at that time to avoid drastic action. In Mongol Catholic communities they had attempted to undercut the prestige of the priest in case he was a foreigner, but they learned from experience that they did not fare better when a Mongol Catholic priest was put in charge. The strong cohesion between the community and the priests forced the Communists repeatedly into making concessions. A perusal of the records, however, creates the impression that dealings with the Catholic Church were handled locally and incidentally only, and that no plans were yet devised for how to take care of the Catholic Church.

After the general conquest, however, a pattern emerged which shows that an over-all policy was applied to the region. This policy was apparently inspired by Lenin's doctrine that Bismarck's head-on collision with the Catholic Church, the Kultur-kampf, was a folly. A propaganda front of "religious freedom" was therefore maintained all through the years. There was apparently, particularly in the beginning, a certain amount of local lattitude in the interpretation of this principle. In a

779 which varies according to one's wealth. This food must be
431 donated by every Moslem in the community who is not poor,
735 and distributed among those who need it. The second institution
794 is that connected with Id al-Adsha, on which occasion the poorer members of the community are fed with the meat of the sacrificed animals, and the skins of those animals are sold, and the sum thus realized spent on the propagation of Islam.

These then are the concepts applied to welfare work among the Moslems of the Northwest. As has been seen: the impetus toward welfare activities is entirely religious. This religious basis of welfare work was somewhat modified among the Chinese Moslems (Hui) particularly in those provinces, such as Ninghsia and Chinghai, where the secular power was in the hands of Moslem leaders. In these cases welfare activities would be supported strongly and with a certain efficiency by the worldly arm, but would pertain in most cases to the Moslem population only.

With regard to the handling of welfare cases among non-Moslem Chinese, reference is made in the section on Public Welfare of the General Handbook.

III. Welfare Among Lamaists

The concept of charity is alien to original Buddhism; it has no part in its ancient teachings. Almsgiving (dāna) is the only charitable activity that is occasionally mentioned in earlier writings. It is there termed as one of the "lucky things," with which to promote one's own self-perfection and salvation, even though it has no place in the eightfold path. Later on, rules concerning the attitude in which alms should be given were worked out, the theory being that the merit of the gift grows with the merit of the donee. The best gift of all, however, was the gift of Dharma (truth). The only entity who practided charity in anything like our sense of the word was the Bodhisatva, for whom, and for whom only, compassion was the cardinal principle. Every consideration is laid aside and even meditation neglected for its sake.

These basic doctrines have not prevented later schools of Buddhism in China from developing charitable and welfare work both through the temples themselves and through Buddhist sponsored or co-sponsored laymen's associations (see China General, Public Welfare). The Lamaist church, however, has stuck closer to the original concepts and hardly a trace of charitable or welfare work emanating from or sponsored by the lamaseries can be detected.

574 There exists, though, one concept common to both Lamaist
794 peoples, through which the situation is mitigated. This is the
485 concept of hospitality. Under this concept many charitable and
792 welfare functions are carried out by the lamaseries as well as

574 by the laymen. Temples frequently maintain free hostels for
794 travellers, and one can count on any layman to provide food,
485 shelter, road guidance, and any kind of help to needy passers-
792 by. It is even customary for a Mongol to leave food in front of his tent during the time he is on an outing. This hospitality is extended to destitutes and refugees also, by Mongols as well as Tibetans, irrespective of the creed of the receiver.

IV. Welfare Efforts Under the Republic, Particularly Under the National Government

657 With the coming of the Chinese Republic, the realization grew
731 that welfare was a public matter. Although it took time until the rudiments of an organization were set up to implement this realization, the government at best acted to the limits of its possibilities to bring relief in the case of natural catastrophes. During the great famine in the Northwest, caused by protracted droughts and earthquakes in 1928/29, the government organized a special commission to handle relief. The relief work of this commission was financed partly by fixed government grants, special loans and by solicited special contributions from Chinese cities, provinces and private organizations and individuals as well as by organizing a rather successful drive for funds abroad. The role played by the China Famine Relief Commission in this as well as in similar instances is discussed in the Social Welfare Section of the General Handbook.

653 The realization grew however that with regard to natural
312 disasters, prevention work might be of greater importance than
185 relief. One of the projects that grew out of this realization might be mentioned here, the Wei-pei irrigation project in Shensi. This project was conceived jointly by the Shensi provincial authorities and the China International Famine Relief Commission in the twenties. Actual work commenced in December 1930 and was completed in June 1932. Ninety thousand acres of land have been reclaimed b this combined conservancy and irrigation project. The maintenance of the system was later taken over by the National Economic Council.

In the late thirties this Council was particularly active in irrigation and reclamation schemes in the Northwest. It was responsible for the sponsoring or subsidizing of several large-scale projects in Shensi, Kansu and Ninghsia Provinces.

114 Unfortunately, there is very little information available on
657 the efforts on the part of the Chinese administration in the field of public welfare in the Northwest, both under the National Government and under the present Communist regime. From the
[794] little material we have the general impression is that the local efforts of the Moslem community encompass most of the work done in public welfare.

N /Mongols of the Northwest/

829 pastures, but not a country. Nationalistic movements of recent
*563 times hardly reached the Mongols of the Northwest (see Political
*[668] Dynamics) and serious attempts to join a greater Mongolian unit (Outer Mongolia) have never been made by the Mongols of Sinkiang.

S For most of the other Mongolian splinter groups of Chinghai,
829 Kansu and Shensi, such an ambition would have been still more
563 unrealistic due to their geographical separation from Inner and
[668] Outer Mongolia and due to their more progressed sinification, which is especially true for the Chinghai and Shensi Mongols. (Two heretofore isolated groups in Kansu, the Mongols of Alashan and Edzingol have recently been incorporated into the Inner Mongolian Autonomous Region.)

For the Mongols of the Northwest their country is China and their supreme representative, the court of the government in Peking. Their immediate superiors and chiefs were the banner leaders who observed a rather strict loyalty to China's court or government as they received a yearly apanage and, after having performed special, mostly military, services for the court in Peking, were promoted to higher ranks which in turn meant an increase in their yearly presents received from Peking. This fact did not encourage them to make any attempts toward independence, self-determination or autonomy. The Mongols of the Northwest thus did not think of their country but of their domain. An important aspect of this view is also the cultural basis of the Northwest Mongols, Lamaism, whose realm is everywhere where Buddhists live and whose center is Lhasa (Tibetan: 'the city of gods') rather than Peking. For the religious world is the real
S and essential world to them, the Dalai Lama, the supreme spiri-
N tual leader of all Lama Buddhists, became more real and essen-
[792] tial to them than the supreme political leader in Peking.

C. Traditional Attitudes of the Northwest Mongols

No matter where Mongols live, some trends are common to all of them: the pride of being a Mongol; the pride of speaking Mongolian, which is considered by them as melodious, sonorous, and full-toned in comparison with the 'chirping and cackling' of
S Chinese; and finally, the pride of being a free nomad, herding
N wherever he wants and riding wherever he wishes. Whenever
[797] Mongols meet each other they can communicate with each other as their dialects differ only slightly. They realize, too, that they have even more in common than only external appearance and language, something which is of utmost importance to all of them - their Lamaistic religion. In these respects they certainly feel that they constitute at least an ethnic unit, very different from the Chinese for whom they do not want to be mistaken.

N
*175 total number of peasant households. "The peasants in the mutual
*668 aid teams are politically organized," stated the Sian Ch'ün-chung
S jih-pao (January 6, 1954), and the enlargement of the membership
175 in the farmers' association have "strengthened the militia, thereby
668 consolidating the people's democratic dictatorship in the countryside in the Northwest region." (NCNA, May 22, 1952).

S Concerning the effects of the agrarian reform on the political
175 organization of the people, Kao Chin-shun, vice-chairman of the
668 Sinkiang People's Government, mentioned the following points: (1) Eradication of the "feudal" landlord class, (2) elevation of the political consciousness of the peasants, (3) consolidation and enlargement of the United Front, and (4) training large number of cadres. (Urumchi, Sinkiang jih-pao, June 19, 1953). He revealed too that in the process of the land reform, large numbers of the people signed pacts pledging to resist America and to aid Korea.

Late in 1950, branches of the China Peace Committee, organized for the purpose of rallying the people to support the war in Korea, was established in the Northwest. The work of these branch committees supplemented the activities of the people's political consultative committees and the people's representative conferences which were then in session preparatory to the formation of the people's governments. In Sinkiang, for example, the Provincial People's Representative Conference, in May, 1951, declared that its aim was to popularize and develop penetratingly the Resist-America and Aid-Korea campaign. Later in the year, in order to strengthen the hate-America campaign, the Sinkiang People's Political Consultative Committee and the Sinkiang branch committee of the China Peace Committee were merged into one joint committee. (Sinkiang jih-pao, June 19, 1953). Henceforth, the activities of the so-called conferences of workers, herdsmen, peasant, youth, women, religious, industrial and commercial circles, which were the components of the people's political consultative conference, were channeled to the work of propaganda. Seven members of the Sinkiang People's Political Consultative Committee who toured the Korean front, returned to spend three months giving speeches to half a million people. By the end of 1951, a total of JMP $213 billion (about US $10 million) was raised, sufficient, it was claimed, for the purchase of 142 fighter planes. This came to 4.24 per cent of the amount raised in all of China.

N Particular efforts were made to utilize religious institutions.
*175 In Chinghai, Buddhist lamas were organized into propaganda teams,
• 792 monasteries into meeting places for discussion of current events
*668 and the signing of pledges, and temple fairs and festivals for the extension of propaganda on government policies to the rural areas.
S Similarly, in Sinkiang, mosques were used to hold accusation
175 meetings and the Akhuns and mullahs were brought in line to sup-
668 port the land reform as well as the Hate-America campaign. A
793
346

159 Ninghsia Province; 1952-54, chairman of the People's Govern-
*668 ment of Ninghsia. His name, however, disappeared from the
701 lime light after the Ninghsia People's Government was abol-
[631] ished and Ninghsia merged into Kansu in 1954.

Hsing was a career soldier. His long years of fighting a guerilla war against the Japanese had made him a man of distinction. His association with the Communists, however, did not begin until he broke away from Sun Tien-ying, under whom he had fought as a guerrilla leader for many years. When Sun's guerrilla forces were re-organized into the Nationalist Fifth Army, Hsing began to shift his political leaning toward the Communists. Hsing's red star began to shine when he was first selected as deputy speaker of the Border Assembly for Hopei-Charhar area. He was responsible for the training of a large number of cadres in Ninghsia.

159
*668 Hsi-jao-chia-ts'o: Buddhist, government official

Born in 1884 in Chinghai Province. At age of twelve entered
• [792] one of the colleges in Drepung Temple in Tibet to study Buddhism; 1916, given the degree Geshe (after completing the five classics in Buddhism, namely, Sutras and Commentaries, Prajnparamita or book on philosophical matters, Madhyama or book on the Middle Doctrine, Vinaya or book on moral discipline and Vasubhandu's work); since then edited and commented on the Kanjur for twelve years. In 1937, he went to Nanking by way of India and gave lectures on Tibetan culture at the National Central University, Tsinghua University, Sun Yat-sen University, Peking University and Wu-han University. 1939, sent to Tibet by the Nationalist Government on a good-will mission.
159 Since 1946 has been a reserve member of the Kuomintang Cen-
*668 tral Supervisory Committee and from 1947 to 1949, vice-chair-
631 man of the Commission on Mongolian and Tibetan Affairs in the National Government. In January 1950, appointed member of the Military and Administrative Council for the Northwest, and concurrently deputy-chairman of the People's Government of Chinghai. Since January 1953, member of the Administrative Council of the Northwest, member of the Political and Legal Commission, vice-chairman of the People's Government of Chinghai, director of the Cultural and Educational Commission in the provincial government, and acting chairman of the Chinese Buddhist Association.

159 The fact that he achieved his degree of Ke-hsi had made Hsi-
*668 jao-chia-ts'o a man of high esteem. He devoted twelve years to
792 editing and commentating the Kanjur, the complete works of
554 Tibetan Buddhism, and his bold approach in editing the textual errors in the scriptures has made him an authority on Buddhism, although he did incur the displeasure of the Dalai Lama.

113, 792 •

and Haich'eng to Chinchi (Ningling) and Ninghsia. The Chinese consider those in the Southern area, who are of more recent Turki origin, to be the more dangerous and fanatical today. In a secluded valley near P'ingliang resides a sort of Mahomedan saint, who has great influence not only in Kansu but also in Yunnan, and who undoubtedly commands the services of thousands, or perhaps tens of thousands, of armed Mahomedans; he is not one of the regular Moslem leaders, who are referred to in later chapters; and there seems to be some sort of mystery about him, which it was not our business to enquire into.

The next stage from P'ingliang is one of 90 li to Wat'ing, a walled fort and posting stage at the foot of the Liupan pass. The road runs up the valley, which beyond a half-way village with inns contracts to a gorge, scrub-covered mountains of shale and sandstone taking the place of the cultivated loess hills. Pheasants were thick here, and so tame that one had to throw stones at them to make them fly. Wat'ing is rather an important point as the roads to Lanchou and Ninghsia here bifurcate (the latter *via* Kuyuan). We were met here by the magistrate of Kuyuan and also by a representative of the family of the late General T'ung Fu-hsiang, whose ancestral seat is in the neighbourhood. I have been told on more than one occasion by Chinese that T'ung Fu-hsiang was not a Mahomedan at all, but a Chinese General commanding Moslem troops; perhaps he was considered a Chinese because he fought against the Mahomedans in the great rebelli[illegible]. The following is a sketch of the career of this celebrated individual, who came into contact with foreigners by leading his Mahomedan troops to the attacks on the Legations in Peking in 1900.

T'ung Fu-hsiang was a native of Kuyuan in Eastern Kansu. In the big rebellion of 1864–1873 he figured prominently as a military chief on the Chinese side under General Tso, and it was he who captured the rebel stronghold of Chinchi on the Yellow River near Ninghsia, an event which was the turning-point in the campaign. This was the foundation of his fortunes, as he was enriched with the confiscated estates of rebels, and from that time on counted as one of the most prominent and influential leaders in Kansu. Subsequently he fought in Central Asia against

treated with every courtesy. The Mahomedans of Kansu still consider themselves to a certain extent as foreigners sojourning in a strange land, and greet travellers from the west as fellow-wanderers.

From New T'ao Chou to Choni, a march of 30 li, the track runs south-west over a low pass in the red clay hills, crosses a valley trending south, ascends another low pass, and descends through a grassy ravine to the T'ao River. Choni, the residence of a T'ussu, or native chief, ruling several Tibetan tribes in the neighbourhood, is a picturesque little place, a walled village built round the chief's residence on the banks of the T'ao, and overlooked by a lamasery containing some 500 monks. We were received by the usual cannon shots (an old-fashioned Chinese custom still surviving in most parts of Kansu which is terrifying to one's pony unless accustomed to it) and really sumptuously lodged in the chief's residence. The Choni T'ussu is by far the most important native chief in Kansu and exercises jurisdiction over an extensive territory. Some of his tribes, especially those living to the south of the Min Shan, are turbulent and not easy to control. The chief is under the authority of the Governor at Lanchou, but unlike his colleagues in Szechuan west of Tachienlu, he retains his power unimpaired over his Tibetans. On the east his jurisdiction is bounded by Chinese territory; on the west it fades away amongst the lawless nomads of the grass-lands. His authority, like that of most native chiefs in China, extends rather over tribes and families than fixed territory, and its limits are therefore vague.

The T'ao River is here the dividing line between Tibetans and Chinese (Mahomedans), the forest-clad mountains to the south being inhabited by the former, and red hills to the north by the latter. There is good big game shooting to be had in these forests, wapiti, sheep, goral, serow, bear, etc. The elevation of the valley seems to be about 8000 feet at Choni.

Leaving Choni the road runs up the beautiful T'ao valley for about ten li, and then turns north-west up a small ravine leading to an easy pass. From here it runs along the top of the mountain for a few li, descends into a valley, crosses another low pass, and drops down to Old T'ao Chou, 45 li from Choni.

is the same land of nomads and lamas, whether Tibetan or Mongol. In past centuries the Chinese were ever engaged, with varying success, in defending their fertile plains and valleys against the incursions of Tartar hordes from these tablelands; now the nomads are impotent outside their own territories, reduced in numbers and virility perhaps by the lama religion, and these vast empty spaces serve as buffers protecting China from the rest of Asia. Undoubtedly her wisest policy is to leave the scattered inhabitants to manage their own affairs as hitherto under her vague suzerainty.

The trail runs north-west across these grass-lands, passing continually from one shallow valley to another; at first these valleys slope S.E. towards the T'ao River, but after 20 li or so they slope N.W. towards the Ho Chou River. The pasturage is excellent and there are many nomad encampments; the latter are only to be approached with care, as they are guarded by huge Tibetan mastiffs, I should think easily the most formidable breed of dog in the world, and the nomads themselves are not friendly to strangers. Indeed the Amdo Tibetan of the Kokonor grass country is about the last kind of individual one would choose to meet alone on a dark night, and a wilder or more picturesque looking lot of ruffians it would be difficult to imagine. They always go heavily armed, and are robbers by nature. Once properly introduced to them, however, one can count on friendly treatment, and we had nothing to complain of in this respect. After six or seven hour's march from the village where we had passed the night the trail descended from the plateau into an open and partly cultivated valley with the temples and barrack-like buildings of the monastery of Heitso Ssu at the end of it, a most striking sight in this land of tent-living nomads.

Heitso Ssu (the Chinese name) is a large and wealthy monastery, containing, we were told, some thousand lamas. It is quite a little town in itself, with, as is usually the case on this border, a small Chinese village or bazaar of one street, run mostly by Mahomedans, attached to it. It lies at the junction of two small valleys below the level of the grass country, and the neighbouring slopes are well cultivated with barley and peas and dotted with Tibetan farms. We were badly housed in a kind of inn in the Chinese bazaar,

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

European scholars have maintained that the Hsifan are not Tibetans and suggested that they represent a northern branch of one of the non-Chinese races of S.W. China, like the Lolos or Mosos. Granting that there is no such thing as a homogeneous Tibetan race, the Hsifan of the country west of T'ao Chou speak the Tibetan language and are as much Tibetans as the inhabitants of any other portion of the Tibetan plateau. A little further north they come into contact with the Kokonor Mongols, whom they bully and plunder. Unlike the Mongols, who are everywhere being pushed back by the encroaching Chinese agriculturist along the northern borders of Shansi and Chihli, the Tibetans of the Kansu border hold their own against the Chinese colonist; partly perhaps because the country is too elevated to suit the latter, but also because the N. Eastern Tibetan is truculent and independent compared to the Mongol and further takes readily and successfully to agriculture. Their food is the buttered tea and tsamba (parched barley meal) of the Tibetans everywhere. Tsamba is a palatable food for people fond of porridge, and the buttered tea is not at all bad when regarded as gruel or soup instead of tea; it is for this reason that the bitter teas of India are unsuited to the Tibetans. It is often said that the Chinese sell the merest refuse of their tea bushes to the Tibetans; but it happens to be what the latter want to make their gruel with. There is little or no resemblance between the tea drunk by the Tibetans and that consumed in Europe.

There appear to be two racial types in Tibet, the short round-faced Mongoloid type, and the tall prominent-featured Aryan type; the latter is common among the Tibetans of Amdo as amongst those of Kham. A peculiar feature of the eastern Tibetan, by which he could in nine cases out of ten be recognised in Chinese or foreign dress, is his habit of standing with his feet turned out at right angles to his body.

From Heitso Ssu the trail runs north over low grass-covered hills for a few li and then descends through a rocky gorge to a small monastery called K'achia Ssu (all our names are Chinese) lying in a narrow wooded valley trending N.W. In this neighbourhood there grows a plant poisonous to ponies and mules. From here the track runs down the

valley, at first through cultivated fields and then through a densely wooded gorge. This is a difficult march in the summer, as the trail constantly crosses and recrosses the stream, which is rapid, obstructed by boulders, and only just fordable. Several of us got a wetting, but we were lucky in keeping the pack-mules on their feet and our bedding dry. The mountains in the neighbourhood are covered with fine forest, but mostly on the slopes facing north only, a peculiarity which may be noticed all along the Kokonor border; I have observed the same thing in the forests of Northern Shansi; whether it is that the sun is too hot on the southern slopes, or that the northern slopes alone receive sufficient moisture, I am unable to say. Four to five hours' march down this gorge, past several small lamaseries, brings one to the junction of this stream with the Tahsia River, a torrent flowing from Labrang to Ho Chou. The Labrang road turns up this valley and runs for a few li through cultivated fields to the small monastery of Shakou Ssu, which lies on the north side of the stream, with a Mahomedan hamlet, Sasuma, opposite, where we passed the night in an inn. There are pine forests all around, and the Tahsia River, though only a mountain torrent, is used for rafting the cut timber down to the Yellow River and Lanchou. The timber is made up into narrow sections, fastened one behind the other, and the jointed raft which results is navigated down the rapids and through the rocks with extraordinary skill by Mahomedan raftmen.

From Heitso to Labrang is a distance of some 120 li, and Sasuma lies about half way, the track running for the rest of the way up the valley of the Tahsia River. For the first 30 li the path is very bad and rocky, the valley being a gorge hemmed in by wooded mountains; there is no more fording to be done, however, as the river is spanned by good cantilever bridges, this being a portion of the Labrang-Ho Chou road, which is much used by the mule trains of Mahomedan merchants. In this neighbourhood we saw some *ma chi*, the large and handsome silver pheasant with red legs (*Crossoptilon auritum*, probably). For the second 30 li the valley opens out and the road becomes a good highway. The first intimation we received of the approach to Labrang were the white and blue tents dotted

over the mountain slopes, and then a sudden bend of the valley reveals the gilt-roofed temples and huge barrack-like constructions of the great monastery. The buildings are, I should say, without parallel in the whole of China for magnificence, solidity, and size, and present a most startling appearance in that wild and sparsely populated region of mountains and grass-lands.

Labrang (Chinese Labalang Ssu) lies at an altitude of about 9000 feet in the valley of the Tahsia River just below the level of the grass-lands which commence immediately to the west. It is a regular town in itself containing over 3000 monks as well as a considerable floating population of visiting Tibetans, hundreds of whom were at the time of our visit encamped in the neighbourhood. The monastery is the most important religious centre between Lassa and Urga, not excluding the better known establishment of Kumbum (T'a-erh Ssu) near Hsining. It contains a university which attracts students from all parts of Tibet and Mongolia, and even Siberia. The monastic authorities exercise control over the neighbouring Tibetans and until recently over Chinese as well. Of late, however, the chief lama, a Re-incarnation (referred to as a Hutukotu by the Chinese), has fallen much under the influence of the Mahomedans of Ho Chou, and the monks are no longer as unruly and hostile to foreigners as formerly; at the time of our visit they had even applied for the establishment of an agency of the Chinese Post Office at Labrang. All the same it is advisable for foreign visitors to be provided with an introduction from some Tibetan or Mahomedan authority. A li or two from the monastery is the usual Chinese, or rather Mahomedan, bazaar. These large monasteries on the Kokonor border are commercial as well as religious centres, and the Chinese trading villages attached to them resemble in a way the foreign settlements attached to Chinese cities opened to foreign trade. This border trade is almost entirely in the hands of the Mahomedans, and even where the Chinese take a hand in it, it is through the agency of Mahomedan middlemen, called *Hsiehchia*, who travel amongst the Tibetans further west, and barter Chinese wares for their produce, especially wool. There are many queer tales about Labrang to be heard locally.

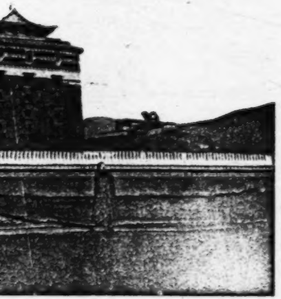
F HEITSO MONASTERY



F HEITSO MONASTERY

[FACING p. 145]

We were well accommodated by the Mahomedans in their village. The Hutukotu was away "saying prayers in the grass-country" (*Ts'ao Ti Nien Ching*—as we were told), but the second lama in charge, an aged monk of refined and intelligent appearance, received us most amicably in a gorgeous apartment glittering with gold images and other signs of wealth, and gave instructions for us to be shown round the monastery. I am not sufficiently acquainted with Lamaism to be able to give an intelligent description of what we saw, but the temples were the finest and richest I have visited in China, and the residences of the monks the usual gloomy buildings common to all lamaseries. At our interview with the lama we were presented with the usual silk scarves (*Khata*), and it may be noted that the Chinese and Tibetans with us attached these in a prominent manner to their persons to show all and sundry that they had been received by the authorities of the monastery; I do not know whether this is a usual use to which to put the *Khata*, but it seemed a good idea here. After getting back to our quarters we found a present consisting of half a sheep for ourselves and several bushels of peas for our animals from the lama, which was very welcome in a country of scanty supplies.

From Labrang to Ho Chou is a distance of about 200 li, which is usually made in three stages. The first day's march took us back down the valley of the Tahsia River to Sasuma. From here the trail continues down the valley, which is here cultivated, past several small lamaseries, for 40 li to the village of Ch'aokou. Here gorges are entered through which the river winds for another 20 li to the village of Ch'ingshui (these villages are Chinese, or rather Mahomedan, with nothing Tibetan about them). The path ledged in the rock and supported by wooden stagings high above the torrent is very dangerous in places. There is an idea that mules and ponies accustomed to the mountains never fall, but this is by no means the case, and I have on more than one occasion seen an animal plunge to his death over the edge of one of these precipices, though fortunately we never lost one ourselves; it is always wise to dismount in such places. In spite of the dangerous nature of the road we met large numbers of mule caravans going up to Labrang

the Kokonor (in Chinese Ch'ing Hai, meaning, like the Mongol name, "Azure Lake"), who used to be known by the Tibetan or Mongol term of "Amban," but who at the time of our visit was styled in the republican manner *Ch'ing Hai Pan Shih Chang Kuan* ("Chief Authority in charge of the Affairs of the Kokonor Territory"). Soon afterwards the post and its occupant, an old Manchu, were abolished by Yuan Shih-k'ai's Government, and the control of the Kokonor territory handed over to the Mahomedan General of Hsining. This control is of the usual vague and shadowy nature, such as has been exercised for so long by China over her outlying dependencies. The Mongol inhabitants are ruled by their own princes under China's overlordship; the Tibetans wander pretty well at will over the territory, robbing one another, the Mongols, and the Chinese, and generally pay but little respect to their nominal Chinese masters. It is possible that the Mahomedans will now take measures to bring them more under control[1].

We remained some days at Hsining, but unfortunately had no leisure to visit either the Kokonor Lake or the famous monastery of T'a-erh Ssu. In the intervals of official business we were hospitably entertained by the Mahomedan General, the Manchu Amban, the Taoyin, and other officials. The former, like most of the Mahomedan leaders we met, was a bluff, hearty soldier and a delightful companion; he had served under T'ung Fu-hsiang at Peking in 1900.

Tanko and Hsining are the headquarters of the great Kokonor wool trade, which has been going on for twenty years or more and has now reached very large dimensions. This wool is produced on the grass lands of the Kokonor border, and is carried by raft and boat down the Yellow River and by camel caravan across the desert to Tientsin, whence it is exported to America. The trade is largely in the hands of the foreign export firms in Tientsin who, through their compradores, maintain buying agencies at various collecting centres such as Hsining, Tanko, Kueité, Hochow, Hsünhua, Tatung, Yungan, and Épo on the

[1] Such measures have since been taken, with the result that the Tibetans, and more especially the lamas, have on several occasions risen in arms against the Mahomedans, and the peace of the Kokonor border has been seriously disturbed.

lawlessness of the past few years, which fact, however, only makes its commercial prosperity all the more remarkable. It evidently owes its importance to its position as the most westerly outpost of Chinese trade in this direction, and like Kueihua Ch'eng, is one of the starting-points for caravans going west. The Mahomedans appear to form an important element in the trading community. There was no civil official at the time of our visit, but a large garrison of soldiers; the inhabitants seem a rough lot, as is to be expected in a frontier town.

At Paot'ou our river journey came to an end and we hired carts to convey our baggage to Kueihua Ch'eng, distant four marches, the usual stages being, Salach'i 90 li, T'aossu Ho 70 li, Pihsuehchi 90 li, and Kueihua Ch'eng 80 li. The road runs east across an undulating cultivated plain accompanied by the Tach'ing Shan range on the north. Except for some marshy patches of grass land which have to be crossed, the going is good, and I have never known Chinese carts to travel faster, our ponies frequently having to trot to keep up with them. The traffic was surprisingly busy on the road which evidently carried a bigger trade than any trail in Kansu. The inhabitants are apparently all Chinese, but at a farm where we stopped for a meal the owner and his wife though dressed in Chinese clothes could only speak Mongol; and another sign of the former Mongol population is a picturesque lamasery on the mountain side, which from its appearance might equally well have been situated on the Kokonor border. The Mongol lamas are very like their Tibetan colleagues, as is shown by the accompanying photographs (see frontispiece) of a so-called Devil Dance, which were taken at a big monastery in Eastern Inner Mongolia, and represent the "Dance of the Black Hat," the commonest religious dance in Tibet. It represents an incident in Tibetan history namely the killing of King Glangdarma, the notorious persecutor of Buddhism, by the lama Dpalgirdarje in A.D. 842; the lama danced before the King in the costume shown in the photographs, concealing in his broad sleeves a bow and arrow. The photographs facing pages 200 and 202, which were taken at the same Mongolian monastery, also represent purely Tibetan ceremonies, namely the *torma* offering for warding off

flowery trees and shrubs, roses and peonies, made the garden fragrant. The temple held a fine set of china figures representing the Pa Hsien. These are the Eight Genii, the men of the hills, who once lived on earth, but now, free from the grosser claims of the flesh, still retain the capacity for such minor delights as strolling leisurely in beautiful surroundings, or even those of eating and drinking. When in the flesh, although they practised asceticism, it was not to such a degree as to secure complete etherisation. They are not immortal, but enjoy a prolonged and easeful life. The little figures look their best standing on the old lacquered table in the sombre shrine, and the gay gardens provide an appropriate setting to these unaspiring beings.

Above the porch was a fresco which showed—hanging in graceful attitude over a balcony rail—the form of the Kwan in—Goddess of Mercy—with an infant in her lap. The pose, coiffure, and background were so Western that it might have been a fresco in the porch of an Italian Church. This was not the only place in which we saw pictures which bore a distinct trace of Nestorian tradition and influence, and this is not surprising considering that in the thirteenth century, Marco Polo still found groups of Nestorian Christians, both in Kanchow and in Suchow.

Close by the Temple of the Spacious Hills was a quiet courtyard, where ten Buddhist nuns lived in community. They were all deficient, either physically or mentally, blind, deaf or short-witted. Their feet were unbound and their hair cropped. They were in receipt of a pension, and gave themselves up to reciting long liturgies. Their services were valued at funerals, where they intone prayers for the departed. We often called in and sat for an hour, and they loved to see our Scripture pictures, and listen to the Bible stories.

[302] ribbon is decorated with white shells, deep-red corals, silver discs and pieces of amber sewn on it. Like the Tibetan women, they wear a caftan that opens on the side, and the men, too, dress like their neighbors, the Tibetans. The faces of the Mongols are rather different from those of the Tibetans. They are broad and their noses are also wide. My men thought they were much better looking than the Fan tse. I, however, did not agree with this. Even with my taste which was corrupted as a result of my Asiatic environment, I could not admire these faces that looked as though they had been flattened out with a roller.

[142]

778
563 July 6. The Mongols are very devout Buddhists. Near the very first yurts on Schang territory there stood mani rdyayu - they looked very gay like our May poles - consisting of four tall poles forming a large square around a taller /338/ center pole. There were garlands of cloth shreds, red, blue, green, yellow and white, completely covered with prayers, stretching from pole to pole (Plate LXXVIII). At the top of the center one cedar twigs swayed in the wind, and their resinous fragrance pleases the heavenly ones. Next to this there was an altar on which today, the day of the full moon, cedar- and thuja-leaves and tsamba were being burned. At noon the family lama blew his horn; a procession of men, women and maidens approached the altar, fell down before it, prayed, circled again and again around the mani rdyayu, clockwise, according to the rules of the yellow sect, "the way the moon rotates around the earth," and prostrated themselves countless times after each time around, hoping to obtain peace, release from demons, and for their herds, freedom from disease and death.

[795]
[799]

563
792 For this exorcism my nearest neighbor in Camp 51, a well-to-do Mongol, (1) had invited the incarnation from Tangsker, a monastery

1. A man is here considered well-to-do if he has 8 to 10 horses, including mares and foals, 20-30 yak cattle and 400 sheep, whereas near Dankar a man is not considered well off unless he has 40 horses, 60-70 yak cattle and close to 1,000 sheep and goats.

of which I learned for the first time here, and which lies far off on the Hwang Ho, many travel-days farther than the oft-mentioned Rardscha gomba. The journey of the holy man from his lamasery to Tsaidam lasted many months, but he had been undertaking it for several years already, and he stayed two or three months each

Kalmyk

summer with the Mongols. The holy man came riding up early in the morning, accompanied by three akkas, and for many hours he read prayers, invocations and exorcisms in the Mongol's yurt. When he departed all the members of the family humbly kissed the hem of his garment and the three akkas followed him with a yak and 28 sheep. - Indeed, summer resorts prove lucrative for the holy men! 563 792

In our little group it was also a day of prayer and sacrifice. Lao Sung who had recovered along with the rest of us from his illness up at the Tschürnong redeemed a pledge today. He had bought the sheep which he had promised the gods for his recovery. He built an altar of earth and stones behind the tent and before it he sang his daily invocation: 782 539

Lama la stiapsumdschiū
Songrdyi la stiapsumdschiū
Tschu la stiapsumdschiū
Ginden la stiapsumdschiū
Guntschok sum la stiapsumdschiū
Yidam tschüngkordye
Lha tsok kordang dye ba
rnam la ptscha tsalo-o
- - - - - - - - - - - -
- - - - - - - - - - - -

If he spoke very rapidly he could say the entire prayer in twenty minutes. (2) Thereupon he burned thuja leaves together with cow

2. The beginning of the prayer btsoktschito... and the supplication to the sGrolma. Every little lama novice and every layman or "black man" (Tibetan: mi nag) knows this prayer by heart and is supposed to repeat it if possible 21 times a day. The above lines roughly translated are: I implore all the lamas, /339/ I implore all the priests, I implore all the deities, I pray to all that is holy. I beseech the trinity of the gods. I kowtow in the dust before the lord of the tutelary gods, before the assembly of the gods, all the holy ones and their pupils...

dung. /339/ Meanwhile the slaughtering of the sheep was undertaken. 782
It was first consecrated according to the Tibetan rite and then killed according to Mohammedan rites. While Lao Sung was still praying, Lao Tscheng brought burning cedar leaves on our serving ladle and exposed the animal to smoke with these; according to his own words,

N.W. China Art
Kalmyk

643 that it hung down below their knees. They all had silver-mounted
291 swords made in Lhasa in their belts and almost all of them wore red and blue mandarin buttons and pheasant feathers on their Manchu hats. I served my guests tea, tsamba and mutton in my tent. My Moham-
781 medan Han had to act as my interpreter, for the dsassak pretended he understood only Mongolian. After the customary amenities, he came out with the purpose of his visit. He had heard that I had come through infected areas and he was afraid his yak herds would become infected if I traveled farther up the valley with my caravan. He also implored me not to hunt in his territory. He and his people had taken a vow not to harm any wild animal for two years. They hoped in this way to win the favor of the local spirits. For this he promised to give me barley and wheat flour inexpensively in his village and to transport a part of my collections back to Hsining fu. After his call, the dsassak rode off over the stony path, to his home in the plain 40 kilometers distant.

563 I had obviously gained prestige through the dsassak's visit. He
342 had been accompanied by a young Mongol named Dyoba Dyentsen
574 (Plate LXXVI) whose yurt stood only a short hour's distance from me and who now invited me to visit him, as did his neighbors. I started my round of visits at the yurt of my nearest neighbor. As I approached the whole family came bursting out of their round, dirty-white beehive. We greeted each other before the door very deliberately with low bows, until finally I, as the first person, stumbled through the wide open narrow, double-winged wooden door common to all Mongol yurts, and over the high threshold into the dim room. Here the wife and the grown daughter served me a peaked mound of tsamba decorated with flecks of butter and arranged with loving care on gaily-trimmed wooden plates and bowls. I was also given first-class tschürra, the skin of milk which had been carefully gathered, and the tail piece of the most-recently killed mutton, with the bristly tail attached, - in short, I was entertained like a high-ranking lama.
[576] When I was ready to leave, all the members of the family dashed out of the yurt, then came my servants, and I had to be the last to leave the tent-house. This is ancient Mongolian etiquette.

563 But I was even more elaborately received by Dyoba Dyentsen.
437 He was /347/ a young unmarried man in his late twenties, who was able to read and write Mongolian and Tibetan. He was a wanda, a
●[792] priest who had not taken his examination, and the son of a family who, according to local standards, was considered wealthy. When I rode to his yurt, a sheep was killed in my honor. Dyoba had a

½ [ie., of Barun. - Analyst]

S
563 /Nomadic Moslems of Sinkiang/
585 to live at his own home if its near, otherwise the bride's parents lend him an aq-oi. He visits the bride every week or ten days. These visits are supposedly secret. Her father must not see the bridegroom entering or leaving his bride's tent.

When the aq-oi is ready, the bridegroom takes the bride away to his own place, over some show of resistance made by the girl's relatives.

S
563 After a year, the girl can divorce her husband by returning
586 the price paid for her. Divorce is not very common among the nomads, and the price paid for it is much higher than that among the Turkis of the plains. The bride's father would usually be very reluctant to return the price paid for his daughter except for extremely grave reasons.

IV. The Chinese Moslems

N
121 Little information is available on the family structure and
59 relationships among the Chinese Moslems. The family relations,
(779) as in all other Moslem communities, are supposed to be regulated by the Shari'a (Moslem law) but the details of the code are not well known to the Chinese Moslems, nor are they observed with great care as far as they are known. What alterations have been produced by the influence of the surrounding Chinese is not known from the meagre amount of available information. Many of the Chinese

N
769 Moslems observe the traditions of ancestor worship that form such
*563 an important unifying factor in Chinese family life. Often they
778 possess ancestral tablets which stand side by side with Moslem religious objects.

N
*563 Intermarriage between the Chinese and Chinese Moslems oc-
582 curs often under certain conditions. The fact that the woman is
797 not Moslem is not an obstacle to marriage with a Moslem; it is even thought to be meritorious to bring women of other faiths over to the true religion by marrying them. On the other hand, Moslem women are strictly forbidden to marry a man of another faith. The non-Moslem women who marry Moslems, although officially converted to Islam, in many cases bring their religious customs to the family, and the children are reared with both traditions and beliefs.

N
*563 The main differences between the Chinese and Chinese Moslems
585 appear to be in the ceremonies of marriage and divorce. A Mos-
586 lem priest usually is invited to preside over these occasions. In
● 733 addition to the Chinese-style ceremony, the Moslem priest will
184 recite a few prayers over the newly-wed couple or will give an additional affirmation to the dissolution of an unsuccessful marriage.

N
*563 In general, the Chinese Moslems have much more in common
184 with the Chinese than they do with their Turkic coreligionists. The law and traditions of the country play a more important part in governing the family relations, than the religious law.

/Chinese Moslems (Dungans)/

4. Customs

S N 563 779 782 [793] [562] 563 779 782 783 563 779 782 785 779 [203] 563 553 852 [788]

a. Religious rites

According to religious rules, the Moslems are supposed to pray five times daily (sunrise, noon, afternoon, sunset and midnight), facing in the direction of Mecca. Few of the Chinese Moslems besides the Mullahs and Ahungs adhere strictly, but pray only once or twice a day. To be valid, prayers should be performed in the mosque, but those who find it impossible to go to the mosques may pray wherever they are. The call to prayer (adhan) is made by the Ahung, or religious leader, and the believers join in saying the adhan. Daily noon prayer is popular, and the Friday service is the most fully attended.

Public worship cannot be performed by fewer than four persons. Women may not attend the mosques where the men pray. In some places, women have their own mosques and women Ahung to direct the prayers and Friday services. Women always worship as individuals and not as a congregation, though there may be a number of women gathered together.

The Moslems must be clean when they attend any religious ceremony. Hands and face must be washed, and bathing before worship is common. For this reason all mosques of importance have bathing places annexed. The Moslem becomes unclean by touching such objects as dishes containing pork or any meat not killed according to ritual, pigs, dogs, wine or excrement.

The thirty-day fast of Ramadan is fairly strictly observed. During this period one is not to eat between sunrise and sunset, and such things as smoking, drinking and sexual contact are also forbidden. In many places, a messenger goes about the Moslem quarters calling out the times for observing or breaking the fast, lest someone oversleep or fail to prepare and eat the necessary food before daybreak. The end of the fast is celebrated by a feast.

The aged, ill, insane, travelers, women who are pregnant, menstruating or nursing, persons doing heavy labor or whose lives are in danger are excused from the fast, but if or when they are able they must make up for it. The purpose of the fast is to help the believers maintain pure and pious lives. Fasting is considered meritorious at other times too, except on Friday, Saturday and Sunday.

b. Naming

Within seven days after the birth of a child, he must be given a Koranic name, or Ching-ming (religious name). For this occasion a feast is prepared, and the poor are fed. If the child is a male and the family wealthy enough, two sheep are killed for the occasion. If the child is a girl, only one sheep is killed. To arrive at the name, the father holds the child with its face toward Mecca and repeats a prayer in one ear of the child, then

/The Tibetans/

*563 264

or leader families) use chopsticks at festivals. Everyone has his own bowl and carries it with him, even when invited to another home for dinner.

*563 574 262 184 556

Ordinary people do not often have guests for dinner, and a feast can be afforded only by the family of a T'u-kung. The formal dinner, which resembles that of the Chinese, is long and ample. When the guests arrive they are served milk-tea, then given chopsticks and a knife. The courses include rice, sweet cake (made of rice flour and dried fruit) sprinkled with sugar and butter, patties made of chopped mutton and intestine. There are small plates of green onions, vinegar and soy sauce for seasoning. The last course is beef soup or mutton with chopped potatoes, rice noodles and vegetables. Sour milk may be substituted for the soup in hot weather.

[252]

Among the poor, the main meat dish for entertaining is a sheep's head boiled in salted water.

*563 291

c. Clothing

Tibetans wear the same sheepskin robe the year around. A man's robe ends just above his knees; a woman's reaches the ankles. Wealthy people may have silk or cotton robes lined with sheepskin. The less wealthy may decorate their robes with red or blue cotton trim or leopard-skin collars. The poor dispense with decoration. The robe is often worn with the left arm and shoulder exposed and the sleeve dangling, and in hot weather, the wearer may strip to the waist leaving both sleeves dangling. Women often strip in this manner while they work, and only in cold weather do they keep both arms in their sleeves. As they habitually wipe their hands on their robes, they are as a rule thoroughly dirty.

[556] [556]

No one wears stockings. The wealthy have long leather boots trimmed with black, red or green. Most common people go barefooted in summer, and wear sheepskin or felt boots in winter. All wear felt hats or caps in winter.

[793]

The dress of the lama differs from that of a commoner. The robe is crimson, reaches to the ankles and has no sleeves. Not even in the coldest weather is the monk permitted to wear sleeves.

*563 302 [184]

Most of the men simply shave their heads, but a few leave a round spot of hair on top. Women's hair styles are elaborate. The farther one goes into the nomadic area, the simpler the way of life he finds, and so also the feminine hair styles. Women in Labrang select a small amount of hair on the top of the head to make a braid which hangs down the back. The rest of the hair is made into a number of tiny braids which hang all around. A soft red board reaching to the ankles is attached to the hair, and the whole is heavily ornamented. This is the Tibetan woman's hairdress which is commonly seen.

/The Tibetans/

*563 585 are arranged for guests. Barley is spread on the ground, sweets and fruits on a low table. The bride, fully dressed, is led in to sit between her parents. The family returns the courtesy of friends and relatives by giving them katags. Then the bride rides a horse or walks to her new home, accompanied by relatives of both families. The newlyweds sit together to go through the formality of a meal with wine and meat, then receive congratulations and katags from the guests. The katags given by elders are worn around the neck; those from persons of equal status are slipped inside the robe.

When the ceremony is complete, the husband entertains with a feast. Guests customarily take home meat or sweets after they have eaten their fill. On the following day, members of both families dress in their best and go for an outing. They visit the monasteries, but do not enter. The celebration usually lasts for three days, with feasting, drinking, singing and dancing.

*563 844 852 [562] [751] The birth of a child is celebrated with a small party on the third day. Though girls are not ill-received, boys are generally preferred. The moment a child is born, a very small quantity of barley flour mixed with butter is put into his mouth to make him strong and tough. A tiny piece of butter is placed on the vein of his crown to protect him from the wind, which, according to Tibetan doctors, is responsible for one-third of all human ailments. A thick solution of butter is given to the mother for the same purpose. Tibetan women prefer to nurse their own babies.

*563 553 852 [793] The child receives a name when it is one month old. The name may be given by the parent, but preferably by a high lama. With a few exceptions there seems to be no distinction between names for males and females. High lamas always give their own names to children as a blessing. It is often on the name-giving day that a baby is taken on its first outing, to a temple to give offerings to Buddha. Birthdays are not ordinarily celebrated.

*563 764 "Feeding the birds" is a common form of burial in nomadic areas of Tibet. The corpse is taken out for the vultures to eat, the idea being that the deceased then rises to heaven in the stomachs of the birds.

*563 [755] [793] When a person falls ill, the lamas are summoned to chant sutras to drive away the evil spirits. If it appears that the patient has no chance of recovery, the lamas are asked to chant sutras to assist him to be born again in the "land of purity."

*563 763 764 Before the patient draws his last breath, he is bound into a bundle, and as soon as he is dead he is placed in a corner of the tent by the entrance. Butter lamps and offerings are placed beside him, and lamas keep vigil day and night, chanting incessant prayers.

*563 764 562 Funeral rites are held on the third day after death. Women are not permitted to attend.

/Chinese Moslems/

000 acter Hui signifying "to return."

S N 795 361 The Chinese Moslems live in small, closely knit communities, organized around the mosques. The Moslem community is usually set apart from the general Chinese community. The Moslems may form a whole village, or a certain suburb or section of town. The communities are organized on a local basis and there is no higher religious authority that unites all the communities. The mosques, the religious and social centers of the Moslem communities, are maintained independently.

S N 795 182 At least ostensibly, the religious attitude of the Chinese Moslims is characterized by moderation. They make concessions to the ruling power, hoping thus to gain security for person and property. The more capable and resolute of those who enter into government service take part in the ceremonial of the national cult.

S N 795 794 [346] The Moslems in the Northwest do not publicly practice their religion, nor do they advertise it. In some cases their mosques are dissimulated, so that they cannot be distinguished easily from other houses in the village. They are quite lax in their observances of the different rituals connected with Islam. The Chinese Moslems do not regularly attend religious services in the mosque. Aside from the ahung (the religious leader of the Chinese Moslem community) and the extremely orthodox people they do not pray five times a day, but once or twice at most. The noon service is the most popular one, and the place of worship is limited to the mosque. The manner of calling for prayer differs in China from that in Western Asia. The Muazzin does not chant the call to prayer. He stands on the roof of the mosque and shouts the invitation to prayer and may strike a special wooden instrument called ta-p'an-tzu. Most Moslems will ignore the worship time if it interferes with their daily business. Except for some minor differences, the prayer ceremony is conducted in a manner similar to that in Western Asia.

S N [793] [782]

S N [562] Women are not allowed to attend the mosques where the men pray. In some of the larger communities, the women may have a mosque of their own, but in most places they worship individually.

The Friday service draws the best attendance, although certainly not all nor even the majority of believers. On this day the sermon is delivered by the Khatib, a special person, not necessarily a religious leader, elected for the purpose. It is usually in Arabic, and few of those present can understand it.

S N 795 785 203 [184] The Fast of Ramadan is one of the rituals which is observed with a degree of strictness in Moslem communities throughout China. In many places there are special messengers who go about the Moslem quarters calling out the times for observing and breaking the fast. Messengers also go around at night lest

/Chinese Moslems/

The Chinese Moslem community differs from the Turkic Moslem community mainly in the organization of the community around the mosque and in the peculiar position the ahung holds in the community. The ahung holds the central position in both the religious and the social life. In principle, the Islamic community has no professional priests, but in China the ahung has actually taken the place of one. The Imam, whose office is important in Western Asia and Eastern Turkestan, where he has leadership in religious life, has lost his pre-eminent position in China. So has the Muazzin (the one who calls people for prayer) and the Mufti (the teacher of law). At present these positions have been practically abolished. Those who hold the title have no particular importance in the community. These titles are inherited and are not conferred by virtue of any knowledge of Islamic affairs. The ahung is the only real Moslem scholar in the Chinese Moslem community. He is nominated to this position by virtue of his knowledge of the details and philosophy of the religion. He trains students, the Khalifa, to become the future ahungs and to continue to maintain Islamic life in China.

G. Chinese Moslem Sects

After the pilgrims had established some contact with the rest of the Moslem world, there were attempts, many of them springing in the Northwest, to reform Islam in China. The first well-known attempt of this sort was made by Muhammad Amin, known in China as Ma Ning-hsia, who in 1781 appeared among the Salars and introduced some reforms concerning the rituals of Islam, correcting some of the practices which seemed not to be in accordance with those he had observed in Mecca.

However, of all the most notoriously successful is the sect of Ma Hua-lung, the hsin-chiao or the new doctrine, as contrasted with the traditional religion practiced by the Chinese Moslems, Lao-chiao or the old doctrine.

The new sect is to be set apart from the rest of Islam in China. In spite of the Islamic Chinese tradition regarding religious leaders, their being chosen by the community to serve it, and known only to their adherents, Ma Hua-lung's name was known far beyond his immediate followers. To some he was a prophet, and others detested him as an impostor.

The nature of Ma Hua-lung's teachings still remains somewhat of a mystery. There is a tendency to regard them as endorsements of Shi'ism, or perhaps as an unusually bold representation of Sufism (mysticism in Islam). However, the notices of D'Ollone show that actually they are genuinely Sunni in character and not a variety of the mystical philosophy widely diffused throughout Central Asia. Ma Hua-lung was regarded as an incarnation of the Spirit—a sheng jen (holy man, prophet)

/Chinese Moslems/

referring to "those who pray openly," contrasted with Khafira (identified as the Old Sect) or "those who pray secretly."

All the sects described above belong to the Sunni order; there are extremely few Shi'is among the Chinese Moslems. These sects have retained continuous hostility, which has manifested itself in violence, at times even resulting in bloodshed.

H. The Salars

The Salars are another group of Moslems, distinct from the Dungans, who live in China. They differ considerably from the Chinese Moslems in appearance, and they speak a form of corrupt Turkish.

The Salars live in Hsün-hua-t'ing on the right bank of the Huang-ho, and in the surrounding villages. They are also found on the road from Sining to Ho-chou. In religion they are Sunnis of the Hanefite School. They are not very strict in their observance of the different Moslem rites, and are known to be heavy drinkers. Although they do not observe the rites of Islam in a strict manner, they feel very strongly about their belonging to the world Moslem community and are quite fanatic in this respect. They have participated in many of the rebellions against the Han Chinese in the Northwest. Their clergy, who are greatly respected, are leaders of the Salar community.

Unlike the Chinese Moslems, the Salars have not assimilated many of the customs and beliefs of the Chinese. They do not burn incense nor pay special reverence to their ancestors. They have a much better knowledge of the Arabic language than have the Dungans, and even the lowest classes are acquainted with the Arabic alphabet. They are said to have received their present form of religion from Ma Ming-hsin (Muhammad Amin).

III. Religious Life of the Chinese in the Northwest

A. Sites of Religious Traditions

The Northwest includes what was once the economic and administrative center of the Chinese Empire. In the city of Sian and its surroundings, some of the older relics of religious institutions can still be seen. The memory of the great culture heroes of the past is particularly strong here and many of them are still worshipped in temples and shrines. Foremost among them is the Great Yü, tamer of the flood, who, according to legend, made life in this region possible by draining the excess water off through the narrows of T'ung-kuan. Among the famous Buddhist temples of Sian is the Wo-lung-ssu (The Temple of the Sleeping Dragon) which was built in Han times and has been a place of continuous reverence by emperors and peasants ever since. It contained a famous mural of the Kuanyin by Wu Tao-zu

ity Affairs Commission, both stressed that the aim of the association was to imbue its members with the love for the fatherland.

In Sinkiang and other concentrations of Moslem population in China, branches of the China Islamic Association and the cultural associations established by the Communists, have supplemented the Islamic church, and the function of the Moslem dignitaries.

3. A more important reason for the apparently tolerant attitude of the Chinese Communists toward Islam is the utilization of the Moslem leaders for the purpose of propaganda, both domestic and foreign. In a speech at the third session of the First National Committee of the CPPCC, October, 1951, Ma Chien declared: "I have received numerous letters from the ahungs in the Northwest and the Southwest regions expressing their desire to study and to reform themselves. In order to assist them to study the revolutionary ideas of Mao Tse-tung as well as to enable these theories to be universally made known to the people of the Middle East and North Africa, we have translated the following documents of the CPPCC: 'On New Democracy,' 'The Chinese Revolution and the CCP,' and the 'Important Documents of the CPPCC.'" (JMJP Nov. 2, 1951.)

The fact that the Chinese Communists intend to use the Moslem leaders to extend Chinese Communist propaganda to their co-religionists in the Middle East may be seen in the statement in the Jen-min jih-pao (June 6, 1952) that the religious leaders of the Northwest were aroused "to boundless sympathy and concern for the people of the Arab countries of the Middle East—Egypt and Iran—in their fight for national liberation and struggle against the United States and British imperialism and to adopt concerted action to support their struggle."

The first act of the preparatory committee of the Chinese Islamic Association was to assist the Chinese Communist Party and Chinese Communist government in publicity work in the Arab countries. In August 1952, it organized a Chinese Hajji Mission to visit Mecca, which, for reasons unexplained, turned back upon reaching Pakistan without going on to its destination. However, two months later, many Moslem leaders from Asiatic countries were invited to attend the Peace Conference of Asian and Pacific Regions, held in Peking, during which Burkhan, chairman of the Association, at a reception to the Moslem delegates, told them that "our religion as well as our customs and habits are fully respected" by the Communist regime. His speech dwelt, however, more on the material benefits than on religious well-being of the people in the Northwest except to say that they were permitted to observe their festivals.

Deprived of their civil and judicial duties, the Moslem clergy

795 in the Northwest was utilized primarily as propagandists. In
648 April, 1951, three thousand Moslem ahungs and mullahs from
* 668 forty-five mosques in Urumchi held a mass meeting to denounce
199 the United States and, later in meetings of their congregations,
• 793 they made speeches to persuade the Moslem people to sign the Stockholm Peace Appeal, the Appeal for the Five-Power Peace Pact, and to protest the rearmament of Japan. On May 2, 3,500 people, led by ahungs and mullahs of 46 Urumchi mosques offered prayers for world peace. The mass rally initiated a drive for funds for the purchase of planes, tanks and heavy artillery for the Chinese troops in Korea. The minority peoples of Sinkiang donated funds sufficient, it was reported, for the purchase of thirty planes and seven artillery pieces. The religious leaders of Yin-chuan in Ninghsia donated funds for a fighter which they named "Mohammedan."

795 In a way, the acquiescence of the Moslem leaders to assist
793 the Chinese Communists in the promotion of propaganda has
* 668 been a reason for the comparative moderation of the Communist
199 regime toward Islam in China. The attitude of the Chinese Communists toward the teachings of Muhammad has followed very much the line adopted in Soviet Russia. The evolution of the Soviet authorities toward Islam has undergone the following stages: (1) the attack on the teachings of Muhammad as the deification of big capitalistic merchants exploiting the unhappy poor, (2) the argument that Islam was originally the ideology of the peasantry but was later corrupted by the aristocratic class. This view was rejected as being too favorable to Islam. (3) The anti-religious propaganda lines that Muhammad was a myth or that Muhammad was the leader of a feudal revolution. (4) The argument that finally prevailed was that of S.P. Tolstov, that Islam emerged from a social-religious movement which evolved from the feudalism following the disintegration of Arab tribal systems. (Essays in the History of Research into Islam in the USSR, published by the History Institute of the Soviet Academy of Sciences, cited in Missionary Bulletin, September, 1955.)

In China, the argument for and against the teachings of Muhammad also raged in Communist publications early in 1951. Lu Hung-chi, in an article in Kuang-ming jih-pao (January 10, 1951) charged that Muhammad, figuratively speaking, held a gun in one hand while he reached into the pockets of the people for money with his other hand, and that his teachings were an excuse for robbing the people. This article aroused a storm of protest from the Moslem residents of Peking and prompted Ma Chien to write a rebuttle entitled "The Sword of Muhammad," published in the Hsin-hua Monthly (February, 1951 issue), stating that the sword of Muhammad was for self-defense, aimed only

764 was up the howling and wailing ceased as suddenly as it had begun, tears were dried, and people went about their business or began eating, and after another twenty-four hours the lamentations were taken up again.

• [793] On the sixth day the Taoist priests again came to the house and set up tents and canopies in the courtyard outside my door. (1)

1. I did not observe that the Chinese of Northwest China used Buddhistic priests in this connection. Lama priests are used only in places where Chinese are intermingled with Tibetans. But Hsining fu is a Chinese city in which, besides Chinese, there are only a few Manchu and Tu ren living.

Musicians appeared and also cooks who had to cook for the many guests and relatives who came to express sympathy. Meanwhile the priests had prepared a passport to the kingdom of the dead, a written eulogy on gray paper, and this was now sent after the dead man into the world of spirits, that is, it was burned amid all kinds of invocations. There were also a few paper dolls representing servants, one-half life size, burned and large paper silver coins and much copper money which was also stamped out of paper, so that the deceased was given a very good dowry to take along. (2)

775 2. De Groot, The Religious System of China, Vol. I, p. 80, reports that in the province of Fu kien in South China which is largely Buddhistic, the Chinese assume that each birth means the release of some poor soul from Hades. There souls always were obliged to pay a large ransom to the god of death and his executioner before they could be freed. In order to be able to pay this sum the souls have to borrow money from other souls and therefore the soul of every person who has died, as soon as it returns to Hades, is hounded by its creditors to pay its old debts, for the creditors were also trying to get the ransom money together so that they could return to earth as soon as possible. They also believe it is very useful to send copper coins along immediately, for of course a poor soul just returning from the earth does not know the current exchange in Hades copper money and is therefore cheated by the money changers down there and suffers great losses before he can get change! This

794

794 CONGREGATIONS--groups organized for common worship (e.g., kin and local groups, special cult groups, church congregations, parishes); lay organization (e.g., elders, deacons, committees); qualification for membership; admission and disciplining of members; fund raising; maintenance of place of worship; religious activities (e.g., sunday school); secular church activities (e.g., education, welfare work, church gambling, temple money lending); recreational facilities (e.g., parish houses); etc. See also:

KalmyK

After I had had my presents handed over, the conversation turned to 643
European weapons and the dsassak who already had a number of Russian 574
and English repeater guns, made every effort to buy some of my weapons. When I showed no inclination to comply with his wishes, the atmosphere became strained and I hurried to take my leave. /350/

The Barun dsassak (Plate LXXV), like all Dam Mongols, cannot 252
be relied upon. The flour for which I had paid him up in the Wulaserä Valley, was still not ground when I came to Barun kurä, and I was obliged to wait two days before I could get it. It was ground in hand-mills by old women and widows.

There were a great many beggars and cripples loafing about in 735
the dsassak's courtyard. They mumbled their Om mani padme hung and plucked at their rosaries without ceasing. There were people 644
coming and going all the time who paid tribute to the dsassak, and my companions were always amazed at how obsequious the Mongols were toward their ruler. Whereas the tent Tibetan shows very little respect toward his chieftain, the ordinary Mongol is bound by strict etiquette. He may never sit down with crossed legs before his prince, he must bend his right knee and remain in a half squatting, half kneeling position. If he is not invited to sit down he remains standing with his legs together. He must take his sword in his left hand and may not leave it sticking diagonally in his belt as he usually does.

The Mongol princes have incomparably greater prestige than the 643
chieftains of the Tibetan nomads. I have already spoken of the princes' right of preëmption. Besides that, the dsassak owns his en- [423]
tire country, he annually apportions the pastures and also the arable land among his subjects and for this he receives his tithe in the form of animals and grain. Moreover, he demands several days of [651]
gratuitous service from each family, which the wealthier ones may pay off in the form of added taxes. On his part he feels himself re- [792] ●
sponsible only toward the priests, he always supports a few lamas and gives large gifts to the monasteries. In many things he is the only source of supply for his subjects. He had large supplies stored in his warehouses in Barunkurä. In them I saw pulo from Shigatse, lamb-skins from Lhasa, Nepalese amulet boxes, peacock feathers from India, saffron from Kashmir, Indian dates and cocoanut, Tibetan stag-antlers and pouches of musk, as well as American cotton materials, boots from Dankar, tea and the many little things with which the Chinese furnish the nomads of the highlands.

While I was staying there a huge felt yurt was erected in the court- 792
yard of the dsassak, measuring 10 meters in diameter. The tribal 346

N.W.China AF13
KalmyK

● 792 lamas gathered in it, in order to read the Kandyur, (Plate LXXIX).
346 Beside the yurt there were deep holes dug, in which bucketsful of tea and thick, glutinous barley soup were cooked for the lamas and the many visitors who came for these prayer recitations.

000 Among the visitors was Dowe who had accompanied Rockhill to K'am in 1889. His eye disease which had set in shortly after his journey with Rockhill had in the meantime become so bad that he was almost blind. Two men who accompanied Kozlov on his journey to K'am also visited me and offered me their services. But they demanded such a high salary that I was unable to take them along. They boastfully told of the attack on Kozlov's caravan not far from Tsiamdo, in which 32 Tibetans were supposed to have fallen, and they spoke as though they had been the deliverers. (1) In the year

1. See in this connection, Kozlov, Mongolia i Kam, St. Petersburg, 1905, Vol. II.

1900 this same courtyard of the Barun dsassak /351/ formed the base of Colonel Kozlov's expedition. Two Cossacks guarded the camel caravan while Kozlov journeyed to K'am. The traces of this expedition were still clearly visible. In the room next to the reception-room the dsassak showed me, with a shake of his head, the place where the large Russian stove which the Cossacks built, had stood. Even the wooden tower for meteorological observations was still intact. These people were unable to rest for a minute, the dsassak observed, and in their feverish activity they opened the large well shaft in the courtyard. (1) However, today this well yields only

1. I was told apropos of the attack on the two Cossacks, that they had seen ghosts one night and shot blindly into the darkness. But there was no enemy. Perhaps the Mongols themselves wanted to steal?

brackish, polluted water. One finds good, salt-free drinking water only a good quarter-hour from Kurä. A solitary rooster had meanwhile made his home in the wooden meteorological tower. The dsassak had brought him along only as an alarm-clock in the morning. He and his fellow-tribesmen, like the Tibetans, never ate eggs. So the hens had been left behind in China. (2)

643

2. The banner of the Barun dsassak has only one squadron

000 to the dogs and the vultures and you will be eternally damned." - "We do not know what happens after death. The ahun says one thing and the lama says something else. I can make a good living here now. If I return to China, I shall be able to enjoy meat only as ts'ai - as a supplementary dish - whereas here it has become a chief article of my diet. Besides, I have to pay good money for the little meat and flour I get in China, and obtain the money by working hard for it. Here I do not need any money," argued the pseudo-Mongol.

My servant Han accomplished nothing. The next morning the relationship between the two brothers was so strained that it seemed to me high time for them to part.

264 576 When the flour was finally ground and while I was taking my leave of the dsassak, I was invited to enter the reception room for a final drink of schnapps. A remarkably dark-skinned bondsman, a young Tibetan from the region south of Lhasa, entered with a stone-ware jug. He bent his right knee and bowed low before me, and with the ring finger of my right hand I had to touch a bit of butter that was stuck to the edge of the jug and to the stopper which consisted of a piece of wood. I had to smear a little of this butter on my forehead while the young chap held the thumb of his right hand against my forehead. After he had bowed before me, the young man made his bow in front of the dsassak, the wife of the dsassak, the lama (1) and finally in front of the small son, offering each of

●[792]

1. Geslong lamas from the Galdan lamasery near Lhasa are always sent to the banner leaders of the Dam Mongols for a period of three years to act as high priests, advisers and shepherds of souls, so to speak. Their chief duty is to lead the ceremony for the dead.

them in turn the closed ewer with the little ball of butter, whereupon each person took some of the butter with his ring-finger and murmured some prayers. Only after he had gone around the circle was the flask opened and some of its contents poured into a cup. Again, a piece of butter adhered to the cup and again the servant handed each one the cup and each person made a libation into all four directions with his fourth finger. Only after that was each person, with the exception of the lama, given some of the schnapps.

576 After that, in accordance with the custom of the country, I delivered a long panegyric on the hospitality of the dsassak who replied

793

793 PRIESTHOOD--specialists in organized religious activities (e.g., priests, priestesses, clergymen, rabbis, mullahs); status and means of support; selection, training, and consecration; hierarchical organization (e.g., chief priests, bishops, cardinals, popes); prerogatives and disabilities of priests; characteristics (e.g., sex, garb, paraphernalia); distinctive behavior (e.g., celibacy); activities (e.g., conducting ceremonies, preaching, teaching, comforting); special priestly personnel (e.g., acolytes, temple prostitutes); etc.

S 563 622 628 leaders from every five-tent group meet on problems of importance such as taxes, Oirat-Chinese relations, internal administration, new regulations and laws, etc. This assembly of a tribe is called in Oirat: xurug.

S 792 443 Lamaseries function as marketing centers and these are the only places where non-patrilineally-related people meet each other in order to trade their products and where they go for religious festivals.

S 563 619 233 422 There are slight differences in herd ownership and management between the various tribes of the Western Mongols. (They call themselves the "Dörwön Oirat"(or "four Oirat") or Ulan-Zalatan ("those who wear red tassels on their hats).) The main tribes of Western Mongols are the Torguts, the Dörböts and the Öläts plus the Oirat proper.

S [602] [609] Some tribes merge the herds of related and non-related individuals while others do not. The basis for different types of economic activities is the "non-kinship-relationship."

S 563 177 Some Western Mongolian tribes came in contact with other peoples more than other tribes did, in the course of history, with the result that customs, usage, and tradition underwent slight changes. Nevertheless, the pattern of

S [184] authority, of inheritance, and the fact that the extended family represents a basic functional unit for purposes of taxation, exogamy, election, etc., are by and large the same in all tribes.

N 563 794 The Salars:

In the Chinese province of Kansu are found three classes of Moslems. There are those who have descended from the merchants on the old trade route from China through Persia to Arabia; another group has evolved from the Uighur branch of the Hun family; and finally there are the Salars. The Salars are of pure Turkish origin and are among the latest arrivals in China.

N [197] To their new home the Salars brought with them the original Turkish language and to this day that is their spoken

N [191] language. The men have learned just a few words of Chinese and the women hardly any. This is one of the indications of a

N 563 794 177 184 lack of assimilation which is characteristic of the Moslems in the west of China. Thus there is a general similarity among the Moslems of Kansu and a dissimilarity between them and Moslems further east. With the progression eastward assimilation of Islam to the Chinese way of life increases to the extent that finally the only difference is the abstinence from eating pork.

This difference in the degree of assimilation can be attributed to four factors: the Moslems in the east have been exposed to

/Salars/

563 794 177 184 Chinese life for a longer period of time; geographical isolation of those in the west; arrival in the west of the "New Sect," among whom are the Salars, dedicated to reform the older residents; and the fact that many in the east are mere converts.

[144] [262] [292] [293] The Moslems in Kansu are further set apart by the physical characteristics of their Tatar ancestry. Also contributing to the general physical condition of the Moslems is their tendency to eat more meat, drink more milk, and indulge less in wine and opium than the Chinese.

563 794 795 The Salars are Moslems of the Shiah division and of the "New Sect." (See chapter about Religion.) The majority of the Moslems in China are of the "Old Sect" and much better assimilated than the "New Sect." The "New Sect" is prevalent mainly in the west of China, and as indicated earlier, their lack of assimilation is due to an obsession to reform the older residents, and is accompanied by extreme fanaticism and intolerance. Amont this "New Sect" the Salars are the most fanatic of all and it may be that they excel in this tendency because of their isolation. Salar stubbornness is further revealed in the practice of the women, who persist in wearing the ancient dress of Samarkand.

563 794 [798] [346] Because the Moslems in China have throughout history persecuted and been persecuted, they display a certain caution in the practice of their religion in areas where they are not abundant. For example the mosques may often be architecturally designed to assume a Chinese style, and if they are in a decided minority the mosques will be constructed without a minaret. In such cases the muezzin will refrain from giving his calls. The isolated Salars, however, are more strict than most Moslems in certain observances. The women, [562] for instance, are still required to wear the veil while absent from their immediate home neighborhood.

563 794 795 Although there have been attempts in the past by the Moslems to set up their own state in North-West China, their internal division over religious questions makes their unification a difficult task because the Chinese leaders take advantage of this weakness and play one faction against another. It also seems to be the opinion that more than a religious basis is necessary in order to establish any sort of political entity. The Moslems are further handicapped in the field of practical political action in the modern world by the fact that it is nearly an impossibility to attain both a Koranic education and a modern education, an inherent requirement for coping with modern conditions in directing the establishment of a bona fide Moslem state. Even if some type of autonomous Moslem government were set up, the isolation, small population, and eccentricity of the Salars probably would

preclude their enjoying any great influence.

The Salars' pattern of social life follows the Islamic form. Patriarchy rules the extended family, whose members' main occupation is agricultural work. However, agriculture goes hand in hand with trade, which plays also a noticeable role. As a group, the Salars are economically unimportant since they form only a small Turkic tribe.

The Sarigh Uighurs:

The Sarigh Uighurs, the so-called Yellow Uighurs, are a small tribe of Turkic origin which is becoming extinct. Although immediate neighbors of the Chinese, they never learned agriculture, and remained herdsmen. Nowadays the Sarigh Uighurs are mostly hired shepherds of Chinese cattle owners. Frequently one also finds them as laborers on Chinese farms. An occasional Sarigh Uighur family owns a few cows, sheep, and horses. The smallest and the only social unit, is the patriarchal family.

The Shera Yögur:

The people belonging to this small Mongolian tribe, rapidly becoming extinct, are semi-nomadic herdsmen. The old Mongolian clan-system is still preserved. Clan exogamy exists and the migrational units are the single clans. The economic centers, however, are their Buddhist monasteries, for it is the monasteries who own the herds and not the individual tribesmen.

The Monguors:

Ethnically consisting of Mongols, Turks, Tibetans, and Chinese, speaking an old Mongolian and Tibetanized dialect, the Monguors are the only Mongolian tribe of the Northwest that shifted successfully from nomadic pastoralism to farming. They learned farming and the use of their agricultural tools for raising barley, wheat, peas, potatoes, etc., from the Chinese. However, livestock still plays an important role as the second inportant economic resource. While sheep, cows, mules, and pigs are economically important, horses are bred only because to own horses is a mark of prestige.

The basic social and economic unit of the Monguors is the extended family which is patrilineally and patrilocally oriented. The grandfather and great-grandfather enjoy authority over all members of the family. Property is collectively owned.

The families belong to a clan which is headed by a chieftain whose Chinese title is T'u-ssu, who is at the same time a Chinese official. Originally the clan chieftain was simply the head of a number of extended families, whose migrations he directed and whose highest duty was the military protection of the clan through organization and training of the men. Later

depends on his herds: they are his only resource, his only wealth, and his only pride. When two nomads meet, whether they are Kazakhs, Kirghiz, Mongols, or Tibetans, the first subject that comes up is their cattle. Among nomads, social status is established by the possession of horses, camels, and livestock in general, and only secondarily determined by titles or descent. This is especially true for the Kirghiz, Kazakhs and Tibetans, and to a lesser degree for the Mongols, among whom aristocratic birth (real or imagined) plays an important role.

The average nomad's life can be described as follows: he lives in a roomy felt tent, furnished with house altar, in the case of Buddhists, or with an artistically made book-stand for the Quran in the case of Muslims, and some chests and carpets. The whole family takes care of the livestock, and periodically the migration unit moves during the summer time from pasture to pasture, preserving the richest and most protected grazing land for the winter time. The weather plays a fatal role in the welfare of the nomad's livestock, and every so often a migration unit (the ail, the aul, the ayir, the omoq, otoq, xotn, or uruq, the ulus or even the aimaq) loses its livestock. In this case, those clans which still own enough livestock divide their herds and lend part of them to those who suffered the loss. Collective cooperation is exercised in this respect by Kazakhs, Kirghiz and Mongols, while the nomadic Tibetans, in a similar situation, have quite a reputation for robbing neighboring tribes of their livestock.

The nomadic way of life, the close contact with nature and dependence on nature promotes animism, shamanism, and spiritualism, which goes hand in hand with the prevailing religions of Islam (in the case of the Kirghiz, Kazakhs, Salars, and some Tibetan clans) and Buddhism (in the case of the Mongols, Tibetans, and Sarigh-Uighurs). As a general rule, the nomadic Kirghiz and Kazakh are not very fanatic or ardent Muslims, and neither are the Mongols very pious Buddhists, but still, both feel strongly about their religious although they are rather lax in their observance. No matter how poor a Buddhistic nomad is, he voluntarily supports and feeds wandering lamas, invites several on major occasions (birth, death, and marriage if the bride's father can afford it), pays them, and finally is accustomed to the old tradition of giving a small percentage of his livestock every year to Buddhistic monasteries. All nomads are very superstitious, and the relationship between cause and effect is often misinterpreted, e.g., in the case of disease or weather. It is safe to say that the dominant motives of the nomads are economic in the first place and religious in the second place.

must have had few, if any, effects upon everyday life, or the village units would not have been so important in the local administrative system. The very common pattern of market-town surrounded by farm villages exists in the Northwest. Like those in China Proper, the Northwest market towns are the outgrowth of those villages which are situated on main roads or at strategic points. The market towns fill the same kind of social, economic and cultural roles here as they do in other parts of the country.

In areas where both Chinese and Chinese-speaking Moslem farmers live, there are three types of rural communities. The first includes the all-Chinese villages which greatly resemble the villages in North China. From twenty to thirty families constitute the average population in these villages. When some peculiar quality, such as its location on a well-travelled road, makes a village acceptable to an entire district, it becomes a market town. Eventually it may grow to the proportions of a city. Whenever the village grows so large that those whose fields lie on the periphery can no longer go back and forth each day, it begins to break up. The families with the very distant fields become the nucleus of a new settlement.

In a Chinese village communal life is exhibited in several ways. One is by religious observance, particularly the conduct of the ritual connected with ancestor-worship and veneration of the past. At stated times throughout the year - especially at the New Year, and during the second, fifth, and eighth moons - festivals honoring certain deities or commemorating religious events are held. Such a festival is always a communal matter. All contribute money for the furnishing of trappings proper to the affair, some are concerned with organizing the celebration, others carry images in the procession, and still others collaborate with the priests, - Buddhist or Taoist, - in the performance of the various ceremonies. Such religious festivals are not altogether a matter of the calendar, for additional services are often held in times of drought or other community disasters.

The village or community theatrical is another communal activity. Generally the plays are given for the enjoyment of the people. The entire community shares the responsibilities and enjoys the fun. In small Chinese hamlets in the Northwest even a funeral is very much a community affairs. Virtually everyone has a part in the mourning, feasting, burying, and attendant religious activities. Also annually in early spring during the feast of Ch'ing-ming, the Chinese in the Northwest, as in other parts of China, decorate the graves, make various offerings of food and drink, burn paper money and incense, and bewail the dead. The graveyards are not necessarily communal, but Ch'ing-ming is observed universally and no one can abstain from participation without arousing comment

and a certain degree of reproach. On the other hand, prompt observance of the rites at least creates a feeling of fellowship. It is primarily a personal matter, but nevertheless, the entire community responds, just as in the case of the spring planting, and for the same reason. Each finds comradeship in working with the others in whatever concerns the welfare of the community.

There are farm villages in which live only Chinese Moslems. Physically, the community structure is similar to a Chinese village. These Moslem villagers live in the same kind of houses and do the same kind of farming. The streets of the villages also have a similar arrangement. But the Moslem people's religious-communal life is distinctively different from that of a Chinese village. In every Moslem village there is a small public building that is used as a mosque. In this building the children of the village gather at regular periods to receive religious instruction. They learn the Arabic alphabet and phonetics so that they are able to read the sounds of necessary prayers and religious formulas, even if they cannot understand them. The Moslems are very faithful in their observance of the fast of Ramadan. During the fast, they eat nothing between sunrise and sunset. At night they eat a communal feast. The community fires blaze all night and people call and shout to each other. Before darkness falls, pious bearded men say their prayers in public places. One or two of the elders may preach the points of theology, quoting the Koran in oddly mutilated Arabic. On such an occasion the Moslems refer to themselves as "we" and to the Chinese in the nearby villages as "they" As in the case of the Chinese temple, the building and upkeep of the mosque is a communal matter. Assessments are made and cooperative effort is initiated; and, of course, as a project, it rivals and competes with the Chinese temple.

The Moslem villages are comparatively more organized, or show more community spirit, than the Chinese villages. Like their Chinese counterparts, the Moslem villages are administered by their village elders who always intervene in the meager relations between the villagers and the local or county government. The county government makes no distinction between Chinese and Chinese Moslem villages. The two types of villages have almost no relations with each other. There is always antagonism between Chinese and Moslem villages. The two peoples have been and still are mutually practicing segregation. Factors which are responsible for the antagonism or segregation are mostly religious habits and ideals. In addition, while the Chinese have a higher population gain, the Moslems are economically more successful. Both of these facts may be sources of jealousy.

However, in numerous economic activities, there is non-admitted cooperation or division of labor between the Chinese and the Chinese Moslems. This has held true especially for Moslem enterprise and Chinese skill.

family were to pay, and the boy's welfare depended largely upon the amount his parents were able to pay. Sons of poor families who could pay perhaps only one yak a year had to do menial work as water carriers, cow-dung collectors, straw and grass carriers, housekeepers and so forth, to pay for their lessons.

The years between eight and eighteen, the usual length of the novitiate, were given to attending an elementary school where the pupil learned to read, write and recite prayers. He was to learn forty chapters of the Kanjur from memory. During this time he was called a bande, or novice. Then he might enter the "Lamaistic college" to become a getsul, a stage between a novice and a fully ordained bLama. Or he might return to his home village or camp to become a house lama, of whom there are thousands, who are supported by a single family. If he chose to become a getsul he might continue to study and become a gelong, a fully ordained lama, entitled to wear the precious yellow tunic with a black collar.

Kumbum has four colleges: a philosophical college, a college of church service and occult sciences, a college of canonical literature and a school of medicine. One must go through the philosophical college before he may enroll in the college of church service and occult sciences, and must go through these two successfully before he may enter the college of canonical literature. The usual characteristics of those who enter the school of medicine are a pathological personality, epilepsy or other abnormality.

The philosophical college (Tib.: tsan-nyid) offers the study of the Kanjur. [The Kanjur consists of one hundred volumes subdivided into one thousand eighty-three chapters. Volumes one to thirteen contain the chapters about conversion and reclaiming (Tib.: dul-wa), the discipline and moral duties of the monks. The volumes from fourteen to thirty-four constitute the Prajñâpâramitâ, which deals with the "road to virtue" leading to the "other shore," to Buddhahood and to that subtile and "transcendental wisdom" which is "without any characteristics," through which "all differences, contrasts, antagonisms, contraries, antithesis and contradistinctions" disappear, where all categories of thinking are empty, where heart and mind become silent like "the surface of a tranquil and placid sea." Volumes thirty-five to thirty-eight are called the Club of the Buddhas, volumes thirty-nine to forty-four are called Construction of the Precious Stones, and the volumes forty-five to seventy-six contain narrations on how to gain the nirvana. The volumes seventy-seven to ninety-eight contain the tantrus and dharanis, sentence of anathemas and magic formulas, and the last two volumes are the exegetics and exposition of the tantras and dharanis.]

The philosophical college does not procede according to the

792 arrangement of the Kanjur but starts, strangely enough, with
794 the most difficult chapters, the abhidharma, metaphysics (Tib.:
873 C'os-mnon-pa, clear doctrine), and difficult sutras. Each
[779] student gets an additional private tutor, who explains difficult passages of the matter under study.

When the weather permits, teaching is conducted in the open in the so-called chör-ra. Otherwise instruction takes place in a temple hall.

[876] An important part of instruction is frequent disputations between the teacher-monks and the students, under the supervision of the abbot, khan-po. These loquatious duels give occasion for the students to show how much they know and how much they have memorized.

In the course of time the students are taught ts'ad (logic), bzo (technique), rtsis (astrology), snan nags (rhetoric), sgra (grammar) and adul-ba (monastic rules). After having mastered the whole material the student receives the degree of dka-bcu (a man who has passed the ten examinations).

To complete the work of the philosophical college takes more than a decade. Then the dka-bcu can either procede to the next [554] college to gain the title of snags-rams-pa (master of the tantric sciences) or to another monastery where other famous teachers are found.

[779] To receive the title of snags-rams-pa, the monk must study large parts of the Tanjur, a gigantic 225 volume collection of theological, philological, ethical, alchemistic tractates and a tremendous amount of occult tantras.

Another center of monastic studies was Labrang in Kansu, one of the foremost monasteries of the Yellow Sect. This monastery is divided into what might be called six different colleges. In the first, known as Wen-hsi-t'ang, five different sutras are taught. The second college is primarily concerned with the continuation of the studies in the first, but the difficulty of the curriculum increases. In the fifth and sixth colleges the esoteric sutras are taught. There are separate colleges for sciences of medicine. Most monks, however, never learned more than a few prayers. The Labrang monastery [177] showed some concern with modern times by introducing courses in animal husbandry and the manufacture of agricultural by-products. Like other monastic academies, however, it has remained primarily a center of religious learning.

B. Nationality Education under the Republic

658 The period of the Republic was characterized by the fact that
891 the government attempted to bring the Chinese educational sys-
177 tem as far as possible into the area of the nationalities. Educa-
*563 tion became one factor in the general policy of assimilation.

PUBLIC WELFARE

I. Introduction

657 Welfare work in China's Northwest has to be conducted for the benefit of two distinct categories of people in need. The poor are composed of those whose problems arose out of inadequate standards of living. They include the aged and disabled, the orphans and other destitute or handicapped people. Marginal cases of this category are the underprivileged groups of society, who might maintain themselves, even though precariously, in years of abundance but who become relief cases as soon as their balance of life is disturbed. Chinese concepts of charity and charity organizations normally available to this category are discussed in the Public Welfare Section of the General Handbook.

657 The second category however, the victims of natural disasters, 661 poses a special problem in the Northwest. As has been demonstrated in other Sections of this Handbook, the maintainence of agriculture in the Northwest is more dependent upon conservancy and irrigation projects than in other regions of China. During the last period of the Imperial era, many of these projects have fallen into disrepair, thus exposing the area to more critical inundations and droughts. Reports from the Imperial period reveal that there were fourteen severe inundations in the province of Shensi during the hundred years 1800-1900 and seven in Kansu. The same century brought sixteen severe droughts to Shensi and nine to Kansu. The droughts of 1877 which encompassed both provinces, of 1900/01 in Shensi, and of 1908/09 in Kansu were catastrophes of a national extent.

The frequency and severity of earthquakes in the Northwest adds to the problems of the region, particularly since in many areas of the region people live in loess caves. The great earthquake of 1879 which hit both Shensi and Kansu, the one of 1881 in Kansu and the once of 1892 in the Kucha district of Sinkiang and the Hsi-ning district of Chinghai are still in everybody's memory, even though the twenties of our century have again brought two devastating earthquakes.

643 Nor is this all. During the last hundred years the Northwest has been ravaged by rebellions and civil wars almost without interruption. Several of these events left in their wake a vast number of displaced and needy people, who added to the problems of emergency and disaster relief.

II. Welfare Among the Moslems

A. The Distribution of Welfare Responsibilities

Most of the efforts in the field of public welfare among the

Moslems of the Northwest were done by the Moslems themselves and not by the Chinese administration. The law of Islam provided for a rather extensive system of, and general concepts on the administration of public welfare. It is not so much through a system of government institutions that the needy were taken care of, but by the religious regulations of Islam. The concept of public welfare is found in the Koran and was transmitted to the people through the laws and obligations specified in the religious writings of Islam. In the Islamic law there is no clear conception of the separation of state and religious institutions. The functions in both political and religious realms are merged and interwoven. The provisions for public welfare are an outstanding example for such a merging of state and church functions. Charity and donations to the needy are regarded as a religious duty and the financial resources necessary to sustain those in need are in the form of an obligatory religious donation, the collection of which is administered by officials, which in an Islamic state constitutes a part of the administration. A department of public welfare is specified in the Islamic religious laws to be one of the departments of the Islamic State. However, since the majority of the Moslem people, including the Moslems of Sinkiang, do not live in an Islamic State, the functions of the state became the responsibility of the local religious community.

B. The Concept of Charity in Islamic Writings

Charity, towards men, in its widest sense, is laid down in the Koran as the second great pillar on which the structure of Islam stands (the first obligation being that of regular prayer). Benevolence to other people is stressed constantly throughout the Koran, the most frequently recurring words designating charity being infaq (meaning spending benevolently), ishan (doing good), zakat (purification), and sadaqah (derived from the root sidq which means truth and has come to signify a charitable deed). Benevolence to others includes the fostering of their homes, the emancipation of slaves, the care of orphans who have no kinsmen. Small good deeds such as helping a man load his animal or saying a good word are considered acceptable.

Charity is of two kinds: it can be voluntary or obligatory. 709 Voluntary charity is usually known as sadaqah, while the obligatory 711 charity is mentioned in the Koran as zakat. 720

Voluntary charity is to be administered so that no idea of the superiority of the giver or the inferiority of the receiver is conveyed: "As for those who spend their wealth in the way of Allah, then do not follow up what they have spent with reproach or injury, they shall have their reward from their Lord." Or, "Kind speech and forgiveness is better than charity followed by injury." Love of God should be the motivation for those who do

709 charitable deeds, and only the well-earned wealth should be
711 given as charity. Those who give secretly are praised more
735 highly than those who publicize their gifts.
749 Obligatory charity is collected by officials who are appointed by the community to carry out this task. The individual donator is not at liberty to calculate and spend his zakat in any way he wants, but it is collected by the officials and spent by the community.

Zakat is a charge on accumulated wealth, and particially in this manner redistributes a portion of the accumulated wealth of the few to those who have none in the community. A part of the amassed wealth of every individual is taken away annually and distributed among the poor and the needy. Zakat is payable on all cash hoardings, or hoardings in gold and silver, as well as on any form of capital, in whatever form or in the shape of cash or kind.

The items of expenditure of zakat are stated by the Koran to be the following: "Alms are only for the poor and the needy, and the officials appointed over them, and to win the hearts and are made to incline to truth, and captives, and those in debt, and in the way of Allah, and the wayfarer. It is an ordinance from Allah, and Allah is the knowing and the Wise" (9:60).

The recipients of the benefits of zakat can be divided into three main categories: (1) those who need help; (2) the officials appointed for the collection and disbursement of the fund; and (3) a part is required to be spent in the way of Allah.

Six kinds of people fall under the first heading: the poor who, on account of some physical and mental defect, are unable to earn their bread because of their deficiencies; the poor who have no resources but when given some help can earn their livelihood; new converts to Islam who are deprived of means of subsistance; those who are captives and are deprived of freedom; debtors who are unable to pay their debts; and lastly, the travellers who are stranded in a foreign country or in a distant place and who are unable to reach their homes.

The second kind of expenditure involves the maintenance of an establishment and office for the collection of taxes, and includes the salaries of those who collect the money and distribute it.

The third heading includes those in the way of Allah, which means usually those who fight Holy War in the name of Allah against the enemies of Islam.

Besides the institution of zakat, there are two others of similar nature designed to collect obligatory charity. Both of these are connected with Moslem festivals. The idea is that whenever the Moslem is in his happiest mood, he must never forget the distress of his poorer brethren. The first of these institutions is the sadaqat-al Fitr, a charity connected with Id el-Fitr, the Moslem New Year. Every Moslem on this occasion is required to give away in charity a certain amount of food, the value of

709 which varies according to one's wealth. This food must be
661 donated by every Moslem in the community who is not poor,
735 and distributed among those who need it. The second institution
749 is that connected with Id al-Adaha, on which occasion the poorer members of the community are to receive gifts out of the sacrificed animals, and the skins of those animals are sold, and the sum thus realized spent on the propagation of Islam.

These then are the concepts applied to welfare work among the Moslems of the Northwest. As has been seen: the impetus toward welfare activities is entirely religious. This religious basis of welfare work was somewhat modified among the Chinese Moslems (Hui) particularly in those provinces, such as Ninghsia and Chinghai, where the Chinese element was in the hands of Moslem leaders. In these cases welfare activities would be supported strongly and with a certain efficiency by the secular arm, but would pertain in most cases to the Moslem population only.

With regard to the handling of welfare cases among non-Moslem Chinese, reference is made in the section on Public Welfare of the General Handbook.

III Welfare Among Lamaiste

The concept of charity is alien to original Buddhism; it has no part in its ancient teachings. Almsgiving (dana) is the only charitable activity that is occasionally mentioned in earlier writings. It is there termed a way of life and merit making. "With which to promote one's own self-perfection and salvation, even though it has no place in the eightfold path. Later on, rules concerning the attitude in which alms should be given were added, and the theory being that the merit of the gift grows with the merit of the donee. The best gift of all, however, was the gift of Dharma (truth). The only entity who practiced charity in anything like our sense of the word was the Bodhisatva, for whom, and for whom only, compassion was the cardinal principle. Every consideration is laid aside and even meditation neglected for its sake.

These basic doctrines have not prevented later schools of Buddhism in China, from developing charitable and welfare work both through the temples themselves and through Buddhist sponsored or co-sponsored laymen's associations (see China General, Public Welfare). The Lamaist church, however, has stuck closer to the original concepts and hardly a trace of charitable or welfare work emanating from or sponsored by the lamaseries can be detected.

574 There exists, though, one concept common to both Lamaist
661 peoples, through which the situation is mitigated. This is the
735 concept of hospitality. Under this concept many charitable and
749 welfare functions are carried out in the lamaseries as well as

520 by the laymen. Temples frequently maintain free hostels for
661 travellers, and one can count on any layman to provide food,
735 shelter, road guidance, and any kind of help to needy passers-
749 by. It is even customary for a Mongol to leave food in front of his tent during the time he is on an outing. This hospitality is extended to destitute and refugees also, by Mongols as well as Tibetans, irrespective of the creed of the receiver.

IV. Welfare Efforts Under the Republic, Particularly Under the National Government

657 With the coming of the Chinese Republic, the realization grew
661 that welfare was a public matter. Although it took time until
735 the rudiments of a public welfare was in the hands of Moslem
749 leaders. In these cases welfare activities would be supported strongly and with a certain efficiency by the secular arm, but would pertain in most cases to the Moslem population only.

With regard to the handling of welfare cases among non-Moslem Chinese, reference is made in the section on Public Welfare of the General Handbook.

Every consideration is laid aside and even meditation neglected for its sake.

These basic doctrines have not prevented later schools of Buddhism in China, from developing charitable and welfare work both through the temples themselves and through Buddhist sponsored or co-sponsored laymen's associations (see China General, Public Welfare). The Lamaist church, however, has stuck closer to the original concepts and hardly a trace of charitable or welfare work emanating from or sponsored by the lamaseries can be detected.

574 There exists, though, one concept common to both Lamaist
661 peoples, through which the situation is mitigated. This is the
735 concept of hospitality. Under this concept many charitable and
749 welfare functions are carried out in the lamaseries as well as

468 of Moslim-Hui, Uighurs (Sarigh-Uighur), Kazaks, Usbeks, Tatars,
638 and Tung-hsiang nationalities. (NCNA Peking, August 4, 1952).
563 A 45 member delegation from 15 different nationalities of
481 Northwest China arrived in Peking yesterday to take part in the coming October 1st National Day celebrations. . . .

The Northwest delegation, headed by Mainor, an Uigur woman, included the following 15 nationalities: Han, Hui, Uigur, Kazakh, Mongolian, Tibetan, Tunghsiang, (Sarigh-Uighur), Usbek, Manchu, Tartar, Solon, Khalhas (Kirgia), Tajik, Sibo and Russian." (NCNA Peking, September 24, 1952).

3. Minority group organizations

Various nation-wide organizations such as the China Buddhist
663 Association, the Chinese Islamic Association, the Mongolian Moslem
749 Cultural Association, and the China-Soviet Friendship Association were organized to contact with numerous minority group leaders as members and sponsors. The local chapters also have propaganda departments. For instance, the Tibetan Buddhists in Chinghai, under the leadership of Hai-jao-cha-shi-ta controlled 728,750,000 for the Resist-America Aid Korea movement in the year 1951 alone. Some monasteries signed patriotic compacts and launched programs of propaganda on current events. According to Hai-jao-ta's report,

"The next step is to expand the propaganda work, mobilize the lamas to organize propaganda teams, make use of temple fairs or festivals for propaganda activities, and carry the propaganda deep into the remote rural villages and nomadic regions. In pushing the autonomous work in the minority region, Buddhism should give more active support and preach the nationality policy of the People's Government." (Sian, Ch'un-chiu-jih-pao, November 23, 1951.)

698 Besides the Buddhists, the Moslems are used to promote the
638 Communist programs, not only in Northwest China, but some were
649 organized into pilgrim groups to visit Mecca and the Moslem nations in the Near East in order to win the friendship of these nations for Red China.

675 The most important of the private associations in Northwest China can be seen in the following incomplete
678 figures. By November of 1951, Sino-Soviet Friendship Associa-
563 tion organizations had been organized in four provinces, four municipalities, thirty-six administrative districts and 157 baien in northwest China. There were 1,314 branch associations and 417 sub-branch associations with a total membership of 336,610 of all nationalities. The purpose of this association is to tell the people of the merits of the USSR.

Obviously a special attempt has been made in Northwest China to capture the minorities with propaganda.

795

795 SECTS--organized groups of congregations with differing and unreconciled systems of beliefs; crucial divergences in dogma; organization of sects or denominations (e.g., episcopal, congregational); admission of members (e.g., baptism, confirmation); distinguishing characteristics of members (e.g., special garb or behavior); established churches; splinter sects; interdenominational conferences and federations; etc. See also:

Secret societies	575	Baptism of infants	881

The newest development, found in the Northwest, especially in Sinkiang, is the partial industrialization of those areas which are the sources of coal, oil, gold, iron, alum, quarta, gypsum, nitrates, salt, and, as recently reported, uranium.

The non-Chinese peoples of the Northwest are not only outnumbered b ut also outweighed in economic and political respects. For more than two thousand years, the Chinese have been ruling those areas (with short interruptions as far as Sinkiang and Chinghai are concerned), even though they never had more than a few garrisons stationed in frontier areas. Those garrisons made it possible for a thin stratum of Chinese officials to rule the areas on the top level. On the lower level, the indigenous peoples and tribes governed themselves - under the supervision of the Chinese viceroys or governors and their bureaucracy.

The general policy of the Chinese government in Peking was to make use of the existing form of governmental institutions of frontier areas like Sinkiang, Chinghai, and Inner-Mongolia. In Sinkiang (prior to 1884 it was called "Hui-chiang," i. e., Muslimic Dominion), two types of local government had existed: the Muslimic type and the Mongolian type. The Northern and Northeastern part of Sinkiang, where the Mongols were the dominant inhabitants, had the same governmental institutions as Outer and Inner-Mongolia, namely, banners ruled by dsasaks, who were appointees of the Emperor in Peking. The Republic of China tacitly recognized their ranks and interfered very little with their functions. Only Communist China deprived the nomad aristocracy of their titles and rights.

The Muslimic communities were fuled by Bäks with various ranks: the Ak'im Bäk, "local governor"; the Iakhban Bäk, "assistant governor"; the Shang Bäk, "collector of revenue"; the Qazi, "judge"; the Kukbashi or Mirabu Bäk, "superintendant of agriculture"; Yüzbashi, "hundred-men-leader"; Onbashi, "ten-men-leader", etc. All the local Bäks were appointed by the emperor or later on by the president of the Republic upon the recommendation of the Imperial or Republican governor, although it must be stated that some governors of Sinkiang, Chin Shu-jen and Sheng Shih-tsai, ruled and governed the province without asking Peking for the consent of appointments.

Besides the Chinese civil service there existed Chinese military staffs and detachments, centered in Ili, Urumchi, Kutja, Chugachak, Kashghar, Sining, Su-chou, Lan-chou, etc. Relay stations provided communication between the government in Peking and the frontier areas. Maintaining the effectiveness of the means of communications was an important duty of Chinese officials. Only since 1930 have some automobile highways been built, and the Communist regime, in cooperation

/Salars/

Chinese life for a longer period of time; geographical isolation of those in the west; arrival in the west of the "New Sect," among whom are the Salars, dedicated to reform the older residents; and the fact that many in the east are mere converts.

The Moslems in Kansu are further set apart by the physical characteristics of their Tatar ancestry. Also contributing to the general physical condition of the Moslems is their tendency to eat more meat, drink more milk, and indulge less in wine and opium than the Chinese.

The Salars are Moslems of the Shiah division and of the "New Sect." (See chapter about Religion.) The majority of the Moslems in China are Sunnis of the "Old Sect" and much better assimilated than the "New Sect." The "New Sect" is prevalent mainly in the west of China, and as indicated earlier, their lack of assimilation is due to an obsession to reform the older residents, and is accompanied by extreme fanaticism and intolerance. Amont this "New Sect" the Salars are the most fanatic of all and it may be that they excel in this tendency because of their isolation. Salar stubbornness is further revealed in the practice of the women, who persist in wearing the ancient dress of Samarkand.

Because the Moslems in China have throughout history persecuted and been persecuted, they display a certain caution in the practice of their religion in areas where they are not abundant. For example the mosques may often be architecturally designed to assume a Chinese style, and if they are in a decided minority the phonecs will be constructed without a minaret. In such cases the muezzin will refrain from giving his calls. The isolated Salars, however, are more strict than most Moslems in certain observances. The women, for instance, are still required to wear the veil while absent from their immediate home heighborhood.

Although there have been attempts in the past by the Moslems to set up their own state in North-West China, their internal division over religious questions makes their unification a difficult task because the Chinese leaders take advantage of this weakness and play one faction against another. It also seems to be the opinion that more than a religious basis is necessary in order to establish any sort of political entity. The Moslems are further handicapped in the field of practical political action in the modern world by the fact that it is nearly an impossibility to attain both a Koranic education and a modern education, an inherent requirement for coping with modern conditions in directing the establishment of a bona fide Moslem state. Even if some type of autonomous Moslem government were set up, the isolation, small population, and eccentricity of the Salare probably would

preclude their enjoying any great influence.

The Salars' pattern of social life follows the Islamic form. Patriarchy rules the extended family, whose members' main occupation is agricultural work. However, agriculture goes hand in hand with trade, which plays also a noticeable role. As a group, the Salars are economically unimportant since they form only a small Turkic tribe.

The Sarigh Uighurs:

The Sarigh Uighurs, the so-called Yellow Uighurs, are a small tribe of Turkic origin which is becoming extinct. Although unmeaty-nesidate neighbors of the Chinese, they never learned agriculture, and remained herdsmen. Nowadays the Sarigh Uighurs are mostly hired shepherds of Chinese cattle owners. Frequently one also finds them as laborers on Chinese farms. An occasional Sarigh Uighur family owns a few cows, sheep, and horses. The smallest and the only social unit, is the patriarchal family.

The Shera Yügur:

The people belonging to this small Mongolian tribe, rapidly becoming extinct, are semi-nomadic herdsmen. The old Mongolian clan-system is still preserved. Clan exogamy exists and the migrational units are the single clans. The economic centers, however, are their Buddhist monasteries, for it is the monasteries who own the herds and not the individual tribesmen.

The Monguors:

Ethnically consisting of Mongols, Turks, Tibetans, and Chinese, speaking an old Mongolian and Tibetanized dialect, the Monguors are the only Mongolian tribe of the Northwest that shifted successfully from nomadic pastoralism to farming. They learned farming and the use of their agricultural tools for raising barley, wheat, peas, potatoes, etc., from the Chinese. However, livestock still plays an important role as the second important economic resource. While sheep, cows, mules, and pigs are economically important, horses are bred only because to own horses is a mark of prestige.

The basic social and economic unit of the Monguors is the extended family which is patrilineally and patrilocally oriented. The grandfather and great-grandfather enjoy authority over all members of the family. Property is collectively owned.

The families belong to a clan which is headed by a chieftain whose Chinese title is T'u-ssu, who is at the same time a Chinese official. Originally the clan chieftain was simply the head of a number of extended families, whose migrations he directed and whose highest duty was the military protection of the clan through organization and training of the men. Later

Based on our experience with Soviet Russia, there can be little doubt that the Chinese Communist propaganda has been, or will be, successful in building up a tremendous feeling for nation and nationality, an artificial and overemphasized pride for everything which is China or Chinese. The Chinese society in the Northwest might be described as stable and united because of its common history, common language, common beliefs, common pattern of living (agriculture by means of irrigation accounting for ninety-five percent) and common fate. We do not refer to the artificial stability and unity enforced by secret police and military garrisons which might turn into a genuine stability like that in Russia after a long period of propaganda. Training of the younger generation and making propagandistic use of political mistakes committed by other powers, like Hitler's lost war against Russia, which was the last step in developing a final and real unity among Russians.

Turning back to the minorities, we can say that the Turks and the Chinese Muslims do have a sense of mission in regard to their religion. For centuries the Muslim has been taught to fight and to consider the "non-believers" to the "only true faith on earth": Islam (Mohammedanism). How strong their feeling is in regard to their religion may be seen from the fact that the Communist regime avoids carefully interference in religious matters and even permits every religious activity to continue, including the pilgrimage to Mecca. Of course, the average Muslim is hardly aware of the fact that the top level Muslim leadership is under complete control of the Communist regime. As a religious group the Turks (Eastern Turks, Salars, Kirghis, Kazakhs and some small islamized Tibetan clans) and the Dungans (Chinese Muslims) are united to a certain degree and they do have a sense of common destiny, repeatedly brought forward, when political events showed that they considered themselves one single group, imbued with common fate, which culminated in their idea and highest aim: the attempt to erect their own Islamic Empire and realm, an attempt which cost hecatombs of blood but never came true. Their perception and conviction that the support of their highest spiritual leaders, first the Caliph of Baghdad, then the Sultan of Constantinople and finally the Great Mufti of Jerusalem (in spite of Stalin's and Ata Turk's discouraging denouncement of any Pan-Islamic or Pan-Turkic movement) developed their group feeling and group consciousness.

As far as the Mongols of the Northwest are concerned, it can be stated that because of their geographical separation (see map of ethnic groups) political disunion was inevitable. However, as an ethnic and religious group (the Mongols are

all Buddhists) they have a strong feeling of belonging together. Nevertheless the Mongols are fully aware that their former power is declining more and more every decade and that their pastures are constantly diminishing because of the encroachment of agriculture and Chinese migration pressure. The establishment of the Inner Mongolian Autonomous Region (to which the Edsin Gol and Alashan areas have recently been added) and the organization of several autonomous chou for the Mongols of Sinkiang, Kansu and Chinghai, might restore to a small degree the hope for recovery of their lost strength and political power, a hope which has been stimulated during the Sino-Japanese war. In addition, the organization of those autonomies will certainly raise their feeling of security, and might east the widespread desperation of Mongolian leaders who have anticipated the final decline of the Mongols as an ethnic group and a linguistic unit because of rapid sinification and loss of pasture land, and therefore loss of cattle, the only life resource of the average Mongol. It is difficult to say what effect the Communist regime will have on the ethnic group of the Mongols. So far, the Mongolian indigenous culture has been fostered by the Communist regime, but there is little doubt that, when it comes, the complete transition of the Mongolian society into a Communistic society will not be carried out without resistance and ensuing hatred. It is unthinkable that the average Mongol, who for centuries has adhered to the simple pattern of nomadic life (owning cattle individually and only pastures collectively) will agree with the policy of kolshevization. It can be easily conceived that deprivation of their cattle will mean the end of the nomadic Mongolian society as such. What has been said about the Mongols may very well be true also for the Kazakhs and Kirghis.

IV. Dominant Social Motives.

The dominant social motive of the average citizen of the Northwest depends largely on his ethnic group affiliation. Starting with the majority, the Chinese, it should be repeated that they are diligent and industrious farmers whose whole energies must be used in order to maintain their families, who cooperatively toil in the fields and earn just enough to live on. In such a setup little room is left for cultural and religious ambitions; although ancestor worship is sincerely practiced it is difficult to say whether this kind of worship is a true religious phenomenon or only a reflection of the traditional respect toward elders and parents. The religious behavior

6) Muru Dzasak, 40 families, (Tafel: Da-tung Dzasak)
7) Charagolchin Dzasak, 4 families (Tafel: presumably Damba Dzasak)
8) Baga-nor Dzasak, 1 family (Tafel: ?)
9) Khalkha Dzasak, 3 families (Tafel: ?)
10) Tsunkuk Dzasak, 60 families (Tafel: probably Tsinkuk Gung)
11) Burun Dzasak, 280 families (Tafel: Barun)
12) Tsun Dzasak, 300 families (Tafel: Dzun)
13) Probable extinction

According to Mueller-mans, the total population of the Chinghai Mongols does not exceed 18,000 people. Since the Mongols of the Chinghai region have very few children - two at the most - and since sinification as well as Tibetanization appears to be rapid, the extinction of the Chinghai Mongols is to be expected in the near future.

IV. The Tibetans of the Northwest

A. General Characteristics

The province of Chinghai is inhabited by sixty-six Tibetan tribes, called by the Chinese "tame" in contrast to the "wild" tribes inhabiting the Kokonor region.

Lattimore and Father Schram point out that the Tibetan tribes easily subdivide into new tribes which observe strict clan exogamy. The Tibetans are Lamaist-Buddhists of the Yellow Hat Sect in the northern districts and of the Red Hat Sect in the southern districts. Shamanism is also still existant among the Tibetans. Some Tibetans living in the district of Hsün-hua have become Moslems.

B. Physical Characteristics

The Tibetans belong to a race which is called protosinide. Their characteristic features are: middle to tall stature and very muscular. The legs are considerably longer than the legs of the Mongoloids. The color of the skin is light brown and the facial skin copperish red. The lips are thin. The nose is long and prominent. The head is large and long. Round heads appear only among the Nge-lnks. The face shows a sharp relief. Usually they lack the Mongoloid eyefold. Eye color is generally brown. Body hair is considerably stronger, thicker and denser than among the Chinese or Mongols.

C. Economic Activities

The Tibetans are either nomads who breed yaks and sheep or farmers who cultivate oats, peas, wheat, cabbage, and turnips. They use the same agricultural tools as the Chinese farmers.

V. The Chinese Moslems

*563 795 [162] A. Population

According to Paul Cwick, there are about 100,000 Chinese Moslems living in Sinkiang, about 300,000 in Ning-hsia, about 1,500,000 in Kansu and about 138,000 in Chinghai. For China as a whole the total figure amounts to 3,599,350.

1. Physical characteristics and economic activities

*563 795 144 142 The overwhelming majority of Chinese Moslems seem to be of Chinese extraction, but undoubtedly there are Chinese Moslems of Turkish and Indo-European extraction. The latter origin can be deduced from statements made by Father Cwick. He says that many Chinese Moslems of Chinghai have blond hair, blue eyes and prominent eagle-noses. Filchner says that the Hui-hui (the Chinese term for the Moslems) are different from the Chinese, having taller and stronger bodies, oval skull shape and prominent noses.

*563 795 181 Fuad Kazak states that the Chinese Moslems (also called Dungans) also differ from the Chinese in terms of their martial tendencies. Certainly their numerous uprising affirm this statement. Father Schram reports some Chinese sayings about the Chinese Moslems: "One Moslem asleep is more intelligent than ten wide awake Chinese," or; "The food of the Moslems is tasteful, but their words are not to be trusted," and "out of ten Moslems nine are thieves." All report concordantly that the Chinese Moslems are very eager, keen, shrewd, and successful traders and merchants, farmers and innkeepers. They are known for their skilled salesmanship [441] "in the grain trade and the buying and selling of horses, mules, oxen, sheep, wool, hides and lamb skins." (Schram) [505] The Chinese Moslems also have a near monopoly on the boat and raft traffic of the upper course of the Yellow River.

2. Religion

*563 795 771 Some of the Chinese Moslems believe in the Sunna tradition and part believe in the Shia. Many Chinese Moslems still exercise Suflsm (mystical submergence into the idea of God, mystical meditations and so forth). While the Sunna-believers stick to the traditional Islamic interpretation and the commandments of the Koran, the Shia-believers do not recognize hereditary religious leadership. Since everybody "who is graced by God" can become a religious leader, the Shia believers are split into many groups.

3. Relations with other groups

a. Chinese

*563 795 186 The Chinese consider the Chinese Moslems as foreigners and even barbarians. The animosity between these two groups is extraordinarily violent. The Chinese Moslems have never missed an occasion to annihilate the Chinese as, for instance, in the second half of the eighteenth century when the northwest of China

N
*563 saw tremendous uprisings. But the Chinese shared in this violence.
795 When they defeated the Moslems, it was their custom to massacre
186 even women and children. (see section on Attitudes and Reactions)

b. Turks

The Chinese Moslems are on good terms with the Turks, and are reported to have feelings of kinship with them. Generally, this has been true even though the uprising of the 1930's ended in skirmishes between Chinese Moslems and the Turks.

N
*563 B. History of Islam in Kansu
795 There are no exact data on the introduction of Islam into
174 Northwest China, but it is believed that the major conversion to
777 the religion of Islam took place during or after the Yüan dynasty (1260-1306). It is unlikely that the first conversion appeared as early as the end of the Tang dynasty (618-906). Richard Wilhelm states, and it is true, that the first Moslem missionaries came to China at the end of the seventh century (Richard Wilhelm, Geschichte der chinesischen Kulture, München, 1928, 238 ff). Islam came to China by two routes, through Turkestan and then from Canton.

N
*563 The first Moslem revolt took place in Kansu as early as 1648.
795 Two hundred years later Yaqub Beg (1865-1877) ruled the newly-
*175 established Islamic empire from Kashgar. Russia, England, and Turkey officially recognized him. Yaqub Beg had an army of 50,000 men.

N
[648] The Moslems of Kansu tried to establish another Islamic empire (1861-1874). They conquered the western part of Mongolia, but the T'ung-chih emperor (1861-1875) defeated them completely. Another uprising in 1895 was equally unsuccessful.

N
*[668] When the Communists took over Northwest China in 1949-1950, they granted the Chinese Moslems the rights of religious freedom
N and autonomy. (see section on Constitutional System)
*563 The communities of Chinese Moslems adopted the classical
795 Arabian educational system, i.e., each mosque has so-called
871 medresse (schools) connected with it, where boys are taught to
N read the Koran, etc. This is one reason why illiteracy is so
[213] seldom found among Chinese Moslems.

VI. The Indo-Europeans of the Northwest

S
563 A. The Tajiks or Iranians or Sarikolis

1. General characteristics

S
[131] In the southwestern part of Sinkiang there lives a small Iran-
[181] ian tribe called Tajiks, Iranians or Sarikolis, who are farmers,
[197] merchants and traders. They have a reputation for being very
[191] intelligent. They speak an Iranian dialect which is very closely related to Persian. The Tajiks very often speak Turkish as a second language, and the merchants even speak Chinese.

1: Washington S-4 (no date) 1956 AF13 Northwest China AF13

EDUCATION

I. Nationality Education in Pre-Communist Times

A. The Traditional Pattern

During the Manchu period, education in the Northwest was characterized by permissive and non-interfering policies of the government. This meant that the minorities were able to maintain and develop their own educational systems. During this period schools connected with the mosques, in the case of the Moslems, and the monasteries, in the case of the Buddhists, were the primary educational institutions. The minorities were allowed to formulate their own educational principles. It may be noteworthy that in the Manchu period, eighteen medrese, mosque schools, existed in Kashgar alone. Reading and writing were taught in these schools, and up to two thousand students were enrolled in the schools in any given year. The total number of medrese in the Northwest during the Manchu rule is unknown, but it is safe to say that each Moslem community had at least one educational institution.

1. Moslem schools

The Mohammedans have two kinds of school. The mekteb, elementary school for children, is administered by the local mosque. These schools provide education for all male children older than six. Since 1923 the Mohammedans have initiated the same educational provisions for girls.

The program of a mekteb comprises, first, the memorizing of a surprisingly high number of suras (chapters of the Koran), then the study of the Arabic alphabet, which is used by the Uighur. By memorizing various suras the pupils acquire some hundred Arabic words by the end of the first year, though their meanings do not become clear until the fifth year when the teaching of Arabian grammar is begun. Between the fifth and tenth years the curriculum covers advanced Koran exegesis, the history of Islam, geography and basic arithmetic.

The medrese, the institutions of higher learning, also teach such familiar subjects as al-mantik (logic), al-arithmāṭīḳī (arithmetic), al-handasa (geometry), al-hai'a (astronomy), al-ṭibb (medicine), al-falāḥa (agriculture); also some subjects which are specifically Islamic in nature, such as al-kalām (theology), al-taṣawwuf (ceremonies or practical theology), 'ilm al-ilāhīyāt (metaphysics), al-'arūḍ (metrics) and al-ḳāfiya (prosody).

As in elementary schools, the method of education consists primarily of learning by rote (talkīn) and dictation. Those

Those students who go through six to ten years of continuous studies may become ahungs, mudarris (teachers) or ustādh (honorary title of recognized teachers). Generally, the erudition of these teachers does not seem to be very high. Hence idioms like "ahmaq min mu-allim kittāb" (more stupid than a school teacher).

Islamic laws regulate strictly the position and conduct of a teacher. He has to be married; he is permitted to teach only in public places (hānūt) with big windows, so the community can watch his activities; he is not allowed to use children as servants or engage them otherwise except in school work without the consent of their parents. Occasionally, however, parents have their children serve the teacher instead of paying the regular fees.

Kashgar has a fairly well-known school, the Wanglyq Medrese, whose fame was not confined to Sinkiang alone when Bohā'eddīn Makhdūm taught there, but spread as far as Istanbul and Cairo. Another famous Moslem scholar, Rāmetulla Akhun, the leading jurist ('ilmi fiqh) of his time, taught at Wanglyq. The Kichiq Orda (Little Castle) Medrese in Yarkand was also a well-known seat of higher learning. Also called Yeshil (Green) Medrese, it was founded by Baisi Bäk, the hākim (judge or physician) in 1820. While the quality of the medreses of Kashgar and Yarkand have steadily declined during the last decades, the medrese of Aqsu has maintained its reputation to the present because the core of its faculty are scholars from Afghanistan who received their training at the Al-Khazar University in Cairo.

2. Monastic academies of Lamaism

The high number of Buddhist monasteries all over Northwest China and their enormous monk population of course colored the whole educational system of the Northwest. These monasteries were not only institutions of higher learning, but they also served as libraries and printing houses.

Kumbum (Tib.: sKu-'bum-Byams-pa-gling; Chinese: T'a-erh-ssu) was the chief monastery in the Northwest. It was customary in Chinghai for every Tibetan family to send its second son to this monastery. At the age of eight the boy was admitted after a strange ceremony, which included questions like the following: Are you a debtor or a slave? Are you a hermaphrodite? Are you a demon or an all-knowing spirit? Did you ever treat your parents badly? Did you ever rob or steal? Did you ever belong to a heretic sect? After having answered these questions satisfactorily he received five objects, which henceforth were his only property: an alms-bowl, underwear, a tunic, a mattress and a water sieve. Then one of the ordained lamas was presented to him as his future tutor, whom his

/Chinese Moslems/

000 acter Hui signifying "to return."

S N 795 361 The Chinese Moslems live in small, closely knit communities, organized around the mosques. The Moslem community is usually set apart from the general Chinese community. The Moslems may form a whole village, or a certain suburb or section of town. The communities are organized on a local basis and there is no higher religious authority that unites all the communities. The mosques, the religious and social centers of the Moslem communities, are maintained independently.

S N 795 182 At least ostensibly, the religious attitude of the Chinese Moslims is characterized by moderation. They make concessions to the ruling power, hoping thus to gain security for person and property. The more capable and resolute of those who enter into government service take part in the ceremonial of the national cult.

S N 795 794 [346] The Moslems in the Northwest do not publicly practice their religion, nor do they advertise it. In some cases their mosques are dissimulated, so that they cannot be distinguished easily from other houses in the village. They are quite lax in their observances of the different rituals connected with Islam. The Chinese Moslems do not regularly attend religious services in the mosque. Aside from the ahung (the religious leader of the S N [793] Chinese Moslem community) and the extremely orthodox people [782] they do not pray five times a day, but once or twice at most. The noon service is the most popular one, and the place of worship is limited to the mosque. The manner of calling for prayer differs in China from that in Western Asia. The Muazzin does not chant the call to prayer. He stands on the roof of the mosque and shouts the invitation to prayer and may strike a special wooden instrument called ta-p'an-tzu. Most Moslems will ignore the worship time if it interferes with their daily business. Except for some minor differences, the prayer ceremony is conducted in a manner similar to that in Western Asia.

S N [562] Women are not allowed to attend the mosques where the men pray. In some of the larger communities, the women may have a mosque of their own, but in most places they worship individually.

The Friday service draws the best attendance, although certainly not all nor even the majority of believers. On this day the sermon is delivered by the Khatib, a special person, not necessarily a religious leader, elected for the purpose. It is usually in Arabic, and few of those present can understand it.

S N 795 785 787 203 [184] The Fast of Ramadan is one of the rituals which is observed with a degree of strictness in Moslem communities throughout China. In many places there are special messengers who go about the Moslem quarters calling out the times for observing and breaking the fast. Messengers also go around at night lest

and a certain degree of reproach. On the other hand, prompt observance of the rites at least creates a feeling of fellowship. It is primarily a personal matter, but nevertheless, the entire community responds, just as in the case of the spring planting, and for the same reason. Each finds comradeship in working with the others in whatever concerns the welfare of the community.

There are farm villages in which live only Chinese Moslems. Physically, the community structure is similar to a Chinese village. These Moslem villagers live in the same kind of houses and do the same kind of farming. The streets of the villages also have a similar arrangement. But the Moslem people's religious-communal life is distinctively different from that of a Chinese village. In every Moslem village there is a small public building that is used as a mosque. In this building the children of the village gather at regular periods to receive religious instruction. They learn the Arabic alphabet and phonetics so that they are able to read the sounds of necessary prayers and religious formulas, even if they cannot understand them. The Moslems are very faithful in their observance of the fast of Ramadan. During the fast, they eat nothing between sunrise and sunset. At night they eat a communal feast. The community fires blaze all night and people call and shout to each other. Before darkness falls, pious bearded men say their prayers in public places. One or two of the elders may preach the points of theology, quoting the Koran in oddly mutilated Arabic. On such an occasion the Moslems refer to themselves as "we" and to the Chinese in the nearby villages as "they" As in the case of the Chinese temple, the building and upkeep of the mosque is a communal matter. Assessments are made and cooperative effort is initiated; and, of course, as a project, it rivals and competes with the Chinese temple.

The Moslem villages are comparatively more organized, or show more community spirit, than the Chinese villages. Like their Chinese counterparts, the Moslem villages are administered by their village elders who always intervene in the meager relations between the villagers and the local or county government. The county government makes no distinction between Chinese and Chinese Moslem villages. The two types of villages have almost no relations with each other. There is always antagonism between Chinese and Moslem villages. The two peoples have been and still are mutually practicing segregation. Factors which are responsible for the antagonism or segregation are mostly religious habits and ideals. In addition, while the Chinese have a higher population gain, the Moslems are economically more successful. Both of these facts may be sources of jealousy.

However, in numerous economic activities, there is non-admitted cooperation or division of labor between the Chinese and the Chinese Moslems. This has held true especially for Moslem enterprise and Chinese skill.

S N 563 763 769 making of a will, the giving of alms, rites at the grave, and the recitation of prayers and giving of alms on certain days after death, and on the first, second and third anniversaries.

The Moslems have their own burial grounds. The mounds raised over the graves are rectangular, not round as in the case of the Chinese. The top of the filled grave must be at least five inches (half a Chinese foot) above the surrounding earth, lest the location be forgotten. A stone may be erected in front of the grave, but the name of the deceased may not be engraved upon it.

S N 563 796 e. Festivals and holidays

Many of the religious festivals are more pagan than Moslem, especially those which are seasonal and therefore not connected with the Moslem calendar. Their celebrations are merely popular gatherings for feasting and enjoyment.

The Moslem New Year (Yengi Yil) celebrates the breaking of the Ramadan fast. The festival takes place during the first three days of the tenth month by the Moslem calendar. Special services are held in the mosques. The people bathe and dress in their best clothes. It is a time of greeting, well-wishing, feasting, visiting and gift-giving. For the Moslems and the Chinese alike, the New Year celebration is the greatest holiday of the year.

S N 563 795 668 199 5. Present day conditions

According to a speech delivered by Burkhan, chairman of the Preparatory Committee of the China Islamic Association, at the Conference of the Asian and Pacific Regions, on October 18, 1952, the Islam religion as well as the customs and habits of its followers are fully respected by the Communist regime. Chinese Moslems are free to practice their faith without interference. It is also said that official circulars from Peking have ordered the people to continue the observance of their important festivals. The tax on the slaughter of cattle for Moslem consumption is abolished, and official holidays are granted on Moslem holidays.

S N [423] In accordance with the Agrarian Reform Law, the mosques may retain their land holdings if the local populace so desire. It is also reported that when the land reform movement was carried out in the Northwest, the land of the mosques was in most cases left untouched. There was also a report of an organized Hajji to Mecca in 1952, which for reasons unknown failed to reach its goal. Special government regulations give Moslem workers in public organizations and educational institutions time off on the more important religious festival days. In military units, factories and schools, consideration is also given to the habits and customs of cadres, soldiers, workers and students of the Moslem faith.

RELIGION

I. Historical Background of the Religions of Inner Asia

791 795 Various religions have been strong in the Northwest, among them Shamanism, Buddhism, Nestorianism, Manichaeism, Confucianism, Taoism and Islam. The latter is the predominant religion among the Turks and the Dungans. Buddhism is the religion of the Mongols, Mongours, Shira Yügür and Tibetans. Nestorianism and Manichaeism have become extinct, but Confucianism and Taoism are still alive in Chinese communities (see China Handbook).

A. Shamanism

791 756 Shamanism is a pagan faith based upon concepts of demons and spirits, with whom the Shaman, or priest, attempts to maintain contact by either sending his soul to them or receiving [787] them into his own soul. The Shaman usually functions in a self-[293] induced trance, produced by taking alcoholic beverages, toad-[296] stool powder, et cetera. A high percentage of Shamans suffer [158] from various neuroses, severe forms of hysteria, or epilepsy, and the selection of a new Shaman may be based upon such manifestations of a deviant personality. Sometimes, however, the [428] position of Shaman is hereditary.

756 The Shaman is regarded as a mediator between man and the supernatural. He exercises his magic powers for such purposes as healing, rain-making, success in hunting, prevention of [787] accidents, and divination. In central Asia, the common methods of divination are by the flight of birds and by scapulimancy, or interpretation of cracks on the shoulderblade of a sheep which [292] has been treated over a fire. While functioning in his supernatural capacity, the Shaman wears a distinctive dress, usually a long robe decorated with metal discs, small bells and the claws of the totem birds.

The training of a Shaman is long and involved, and he usually does not reach full professional status until the age of forty or fifty. Shamanists have no ecclesiastical organization, but rank Shamans on the basis of their success in dealing with the supernatural.

756 77 Besides the various ghosts, ancestral and animal spirits and other lesser supernatural beings, the Shamanists recognize a supreme being, the Tengri, who is the universe personified, God and heaven. He is the fountain of life, as he gives man his 171 soul, and the fate of all peoples depends upon him. The Altaic 776 people believe that the Tengri observes all and everything; no

B. Buddhism

795 171 175 The steppe people's first contact with Buddhism came by means of the famous "silk road." Buddhist missionaries from India traveled over this road to China. Translations of Buddhist works into Chinese (223-253) were made by the Parthian, An Shih-kao, in 170; by Indoscythian Yüeh-chih Chih-ch'an, founder of the monastery at Lo-yang; and by Chih-ch'ien, son of a Yüeh-chih envoy. A Chinese military leader brought Kumārajīva of Kucha (344-413) to Lo-yang (382-383). Eventually the Turfan region was converted to Buddhism. Survarnatep of Kucha (Suvarna: Sanskrit "Gold") was host to the Chinese Mahāyāna pilgrim, Hsüan-tsang, in 630. Kucha's Iranian characteristics were eradicated by the Chinese punitive expedition of 647. Buddhism remained the predominant religion of Inner Asia until the times of Islamic conquest.

The first steppe people to come into close contact with Buddhism were the Hsiung-nu and the Toba. Shih Hu (334-349), king of the Hsiung-nu, combined Buddhism and perversion and his son ordered the most beautiful concubine cooked and served. On the other hand, T'ai-wu-ti, the Toba emperor, opposed Buddhism (438-446), but his grandson, Wen-ch'eng-ti (452-465), put a halt to the persecution. In 471, Hsien-wen-ti went to the extent of abdicating and becoming a monk. His son, Hsiao-wen-ti, humanized the law. During the latter's reign the conquering tribe, the Toba, became completely sinified and concurrently lost its warlike characteristics. Buddhism exercised its strongest influence upon the Mongols who were the first steppe people to conquer the whole of China. Khagan Möngke was the first ruler who showed a pro-Buddhist attitude. Qubilai, after him, actively approved the advancement of Buddhism among his people. He promoted the Tibetan, 'P'ags-pa, to be his personal advisor and promulgated anti-Taoist edicts. As conquerors and rulers over Iran, Ilkhan's Hülägü, Abaga and Argun brought Buddhism to the western countries.

For a time, Buddhist influence on the Mongols was weakened in the face of the Chinese nationalist reaction of the fourteenth century, when the Mongols had to retreat from China proper. Their intellectual impoverishment contributed to a further disintegration of Buddhist influence. Soon, however, following their contact with Tibet, their complete conversion to Tibetan Buddhism, or Lamaism, took place. In 1566, after the Yellow Sect, founded by Tson-k'a-pa, had vanquished the Red Sect, it succeeded in converting the Ordos Mongols. Altan Khan and his nephew, Khutuqtai Setsen, invited Tibet's highest church dignitary, bSod-nams-gya-mtso, to visit them. In 1577, the "Mongolian Church" was established. Altan Khan was ordained as the incarnation of Qubilai and the prelate as the incarnation of

795 'P'ags-pa. After his conversion, the Great Khan, Tümen Sasaq-
171 tu (1557-1593), of the Chahar area, promulgated a Buddhist code
175 of law. His second successor, Legdan, built a Buddhist temple and had the Buddhist compilation of the Tanjur translated. The "Living Buddha" settled at Urga in 1602 and was succeeded by a chain of reincarnations until 1924. In 1620, the Khoshuts, inhabitants of present-day Dzungaria, broke away from Shamanism. Buighabu Bātur also adhered to Yellow Sect Lamaism. As a reward for leading the "holy league" of Oirats who defeated a Red Sect prince's attack on Lhasa, the Dalai Lama ordained Gushi-Khan, the Buighabu's brother, as "vicar" of the Yellow Church. After the Ordos and the Chahar, the Tümet and Khalkha, having adopted Buddhism, also lost their warlike characteristics. In contrast to the "secret history" of 1240, the history of the Ordos prince, Sanang Setsen (1662) dealt not with the conquest of the world but with the conquest of souls.

175 C. The Lamaism of Chinghai
795 The province of Chinghai, or Amdo as the Tibetans refer to
792 it, has played a very significant role throughout the history of Lamaism. From Chinghai came the first new stirrings of Buddhism after the religious persecution by the apostate king, Langdarma. The great reformer, founder of the ruling (Yellow) sect, the Gelugpa, came from this border area. The immediate excuses for China's marching into Lhasa usually have been supplied by events here. Both the present and the late Penchen Lamas had spent considerable periods of exile or semi-exile in one of the most famous monasteries of the area, Kumbum. Cen-
[648] turies ago the Chinese system of Ambans at Lhasa was insti-
[795] tuted after a Chinese army had marched as escort for a disputed reincarnation of the Dalai Lama. This Dalai had been born south of Amdo, but had spent his years at Kumbum. As a meeting place of Mongols, Tibetans and Chinese, the area has also played a vital role, religiously and politically, in matters concerning Mongolia and China.

795 Lamaism has played a role in Chinghai equal to the role that
792 the province has played in the religion. According to Ekvall (1939), one out of every three males in the area is a monk. Lhasa has never succeeded in achieving the secular rule of this region; as a result, all sects of Lamaism including the various unreformed sects and the non-Buddhist Bonist sects have continued to flourish. However, the two largest monasteries, Kum-
792 bum and Labrang, adhere to the Yellow Church. Kumbum had held the pride of place as the site where the great reformer
[669] Tsong-kha-pa was born. After the Moslem rebellions in the last century, however, the population of Kumbum dropped. Until recently it had to bow to Labrang in respect to numbers. Between

792 the two monasteries there has been a total of five to seven thousand monks. These monks came not only from the immediate area, but were attracted by the prestige or teachings of the monasteries from Mongolia and other areas on the Chinese border.

792 871 Labrang prides itself on being one of the six major academic monasteries in all Tibet. Ma Ho-t'ien even claims for it more complete systems of education and organization than are to be found at the central Tibetan centers of Ganden, Sera and Tashihlumpo. But this pride is modified by the fact that an academic degree of Geshe from Labrang is not actually recognized in Tibet proper. The Labrang incarnations, Chia-mu-yang, have generally gone to Depung in Lhasa to receive instructions.

792 [778] [423] [651] Kumbum can rest on its laurels as a place of holy pilgrimage. Within its grounds is the rock associated with Tsong-kha-pa's birth; so too is there the famed tree that supposedly sprang from the shorn locks of the Great Reformer. Both monasteries own much land and represent great wealth. Some has come in the form of the accumulated gifts and donations of the pious. Still more is representative of taxes imposed over the years on their local subjects, for, like many of the smaller monasteries, these two are the seats of secular rule as well as religious reverence.

792 701 In return for the gifts and other revenue, however, the monasteries perform many functions for their subjects and believers. In the turbulent conflicts between Moslems, Chinese and Tibetans, the monasteries have represented the effective military force of the area. Rijnhart, Ekvall, Ma and others who have been present in crises have all reported the efficacy of the fighting monks. Their strongholds serve as banks for the wealth of all in danger from looting; their armed force stands for the safety of Chinese, Tibetans and foreigners who seek refuge. Nor is there any perceptible hesitancy about the prospects of taking life when the lama war cry, "Sha-sa, sha-sa" (Eat meat, eat meat!), summons the monks to arms. Sometimes these armies [669] were aroused by major crises, such as those of the Moslem rebellions in the late 1800's. They have also done battle against the Communists in the 1930's. And when no greater danger threatens, they are apt to do battle among themselves on an inter-sect or local rivalry basis.

792 795 But the hold of the monasteries cannot be measured solely in terms of the social and political roles they fulfill. The religion of Lamaism is a very tenacious one. The complete conversion of Tibetans to another faith, be it Christianity or Islam, remains on a very small scale. Within the Lamaist structure, the hold of the older sects is the strongest, especially in areas that have remained outside the control of Lhasa. And underneath

792 795 all the forms of Lamaism, especially in Chinghai, the strong strain of Bon, the pre-Buddhist religion, continues in a modified but still openly non-Buddhist form.

795 175 D. Manichaeism

Manichaeism reached the steppe people by way of Persia and China. Mo-yen-cho (759-780), the Uigur Khagan, accompanied by Manichaean missionaries, returned from the conquered Lo-yang. He was converted and on the inscription of Khara Balasaghun he was referred to as "Mani's emanation." After the Kirghiz forced the Uigurs to flee from the Orkhon region to the Turfan area, Manichaeism waned among the latter and they soon adopted the Buddhism found in their new domain. Rudiments of Manichaeism were to be found up to the time of Chingis Khan.

795 175 171 E. Christianity

From time to time, Christianity has played a significant role in Inner Asia. Due to Methodius and Kyrillus (759-780), it exerted powerful force among the former inhabitants of today's southern Russia. The empire of Khara-Khitai in Eastern Turkestan furthered both Buddhism and Nestorianism. Among the Turkic Naimans, Nestorianism came into existence but not in sufficient strength to overshadow Shamanism. The Turkic tribe of the Kereits (almost as influential as the Naimans) is said to have become Christian about 1,000 A.D. Their Khan contacted the metropolit of Merv, Ebejesü. When the Khan of the Naimans, Küčlük, had been driven away to Kashgaria (1214), his Nestorian education became obvious when he permitted the Moslems to become either Buddhists (considering the faith of his wife, who was the daughter of Gur-Khan) or Nestorians.

The Mongols were considerably influenced by Christian traditions because of the Kereits' and the Naimans' intense interest in their faith. The Great Khan Güyük (1246-1248) was in favor of Nestorianism. His chief advisor, Khadag, and his chancellor, Chin-Kai, were Nestorians. The Great Khan Möngke (1251-1259) was educated by his Nestorian mother, who was the Kereit princess, Surgaqtani, and had Bulghai, a Kereit Nestorian, as his advisor. Even at the beginning of the Iranian Mongolian Empire of the Ilkhans, Christian traces were considerable.

Hülägüs' wife, a niece of the last king of the Kereit, was a Nestorian. The military leader, Kitbugha, who was defeated at Ain Jalüt (in Palestine), was another early adherent to this religion. In many respects the conquest of Persia resembled an anti-Islamic crusade. The indigenous Christians' aid proved effective whereas that of the occidental Christians was requested in vain. As in the case of the empire of the "Golden Horde" (Batus' son, Sartaq, was a Nestorian), these Christian outposts

795 were annihilated by the victory of Islam.
171
175 When the government of the now sinified Mongols became a Chinese empire, Qubilai permitted the Nestorian patriarch of Bagdad to establish an archbishopric in Peking in 1275. In 1289, a government bureau was established in Peking to deal with Christian affairs throughout the empire. A strong occidental Christian influence was also present. John of Montecorvine, sent by the Pope in 1289, built two churches in Peking and became archbishop of that city in 1307. Other Franciscan monks who played an important role were Thomas, Hieronymus, Petrus of Florence (1313) and Andreas of Perusa. The most famous missionary from the west was Odorick of Poderone (1265-1313). As the fall of the Uigur Empire in 840 resulted in the destruction of the Christian outposts, so the downfall of the Mongol rulers brought the collapse of Chinese Christianity which was pursued and prohibited by Chinese nationalist reaction.

F. Islam

Islam was relatively late in reaching the steppe people. Its first adherents were the Turks (Qarakhanides, Ghaznawids and Selchuks) who settled in Transoxania, Afghanistan and Iran in the tenth century. They soon took the lead in overthrowing the heretofore dominant Arabian culture and tradition. Islam's deeper penetration into the culture of the steppes occurred under Mongol rule. After the first massacres, Chingis Khan adopted a more positive attitude toward Islam. However, he prohibited ritual washings and ritual slaughtering of animals because they contradicted Mongolian traditions. In conquered Bukhara, then the cultural center of Turkestan, he accepted the doctrines of Islam (1222) except for the "unnecessary" pilgrimage to Mecca ("all the world is Tengri's house"). His tolerant successors gave Moslems the opportunity to participate in religious discussions or debates. In 1254 they were tactically allied with Rubruk against the Buddhists. During this time, some insignificant conversions of members of the ruling family were made. Among these unsuccessful converts were Mubarek-Shih in Chaghatai (1266); the Ilkhan Takhudar (1282-1284), and the Khan of the Golden Horde, Berke (1257-1260). In 1377 the grandson of Qubilai, Ananda, who despite his Buddhist name was an ardent Moslem, made an unsuccessful attempt to seize the throne of China. He was vanquished and murdered by his cousin, Khaishan.

In the fourteenth century, the official conversion of the Mongol successor states began under Ghazan (1295-1304 in the empires of the Jakhans). To indicate their new faith the Mongols even adopted the wearing of turbans. The wave of iconoclasm initiated by the Emir Nauruz resulted in the destruction of churches, synagogues, and the pagodas decorated with Buddhist

795 sculpture by Arghun. Under Özbek Khan (1312-1340) and Jani Bek
171 (1340-1357) Islam conquered the "realm (empire) of the Golden
175 Horde" of southern Russia. Later there followed the Inner Asian Khanac Chaghatai which stuck longest to the Jassa Laws of Chingis Khan.

As far as Central Asia was concerned, the conversion of the masses occurred under Tughluq (1347-1363) and Chingis Khan's greatest successor, Timur (Tamerlan), who wanted to recreate the Great Mongolian Empire and who founded his empire completely on Islam. However, his plans for the invasion of China never materialized.

II. The Position of Islam in Northwest China

A. The Sources of Islam

719 The original source from which all principles and ordinances of Islam are drawn is the Koran, the Holy Book which, according to Moslem belief, was revealed to the Prophet Muhammad by God through his Angel Gabriel. Although the Koran does not contain a systematic exposition of Moslem beliefs or rituals, yet taken as a whole, there emerges from it a consistent body of doctrine and of practical obligations. Through the ages these have remained the core and inspiration of Moslem religious life.

The Koran is not the only source of the Islamic religion. The sunna (custom) of the Prophet and the interpretation of his different ways of behavior also constitute an extremely important source for the religion. At first the sunna of the Prophet was handed down in the form of a short narrative, called a hadith (story), told by his Companions. The whole corps of sunna collected and handed down soon received the general name of hadith. The hadith was first transmitted orally. Later it was collected and written down. The tradition was invaded on a vast scale by forgeries. However, the serious students of the hadith became aware of the danger of incorporating many of these tales which contained elements foreign to Islam. They established different methods of control by which to attempt to sift out the genuine traditions from the mass of forgeries.

779 The Shari'a is the third important source of Islam. It em-
671 bodies Islamic juristic studies and doctrines, which evolved into a rather coherent body of laws and regulations. The law contained in the Shari'a is not restricted to religious regulations, but envelops all phases of life. Yet it is considered a part of the religious doctrine, for one of the characteristics of Islam is that law is considered part of the religion, and there is no clear distinction between the two. In the Koran, both legal and religious aspects were interwoven. The connection between law and religion established by Muhammad and adopted by his followers

N D. The Sects of Islam

N 795 The two major sects of Islam are the Sunna and the Shi'a. Both of these camps are divided internally into numerous sub-sects, a discussion of which will not be included in this chapter.

N 795 798 The schism between the Sunna and Shi'a occurred first on the political question of the legitimate succession to Muhammad's leadership in the Islamic world. The Sunnis claimed that the Caliphs were the legitimate heads of the Islamic community. The Shi'a followers repudiated the first three Caliphs, Abu Bakr, Omar and Uthman, as usurpers, and declared Ali, Muhammad's son-in-law, to be the true successor, and his house to be the only source for the selection of future Caliphs.

The Shi'a sect seceded on a purely political basis, but it also began to develop its own characteristics in matters relating to religious doctrine. It spread widely in Persia and Iraq and assimilated a great amount of the esoteric non-Moslem doctrines which prevailed among the newly converted Moslems.

N 799 795 798 In particular, a special doctrine concerning the nature of political leadership of Islam divides the Sunnis and the Shi'is. The Shi'is attribute to the Imam (the political leader) a spiritual function which the orthodox Sunni theologians never granted to their Caliphs. This doctrine of the Imamate gradually crystallized into definite theological form. The Imams acquired a superhuman character and their decisions on both political and theological questions are not to be contested.

N 795 The mystical movement in Islam, Sufism, found followers in both camps, and is popular mainly among the masses of the people.

S E. The Turkic Moslems of Sinkiang

S 563 795 The majority of the population of Sinkiang is Moslem by religion. The Moslems include the Eastern Turkis, the Kirghiz and Kazakh nomadic tribes, a small number of Chinese Moslems and a few Afghans, Indians and Tajiks, most of whom reside only temporarily in Sinkiang.

The Turks of Sinkiang are Sunnis of the Hanefite School. Unlike the Chinese Moslems, they have maintained close ties with the rest of the Moslem world. The idea of the cohesiveness of all believers is very strong in Islam. The Turks of Sinkiang not only feel strong national ties with their Turkic brothers in Western Turkestan, but they also consider themselves an integral part of the Moslem world community. In the past they recognized as the chief of all believers (emir el mu'minin) the Khan of Bukhara, and they looked to the Sultan of Constantinople as the political leader of Islam.

S 799 Sinkiang can be called a Moslem country, but it has features which are peculiar to it, and which have greatly changed the

S
793 them. Nowadays these are more cases of private feuds than law
[692] suits. Even when a Qazi exercises his judicial powers, he has
S
[794] no authority to enforce the verdict. The position of the reis is purely symbolic, and that of the Mutaki merely one of consultative powers.

F. The Chinese Moslems

S
N
● 795 The Chinese Moslems are a different sect of Islam than the Turkic Moslems in Sinkiang. They constitute a religious and, to
563 an extent, a racial minority in China proper. The same is not true of the Turkic Moslems, who form a major section of the population in Sinkiang, and who in reality are not a national and religious minority. However, in Northwest China, the number of Chinese Moslems is much greater than in other parts of China, with the possible exceptions of Yunnan and Peking. Many differences between the Chinese Moslems and the Turkic Moslems stem from this factor alone. The Chinese Moslems are
S
N
795 much influenced by an environment which is foreign to Islam. They have accepted many of the local customs and have integrated them into their own rites. This process has been both voluntary and forced. The Chinese Moslems, through the process of intermarriage and living within a majority of non-Moslems, have absorbed some of their customs, perhaps without realizing it. To avoid persecution and suspicion from the rest of the people, they have been forced to adopt others.

S
N
[361] Another important factor in the shaping of Islam in China is the virtual isolation of the Chinese Moslem communities from other centers of Islam, an isolation which has existed for many centuries. Islam in China has been deprived of many of the contributions made later to the religious doctrine and practice by various philosophic and juristic scholars in Western Asia. Islam in China, consequently, developed its own peculiar characteristics (mainly in ritual). The Chinese Moslems have not contributed anything of major importance to the fields of Islam's philosophy and theological thought.

S
N
795 The Chinese Moslems are commonly called Dungans. They
101 themselves do not use the name, but term themselves Hui-hui or Hui tzu. This appellation is applied by the Chinese to all Moslems, whether residents of China proper or Turkestan. Islam is commonly designated Hui-Hui Chiao (the religion of the Hui Hui). It is also known as Ch'ing-chen Chiao (The Pure and True Religion), or the Hsiao-chiao (minor religion) as contrasted with Confucianism, the "Great Religion." The Communists refer to them as Hui. The meaning and origin of the name Hui-hui are not known. There are many varying opinions on the subject. Some say Hui-hui is a corruption of the name Uighur; others, that it is equivalent to the Arabic term Islam, the character Hui signifying "to return".

/Chinese Moslems/

000 acter Hui signifying "to return."

S N 795 361 The Chinese Moslems live in small, closely knit communities, organized around the mosques. The Moslem community is usually set apart from the general Chinese community. The Moslems may form a whole village, or a certain suburb or section of town. The communities are organized on a local basis and there is no higher religious authority that unites all the communities. The mosques, the religious and social centers of the Moslem communities, are maintained independently.

S N 795 182 At least ostensibly, the religious attitude of the Chinese Moslims is characterized by moderation. They make concessions to the ruling power, hoping thus to gain security for person and property. The more capable and resolute of those who enter into government service take part in the ceremonial of the national cult.

S N 795 794 [346] The Moslems in the Northwest do not publicly practice their religion, nor do they advertise it. In some cases their mosques are dissimulated, so that they cannot be distinguished easily from other houses in the village. They are quite lax in their observances of the different rituals connected with Islam. The Chinese Moslems do not regularly attend religious services in the mosque. Aside from the ahung (the religious leader of the [793] Chinese Moslem community) and the extremely orthodox people [782] they do not pray five times a day, but once or twice at most. The noon service is the most popular one, and the place of worship is limited to the mosque. The manner of calling for prayer differs in China from that in Western Asia. The Muazzin does not chant the call to prayer. He stands on the roof of the mosque and shouts the invitation to prayer and may strike a special wooden instrument called ta-p'an-tzu. Most Moslems will ignore the worship time if it interferes with their daily business. Except for some minor differences, the prayer ceremony is conducted in a manner similar to that in Western Asia.

S N [562] Women are not allowed to attend the mosques where the men pray. In some of the larger communities, the women may have a mosque of their own, but in most places they worship individually.

The Friday service draws the best attendance, although certainly not all nor even the majority of believers. On this day the sermon is delivered by the Khatib, a special person, not necessarily a religious leader, elected for the purpose. It is usually in Arabic, and few of those present can understand it.

S N 795 785 787 203 [184] The Fast of Ramadan is one of the rituals which is observed with a degree of strictness in Moslem communities throughout China. In many places there are special messengers who go about the Moslem quarters calling out the times for observing and breaking the fast. Messengers also go around at night lest

/Chinese Moslems/

any should oversleep and fail to eat the necessary food before daybreak.

The regular practice of Zakat is practically unknown to the Chinese Moslem community. Only during the month of Ramadan, when charity is extended to the poor and donations are given to the ahung are alms given in a form resembling Zakat. There is no fixed amount given and the act itself is purely voluntary. The only form of sadaqa (voluntary alms) given is the sadaqa el-fitr given in the three days of Id el Fitr (the Moslem New Year). These offerings can be made in cash or in goods.

Particularly among the Chinese Moslems of the Northwest the practice of pilgrimage to Mecca was observed. The Hajjis, or those who completed their pilgrimage to Mecca, were highly respected in their communities. Pilgrimage has decreased considerably in the last years. The Hajj organized by the China Islamic Society in 1952 did not reach Mecca; they went as far as Pakistan and returned to Peking, for reasons that were not specified.

Id el-Fitr, the New Year, is the best observed of the different Moslem holidays. It occurs during the first three days of the tenth month. Special services are held in the different Moslem communities, and great feasts are given to celebrate the occasion.

In general the Chinese Moslems do abstain from pork and wine as their religion commands. They will not eat meat that has not been killed in the approved Moslem fashion. Many of the merchants, carters and others who travel carry their own utensils, and often, where there are no Moslem communities, carry their own food so as to avoid food that is prohibited by their religion.

The influence of the general Chinese beliefs on the Moslems has been noted by many, particularly by D'Ollone. Ancestor worship is the core of the non-Moslem Chinese belief. It is not restricted to domestic worship but extends to religious devotion to the graves of the ancestors, which are designed to assure the peace of the deceased and are a scene of devotion every anniversary. The Moslems of the Northwest have been so influenced by these traditions that, in the secrecy of their homes, most of them burn incense in front of the ancestors' tablets. In evidence of this custom, D'Ollone brought back two vases which served the purpose of ancestor worship. Both of these vases belonged to Chinese Moslems, and had Moslem religious inscriptions in Arabic. The practice of pilgrimage to the well kept tombs of the ancestors is also found among the Chinese Moslems of Kansu. Some of the bigger tombs are quite elaborate and include, besides the monuments, a mosque, school halls and lodging places.

/Chinese Moslems/

The Chinese Moslem community differs from the Turkic Moslem community mainly in the organization of the community around the mosque and in the peculiar position the ahung holds in the community. The ahung holds the central position in both the religious and the social life. In principle, the Islamic community has no professional priests, but in China the ahung has actually taken the place of one. The Imam, whose office is important in Western Asia and Eastern Turkestan, where he has leadership in religious life, has lost his pre-eminent position in China. So has the Muazzin (the one who calls people for prayer) and the Mufti (the teacher of law). At present these positions have been practically abolished. Those who hold the title have no particular importance in the community. These titles are inherited and are not conferred by virtue of any knowledge of Islamic affairs. The ahung is the only real Moslem scholar in the Chinese Moslem community. He is nominated to this position by virtue of his knowledge of the details and philosophy of the religion. He trains students, the Khalifa, to become the future ahungs and to continue to maintain Islamic life in China.

G. Chinese Moslem Sects

After the pilgrims had established some contact with the rest of the Moslem world, there were attempts, many of them springing in the Northwest, to reform Islam in China. The first well-known attempt of this sort was made by Muhammad Amin, known in China as Ma Ning-hsia, who in 1781 appeared among the Salars and introduced some reforms concerning the rituals of Islam, correcting some of the practices which seemed not to be in accordance with those he had observed in Mecca.

However, of all the most notoriously successful is the sect of Ma Hua-lung, the hsin-chiao or the new doctrine, as contrasted with the traditional religion practiced by the Chinese Moslems, Lao-chiao or the old doctrine.

The new sect is to be set apart from the rest of Islam in China. In spite of the Islamic Chinese tradition regarding religious leaders, their being chosen by the community to serve it, and known only to their adherents, Ma Hua-lung's name was known far beyond his immediate followers. To some he was a prophet, and others detested him as an impostor.

The nature of Ma Hua-lung's teachings still remains somewhat of a mystery. There is a tendency to regard them as endorsements of Shi'ism, or perhaps as an unusually bold representation of Sufism (mysticism in Islam). However, the notices of D'Ollone show that actually they are genuinely Sunni in character and not a variety of the mystical philosophy widely diffused throughout Central Asia. Ma Hua-lung was regarded as an incarnation of the Spirit—a sheng jen (holy man, prophet)

/Chinese Moslems/

equal to or even higher than Muhammad himself. Most of his followers were uneducated. They believed that he had divine revelations since, without instruction, he had answers to all questions and appeared to know many things. As the founder of a new sect, he had to prescribe certain external forms by which his adherents might be distinguished from others. The differences he ordered are best described by W. T. Chan in the following passage:

"The New Sect insists that a certain chapter of the Koran should be recited once only instead of three times as held by the Old Sect, that at prayer clasped hands should be raised once instead of twice, that after a meal there is no need to raise clasped hands in greeting, and that in singing the praise of Allah the voice should be low instead of high. With reference to religious service, the New Sect does not allow any substituting for an ahung in preaching, whereas the Old Sect permits such an arrangement. The two sects also disagree on the basis for calculating the period of fasting, with the New Sect adhering strictly to the Arabic method and the Old Sect following the Chinese lunar Calendar. The New Sect believes that at funerals the mourners should take off their shoes, and stand on a mat while praying for the dead, whereas the Old Sect holds fast to the tradition of standing on the ground with the shoes on. The New Sect also directs that the corpse be laid on the ground, whereas the Old Sect insists on its being on a platform. There is also a disagreement as to whether there should be an honoraria for preachers. In short, the New Sect insists on returning to Islamic traditions, but the Old Sect prefers to keep the customs that have developed in China through the centuries." (Religious Trends in Moslem China, p. 193.)

Being partly dedicated to ideas of forming a Moslem state in the Northwest, independent of China proper, Ma Hua-lung played a very important role in the Moslem rebellion during the nineteenth century.

After the death of Ma Hua-lung, friction developed in his sect. His son-in-law, Ma Ta-hsi, and his grandson, Ma Hi-hsi, fought each other for the sacred inheritance. Ma Ta-hsi had the advantage of numbers and his place of residence, Cha-ku, became an important religious center.

Chang distinguished another sect existing in the Northwest, which he identifies as the New New Sect. Unfortunately there is not much evidence as to its nature. He also mentions a Sufi order in the Northwest called Che-ho-yeh (corruption of Jahriyah). The latter is described as "having an abbot, like the Buddhist lama. It is heavily superstitious and is generally despised by other schools." D'Ollone and Hartmann, however, identify this sect as that of Ma Hua-lung, the name Jahriya

S N 795 referring to "those who pray openly," contrasted with Khafira (identified as the Old Sect) or "those who pray secretly."

All the sects described above belong to the Sunni order; there are extremely few Shi'is among the Chinese Moslems. These sects have retained continuous hostility, which has manifested itself in violence, at times even resulting in bloodshed.

N 795 563 [197] [142] H. The Salars

The Salars are another group of Moslems, distinct from the Dungans, who live in China. They differ considerably from the Chinese Moslems in appearance, and they speak a form of corrupt Turkish.

N 795 [361] The Salars live in Hsün-hua-t'ing on the right bank of the Huang-ho, and in the surrounding villages. They are also found on the road from Sining to Ho-chou. In religion they are Sunnis of the Hanefite School. They are not very strict in their observance of the different Moslem rites, and are known to be heavy drinkers. Although they do not observe the rites of Islam in a strict manner, they feel very strongly about their belonging to the world Moslem community and are quite fanatic in this respect. They have participated in many of the rebellions against the Han Chinese in the Northwest. Their clergy, who are greatly respected, are leaders of the Salar community.

N [669] [793] Unlike the Chinese Moslems, the Salars have not assimilated many of the customs and beliefs of the Chinese. They do not burn incense nor pay special reverence to their ancestors. They have a much better knowledge of the Arabic language than have the Dungans, and even the lowest classes are acquainted with the Arabic alphabet. They are said to have received their present form of religion from Ma Ming-hsin (Muhammad Amin).

N [177] [212]

III. Religious Life of the Chinese in the Northwest

N 346 798 A. Sites of Religious Traditions

The Northwest includes what was once the economic and administrative center of the Chinese Empire. In the city of Sian and its surroundings, some of the older relics of religious institutions can still be seen. The memory of the great culture heroes of the past is particularly strong here and many of them are still worshipped in temples and shrines. Foremost among them is the Great Yü, tamer of the flood, who, according to legend, made life in this region possible by draining the excess water off through the narrows of T'ung-kuan. Among the famous Buddhist temples of Sian is the Wo-lung-ssu (The Temple of the Sleeping Dragon) which was built in Han times and has been a place of continuous reverence by emperors and peasants ever since. It contained a famous mural of the Kuanyin by Wu Tao-tzu

"The traditions, the rituals, the basic and essential relationships which govern men's intercourse, control the small circle living in such far-away places as rigidly as they control the family which dwells in one of China's great cities. Both act according to principles laid down by ancestors, whose control is so subtle and so little questioned as to leave no room for the spontaneous and the unusual." (Cable and French, The Gobi Desert, 165-166.)

Chinese settlers in Sinkiang of course reflect the religious characteristics of their origin. Among the old settlers, who came into the country with Tso Tsung-t'ang, the secret society tradition is still strong. Merchants, mostly from Tientsin, almost universally belong to the Tsai-li sect which forbids its adherents indulgence in drinking and smoking.

IV. Religion under the Communists

A. Islam

When they were fighting for the supremacy of China in the years following World War II and when they first came to power in 1949, the Chinese Communists promised religious freedom to the national minorities in an effort to gain their support. Article 53 of the Common Program of the CPPCC, promulgated in September, 1949, stated that "the national minorities shall have freedom to develop their dialects and languages, to preserve or reform their traditions, customs and religious beliefs." Mosques were promised exemption from taxes and Article 3 of the Agrarian Reform Law, published in June 1950, which decreed the confiscation of the land belonging to ancestral shrines, Buddhist temples and Christian churches and schools, provided for the retention of land by the mosques, subject to the wishes of local Moslem residents. As a further effort to win over the Moslem population of the Northwest, the Government Administration Council issued in December, 1950, a directive permitting the observance of the festivals of Id-el-Fitr, Corban and Molid Nabawi. It abolished tax on the slaughter of cattle for celebration of these festivals and permitted holidays for cadres, soldiers, workers and students of Moslem faith. State trading companies were instructed to sell daily necessities to the Moslems, during these festivals, at reduced prices.

These pronouncements made up the sum total of what the propaganda of the Chinese Communists called the "policy of benevolence" toward the national minorities. They were given tremendous publicity which served to overshadow the grimmer and more gory record of persecution of the Moslem peoples in the Northwest. The reasons for the ostensible policy of toler-

N
795 ance toward the Moslems may be as follows:
668 1. The strong cohesiveness of the Moslems in China. Unlike
177 the followers of other faiths, such as Buddhism and Taoism, who were scattered and disorganized, the Moslems in China and in the border regions are strongly organized and, at times, have presented a united front toward their enemies. This was one of the first lessons learned by the Chinese Communists. For example, early in 1949 when the People's Liberation Army, on entering Peking, wanted to occupy one of the mosques, a crowd of Moslems immediately gathered at the entrance of the mosque, voicing belligerently their determination to defend it. It was only upon the intervention of the Commission of Nationality Affairs that the PLA agreed to drop its demands.

In view of the predominance of the Moslem population in the
N Northwest, especially in Sinkiang which is far from the locus of
795 Chinese Communist power and where Soviet influence was
668 strong, the Chinese Communists were obliged to adopt a conci-
177 liatory, go-slow policy in order to bring the Moslems in line.

S
795 2. Instead of outright persecution, the Chinese Communists,
668 recognizing the traditional deference of the Moslems to their
177 leaders and their attachment to organizations, sought to control them by winning over their leaders and dominating them indirectly through the agency of mass organizations. Of these mass organizations, two were especially designed for the control of the Moslem peoples as a religious faction: the China Islamic Association and the China Hui Cultural Association, both established in May 1953, and both predominantly staffed by Chinese Moslems (Hui or Dungans) instead of Moslems of other races.

S
[635] The chairman of the China Islamic Association is Burkhan, governor of Sinkiang (now chairman of the Sinkiang Uighur Autonomous Region), who is apparently a figurehead. In the executive committee of the China Islamic Association, thirty-one of the forty members are Chinese Moslems and only four including Burkhan are Uighur. The China Hui Cultural Association, headed by Liu Ko-p'ing, is almost exclusively a Chinese Moslem organization.

The purpose of the China Islamic Association, stated Burkhan in a speech in October, 1952, was to assist the government to implement the policy of religious freedom and to include the representative figures of Moslem faith throughout the country. The vice chairmen of the association, Liu Ko-p'ing, Shaikh Nur Mohammad Ta Pu-sheng, Yussuf Ma Yu-huai, Ma Chien and Saifuddin, are all loyal Communist followers. In their speeches at the preparatory meeting of the association, July 27-31, 1952, Chang Hsi-jo, vice chairman of the Financial-Economic Commission of the GAC, and Ulanfu, vice chairman of the National-

Affairs Commission, both stressed that the aim of the association was to imbue its members with the love for the fatherland.

3. A more important reason for the apparently tolerant attitude of the Chinese Communists toward Islam is the utilization of the Moslem leaders for the purpose of propaganda, both domestic and foreign. In a speech at the third session of the First National Committee of the CPPCC, October, 1951, Ma Chien declared: "I have received numerous letters from the ahungs in the Northwest and the Southwest regions expressing their desire to study and to reform themselves: In order to assist them to study the revolutionary ideas of Mao Tse-tung as well as to enable these theories to be universally made known to the people of the Middle East and North Africa, we have translated the following documents of the CPPCC: 'On New Democracy,' 'The Chinese Revolution and the CCP,' and the 'Important Documents of the CPPCC.'" (JMJP Nov. 2, 1951.)

The fact that the Chinese Communists intend to use the Moslem leaders to extend Chinese Communist propaganda to their co-religionists in the Middle East may be seen in the statement in the Jen-min jih-pao (June 6, 1952) that the religious leaders of the Northwest were aroused "to boundless sympathy and concern for the people of the Arab countries of the Middle East—Egypt and Iran—in their fight for national liberation and struggle against the United States and British imperialism and to adopt concerted action to support their struggle."

The first act of the preparatory committee of the Chinese Islamic Association was to assist the Chinese Communist Party and Chinese Communist government in publicity work in the Arab countries. In August 1952, it organized a Chinese Hajji Mission to visit Mecca, which, for reasons unexplained, turned back upon reaching Pakistan without going on to its destination. However, two months later, many Moslem leaders from Asiatic countries were invited to attend the Peace Conference of Asian and Pacific Regions, held in Peking, during which Burkhan, chairman of the Association, at a reception to the Moslem delegates, told them that "our religion as well as our customs and habits are fully respected" by the Communist regime. His speech dwelt, however, more on the material benefits than on religious well-being of the people in the Northwest except to say that they were permitted to observe their festivals.

N
[795]

Deprived of their civil and judicial duties, the Moslem clergy

795 in the Northwest was utilized primarily as propagandists. In
648 April, 1951, three thousand Moslem ahungs and mullahs from
*668 forty-five mosques in Urumchi held a mass meeting to denounce
177 the United States and, later in meetings of their congretations,
793 they made speeches to persuade the Moslem people to sign the Stockholm Peace Appeal, the Appeal for the Five-Power Peace Pact, and to protest the rearmament of Japan. On May 2, 3,500 people, led by ahungs and mullahs of 46 Urumchi mosques offered prayers for world peace. The mass rally initiated a drive for funds for the purchase of planes, tanks and heavy artillery for the Chinese troops in Korea. The minority peoples of Sinkiang donated funds sufficient, it was reported, for the purchase of thirty planes and seven artillery pieces. The religious leaders of Yin-chuan in Ninghsia donated funds for a fighter which they named "Mohammedan."

795 In a way, the acquiescence of the Moslem leaders to assist
798 the Chinese Communists in the promotion of propaganda has
*668 been a reason for the comparative moderation of the Communist
177 regime toward Islam in China. The attitude of the Chinese Communists toward the teachings of Muhammad has followed very much the line adopted in Soviet Russia. The evolution of the Soviet authorities toward Islam has undergone the following stages: (1) the attack on the teachings of Muhammad as the deification of big capitalistic merchants exploiting the unhappy poor, (2) the argument that Islam was originally the ideology of the peasantry but was later corrupted by the aristocratic class. This view was rejected as being too favorable to Islam. (3) The anti-religious propaganda lines that Muhammad was a myth or that Muhammad was the leader of a feudal revolution. (4) The argument that finally prevailed was that of S.P. Tolstov, that Islam emerged from a social-religious movement which evolved from the feudalism following the disintegration of Arab tribal systems. (Essays in the History of Research into Islam in the USSR, published by the History Institute of the Soviet Academy of Sciences, cited in Missionary Bulletin, September, 1955.)

In China, the argument for and against the teachings of Muhammad also raged in Communist publications early in 1951. Lu Hung-chi, in an article in Kuang-ming jih-pao (January 10, 1951) charged that Muhammad, figuratively speaking, held a gun in one hand while he reached into the pockets of the people for money with his other hand, and that his teachings were an excuse for robbing the people. This article aroused a storm of protest from the Moslem residents of Peking and prompted Ma Chien to write a rebuttle entitled "The Sword of Muhammad," published in the Hsin-hua Monthly (February, 1951 issue), stating that the sword of Muhammad was for self-defense, aimed only

795 at the counter-revolutionaries and not to coerce the people to
798 become converts. In this article, Ma Chien skillfully diverted
*668 the attention of the people from Islam to the United States as the
177 enemy of the nation, saying that it was American imperialism, not Islam, which aimed at the conquest of Asia and the enslavement of the Asians. This line was immediately adopted. On May
795 16, 1951, the Jen-min jih-pao carried an article entitled, "The
648 American Imperialists are the Deadly Enemies of the Moslems
*668 of the World." On April 16, 1951, another article appeared in the
177 Jen-min jih-pao, signed by forty-nine prominent Moslem leaders in Peking, entitled "Moslem Brethren of the World, Rise up to Halt the Crimes of the American Imperialists." The cry was re-echoed by Moslem leaders in the Northwest. Ma Liang-chin, imam of the Chinese Moslems in Sinkiang, issued a proclamation under the title "Moslem Believers, Take Positive Action and Struggle to Crush the Germ Warfare of the United States." (Sinkiang jih-pao, March 13, 1952.)

Thus, by joining the Resist United States and Aid Korea Movement, which was raging at a frenzied pitch in 1950-52, the Moslem leaders in China were able to deflect attacks on Islam launched by some of the Communist publicists. But with the conclusion of hostilities in Korea, the Chinese Communists began to re-evaluate and to revise their policy toward the Moslems in
795 the Northwest. Moreover, by 1954, when Communist China had
*668 gained ascendency in Chinese Turkestan and political domination
177 over the Moslem population in that region, there was less need to pacify them by promises. The year 1954 also marked the end of the period of New Democracy, which called for a United Front of all the peoples, and the commencement of socialism, in which the CCP would emerge paramount.

795 The change of Communist policy toward the Moslem peoples
64 of the Northwest as in other parts of China is seen in the official
*668 documents of the Chinese Communists. In contrast to the Com-
177 mon Program of the CPPCC, the blue print for the period of New Democracy, in which, in Article 53, the national minorities were promised freedom to develop their languages and to preserve or reform their cultures and religions, the Constitution of the People's Republic of China (adopted in September, 1954,) pointedly omits the freedom of religion for the national minorities. Article 3, which discusses the rights of the national minorities, states that "all the nationalities have freedom to use and foster the growth of their spoken and written languages and to preserve or reform their own customs and ways." Only in Article 88 was there the provision that the "citizens of the People's Republic of China enjoy freedom of religious belief," and, according to Mao Tse-tung's definition (in his People's

795 Democratic Dictatorship, 1949), the term "citizen" is restricted
64 to certain select classes of people, not all the people.
*668 Moreover, as the Communist officials have frankly stated,
177 toleration would be granted to only religious faiths which (1) have been purified of foreign influences and "feudal superstitions," (2) contribute toward the increase of production, and
795 (3) do not conflict with the teachings of Marx, Lenin and Mao
798 Tse-tung. In other words, the Chinese Communists sanction
*668 only religions that have been tamed, domesticated, and cleansed
177 of political coloration.

In the implementation of this policy of the Central People's Government, Burkhan, governor of Sinkiang, announced in February, 1955, that only "legal religious activities would be permitted by the people's government," because, he said, "individual counter-revolutionary elements have infiltrated into Islam and, under the cloak of religion, are carrying on counter-revolutionary activities." (Sinkiang jih-pao, February 25, 1955.)

The stiffening of Chinese Communist policy toward the adherents of Islam represented, actually, no radical change but rather the shedding of the pretense of benevolence toward the nationality minorities whose attachment to their religion was stronger than their allegiance to the state. It represented, too, a recognition by the Chinese Communists of the fundamental differences between Islam and Communism and of the impossibility of rationalizing these differences. Islam, with its strong social principles for the regulation of state and homelife, conflicts with the totalitarianism of Communism. As Moslem
795 leaders of Asian countries have pointed out, Communism advo-
*668 cates the use of force against those who would not readily
177 accede to it; Islam teaches men to bring others to follow the way of God by peaceful means. Communism does not respect the sanctity of human life, but teaches violence and favors the organization of society based upon atheism and anti-religion; Islam provides for individual rights and freedom, and encourages humanitarian services, compassionate feeling toward all living beings, apart from devotion to God.

795 Besides being a religion, Islam in Chinese Turkestan has
182 also been a strong political force welding the multi-racial groups together in their struggle for self-rule and their resis-
(69) tance to oppression. The insurrections of the Moslems against the Chinese in the beginning of the nineteenth century have been led by religious leaders, the Khojas; the widespread uprisings of the Moslems in the 1860's were led by Ma Hua-lung, the leader of the New Sect, in Kansu, and by Yakub Beg, who bore the title of Commander of the Faithful, in Kashgaria.

000 *The demands of the natives of Sinkiang for independence were*

S
795 civil marriage,' marriage and divorce ceased to be an important
798 function administered by the qadi.
668 Thousands of religious scholars and intellectuals, denounced
177 as counter-revolutionaries, were arrested. The people's courts
S tried some thirty thousand Moslems, sentencing some to death
[648] and others to life imprisonment. Soviet forces were reported to
[669] have joined the Chinese Communist troops in suppressing the anti-Communist uprisings, in which it is estimated that 130,000 Moslems were slaughtered, 260,000 sentenced to forced labor and 150,000 fled from Sinkiang. [Figures based on Hikmah (Indonesian weekly), July 23, 1955, in Missionary Bulletin, January 1954, and report of Mochtar Gazali, member of the Executive Council of the Federation of Indonesian Moslem Labor, in Missionary Bulletin, July 1953.]

But the persecutions have failed to wipe out opposition from large segments of the Moslem population. As late as the spring of 1956, it was still charged that "counter-revolutionaries" were hiding in religious circles and "under the cloak of religion they carried out various kinds of destructive activities." (Report of Su Chen-yung, vice director of the Bureau of Public Security, Kansu People's Government, in Kansu jih-pao, March 15, 1956.)

N
B. Lamaism

• 795 As was the case with Islam, the present regime has also
792 tried to placafe Lamaism as a device to attract the loyalties of
*668 the Lamaistic peoples, the Mongols and the Tibetans. Famous
177 Lama temples were kept in a good state of repair, Lamaist priests and dignitaries received subvention and a certain restraint was shown toward interfering with strictly religious practices (for details see IMAR Handbook, Religion). More particularly, the two highest priests of Tibetan Lamaism, the Dalai Lama and the Panchen Lama, both 'teen-agers, by the way, were kept at Peking for long periods of time and shown around at international gatherings.

N
Attitudes toward Lamaism as a religion and an institution
795 differ somewhat in the Mongolian and the Tibetan contexts. Gen-
792 erally speaking, it can be said that among the Mongols the in-
*563 fluence of Lamaism was on the wane. Even among those Mon-
*668 gols who stuck to their traditions and maintained loyalty to their
177 princes, there was a tendency to break loose gradually from the leading-strings of the Lamaseries. Already in pre-Communist times, progressive Mongols supported this movement. The Regent of the Alashan Mongols, for instance, had made it a rule to submit Lama novices to compulsory secular education and military training in order to educate them out of Lamaism. No reports are available on how Mongolian Lamas have reacted to

• 795 the Communist soft-glove treatment. It is known, however, that
792 they are used widely as Communist propaganda agents.
*563 In Tibet, on the other hand, and that includes the Tibetan
*668 parts of Chinghai, the position of Lamaism is infinitely stronger.
177 There was no sign of weakening in the adherence to the old faith,
795 and militant Lamas were always in a position to incite the lay
792 population to concerted action. This has again been shown in the
171 recent rebellious outburst in Tibet, which seems to be partic-
*668 ularly strong in Southern Chinghai. Occurring at a time when
177 the Dalai Lama was back in Lasa and the first steps had been taken to grant Tibet "autonomy" status (Reuters, April 26, 1956), this outburst is all the more surprising as it sets off the leading Lamaist clergy not only from the Peking regime but also from their spiritual head. Ruthless suppression measures which included the bombing of Lamaseries have thus far apparently not succeeded in quelching the rebellion. Mention is made of a Tibetan Resistance Party (Mim ang, literally, People's Organization) led by Lamaist clergy and joined by officials, traders and other laymen (Himalayan Times, Kalimpong, May 13, 1956; New York Times, June 30, 1956; AP, July 7, 1956).

C. The Fate of Christianity

795 Christian missionary activities and Christian establishments
798 in the Northwest have been predominantly Catholic. The Com-
*668 munists had some dealings with Catholic priests and Catholic
177 communities in the Yenan period. The staunchly anti-Commun-
[797] ist stand of the Catholic Church had at that time given rise to friction and incidents, even though the Communists still wanted at that time to avoid drastic action. In Mongol Catholic communities they had attempted to undercut the prestige of the priest in case he was a foreigner, but they learned from experience that they did not fare better when a Mongol Catholic priest was put in charge. The strong cohesion between the community and the priests forced the Communists repeatedly into making concessions. A perusal of the records, however, creates the impression that dealings with the Catholic Church were handled locally and incidentally only, and that no plans were yet devised for how to take care of the Catholic Church.

795 After the general conquest, however, a pattern emerged
*668 which shows that an over-all policy was applied to the region.
177 This policy was apparently inspired by Lenin's doctrine that
798 Bismarck's head-on collision with the Catholic Church, the Kultur-kampf, was a folly. A propaganda front of "religious freedom" was therefore maintained all through the years. There was apparently, particularly in the beginning, a certain amount of local lattitude in the interpretation of this principle. In a

• 795 number of parishes, religious life went on without major inter-
*668 ference up until about 1951. For the strategy of interferences the
177 Communists drew on earlier experienees in Manchuria and
798 Inner Mongolia, where "spontaneous action" had frequently led to situations that were deemed undesirable by the regime (see Northeast Handbook, Religion). From the pattern of events the following strategic rules can be derived:

1. Do not attack the Catholic Church as such.
2. Attack certain Church institutions which are either most dear to the hearts of the communities or most efficient in maintaining an active community spirit.
3. Avoid making martyrs.
4. Attack individual functionaries of the Church on non-religious charges.
5. Draw the utmost propaganda advantages out of every case.
6. Separate foreign leadership from indigenous communities.
7. Substitute a malleable "Catholic" organization for the existing Catholic Church.

Not even the first of these principles was generally applied. Even though the "freedom of religion" line was never officially abrogated, repeated anti-religious propaganda campaigns were entertained to create an atmosphere in which individual believers would sever their connections with their Church. In the case of Catholics these campaigns proved essentially a failure. It was furthermore made perfectly clear in interrogation of Church officials that there was no room for religion in a Communist state.

Catholic institutions most heavily attacked were the orphanages and the Legion of Mary. The Communists did not tolerate the possibility that an institution of such incisive charitable effect as an orphanage should remain in the hands of the Church. The public trials of the Sisters who were in charge of these orphanages are among the most vicious on record; incredible charges such as child murder and selling into prostitution were preferred against them. The Communists even risked considerable opposition and resentment to eradicate institutions which would so obviously ingratiate the Church to the communities.

The campaign against the Legion of Mary started early. It reached its pitch in 1951, but has not subsided.

The treatment dealt out to Catholic priests, sisters, brothers and laymen showed some local variations. There are instances in which torture and indignities were only sparingly applied. In most cases, however, it was attempted to go all the way to the point of martyring—an attempt, by the way, that was not always successful. Insufficient food, shackling, beatings by fellow prisoners used as stooges, constant disturbance of sleep,

795 continuous interrogations and then trials before People's tribunals and confrontations with hysterical crowds, parading through the city, were the methods most frequently used.

In the second half of 1951 and all during 1952 and 1953, the campaign against the Catholic hierarchy went on. Most of the bishops and priests were charged with collaboration with imperialistic countries, spying, and membership in the Legion of Mary. Many of them were thrown into jail or kept under house detention, and then one by one they were expelled. It is strange to note that, particularly in the beginning, the Communists wanted it to seem that they left voluntarily; and all kinds of torture were applied to make them sign petitions for an exit permit. Among those expelled were: Archbishop Theodore Buddenbroek of Lanchou, Kansu; Bishop Melchebeke of Ninghsia; Prefect Apostalic Jerome Haberstroh of Hsining; Bishop Larranga-Lana of Ping-liang, Kansu; Prefect Apostalic Pierre Maleddu of Hsing-an, Shensi; Bishop Peter Grimm of Ch'in-chou, Kansu; Bishop Joseph Maggi of Han-chung, Shensi; Bishop Pierre Moretti of T'ung-chou, Shensi, and Bishop Fulgence Pasini of San-yüan Shensi. Priests and Sisters were also forced to leave, so that by January 1, 1956, no foreign church official was left in the Northwest. However, as in most of the dioceses concerned, the indigenous priesthood, Chinese or Mongol, was well developed, this loss of foreign leadership did not hurt the Catholic Church in the Northwest so much as the Communists had hoped. Chinese priests were not spared the persecution that their foreign brethren had experienced. They were pilloried and jailed in great numbers; but they stood up to the test remarkably well. Even under the most restricted of circumstances they maintained church services and contact with their communities. It is reported, for instance, that an unnamed Chinese bishop carried on in Lanchow after Archbishop Buddenbroek had left, and even went on ordaining new priests.

The attempt by the Communists to substitute an "Independent" or "Reformed" Catholic Church for the original structure failed dismally in the Northwest. Also in other parts of China this movement has found only negligable response among the Catholic clergy, with the exception of a few show pieces which, of course, are always produced when foreign visitors are at hand. When the movement started, a few among the clergy in the Northwest might have believed that the Holy See would condone such a compromise. Excommunication of the collaborators soon dispelled this belief, however, and in no known case does a priest in the Northwest support the movement. The Communists tried for a time to bring in some "progressive" priests from outside, but apparently none could gain a foothold in Northwest communities.

/Chinese, Chinese Moslems and Sedentary Tibetans/

because there is nothing for which to exchange it. Once a week a caravan carrying Government supplies deposits a bag of flour at the door. This is the subsidy granted to them, in exchange of which her husband is bound to be at his post all through the year, and keep the well from being choked by sand. She has never thought in terms which refer to anything except meals, births and occasionally deaths. Her boys may go farther afield, and if they do, she knows that they will never return, but after a time she will become accustomed to their absence and it will not trouble her again."

With spiritual senses dormant, mental powers arrested and physical demands reduced to the minimum, wherein shall a human being show that he differs from the beasts whose conditions he shares? There is hardly anything which can be called attitudes or reactions.

About the Chinese-speaking Moslems Miss Cable reports that Chinese travelers avoid any inn operated by Moslems because of the rudeness to which they may be subjected when using it. This is a very particular observation, as in other places in the Northwest, non-Moslem Chinese prefer to go to Mohammedan restaurants, which are famed for their cleanliness and tasty food. In many places Moslems have monopolized the innkeeper business, so that they cannot possibly be avoided. Even the Chinese guests abstain from eating pork during their stay, every pot and pan which they possess is considered unclean and will not be allowed inside the kitchen. This is not conducive to good feeling between host and guest, and may at any time lead to high words and even to blows. Toward known westerners the Moslems' attitude is somewhat different, and more tolerant. Cable records the experience of her party in staying in an inn with the sign of "Pure and True Religion" by saying, "The attitude toward our party was different because, though we were styled kaper (infidel) we were known to keep a 'clean' kitchen, which is to say that pork, lard, and every produce of the pig was rigidly excluded from our menu. We were 'infidels of the book' for the Bible and not the Koran was our guide, but we were not 'infidels of the pig' which was an insult reserved for eaters of unclean food. The closest watch was kept upon us as we journeyed, and any lapse or laxity would have been reported to every mosque on our route, so that 'pure religion' inns would have been closed to us. Moslems acknowledged that we were as free from idolatry as themselves, but openly stigmatized us as blasphemers, for we called the prophet Jesus 'Son of God', and the innkeeper turned aside to spit whenever he heard the word." (pp. 72-73). The Moslems who are of means like to make others understand that they are wealthy people. "Like other Tungan landlords to whose houses we had the entree, he left us with a sense that he was very wealthy and that his

apparent trade of innkeeping was simply a cover for another and more lucrative business." (p. 73).

Like the Chinese, the sinicized Moslems are very much concerned with the problem of offspring. To them continuity of life is bound up with that prolongation of existence which a son secures, one who carries on the life which he owes to his parents. This is a completely Chinese concept. The Chinese-speaking Moslems cannot understand and would certainly not accept the Christian faith that life after death is God's gift, that one does not depend upon a son and his worship, and that immortality means the soul or spirit living eternally in Heaven. Miss Cable records in her book: "We talked often of these things, but it was hard for them to understand what I told them, and they would turn it off with one excuse or another. 'She is different from us', they said, 'her life is given up to God's work and her merit will secure her an entrance to Paradise'. Some envied, some pitied, some just stared and made no effort to understand, others summed it up in these words: 'Eastern ways are for the East, Western ways are for the West.'" (p. 75).

The Chinese-speaking Moslems in the Northwest, in spite of their having taken up a considerable amount of the Chinese way of life, are deeply conscious of racial and religious inadaptability to Chinese rules. Most of them are always rebellious. They alwasy think that they are oppressed or unfairly treated by the Chinese authorities. For this reason, Moslem revolts occur in the Northwest frequently. For example, the immediate cause of the the 1930 revolt was, according to Miss Cable's account, the suspicion of the Moslems that the Chinese Government was to change their age-old social and political system and that the Chinese population in the area goat many advantages at the expense of the Moslems. Up to 1930 the Moslems in the Hami district of Sinkiang were always governed by a ruler of their own race, religion and speech. The last one of their rulers was Khan Maksud Shah. This ruler died during the year 1930. The Chinese Sinkiang Government took this opportunity to end the Moslem system and the succession of the Khan was not allowed to continue. Maksud's son, Nazir, heir to the throne was summoned to report at Urumchi, then capital of the Sinkiang Provincial Government, and Yolbars, the Tiger Prince, was ordered to appear with him. This was bad news for the Moslem inhabitants. Later, a word came from the capital that the young prince had been made a prisoner in his own lodging, and that there were to be many changes in the standing of the Turki people. When Yolbars returned to Hami he left Nazir in Urumchi, and arrived in company with a band of Chinese officials who at once sat down to business and drew up a list of changes which were to be introduced in the administration of the Moslem community. The old administration

hunting and racing games. In playing such games all the participants think and act as equal competitors. All social and kinship distinctions disappear. The competition between father and son, if they all participate in the same game, could be just as fierce as that between two other persons.

In regard to relations between the Chinese and the Chinese-speaking Moslems, the attitude of the people in Ninghsia was quite different from that of people elsewhere. In Ninghsia, the Chinese-speaking Moslem leaders held that the Moslems are not a race different from the Chinese but that they are only a religious group. Because of this attitude the Ninghsia Moslem leaders advised their co-religionists not to undertake any political movement on the basis of race. This attitude eliminated or at least lessened the racial antagonism between the Moslems and the Chinese. Another significant trend to be mentioned here is that the traditional barriers between the Moslems and the Chinese have been melting away in recent years. Fan reports that the Moslems in the northern parts of Ninghsia went voluntarily to Chinese schools and learned the Chinese language. Some of their religious leaders were alarmed and tried to stop this. But the people answered them by saying: "After our children have gone to Chinese schools and learned the Chinese language they immediately become useful in helping their families to make a living. What is the use of learning the Koran?"

Robert B. Ekvall is a Christian missionary who lived in the southeastern parts of the Northwest for many years. He and his wife did evangelistic work mostly among the sedentary Tibetans in the district of the Kansu-Chinghai border. He made numerous observations on the sedentary Tibetans and the Tibetan-influenced Chinese. About the latter, Ekvall says: "In contrast to the violent incompatibility existing between the Chinese and the Moslems, we have Chinese and Tibetans displaying a mutual tolerance in matters of religious belief and practice... the Chinese of the border differ from those already described in that they place a greater emphasis upon Buddhism to the neglect of some aspects of Confucianism. In particular do the more uneducated tend to become almost entirely Buddhistic in observance; the scholars, of course, give greater place to the doctrines of the Sacred Books of Confucian teaching and always refer to themselves as members of the Confucian sect. Also, the Chinese of the border country - possibly influenced by the religious fervor of the Tibetans - appear more religious-minded than their fellow countrymen of the Titao district." (Cultural Relations on the Kansu-Tibetan Border, p.33)

In speaking of the differences between the Chinese and the sedentary Tibetans, Ekvall observes that the Chinese village organization permits a considerable degree of individualism, whereas in the Tibetan village, communal activity completely overshadows

in the Constitution of the People's Republic of China. There are many followers of religions in China. It would be unwise, the spokesman argued, to offend them all. He repeatedly emphasized, however, that the world outlook of the Marxists is in every way contradictory to that of religious believers. The solution is, "the religious believers must abide by the Constitution and the law. The policy of freedom of worship must not be allowed to be used as a pretext for carrying out counter-revolutionary activities,... We must publicize among the masses of the Youth the materialistic world outlook... The youths should thus be given an ideological fouucation... to make them into...atheists and the heroic fighters of the Socialist construction undertaking." (Ibid., p. 28).

The Communists believe that by turning the young people against religion, all religion will eventually be eliminated when the present believers die. However, the Communists will tolerate or even participate in religious activities for reasons of expediency. In Northwest China where the influence of Islam and Lamaism is great, the Communists have gone all out to woo the Moslems and the lamas. For instance, when the Communist army marched into Ninghsia and Kansu, the commander of their First Field Army, Peng Te-huai, issued a special order to the whole field army to honor the Moslem religious habits. Not only were the Mosques not to be damaged, but the order even demanded that every soldier wash his hands before he drew water from a well. In numerous cases, the Communists spent much money to repair the mosques and the lama temples. In the Soviet China stage the Communists had disqualified every monk as a citizen. (see above).

Obviously, the general civil rights promise in the Communist Constitution are restricted. Mao Tse-tung's statements in his "On People's Democratic Dictatorship" leave no doubt about this point.

E. Practices

Some instances of infractions of these rights may serve as examples. In 1951 some faculty members of the Provincial First Middle School at Sian, Shensi, grumbled in private talks about the "land reform." They said, "In the country, if you have two bowls of rice to eat, you will not have peace." Because of this, Vice-Commissioner Lu Ch'in-liang of the Bureau of Culture and Education of Shensi Province wrote a special article and published it in the local newspaper. He severely criticized the tolerance of the administrators and accused the school of being a hiding place for counter-revolutionary ideas and opinions. Special groups were organized by the Northwest People's Supervisory Committee and the Northwest Department of Education to investigate the school. A special criticism was published in the nation-wide Party magazine, Hsüeh-hsi. As usual, this would indicate that a serious purge took place.

trough below the surrounding level of the valley. Just beyond Hsitachai the path leaves the T'ao River, along which another track runs direct to Choni, and turns up a side valley to the north to reach a semi-Tibetan hamlet called Shanch'a, 80 li from Min Chou, where we passed the night in the house of the headman. Pheasants were abundant in this picturesque and well-wooded valley.

At Shanch'a the path turns up a side ravine leading after an hour's march to an easy pass, whence there is a descent for another hour into a bare valley, followed by a rise over a second low pass, and a descent to New T'ao Chou in another bare open valley, a march of 40 li in all. New T'ao Chou (now called Lintan Hsien) is the official town, as opposed to Old T'ao Chou, distant 60 li, the commercial town, and is an empty shell of a city of no importance. About half the few buildings inside the walls had been destroyed by the White Wolf rebels the year previously. We were accommodated in a temple which the magistrate had fitted up temporarily as his yamen. The city lies in a bare open valley some 20 li or so north of the T'ao River in a region of treeless hills of loess, red clay, and red sandstone. This somewhat dreary belt of bare red hills intervenes practically all along this border between the loess of Kansu proper and the pine forests and grass lands of the Kokonor country, and corresponds roughly to a similar Mahomedan wedge between Chinese and Tibetans. The red hills round New T'ao Chou are cultivated and dotted with villages, mostly Mahomedan. The Moslems extend from here along the border to their real strongholds round Ho Chou and Hsünhua, and thence north of the Yellow River to beyond Hsining. We were travelling round the two T'ao Chous during the season of summer thunderstorms (early July), and usually experienced several daily, some very severe and rather alarming in this elevated region. On one occasion hurrying into a Mahomedan farmhouse for shelter we found the inhabitants at prayer as though in a mosque; this custom of using private houses for prayer is, I was told, confined to the followers of the "New Sect," which is very extended and influential in Kansu. Our sudden intrusion was not resented in the least, and on this, as on every other occasion when I met Mahomedans in Kansu, we were

with the Mahomedan population of the district. At the time of our visit there was also a Chinese General with a few hundred old-fashioned Chinese troops in the city, the Mahomedan troops, of whom there are many thousands in the neighbourhood, being quartered in the surrounding Mahomedan districts. We spent a day in Ho Chou, which I thought a delightful place, feasting and receiving callers.

The Chinese differentiate between two kinds of Mahomedans in Kansu, the Sala, the descendants of a Turkish tribe which came from the neighbourhood of Samarcand some five or six hundred years ago and settled on the upper Yellow River round Ho Chou and Hsünhua, and the original Mahomedan population of the province, which also came from Turkestan, but at a much earlier period. The former are really Chinese Turks, while the latter are probably so mixed with early Chinese colonists who adopted Islam as to merit the title of Mahomedan Chinese. The Chinese look upon all the Moslems as being of a different race to themselves, and they are assigned one of the five colours of the republican flag, which symbolises the union of the five Mongoloid races of the former Chinese Empire. They are locally known as Hui Hui, or Hsiao Chiao Jen; the origin of the former name is still occupying the attention of scholars, and has been explained in various far-fetched and unsatisfactory ways; the latter means People of the Lesser Religion. The Mahomedan religion itself is known as Ch'ing Chen Chiao (Pure and True Religion). The Sala, who are considered by the Chinese to be the more fanatical and dangerous, show their comparatively recent Turkish origin in their long narrow faces, large eyes, and strong beards, and a Turkish dialect of some kind still survives amongst them.

There are two large sects amongst the Mahomedans of Kansu, those who follow the Lao Chiao (Old Religion) and those who follow the Hsin Chiao (New Religion), which I have heard compared by the Chinese to the Catholic and Protestant Churches of Christianity. These two sects are bitterly hostile to one another, and generally speaking the Mahomedans are always quarrelling amongst themselves about religious matters. But, in spite of these apparent internal dissensions, they present on the whole a united

front towards the Chinese and the rest of the world, and in this unity (as also in the case of the unity of the Catholic Church) lies their amazing strength today. I have heard the Chinese compare both Islam and the Catholic Church to vast world-wide secret societies bound together for purposes of mutual benefit and protection against the rest of mankind. At present the Moslems of North West China, though unsupported by the Treaties of any Foreign Powers, and in spite of the terrible set back after the rebellion, have acquired by their own efforts a privileged and independent position, and indeed are now the principal power in the province.

The various sects and classes seem to differ a good deal in the strictness of their observance of the tenets of their religion. Abstention from pork seems universal, and many abstain also from wine, opium, and even tobacco. The Ramadan fast is carefully kept by the upper classes, but not so strictly by the lower. Every Moslem appears to have an Arabic as well as a Chinese name, but a knowledge of the former language is confined to a few Ahongs and scholars. The Koran is read in Arabic. All classes hold keenly to their religion, and their religious centres are visited from time to time by priests from Turkey, Arabia, and Central Asia. They keep aloof from the Chinese, whom they consider unclean, and do not usually frequent the Government schools. They occasionally take Chinese wives, but the latter have to be cleansed before marriage externally and internally by a course of baths and water drinking. The veiling of their women is not, I believe, practised in other parts of China, but in Kansu we saw veiled women on two or three occasions, each time travelling on the road. The superiority of the Moslems over the Chinese in regard to housing, food, personal cleanliness, and general standard of living is marked, and their spotlessly clean and well-kept mosques (*Lipai Ssu*) are in striking contrast to the dirty and dilapidated temples of the Chinese. These mosques are Chinese-style buildings, and in this respect as in most others they have created a Chinese Mahomedan Church. Though the magistrates in the Mahomedan districts are Chinese, they usually refrain from any interference with the Mahomedans, who appear to manage their own affairs through a sort of local government.

563 ribbon is decorated with white shells, deep-red corals, silver discs
[302] and pieces of amber sewn on it. Like the Tibetan women, they wear a caftan that opens on the side, and the men, too, dress like their neighbors, the Tibetans. The faces of the Mongols are rather differ-
[142] ent from those of the Tibetans. They are broad and their noses are also wide. My men thought they were much better looking than the Fan tse. I, however, did not agree with this. Even with my taste which was corrupted as a result of my Asiatic environment, I could not admire these faces that looked as though they had been flattened out with a roller.

778 July 6. The Mongols are very devout Buddhists. Near the very
563 first yurts on Schang territory there stood mani rdyayu - they looked very gay like our May poles - consisting of four tall poles forming a large square around a taller /338/ center pole. There were garlands of cloth shreds, red, blue, green, yellow and white, completely covered with prayers, stretching from pole to pole (Plate LXXVIII). At the top of the center one cedar twigs swayed in the wind, and their resinous fragrance pleases the heavenly ones. Next to this there was an altar on which today, the day of the full moon, cedar-
[175] and thuja-leaves and tsamba were being burned. At noon the family
[789] lama blew his horn; a procession of men, women and maidens approached the altar, fell down before it, prayed, circled again and again around the mani rdyayu, clockwise, according to the rules of the yellow sect, "the way the moon rotates around the earth," and prostrated themselves countless times after each time around, hoping to obtain peace, release from demons, and for their herds, freedom from disease and death.

563 For this exorcism my nearest neighbor in Camp 51, a well-to-do
792 Mongol, (1) had invited the incarnation from Tangsker, a monastery

1. A man is here considered well-to-do if he has 8 to 10 horses, including mares and foals, 20-30 yak cattle and 400 sheep, whereas near Dankar a man is not considered well off unless he has 40 horses, 60-70 yak cattle and close to 1,000 sheep and goats.

of which I learned for the first time here, and which lies far off on the Hwang Ho, many travel-days farther than the oft-mentioned Ratdscha gomba. The journey of the holy man from his lamasery to Tsaidam lasted many months, but he had been undertaking it for several years already, and he stayed two or three months each

I: Washington S-4 (no date) 1956 AF13 Northwest China AF13

It had become clear to me that on my new expedition into the highlands, I could not think of continuing my old route. It would have taken too much time to get to the old place on the Tschang tang. By the time I would have reached it the animals would have suffered so much from the cold as well as from the distance, that I would have had little prospects of an important further advance. But above all I did not have the means to equip a second equally large caravan. I had therefore decided to take a trip into the little /98/ known K'am. In K'am on the upper Yangtze Kiang, around the sources of the Mekong and up to the banks of the Salwen, there lies a Tibetan province which, as I mentioned earlier, belongs to Hsining or rather to the Kuku Nor territory because it was occupied by Hsining Chinese at the beginning of the eighteenth century in the wars of conquest of the Manchu. The people of Hsining call this province the Hung mao or de ti fang, the "home of the red-hats" (1), sometimes also the Yü fu (Yü schu in the Peking dialect). It is the country of Nan tsien (or Nan tschen) dyalbo, a king who is practically independent. The territory is very large and little of it has been explored because it is extremely difficult of access. We therefore do not even know its exact boundaries. But it is today the most important center of the old Nima- (rNingma-) faith, that is, this very sect of Red-hats.

1. All the people who do not belong to the Gelugba sect, refer to the Hsining Chinese as "red-hats," irrespective of whether they follow the Nima- (rNingma)Saskya-, or Karma-rites. As far as a layman is concerned the difference between these sects consists chiefly in small externalisms of the ritual, in the invocation, the gestures of the hands, in the type of music, in the intonation of the instruments and in whistling and hand-clapping. For the monks the difference lies in the first place, in the diversity of tutelary gods.

In order to penetrate the lands of the Nan tsien king, I felt that it was first of all necessary for me to secure the consent of the Hsining amban. But how was it possible for me, without a recommendation from my government, once again to come into the presence of the high and mighty lord? It took a great deal of trouble. This yamen had an astonishing number of almighty gate-keepers. On two different days I went to the amban yamen at 10 o'clock in the morning and left it when the gates were closed at night without being admitted by the

/The Nomadic Tibetans/

*563 encampment, or they may consist of a group of friends or relatives.
221 Some go only to the neighboring farmers, but more gain is to be
[437] found in the trade at the border. Winter also is the time for weaving the yak hair cloth, for preparing and repairing equipment, and for visiting and gossip. The period of high festivity is approaching.

*563 The traders return from their travels and the nomads flow en
221 masse to the monastery centers for the observation of the mid-
• 796 winter festival. During the festivals religion is combined with both
792 pleasure and business. Almost every family has its representa-
[443] tives among the monks so that family reunions heighten the gaiety
[584] of the season. Trade is brisk for the monastery centers are also market towns. Maidens contract alliances with the swashbuckling young nomads, and some of these affairs ripen into marriages. Business of another nature may also be contracted at this time.

*563 Once the spring movements commence, the nomads find it advisable
221 to travel with a minimum of baggage both for actual convenience of
579 movement, and to lessen the loss incurred should a raid occur.
[792] Thus advantage is taken of this opportunity to store one's valuables
[488] in the care of the monastery, and more particularly with a monk related to the owner. From mid-winter until the horses are too jaded in early spring, the major occupation can only be described as robbery and attempted robbery. Large-scale caravans from other parts of Tibet and from China make the most desirable prey.

*563 Ekvall and Yu reported that the winter grazing grounds belonged
423 to the encampment, and that the territories in which the pastures
[28] were located, and assigned, were the property of the larger units
621 (or tribes, as they are sometimes called) consisting of a number of encampments. The winter hay fields were individual's own property.

*563 These units might be under the jurisdiction of a chief or they might
423 form a rather loose confederation without marked central authority.
622 In some instances the actual "chief" might be one of the local
[792] monasteries, whose head will exercise civil authority over the laity. Infrequently a chief might even control several larger units, in which case he would be referred to as gyalpo or "king." But

*563 even the most nearly autocratic chief exercised caution in asserting
622 his position, lest a disgruntled encampment, or some tents, might
628 leave his jurisdiction for the welcoming embrace of some other chief. The latter would then have complete information necessary for conducting a successful foray against the first group. Thus, just as within the encampment, the actual authority in these larger units rested in the hands of a council of elders, representing each of the component encampments.

*563 Although there are clans in Tibet which have played important
614 roles in the history of some of the ruling families, they perform
[621] no major function among the Tibetan nomads. The encampment is not based on clan affiliation. Such affiliations even cross the lines of the larger units. (Cf. Ekvall, 1939 and Yu, 1947). The clan

*563 and a certain degree of reproach. On the other hand, prompt ob-
62 servance of the rites at least creates a feeling of fellowship. It
769 is primarily a personal matter, but nevertheless, the entire
community responds, just as in the case of the spring planting,
and for the same reason. Each finds comradeship in working
with the others in whatever concerns the welfare of the community.

*563 There are farm villages in which live only Chinese Moslems.
621 Physically, the community structure is similar to a Chinese vil-
184 lage. These Moslem villagers live in the same kind of houses and
795 do the same kind of farming. The streets of the villages also have
a similar arrangement. But the Moslem people's religious-com-
munal life is distinctively different from that of a Chinese village.
[346] In every Moslem village there is a small public building that is
[871] used as a mosque. In this building the children of the village gather
at regular periods to receive religious instruction. They learn
the Arabic alphabet and phonetics so that they are able to read
the sounds of necessary prayers and religious formulas, even if
[985] they cannot understand them. The Moslems are very faithful in
their observance of the fast of Ramadan. During the fast, they
• [796] eat nothing between sunrise and sunset. At night they eat a com-
munal feast. The community fires blaze all night and people call
and shout to each other. Before darkness falls, pious bearded
men say their prayers in public places. One or two of the elders
may preach the points of theology, quoting the Koran in oddly
mutilated Arabic. On such an occasion the Moslems refer to them-
selves as "we" and to the Chinese in the nearby villages as "they"
[794] As in the case of the Chinese temple, the building and upkeep of
the mosque is a communal matter. Assessments are made and
cooperative effort is initiated; and, of course, as a project, it
rivals and competes with the Chinese temple.

The Moslem villages are comparatively more organized, or show
more community spirit, than the Chinese villages. Like their
Chinese counterparts, the Moslem villages are administered by
their village elders who always intervene in the meager relations
between the villagers and the local or county government. The
county government makes no distinction between Chinese and Chi-
nese Moslem villages. The two types of villages have almost no
[578] relations with each other. There is always antagonism between
Chinese and Moslem villages. The two peoples have been and
[798] still are mutually practicing segregation. Factors which are re-
sponsible for the antagonism or segregation are mostly religious
habits and ideals. In addition, while the Chinese have a higher
population gain, the Moslems are economically more successful.
Both of these facts may be sources of jealousy.

*563 However, in numerous economic activities, there is non-
184 admitted cooperation or division of labor between the Chinese
628 and the Chinese Moslems. This has held true especially for
Moslem enterprise and Chinese skill.

/The Han Chinese/

000 with the fur side inside.

*563 The Chinese home is still governed by the patriarchal tradi-
769 tion. The ancestral tablets stand in the place of honor. Ancestor
592 worship, which includes the belief that the spirits of those who
have gone before are always present, profoundly affects the de-
tails of family life and holds the members together, not so much
by affection as by obligation and a sense of mutual responsibility
within the clan.

N
*563 At the New Year, in the shabby mud hut as well as in the
592 elaborate living room of a wealthy home, the family makes obei-
• [796] sance to the elders in exacting ritual. The essential relation-
[184] ships which govern social intercourse are rigidly practiced. The
[593] individual maintains a close tie with his family, for he finds in
it the satisfaction of fulfilling the demands of tradition. A male
Chinese considers his home a place which Heaven has entrusted
N to him, to hand down to posterity.

*563 The annual festivals, such as the seasonal celebrations of the
796 New Year, the Dragon Festival, the Moon Festival, et cetera,
184 are celebrated in more or less the same manner as by the peo-
N ple of other regions. Customs regarding birth, marriage, funer-
*563 als and burial are also similar; in some places the ritual is
824 more rigid and conservative. The distinguishing factor here is
N in the simple home life, as well as in social relations. The atti-
[558] tude toward life is more practical because of poverty and neces-
sary thrift. The preservation of "face" is not regarded as so
essential to prestige and social status. For example, Chinese
people in other parts of the country may have elaborate funerals
for their parents to maintain the prestige of the family, despite
resulting financial worries.

S
N B. The Chinese Moslems (Dungans)
563 1. The People
101 Actually the Moslems are predominantly Chinese. In Asia the
Chinese Moslems are referred to as Dungans, but in Kansu
Province they are called Hui-hui. Dungan is not a Chinese word,
but a term used by the Turks of Sinkiang in referring to the Chi-
nese Moslems.

S
[161] These people settled thickly in Sinkiang Province, where they
[197] form the bulk of both the trading communities and the farmers.
In addition to Chinese they speak a Turkish dialect, and they
distinguish themselves from the Moslems of North China who,
except for their religion, have been almost totally assimilated
by the Chinese.

S
N The Chinese Moslems are a much more courageous people
563 than the local Han Chinese. The Kansu men of this area are con-
181 sidered the most timid of the sturdy North China stock. It is
said that the Kansu men never have ambition, while the other
Northerners are never without it.

/Chinese Moslems (Dungans)/

S religious teachings. According to the religious code it is obliga-
N tory for a man of means to contribute a certain amount of his
563 wealth to public charity. Next to worship, this is the most im-
783 portant duty in Moslem society. The original idea of helping the
799 poor and needy evolved into a tax (ten per cent on agricultural
431 produce and two and one-half per cent on animals) collected from
[651] all believers for religious and public welfare purposes. Another
form of alms, the sadaqa, is a voluntary offering. Public wel-
fare supported by the tax, after the collector's fee is deducted,
includes freeing slaves, assistance to persons who became in-
debted for good reason, making holy war to defend the people
and the faith, and aiding needy travelers.

S During the month of Ramadan (fasting) donations and offerings
N are collected for public welfare purposes. The amount is not
563 fixed, and the act of giving is voluntary. A sense of public re-
• 796 sponsibility is strong among these people. Not only do they give
135 regular allowances to the needy in their own communities, but
they help needy outsiders of their own faith.

S The Hajjis, or those who have completed the pilgrimage to
N Mecca, are highly respected in the Moslem community, and
563 wear special badges to mark their distinction. The opportunity
788 to journey to Mecca is the dream of all Moslems.
554 c. Virtue

It is important for the individual to cultivate the true concept
S of peace and submission. The concept of peace involves such
N ideals as mutual cooperation and aid among mankind, mutual
563 understanding among religions and peaceful co-existence of
577 nations to achieve world brotherhood. The concept of submission
794 means to submit oneself wholly to Allah and follow his teachings,
sacrificing self-interest for the promotion of happiness for man-
kind.

S Personal cleanliness, both internal and external, is most
N important. Cleanliness in eating habits and personal hygiene is
563 thought to develop a clean soul, free of evil thoughts and im-
515 moral conduct.

S d. Racial superiority
N The Chinese Moslems regard themselves as a special group,
563 superior to their Chinese neighbors. As students and officials,
186 their attitude toward respect for the emperor and for Confucius
has, in the past, been one of compromise. Compelled by law to
conform, they excused themselves on the grounds that they did
so outwardly but not in their hearts. The old and the new sects
S of Chinese Moslems, although bitterly hostile toward each other
N and at times engaged in armed conflict, on the whole present a
[798] united front toward the Chinese and the rest of the world.

/Chinese Moslems (Dungans)/

4. Customs

a. Religious rites

According to religious rules, the Moslems are supposed to pray five times daily (sunrise, noon, afternoon, sunset and midnight), facing in the direction of Mecca. Few of the Chinese Moslems besides the Mullahs and Ahungs adhere strictly, but pray only once or twice a day. To be valid, prayers should be performed in the mosque, but those who find it impossible to go to the mosques may pray wherever they are. The call to prayer (adhan) is made by the Ahung, or religious leader, and the believers join in saying the adhan. Daily noon prayer is popular, and the Friday service is the most fully attended.

Public worship cannot be performed by fewer than four persons. Women may not attend the mosques where the men pray. In some places, women have their own mosques and women Ahung to direct the prayers and Friday services. Women always worship as individuals and not as a congregation, though there may be a number of women gathered together.

The Moslems must be clean when they attend any religious ceremony. Hands and face must be washed, and bathing before worship is common. For this reason all mosques of importance have bathing places annexed. The Moslem becomes unclean by touching such objects as dishes containing pork or any meat not killed according to ritual, pigs, dogs, wine or excrement.

The thirty-day fast of Ramadan is fairly strictly observed. During this period one is not to eat between sunrise and sunset, and such things as smoking, drinking and sexual contact are also forbidden. In many places, a messenger goes about the Moslem quarters calling out the times for observing or breaking the fast, lest someone oversleep or fail to prepare and eat the necessary food before daybreak. The end of the fast is celebrated by a feast.

The aged, ill, insane, travelers, women who are pregnant, menstruating or nursing, persons doing heavy labor or whose lives are in danger are excused from the fast, but if or when they are able they must make up for it. The purpose of the fast is to help the believers maintain pure and pious lives. Fasting is considered meritorious at other times too, except on Friday, Saturday and Sunday.

b. Naming

Within seven days after the birth of a child, he must be given a Koranic name, or Ching-ming (religious name). For this occasion a feast is prepared, and the poor are fed. If the child is a male and the family wealthy enough, two sheep are killed for the occasion. If the child is a girl, only one sheep is killed. To arrive at the name, the father holds the child with its face toward Mecca and repeats a prayer in one ear of the child, then

/Chinese Moslems (Dungans)/

making of a will, the giving of alms, rites at the grave, and the recitation of prayers and giving of alms on certain days after death, and on the first, second and third anniversaries.

The Moslems have their own burial grounds. The mounds raised over the graves are rectangular, not round as in the case of the Chinese. The top of the filled grave must be at least five inches (half a Chinese foot) above the surrounding earth, lest the location be forgotten. A stone may be erected in front of the grave, but the name of the deceased may not be engraved upon it.

e. Festivals and holidays

Many of the religious festivals are more pagan than Moslem, especially those which are seasonal and therefore not connected with the Moslem calendar. Their celebrations are merely popular gatherings for feasting and enjoyment.

The Moslem New Year (Yengi Yil) celebrates the breaking of the Ramadan fast. The festival takes place during the first three days of the tenth month by the Moslem calendar. Special services are held in the mosques. The people bathe and dress in their best clothes. It is a time of greeting, well-wishing, feasting, visiting and gift-giving. For the Moslems and the Chinese alike, the New Year celebration is the greatest holiday of the year.

5. Present day conditions

According to a speech delivered by Burkhan, chairman of the Preparatory Committee of the China Islamic Association, at the Conference of the Asian and Pacific Regions, on October 18, 1952, the Islam religion as well as the customs and habits of its followers are fully respected by the Communist regime. Chinese Moslems are free to practice their faith without interference. It is also said that official circulars from Peking have ordered the people to continue the observance of their important festivals. The tax on the slaughter of cattle for Moslem consumption is abolished, and official holidays are granted on Moslem holidays.

In accordance with the Agrarian Reform Law, the mosques may retain their land holdings if the local populace so desire. It is also reported that when the land reform movement was carried out in the Northwest, the land of the mosques was in most cases left untouched. There was also a report of an organized Hajji to Mecca in 1952, which for reasons unknown failed to reach its goal. Special government regulations give Moslem workers in public organizations and educational institutions time off on the more important religious festival days. In military units, factories and schools, consideration is also given to the habits and customs of cadres, soldiers, workers and students of the Moslem faith.

/The Tibetans/

right side. The honored seat is the one farthest from the door. After the guests are seated the hostess will brew tea, place a wooden box in front of the guests, and serve tsamba and butter. The guests take their eating bowls out of their robes.

At dinner parties, conversation takes place before the meal. It is proper and right for the guests to say farewell and leave immediately after dinner.

c. Position of women

The position of women in Tibetan society is very low. They have no place in matters of religion, and are permitted to participate in few religious rituals. They are permitted to enter the monastery on the Memorial Day of Sakyamuni, which occurs on the fifteenth day of the fourth month. At sunrise, all women put on their best clothing with all their trimmings and ornaments, and gather outside the monastery. The women of each village form into a group, and the groups take turns going inside the temple and turning the prayer wheel. Men and boys stand by to witness the spectacle. On this day, women fast until sundown.

d. Customs

On the third day of the first month each year, a coming-of-age festival is held for all girls of fifteen or sixteen. Girls do their hair in the adult style, dress in their best, and visit the households of relatives and friends, who present them with gifts. After a ceremony, the girls may participate in all mixed social functions, and they may also have any sort of relationship with men. After the coming-of-age ceremony, a girl may ask any man she likes to spend the night in her tent.

Tibetan marriage follows much the same customs as in traditional China. Proposals are made through go-betweens, who are usually relatives of the families. It is important that the horoscopes of bride and bridegroom be in harmony. When the parents and the young couple give consent, gifts of wine and katags are exchanged and a contract is drawn up giving the terms on which the alliance is to be made.

The family receiving a bride or a "male bride" (The male bride is a man who marries into the bride's family, leaving his own home and joining hers.) pays the family for the bride in money or jewels, and also pays a sum to meet the expenses of the engagement party. Katags are exchanged between the relatives of the two families to signify mutual consent and wishes for a happy union. The bride usually has a dowry in cash or in livestock, land and goods, depending upon the means of the family.

Before the wedding day, the families of the bride and bridegroom prepare a feast to entertain relatives and friends, who bring gifts for the couple. The bride's family builds a tent for the ceremony, decorating it with pillows and comfortable seats

*563 535 far more complex and subtle figures of the troupes of professional dancers.

*563 535 536 996 It is in the sacred mystery plays (commonly known in the West as "devil dances") that the art of Tibetan dancing reaches its heights. It is part of the regular ceremonial of the church, given at certain seasons of the year. In the large monasteries, hundreds of monks participate in these dances. The smaller monasteries also have their dancing monks and costumes for these mystery plays. The dances usually portray a story, the story always being religious, such as the victory of the heavenly forces over the evil ones. The costumes worn are magnificent, the dresses being made of Chinese silk brocade and embroidery with underskirts banded in red and yellow, the two sacred colors. In addition to the presentation of the heavenly figures, some of the men are dressed as skeletons and demons. At the culmination of the dance, to represent the overthrow of the evil forces, effigies representing them are torn to pieces.

III. Shen-Kan-Ning, the Cradle of Chinese Communist Literature

536 *668 199 The Shen-Kan-Ning border area with its center at Yenan was for a period the leading and most advanced region of all Communist activities. Even though cultural propaganda was not yet stressed to the same degree as in the period after 1949, most of the patterns of future procedure were already worked out there and then. This pertains in particular to the development of propaganda dramas on a popular level, both for the benefit of the peasants and for the army. The effectiveness of presenting to an unsophisticated audience its own problems in an inflammatory way through the medium of drama was not a discovery of the Chinese Communists. In the framework of the Ting-hsien experiment the same thing had been done in the late 1920's and early 1930's to arouse the political awareness of the Ting-hsien population. Hsiung Fu-hsi (see General Handbook) was the principal author of these popular and frequently impressive plays. As in other cases the Communists were swift in beclouding this ancestry of their propaganda plays, and, when questioned about it, made some disdainful remarks about the bourgeois character of Hsiung and the entire Ting-hsien experiment. In this field too, their political media had to be presented as being of their own creation.

*[175] Actually, political dramatics were cultivated in the Kiangsi period, but little emphasis was given to them then and in the earlier Yenan days. It was only with the outbreak of the Japanese war and the influx of experienced Chinese writers from the major cities that the movement gained momentum. Prominent

779 785 c. Fasting (Saum). Fasting, according to Islam, is primarily a spiritual discipline. Satisfying one's thirst and hunger are considered great temptations, and a chance is given to man to overcome his temptation.

• [796] Moslems are required to fast for twenty-nine or thirty days of the month of Ramadan, the ninth month of the lunar year. Fasting begins at the appearance of the moon of Ramadan and ends on the appearance of the new moon of Shawwal (the tenth month). Fasting is to be observed with complete abstinence from food and drink during the hours of daylight. The fast is broken after sunset and during the hours of the night. The last meal should be taken before sunrise. The Koran and the Hadith make special mention of people who are exempted from fasting. The Koran mentions those who are sick and those on a journey. This is not an absolute exemption, as the sick man and the traveler are required to fast later, when the sickness has gone or the journey has ended. Hadith also gives extension or exemption to certain classes of people who, because of some physical disability or the performance of heavy labor, are not able to fast. In addition, fasting is included among the expiations for various offenses.

779 788 d. Pilgrimage (Hajj). As an institution the hajj existed from a very remote antiquity, before the advent of Islam. The sacredness of Mecca was established in the Koran by Muhammad and given strong connection with the names of Abraham and Ishmael.

[175] In the first and second years of the Hejira (Muhammad's exodus from Mecca to Medina, 622-23 A.D.) full directions relating to the hajj were given by the Prophet. The traditional days in Dhu'l Hijja (the twelfth month) and the traditional ceremonies: going in circuit round the Kaaba; running between the two small eminences of Safa and Marwa in the vicinity; assembling on the ninth day of the month at the hill of Ararat; offering sacrifices of sheep and camels at Mina on the way back to Mecca—all were retained and prescribed in the Koran. Other traditional usages, including the kissing of the Black Stone set in the walls of the Kaaba, and the stoning of the pillars representing the Devil in the vicinty of Mina, though not mentioned explicitly, were observed by Muhammad in his pilgrimages and so were incorporated into the Moslem rite.

[783] [302] [292] As before prayer the worshipper must be ritually clean, so also before making the pilgrimage the worshipper must be in a state of ritual consecration (ihram). This involves shaving the head and discarding ordinary clothing before entering the territory of Mecca, putting on instead two plain sheets and leaving the face and the head uncovered.

Although the pilgrimage constitutes a religious obligation for every Moslem, the obligation is explicitly limited by possession

/Chinese Moslems/

000 acter Hui signifying "to return."

S N 795 361 The Chinese Moslems live in small, closely knit communities, organized around the mosques. The Moslem community is usually set apart from the general Chinese community. The Moslems may form a whole village, or a certain suburb or section of town. The communities are organized on a local basis and there is no higher religious authority that unites all the communities. The mosques, the religious and social centers of the Moslem communities, are maintained independently.

S N 795 182 At least ostensibly, the religious attitude of the Chinese Moslims is characterized by moderation. They make concessions to the ruling power, hoping thus to gain security for person and property. The more capable and resolute of those who enter into government service take part in the ceremonial of the national cult.

S N 795 794 [346] The Moslems in the Northwest do not publicly practice their religion, nor do they advertise it. In some cases their mosques are dissimulated, so that they cannot be distinguished easily from other houses in the village. They are quite lax in their observances of the different rituals connected with Islam. The Chinese Moslems do not regularly attend religious services in the mosque. Aside from the ahung (the religious leader of the S N [793] Chinese Moslem community) and the extremely orthodox people [782] they do not pray five times a day, but once or twice at most. The noon service is the most popular one, and the place of worship is limited to the mosque. The manner of calling for prayer differs in China from that in Western Asia. The Muazzin does not chant the call to prayer. He stands on the roof of the mosque and shouts the invitation to prayer and may strike a special wooden instrument called ta-p'an-tzu. Most Moslems will ignore the worship time if it interferes with their daily business. Except for some minor differences, the prayer ceremony is conducted in a manner similar to that in Western Asia.

S N [562] Women are not allowed to attend the mosques where the men pray. In some of the larger communities, the women may have a mosque of their own, but in most places they worship individually.

The Friday service draws the best attendance, although certainly not all nor even the majority of believers. On this day the sermon is delivered by the Khatib, a special person, not necessarily a religious leader, elected for the purpose. It is usually in Arabic, and few of those present can understand it.

S N 795 785 The Fast of Ramadan is one of the rituals which is observed with a degree of strictness in Moslem communities throughout China. In many places there are special messengers who go about the Moslem quarters calling out the times for observing and breaking the fast. Messengers also go around at night lest

[784]

S N 795 782 796 203 /Chinese Moslems/

any should oversleep and fail to eat the necessary food before daybreak.

S N 795 735 431 The regular practice of Zakat is practically unknown to the Chinese Moslem community. Only during the month of Ramadan, when charity is extended to the poor and donations are given to the ahung are alms given in a form resembling Zakat. There is no fixed amount given and the act itself is purely voluntary. The only form of sadaqa (voluntary alms) given is the sadaqa el-fitr given in the three days of Id el Fitr (the Moslem New Year). These offerings can be made in cash or in goods.

S N 795 788 Particularly among the Chinese Moslems of the Northwest the practice of pilgrimage to Mecca was observed. The Hajjis, or those who completed their pilgrimage to Mecca, were highly respected in their communities. Pilgrimage has decreased considerably in the last years. The Hajj organized by the China Islamic Society in 1952 did not reach Mecca; they went as far as Pakistan and returned to Peking, for reasons that were not specified.

S N 795 796 Id el-Fitr, the New Year, is the best observed of the different Moslem holidays. It occurs during the first three days of the tenth month. Special services are held in the different Moslem communities, and great feasts are given to celebrate the occasion.

S N 795 262 In general the Chinese Moslems do abstain from pork and wine as their religion commands. They will not eat meat that has not been killed in the approved Moslem fashion. Many of the merchants, carters and others who travel carry their own utensils, and often, where there are no Moslem communities, carry their own food so as to avoid food that is prohibited by their religion.

S N 795 769 177 The influence of the general Chinese beliefs on the Moslems has been noted by many, particularly by D'Ollone. Ancestor worship is the core of the non-Moslem Chinese belief. It is not restricted to domestic worship but extends to religious devotion to the graves of the ancestors, which are designed to assure the peace of the deceased and are a scene of devotion every anniversary. The Moslems of the Northwest have been so influenced by these traditions that, in the secrecy of their homes, most of them burn incense in front of the ancestors' tablets. In evidence of this custom, D'Ollone brought back two vases which served the purpose of ancestor worship. Both of these vases belonged to Chinese Moslems, and had Moslem religious inscriptions in Arabic. The practice of pilgrimage to the well kept N 795 788 778 tombs of the ancestors is also found among the Chinese Moslems of Kansu. Some of the bigger tombs are quite elaborate and include, besides the monuments, a mosque, school halls and lodging places.

797 or Ching-chiao pei in Chinese, which stands at Sian, varifies
(211) the fact that this church had been established among the Chinese
people of Shensi Province. This early Christian movement in
[798] Northwest China suffered persecution and died out. In modern
times both the Catholic and Protestant Churches came to the
Northwest. Most of their converts have been Chinese. Until the
Communist period the Catholic Church had been very strong in
one place in Ninghsia Province. It rendered many kinds of
service to its members and had a much stronger control over
them than did the local government. To a great extent it had
trespassed the jurisdiction of the government, which had cre
ated considerable resentment and suspicion among the authori-
ties and the general populace. (See Social Structure.)

791 Though subscribing to all important religions in varying pro-
portions, the Chinese in the Northwest, like those in other
provinces, seem rather materialistic. Nowhere among them is
there found a religious fervor and devotion which characterize
both the Moslems and the Tibetans of this part of Asia. How-
ever, the religious atmosphere is very strong in all aspects of
701 communal life, which are always cloaked with some religious
536 rite. For example, the village or community theatrical has a
545 great deal of religious implication. Although unlike the miracle
plays and so-called devil dances of the Tibetans, the plays are
usually straight drama; frequently historical, the primary sig-
nificance of the presentation is a religious one. They give the
gods pleasure and thus dispose them favorably toward the people
of the community. Even the mask and the animal plays of the
New Year's celebration have a definite religious significance.

701 Chinese home life is also mixed with religious or semi-
719 religious feelings. Regardless of its wealth or locale, a Chinese
[353] home will have its ancestral tablets in the place of honor. The
tablets represent those who have gone and keeps them and their
memory always present. Those living now are only the present
custodians of the family name.

[592] "This belief. . . holds the members of one household toget-
[614] er with strands which are not so much woven by affection as by
a sense of mutual responsibility within a clan. . .

771 "At New Year the shack living room, miserable though it be,
• 796 is the scene of the most exact rituals when, in absolutely cor-
592 rect order, each member of the family makes obeisance to the
782 elders; the feasts fixed by the Chinese calendar are scrupulous-
ly observed, and I have known a man to carry a watermelon for
days across the desert in order that at the Feast of the Moon,
in the most desolate of wayside stages, he might put an old
rickety table in the courtyard and offer the melon, cut in slices,
to the Queen of Heaven.

/Chinese, Chinese Moslems and Sedentary Tibetans/

712 different from the others. All the inns and shops were in the
361 suburb. The people who owned them were descendants of a long
line of old residents who took pride in the very exclusiveness which
was imposed by their isolation. Few of them ever left the place,
and many had never even seen the neighboring town of Suchow.
An inner gate led to the military section of the fortress, where
life was entirely different. The yamen, built in traditional Chinese
712 style, was the center of garrison life, and here the general and
701 his family lived, guarded day and night by sentries! Officers
marched in and out, and much official business was done, for
this was an important military center and the officer in command
held a high rank. Unlike the old residents, the military hated the
place and seized every chance of being away from it, bitterly
resenting the appointment to such a lonely outpost, and longing to
be transferred elsewhere. Nothing would have induced them to
walk outside the Northwest Gate where that fateful Gobi Desert
stretched, and their eyes always turned longingly to the city where,
twenty miles away, there was solace, gaiety and life.

712 If the men disliked Kiayukwan (Chia-yu-kuan), the women hated
512 it. There is nothing to do here all day but sit and listen to that
517 howling wind, they would say frequently.

The ladies of the yamen would gather in each other's rooms,
[529] play ma-jong for small stakes, sip tea and gossip. Often the
[521] game was prolonged until midnight, with interludes for drawing
[796] on the opium pipe, but the next morning's reaction brought a
fierce hatred of this place where desert demons hid themselves
in dust-clouds and whistled through every crevice of the crazy
[567] buildings. The little slave girls learnt to dread the days of bliz-
zard when their mistresses' nerves were tensed and blows were
dealt out irritably for the slightest offense.

• [796] Each festival of the year was the occasion for a welcome social
[574] function, and during the summer months life was made brighter by
[545] the frequent exchange of visits with the officials from Suchow.
Twice a year a theatrical troupe visited the fortress, and for the
three days of its performance all the inhabitants enjoyed them-
selves and made merry. But it was soon over, and when the
properties were packed and carts carried both actors and their
belongings elsewhere, life in the fortress relapsed into desolating
stagnation.

712 The third category of human beings to be met in Kiayukwan
485 were the travellers who came, lodged for a night or two at the
484 inns, and forthwith went their ways. Every sunset and every sun-
rise they arrived, some taking night stages and some travelling
by day, but all were travel worn and weary....

484 These formed the stream of living men and women who moved
712 up and down the great road, acquainted with life and full of know-
ledge about distant places. They were familiar with the large

S 4. Cultural corps

668 In the army, cultural work corps promoted propaganda by means
708 of entertainment. In local dances and songs, the Cultural Work
208 Corps of the Fifth Army (originally the Sinkiang National Army)
545 in the summer of 1951 promoted the Party's Nationality policy and
the Resist-America Aid-Korea movement in Sinkiang. They
visited various villages and regularly attracted an audience of
S from three or four thousand to ten thousand people. The members
[563] included thirteen minority groups living in Sinkiang. Some of
[484] them went to Peking in 1953 and presented a performance of 21
[548] acts before the audience in the capital.

The visit was returned by the Central Nationality Dancing
668 Corps of Peking which sent a performing team of 140-odd mem-
648 bers to Sinkiang in April, 1955 to celebrate the establishment
545 of the Sinkiang Uighur Autonomous Region. It spent more than
half a year in Sinkiang and returned to Peking on November 13
after having visited ten special districts, three autonomous chou,
seven counties, two state farms, three mines in Sinkiang and two
cities (Lanchow and Su-chou) in Kansu. It performed 112 times
before audiences of various nationalities totalling more than
439,000 people.

N IV. The Methods of Propaganda.

¥668 Besides those already mentioned, the Communists are using
208 many other methods of propaganda. Parading, signature drives,
circulation of pictures and pictorial stories, large-scale welcome
meetings for important personnel sent from Peking, lantern slides
and movies produced by the Party and the government, theater
activities such as opera, drama, dance, and concerts all have
been used as means of propaganda. The public accusation meet-
ing is another form. No matter what the main target of a partic-
ular accusation meeting may be, whether a landlord or the U.S.A.,
the accusation always carries out the propaganda of the day,
whether it be the Resist-America Aid-Korea movement or land
reform. Other kinds of meetings are equally useful. "Model
S Peasants Rallies," held in the main farming districts of Sinkiang
[668] are the place to promote propaganda for increasing production as
[208] well as for denouncing germ warfare.

N A. Festivals

¥668 Festivals are always good opportunities for promoting propa-
• 796 ganda. In Northwest China where most of the minority groups are
¥[563] followers of the Moslem religion, the Islamic festivals are used
[771] as a time to express the thoughtfulness of the Communist govern-
[651] ment. For instance, during their celebration of the three major
Moslem festivals of the year, the butchery tax on beef and mutton
consumed by Mohammedan communities is exempted. Further-

B. Guided Tours

Representatives of national minorities from northwest China are invited to visit Peking and other urban centers of north and east China. They are guided to see the factories, schools and palaces of historical interest. After being deeply impressed they are sent back to their homes. They often become good native propagandists for the Party.

*668 208 876

C. School Programs

In local schools, the pupils are not spared from propaganda. For instance, in the Mongol schools in the province of Chinghai:

"In mathematics, the number of American and bandit Rhee's troops annihilated by the Chinese and Korean people's armies in Korea and the construction figures in Chinghai were made into questions for the students and the masses to solve. By this way, they not only learned mathematics but they also retained in their minds the victorious results of our war and the great achievements in construction following the liberation." (Sian, Ch'un-chung jih-pao, March 30, 1952.)

*668 208

D. Other Methods

The whole propaganda system generally functions as follows. When the Party central committee decides to promote certain propaganda, it orders the reporter at every level of the Party organization to report the party line to the people inside as well as outside the Party. Then the propagandists and activists all go out to do the work. This can be done in various ways, according to the situation. In factories, it may be a kind of question and answer. The workers might be asked to check each other with these questions until all got the right answers. In streets, it might be in the form of door-to-door visits and "casual chats." While these were going on, the people would be bombarded daily with the same theme in newspapers, blackboard newspapers, wall newspapers, periodicals, books, pamphlets, pictures, cartoons, radio broadcasts, concerts, lantern slides, movies, plays, operas, story-tellers, picture-story books, street meetings, signature drives, production competitions, challenges, counter-challenges.. and a lot of other devices to drive the point home.

V. The Campaigns and Contents of Propaganda.

A. Campaigns

1. Destruction of organized resistance

The contents of propaganda follow the shifts in the Party line.

lawlessness of the past few years, which fact, however, only makes its commercial prosperity all the more remarkable. It evidently owes its importance to its position as the most westerly outpost of Chinese trade in this direction, and like Kueihua Ch'eng, is one of the starting-points for caravans going west. The Mahomedans appear to form an important element in the trading community. There was no civil official at the time of our visit, but a large garrison of soldiers; the inhabitants seem a rough lot, as is to be expected in a frontier town.

At Paot'ou our river journey came to an end and we hired carts to convey our baggage to Kueihua Ch'eng, distant four marches, the usual stages being, Salach'i 90 li, T'aossu Ho 70 li, Pihsuehchi 90 li, and Kueihua Ch'eng 80 li. The road runs east across an undulating cultivated plain accompanied by the Tach'ing Shan range on the north. Except for some marshy patches of grass land which have to be crossed, the going is good, and I have never known Chinese carts to travel faster, our ponies frequently having to trot to keep up with them. The traffic was surprisingly busy on the road which evidently carried a bigger trade than any trail in Kansu. The inhabitants are apparently all Chinese, but at a farm where we stopped for a meal the owner and his wife though dressed in Chinese clothes could only speak Mongol; and another sign of the former Mongol population is a picturesque lamasery on the mountain side, which from its appearance might equally well have been situated on the Kokonor border. The Mongol lamas are very like their Tibetan colleagues, as is shown by the accompanying photographs (see frontispiece) of a so-called Devil Dance, which were taken at a big monastery in Eastern Inner Mongolia, and represent the "Dance of the Black Hat," the commonest religious dance in Tibet. It represents an incident in Tibetan history namely the killing of King Glangdarma, the notorious persecutor of Buddhism, by the lama Dpalgirdarje in A.D. 842; the lama danced before the King in the costume shown in the photographs, concealing in his broad sleeves a bow and arrow. The photographs facing pages 200 and 202, which were taken at the same Mongolian monastery, also represent purely Tibetan ceremonies, namely the *torma* offering for warding off

Herds of Mongolian ponies (the "China pony" of the 133
Treaty Ports) were to be seen, but the good pony country lies much further north-east, beyond Kalgan and Dolonor. The following day, September 26th, we accomplished our last march, 60 li to Feng Chen. It was freezing hard in the early morning, and we decided we had just completed our journey in time; for winter on these steppes of High Asia is very severe. The trail continues across the grass lands for two hours' march, and then runs down a broad cultivated valley plain for the rest of the way to Feng Chen, an un- [361]
walled township, and the railhead of the Peking-Kalgan-Kueihua extension line.

A construction train took us down to Tatung Fu, an [496]
important town of Northern Shansi, where we were lucky [796]
enough to strike the weekly express, which runs through to Peking in one day. This was the end of our long journeys, and the reader, having accompanied us as far afield as Chengtu in Szechuan and Hsining and Liangchou in Kansu, is probably as tired of reading about them as the writer is of recording their description.

AF13 Northwest China AF13

a carillon of nine bells, hanging over the shrine. Simultaneously one catches the monotonous tone of a hollow, wooden drum, shaped like a crab, the beating of which declares, in triple rhythm, that the ultimate issue of earth, matter, and even life itself, is VOID. 788

'Earth is void! All is void! I am void!' This is the message of the drum to every human heart in that city of unnumbered gods.

The most rigorous asceticism rules the lives of many Kanchow women. Not content with being under a vegetarian vow, as is usually understood, they so fear any subtle indulgence of the appetite, that even onions, garlic, vinegar and red pepper, the necessary condiments to flavour the insipid dough-string diet, are eschewed. During the spring months almost each day sees the recurrence of some festival, which draws the crowds alternately to each temple in the neighbourhood. Theatrical troops move from fair to fair, repeating their performances to the never-failing concourse of village people, whose bullock-carts are parked in a wide semicircle facing the stage, and in which the women sit the whole day long exposed to the heat of the sun. Most of the younger women and girls adorn themselves for the occasion with paint and powder, until the face is converted into an expressionless mask. Their hair is beautifully dressed and decorated with artificial flowers. Most of the small children are stamped on the forehead, nose, and chin with minute geometrical patterns, traced in red circles. 262 785 796 [536] 796 302

Just out of earshot of the stage, the food-vendors pitch their stalls, where cooked eatables of all descriptions are on sale. Pork fried and stewed in a thick gravy, is served up in small saucers and eaten with chopsticks, as also fried meat-dumplings, garnished with vinegar and red pepper. A large mould of 796 265

AF13 Northwest China AF13

796 steamed rice containing the fruit of the jujube tree is
265 popular, and dried apricots, macerated in water, are in demand as a cooling drink. Not far off are long tables sheltered by an awning, where men will sit for hours sipping tea and playing cards.

796 Within the temple buildings[1] the idols are dressed up in
782 gay silks, and each family on arrival presents itself at the various shrines to make obeisance, and burn incense. Thin sheets of yellow paper, on which are inscribed petitions to the gods, are lighted at the shrine lamp, waved in the air, and wafted upwards, the manner and height of ascent indicating the favour or displeasure of
785 the deities. Some of the older women, who have
796 practised asceticism for a lifetime and are prepared for any self-abnegation so that they may in the next incarnation obtain a more auspicious rebirth, perform elaborate rituals with touching devotion.

796 On such a fête-day all the temple treasures and silken
536 embroideries are on view, as also magnificent peacock-feather screens and umbrellas. The din of voices from vendors and visitors is completely overwhelmed when once the theatrical musicians commence their performance. Cymbals, pipes, and drums sound their loudest, while above them soars the shrill falsetto voice of the stage managers, announcing the details of the performance.

351 The temple grounds are beautifully kept. The
796 fragrant tree-peony opens its blossoms when the peach and pear trees drop their petals, and all through the summer months a succession of beautiful flowers decorates the fancy landscapes of the temple gardens, miniature lakes and bridges supplying a foreground to sacred mountains arranged on the same small scale.

796 The whole scene, from the turquoise sky, the snow-clad mountain ranges and the gorgeous profusion of flowers,

to the embroidered satin banners and brilliant clothes of the crowd, forms a feast of riotous colour which is a delight to the eye.

Where such crowds of men and women congregate, the missionary cannot afford to be absent, and our whole Christian community spent some strenuous days in sewing together a large tent capable of holding about 300 people, which would afford us a vantage-ground at the fairs which now were going to be visited. The first occasion for its use was in the town of Shantan, two marches distant from Kanchow, when all studies were suspended to enable a band of eighteen students to accompany us. Under Dr. Kao's superintendence, four men went ahead, and secured an empty courtyard for our accommodation, being also instructed to display Christian posters wherever possible.

The preparations for such a campaign necessitated considerable forethought. The only sleeping accommodation supplied in inns or hired houses is a bare mud sleeping-platform in an empty room, therefore each member of the party must take a wadded quilt in which to wrap at night, and serving as both mattress and coverlet. A couple of iron pots, large enough to serve the whole company with boiled rice or macaroni, must also be supplied, and each member of the preaching-band carried his own bowl and chopsticks. The tent ropes and pegs were placed at the bottom of the cart, and 2000 lbs. weight was made up with bags of rice, flour, and the preachers' ammunition in the form of the Christian literature as supplied by the Bible and Religious Tract Societies. On all these trips, leaders and students, whether foreign or Chinese, ate and shared alike.

The clean white tent, flying attractive flags and decorated with bright Scripture posters, was a gay and

3:Cable & French M-S (1926) 1927
AF13 Northwest China AF13

gentlemen acquaintances, it being the social custom that no woman should pay calls before the fifth of the month. Each visitor was duly offered tea and light refreshments, and each on leaving laid on the table his scarlet visiting-card.

The next morning early, the main street was converted into one long casino for the purpose of gambling, each croupier spreading a table, bordered by cash strung on red cords, and to these tables the townsmen and villagers flocked to enjoy the excitement of play for high stakes. For three whole days the crowds were so dense that no horse traffic of any description could pass. On the flat mud roofs the women gathered in swarms to watch the fun. All had painted their faces, and wore brilliant dresses of green, pink or scarlet, while artificial flowers decked their hair. But underneath all this gay scene many a tragic shadow was concealed, and darkness had scarcely closed in when the Mission compound was aroused by urgent calls for help, the doctor being sent for to save, if possible, the life of a woman who, driven to despair by her husband's losses, had tried to kill herself. During the next few days many were the cases of suicide dealt with; some for an overdose of opium; others for swallowing the white face-powder which was always at hand; others, again, jumped down wells, or cut their throats; while one woman, more determined to end her miseries than the rest, had eaten handfuls of whole dried peas, after which she had very deliberately swallowed several bowlfuls of water, believing that no medical aid could possibly avail to restore her to life.

Within a week from New Year's Day came another ceremonial date, named 'The Greeting of Spring,' when this season is represented by a roughly-modelled, symbolic mud-cow, whose body is filled with dried

[1] [the New Year Festival -- Analyst]

fruits, emblematic of fertility. To burn incense before this grotesque monster came the highest official of the city, in his green sedan-chair, while groups of workmen of the various trade guilds formed themselves into pageant scenes and walked round the town in procession. Needless to say, this was for us also a very busy day, with the result that later on, while itinerating in the country, we frequently were welcomed by people in their homes, who showed us books bought from us on that occasion.

On our return home, we found our landlord's family in a strange state of confusion, and learnt that, during their absence, while merry-making with their friends, a beautiful fur gown had been stolen from the eldest daughter's room. We soon realised that they were more disturbed by the incident than the actual value of the garment warranted, and the fact soon came to light that there was in existence another member of the family of whom we had hitherto never been aware, namely, the ne'er-do-well eldest son. From gambling and opium-smoking, he had gradually sunk so low as to become a member of a gang of thieves, and it was undoubtedly he who had walked into the empty house, opened his sister's cupboard and abstracted the valuable robe.

After the doors were closed for the night, all the senior members of the family clan were called in, and a solemn conclave was held. The father himself was a typical specimen of a gentleman of the ancient school. Tall and thin, with a straggling grey beard, he wore large goggles, and finger-nails two inches long. Daily he might be seen pacing up and down the path of his loved flower-garden, smoking a long pipe with a slender stem, regarding, doubtless, the theoretical care of his pretty plants as the fitting, final occupation of a con-

morass) the whole of the party made its way on foot to a wretched hovel, where on the damp ground, amidst indescribable dirt, we spent the night. Incidentally, we discovered that we were expected at this house; and that the carter was smuggling illicit goods to his friends under cover of our tracts. The next day the mules were changed for oxen. 'There are rivers ahead,' said the man, in a confidential whisper; 'nothing like oxen for crossing water. This, my nephew, (here he indicated a lad of about sixteen) 'understands the fords thoroughly, and he will now take you on for the rest of the way.'

Knowing there could be no danger from rivers at this season of the year, but feeling that we might, at this rate, never reach our destination at all, we accepted the new arrangement, trusting 'Welcome Home' to see us safely through; and late that afternoon, in a snowstorm, we reached Kinta.

It proved to be an interesting place, colonised two hundred years ago by people from Taiyüanfu, in Shansi, and though small, yet from its position on well-watered land of large extent, it is a place of importance.

The Golden Tower, from which Kinta takes its name, is in Indian style, as are also many of the temple frescoes and wooden idols of the cities north-west of Kanchow, showing that at one time Indian art had strongly imprinted its mark in the Province of Kansu. The dome of the tower is said to have originally been covered with pure gold, which was stripped off by the Moslems and replaced by brass; and this having in turn been stolen, the whole tower was subsequently whitewashed, as it is to-day.

In the spring the temples all hold separate festivals in honour of their respective gods, and we were in Kinta when the *Cheng Wang* (protective deity of the

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

town) was carried into the country in a sedan-chair. Here he was required to bless the sown fields, and also to call in his subordinate demons, whom he holds in check while the grain is ripening, lest they work mischief on the peasants, but whom he again releases after all the crops are gathered in. He was escorted by a big official procession, to the sound of pipes and cymbals; but so soon as the idol was safely deposited in the village shrine, where it was to spend a few days, the whole company made a rush for the courtyard, where we were staying, and listened attentively for over an hour to our singing and preaching.

One other afternoon was spent in the house of a man whom we had first met at Suchow, at the New Year's festival. He had then heard us speak, and being much interested had bought a copy of the New Testament. On learning that we had now arrived at Kinta, he invited us to his home in order that we might meet the women of his family. We were received by them with a deference that was almost reverential, the younger members of the house, dressed in their festive garments, being ordered to kneel before us; and it was with the greatest difficulty we prevented their doing us homage as to 'Holy Women.' Mrs. Ma, the wife, was a vegetarian of the third generation; neither her grandmother not her mother having ever broken the vow of a most rigid asceticism, which forbade their tasting any condiment to relieve the insipidity of the dough-string diet, or even the refreshment of a cup of tea. We found her to be extraordinarily understanding in spiritual things, and she responded with an alert mind to the story of the suffering Saviour.

She showed her confidence in us to a remarkable degree, by consenting to take a meal with us the following day, when she returned our call, feeling sure

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

we would give her nothing that was forbidden by her vow.

The day before we left Kinta, the temple of the Goddess of Mercy was crowded with women worshippers —young brides beseeching the gift of a son; while mothers who had received a child during the past year, now brought it to be placed under her protection. The baby, covered by a red scarf, was held in its mother's arms under an immense iron bell, when she produced her offering, namely, a handkerchief full of mixed grain. The bell was then struck; the priest took out some of the grain and scattered it over the child's head, with the words, '*May the Goddess of Mercy protect thee; may the God of Plenty endow thee;* then, yellow paper having been burnt, and its ashes smeared over the child's forehead, the priestly incantation was ended, and the mother went away, satisfied that all that could be done to protect the little life from ill-luck and demons had been successfully carried out.

A few days later we visited a famous group of temples known as Wenshu Miao—'The Halls of Learning'—situated only twenty miles from Suchow, at the mouth of the main Pass through the Southern Hills, and where festivals are held for both Chinese and Tibetans during the spring months. Hundreds of shrines stand on the mountain-side and numerous guest-houses have been built to accommodate the thousands of pilgrims who gather each year, on the first day of the fourth moon. From early dawn carts full of women, followed later in the day by military processions, escorting the chief officials of the town, followed one another up the stony valley in unbroken succession.

The shrines are connected by a labyrinth of small, steep paths which wind in and out around and over the hillside, at each turn of the road revealing a temple,

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

and anyone following the maze will pass hundreds of shrines in the course of his pilgrimage. The ambition of each worshipper is to visit as many idols as possible, and to light a stick of incense and burn paper before each. It is an amazing feat for women who are crippled by bandages and tiny shoes, and many of whom are no longer young, to climb these precipitous paths, sometimes even on hands and knees, in order to reach an apparently inaccessible rock-shrine, yet this is accomplished even over roads made slippery by rain.

Some of the chasms are crossed by rickety wooden bridges which bear such names as 'The Heavenly Road,' or 'The Short Cut to Paradise,' and here old women are helped by husband or son who carries the basket of incense and a pile of votive-paper.

Most of the shrines[1] are modern, but the original cluster of buildings dates from the time of the Emperor Chien Lung, and there are a very few, excavated in the hill, of a much older date, which contain frescoes similar to those found in the famous 'Caves of the Thousand Buddhas' at Tunhwang. At dark on the last evening, bonfires are lighted on every prominence, in which all the remaining incense and paper is burnt, in honour of the gods of the earth, spaces, and mountains.

The crowds were by this time accustomed to the sight of the white tent, and the people streamed in and out, listening to the addresses and buying the books. In preparation for the festival the students posted carefully selected passages of Scripture in each of the many shrines, and twelve months later, when we revisited Wenshu Miao, not one of these had been defaced or destroyed.

A week later was the Tibetan gathering, and we drove out once more over that stony road. We had

[1] [at Wenshu Miao, see p.107 -- Analyst]

484 last watch before dawn dragged itself slowly out. There was no telegraph wire to cheer us, there being no line to Tunhwang, so we were dependent for guidance on a landmark erected at each half-stage, and which by daylight was visible for many miles. At last our carter stopped at a tiny hut ; the men thundered on the door until an old woman opened it, and in a few minutes a crackling wood fire restored life and hope, as we stood round it in the little hovel reeking with opium fumes. Presently the old dame, seeing how perished we were with cold, threw a handful of dried leaves into a pot of boiling water, and ladled us out an infusion, in whose restorative powers she professed the greatest belief. It may have been the herb, or the fire, or her kindness, or perhaps the combination of all three, but most certainly we were presently able to go on our way with new strength.

It took us six hours to reach the gates of Tunhwang, and in the bitter cold of the hour before sunrise we were fortunate enough to pick up a bundle of straw, dropped from a peasant's cart, to which we set light, and after warming ourselves, went on invigorated. All round the city are large orchards of a park-like character, watered by rushing streams, and planted with thousands of trees, a great proportion being pear trees, for the fruit of which the place is celebrated. The early frosts had already touched the leaves, and the whole scene was ablaze as with golden flames. It was the fourteenth day of the eighth moon (October 1st), the eve of the Moon Festival, when offerings of every description of fruit are made to that luminary, and the street stalls were piled with 'moon cakes,' apples, grapes and nectarines—an attractive spectacle to us after our weary journey.

361 245 796 789

000 The geographical position of the city is such as to

N.W. China AF13

000 sewed together the two lappets of my skin, right there on the shores of the lake, to my complete satisfaction. Fortunately, it was not a serious injury, only the skin of my head was slashed, the bone and periosteum had only been lightly bruised.

The rest of the day we traveled in a southeasterly direction, up the valley of the Ara Gol, which rises almost imperceptibly. This valley presumably represents the former drainage basin of the Koko Nor during a previous period of greater moisture when the lake was connected with the present-day Hwang Ho. Toward evening, shortly before twilight, we reached the walls of Tsaghan tscheng (1), i. e.,

631 361

1. Tsaghan is Mongolian meaning "white"; tsch'eng, Chinese, means "city." Such malformations occur largely on the Chinese-Tibetan border. The place is also called "ying pan ga tang" and was formerly called "tsaghan tologha."

the "white city," in which Mongolian khans formerly resided, and where later for a long time the Chinese amban of Northeast Tibet had his official seat and his troops. It is supposed to be only 90 or 100 years ago that the yamen there was discontinued and transferred to Hsining. About 35 years ago the last Chinese military camp of Northeast Tibet, which was stationed here, was withdrawn. Since then Tsaghan tsch'eng is deteriorating more and more. Only once a year on the fifteenth day of the eighth Chinese month, when the Hsining fu amban is commissioned by the government to attend to the worship of the sea deities of the Koko Nor, new life returns to this town of the steppes. All Mongolian and Tibetan vassals of the region must appear for this festival. The nomad princes then come and live in hundreds of tents. In the middle of the ruins of the city a large felt yurt is set up for the amban. On the afternoon before the holiday the princes present themselves before the amban. Early the next morning the ceremony of worship takes place on a small hill outside the city, from which point one can just make out the surface of the lake on the distant horizon. The amban and the assembled princes fall on their knees, incense sticks are lighted, a piece of yellow silk which says that the emperor offers this sacrifice, is burned and everyone bows to the earth nine times. /204/ Thereupon the amban admonishes all the princes to maintain peace among each other and to remain faithful subjects. Then everyone rapidly disperses. By evening of that day the city of Tsaghan tsch'eng lies as lonely and dead on the steppes as ever before.

796

5: Tafel--583 T-3 (1905-1908) 1914 AJ1 Tibet

N.W. China AF13

000 commit suicide, only to make things uncomfortable for me. Chinese, as well as Tibetans believe that it is easy for a dead person to take revenge on a living one and that this type of revenge is exceedingly sweet. If I had not had Mohammedans with me, I would have lost this fight over the opium with the personnel of my caravan. With their help alone I effected my purpose of becoming the opium supervisor of my men and cutting down on their daily rations somewhat each day. In this way I controlled the opium threat within three weeks. But on May 22 and 23 Lao Tschang, a man of 45 and a cousin of Da Tschang, howled like a dog all day long because he got less than his quantity of opium.

137 Not far from the tents of the Sidia I had more ill luck. The most valuable of my riding horses, a five-year-old, dark bluish-gray pacer suddenly fell sick. It trembled all over and could walk only totteringly. We soon pitched camp, but the animal nevertheless collapsed. It had eaten du ts'a, a poisonous grass, that not infrequently occurs in Tibet. Many horses die of it. The most unpleasant thing about this type of poisoning is that horses never learn not to eat this grass. I was told that horses sometimes become sick three or four times in succession. But in most cases the poison is soon fatal.

796 May 23. According to the Chinese calendar this is the first of the leap-year month. Last night the men built a large altar of earth and stones. At sunrise they performed their sacrifices on it. Tsch'eng blows into a shell, sprinkles water, and everyone prostrates himself before the rising sun. Cedar twigs which have been brought from the Ga fo ying pan are burned as well as a few grains of rice and /319/ pieces of tsamba dough. This service is held on the first and the fifteenth of each month. Seen from my tent, this cult always looks very biblical.

133 We had been traveling in the Tschürnong Chu Valley for a long time now. In the Sidia Fan-tse territory this valley is many kilometers wide and is almost a plain with low roundish rows of hills for a distance of more than 50 kilometers, up to the other side of the Hwang Ho. The Tschürnong Tschü River itself, however, we saw for the first time on May 24. We were amazed when we stood before a crevice over 200 meters deep, in which, far below the river rushed along with dashing waves (Plate LXVI). Such contrasts are not to be found anywhere in our Alps. Here there was an unfathomable rock terrace covered with low grass and clearly recognizable as the floor of an ancient glacier, while in the very center of it was a deep, precipitous gorge, full of rock fragments, cataracts and eddies, on whose walls

797

797 MISSIONS--religious proselyting and evangelism; religious conversions; organized missionary activities (e.g., by sects within the society, by missions from other societies, by foreign missions abroad); mission organizations; mission stations; missionaries or evangelists (e.g., qualifications, selection, prerogatives and disabilities, religious activities); secular activities of missions and missionaries (e.g., education, medicine, technological assistance); etc. See also:
Welfare missions . . . . . 747 Religious revivalism 786

S N 668 186 Based on our experience with Soviet Russia, there can be little doubt that the Chinese Communist propaganda has been, or will be, successful in building up a tremendous feeling for nation and nationality, an artificial and overemphasized pride for everything which is China or Chinese. The Chinese society in the Northwest might be described as stable and united because of its common history, common language, common beliefs, common pattern of living (agriculture by means of irrigation accounting for ninety-five percent) and common fate. We do not refer to the artificial stability and unity enforced by secret police and military garrisons which might turn into a genuine stability like that in Russia after a long period of propaganda. Training of the younger generation and making propagandistic use of political mistakes committed by other powers, like Hitler's lost war against Russia, which was the last step in developing a final and real unity among Russians.

N (182)

S N 563 795 797 668 Turning back to the minorities, we can say that the Turks and the Chinese Muslims do have a sense of mission in regard to their religion. For centuries the Muslim has been taught to fight and to convert the "non-believers" to the "only true faith on earth": Islam (Mohammedanism). How strong their feeling is in regard to their religion may be seen from the fact that the Communist regime avoids carefully interference in religious matters and even permits every religious activity to continue, including the pilgrimage to Mecca. Of course, the average Muslim is hardly aware of the fact that the top level Muslim leadership is under complete control of the Communist regime. As a religious group the Turks (Eastern Turks, Salars, Kirghiz, Kazakhs and some small islamized Tibetan clans) and the Dungans (Chinese Muslims) are united to a certain degree and they do have a sense of common destiny, repeatedly brought forward, when political events showed that they considered themselves one single group, imbued with common fate, which culminated in their idea and highest aim: the attempt to erect their own Islamic Empire and realm, an attempt which cost hecatombs of blood, but never came true. Their perception and conviction that the support of their highest spiritual leaders, first the Caliph of Baghdad, then the Sultan of Constantinople and finally the Great Mufti of Jerusalem (in spite of Stalin's and Ata Turk's discouraging denouncement of any Pan-Islamic or Pan-Turkic movement) developed their group feeling and group consciousness.

S N 563 (795) As far as the Mongols of the Northwest are concerned, it can be stated that because of their geographical separation (see map of ethnic groups) political disunion was inevitable. However, as an ethnic and religious group (the Mongols are

N
*563 saw tremendous uprisings. But the Chinese shared in this violence.
795 When they defeated the Moslems, it was their custom to massacre
186 even women and children. (see section on Attitudes and Reactions)

b. Turks

The Chinese Moslems are on good terms with the Turks, and are reported to have feelings of kinship with them. Generally, this has been true even though the uprising of the 1930's ended in skirmishes between Chinese Moslems and the Turks.

N
*563 B. History of Islam in Kansu
795 There are no exact data on the introduction of Islam into
174 Northwest China, but it is believed that the major conversion to
797 the religion of Islam took place during or after the Yüan dynasty (1260-1306). It is unlikely that the first conversion appeared as early as the end of the Tang dynasty (618-906). Richard Wilhelm states, and it is true, that the first Moslem missionaries came to China at the end of the seventh century (Richard Wilhelm, Geschichte der chinesischen Kulture, München, 1928, 238 ff). Islam came to
N China by two routes, through Turkestan and then from Canton.
*563 The first Moslem revolt took place in Kansu as early as 1648.
795 Two hundred years later Yaqub Beg (1865-1877) ruled the newly-
*175 established Islamic empire from Kashgar. Russia, England, and Turkey officially recognized him. Yaqub Beg had an army of 50,000 men.

N The Moslems of Kansu tried to establish another Islamic empire
[648] (1861-1874). They conquered the western part of Mongolia, but the T'ung-chih emperor (1861-1875) defeated them completely. Another uprising in 1895 was equally unsuccessful.

N When the Communists took over Northwest China in 1949-1950,
*[668] they granted the Chinese Moslems the rights of religious freedom
N and autonomy. (see section on Constitutional System)
*563 The communities of Chinese Moslems adopted the classical
795 Arabian educational system, i.e., each mosque has so-called
871 medresse (schools) connected with it, where boys are taught to
N read the Koran, etc. This is one reason why illiteracy is so
[212] seldom found among Chinese Moslems.

VI. The Indo-Europeans of the Northwest

S
563 A. The Tajiks or Iranians or Sarikolis

1. General characteristics

S In the southwestern part of Sinkiang there lives a small Iran-
[131] ian tribe called Tajiks, Iranians or Sarikolis, who are farmers,
[18.1] merchants and traders. They have a reputation for being very
[197] intelligent. They speak an Iranian dialect which is very closely
[191] related to Persian. The Tajiks very often speak Turkish as a second language, and the merchants even speak Chinese.

/Nomadic Moslems of Sinkiang/

S 563 585 to live at his own home if its near, otherwise the bride's parents lend him an aq-oi. He visits the bride every week or ten days. These visits are supposedly secret. Her father must not see the bridegroom entering or leaving his bride's tent.

When the aq-oi is ready, the bridegroom takes the bride away to his own place, over some show of resistance made by the girl's relatives.

S 563 586 After a year, the girl can divorce her husband by returning the price paid for her. Divorce is not very common among the nomads, and the price paid for it is much higher than that among the Turkis of the plains. The bride's father would usually be very reluctant to return the price paid for his daughter except for extremely grave reasons.

IV. The Chinese Moslems

N 121 59 [779] Little information is available on the family structure and relationships among the Chinese Moslems. The family relations, as in all other Moslem communities, are supposed to be regulated by the Shari'a (Moslem law) but the details of the code are not well known to the Chinese Moslems, nor are they observed with great care as far as they are known. What alterations have been produced by the influence of the surrounding Chinese is not known from the meagre amount of available information. Many of the Chinese

N 269 *563 778 Moslems observe the traditions of ancestor worship that form such an important unifying factor in Chinese family life. Often they possess ancestral tablets which stand side by side with Moslem religious objects.

N *563 582 • 799 Intermarriage between the Chinese and Chinese Moslems occurs often under certain conditions. The fact that the woman is not Moslem is not an obstacle to marriage with a Moslem; it is even thought to be meritorious to bring women of other faiths over to the true religion by marrying them. On the other hand, Moslem women are strictly forbidden to marry a man of another faith. The non-Moslem women who marry Moslems, although officially converted to Islam, in many cases bring their religious customs to the family, and the children are reared with both traditions and beliefs.

N *563 585 587 586 793 184 The main differences between the Chinese and Chinese Moslems appear to be in the ceremonies of marriage and divorce. A Moslem priest usually is invited to preside over these occasions. In addition to the Chinese-style ceremony, the Moslem priest will recite a few prayers over the newly-wed couple or will give an additional affirmation to the dissolution of an unsuccessful marriage.

N *563 184 In general, the Chinese Moslems have much more in common with the Chinese than they do with their Turkic coreligionists. The law and traditions of the country play a more important part in governing the family relations, than the religious law.

798 776 823 [782] According to official tradition, the Spirit of Hua-shan is Shan-sheng, one of the descendants of P'an-ku, the mythical creator of the world. Many other genii have, however, been connected with this mountain. According to the oldest legendary records, it was a female spirit, the Holy Mother, Sheng-mu, who was propitiated here to bring forth the all-important rain; but she also received sacrifices and prayers to accord victory in battle. More recent and still prevalent legendary traditions make the Hua-shan one of the centers of the cult of the Jade Maiden (Yü-nü) whose blessings are sought for the propagation of male offspring.

823 It might be added that the Hua-shan with its rugged peaks and valleys, adorned with rare forests and intimate expressions of the pious sense of centuries, belongs to the most scenic spots of all China.

346 712 178 The great temple at the foot of the mountain, one of the most magnificent products of Chinese architecture, has been transformed into an arsenal in Kuomintang times.

B. Religious Attitudes in the Northwest

791 In general the Chinese in the Northwest adhere to the so-called "Three Great Religions." Confucianism, Buddhism and Taoism all play important parts in their religious system. In specific regions, Christianity, particularly the Catholic Church, has strong footholds among the local Chinese people. Where the people belong to the tradition of Chinese history and culture, scholarship and tradition have strengthened the cult of ancestor worship and the ideals and practices of Confucianism. There the blending of Confucian teachings, Buddhist ethics and Taoist principles predominates in the religious complex of the local [777] inhabitants. In the border communities, strongly influenced by the nearby Tibetans, the Chinese include a large amount of Buddhistic observance and practice in their religious activities. They persist in styling themselves Confucianist in religious matters, but they devote their time and money to the performance of Buddhist ritual. It is reported that the Chinese of these areas are appreciably more religious than those of the more typically Chinese communities. Taoism is sandwiched into this all-embracing system of magical practices, necromancy and aberrant forms of philosophy.

• 799 Christianity first came to China through the Northwest and established its headquarters in Ch'ang-an (present Sian), the national capital during the Tang Dynasty. Missionaries of the Nestorian Church first brought Christianity to the trade routes in the present Northwest. The decisive, historically dated [211] record in Chinese and in Syriac called the Nestorian monument,

797 or Ching-chiao pei in Chinese, which stands at Sian, varifies
[211] the fact that this church had been established among the Chinese
people of Shensi Province. This early Christian movement in
[798] Northwest China suffered persecution and died out. In modern
times both the Catholic and Protestant Churches came to the
Northwest. Most of their converts have been Chinese. Until the
Communist period the Catholic Church had been very strong in
one place in Ninghsia Province. It rendered many kinds of
service to its members and had a much stronger control over
them than did the local government. To a great extent it had
trespassed the jurisdiction of the government, which had cre
ated considerable resentment and suspicion among the authori-
ties and the general populace. (See Social Structure.)

771 Though subscribing to all important religions in varying pro-
portions, the Chinese in the Northwest, like those in other
provinces, seem rather materialistic. Nowhere among them is
there found a religious fervor and devotion which characterize
both the Moslems and the Tibetans of this part of Asia. How-
ever, the religious atmosphere is very strong in all aspects of
communal life, which are always cloaked with some religious
771 rite. For example, the village or community theatrical has a
536 great deal of religious implication. Although unlike the miracle
545 plays and so-called devil dances of the Tibetans, the plays are
usually straight drama, frequently historical, the primary sig-
nificance of the presentation is a religious one. They give the
gods pleasure and thus dispose them favorably toward the people
of the community. Even the mask and the animal plays of the
New Year's celebration have a definite religious significance.

771 Chinese home life is also mixed with religious or semi-
769 religious feelings. Regardless of its wealth or locale, a Chinese
[353] home will have its ancestral tablets in the place of honor. The
tablets represent those who have gone and keeps them and their
memory always present. Those living now are only the present
custodians of the family name.

[592] "This belief. . . holds the members of one household togeth-
[614] er with strands which are not so much woven by affection as by
a sense of mutual responsibility within a clan. . .

771 "At New Year the shack living room, miserable though it be,
796 is the scene of the most exact rituals when, in absolutely cor-
592 rect order, each member of the family makes obeisance to the
782 elders; the feasts fixed by the Chinese calendar are scrupulous-
ly observed, and I have known a man to carry a watermelon for
days across the desert in order that at the Feast of the Moon,
in the most desolate of wayside stages, he might put an old
rickety table in the courtyard and offer the melon, cut in slices,
to the Queen of Heaven.

795 the Communist soft-glove treatment. It is known, however, that
792 they are used widely as Communist propaganda agents.
* 563 In Tibet, on the other hand, and that includes the Tibetan
* 668 parts of Chinghai, the position of Lamaism is infinitely stronger.
177 There was no sign of weakening in the adherence to the old faith,
795 and militant Lamas were always in a position to incite the lay
792 population to concerted action. This has again been shown in the
171 recent rebellious outburst in Tibet, which seems to be partic-
* 668 ularly strong in Southern Chinghai. Occurring at a time when
177 the Dalai Lama was back in Lasa and the first steps had been
taken to grant Tibet "autonomy" status (Reuters, April 26,
1956), this outburst is all the more surprising as it sets off the
leading Lamaist clergy not only from the Peking regime but
also from their spiritual head. Ruthless suppression measures
which included the bombing of Lamaseries have thus far appar-
ently not succeeded in quelching the rebellion. Mention is made
of a Tibetan Resistance Party (Mim ang, literally, People's
Organization) led by Lamaist clergy and joined by officials,
traders and other laymen (Himalayan Times, Kalimpong, May
13, 1956; New York Times, June 30, 1956; AP, July 7, 1956).

C. The Fate of Christianity

795 Christian missionary activities and Christian establishments
798 in the Northwest have been predominantly Catholic. The Com-
* 668 munists had some dealings with Catholic priests and Catholic
172 communities in the Yenan period. The staunchly anti-Communi-
• [797] st stand of the Catholic Church had at that time given rise to
friction and incidents, even though the Communists still wanted
at that time to avoid drastic action. In Mongol Catholic commun-
ities they had attempted to undercut the prestige of the priest in
case he was a foreigner, but they learned from experience that
they did not fare better when a Mongol Catholic priest was put
in charge. The strong cohesion between the community and the
priests forced the Communists repeatedly into making conces-
sions. A perusal of the records, however, creates the impres-
sion that dealings with the Catholic Church were handled locally
and incidentally only, and that no plans were yet devised for
how to take care of the Catholic Church.

795 After the general conquest, however, a pattern emerged
* 668 which shows that an over-all policy was applied to the region.
177 This policy was apparently inspired by Lenin's doctrine that
798 Bismarck's head-on collision with the Catholic Church, the
Kultur-kampf, was a folly. A propaganda front of "religious
freedom" was therefore maintained all through the years. There
was apparently, particularly in the beginning, a certain amount
of local lattitude in the interpretation of this principle. In a

done in public welfare. The information about the situation in the Northwest has to be inferred mostly from what is available to us about China proper, keeping in mind that Chinese policies in Sinkiang have never achieved a fulfillment comparable with the fulfillment they have achieved in China proper.

It was only during the Sino-Japanese War (1937-1945) that the Nationalist Government established a Ministry of Social Affairs. This Ministry organized in each province, including Sinkiang, a Bureau of Social Affairs for relief and welfare works. Institutions were set up to take care of the aged, orphans, the disabled, disabled veterans and beggars.

The relief organs in the Northwest sponsored by the Ministry of Social Affairs were restricted to free medical service centers; organs maintained by provincial governments were mainly experimental relief stations, which were responsible for a variety of relief work. Municipal and district governments maintained, in addition to general relief organs (90 for the entire Northwest; 57 of these were located in the provinces Chinghai and Ninghsia, which had Moslem governors), children's relief centers (37) and a sprinkling of other institutions. There were several dozens of private Chinese Charity Associations active in the Northwest during the war.

Furthermore, the National Government joined efforts with some religious and humanitarian bodies and organized the National Relief Commission. During the war, this Commission was particularly active in disaster relief. Large appropriations were earmarked for the famine in Shensi in the years 1943 and 1944. Contributions to this province as well as to the provinces of Kansu and Ninghsia were largely used for the resettlement of and the starting of reclamation projects by disaster victims of Shensi as well as of Honan province.

The activities of the National Relief Commission included care for war orphans and refugee children. Five hundred of them were sent to Sinkiang and one thousand were resettled in Chinghai. Furthermore, a Juvenile Northwest War Area Service Corps was organized to accommodate graduates from War Refugee Children's Schools.

The National Child Welfare Association, founded by H. H. Kung, also maintained a Child Welfare Camp at Hei-hsien, Shensi.

Among the service corps operated by the Friends of the Wounded Society, organized under the New Life Movement Association; one had a base in Shensi. These corps worked in hospitals and convalescent camps. They provided delousing, laundry and sewing services etc. and special dieting.

The welfare work of Christian missions contributed to alleviate much distress. There were few large Protestant missionary

747 797 establishments in the Northwest prior to the war. (See Section on Religion). During the war, however, religiously sponsored welfare work also spread to the Northwest. Among the more active organizations, the Friends' Ambulance Unit (FAU) which came to China in 1941 has to be mentioned; Catholic missionary organs also did much welfare work in the Northwest. The outstanding welfare contribution of the Catholics is their maintenance of orphanages, particularly for girls. In 1933 there existed three Catholic orphanages in Sian (Shensi), six in Lanchou (Kansu) and one in Ch'in-chou (Kansu) in which altogether 480 orphans were cared for. During the war, the number of orphanages grew to eleven in Shensi, twenty in Kansu (including Ninghsia) and one each in Chinghai and Sinkiang. In these institutions altogether 2,758 orphans found shelter and relief. Under the Communists these Catholic orphanages attracted particularly vicious attacks. No data are available from the Northwest; if, however, events in other parts of China can be generalized, it has to be assumed that none of these institutions survives. In addition eleven homes for the old were maintained by Catholic missionaries in the Northwest with over two hundred inmates. Also the Catholic refugee camps at Feng-hsiang, Shensi must be mentioned.

747 648 As the provinces of the Northwest were not occupied by the Japanese during World War II; UNRRA activities did not extend to this region.

V. Chinese Communist Welfare Projects

74 *668 177 From the information that we get from the Communist press and propaganda, the Chinese Communist Government has launched an extensive program of public welfare, dedicated in particular to the raising of standards and security of the working class. It is no wonder that the Communist regime emphasizes the working classes to such an extent, since it claims that its ideological bases rest on this class. Life and medical insurance programs, better working conditions in factories and construction jobs, and welfare facilities for the working people are included in the Communist program. According to the Labor Insurance Law of 1951 (revised in 1953) workers were guaranteed from sixty to one hundred percent of their wages in case of injury or illness (including non-occupational ones) for their first six months of absence; after six months, they were to receive from forty to sixty percent of their wages from the labor insurance fund. Their jobs are secured for them upon recovery. Women had special provision for childbirth, upon which they received eight weeks of paid vacation and the expenses of the birth were taken on by the management. Provisions for the workers' future at old age, and the future of their families in case of accident was guaranteed as well.

745 *668 177

the latter gradually comes to an end, winds through the same low hills in a northerly direction until, crossing a low divide, it emerges into more open country to reach Kulupa.

The latter is a walled stronghold of the Catholics on the top of a hill and is the centre of Catholic missionary work in Southern Shensi, though the Bishop resides at Hanchung. The Italian Fathers who have been established in this corner of Shensi for a great many years, have attained considerable power and influence in the neighbourhood. They work on different lines to the Protestant Missions, but from their point of view with greater success. Their plan is to collect orphans or other children who are not wanted by their parents, to educate them and teach them all kinds of useful industries, and to bring them up as Catholics. This is the work that is carried on at Kulupa, where there are usually some hundreds of children being brought up as members of the Catholic Church, mostly girls, as these are easier to secure. These old-established Catholic Missions usually own a good deal of land acquired in a variety of ways, and are practically self-supporting. At Kulupa an entire hill top is covered by substantial buildings and the whole surrounded by a good wall. When trouble comes, the gates are shut, the community fetches out its arms, and the brigands, or whoever they may be, pass on to easier prey.

To many Catholics the Protestant missionaries, who are usually married and live as far as possible a comfortable European family life, seem entirely out of touch with the Chinese amongst whom they are working. To many Protestants the life led by the children in such an establishment as Kulupa seems somewhat dreary, inhuman, and lacking in the comforts and interests of home life. The ideas of Catholics and Protestants in regard to Christianity and the converting of the Chinese are certainly very divergent and consequently puzzling to the latter, but they both do an enormous amount of good in different ways. The priest appears perhaps to sacrifice his life more completely to the Chinese, as he usually comes out from Europe never to return, and often lives for the rest of his days practically as a Chinese amongst the Chinese. But no missionaries of any persuasion have done more good for the Chinese people

*563 181 526 [593] hunting and racing games. In playing such games all the participants think and act as equal competitors. All social and kinship distinctions disappear. The competition between father and son, if they all participate in the same game, could be just as fierce as that between two other persons.

*563 [184] In regard to relations between the Chinese and the Chinese-speaking Moslems, the attitude of the people in Ninghsia was quite different from that of people elsewhere. In Ninghsia, the Chinese-speaking Moslem leaders held that the Moslems are not a race different from the Chinese but that they are only a religious group. Because of this attitude the Ninghsia Moslem leaders advised their co-religionists not to undertake any political movement on the basis of race. This attitude eliminated or at least lessened the racial antagonism between the Moslems and the Chinese. Another [178] significant trend to be mentioned here is that the traditional barriers between the Moslems and the Chinese have been melting *563 179 away in recent years. Fan reports that the Moslems in the northern parts of Ninghsia went voluntarily to Chinese schools and learned the Chinese language. Some of their religious leaders were alarmed and tried to stop this. But the people answered them by saying: "After our children have gone to Chinese schools and learned the Chinese language they immediately become useful in helping their families to make a living. What is the use of learning the Koran?"

799 Robert B. Ekvall is a Christian missionary who lived in the southeastern parts of the Northwest for many years. He and his wife did evangelistic work mostly among the sedentary Tibetans in the district of the Kansu-Chinghai border. He made numerous observations on the sedentary Tibetans and the Tibetan-influenced 798 Chinese. About the latter, Ekvall says: "In contrast to the violent *563 incompatibility existing between the Chinese and the Moslems, we 795 have Chinese and Tibetans displaying a mutual tolerance in matters of religious belief and practice... the Chinese of the border differ from those already described in that they place a greater emphasis upon Buddhism to the neglect of some aspects of Confucianism. In particular do the more uneducated tend to become almost entirely Buddhistic in observance; the scholars, of course, give greater place to the doctrines of the Sacred Books of Confucian teaching and always refer to themselves as members of the Confucian sect. Also, the Chinese of the border country - possibly influenced by the religious fervor of the Tibetans - appear more religious-minded than their fellow countrymen of the Titao district." (Cultural Relations on the Kansu-Tibetan Border, p.33)

*563 621 184 In speaking of the differences between the Chinese and the sedentary Tibetans, Ekvall observes that the Chinese village organization permits a considerable degree of individualism, whereas in the Tibetan village, communal activity completely overshadows

APPROACHING KULUPA

[FACING P. 35]

PLATE VIII

an some of the veterans of the China Inland Mission, who ve passed the best part of their lives in isolated stations Shensi and Kansu, such as Hsingan, Hanchung, Feng- iang, Lanchou, Liangchou, Hsining, and Ninghsia, where onths and years pass by without their ever seeing another reigner. Their success in securing converts may not have en striking, but it is permissible to speculate on whether ose whom they have secured are not more genuine ristians than the native Catholics. Often in spite of the sest ingratitude on the part of the Chinese, whose wounds d illnesses they tend one day, only to be passed by in e street with a scowl on the next, these noble men have oured on year after year doing good and leavening, in wever small a degree, the leaden mass of Chinese aterialism. The results of their work may not always be parent now, but they have sown a seed which cannot fail time to produce a harvest of some kind, a harvest of hich other Missions not infrequently reap the benefit.

We spent the night at Kulupa, where we were most spitably received and entertained with a banquet.

The distance to Hanchung is called 75 li. After de- ending for about an hour's march through gullies in the lls the track debouches on to the famous plain of Hanchung, highly fertile, heavily cultivated, and densely populated gion, stretching for a certain distance along both banks the Han, and entirely surrounded by mountains. Another o hours' march across this plain, past the boundary tween Ch'engku and Hanchung (Nanch'eng) districts, ings one to the Han River here a shallow stream flowing a broad sandy bed, a hundred yards wide and a few feet ep. The path runs along the banks of the Han for a ort distance, and then, crossing by a ferry, continues for n li over the plain to reach the busy township of Shihpali u. This village, which, as its name implies, is 18 li from anchung, is developing into a large town, and is evidently centre of the through trade from Szechuan, Kansu, and orthern Shensi, which, as is usually the case in China, is iven to avoid the capital by the various tolls and dues. rom here the road runs west for the rest of the way to anchung, passing through a rich suburb to reach the ast Gate of the city.

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

The English Baptist Mission, apart from the China Inland Mission, the only Protestant Mission working in Shensi, has been established for many years at Sanyuan, in the neighbourhood of which there are quite a number of Christian villages. The history of how they came to the province is of some interest to the student of missionary enterprise in China. The Mission also works in Shantung, and when, after the depopulation caused by rebellion and famine during the latter half of the last century, Shensi was being repopulated from other provinces, some of the Shantung Christians were amongst the immigrants. These appear to have founded Christian communities in the plains of Central Shensi, and to have invited their former foreign teachers to follow them. The story is of interest because it appears to point to the existence at that time of a native Christian church standing on its own legs, which in my experience is a very rare thing in China today. The great obstacle to the spread of Protestant Christianity in China is that the Christian church remains almost everywhere a purely foreign institution. How much Christianity would be found in China in ten years time, if all the foreign support, missionaries and funds, were withdrawn today? There appears to be not the remotest prospect of China ever embracing Christianity on a large scale, until, if ever, a really native Christian church takes root in the same way as the Mahomedan religion has done. All of which, however, in no way detracts from the good work now being done by missionaries of all persuasions throughout the Republic, the benefits of which to the Chinese are incalculable. Since the revolution there has been a great influx of Chinese into the Missions; but it is to be feared that only a very small proportion of these enquirers and converts were actuated by other than material motives, such as a desire to share in the wonderful immunity enjoyed by the foreigner from the evils bred by the lawlessness of the times. There is a story about a veteran missionary in Kansu, who, having baptised several converts and having subsequently had the painful experience of watching them backslide one after the other, swore he would never again baptise a Chinese, and limited himself in future to exhorting them to be good and explaining the sacred books; which seems to the layman to be a

thoroughly sound and sensible policy. The conversion of the Chinese is a tough proposition; but there is a far tougher one confronting the missionary in the North West, and that is the conversion of the Mahomedans and Tibetans in Kansu. The Chinese is apathetic towards Christianity, while keeping an open mind towards any aspect of it which may be turned to his material advantage. The Tibetan or Mahomedan on the other hand is usually not at all apathetic, but very actively hostile towards any attempt to convert him.

From Sanyuan to Hsian Fu is a day's march, called 90 li by the Chinese owing to the passage of the two rivers which occupies an hour or so, and is therefore considered the equivalent of 10 li. For us it was a long slow march, floundering through the mud in pouring rain. The road runs due south across the plain, the pagoda of the village of Ch'ingyang T'a being a prominent landmark for the first 30 li. A few li beyond this village the Ching Ho is reached and crossed by a cart ferry, and another 15 li across a low table-land of loess dotted with the curious tumuli, some from fifty to one hundred feet high and said to be the tombs of ancient kings, brings one to the Wei River, varying from a few hundred yards to a mile in width according to the season, and crossed by a cart ferry. These plains along the Wei and Ching rivers are the great cotton-growing areas of Central Shensi. Cotton has always been a staple crop of the province, and is one of the principal exports. It is now being grown more extensively than ever and is being bought up for export by the Japanese. The soil and climate appear well suited to its cultivation, and there seems to be no reason why its quality should not be improved by scientific methods, nor why there should not be a big cotton spinning industry in Hsian and the neighbourhood. As it is the Japanese buy the cotton, take it to Japan to spin, and then return it to the Chinese in the form of yarn.

We found the Wei River in flood and had a hard time crossing it. The ferry took us over the main stream, but two branches in flood had to be forded with the water up to the ponies' bellies and running like a mill race. One of the carts accompanying us, containing the baggage of the soldiers, apparently drove into a hole and disappeared except for its hood; we were too much occupied at the time with our own

the days of the great Li Hung-ch'ang, himself a native of that place. All these officials are, of course, more or less members of the Anhui military party, whose influence in the government of the country has been so great in recent years[1].

The foreign community of Lanchou at the time of our visit consisted of the China Inland Mission, a Catholic priest, and the British Postmaster, who, like his colleague in Hsian Fu, and indeed the foreign postal officials throughout the country, is doing splendid work for the Chinese. The efficiency of the Chinese Postal Service, under a French Director-General in Peking working with a staff of French, British, and other nationals, is truly remarkable, when one takes into consideration the many difficulties there are to contend with. Especially has this been the case during the constant rebellions and civil wars of the past few years, in spite of which steady progress has been made. On the whole the warring factions, whether government troops, revolutionaries, rebels, or brigands, respect the C.P.O. in a remarkable manner, due apparently to their genuine admiration for the one really sound institution in the interior; and the postal couriers are often able to pass backwards and forwards through districts where no other Chinese dare venture. Occasionally, but not often considering the numbers carried, a mail is lost through the action of brigands.

There are not a great many missionaries in Kansu compared to some of the other provinces, at the time we were there only about ten or a dozen stations altogether, and only one doctor. It would probably surprise many people not well acquainted with missionary work in China to find how few ordained clergymen there are amongst the ranks of the Protestant missionaries; I do not think we met any in Kansu. This puzzles the Catholics very much with their strict system of training. Of course there is no particular reason why a missionary should be a clergyman, though the uninitiated are apt to look upon him as such; except that ordained clergymen are usually well-read men of superior

[1] This influence has since steadily increased until in 1920 a group of rival Northern Generals challenged the Anhui military party (on the usual pretext of defending democratic principles) and overthrew them in a series of battles round Peking in the summer of that year.

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

797

education, and one seldom finds amongst them the type of corybantic missionary of little education familiar to most travellers in the interior of China. In Kansu the missionaries are mostly veterans of the C.I.M., who have spent the best part of their lives in isolated posts where they seldom see another white face for months or years on end, and whose steady work during a generation of time, though possibly not richly productive in converts, cannot but have accomplished an enormous amount of good for the Chinese. Protestant missionaries in China have been subject to many attacks, which they often invite, from their own countrymen; but after all, mankind must apparently have a religion of some kind, and would the critics of Christianity in China contend that the teachings of Christ are inferior to those of Buddha or Mahomed? Only, to be fair to the Chinese, the missionaries should surely propagate an up-to-date form of Christianity, as modified by modern scientific research, instead of teaching, as seems usually to be the case, old literal beliefs which have ceased to hold good in Europe. Also Christianity, a westernised oriental religion, is being taught back to orientals, and for that reason should in China be stripped as far as possible of its Western exterior. It is difficult to imagine anything more utterly absurd than the construction of a foreign style church, with steeple, etc., in the interior of China as a place of worship for Christian Chinese; and there are many other respects in which the missionary often endeavours to impose purely European methods of worship, which have nothing to do with original Christianity, on the Chinese. All this merely emphasises the foreign nature of the Christian Church in China, which is one of the greatest obstacles to its real establishment. When we were in Kansu we learned that a new mission composed of believers in the gift of tongues (known to the vulgar as the "Holy Rollers") was about to open in Kansu with the object of working amongst the Tibetan tribesmen of the Kokonor border. The experts in this sect are in the habit of working themselves up into a sort of fit, when they are said to roll on the ground and speak in strange and unknown tongues; apparently the promoters of this mission in Kansu are banking on the unknown tongue being in this case the Amdo dialect of North-Eastern Tibetan. That

missionaries holding these strange beliefs should be the only vehicle for the propagation of Christianity amongst the Kokonor tribesmen does not seem to be fair either to Christianity or to the tribesmen.

Having outlined the history of recent events in Shensi since the Revolution in a preceding chapter, with the Ko Lao Hui in the leading rôle, it may be of interest to recount the history of the same period in Kansu, assigning the principal part to the Mahomedans.

Kansu only played a small part in the Revolution of 1911, and, as was to be expected in so backward and isolated a province, there was little sympathy with the republican cause. The troops in the province at that time consisted still of the old style *Hsün Fang Tui* who were in the course of being modernised into the new regular army known as *Lu Chün*, and of Mahomedan soldiers peculiar to the province called *Hsi Chün*. After the Revolution the *Hsün Fang Tui* and the *Lu Chün* melted away together with the provincial government, and the attitude of the province towards things in general was governed by the action of the Mahomedan leaders and the Mahomedan troops, who, true to their recent traditions, remained loyal to the Manchu throne. Ma An-liang, the famous leader of the Kansu Mahomedans, who thus found himself at the head of the province, together with Sheng Yün, ex-Viceroy of the North West and one of the Manchu die-hards, despatched Moslem troops across the border into Shensi to fight the revolutionary forces of the Ko Lao Hui, but were eventually induced by the wise statesmanship of Yuan Shih-k'ai to withdraw them and accept the republic in name. Had Yuan Shih-k'ai not been at the head of affairs at that time, and had the Manchus been able to rally themselves to the Mahomedans of the North West, the settlement of 1912 might have been much delayed.

The result of the Revolution was therefore to give the Mahomedans what they had failed to obtain by rebellion in the past, namely complete autonomy and control of the province under General Ma An-liang, who moved into Lanchou from his residence near Hochou. There was a republican Tutu at the same time, but he seems to have been a mere figure-head. General Ma's management of the

under the Choni chief. From the neighbourhood of T'ao Chou fine views are obtainable over this great Min Shan range, rising like a gigantic wall of snow-patched rock immediately to the south of the river, its serrated peaks being, I should say, 16,000 to 17,000 feet in height. It here forms the divide between the Yangtzu and the Yellow River, and from it the Ch'inling Shan continues eastwards right across China to the plains of Honan, separating the rice-eating peoples of Central China from the wheat-eating inhabitants of the north. Should such a catastrophe ever occur as a temporary separation of Northern from Southern China, this great barrier range would form an ideal political boundary between the two States.

There is a station of an American mission at T'ao Chou (as also at Min Chou, Choni, and Titao) designed for work amongst the Tibetans of the Kokonor border. But as has been the case with missionary work on the Szechuan Tibet frontier, their efforts to influence the Tibetan tribesmen have been practically without result owing to the immense power of the lama church and its monasteries. This mysterious Sino-Tibetan borderland and the prospect of attacking lamaism in its native strongholds have attracted some of the finest missionaries in the East, who, however, find after years of strenuous work and self-denial, that they have only succeeded in influencing a few of the Chinese. In Tibetan Yunnan the Catholics, and on the Indo-Tibetan frontier the Moravians, have been working for the past 50 years or so, I believe with the same lack of success as far as the Tibetans are concerned; and in the case of the China Inland Mission, which worked for years amongst the Tibetans of the Szechuan marches, the only converts obtained were amongst the Chinese settlers of that region. Viewed from a missionary point of view, it therefore seems a doubtful policy to waste so much money and energy in attempting the impossible on the sparsely populated Tibetan borderland, when there are still many great centres, at any rate in the north-west, of the more receptive and friendly Chinese untouched.

The year after our visit there was an outbreak of pneumonic plague round T'ao Chou, which appears to have originated in the same kind of grass country inhabited by nomads and marmots as the Manchurian outbreak of 1911.

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

through a sort of local government. In other parts of China the Mahomedans are mostly indistinguishable externally from the rest of the Chinese population; but in Kansu, apart from the Salas, who are of a distinctly Central Asiatic type, my experience was that the faces of most of the Mahomedans are somehow different from the Chinese; they are in any case usually rendered noticeable by their white caps. Foreign scholars attach importance to the early Arab intercourse by sea, but all the Chinese with whom I discussed the question of Islam in China agreed that it came overland from Central Asia, and this is probably true of the North and North West at any rate, which, apart from Yunnan, are the regions where Mahomedanism counts.

The Mahomedan population of Kansu, decimated by the great rebellion, is now recovering and increasing again as the result of many years of comparative peace. Apart from natural increase by births and, after the Chinese fashion, by adoptions, there are a certain number of conversions; these are due rather to expediency than to religious conviction, but the converts having once adopted Islam, appear usually to become good and zealous Moslems. The Chinese as a race seem to require stiffening by a virile religion of some kind, and the effects of Mahomedanism on the characters of those among them who embrace it appear remarkable, and give rise to curious speculations.

It may briefly be stated here that the Mahomedans of North West China, in spite of their religious connection with Turkey and the intrigues of enemy agents, have throughout the War remained absolutely loyal to the Chinese Government.

The relations between the Moslems and the foreign missionaries are comparatively good, so long as religious questions are not concerned. Even in religious matters they agree with the foreigner up to a certain point, since they consider that both they and the missionaries worship the only true God, in contrast to the idolatrous Chinese. It is only when the divinity of Jesus, whom they regard as a prophet but not divine, is raised that they join issue with the foreigner, and then they become inexorably hostile. The early history of Protestant missions in China contains many references to assistance received from the Mahomedans

during the first difficult days. But evangelistic work amongst the Moslems of Kansu appears hopeless. A hospital is now being erected in Lanchou under the auspices of the China Inland Mission with the special object of converting the Mahomedans; it remains to be seen whether it will meet with any success.

Some remarkable facts are brought to light if the history and progress of Islam and Christianity in China are compared, the Chinese authorities having been equally tolerant to both religions, as to all others, until in recent years rebellions caused them to mistrust the former, and political considerations rendered them suspicious of the latter; but in both cases only to a limited extent, for in the past and in the present China holds a record for religious tolerance hard to beat anywhere amongst the nations of the world.

Christianity was propagated in China by Nestorian missionaries during the 7th century and later for an unknown number of centuries (they appear to have still existed in Marco Polo's time); Catholic missionaries flourished under the Mongol dynasty in the 14th century, and from the 16th century on penetrated to all parts of China; Protestant missionaries have been working actively in China during the past half century, during which period vast sums have been expended and great activity shown in the attempt to convert the Chinese. Islam was introduced into China by immigrants from Central Asia, who in most parts became entirely merged in the Chinese, and now exists in all the provinces of the Republic. Practically speaking, there are not now, and never have been, any active Mahomedan missionaries at work amongst the Chinese. And yet today there are perhaps a million and a half nominal Chinese Catholic Christians, a third or a quarter as many Protestants, and at least ten times as many Moslems.

It is difficult at first sight to account for this state of things. The explanation lies perhaps partly in the fact that Islam has become, so to speak, naturalised amongst the Chinese and is firmly rooted as a native faith, without retaining, as far as its believers are concerned, any alien character; while Protestant Christianity remains in most cases a foreign institution supported by foreign energy, brains, and money. Many missionaries appear to the un-

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

487 133

underlings that a mule must be found, and the latter had gone round to the inn as the most likely place to find a suitable animal, and had simply walked off with the best one they could lay hands on.

At Kulang one is 120 li, two short marches, from Liangchou. The road runs at first across a loess plain dotted with fortified farms past the village of Shuangt'a to the old posting station of Chingpien Yi, a short stage of 50 li. The villages and post stations on this side of the divide are even more dilapidated than those further east, and are mostly nothing but a heap of ruins round an inn or two. The people here seem to have given up living in villages, so prominent a feature of Chinese life in most provinces, and occupy the fortress farms with which the plains are dotted. From Chingpien Yi to Liangchou the road continues across the level plain which is in places almost entirely covered with loose stones, rendering the going very slow and tiring. On the left hand the view is bounded by the snow-capped Nan Shan; on the right the plain extends to the horizon. The twin pagodas of Liangchou form a prominent landmark denoting the approach to the city.

361 487 487 133

Liangchou Fu, now known as Wuwei Hsien, is about the most important city, commercially and politically, in Western Kansu. It lies in an irrigated plain dotted with fertile oases between the Nan Shan mountains and the desert of Alashan. This plain is traversed by numerous streams and irrigation channels flowing down from the snows of the mountains to lose themselves eventually in the sands of the desert, and owing to this never failing supply of water for irrigation purposes is a very fertile and productive region. The inhabitants of Liangchou and the surrounding plains are mostly Chinese; the whole region was devastated during the big rebellion, and was again laid waste by marauding bands of Mahomedans from the Hsining neighbourhood during the rebellion of 1895. The interior of the city is very poor-looking and dilapidated, like most Kansu towns, and the streets are almost entirely covered with the same loose stones found outside; riding being the only method of getting about, these stones are a great drawback to the place. There is a station of the China Inland Mission at Liangchou which can compete with those at Hsining and Ninghsia for

[5/12] 361 797

797 being the most isolated post occupied by the mission; Ninghsia is probably the worst off in this respect; but in any of them years may go by without the resident missionary seeing a strange European face. The Catholics are strong in the neighbourhood, having a large establishment with a bishop at a village called Chenchia Chuang, 20 li to the west.

249 The Liangchou neighbourhood used to be famous for its poppies, the opium being considered the best native drug produced in China. The success of China's measures for the suppression of poppy cultivation has been one of the most striking events in her recent history. In 1907 the policy of total suppression within ten years was adopted amidst general scepticism on the part of most foreigners and many Chinese. It was generally felt that this policy would be but another instance of the maxim *Yu Ming Wu Shih* (Theory but not Practice), so deeply engrained in Chinese official life. The ten years have now elapsed, and though cultivation may not be completely extinct in wild mountain districts and amongst the semi-independent tribes of the west and south-west, yet one may travel for months through the plains and valleys of provinces such as Szechuan, Shensi, and Kansu, where most of the native opium consumed in North China used to be produced, and never see a single poppy plant. Conclusive evidence of the success of the suppressive measures is to be found in the fact that in the former poppy-growing areas of Shensi and Kansu, where opium could be bought locally ten years ago for 100 cash an ounce, the price has now risen to about 12,000 cash an ounce. Further the success which has been attained, has been accomplished in face of great obstacles, such as the revolution, after which there was a general recrudescence of cultivation, and the subsequent rebellions; in every case where there was a general collapse of local government and law and order the people immediately returned to their poppy cultivation. Yunnan and Shensi have probably been the worst offenders and the slowest to achieve comparatively complete suppression, owing in the first case to the tribes, and in the second to the brigands. The stimulus exercised by the Treaties with Great Britain of 1907 and 1911, under which the import of Indian opium was to cease if China could succeed in putting her own house in order with regard

500

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

[439] [236] 487

packing the wool which comes down from Western Kansu by boat on the river and by camel overland, and in collecting local produce from the Mongols. The overland trail from Paot'ou, eight to ten marches from well to well across the Ordos desert, here strikes the Yellow River, crosses by a ferry, and continues up the plain to Ninghsia. Supplies must be laid in at Shihchu Shan to last to Paot'ou, little or nothing being obtainable in the Ordos *en route*.

133

Leaving Shihchu Shan we passed finally out of Kansu into the Ordos. The river runs for some hours with a rapid current between bare mountains, which gradually recede and give way to sandy desert. After about twelve hours drifting down stream Tengk'ou, a desolate little village in the desert on the left bank, is reached, and some eight hours further on the township of Santaohotzu is passed, where there is a Catholic Mission and a considerable Chinese population engaged in agriculture round the old branches of the Yellow River. The river banks on either side are lined much of the way with a belt of willow scrub, which furnishes a most useful supply of fuel to the boats going up and down. The current is fairly strong through the Ordos, considering the level nature of the country, but we were frequently compelled to tie up to the bank to wait for the wind to drop. On one of these occasions my five ponies, which were being exercised on the bank, took alarm at something and galloped off into the desert. We followed them for miles and then lost their tracks on some hard stony ground. The country was desert without a sign of life except for numerous antelope and an occasional camel turned out for the summer, and the boatmen expressed the opinion that we should never see the ponies again unless we chanced on them further down stream, as though they had galloped off inland they would be bound to return to the river for water. On the following day after having drifted many miles further down we fortunately spied a Mongol watering his camels on the bank, who turned out to have met the ponies inland, and they were soon recovered, very hungry, thirsty, and tame.

[797] 502

Lower down we met again and again with the most violent winds, necessitating long and weary delays in the desert. There was some trouble with Mongol brigands going on in this neighbourhood, and on one occasion shots

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

the Church, and the hospital, where he daily received men and women patients. At the time of our meeting his position in the city was amply assured, but many years previously the people of Pingliang had combined to refuse him all admittance by forbidding anyone to sell him food, and it was only due to the secret kindness of one woman in supplying him with a meal of flour and water pancakes each day for several months, that he existed at all; but in the end he overcame every opposition, outlived suspicion and came to be regarded with universal respect.

We studied together the map of Kansu, and he told us of his own various itinerant journeys to districts reputed to be almost uninhabited, but where large audiences had collected whenever he made halt to proclaim the Gospel. Laying his finger on a spot at the extreme North-Western boundary of the Province, he said: 'Here stands the Great City of Suchow. You who care so much for Kansu, this is the town which awaits your coming!'

CHAPTER III

THROUGH THE EARTHQUAKE AREA TO LANCHOW

On the second day after leaving Pingliang, we took the Pass which rises to nearly nine thousand feet over the Lupan Shan. All the morning we had followed the course of a rushing stream, which we crossed and recrossed many times. It was still early winter, and the ice was not strong enough to bear the weight of our litters, so that we often had the unpleasant experience

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

that two hundred thousand people had perished in the disaster.

Before reaching Lanchow we crossed a wide river by means of a well-built and handsome bridge, which had also been constructed with famine relief funds, and which now provided the means for saving scores of lives, a heavy yearly toll having hitherto been exacted by the treacherous mountain torrent.

On leaving the town of Tsingningchow we travelled for seven days before touching another Mission station —a tremendous gap in the chain, so it seemed to us in those days, unused as we were then to the wider horizons of the Great North-West. Half-way stood the little market-town of Anting, to which Mission authorities had directed our attention as the possible goal of our quest; but as we walked through its streets with every perception alert, we felt the firm conviction that our appointed destination lay still farther ahead.

One of our litter-men was a Moslem—proud and cantankerous, as all of his kind. A somewhat grimy, white, woollen cap was the badge of his belief, and at brief intervals he would raise his head and sing a wild snatch of the 'Song of the Wandering Dove,' a weird melody greatly loved by the men of his race, and sung by them in eulogy of home when on a journey, the barbaric intervals of which produced a most dramatic effect in those lonely gullies. An altercation frequently arose between this man and the others, on the subject of the choice between Moslem or Gentile inns, the former being distinguished by the painted sign of a teapot, and the mystic words: 'KIAO MEN' (member of the assembly). The boasted 'cleanliness' of the Moslem inn is, however, not visible to the naked eye, but manifests itself otherwise, namely, in endless bickerings with the travellers on matters of purification connected

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

bridge has replaced the old bridge-of-boats, which until quite recently spanned the great flood. Green sedan-chairs, we found, were still used by the officials, and the Yamens still retained the grand style which had existed under the Manchu Government—a pomp which entirely vanished from Shansi with the entry of the Republic, and has also since passed from Kansu, with the arrival of Marshal Feng's armies. We spent three weeks in Lanchow, staying most of the time in the central China Inland Mission compound, but paying visits to the Borden Hospital on the further bank of the river, and to the large boys' school at the foot of the Blue Lotus Hills, both of which are under the auspices of the China Inland Mission, which is the only society working in Lanchow. The whole visit was brimful of interest, and we were particularly struck with the way in which the Christian community had impressed itself on the civic life of the town.

The great Yellow River, during summer months, supplies a waterway by which the journey to Peking may be accomplished in about thirty days by raft. These rafts are floated by means of inflated goat and bullock skins, which are roped together and carried very swiftly down-stream. Though the journey is popular, being quicker and easier than if taken by road, yet the element of danger is always present, and Dr. George King, at whose hospital we stayed when in Lanchow, was drowned in May 1927 when travelling by this route. His raft caught on a sandbank, and in helping the men to release it, he fell into the water and was swept away.

During the winter months the river is frozen over and can be crossed on foot. When the stream is freezing, and while it is thawing, the toll of accidents is always heavy. During the whole of our stay the surface of the

Whether in winter or in summer, whether by litter or by cart, the Kansu roads present dangers to the traveller. In hot weather thunderstorms or cloud-bursts in the hills are not unusual, and on these occasions mountain torrents will rush down with such force as to carry everything before them, nor have a cart and mules any power to withstand the strength of the spate. Each of the large rivers is so subject to fluctuations of stream, and unexpected currents, that each year some of the more reckless villagers lose their lives by drowning. In winter the rivers are ice-bound, and supply the traveller with many a nerve-racking experience, as we found when it was necessary to cross the ice in darkness, avoiding, by the help of a tiny lantern, the deep holes and fissures.

The last day before entering Liangchow, and the two days after leaving it, are days of torture, owing to the stony nature of the road. Even the very streets of the town are as stony as the famous Portland pebble beach. Liangchow was the last outpost held by foreign missionaries in North-West China, and has been occupied by the China Inland Mission for the past forty years. Six days further on lies the city of Kanchow, and here lived a Chinese missionary and doctor who, five years previously, had taken up his residence there. From him and from his Church-officers we had received a most cordial invitation to pay them a visit, and having accepted to do so, we were soon on the march once more.

We delayed, however, a few days in the little town of Yungchang, distant two stages from Liangchow, the inhabitants of which have sunk to the lowest imaginable depth through opium smoking. Communal life here is not regulated, as in other places, by the meal hours, but by the recurring period at which the craving for the drug grips the population with invisible but relentless tentacles, so that on every *kang* the little lamp is

neighbourhood of the inns, and threading the dark streets with their many turnings, where the dim roofs of temples could just be distinguished, we at last alighted at the door of a large compound, closely shut in behind high walls.

In a few minutes we were seated before a delicious meal and a longed-for cup of tea, in a room which to some might have seemed bare, but which to us presented the very acme of comfort, for we had been travelling for eighteen hours in the teeth of a bitter North-Easter, with no food but cold dough-cakes fried in pungent, linseed oil, and we were broken with fatigue. It was after midnight before we laid our weary heads upon our pillows. We had left Hwochow in June; it was now March, and we had already come about 1,500 miles since leaving the railhead.

CHAPTER VI

A CHIEFTAIN OF THE ALTAI MOUNTAINS

SHORTLY after dawn, we were conscious of the peculiar sense of Sabbath-quiet that permeates a Christian community, which, of course, is alone in recognising the Lord's Day in a heathen land. Every-one on the compound though he may own but one garment, is expected to wear it newly-washed and clean. Every room and courtyard has been swept and tidied up, and from sunrise the sound of singing is heard. On this day also every carpenter or mason employed is given his day's wages, although no work is done by him.

This was a red-letter day for the Kanchow Church; indeed, far more so than we were at first in a position to

Kanchow home and work were definitely located. The land, however, was no more than a rough, irregular space, but the position being good, the shabby little house upon it was soon repaired, and made into a possible dwelling-place for Mrs. Kao and the children, who now came from Lanchow to join him. The open space then required to be enclosed by a wall, and in this job Dr. Kao took an energetic share, each morning, before the dispensary opened, driving down to the riverside and bringing back a load of stones for the foundations.

In the course of the next few years a convenient dispensary, waiting-room and guest-hall were built, and school-court and adequate class-rooms had been added about the time of our arrival. The Mission Compound thus became the most attractive building in the city, for, not only was the daily Peking newspaper posted outside the main entrance, but a blackboard, holding special items of news, hung beside it, while the front of the building was decorated with Christian posters constantly changed or renewed. Just inside the front door was the book-room, where Christian papers and a library were accessible to anyone who cared to use them; here visitors, too, were received, and everyone was welcome; moreover, the large space without was planted with trees, and was sanded to make a play-ground for the Kanchow street children.

Shortly before we arrived a small additional strip of land, adjoining the premises, had also been purchased; the owner of which, after the deed was signed, was, as always, dissatisfied with the deal, therefore, according to custom, set out to terrify the purchaser by the use of a ritual which had never before been known to fail in securing at least a substantial *douceur*. Accordingly, one morning he sent a relative on ahead to announce

[1 to the Mission at Kanchow -- Analyst]

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

distinct classes—the lamas, and the laity. These latter are a wholly uneducated, spontaneous, and trustful people. Many of them would sit with us for hours, and would return again and again, bringing small offerings which they exchanged for coloured pictures. The layman is accustomed undeviatingly to shelve all responsibility in matters deemed spiritual on to the shoulders of the priest, who is paid and kept solely for this purpose, with the result that the lamas' whole existence being dependent upon the populace, it is to his advantage that ignorance and gross superstition should be maintained. Yet even among the lamas some seem to have aspirations after better things. There is one Living Buddha who stands out in contrast with all his fellows. He made a pretext to visit our tent, where he sat, spellbound, listening to the story of the Prodigal Son.

'The forgiveness of that young man by his father is a thing I can understand,' he said; 'but what of the burden of sin of previous lives, which binds us to the Wheel of Life?' 'The Lord Jesus Christ is the Door *out* from all the past, as well as being the Entrance *into* a new and an Eternal Life,' was our answer. He listened thoughtfully, and when he left accepted a copy of the New Testament in Tibetan, which he carefully hid in the folds of his red shawl.

CHAPTER XII

IN THE VILLAGES

ON our return to Kanchow we found the wheat-harvest almost over, and the season now suitable for conducting classes in village centres. These were very

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

largely attended, as many as eighty men and women registering in one locality. The majority were illiterate. We therefore considered it best to insist on all students becoming first of all proficient in the Government Phonetic Script, by means of which system an illiterate can be taught to read in twenty days. During the three years we spent in Kansu, five hundred and twenty-three pupils learnt this Script in our classes.

The villages of Kansu are often exceedingly poor, and in one of the places we visited the people had sunk so low as to be threatened with extinction by famine. A few miles away from this village the wide Heh ho—Black River—rushes out of a mountain gorge, its waters being then turned into the large irrigation-canals which convey them to the various districts. Quarrels, resulting in lawsuits between the principal villages, had led to the loss of their rights on the river by this settlement. For three years no water had been allowed to come that way, and as rain is so scarce in North-West Kansu no farming can be done without irrigation. As deep poverty seized these unfortunate people, opium-smoking became their only possible luxury, and they were soon plunged in unspeakable degradation. Dr. Kao, with a band of young Christian men, hearing of their miserable condition, paid them a visit. He found their irrigation-canal having been dry for three years was now completely choked with all kinds of débris. Apathy had fallen on the village elders, and the whole situation appeared hopeless. A meeting was convened, to which all the men came, and was opened and addressed by Dr. Kao. He told them of the love of God for each one of them, and of the saving power of the Lord Jesus Christ to free them from even the craving for opium. 'You must repent, pray, and work,' he said. 'We will now together acknowledge

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

The mother's parting threat to her son, when he left the house, was expressed in these words: 'The day you join that Church you may order my coffin, for I will not live to endure such a disgrace.' His answer was: 'There is a way of life and a way of death. If you *must* choose the way of death, I shall mourn for you. But as for me, my path is that of Life.'

On our next visit to Fuyi we were the guests of the Mandarin for seventeen days, during which time, at his request, we gave instruction in Phonetic Script to both boys' and girls' schools. Although the town is small, the schools are important, and supply a number of students to the Provincial College at Lanchow. This visit afforded us the opportunity, under particularly happy conditions, to hold evangelistic services for children and for adults. The first Christian worship in Fuyi was led by Mr. Tu, whose name was in the mouth of every man of the neighbourhood. 'What *shall* we see next?' they said. 'Tu ru tao has joined the Christians!'

CHAPTER XV

NEARING SUCHOW

THAT same evening we left Fuyi for the city of Kaotai, which is the next important centre between Suchow and Kanchow. The fertility of this district can be judged by the daily market, where splendid vegetables of every description are for sale. This was the melon season, and half-a-dozen varieties of excellent quality were displayed in abundance. In view of the lean days to come, we stocked ourselves well with them, as also with carrots, celery, potatoes, egg-plant, and, for the

AF13 Northwest China AF13

conditions unspeakably wretched, they yet cared not at all, for they had temporarily banished reality, and moved among elusive shadows, until the sentinel grey dawn should recall them to the grim world of Fact.

The largest city through which we passed was Pingliang. On the steps of a temple outside the city gate, we saw a motley crew of several hundred beggars basking in the midday sunshine. They displayed such a variety of physical ills, and provided such an exhibition of tatterdemalion garments, as to make one question how existence under such conditions could be endured. Nor can the life of a Kansu beggar hold any sense of security or hope of alleviation. All too familiar is the sight, on a winter's morning, of the naked corpse of a man, woman or child, frozen to death on the side path ; and there is no one to remove the corpse, unless it be the tradesman, under whose frontage he sought shelter and died. The gathering which we witnessed at Pingliang was an assembly of the Beggars' Trade(less) Union, when they collect an enforced contribution from each business house in the town—a tax which none dared refuse, since their appointed Head controlled a band of defenders, who were ready to deal summarily with any shopkeeper who might offer a blow in lieu of the dole. The police were helpless in face of this Corporation ; and thus the beggar asserted his right to live.

For an hour our litters threaded their way through the crowded streets before we reached the Mission Compound, where we were the guests of a Swedish missionary and his wife, Mr. and Mrs. Törnvall. Our hearts warmed with admiration for the unassuming man, on whose face long suffering had left indelible marks. With him we visited the spacious buildings of

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

797 •
342

Our expectation was not in vain, for only a few days later Dr. Kao informed us he had been approached by one of the leading gentlemen of Suchow, with the suggestion that he should rent his vacant house for the Bible-School premises, and also he had added the polite words, that it would give him the greatest pleasure if the three ladies would occupy the pavilion standing in his flower-garden, and which was now quite empty. It sounded rather like a fairy-tale, somewhat too good to be true; nevertheless, a few days later we moved our belongings bodily to Chang-si-yeh's attractive property.

On the west side of the roadway that traversed it were the two Bible-School courtyards; one filled with living-rooms, while the other contained a spacious hall, suitable for the Class-Room and the Sunday services. The third courtyard was only waste ground, but our students soon levelled and planted it out as a vegetable garden; here, also, the preaching-tent was pitched. On the east side was the entrance to Mr. Chang's own private house, and through this we passed into a charming flower-garden, backed by an orchard. Under the cloudless October sky, the autumn-tinted fruit-trees looked very lovely, and we felt the lines had indeed fallen for us in pleasant places. An ornamental building of carved wood faced the parterre, and if the structure was somewhat flimsy (being mainly composed of delicate fretwork and white paper), it yet commanded a delightfully sunny aspect, and a glorious view of the snow-capped Tibetan mountains, some rising to 15,000 feet. The single room within was of considerable size, and held two recessed *kangs*. The central portion we immediately arranged as our dining and guest-receiving room, while each end was furnished to suggest a bed-study-sitting-room.

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

797 342 The floor was of very loosely trampled earth, and there was no ceiling, the roof being merely of pine-wood rafters, boarded on the outside. Strange to relate, even these bright premises were not free from the universal hauntings, for on the verandah stood a sedan-chair which inspired such terror to the whole family that none would venture to sit in it. Some months previously Mr. Chang had celebrated his birthday with a banquet, to which he had invited all his relatives and friends. Having feasted not wisely but too well, he sat down in this chair, and throwing out his chest disported himself with the typical gestures of a Chinese Mandarin. While the younger men of the party carried him joyously to and fro, he made suitable faces, saying: 'Now do I look like a Mandarin?' After a few minutes of this sport he stepped out from the chair, when, to the horror of the whole party, it was found that his mouth remained permanently twisted on one side; and as an added terror a few days later his wife developed a similar affliction.

776 It was most unfortunate that the time of our moving in coincided with the prolonged period, during which the god controlling the element of Earth forbids mankind to disturb his dominion. We were therefore implored not to build our kitchen stove, not to plaster a wall, nor even to mix the mud necessary to stop the crevices through which the wind was whistling, until this season expired. Courtesy demanded that we should not outrage the feelings of our kind host, but we decisively informed him that as Christians we were entirely freed from the power of demons, and the bondage of such superstitions.

His reply was: 'That is true and right, and I know that none of these things can harm *you*, because you are under the complete protection of your God. I, on the

floors of on an average 2, 900-2, 700 meters high. 000

Even toward the end of September it was very rainy in and around Tao tschou. The precipitation remained within modest amounts but the sky was usually overcast. This was probably the reason why the night temperatures were not yet low and, in spite of the 2, 760 meter altitude, hovered between +2° and +6°, whereas at noon the air warmed up at various times to more than +10°. As a rule there was almost no wind on the ground. The rain clouds came from the south-east or the west. On September 16 in the early morning we had snow with a gentle east wind and a westerly drift of clouds and only on the nineteenth, twentieth and twenty-first I noted thunderstorms in my meteorological diary. All three thunderstorms came from the west. September 24 when I said farewell to Tao tschou and its hospitable Americans, was a day of rain so that the animals slipped on the sticky loam earth and the pack animals were hardly able to make any progress. Mr. Ruhl accompanied me on the first two marches. So at first I had to say goodbye to Mrs. Ruhl, my extremely gracious and pretty hostess and her little baby. Even though the mission house in Tao tschou presented a very good and neat appearance - everywhere the guiding hand of the practical American woman was to be felt - nevertheless for a woman of our Western culture residence in the city must have been torture. Year in and year out one hears about nothing but war and pillage here, and the missionary work bears occasional fruit only among the Chinese and the widowed or lonely old Chinese women. Tangible success in mission work among Tibetans and Mongols is not to be thought of, of course, because of the omnipotence of the lamas. Besides, the European also battles the severe highland climate and the homesickness that comes from this seclusion from the world. In the summer of 1907 there was an imperial Chinese postoffice installed, but because of lack of other interests it was only obliged to forward missionaries' letters and every tenth day a messenger arrived who delivered mail that had been en route six weeks from Hsingan fu. As in Hsining fu, the population is frequently afflicted with diphtheria, scarlet fever and smallpox. Typhus and syphilis of course also reap large harvests and among the lung diseases of the region asthma plays an important role. A large percentage of the missionaries contracted smallpox. Mr. Simpson had acquired pock marks up there in carrying out his profession. A missionary who had just come up from the coast where he had been freshly vaccinated, died shortly before my arrival, of variola.

361 are under the tschi li tschou of Tsinchow, were sacked by the long-haired ones and have since then not regained their former prosperity. Corresponding to the well-kept appearance of the dwellings of Tsinchow was a beautifully cultivated temple hill, Taischan, on which, among ancient trees, stands the Taoist and Buddhist pantheon, and which is also used as an entertainment park on festival days. In the Tschung tsch'eng, the center of the city, I visited a very pretty mosque which is over 400 years old. In the da (large) tsch'eng which is also enclosed by a wall, are the yamen of the dao tai, the tschi li tschou and a major; in the walled hsi (west) kwan are the large commercial concerns; while in dung (east) kwan are the extensive buildings of the apostolic vice-regency of South Kwan, in which I was warmly welcomed by Bishop Ter Laak. These Belgian missionaries said that the Tsinchow district has a great many earthquakes. Count von Széchenyi knew about these, too, and in the history of China there are several major catastrophes mentioned which struck the region of Kung tschang fu and Tsinchow. Besides, in this region I noted many and large landslides. Here mountain sides of loess a kilometer square slide off on their clayey substratum along with all their fields and villages.

• [797] 133

554 One morning in the main street of Tsinchow I met a good old acquaintance, the scholar Li, who was with us in Tibet in 1904. As he spoke of his present position, a satisfied smile broke out over his entire, broad face. Originally tailor by trade, then shoemaker, painter, beginning with his 38th year student, then secretary and maker of calendars, in between small merchant, finally schoolteacher for children of 10, then our scholar, he was now, in keeping with the needs of modern times, professor of French at the newly-built college in Tsinchow, and a very respected man who moved only with the greatest dignity and very slowly crossed the street, "practicing quiescence." Meanwhile he had made a map of the entire Tschou bailiwick, having been commissioned to do so by his superiors, and whereas at that time when we left Lanchow fu with him for Tibet, he knew only 10 Latin words, he could now already "count in French." He had 50 pupils of the ages between 20 and 35. His teaching position earned him 20 taels a month with which he also supported his family which he had left in Lanchow fu. He was now a small lao ye, a gentleman official, and on the street he was greeted on all sides with veneration.

178 Of the new era which had begun for China one was little aware in Tsinchow, except for the school, its classes for foreign languages

487 Shensi from Kansu. I had come down another level into the lowland, a formation of land which our map had not yet indicated. Down in the province of Shensi I again stood on my familiar Shensi-Ordos clod of earth. Here, too, at Lung tschou, the Chinese have since olden times worked coal pits which yielded good coal. But because the roads are too poor, the coal is sent only for a distance of a two-days' journey, beyond Kien yang hsien.

[316]

My journey continued without stopping, ever deeper into the rich, the beautiful, the new China. In Kien yang hsien I was invited for supper by two gracious Swedish ladies who were doing quiet missionary work all alone here in this outpost. A further day's march brought me into the city of Feng tsiang fu, and the next day saw me in the city of Ki schan hsien; herewith I had reached the big old Szechwan road. Everywhere there were magnificent hotels by the side of the road. Large carts loaded with snowy cotton were heading into the cities. In one day I road through half a dozen chief cities of districts. At Sien yang hsien for the last time we crossed the Wei Ho which at that city is muddy and thick and only 360 meters above sea level. Here the Szechwan road on which I traveled at the end and the cart road to Lanchow fu unite. There are seven large ferries to take care of the heavy traffic during the high waters in summer, while every winter a trestle bridge is built. Round about on the flat hills are old earth mounds which have been the burial places for countless emperors of the old dynasties, those of Hsingan fu, the Tschang ngan of old.

• [797]

000 /328/ Ever since I had left Lanchow fu I was goaded on by the fear that on account of my detour I might arrive in Hsingan fu later than my carts and chests and that my property might get lost if there was no one to receive it at its place of destination. But now, after much telegraphing back and forth, it turned out that they had not even left Lanchow fu. Again my mind had not worked sufficiently in the manner of the Chinese merchants. It had occurred to some clever individual to use my shipment in order to smuggle a few boxes of water-pipe tobacco through the customs. But it had been done too boldly and so everything, my chests as well as the tobacco chests, were confiscated. Finally Mr. Shields was called in by the draymen to help because he had recommended the hang to me. When he came to the custom station the officials and soldiers were rummaging, amid pouring rain, among the bird skins, butterflies and the various oddities. Without Mr. Shields' help I would again have had to undertake the month-long trek to Lanchow in order to get my belongings.

798

798 RELIGIOUS INTOLERANCE--rivalry between sects; religious persecution and intolerance; concept of heretics; suppression of dissenters by established religions (e.g., massacres, inquisitions, discriminatory legislation); martyrdom and martyrs; antireligious proselyting; etc. See also:

/Salars/

563 794 177 184 Chinese life for a longer period of time; geographical isolation of those in the west; arrival in the west of the "New Sect," among whom are the Salars, dedicated to reform the older residents; and the fact that many in the east are mere converts.

[144] [262] [202] [203] The Moslems in Kansu are further set apart by the physical characteristics of their Tatar ancestry. Also contributing to the general physical condition of the Moslems is their tendency to eat more meat, drink more milk, and indulge less in wine and opium than the Chinese.

563 794 795 The Salars are Moslems of the Shiah division and of the "New Sect." (See chapter about Religion.) The majority of the Moslems in China are of the "Old Sect" and much better assimilated than the "New Sect." The "New Sect" is prevalent mainly in the west of China, and as indicated earlier, their lack of assimilation is due to an obsession to reform the older residents, and is accompanied by extreme fanaticism and intolerance. Amont this "New Sect" the Salars are the most fanatic of all and it may be that they excel in this tendency because of their isolation. Salar stubbornness is further revealed in the practice of the women, who persist in wearing the ancient dress of Samarkand.

563 794 [798] [346] Because the Moslems in China have throughout history persecuted and been persecuted, they display a certain caution in the practice of their religion in areas where they are not abundant. For example the mosques may often be architecturally designed to assume a Chinese style, and if they are in a decided minority the mosques will be constructed without a minaret. In such cases the muezzin will refrain from giving his calls. The isolated Salars, however, are more strict than most Moslems in certain observances. The women, [562] for instance, are still required to wear the veil while absent from their immediate home heighborhood.

563 794 795 Although there have been attempts in the past by the Moslems to set up their own state in North-West China, their internal division over religious questions makes their unification a difficult task because the Chinese leaders take advantage of this weakness and play one faction against another. It also seems to be the opinion that more than a religious basis is necessary in order to establish any sort of political entity. The Moslems are further handicapped in the field of practical political action in the modern world by the fact that it is nearly an impossibility to attain both a Koranic education and a modern education, an inherent requirement for coping with modern conditions in directing the establishment of a bona fide Moslem state. Even if some type of autonomous Moslem government were set up, the isolation, small population, and eccentricity of the Salars probably would

S N II. Stability of the Societies in the Northwest

563 182 It is safe to say that the minorities of Sinkiang, Chinghai and Kansu represent rather unstable societies. This instability has several causes. The first is certainly the fact that the Turks, the Mongols and the Tibetans consider themselves utterly different from the Chinese in regard to race, religion, language, and ethnic grouping; therefore they desire independence and do not want to be ruled by "aliens," which they consider the Chinese to be. The second reason for instability S N [167] is the progressive settling and colonization by Chinese peasants who cut down the pasture areas of the nomadic Mongols, Turks, and Tibetans, and consequently provoke hatred against themselves. The third reason for the unstable character of the S N [651] societies of the Northwest was the reckless taxation of the minorities by many Chinese officials who considered their offices in areas like Sinkiang and Chinghai as an opportunity to gain wealth while holding those offices for a limited number of years. In periods of wars, the minorities were subject to merciless requisition of their cattle and agricultural products. In addition to the friction and animosity between the minorities and the Chinese, the disunion among the minorities themselves S N 563 was at times considerable. As an illustration one might remember that during the uprisings of the Dungans between 1931 669 and 1936, the Chinese Muslims fought against Turkic Muslims 182 (which supposedly represent a single religious unit), Mongols, Chinese, and White Russians fought against the Chinese Muslims (Dungans) and the Kirghiz and Kazakhs even formed a special unit and fought against both groups or joined one of the two according to the military situation, opportunistically. This period was without doubt the culmination of disunion and confusion among minorities of the Northwest during the last decades.

S 563 635 182 On the other hand, when a governor who was more interested in the welfare of the country as such than in his own enrichment, like Sheng Si-ts'ai of Sinkiang with a cleaner officialdom, ruled the province, the society gave a more stable impression and the frictions between the various nationalities decreased.

S N 563 A further reason for the disunion of the society in the North- 798 west is the incompatibility of various religions, especially 182 the "martial" Islam on the one hand and the more peaceful Buddhism on the other. The Muslims feel superior to any other religious community; the Buddhists (Mongols, Tibetans, Shera Yögurs, Monguors) consider the Muslims as having a barbarian religion; the Chinese, generous and tolerant in regard to religions consider at least Islam to be somewhat inferior to their own multi-religious conceptions and beliefs.

T 133 In the region of the Hsining River we again traveled between loess-covered red clay mountains to the town of Ping tschung yi and then through the so-called Hsiao hsia (small gorge), both of them places where in the last Mohammedan war there were bloody clashes.

C 797 361 On December 25, I was in the city of Hsining fu. I soon found a pretty, albeit dirty, but at any rate homey inn, and that evening I could already spend with Mr. and Mrs. Ridley, the English missionaries of the China Inland Mission, to whom so many Tibetan travelers are indebted. With two boys of five and three years and their adorable little daughter who was then six months old, the courageous couple were again living all alone among the Chinese in the rude frontier town in which they already in 1895 lived through the terrible four-month siege by the Mohammedans. The last European whom Mr. and Mrs. Ridley had seen, had come through Hsining fu a half year before. I found a large Christmas tree in their simple Chinese house, and on that evening I was even permitted to appear as "Grandfather Christmas" with a long white beard, with a stick and a rod and a well-filled sack, and help give the children the type of Christmas celebrated in their homeland. I would not have dreamed of all this on the night before when in the pitch dark I was still sitting on my pony in a temperature of 15° and in a dry, biting mountain wind, until I finally found a hut on the gates of which we had to knock for a long time before we were admitted.

C 727 Of course, nothing had changed in Hsining fu since I had left it in November 1904 together with Mr. and Mrs. Filchner. Chinese cities probably do not change much anyway. There was meantime only the small war that was taking place on the Hwang Ho below the city of Kue de ting and the city had not yet calmed down during the first few days after my arrival. An anxiously-awaited execution order had just arrived from Peking and, at the imperial command, a few leaders of the hostile party, an aristocratic Salar and a few Tibetan chiefs and lamas were now being beheaded just outside the west gate. This was a big event because of the importance of the persons. Many people had gathered from far and near for this performance and the soldiers who were in charge of the execution were very frightened. They purposely walked back and forth excitedly while the preparations were going on and meanwhile one of them on whom the executioner's sword had heretofore not been seen, knocked off all the heads in such a way that no one could tell who actually did it.

133 the river, a great deal of loess mixed with broken stones can immediately be seen, and for the first time since I left Hsining fu I again saw a cart. /302/ (1) The higher up I climbed on the other

[493]

1. The boundary marking the distribution of the North Chinese two-wheel horse cart extends from here along the mountainous country I had just traversed eastward and keeps to the north of the Tsing ling pass in the North Chinese loess country. It is unknown in all of Szechwan and Kweichow, Hunan and in large parts of Hupeh.

361 side, the purer became the loess masses. At Lao tschai ni, a Chinese town, 3,015 meters high, I had already reached a typical loess village and caves in the loess. Four kilometers farther and only 250 meters lower lies the commercial city of Tao tschou, the Tibetan Batse.

It was nine o'clock and had grown dark when, with great effort and exertion, I reached the city, and ör gen, the second night watch was long past before the tormented tsung ye who in the darkness had lost the path, finally discovered me. Long before that, the friendly members of the Christian and Missionary Alliance, the Americans Mr. and Mrs. Ruhl and Mr. and Mrs. Simpson, had found me and invited me to supper in their new home in which the former couple did Tibetan missionary work and the latter, Chinese. My stay in the border city lasted from September 9 to 23 and was made pleasant by the hospitality of the missionaries who did not rest until, on the third day, I moved out of my grimy hotel and into their home outside the city. Meanwhile I discharged the caravan, paid off the servants and escort and presented the tormented tsung ye and his men with a mule and three horses, besides money and food supplies. I had never before on any of my journeys had such apt companions who were so willing to serve me. When the tsung ye said farewell his whole face lighted up and I, too, felt his relief over the fact that, in spite of my vagaries, he was able to deliver me safely at the appointed place. I sold two more mules here and only Brdyal and six animals remained. A team /hang/ of mules brought the large pieces of baggage to my depository in Lanchow fu, and my time was occupied arranging my diaries and developing my photographic plates. Only a few more than 400 plates turned out successfully on the last journey, one and one-half boxes (420 plates) were destroyed by water, while 280, all of those taken with the polyscope camera, were spoiled because they

[497]

000

and a certain degree of reproach. On the other hand, prompt observance of the rites at least creates a feeling of fellowship. It is primarily a personal matter, but nevertheless, the entire community responds, just as in the case of the spring planting, and for the same reason. Each finds comradeship in working with the others in whatever concerns the welfare of the community.

There are farm villages in which live only Chinese Moslems. Physically, the community structure is similar to a Chinese village. These Moslem villagers live in the same kind of houses and do the same kind of farming. The streets of the villages also have a similar arrangement. But the Moslem people's religious-communal life is distinctively different from that of a Chinese village. In every Moslem village there is a small public building that is used as a mosque. In this building the children of the village gather at regular periods to receive religious instruction. They learn the Arabic alphabet and phonetics so that they are able to read the sounds of necessary prayers and religious formulas, even if they cannot understand them. The Moslems are very faithful in their observance of the fast of Ramadan. During the fast, they eat nothing between sunrise and sunset. At night they eat a communal feast. The community fires blaze all night and people call and shout to each other. Before darkness falls, pious bearded men say their prayers in public places. One or two of the elders may preach the points of theology, quoting the Koran in oddly mutilated Arabic. On such an occasion the Moslems refer to themselves as "we" and to the Chinese in the nearby villages as "they" As in the case of the Chinese temple, the building and upkeep of the mosque is a communal matter. Assessments are made and cooperative effort is initiated; and, of course, as a project, it rivals and competes with the Chinese temple.

The Moslem villages are comparatively more organized, or show more community spirit, than the Chinese villages. Like their Chinese counterparts, the Moslem villages are administered by their village elders who always intervene in the meager relations between the villagers and the local or county government. The county government makes no distinction between Chinese and Chinese Moslem villages. The two types of villages have almost no relations with each other. There is always antagonism between Chinese and Moslem villages. The two peoples have been and still are mutually practicing segregation. Factors which are responsible for the antagonism or segregation are mostly religious habits and ideals. In addition, while the Chinese have a higher population gain, the Moslems are economically more successful. Both of these facts may be sources of jealousy.

However, in numerous economic activities, there is non-admitted cooperation or division of labor between the Chinese and the Chinese Moslems. This has held true especially for Moslem enterprise and Chinese skill.

799 [788] of the necessary means and the physical possibility of getting to Mecca.

e. The Way of God (Jihad). In addition to the obligations mentioned, in many passages the Koran further enjoins believers to "strive in the Way of God." The duty is formulated in general terms in Sura li, v. 186., between the regulations of the fast and pilgrimage: "Fight in the Way of God against those who fight against you, but do not commit aggression. . . Slay them wherever you find them, and expel them from whence they have expelled you, for sedition is more grievous than slaying. . . Fight against them until sedition is no more and allegiance is rendered to God alone; but if they make an end, then commit no aggression save against the evil-doers."

A distinction is drawn between warfare against the pagans, on the one hand, and against the Jews and Christians on the other:

"When the sacred months are over, kill those who ascribe partners to God wherever you find them; seize them, encompass them, and ambush them; then if they repent and observe prayer and pay alms, let them go their way." [Sura ix, v. 5]

799 721 • 798 "Fight against those who believe not in God nor in the last day, who prohibit not what God and His Apostle have prohibited and who refuse allegiance to the True Faith from among those who have received the Book, until they humbly pay tribute out of hand." [Sura ix, v. 29]

"As for those who are slain in the Way of God, they are not dead but living in the presence of their Lord their needs supplied, rejoicing in the bounty which God has given them." [Sura iii, vv. 163-4]

799 [262] [681] [567] [581] [671] Besides these major issues of doctrine, ritual and obligations, the Koran contains a large body of religious and ethical teachings and legal injunctions. For example, wine, pork, gambling and usury are forbidden along with the making of images or representations and a number of the practices of pagan Arabs. Marriage, dowry, divorce, the guardianship of orphans, and inheritance are all regulated in detail. Penalties are laid down for certain crimes such as stealing, homicide and murder as well as for a few minor offenses. Slavery is accepted as an institution, but certain limitations are placed upon the rights of owners over slaves and good treatment of slaves is enjoined. Fraud, perjury and slander are repeatedly and severely condemned, and rules of social behavior are laid down in several passages. All these and other regulations explicitly detailed in the Koran served as foundations for a more elaborate set of rules and regulations upon which the structure of the Shari'a, the Islamic law, was erected by later generations.

N 795 D. The Sects of Islam

The two major sects of Islam are the Sunna and the Shi'a. Both of these camps are divided internally into numerous subsects, a discussion of which will not be included in this chapter.

N 795 • 798 The schism between the Sunna and Shi'a occurred first on the political question of the legitimate succession to Muhammad's leadership in the Islamic world. The Sunnis claimed that the Caliphs were the legitimate heads of the Islamic community. The Shi'a followers repudiated the first three Caliphs, Abu Bakr, Omar and Uthman, as usurpers, and declared Ali, Muhammad's son-in-law, to be the true successor, and his house to be the only source for the selection of future Caliphs.

The Shi'a sect seceded on a purely political basis, but it also began to develop its own characteristics in matters relating to religious doctrine. It spread widely in Persia and Iraq and assimilated a great amount of the esoteric non-Moslem doctrines which prevailed among the newly converted Moslems.

N 799 795 798 In particular, a special doctrine concerning the nature of political leadership of Islam divides the Sunnis and the Shi'is. The Shi'is attribute to the Imam (the political leader) a spiritual function which the orthodox Sunni theologians never granted to their Caliphs. This doctrine of the Imamate gradually crystallized into definite theological form. The Imams acquired a superhuman character and their decisions on both political and theological questions are not to be contested.

N 795 The mystical movement in Islam, Sufism, found followers in both camps, and is popular mainly among the masses of the people.

S 563 795 E. The Turkic Moslems of Sinkiang

The majority of the population of Sinkiang is Moslem by religion. The Moslems include the Eastern Turkis, the Kirghiz and Kazakh nomadic tribes, a small number of Chinese Moslems and a few Afghans, Indians and Tajiks, most of whom reside only temporarily in Sinkiang.

The Turks of Sinkiang are Sunnis of the Hanefite School. Unlike the Chinese Moslems, they have maintained close ties with the rest of the Moslem world. The idea of the cohesiveness of all believers is very strong in Islam. The Turks of Sinkiang not only feel strong national ties with their Turkic brothers in Western Turkestan, but they also consider themselves an integral part of the Moslem world community. In the past they recognized as the chief of all believers (emir el mu'minin) the Khan of Bukhara, and they looked to the Sultan of Constantinople as the political leader of Islam.

S 799 Sinkiang can be called a Moslem country, but it has features which are peculiar to it, and which have greatly changed the

797 [211] • [798] or Ching-chiao pei in Chinese, which stands at Sian, varifies the fact that this church had been established among the Chinese people of Shensi Province. This early Christian movement in Northwest China suffered persecution and died out. In modern times both the Catholic and Protestant Churches came to the Northwest. Most of their converts have been Chinese. Until the Communist period the Catholic Church had been very strong in one place in Ningheia Province. It rendered many kinds of service to its members and had a much stronger control over them than did the local government. To a great extent it had trespassed the jurisdiction of the government, which had created considerable resentment and suspicion among the authorities and the general populace. (See Social Structure.)

799 Though subscribing to all important religions in varying proportions, the Chinese in the Northwest, like those in other provinces, seem rather materialistic. Nowhere among them is there found a religious fervor and devotion which characterize both the Moslems and the Tibetans of this part of Asia. However, the religious atmosphere is very strong in all aspects of communal life, which are always cloaked with some religious rite. For example, the village or community theatrical has a great deal of religious implication. Although unlike the miracle plays and so-called devil dances of the Tibetans, the plays are usually straight drama, frequently historical, the primary significance of the presentation is a religious one. They give the gods pleasure and thus dispose them favorably toward the people of the community. Even the mask and the animal plays of the New Year's celebration have a definite religious significance.

799 769 [353] Chinese home life is also mixed with religious or semi-religious feelings. Regardless of its wealth or locale, a Chinese home will have its ancestral tablets in the place of honor. The tablets represent those who have gone and keeps them and their memory always present. Those living now are only the present custodians of the family name.

[592] [614] "This belief. . . holds the members of one household together with strands which are not so much woven by affection as by a sense of mutual responsibility within a clan. . .

799 796 592 782 "At New Year the shack living room, miserable though it be, is the scene of the most exact rituals when, in absolutely correct order, each member of the family makes obeisance to the elders; the feasts fixed by the Chinese calendar are scrupulously observed, and I have known a man to carry a watermelon for days across the desert in order that at the Feast of the Moon, in the most desolate of wayside stages, he might put an old rickety table in the courtyard and offer the melon, cut in slices, to the Queen of Heaven.

N 791 182 N (769) "The traditions, the rituals, the basic and essential relationships which govern men's intercourse, control the small circle living in such far-away places as rigidly as they control the family which dwells in one of China's great cities. Both act according to principles laid down by ancestors, whose control is so subtle and so little questioned as to leave no room for the spontaneous and the unusual." (Cable and French, The Gobi Desert, 165-166.)

S 791 795 (575) Chinese settlers in Sinkiang of course reflect the religious characteristics of their origin. Among the old settlers, who came into the country with Tso Tsung-t'ang, the secret society tradition is still strong. Merchants, mostly from Tientsin, almost universally belong to the Tsai-li sect which forbids its adherents indulgence in drinking and smoking.

IV. Religion under the Communists

N 795 *668 199 A. Islam

When they were fighting for the supremacy of China in the years following World War II and when they first came to power in 1949, the Chinese Communists promised religious freedom to the national minorities in an effort to gain their support. Article 53 of the Common Program of the CPPCC, promulgated in September, 1949, stated that "the national minorities shall have freedom to develop their dialects and languages, to preserve or reform their traditions, customs and religious beliefs." Mosques were promised exemption from taxes and Article 3 of the Agrarian Reform Law, published in June 1950, which decreed the confiscation of the land belonging to ancestral shrines, Buddhist temples and Christian churches and schools, provided for the retention of land by the mosques, subject to the wishes of local Moslem residents. As a further effort to win over the Moslem population of the Northwest, the Government Administration Council issued in December, 1950, a directive permitting the observance of the festivals of Id-el-Fitr, Corban and Molid Nabawi. It abolished tax on the slaughter of cattle for celebration of these festivals and permitted holidays for cadres, soldiers, workers and students of Moslem faith. State trading companies were instructed to sell daily necessities to the Moslems, during these festivals, at reduced prices.

These pronouncements made up the sum total of what the propaganda of the Chinese Communists called the "policy of benevolence" toward the national minorities. They were given tremendous publicity which served to overshadow the grimmer and more gory record of persecution of the Moslem peoples in the Northwest. The reasons for the ostensible policy of toler-

N • (798)

795 648 *668 199 793 in the Northwest was utilized primarily as propagandists. In April, 1951, three thousand Moslem ahungs and mullahs from forty-five mosques in Urumchi held a mass meeting to denounce the United States and, later in meetings of their congretations, they made speeches to persuade the Moslem people to sign the Stockholm Peace Appeal, the Appeal for the Five-Power Peace Pact, and to protest the rearmament of Japan. On May 2, 3,500 people, led by ahungs and mullahs of 46 Urumchi mosques offered prayers for world peace. The mass rally initiated a drive for funds for the purchase of planes, tanks and heavy artillery for the Chinese troops in Korea. The minority peoples of Sinkiang donated funds sufficient, it was reported, for the purchase of thirty planes and seven artillery pieces. The religious leaders of Yin-chuan in Ninghsia donated funds for a fighter which they named "Mohammedan."

795 • 798 *668 199 In a way, the acquiescence of the Moslem leaders to assist the Chinese Communists in the promotion of propaganda has been a reason for the comparative moderation of the Communist regime toward Islam in China. The attitude of the Chinese Communists toward the teachings of Muhammad has followed very much the line adopted in Soviet Russia. The evolution of the Soviet authorities toward Islam has undergone the following stages: (1) the attack on the teachings of Muhammad as the deification of big capitalistic merchants exploiting the unhappy poor, (2) the argument that Islam was originally the ideology of the peasantry but was later corrupted by the aristocratic class. This view was rejected as being too favorable to Islam. (3) The anti-religious propaganda lines that Muhammad was a myth or that Muhammad was the leader of a feudal revolution. (4) The argument that finally prevailed was that of S.P. Tolstov, that Islam emerged from a social-religious movement which evolved from the feudalism following the disintegration of Arab tribal systems. (Essays in the History of Research into Islam in the USSR, published by the History Institute of the Soviet Academy of Sciences, cited in Missionary Bulletin, September, 1955.)

In China, the argument for and against the teachings of Muhammad also raged in Communist publications early in 1951. Lu Hung-chi, in an article in Kuang-ming jih-pao (January 10, 1951) charged that Muhammad, figuratively speaking, held a gun in one hand while he reached into the pockets of the people for money with his other hand, and that his teachings were an excuse for robbing the people. This article aroused a storm of protest from the Moslem residents of Peking and prompted Ma Chien to write a rebuttle entitled "The Sword of Muhammad," published in the Hsin-hua Monthly (February, 1951 issue), stating that the sword of Muhammad was for self-defense, aimed only

795 • 798 *668 199 795 618 *668 199 at the counter-revolutionaries and not to coerce the people to become converts. In this article, Ma Chien skillfully diverted the attention of the people from Islam to the United States as the enemy of the nation, saying that it was American imperialism, not Islam, which aimed at the conquest of Asia and the enslavement of the Asians. This line was immediately adopted. On May 16, 1951, the Jen-min jih-pao carried an article entitled, "The American Imperialists are the Deadly Enemies of the Moslems of the World." On April 16, 1951, another article appeared in the Jen-min jih-pao, signed by forty-nine prominent Moslem leaders in Peking, entitled "Moslem Brethren of the World, Rise up to Halt the Crimes of the American Imperialists." The cry was re-echoed by Moslem leaders in the Northwest. Ma Liang-chün, imam of the Chinese Moslems in Sinkiang, issued a proclamation under the title "Moslem Believers, Take Positive Action and Struggle to Crush the Germ Warfare of the United States." (Sinkiang jih-pao, March 13, 1952.)

Thus, by joining the Resist United States and Aid Korea Movement, which was raging at a frenzied pitch in 1950-52, the Moslem leaders in China were able to deflect attacks on Islam launched by some of the Communist publicists. But with the conclusion of hostilities in Korea, the Chinese Communists began to re-evaluate and to revise their policy toward the Moslems in the Northwest. Moreover, by 1954, when Communist China had gained ascendency in Chinese Turkestan and political domination over the Moslem population in that region, there was less need to pacify them by promises. The year 1954 also marked the end of the period of New Democracy, which called for a United Front of all the peoples, and the commencement of socialism, in which the CCP would emerge paramount.

795 641 *668 199 The change of Communist policy toward the Moslem peoples of the Northwest as in other parts of China is seen in the official documents of the Chinese Communists. In contrast to the Common Program of the CPPCC, the blue print for the period of New Democracy, in which, in Article 53, the national minorities were promised freedom to develop their languages and to preserve or reform their cultures and religions, the Constitution of the People's Republic of China (adopted in September, 1954,) pointedly omits the freedom of religion for the national minorities. Article 3, which discusses the rights of the national minorities, states that "all the nationalities have freedom to use and foster the growth of their spoken and written languages and to preserve or reform their own customs and ways." Only in Article 88 was there the provision that the "citizens of the People's Republic of China enjoy freedom of religious belief," and, according to Mao Tse-tung's definition (in his People's

S N 563 183 709 431 [651] religious teachings. According to the religious code it is obligatory for a man of means to contribute a certain amount of his wealth to public charity. Next to worship, this is the most important duty in Moslem society. The original idea of helping the poor and needy evolved into a tax (ten per cent on agricultural produce and two and one-half per cent on animals) collected from all believers for religious and public welfare purposes. Another form of alms, the sadaqa, is a voluntary offering. Public welfare supported by the tax, after the collector's fee is deducted, includes freeing slaves, assistance to persons who became indebted for good reason, making holy war to defend the people and the faith, and aiding needy travelers.

S N 563 796 935 During the month of Ramadan (fasting) donations and offerings are collected for public welfare purposes. The amount is not fixed, and the act of giving is voluntary. A sense of public responsibility is strong among these people. Not only do they give regular allowances to the needy in their own communities, but they help needy outsiders of their own faith.

S N 563 788 554 The Hajjis, or those who have completed the pilgrimage to Mecca, are highly respected in the Moslem community, and wear special badges to mark their distinction. The opportunity to journey to Mecca is the dream of all Moslems.

c. Virtue

S N 563 579 709 It is important for the individual to cultivate the true concept of peace and submission. The concept of peace involves such ideals as mutual cooperation and aid among mankind, mutual understanding among religions and peaceful co-existence of nations to achieve world brotherhood. The concept of submission means to submit oneself wholly to Allah and follow his teachings, sacrificing self-interest for the promotion of happiness for mankind.

S N 563 515 Personal cleanliness, both internal and external, is most important. Cleanliness in eating habits and personal hygiene is thought to develop a clean soul, free of evil thoughts and immoral conduct.

S N 563 186 d. Racial superiority

The Chinese Moslems regard themselves as a special group, superior to their Chinese neighbors. As students and officials, their attitude toward respect for the emperor and for Confucius has, in the past, been one of compromise. Compelled by law to conform, they excused themselves on the grounds that they did so outwardly but not in their hearts. The old and the new sects of Chinese Moslems, although bitterly hostile toward each other and at times engaged in armed conflict, on the whole present a united front toward the Chinese and the rest of the world. S N [798]

795 Democratic Dictatorship, 1949), the term "citizen" is restricted
641 to certain select classes of people, not all the people.
*668 Moreover, as the Communist officials have frankly stated,
177 toleration would be granted to only religious faiths which (1)
795 have been purified of foreign influences and "feudal superstitions," (2) contribute toward the increase of production, and
•798 (3) do not conflict with the teachings of Marx, Lenin and Mao
*668 Tse-tung. In other words, the Chinese Communists sanction
177 only religions that have been tamed, domesticated, and cleansed of political coloration.

In the implementation of this policy of the Central People's Government, Burkhan, governor of Sinkiang, announced in February, 1955, that only "legal religious activities would be permitted by the people's government," because, he said, "individual counter-revolutionary elements have infiltrated into Islam and, under the cloak of religion, are carrying on counter-revolutionary activities." (Sinkiang jih-pao, February 25, 1955.)

The stiffening of Chinese Communist policy toward the adherents of Islam represented, actually, no radical change but rather the shedding of the pretense of benevolence toward the nationality minorities whose attachment to their religion was stronger than their allegiance to the state. It represented, too, a recognition by the Chinese Communists of the fundamental differences between Islam and Communism and of the impossibility of rationalizing these differences. Islam, with its strong social principles for the regulation of state and homelife, conflicts with the totalitarianism of Communism. As Moslem
795 leaders of Asian countries have pointed out, Communism advo-
*668 cates the use of force against those who would not readily
177 accede to it; Islam teaches men to bring others to follow the way of God by peaceful means. Communism does not respect the sanctity of human life, but teaches violence and favors the organization of society based upon atheism and anti-religion; Islam provides for individual rights and freedom, and encourages humanitarian services, compassionate feeling toward all living beings, apart from devotion to God.

Besides being a religion, Islam in Chinese Turkestan has
795 also been a strong political force welding the multi-racial
182 groups together in their struggle for self-rule and their resis-
[669] tance to oppression. The insurrections of the Moslems against the Chinese in the beginning of the nineteenth century have been led by religious leaders, the Khojas; the widespread uprisings of the Moslems in the 1860's were led by Ma Hua-lung, the leader of the New Sect, in Kansu, and by Yakub Beg, who bore the title of Commander of the Faithful, in Kashgaria.

000 The demands of the natives of Sinkiang for independence were

795 the Communist soft-glove treatment. It is known, however, that
792 they are used widely as Communist propaganda agents.
*563 In Tibet, on the other hand, and that includes the Tibetan
*668 parts of Chinghai, the position of Lamaism is infinitely stronger.
177 There was no sign of weakening in the adherence to the old faith,
795 and militant Lamas were always in a position to incite the lay
792 population to concerted action. This has again been shown in the
171 recent rebellious outburst in Tibet, which seems to be partic-
*668 ularly strong in Southern Chinghai. Occurring at a time when
177 the Dalai Lama was back in Lasa and the first steps had been taken to grant Tibet "autonomy" status (Reuters, April 26, 1956), this outburst is all the more surprising as it sets off the leading Lamaist clergy not only from the Peking regime but also from their spiritual head. Ruthless suppression measures which included the bombing of Lamaseries have thus far apparently not succeeded in quelching the rebellion. Mention is made of a Tibetan Resistance Party (Mim ang, literally, People's Organization) led by Lamaist clergy and joined by officials, traders and other laymen (Himalayan Times, Kalimpong, May 13, 1956: New York Times, June 30, 1956; AP, July 7, 1956).

C. The Fate of Christianity

795 Christian missionary activities and Christian establishments
•798 in the Northwest have been predominantly Catholic. The Com-
*668 munists had some dealings with Catholic priests and Catholic
177 communities in the Yenan period. The staunchly anti-Commun-
[797] ist stand of the Catholic Church had at that time given rise to friction and incidents, even though the Communists still wanted at that time to avoid drastic action. In Mongol Catholic communities they had attempted to undercut the prestige of the priest in case he was a foreigner, but they learned from experience that they did not fare better when a Mongol Catholic priest was put in charge. The strong cohesion between the community and the priests forced the Communists repeatedly into making concessions. A perusal of the records, however, creates the impression that dealings with the Catholic Church were handled locally and incidentally only, and that no plans were yet devised for how to take care of the Catholic Church.

795 After the general conquest, however, a pattern emerged
*668 which shows that an over-all policy was applied to the region.
177 This policy was apparently inspired by Lenin's doctrine that
798 Bismarck's head-on collision with the Catholic Church, the Kultur-kampf, was a folly. A propaganda front of "religious freedom" was therefore maintained all through the years. There was apparently, particularly in the beginning, a certain amount of local lattitude in the interpretation of this principle. In a

795 number of parishes, religious life went on without major inter-
*668 ference up until about 1951. For the strategy of interferences the
177 Communists drew on earlier experiences in Manchuria and
•798 Inner Mongolia, where "spontaneous action" had frequently led to situations that were deemed undesirable by the regime (see Northeast Handbook, Religion). From the pattern of events the following strategic rules can be derived:

1. Do not attack the Catholic Church as such.
2. Attack certain Church institutions which are either most dear to the hearts of the communities or most efficient in maintaining an active community spirit.
3. Avoid making martyrs.
4. Attack individual functionaries of the Church on non-religious charges.
5. Draw the utmost propaganda advantages out of every case.
6. Separate foreign leadership from indigenous communities.
7. Substitute a malleable "Catholic" organization for the existing Catholic Church.

Not even the first of these principles was generally applied. Even though the "freedom of religion" line was never officially abrogated, repeated anti-religious propaganda campaigns were entertained to create an atmosphere in which individual believers would sever their connections with their Church. In the case of Catholics these campaigns proved essentially a failure. It was furthermore made perfectly clear in interrogation of Church officials that there was no room for religion in a Communist state.

Catholic institutions most heavily attacked were the orphanages and the Legion of Mary. The Communists did not tolerate the possibility that an institution of such incisive charitable effect as an orphanage should remain in the hands of the Church. The public trials of the Sisters who were in charge of these orphanages are among the most vicious on record; incredible charges such as child murder and selling into prostitution were preferred against them. The Communists even risked considerable opposition and resentment to eradicate institutions which would so obviously ingratiate the Church to the communities.

The campaign against the Legion of Mary started early. It reached its pitch in 1951, but has not subsided.

The treatment dealt out to Catholic priests, sisters, brothers and laymen showed some local variations. There are instances in which torture and indignities were only sparingly applied. In most cases, however, it was attempted to go all the way to the point of martyring—an attempt, by the way, that was not always successful. Insufficient food, shackling, beatings by fellow prisoners used as stooges, constant disturbance of sleep,

795 continuous interrogations and then trials before People's tri-
• 798 bunals and confrontations with hysterical crowds, parading
177 through the city, were the methods most frequently used.
*668 In the second half of 1951 and all during 1952 and 1953, the campaign against the Catholic hierarchy went on. Most of the bishops and priests were charged with collaboration with imperialistic countries, spying, and membership in the Legion of Mary. Many of them were thrown into jail or kept under house detention, and then one by one they were expelled. It is strange to note that, particularly in the beginning, the Communists wanted it to seem that they left voluntarily, and all kinds of torture were applied to make them sign petitions for an exit permit. Among those expelled were: Archbishop Theodore Buddenbroek of Lanchou, Kansu; Bishop Melckebeke of Ninghsia; Prefect Apostalic Jerome Haberstroh of Hsining; Bishop Larranga-Lana of Ping-liang, Kansu; Prefect Apostalic Pierre Maleddu of Hsing-an, Shensi; Bishop Peter Grimm of Ch'in-chou, Kansu; Bishop Joseph Maggi of Han-chung, Shensi; Bishop Pierre Moretti of T'ung-chou, Shensi, and Bishop Fulgence Pasini of San-yüan Shensi. Priests and Sisters were also forced to leave, so that by January 1, 1956, no foreign church official was left in the Northwest. However, as in most of the dioceses concerned, the indigenous priesthood, Chinese or Mongol, was well developed, this loss of foreign leadership did not hurt the Catholic Church in the Northwest so much as the Communists had hoped. Chinese priests were not spared the persecution that their foreign brethren had experienced. They were pilloried and jailed in great numbers; but they stood up to the test remarkably well. Even under the most restricted of circumstances they maintained church services and contact with their communities. It is reported, for instance, that an unnamed Chinese bishop carried on in Lanchow after Archbishop Buddenbroek had left, and even went on ordaining new priests.

The attempt by the Communists to substitute an "Independent" or "Reformed" Catholic Church for the original structure failed dismally in the Northwest. Also in other parts of China this movement has found only negligable response among the Catholic clergy, with the exception of a few show pieces which, of course, are always produced when foreign visitors are at hand. When the movement started, a few among the clergy in the Northwest might have believed that the Holy See would condone such a compromise. Excommunication of the collaborators soon dispelled this belief, however, and in no known case does a priest in the Northwest support the movement. The Communists tried for a time to bring in some "progressive" priests from outside, but apparently none could gain a foothold in Northwest communities.

/Chinese, Chinese Moslems and Sedentary Tibetans/

because there is nothing for which to exchange it. Once a week a caravan carrying Government supplies deposits a bag of flour at the door. This is the subsidy granted to them, in exchange of which her husband is bound to be at his post all through the year, and keep the well from being choked by sand. She has never thought in terms which refer to anything except meals, births and occasionally deaths. Her boys may go farther afield, and if they do, she knows that they will never return, but after a time she will become accustomed to their absence and it will not trouble her again."

With spiritual senses dormant, mental powers arrested and physical demands reduced to the minimum, wherein shall a human being show that he differs from the beasts whose conditions he shares? There is hardly anything which can be called attitudes or reactions.

About the Chinese-speaking Moslems Miss Cable reports that Chinese travelers avoid any inn operated by Moslems because of the rudeness to which they may be subjected when using it. This is a very particular observation, as in other places in the Northwest, non-Moslem Chinese prefer to go to Mohammedan restaurants, which are famed for their cleanliness and tasty food. In many places Moslems have monopolized the innkeeper business, so that they cannot possibly be avoided. Even the Chinese guests abstain from eating pork during their stay, every pot and pan which they possess is considered unclean and will not be allowed inside the kitchen. This is not conducive to good feeling between host and guest, and may at any time lead to high words and even to blows. Toward known westerners the Moslems' attitude is somewhat different, and more tolerant. Cable records the experience of her party in staying in an inn with the sign of "Pure and True Religion" by saying, "The attitude toward our party was different because, though we were styled kaper (infidel) we were known to keep a 'clean' kitchen, which is to say that pork, lard, and every produce of the pig was rigidly excluded from our menu. We were 'infidels of the book' for the Bible and not the Koran was our guide, but we were not 'infidels of the pig' which was an insult reserved for eaters of unclean food. The closest watch was kept upon us as we journeyed, and any lapse or laxity would have been reported to every mosque on our route, so that 'pure religion' inns would have been closed to us. Moslems acknowledged that we were as free from idolatry as themselves, but openly stigmatized us as blasphemers, for we called the prophet Jesus 'Son of God', and the innkeeper turned aside to spit whenever he heard the word." (pp. 72-73). The Moslems who are of means like to make others understand that they are wealthy people. "Like other Tungan landlords to whose houses we had the entree, he left us with a sense that he was very wealthy and that his

*563 181 526 [593] hunting and racing games. In playing such games all the participants think and act as equal competitors. All social and kinship distinctions disappear. The competition between father and son, if they all participate in the same game, could be just as fierce as that between two other persons.

*563 [184] In regard to relations between the Chinese and the Chinese-speaking Moslems, the attitude of the people in Ninghsia was quite different from that of people elsewhere. In Ninghsia, the Chinese-speaking Moslem leaders held that the Moslems are not a race different from the Chinese but that they are only a religious group. Because of this attitude the Ninghsia Moslem leaders advised their co-religionists not to undertake any political movement on the basis of race. This attitude eliminated or at least lessened the racial antagonism between the Moslems and the Chinese. Another [178] significant trend to be mentioned here is that the traditional barriers between the Moslems and the Chinese have been melting *563 away in recent years. Fan reports that the Moslems in the northern parts of Ninghsia went voluntarily to Chinese schools and learned the Chinese language. Some of their religious leaders were alarmed and tried to stop this. But the people answered them by saying: "After our children have gone to Chinese schools and learned the Chinese language they immediately become useful in helping their families to make a living. What is the use of learning the Koran?"

799 Robert B. Ekvall is a Christian missionary who lived in the southeastern parts of the Northwest for many years. He and his wife did evangelistic work mostly among the sedentary Tibetans in the district of the Kansu-Chinghai border. He made numerous observations on the sedentary Tibetans and the Tibetan-influenced 798 Chinese. About the latter, Ekvall says: "In contrast to the violent *563 incompatibility existing between the Chinese and the Moslems, we 795 have Chinese and Tibetans displaying a mutual tolerance in matters of religious belief and practice... the Chinese of the border differ from those already described in that they place a greater emphasis upon Buddhism to the neglect of some aspects of Confucianism. In particular do the more uneducated tend to become almost entirely Buddhistic in observance; the scholars, of course, give greater place to the doctrines of the Sacred Books of Confucian teaching and always refer to themselves as members of the Confucian sect. Also, the Chinese of the border country - possibly influenced by the religious fervor of the Tibetans - appear more religious-minded than their fellow countrymen of the Titao district." (Cultural Relations on the Kansu-Tibetan Border, p.33)

*563 621 184 In speaking of the differences between the Chinese and the sedentary Tibetans, Ekvall observes that the Chinese village organization permits a considerable degree of individualism, whereas in the Tibetan village, communal activity completely overshadows

000 purge took place.

N

In order to control Christians, the Communists sponsored a movement to reorganize the churches. Following the principles of Communism all the churches were supposed to be combined under the leadership of the Communist government. The movement started with a government-sponsored statement entitled, "Road for Chinese Christian Churches in Reconstructing New China." All Christians were asked to sign their names to this statement. To most Christians, this movement was a rebellion against God. To the Communists, any Christian who refused to sign was a potential "counter-revolutionary". According to the Communist report, 1,527 Christians signed the statement in August and 1,741 signed in September of 1950. Among these, 44 were in Shensi and 1 in Kansu. (Peking Jen-min Jih-pao, December 5, 1950). No detailed figures of the later years are on hand but it was the start of a continuous persecution of Christians loyal to their faith.

An editorial of the Jen-min jih-pao of July 7, 1955 complained about sabotage activities of "reactionary" religious groups in Shensi and Kansu during 1954 and recommends: "We must take effective actions and resolutely beat the sinful activities of all the reactionary religious groups.... We must severely suppress these religious leaders. As to the common believers... we must order them to register in the government and force them to sign a pledge to withdraw from their religious organizations."

S

The Sinkiang jih-pao of June 18, 1953 discussed the activities of people's courts in the district of Urumchi: "When the land reform began, the personnel of the courts cooperated with the land reform teams to penetrate into the villages. They called various meetings and publicized the policy, function and missions of the people's court... They encouraged the mass to accuse the landlords,.... Generally they would arrest the landlords... confiscate their property and publicly liquidate them. When a case could be used to educate the people they would convict the man in public trial before a mass meeting. For instance, after the arrest of the unlawful landlord Je-he-p'u (most likely an Uighur) of T'o-k'e-sun, the team and the court organized a small scale liquidating meeting against him in his village. Then they organized a large scale liquidating meeting in the hsiang with deputies from every district of the county presented.... In less important cases, the landlords were warned before the public... and forced to admit their sin and publicly accuse themselves... The important point is to use the local people as the judge and the jury. ... For instance, when the 3rd hsiang of the 3rd district of Shanshan publicly accused the local despot and landlord P'ai-tsu-nan (probably an Uighur), the judge and the jury were all minority cadres. The mass was very much pleased, saying, "Now... it

collectivize was slight, but the speed toward socialization has been increased greatly especially since the middle of 1955. The plans call for a continuation in the breakdown of privately-owned farms. In Sinkiang the 1702 production cooperatives which existed in 1955 are to be increased to 3469 in 1956. By 1960, 85% of all households are scheduled to be at least semi-socialized. Furthermore, a relatively large number of mechanized state farms have been instituted in the Northwest (China News Agency No. 112.). It is not surprising that these rapid changes, combined with methods of terror and intimidation, should result in peasant opposition. (Union Research Service, Oct. 14, 1955.)

-4. Religious organizations

Religious organizations have also come under attack. Counter-revolutionaries are suspected of hiding in them and of using them for propaganda activities and espionage. Sinister anti-government activities are attributed to the traditional secret societies, especially I-kuan-tao, which has many branches throughout China and appears under various names. It is estimated to have 100,000 members in Shensi, Kansu and Ninghsia. Secret society activities have existed among the Chinese Moslems since Tso Tsung-t'ang's invasion of the Northwest. Only now are they being suppressed. It is unlikely that, after such a long existence, the Communists will succeed in completely uprooting the organizations in the very near future.

C. Centers of Resistance Abroad

It is clear that no effective organs of opposition can exist in the Northwest under conditions of terror and in the face of a centralized system of police and military control. All that can be expected is individual terror and sabotage - a method of opposition, nevertheless, that continues to give the administration constant irritation and worry. Moreover, if historical precedent can serve as an indication for the future, a rebellious movement can attain political significance only when military aid from abroad is available. This was the case during World War II, for instance, when the Turks of southern Russia rebelled against the Soviet regime and sided with the Germans. At present only two important centers of resistance exist abroad. One is the so-called National Turkestanian Unity Committee (Turkish: Milli Turkistan Birlik Quomitasinin), headed by its president, Veli Kayum Khan, a member of an old aristocratic Uzbek clan; the other is Formosa, the rallying point of all anti-Communists from the mainland.

1. The Turkestanian Unity Committee

Few people in the West are aware of the existence of an East and West Turkistan government-in-exile, which is supported by the Turks of Central Asia and by Turkestanian refugees. Due to their fear of political entanglements with Russia, none of the

3:Cable & French M-5 (1926) 1927

of age, tall, handsome, strong of body and independent of mind. She walked into our courtyard on the first Sunday we were in Suchow and heard us speak of the Saviour we were there to preach, whereupon she turned to the crowd of women, saying: 'Every word of this is true.' From that day she never missed attending service, and helped us in every way she could.

As has been already recorded, the first night in Suchow was spent at an inn which was very cold and uncomfortable, and we could not remain there. The landlord was a tall ex-soldier of a Shantung regiment, and although we left his inn, he came to see us in our new quarters and was extremely friendly. A few weeks later his wife brought the little baby with her to Sunday service, then returned home, and before night the child was dead. Instead of yielding to terror and superstition she asked her husband's leave to come and stay with the women-students for a few days, for they talked with her of Christ, and this comforted her.

A Moslem merchant was also among those who believed, and his gentle little wife very gradually, but surely, yielded to the faith which recommended itself by the change it had wrought in her husband's treatment of her.

We commenced the winter term of the Bible School under apparently auspicious circumstances, yet those who were leaders in the work were profoundly conscious of a persistent premonition, pointing to impending trouble. The crowds were greater than ever, and praise of the Christian community, its kindness and philanthropy, was heard on all sides. The victories already won, however, were not to be allowed to pass unchallenged. The hostility of those spiritual forces which had met us, on the threshold of the Temple Courts of Hell with a sneering query: '*What? So* you *have*

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

come too,' was gathering impetus for a more organised attack than any to which the Christian community had hitherto been exposed. Severe financial loss was incurred through the death of mules, horses, sheep and cows, in which live stock the Church funds were invested. One of the most valued Christian leaders was at death's door with rheumatic fever, and hope of his restoration was almost abandoned. He, however, slowly recovered, but when barely convalescent, received news that his two cousins who had but recently left us on a visit to Honan, were murdered by brigands on the road. A few weeks later came a letter, telling of a robber-band attack on his home, and the capture of the head of the house. A large ransom was demanded for his release, and the whole clan impoverished itself to raise the money, yet when this was handed over, they merely received the information that his body would be found in a certain well, and so it proved to be.

There had, moreover, been trouble lately in Kanchow, which clearly showed us the active opposition of enemies. The Kanchow Christian farmers had not sown any opium, and so many had registered as enquirers as to cause a positive difficulty to the Local Official in the raising of the twenty-four-thousand-dollar opium tax, at which sum the crop under his control had been assessed. These wheat-growing farmers did not place themselves in a position of financial advantage, as the value of the opium crop, even allowing for the tax, was almost five times that produced by grain. As friction increased, the local tax-gatherer determined to wreak vengeance on the whole Christian community, and thus the plan of revenge was laid with a craft and subtlety such as is difficult for the Westerner to grasp. An old man, seventy years of age, so poor as to be nearly starving, was secretly approached with the offer of

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

798
629

money, a few days of feasting, and the promise of generous sacrifices after death, in exchange for the risk he should run of losing his life in an organised mêlée at the time of a coming fair. After some bargaining the matter was settled, and the tax-collector proceeded to secure the services of certain young roughs, always ready for a fight. The compact, however, was not kept as wholly secret as the parties intended, for some young girls overheard the conversation, and subsequently repeated it to their friends. On the morning of the fair a band of Christian men and women were selling books near the theatrical stage, when the tax-gatherer's gang began to pick a quarrel with them concerning the offence offered to the gods by their preaching. In a moment, others joined in, and there were hot words and hard blows on both sides. Benches were used as weapons, and shortly afterwards the old beggar was lying dead, while the Christians were falsely accused of having killed him! It so happened that the more important Christian farmers were detained that day at a village three miles distant, but in a few hours' time a squad of soldiers arrived from Kanchow and took prisoner twenty Christian men, including even those who could prove an *alibi*. For weeks they lay in prison, without trial or proper investigation, wholly dependent for food on the charity of the Christian community, and not until one of them died, as a result of neglected wounds, was release on bail obtained for the remainder, the official refusing even to coffin the dead man until his old mother made her wrongs known by sitting the whole day wailing, in Eastern fashion, in the Yamen court, while the birthday festivities of the Mandarin were in progress! The facts of the story gradually became known, but no trial was held, and the accused were left in the supremely unsatisfactory condition of

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

being refused all opportunity for clearing themselves, although the whole populace declared them to be innocent. Dr. Kao was actually with us at distant Suchow when the incident occurred. Subsequently, however, he made an open enemy of the Kanchow Official by peremptorily refusing to consider the case on a suggested compromise basis, *i.e.* that as a life had been sacrificed on either side, and honour was satisfied, it only remained for the parties concerned to seal their agreement by feasting !

The circle of those bound together to wreak vengeance on the Christians and their leader was growing, and they were now joined by an influential man of whom Dr. Kao had made an enemy by refusing his donation of several hundred dollars towards the hospital work, a gift which had been offered on the tacit understanding that having accepted it the doctor would cease his open denunciation of the opium traffic.

During the winter months of 1925 the Provinces of the North-West Frontier were placed under the jurisdiction of Marshal Feng, and the city walls were covered with excellent proclamations, forbidding soldiers to oppress the people, and promising adequate protection to farmers bringing in their produce, it being the custom of the local battalions to ill-treat persons and seize goods at their pleasure. These proclamations were received with acclamation by the people, but were obviously *not* liked by the officials or the soldiers.

One day in January 1926, Dr. Kao, walking along the street, met a crowd running towards a back alley, where on following them, he found five men beating a young villager so severely as to endanger his life. Several of the assailants were soldiers, and one, armed with a hammer, was proceeding to break the youth's skull when, without a moment's hesitation, the Doctor

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

the same hour as the carter died—a life for a life, while the local garrison was most indignant at the suggestion that one of their number should be executed on such a trivial charge as the death of a common carter, and swore vengeance. However, after forty-eight hours of extreme anxiety, our relief knew no bounds when a slight improvement, following on a severe operation, showed itself in the patient, and he eventually recovered, the two lives being saved, as the soldier was released.

The New Year festivities were at this juncture in full swing, and the friendliness on all sides was such that we greatly hoped the ill-feeling produced by this incident had passed over. Our guest-rooms were daily crowded with visitors, and the tent would barely hold the congregation which gathered each evening.

It came like a bolt from the blue when one day Dr. Kao walked into our sitting-room with the startling announcement :

' The compound is surrounded by men sent to arrest me ! '

' To arrest you ! ' we exclaimed. ' Impossible ! On what plea ? '

' I am accused,' he quietly said, ' of leading an armed mob to break open the city gaol in order to release a certain Moslem prisoner. The man, as we all know, has been living in his own home for months, nor have I been inside their prison. The accusation is futile, but the power of the accusers is tremendous ; and chief among them is the Governor of the prison himself, *the master of the little slave whose foot I amputated.*" Then, showing a visiting-card, he added : ' This card has just reached me from the Judge, who is a patient of mine, and who asks for a visit from me. I know he never sent it, and it is but a trap to get me quietly into the Yamen and arrest me there, for they fear a hubbub among the

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

people. I expect you agree with me ; I had better go ; and so I just came in to say good-bye. Our life and death are in God's hands, as also the reputation of His Church. He will vindicate His Name.'

Commending each other to the care of God we parted, and he proceeded in company with Mr. Chang to the Yamen. As the two men left the house and walked down the streets, knots of Yamen runners, who had been placed at various points from which they watched the doors of the compound, closed in behind them, so that, as they reached the Yamen gate, they were completely surrounded by soldiers. As they entered the courtyard, the Civil Magistrate appeared, who shouted angrily : 'Seize that fellow Kao!' Immediately a dozen hands took hold of him, and thrust him into the Black Hole of the inner prison, reserved only for condemned criminals.

CHAPTER XXVII

THE STORM

DR. KAO'S arrest took place on February 17th, 1926, and it was June 1st of the same year before he left Suchow for Lanchow, to be present at the enquiry into his case. For forty-two days he was incarcerated in the Black Hole, which is an inner apartment of the prison, without any window ; it contains, however, a small aperture in the roof to admit a little air and light. The cell was so unspeakably filthy that the Doctor's first request was for some quicklime to scatter on the floor and under the boards of the *kang*, on account of the numerous rats, and other even worse vermin. The only door was the one by which the gaoler entered,

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

and in it was a small grating through which the food could be passed. Next to this was the gaoler's own room, and beyond that again was another cell, in which twenty prisoners were incarcerated, most of them heavily ironed ; this room, too, was in almost total darkness. None of all those wretched prisoners were permitted to leave their cells except for a few minutes once in twenty-four hours, and all were entirely dependent upon their relatives or friends for their food ; consequently death from starvation was all too frequent, while, according to Dr. Kao's own account, the nights were made hideous by the agonised cries and groans of these most miserable of men.

For some days after the arrest we suffered intense anxiety from the fact that no message whatever could reach us direct from the Doctor ; moreover, persistent rumours were afloat that he was to be shot. Of course he was regularly supplied with food from the Mission Compound, but we had no certain means of knowing whether he really did receive it or not. Those first days of suspense were, indeed, terrible. The Civil Magistrate, it must be explained, had secured to the accusation brought by him against the Doctor the signatures of the two other most important officials of the city, each one thereby declaring himself personally cognisant of the offence. Consequently, when the answer ultimately came from the provincial capital of Lanchow, it was couched in these terms : 'Since you affirm Kao to be guilty of breaking open the prison of Suchow with an armed mob, you may inflict the extreme penalty of the law ; but if later investigations should prove him to be innocent, you will personally be held responsible for your action.' The three officials then pronounced themselves prepared to take this responsibility ; but did so as a means of currying favour with the local garrison,

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

in the secret hope that the ever-shifting sands of the political hour-glass would produce new conditions, capable of manipulation, if needs be, to cover over such an insignificant incident as that of the execution of a Christian leader. They were strengthened in this expectation by reports of successful demonstrations by the anti-Christian organisations in large cities.

To us the reply from Lanchow seemed to hand over the situation to our enemies ; nevertheless, prayer was constantly made by the whole Christian community to God for Dr. Kao, and we waited for the answer to come.

By the law of China, it is the Civil Magistrate who pronounces the sentence upon the prisoner ; nevertheless, it cannot be carried into execution without the additional authority of the District Judge ; therefore, when this Official was approached and asked to ratify the sentence upon Dr. Kao, he very indignantly replied : 'I refuse to condemn a man whom we all know to be innocent. Every child in the Suchow streets knows that the prison door has never been forced, nor has any prisoner there been unofficially released.' And from this position no persuasion moved him, although he was perfectly aware that such opposition might ruin his magisterial career. We, on our side, at Dr. Kao's request, refrained from any kind of interference or interposition, with the exception that we duly informed our Lanchow friends of all the facts, urging them, if possible, to use their influence to secure an impartial enquiry, which must necessarily be held by officials other than the local authorities. As a result of this appeal, a telegram was presently received from Lanchow, ordering the case to stand over until the arrival of a Special Commissioner appointed for the examination. The natural effect of this communication, following on the action taken by the District Judge, caused some degree

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

of trepidation in official circles, one result of which being that it immediately secured for Dr. Kao the privilege of receiving visitors, ourselves among the number. We always found him cheery and serene, although the sanitary conditions were so bad that they told seriously on his health, so much so, that when at last he emerged into the open day, he fell to the ground overpowered by the effect of the light. Many a time did we remind each other that although he had not broken open the city gaol and released its prisoners, we were yet all at that very hour seeking to preach liberty to the captives held in the strongholds of the Power of Evil.

It was with a peculiar sense of triumph that we brought the news to the prison, one Sunday afternoon, of the first baptismal service in Suchow having taken place that day.

The turnkey was increasingly friendly to his genial, though intractable prisoner, and when the doors were closed for the night, allowed him to leave his cell and preach to the other captives. The accusation was hanging on the evidence of one witness, namely that of the Governor of the gaol, and owner of the little slave-girl mentioned in a previous chapter. He was a man of weak and shallow nature, to whom cruelty of any kind partook of the nature of an amusement. He had bought over several witnesses, but when they heard the rumour of an investigation by a Commissioner appointed from Lanchow, they backed out and declared that only fear of torture had led them to give evidence. He began to realise, when it was too late, that each of the other officials had left himself a possible loophole of escape, which, if acted upon, would leave the whole burden of the responsibility upon his own head. Surreptitiously, therefore, he began to make preparations for a hasty exit into Turkestan ; but this being prevented by his

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

superior, it soon became the city talk, that whereas formerly he looked like a man, now his face resembled that of a terrified ghost.

Meanwhile the Commissioner from Lanchow arrived, and only made himself known after spending several days *incognito* in an inn, under the guise of a merchant. He easily satisfied himself that the accusation brought against Dr. Kao was without any foundation, and he collected witness from every tradesman in the vicinity of the prison, to the effect that the gaol had never been attacked at all. He personally visited the prison court, and noticed that this cell now bore a new red paper notice stating that : ' This room is to be called a House of Detention.' This was a ruse by the Civil Magistrate, to justify himself for having placed an untried prisoner in a condemned cell.

Before returning to Lanchow, the Commissioner insisted upon immediate removal to the real ' House of Detention,' where was a sunny courtyard, surrounded by decent rooms, each containing only one occupant. Here, Dr. Kao soon resumed his normal appearance ; he was allowed to shave and keep his hair cut ; visitors came freely, and things in general were decidedly better. All the same, it was still a prison, and many of his neighbours had lived there for years, awaiting a trial that never came ; fed from their homes by little slave-girls sent in with their meals, and who slipped their slender bodies between the thick wooden bars of the locked entrance gate, with basins of rice for their masters' dinner. Some of these men had settled to a dull apathetic endurance of a wrong that could not be righted, many found a solace in the deadening fumes of opium, but there were a few who abandoned themselves to such a frenzy of despair that within a few months they were released by death from the hands of their enemies.

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

One or two there were who vowed to know no rest until this system of bribery and corruption should be overturned, which made it possible to incarcerate innocent men, sometimes for life, without trial and without appeal.

Kansu was at this time in a political ferment. Some months previously General Feng's troops had assumed authority in Lanchow, and were gradually making their power felt throughout the province. His appointment of his own men to positions of importance caused the greatest excitement and apprehension among the local authorities, and the city walls were posted with the announcement that anyone spreading reports on political or military matters would be shot.

The first we saw of Marshal Feng's officers was one Sunday morning at the early Communion Service, when two finely-grown, well-set-up soldiers, in spotless uniform, walked in, taking their place among the little group of believers, thus openly associating themselves with Christianity. They only stayed a few days, however, but were soon followed by recruiting officers, and lecturers, who addressed themselves to the populace and preached equality and the rights of the proletariat, and when the city walls were covered with anti-British posters. It was all very chaotic. But the recruiting fell off, because the people said, ' Under Feng you *must* fight, so what's the use of his good pay if you die ? ' Then the posters quietly disappeared, but the authorities left ours up intact—one did not know what to expect ! At last an officer appeared, sent by Feng, under whose superintendence the city was entirely transformed in only a few weeks. The main streets were widened and levelled ; a market-place was erected where the peasants might sell their goods unmolested ; industrial institutions were opened for the poor children, and other

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

public works set on foot for the unemployed. Suchow was transformed ! But still Dr. Kao's imprisonment dragged on.

Finally, on June 1st, the trial of our patience came to an end. A student arrived in our court at dawn, saying that Dr. Kao was under orders to leave that morning for Lanchow, there to stand his trial. In spite of final delays and procrastinations, that same afternoon he left on foot for the eighteen days' tramp to the provincial capital. Here he spent some months, during the greater part of which he was able to live with his own friends. When the trial finally took place, he was declared innocent, and acquitted on all charges.

Many had been the orders and counter-orders, the subterfuge, and the conflicting motives at work, under the shifty régime of Chinese officialdom. On his release General Feng appointed him to the position of Medical Officer in charge of Red Cross work at his own Military Hospital, and his return to the far North-West has been temporarily delayed.

C. Ninghsia

The trade in Ninghsia is centered around its capital city, Ninghsia, which is the midpoint of the two important trade routes in the Northwest, one being the Yellow River, and the other being the caravan routes. The Yellow River route is usually divided into the following six sections:

Table III: The Yellow River Route (downstream)

Places	Length (li) (1 li = 1890 ft.)	Days of Journey
Hsi-ning–Lanchou*	480	3-5
Lanchou–Chung-wei	740	3-4
Chung-wei–Ninghsia	350	3-4
Ninghsia–Shih-ts'uan-tzu	190	2
Shih-ts'uan-tzu-Teng-kuo	200	2
Teng-kuo–Pao-t'ou	1,000	7-10
Total	2,960	20-27

*Including its tributary, the Huang River or Hsi-ning-ho.

Source: Shino Shōbetsū Zenshi, 1943 ed., Vol. 7, pp. 640-41.

The caravan routes consist of the following:

1. from Hsi-ning to Ninghsia via Lanchou,
2. from Sinkiang to Ninghsia via Alashan,
3. from Pao-t'ou to Ninghsia via the Ordos,
4. from Ping-liang, Kansu, to Ninghsia via Hua-ma-chih.

A caravan used to have thirty to fifty camels, each camel carrying about 375 pounds of goods and traveling about fifty to seventy li a day. (For modern highways see section Communications.)

According to 1933 statistics, the total value of exports and imports of Ninghsia amounted to 6,310,000 yüan, a little less

a correspondingly important part in Chinese history. In more recent days too, during the troubles since the fall of the Manchus in 1911, it has once more figured prominently in the manœuvres of Imperial, Revolutionary, and Republican armies, brigands, and train bands, while in times of peace it lends itself admirably, flanked as it is by river and mountain, to the levying of likin and other barrier tolls dear to the Chinese official. It is a compact little place, with ramparts and gates remarkable for their massive size even in China, the land of walls, overlooking the Yellow River, which pouring down from the north in a turgid yellow flood here strikes the Ch'inling Shan and turns sharply to the east.

As we approached T'ungkuan some one noticed three strange pack mules which had attached themselves to our caravan. Enquiries elicited the fact that they belonged to a merchant who was endeavouring to smuggle three loads of Price's candles through the frontier barrier into Shensi by this means. We had unwillingly to cut him adrift. Unless accompanied by transit passes goods in transport through the interior of China are taxed again and again at every point where a barrier can be erected until the prospective profit on their sale is eaten up by these tolls and their further transport becomes futile.

From the railhead at Kuanyint'ang to T'ungkuan is called a distance of 280 li, and can be done in three days. As far as Lingpao the li are "short li"; thence to T'ungkuan they are "long li"; the difference is most marked, the short and the long li averaging about a quarter and a third of a mile respectively. This absurd and typically Chinese arrangement is said to be due to the fact that the authorities of Honan Fu endeavoured in days gone by to lay claim to the fortress of T'ungkuan on the ground that it was nearer to their city than to Hsian Fu.

A peculiar four-wheeled cart of prehistoric appearance is used round T'ungkuan, the only place in China where I have seen a four-wheeled native vehicle. Even the huge carts which one meets on the grasslands of the Mongolian border or in the sands of Western Kansu, regular ships of the desert, and often accommodating whole families, are always of the familiar two-wheeled type.

From T'ungkuan to Hsian is a distance of 290 li, which

THROUGH JADE GATE

broken hearts, nor can anyone leave China by this road without peculiar pain, and even tears.

'When I leave thy gates, O Kiayükwan,
My tears may never cease to run.'

The most illustrious of all the exiles who have trod this *Via Dolorosa* was the great Sage and Philosopher, Lao-dze, who here turned his back on the land which had refused his teaching, and sought for himself an unrecorded grave in the wilderness beyond.

Among all those tragic inscriptions, from the day of our visit, one message of *Hope* now hangs, printed in crimson letters so large and clear, that every tear-filled eye can see it : '*Christ Jesus came into the world to save sinners.*'

CHAPTER XVIII

A PRODIGAL SON

The Chinese, together with other ancient peoples, observe the lunar month, and date their calendar by the Agricultural Year ; New Year's Day, consequently, falling irregularly between the last week of January and the middle of February, marks also the time for the sowing of the crops. The official calendar, issued by the Peking Board of Rites, is often at variance with local almanacs, so that we found the people of Suchow were much disturbed as to whether the first day of the first moon should be the coming Thursday or Friday. The question was not to be decided, until Wednesday afternoon, when the Town Crier, beating a gong, patrolled the streets announcing in a loud voice, 'To-morrow is New Year's Day ! '

812

In the cove of Tikyükwe more than in the cave of the Mongols and Turks.

While the attitude of the average Northwest Chinese is rather indifferent to national problems, at least so long as his economic position is not anti-cerately affected, his approach to individual problems is characterized by a distinct

The plateaus of Kansu and Shensi, almost exclusively populated by Chinese, are, in comparison with the provinces of China proper, less progressive in regard to education and general living standard; therefore the frontier Chinese is more conservative but also more suspicious and distrustful when faced with innovations and reforms. He relies more upon himself, seeking and expecting less help from the

Generally speaking, the frontier Chinese can be divided into the following groups: (1) the descendants of those who were exiled and ostracized for political reasons during the Manchu Period, further on, the descendants of criminals who were sent to the frontier areas as workmen, and last but not least, the colonist (the ever-widening majority), partly adventurous and desperados and partly surplus population of China proper who emigrated to the frontier in search of a new home.

Immigrants from China proper who were conscripted to frontier service, desperately looking for new cultivable land.

Among the Chinese of the Northwest, those living in Shensi and Kansu belong to the oldest settlers. Detached and severed from his old homeland, he developed into a more versatile and more open-minded townsfolk unusual and unaccustomed

Living in the midst of a population of a lower standard of culture, he developed a feeling of superiority and self-satisfaction which still survives in the

The frontier Chinese is possessed by a romantic feeling for his old country. His position at an outpost in a remote area makes him see the old homeland in an euphemistic light.

The frontier Chinese has to prove true and to stand the test more than the Chinese of China proper, which treates a healthy measure of self-criticism without falling into the neurotic error of self-laceration. The frontier Chinese is more self-assertive, more optimistic, and more convinced of and bound to his environment than the Chinese of China proper.

The obvious propagandistic success of the Communists in the Northwest is due not only to the above-mentioned phenomena, because the Communistic propaganda proceeds in an atmosphere that is favorable to it, and which is created by certain psychological inclines to rationalistic but pretended acceptance of propaganda.

816

between the Mongols and the Lamaists.

Besides the fault of the above-said complexity of its geographic basis as well as of its historical background, the Northwest's population problems are as complicated as its intermingling ethnic composition. For many years, the extreme northwestern province of Sinkiang suffered from continual conflict between China and Russia, although with the introduction of the Communist regime, the conflict seems at least temporarily resolved.

The development of industrialization in present day China is confined mainly to the Northwest. New towns have been emerging in barren mountainous areas, such as Shih-ch'uen-hsien (Yü-men), Tso-shan-tzu, (south of Wu-sui) and Shih-hot-tzu on the western bank of the Yellow River, between the two well-known (Sui-ta) and Ulan-Wane. The first two sprang up because of the drilling for petroleum, and in the first, mined for the coal from the mountains.

The China Academy of Sciences announced in December, 1955, that in 1954 a number of new research divisions will be established in the Northwest: a Petroleum Research Bureau in Lanchow of Kansu, an Agro-Forestry Research Bureau in Sian, an Archaeological Research Bureau in Sian, a Geophysical Research Bureau and a Veterinary Research Bureau. (Jen-min jih-pao Dec. 16, 1955, SCMA. May 11, 1956).

Last November, a meeting of scientists of the China Academy of Sciences held in Lanchow, and with the assistance of Kuo Mo-jo, the forefather an ambitious plan was formulated for the development of the Northwest in the coming fifteen years, with emphasis on survey of natural resources, water conservancy and irrigation, exploitation of non-ferrous metals, agronomy, soil science and animal husbandry. In these 15 documents, 57 different research institutes of higher education in the Northwest University, the Northwest Industrial College, and the Northwest Agricultural College participated. (Hsueng-ming pöpiao Dec. 13, 1955, SCMA. May 31, 1956).

N. B. General Distribution and Regional Characteristics.

The Northwest Region has on an average density of 28.6 persons per square mile, as compared with the average density of 160 per square miles for the whole country. It has the smallest number of inhabitants among all the major regions of China, as the following shows:

	Population (1953 Census)
North China	55,747,000
Northeast China	42,732,000
East China	162,582,000
Central and South China	176,131,000

all the lamas labored under the delusion that their Great Lama had be blessed or lose his life if a competent magician, an enemy of tantrism, touched his clothing, in fact, if he even touched the soles of his shoes; and all of them were firmly convinced that this exorcism would be eyen easier if a photograph were made. (1)

1. Meanwhile photographs of the Dalai Lama were taken in India. A detailed study about Tobden Dalai Lama is in Sochihii. The Dalai Lama of Lhasa. T'oung Pao 1925, t. 1-104.

After this interview I hurriedly rode back to Hsining fu and without delay began to equip my new caravan. [illegible] the original text.

The goba, the Lhasa "gentlemen," appeared more numerous than ever in Hsining fu during the years in which Tobden Lama resided in Cum bum. The picturesque, gaily-clad and dark-complexioned figures representing the Tibetan aristocracy appeared in all the market places. With their little mustaches and imperials on their chins they made an almost Western impression on me. With the help of interpreters, they traded for the mules of the Amdo peasants, that were for sale and for the few other things that are valuable /85/ enough to be transported across the barren Tsehang tang to Central Tibet. Inasmuch as I wanted to make rapid progress on my new journey, I this time also collected a caravan of mules and horses and was in sharp competition with the gobas. Good mules which we here are very difficult to procure are those that are raised in Shensi, are, in ordinary times, as expensive as four yak cows. The prices were relatively low, considering the presence of so many Central Tibetans. With great difficulty I finally got together 32 animals, among them 12 mules.

On January 14 - I was in the midst of this peculiar business and had that day, been called into the street for the fourth time already in order to look at horses - it suddenly grew very dark. The sky was clear and cloudless, as on every winter day. Not a breeze stirred. Evening seemed clearly to be approaching. Angrily I growled at my servants that they had once again forgotten to bring me my noon-dinner. In reply I could still hear them cry out: "Or me bu h'ai" (The day is no good. /it is an unlucky day/) and then I started up the street to see the horse that was for sale. It chanced that my way led me past the gate of fu yamen. A great many soldiers and musicians were assembled in the broad courtyard, all of whom were solemnly engaged in playing

drums, gongs, shrill whistles, cooking-pots and anything that made a noise, and were, like children, producing an ear-splitting racket. On their midst stood the prefect in full official dress with his blue button and the feathers on his hat, as well as the embroidered heraldic bird on his chest. In front of him a wash bowl had been set up into which he kept looking with a worried expression, and behind him or a wooden frame the symbol of "gluttony" had been drawn on paper.

From a near-by temple also came the sound of hollow drum beats and from all the large courtyards came similar ghastly caterwauling. This was the way these people defended themselves against - the eclipse of the sun which occurred on this day. All those who had an official position - and these are certainly not a few in Hsining fu - felt duty-bound to make a racket along with all their employees. but they were joined by all the wealthy people of the city, all the craftsmen and peasants who crowded and banged in an effort to rescue the sun and drove away the bad voracious monster that threatened to consume her. Words /86/ appearing on order had been issued to this effect from the astrological office in Peking. Like a great strategist the prefect, in the midst of his troops, swore for the success of his weapons. And once again he was in luck! The monster decidely retreated. The sun shone again in its usual fashion. When the danger was over, the prefect offers a kowtow, nodding his head nine times, and then disappears, smiling in a supervisory way, inside his yamen. Commendedly the soldiers march home and everyone continues his usual pursuits.

The eclipse was not total. At the height of the eclipse a tiny crescent was visible on the lower rim. But it grew dark enough so that all the animals were terrified and began screaming. The chickens /87/ gathered in their coops as they do at night; the sparrows continued to quarrel and chirp for a short time, but then quickly slipped into their hide-a-ways for the night, under the eaves. Absolute quiet prevailed in the animal kingdom, only humans had to go on like mad playing their miserable musical instruments until it grew light again and the day began anew for the sparrows and the four-footed animals.

I recruited six men to accompany me on my new venture. Again the supply was tremendous. I had to overcome all kinds of tricks and intrigues in order to get every petting people who had never before been in the steppes or in the highlands. The ones I had hired already were lured by the others for a recommendation. They quickly learned a few matches of Tibetan in order to be able to say they understood

/The Tibetans/

3. Social values and customs

a. Ethics

Early social values and customs of the Tibetans were derived from the teachings of Buddha, Confucius, Lao-tse, and Mencius. Aesthetics formulated a set of virtues for the laity, which however were together as a people, and it is said that birth in the all-generous state and which have become a source of inspiration for Tibetan literature.

The sixteen early Tibetan virtues are: "To have faith in The Three Precious Ones (Buddha, Dharma, and Sangha), to be compassionate and to study; to honor one's parents; to respect the virtuous; to honor elders as well as those of high birth; to pay heed to relatives and friends; to be modest; to be generous; to be honest; to realize the proper use of food and wealth; to follow the examples of the ancients; to be kind to all; to be grateful; to repay debts; to be moderate in one's behavior. These virtues are under had been issued to this effect from the astrological office in Peking. Like a great strategist the prefect, in the midst of his troops, swore for the success of his weapons. And once again he was in luck! The monster decidely retreated. The sun shone again in its usual fashion. When the danger was over, the prefect offers a kowtow, nodding his head nine times, and then disappears, smiling in a supervisory way, inside his yamen. Commendedly the soldiers march home and everyone continues his usual pursuits.

English century A.D.) and a Song edition of the Tripitaka. It gained its name through the Buddhist monk Wei-ho (Song times) who had the text brought to Fukien province from the Kingdom of Hsi-hsia.

Another one is the K'ai-yüan-szu, built in 713 A.D., which is adorned with stone lions and two stone towers, one of which was once famed for its library. Few religious relics are left now at this temple, which has become a source of inspiration for Chinese and non-Chinese artists.

One of the landmarks of Hsien is the Ch'uan-t'ou Pagoda, Hsien's, built during the times of the Five Dynasties. Other famous pagodas in the neighborhood are the Great Buddha Pagoda, Tasheng-t'a, in the village of Ch'ung-fu, and the Pagoda of the Hsing-hua-szu, a temple in the village of Hsing-hua Buddha Pagoda, Hsing-hua-szu's, built in the beginning of the eighth century.

Hsien is known as the birthplace of Ts'ai Hsiang, a famous calligrapher who was found by the Sung emperor Jen-tsung of Ts'ai Hsiang in 708 A.D. at a period when the Imperial house of Tang was ruling in China. Ts'ai Hsiang, Chinese calligrapher, has been transformed into an avenad in Kuomintang times.

B. Religious Attitudes as they Affect Nature

In general the Chinese in the Northwest adhere to the so-called "Three Religions," the Chinese, in their religio here Taoism all play important parts in their religious system. In addition to these religions, Islam, Lamaism, and Christianity have made inroads into the Northwest. Islam is the religion of the Moslem people belong to the tradition of Chinese history and culture, architecture and literature, and in the religious worship of worship and the ideas and practices of Confucianism. There the Moslem Chinese have adopted the Arabic language in their religious services, and the Koran is known to persons for regular services or at least had memorized by the Moslem Chinese. The Moslem Chinese, in their religious observance and practice in their religious activities.

Lamaism is the religion of the Tibetan people, and the Mongolian people, the great pioneers for long with both hands. The requisite may not receive it personally, however, as the giver places it on the top of a pile of other gifts. Two or more of the Tibetans each occupy hand the budget to each other. A person of high rank grants a bolog to a less exalted person, he ties it around the neck of the latter's horse, or he puts it on the place on the top of a pile.

The white cigarette surrounds a social visit. When a visitor appears in a village or in a tent, he receives petting people who had never before been in the steppes or in the highlands. The ones I had hired already were lured by the others for a recommendation. They quickly learned a few matches of Tibetan in order to be able to say they understood

140

THROUGH JADE GATE

133 frost-house in the midst of a group of trees, the whole 134 being reflected in the water, wherein innumbers of little black ducks with white beaks disported themselves, dipping and disappearing continually. The little divers found the current to be so strong, fast as soon as they reached the western extremity they rose to the surface of water and trusted to their wings for the return journey rather than battle against the stream.

There is another curious phenomenon in the facts of which we were able to test. We were told to slide down the sandhill propelling ourselves by movements of our hands. It was found to be a very pleasant manner of way of descent, as the whole warm dry surface moved with us. At a certain point a loud, clear, vibrating sound emerges, as from a gigantic stringed instrument, a twang of a mighty musical instrument, which sound seemed to proceed from the whole mountain side.

Another name for the locality is "The Doce of Thunder," from the extraordinary sounds that sometimes are heard, when the whole valley echos and reechoes with sound, but it is also called the Valley of Singing, and when the sand, moved by the vibration, starts rolling, and continues to roll down in the form of a fall. It is amazing that this little lake and its surrounding temples should be so long ago kept a secret from the world. The sand hills. Certain it is that, however fierce the wind, it always carries the sand away from the surface of the water; were it otherwise one windy season must be enough to alter the whole aspect of the scene.

The Side Door of Paradise' is a name frequently used by Buddhist pilgrims when speaking of this lake. Only a few hundred yards from the lake there is a sandchoked depression, with temple buildings almost wholly submerged by the sand. Local report here was formerly a sheet of water as clear as that of the Crescent

[illegible] Lake of the Crescent Moon [illegible]

5: Tafel--296 T-3 (1905-1908) 1914 All Tibet N.W. China AF13

140

THE LAKE OF THE CRESCENT MOON 141

Lake itself. Its purity was defended by the act of two 133 women, who disappeared into the water, whereupon 134 Paradise by the crystal gate of these pure waters. Throwing their garments and their bodies plunged beneath the surface and were never seen again, but the lake immediately receded and allowed the shifting dune to cover it again.

The popular idea of buried buildings and great submerged temples, which account for call these mysterious effects, are probably correct, nor is it impossible that we found by chance the entrance of them. The whole neighbourhood is full of interest, and some days' exploration, with a proper party to give up its secrets to scientific excavators.

Just where the lake ends, the sand-house, a lama 135 came towards us, having travelled barefoot from the sacred monastery of Shanni, prostrating himself at every few steps. It was near sunset; his red and yellow robes were soiled, but his features still wore a look of unsatisfied, so that he was now calling in at this temple for a night's shelter. We stopped and spoke to him, and then sat down to dinner in front of the lake.

From what Prirlove do you come, lama ? we enquired.

From Utai Mountain, in Shansi,' he answered, ' and the road is long; it has taken me six months to reach here.'

'And where are you going ?

'To Lhasa, through those mountains,' waving his hand in the direction of the Southern Hills.

'What is the purpose of your pilgrimage ?'

'To fulfil a vow,' was the reply.

We handed him a copy of St. John's Gospel, in which he at once read aloud the opening words. ' *In the beginning was the Word, and the Word was with God, and*

the air and even without sun. The Koko Nor rhubarb is bought up by the merchants from the neighboring province of Shensi. For this reason it gets into the hands of Europeans mostly under the name of Shensi- (pronounced: Shansi-) rhubarb. There is also Szechwan, Shanghai-, and Canton-rhubarb, all drug-names which have been introduced by European export firms on the coast or on the Russian border.

824 278 437 /342/ Dankar and Hsining (1) as well as Suchow are the places

1. At the time of my journey Hsining exported 1,000 and 1,200 picul,

where the merchants from the Chinese lowland, the "Shensi- and Canton guests," take the medicinal plant from the rhubarb-gatherers of the Koko Nor in November and December. These merchants are almost exclusively Kansu Mohammedans who set out in groups of 30 to 40, under the leadership of a master. In this way 400 to 500 men journey annually from the valleys of the Hsining prefecture in order to hunt for rhubarb. These leaders are small, independent employers who take the risk of a journey into dangerous Tibet. They pay their men two to three taels a month with free maintenance. In order to be assured in advance of a certain price for their goods and not be subject to too much subsequent speculation, the merchants of the lowland usually bear the cost of the equipment and the rather expensive licenses which may be bought from the amban yamen and also from the individual native chieftains. All my Mohammedan servants had already been in the Ts'ao ti digging for rhubarb. The chief harvest time is September when the small fruit is ripe. Then the rhizomes are less juicy. Of ten pounds of freshly-dug roots, about seven pounds remain after they are dried. In July, on the other hand, they are so spongy that only three pounds remain out of ten pounds, and the efficacious ingredients are not present in such large amounts as in the fall. In the winter and as long as the plant has no leaves, the rhizome is considered "empty."

The gatherers dig out the rhubarb very carelessly. They pull all the larger stalks, those that are more than five or six years old, out of the earth and drag them along with roots attached to the camp sites. There the ring-shaped stricture where the plant part goes over into the rhizome is cut; then the rhizomes are peeled, all the hair

N.W. China AF 13
KalmyK

roots are cut off with a knife, as well as all the old leaves, everything that is, as the people say, "black." Thereupon the clean, wet pieces of root a few inches long are pierced with an awl and strung up on strings to dry in the air. Careful drying is of the utmost importance for the quality and the price. The bulbs may never be exposed to the sun. Thus, they are carefully hung up between the branches of cedar trees (there are no houses or roofs in this region) and where there are gaps in the branches these are filled in with twigs. If the sun dries the roots they are said to become black and the Chinese buyers will not take them or only at much lower prices. The buyers at the Dankar market cut them open in order to see whether they have any black spots. /343/ (1) Only pieces that are yellowish-

278 824 437

278 437

1. See in this connection: A Tschirch: "Studien über den Rhabarber und seine Stammpflanze" in Festschrift für Professor Ritter, Vienna 1904, and the report based on my personal observation: A. Tschirch, Arch. d. Pharm., 1907, p. 680 and Schweiz. Wochenschr. f. Chemie und Pharm. 1910, no. 12, "Zwei interessante Pflanzen des Berner Botan. Gartens," with a good illustration of Rheum tanguticum which was grown from the seed I gathered at the border of Tsaidam (near Dulan gomba). - Further, see C.C. Hosseus, Osterr. botan. Zeitschr. 1911, no. 12, "Die Stammpflanze des offiziellen Rhabarbers"; Arch. d. Pharm. 1911. p. 419, "Rheum palm., die Stammpflanze," Südd. Apoth.-Ztg. p. 239.

The pieces, which are peeled on the spot, are examined in Dankar and cleaned again, then packed in boxes which are sealed with oiled paper. All the exporters of medicinal rhubarb in Shanghai say that it is extremely hygroscopic. It must be very carefully handled in the moist coastal climate. There it is often re-dried in order to keep it from getting moldy, but then it often loses its quality. The so-called Muscovite rhubarb which comes over the Russian-Mongolian border and via Kiakhta travels through a drier climate and is therefore justifiably considered better, aside from the fact that it derives from North Tibet, that is, from the Rheum palmatum which contains 2.8 to 4 percent oxymethylanthrachinonen.

red all the way through bring a good price in Dankar. Twelve to

N.W. China AF 13
KalmyK

278 437 fourteen taels were paid in 1894 for 100 catties. At the beginning of this century the price in Dankar dropped to 8 to 9 taels. The rhubarb from Kue de brings 1 to 2 taels less because its rhizomes are blacker and are therefore considered less efficacious.

434 366 262 The Mongols and Tibetans use this rhubarb only for dyes, not for medicinal purposes. On the other hand, they use the stems of another kind which the Mohammedans call sche hoang, that is, stone-rhubarb, with leaves that are only slightly slit, as a vegetable.

On July 10 I left the Schang yurts. I had set Barun-Tsaidam as my next goal, in order to supplement my supply of flour, which I had not succeeded in doing in Schang. In Barun there is supposed to be more barley than in Schang.

608 We had some difficulty in getting started. The small animals had not got used to each other. The 37 head which I bought always tried to stray apart and head for any larger herd. It was a mystery to me how my men with unfailing accuracy always extricated my animals from a flock of many hundreds of sheep and goats. But the Chinese are good at things like that. It always amuses me to recall an example illustrative of this distinguishing trait. It happened at an inn in the lowlands. A guest and, of course, a great widower had just returned home from market carrying his supper consisting of meat, eggs and flour, and the necessary fuel for it under his arm. He threw the bundle of twigs down in front of the door of his room. While he was in the room in order to fetch his cooking pot and pan, a policeman who was keeping the all-too troublesome gapers away from me, hoping to earn a good tip, got himself a stick from the bundle of faggots of my neighbor and paraded up and down with it at some distance in front of the gate of the inn. The grass widower returned. He took up his bundle and immediately discovered the damage. A mere glance, and he recognized his property in the hands of the policeman. Now, there was a second policeman with a similar stick in his hand, standing at the gate, but the injured man had immediately picked out the right one and also got back what belonged to him. The lies and excuses of the policeman were powerless against his plausible arguments. He was able to give a minute description of his firewood.

139 We traveled over low hills and a small saddle: at the end of our day's march we crossed over the Yogh'ore gol, the outlet of the Tossun Nor and the Alang Nor. The Yogh'ore Valley is wide and flat-bottomed, the river is /344/ divided into several branches and was now, at the time of the monsoon rains, rather deep. I had

of the North West and must consume a great deal of grain. Strangely enough the Chinese peasants, often poor to the verge of starvation, seldom touch them, partly because of the cost of powder and shot, and partly perhaps because of the curious prejudice the Chinese cultivator has to eating anything wild, for fear lest it should make him "wild in the heart." The ordinary Chinese appear much to prefer a skinny old chicken to a nice plump pheasant because the former is not wild. While we were routing out pheasants on these hills we put up four deer, apparently a large kind of roe, which showed very little alarm and kept on reappearing at intervals for the rest of the afternoon.

136 262 136 825

The T'ing, usually translated "sub-prefecture" and now abolished, appears formerly to have been always the centre of a sort of military district located in mountainous country for the purpose of holding aboriginal tribesmen of some kind in check. Thus one will find many T'ing on the western confines of Yunnan, Szechuan, and Kansu facing the Tibetans; in the Miaotzu country of Kueichou and adjacent provinces; on the borders of Lololand in Szechuan; on the Burma-Yunnan frontier; and in Northern Shensi on the Mongolian border; but not in provinces like Anhui, Kiangsu, Shantung, etc., which have never contained a non-Chinese population. There are quite a number of T'ing in the Nan Shan of Shensi. But every vestige of an aboriginal non-Chinese population seems to have disappeared, if it ever existed. I have a vague recollection that some European scholar has evolved a theory that the non-Chinese tribes now living in Southern China originated in the mountains of Southern Shensi. Incidentally it may be noted that the former T'ing are usually marked in foreign maps of China as more important places than the Hsien. But with the exception of a few larger places such as Tachienlu and T'engyueh, nine out of ten of the T'ing are miserable little walled villages in the mountains, nowadays ranking as the poorest of third class Hsien.

634 563

Leaving Fop'ing the track climbs up the range immediately to the north by zigzags to reach the pass about a thousand feet above the valley, whence there is a fine view over a wilderness of mountains all around. To the N. and N.W. lies T'aipai Shan, a bare rocky ridge still carrying a good deal of snow in May. This pass (about 7000 feet) is

/The Chinese/

knowledge of sanitation and elementary health regulations. Their concepts of health and disease rest mainly on the traditional beliefs. The concept that dominates most of their thinking about the human body and its health is that of the Two Principles of yang and yin. These are philosophical concepts of the origin of all things. The yang principle represents the male and the yin represents the female. They stand for opposite poles - heaven and earth, sun and moon, day and night, heat and cold, life and death, positive and negative, strong and weak.

In medicine, everything is classified as yang or yin. The exterior of the body - the skin - is yang, while the interior is yin. The back is yang, while the abdomen is yin. The heart and liver are yang while the spleen, lungs and kidneys are yin. A disease, accordingly, is yang when due to external causes and yin when due to internal causes. Respiratory diseases, fever, and diseases affecting the upper part of the body are yang diseases. Chills and afflictions of the lower body, and circulatory diseases are yin diseases. When the yin predominates, one suffers from yang disease; when the yang is in excess yin results. These two principles must be kept in mind when treating the disease, since the drugs and herbs are also divided into these two classes.

Another Chinese concept concerning health is that of the existence of the Five Elements - metal, wood, water, fire and earth. According to this belief, the human body is composed of a mixture of the five elements. So long as the proportions of these five elements remain in order, health results. If the balance is disturbed, disease follows.

These beliefs are common mainly among the uneducated population, the rural and the lower classes of the urban population. In most cases, the higher classes have a Western knowledge of the basic elements of health and sanitation and know the basic facts of human physiology and the causes of transmission of diseases. Illiteracy and ignorance is much greater in the Northwest region than along the Pacific Coast. Thus, in the Northwest, the beliefs are widespread and most Western ideas have not penetrated into the larger part of the population.

Unfortunately, we do not have figures on the birth and death rate in Northwest China. The figures for all of China are given in the chapter on "Health and Sanitation" of the General China Handbook.

C. Predominant Diseases Among the Chinese

The most common diseases are the fecal-borne ones. They are spread through the use of human waste as fertilizer. Andre Migot, who travelled through Northwest China in 1946, dwells on this problem in his description of a typical middle-sized town in this area (Tibetan Marches, p. 51): "Then there is the problem of sanitation. The total volume of human excrement produced every day

827

827 ETHNOPHYSIOLOGY--ideas about anal reactions (e.g., urination, defecation, farting); circulatory reactions (e.g., heartbeat, pulse); dermal reactions (e.g., flushing, fever and temperature, perspiring, shivering, itching and twitching, sloughing of skin and hair); facial reactions (e.g., laughing, smiling, grinning, sneering, frowning); nasal and respiratory reactions (e.g., breathing, panting, sneezing, running of nose); ocular and auricular reactions (e.g., weeping, blinking, dilation of pupils, ringing of ears, secretion of wax); oral reactions (e.g., salivation, spitting, swallowing, vomiting, coughing, hiccoughing, yawning); ideas about digestion and respiration; notions about heredity; associated behavior patterns (e.g., scratching, congratulations upon sneezing); etc. See also:

outlook on life, which results in a remarkable internal social stability of family and community at the expense of personal ease. The greatest Islamist of our time, Carl Brockelmann, once called the Quran "die Heeresdienstvorschrift für die Mohammedaner" ("the army regulation book for the Muslims"), and indeed the Quran is not only the condensation of Muslimic religion and philosophy but also the code of laws and the "Code of practical regulations" concerning the practical daily life of the average Muslim. From childhood on those "regulations" are drilled and hammered in to the people. The Quran becomes the basis from which everything is judged. The conclusion, that the Muslims do show a strong inclination for doctrinal behavior, is rather justified.

If we describe the nomad as a logical and realistic individual to whom neurosis and psychosis are in general alien, one certainly should not forget that there has been still room for romance in his life: first and foremost, the Muslimic nomads as well as the Buddhistic nomads (the Mongols) dreamed and still dream of the creation of their own empire in which they are the masters and not the Chinese. The Mongols still mourn for their once powerful and grand empire "where the hoof of the brave horse was the only sound and the roaring and bellowing of camels and cows the only noise" and where the Khan of the Khans, the Khakhan, the Great King, resides in Qaraqorum, the scene of the Great Qurultai (constitutional and legislative assembly), ruling the Mongolian tribes and leading the Mongolian armies, in the name and as the representative and vicar of the "Eternal Blue Heaven," the ruler over the universe.

While in the folklore and literature of the Muslimfe nomads the Golden Horde and the Chagatai Empire (Chagatai Ulus), Batur Khan and Timur Lenk (Tamerlane) are oft-repeated subjects, the Mongolian folklore abounds in painting the deeds of Chingis Khan and is excessive in describing the adventurous greatness of the former Mongolian Empire.

The Buddhistic conception of palingenesis and reincarnation add another romantic feature to the life of the average Mongol and Tibetan and the belief of the Muslim (after having become a hajji, a pilgrim, or even better, a hazze, one who fought as a soldier against the "non-believers") that he would enter the paradise of heaven (or better one of the seven heavens, the seventh,only when he sacrifices his life to Allah in combat), is a deep-rotted romantic conception.

As we said, the life of the Buddhistic nomad is centered around his tent and his herds, so to speak, the outer sphere of his life, but the inside sphere is absorbed deeply by religion,

829

829 ETHNOSOCIOLOGY--social philosophy; interpretations of the society's charter; native ideas about social relationships and social structure; concepts of society (e.g., social contract); notions about culture and cultural change; economics and political behavior (e.g., mercantilism), racial inequality; etc. See also:

The Chinese, fully aware of their old culture and history, continued up to our times to consider Mongols, Turks and Tibetans if not as barbarians, at least as inferior peoples. This attitude of the Chinese caused, perhaps as an understandably psychological reaction, the superiority-complex behaviour of some minorities. In addition, the higher efficiency and diligence of the average Chinese peasant in comparison with the average non-Chinese did not help mutual understanding and esteem.

Constitutionally, for the first time in centuries, the minorities are not only considered by the present Communistic regime as absolutely equal to any other racial or ethnic group but they are also treated with consideration. The Communists do everything in order to avoid hurting the nationalistic feeling of the minorities. The price the minorities have to pay for a certain degree of local self-determination, independence and self-government is the thorough acceptance of the party line with all its consequences, above all, collectivization, which certainly means an incredible change of the traditional economic pattern, because eight ninths of the total population are peasants and only the remaining one ninth are pastoral nomads, whose livestock - collectivization is yet to come.

Since the overwhelming majority of the population of the Northwest consists of Chinese, the attitude towards the state in general is positive. Natural recognition of the government lies in the traditional line of Chinese behavior. The deep-rooted respect for "magistracy" and officialdom implies this basic recognition.

The relationship between Chinese Communist rulers and ruled Chinese (whether Communist or not) might be described as less frictional than that between the non-Chinese minorities and the Chinese Communist rulers, that is, a certain tension and uneasiness between the Uighur Autonomous Region and the government has occurred several times during the last five years, and also between the Tibetans of Chinghai and the Communist authorities, and the recent uprisings of Tibetans (July 1956) seem to be of major significance.

Generally speaking, the average Chinese in the Northwest has neither a sense of common destiny or any sense of mission. The average Chinese peasant's life is concerned with one main and urgent problem: livelihood. Quite different is the situation among the intelligentsia, who are culture conscious to such a degree that it often results in a feeling of superiority over other peoples. Among those intellectuals there is a strong feeling and conviction that China has a grand mission in Asia - cultural and political leadership.

~~Sinkiang AF 1~~

we strolled between the flower-beds listening to singing birds, which, alas! were in cages concealed among the branches of the trees. The arrangement of the garden was highly skilful and artificial. In one place a miniature mountain showed tiny paths connecting shrines and temples, all built to scale, while the whole was watered by the ramifications of a sparkling little stream, on the banks of which stood diminutive men, women and children—the whole happy-family scene conveying the impression of a life spent in Elysian fields, which no disturbing element could touch. A good deal of the verdure in the flower-beds was supplied by asparagus plants, known to the Chinese as 'Dragon's Beard,' which seems to be indigenous to Kansu, but which, strange to say, the people do not care to eat. Many are the bitter weeds, leaves and buds which the Chinese cleverly convert into palatable food, but the delights of asparagus have not yet been discovered by them, and it is distressing to a Westerner to see the shoots allowed to go to leaf without ever being cut.

The meal served to us was of the usual kind, commencing with dessert and *hors d'œuvres*, and proceeding to chicken, fish, birds' nest soup, and sweet rice; then reverting to sharks' fins, seaweed, and apricot-kernel syrup; ending with plain boiled rice, rolls, and several basins of vegetable soups with meat balls, while on this occasion a seasonable dainty was provided in the shape of light fritters, made from the petals of the tree-peony. As we were by now on a footing of intimate friendship with these ladies, the social intercourse and delightful food thus prepared for us made a pleasant interlude coming between the exacting claims of the last days.

Late one evening a Suchow man of our acquaintance, Mr. Li by name, called, bringing with him a gentleman

S: Tafel--372 1-3 (1905-1908) 1914 AJI Tibet

seeds of rhubarb in case I found any.

In the 13th century, already, Marco Polo reports that rhubarb was gathered in the Koko Nor region and from there sent to the rest of the world. In our time Prschewalski brought back bulbs and seeds as well as dried plants from the Koko Nor on his Tibetan journey in the years 1870-1873, and after that the Koko Nor rhubarb was classified as Rheum palmatum L. var. tanguticum Maximowicz. But in the course of the years the specimens grown from Prschewalski's seeds in the botanical gardens of St. Petersburg, Bern, etc., changed so much and became so similar to our ordinary Rheum palmatum hortorum, moreover, such a large number of new species have been said to be the original plant of the medicinal remedy we use, that the question of its origin still seems unsolved.

Thus, I was very pleased to be able to send Professor Tschirch an envelope containing rhubarb seeds which I had myself gathered in the woods between the rocks near Dulan gomba (37° northern latitude, 98° , 40′ longitude east of Greenwich), and that from these seeds, in defiance of all primitive methods of transportation, young plants came up in the Bern Botanical Garden, a year later and long before I left Tibet, which helped solve the problem conclusively. In the Schweizerische Wochenschrift für Chemie und Pharmazie, 1910, number 19, Professor Tschirch reports that from the seeds I sent him Rheum palmatum L. var. β-tanguticum Maxim. developed, in fact, that this species is so different from Rheum palmatum, that he feels inclined to classify it as a different species, as Rheum tanguticum.

Rheum palmatum is confined to Northeast Tibet, to the highlands of the Nan Shan and Koko Nor, whereas the very different Rheum officinale occurs in the more moist south and southeast of the Tibetan mountains. Hand in hand with the variety of species and climate goes the /342/ method of treatment of the bulbs once they are dug out. In Szechwan and South Tibet the root must often be artificially dried in ovens because the summers are too wet. In the north, at Koko Nor, the people who gather rhubarb take the greatest care to dry the bulbs in

278
324

in the case of Tibetans more than in the case of the Mongols and Turks.

While the attitude of the average Northwest Chinese is rather indifferent to national problems, at least as long as his economic position is not unfavorably affected, his approach to individual problems is characterized by a distinct realism and opportunism.

The provinces of Kansu and Shensi, almost exclusively populated by Chinese, are, in comparison with the provinces of China proper, less progressive in regard to education and general living standard; therefore the frontier Chinese is more conservative but also more suspicious and distrustful when faced with innovations and reforms. He relies more upon himself, seeking and expecting less help from the bureaucracy.

Generally speaking, the frontier Chinese can be divided into the following groups: the descendants of those who were exiled and ostracized for political reasons during the Manchu period, further on, the descendants of criminals who were sent to the frontier areas as workmen, and last but not least, the colonist (the overwhelming majority), partly adventurers and desperados and partly surplus population of China proper and finally descendants of former garrison troops and merchants from China proper who were condemned to frontier service, desperately looking for new cultivable land.

Among the Chinese of the Northwest, those living in Shensi and Kansu belong to the oldest settlers. Detached and severed from his old homeland, the frontier Chinese is more versatile and more open-minded towards unusual and unaccustomed situations. The old Confucian ethics in regard to family life and relationship with neighbors is still very strong.

The frontier Chinese is possessed by a romantic feeling for his old country. His position at an outpost in a remote area makes him see the old homeland in an euphemistic light.

The frontier Chinese has to prove true and to stand the test more than the Chinese of China proper, which creates a healthy measure of self criticism without falling into the neurotic error of self-laceration. The frontier Chinese is difficult to influence since he is more unrestrained and less bound to his environment than the Chinese of China proper.

The obvious propagandistic success of the Communists in the Northwest does not contradict the above-mentioned phenomena, because the Communistic propaganda proceeds in an atmosphere of terror and the Chinese, as a born realist and opportunist, inclines to rationalize his pretended acceptance of propaganda.

THE FAMILY

I. Introduction

Northwest China is heavily populated by national minorities. In the province of Sinkiang, the Chinese even form a minority group and the Turkic Moslems constitute the majority. Therefore, in a discussion of the family in this area, general statements applying to the population as a whole would not apply, but a distinction has to be made between several different ethnic elements.

For the purposes of the present section, the following rough division suggests itself: (a) Turkic sedentary Moslems; (b) Turkic nomadic Moslems; (c) the Dungans or Chinese Moslems; (d) the Tibetans; (e) the Mongours; (f) the Mongols, and (g) the Chinese. The last two groups are discussed in detail in their respective handbooks, the IMAR Handbook and the General Handbook of China.

Among all Moslems Islam forms the ideal concept of the family. In Islamic society the institution of the family has always been one of primary importance. The family is considered the basic essential of human civilization. Having a family, and being a dutiful member of one, is not only regarded as necessary, but is expressly a religious obligation. Marriage, the step leading to the establishment of a family, is a sacred contract into which each Moslem must enter. A Moslem who, without just reason, does not marry and does not establish a family, is considered almost as a heretic.

The family's function is primarily for reproduction of the group and the continuation of the family. The institution of the family, furthermore, provides security and peace of mind for its members. The family man is respected and esteemed in Moslem society; he is considered honorable and trustworthy. An unmarried man is likely to be looked upon with some suspicion and distrust.

Since the family plays such a significant role in Moslem society, there is great emphasis on its unity and closeness. This is probably best expressed in the following quotation from the Koran, "...and Allah has made wives for you from yourselves and has given you sons and daughters from your wives." This closeness resulting from the blood relationship is extended to all other phases of family life.

Love and compassion should underlie all the relationships within the family. In relations between a man and his wife, or wives, between one kin to another, love is stressed as the basis. A man's behavior within his family reflects his attitude toward society as a whole. If there is love in his heart for his family, he will also have compassion for others and be of service to society.

In the family, the man's position is always superior to that of the woman, regardless of his age. The wife is, accordingly, put in an inferior position to that of her husband, being under his control completely. The head of the house holds unquestioned authority

over the members of the household. Full obedience and respect is expected from the children, who are obliged to take care of their parents when the latter reach old age.

Islam allows a man to have more than one wife. The truly religious person will not exceed four wives.

Islam grew in a tribal society and retained many of the loyalty concepts relating to the tribes. After his own family, a man owes loyalty to his tribe. This attitude is strongly reflected in the religious writings. As Islam spread, these concepts were carried to societies, other than those residing in the Arabian Peninsula.

II. The Sedentary Moslems of Sinkiang

A. Family Organization

In this discussion the concept of family refers to a unit consisting of members related to each other by blood, marriage or adoption and having a common budget and common property. Persons remaining in the family and those temporarily absent are included. Servants or relatives temporarily visiting with the family are considered members of the household, but not members of the family unit.

Among the Turkic Moslems of Sinkiang the family consists of a man, his wife or wives, and their unmarried children. In some cases it may also include their divorced or widowed daughters. Occasionally the married sons stay with their family for a short period. Each family unit occupies its own separate house. One may have a few households to take care of, in the case that one has more than one wife. Polygamy is permitted according to Islamic law. However, the majority of the men and particularly the peasants, cannot afford to keep more than one wife at a time. Wealthier people and well-to-do travelling merchants often have more than one household. Each wife is usually kept in a different section of town, or in different towns altogether (this is the case when the husbands are merchants and officials who travel to a great extent). The familiar harem of other Moslem countries hardly exists as such in Sinkiang. The individualism of the women, the freedom allowed to them and their jealous nature and temperament make it impossible for a man to keep more than one wife under the same roof. This factor complicates the nature of the nuclear structure of the family, and sometimes results in one man's having similar obligations to more than one household.

Families usually are large, regardless of their wealth or poverty. It is considered a disgrace for a woman not to have many children. This is one reason why a man often prefers to marry a divorced woman with child (a son preferably), who has already proved her ability to bear children.

/The Han Chinese/

with the fur side inside.

The Chinese home is still governed by the patriarchal tradition. The ancestral tablets stand in the place of honor. Ancestor worship, which includes the belief that the spirits of those who have gone before are always present, profoundly affects the details of family life and holds the members together, not so much by affection as by obligation and a sense of mutual responsibility within the clan.

At the New Year, in the shabby mud hut as well as in the elaborate living room of a wealthy home, the family makes obeisance to the elders in exacting ritual. The essential relationships which govern social intercourse are rigidly practiced. The individual maintains a close tie with his family, for he finds in it the satisfaction of fulfilling the demands of tradition. A male Chinese considers his home a place which Heaven has entrusted to him, to hand down to posterity.

The annual festivals, such as the seasonal celebrations of the New Year, the Dragon Festival, the Moon Festival, et cetera, are celebrated in more or less the same manner as by the people of other regions. Customs regarding birth, marriage, funerals and burial are also similar; in some places the ritual is more rigid and conservative. The distinguishing factor here is in the simple home life, as well as in social relations. The attitude toward life is more practical because of poverty and necessary thrift. The preservation of "face" is not regarded as so essential to prestige and social status. For example, Chinese people in other parts of the country may have elaborate funerals for their parents to maintain the prestige of the family, despite resulting financial worries.

B. The Chinese Moslems (Dungans)

1. The People

Actually the Moslems are predominantly Chinese. In Asia the Chinese Moslems are referred to as Dungans, but in Kansu Province they are called Hui-hui. Dungan is not a Chinese word, but a term used by the Turks of Sinkiang in referring to the Chinese Moslems.

These people settled thickly in Sinkiang Province, where they form the bulk of both the trading communities and the farmers. In addition to Chinese they speak a Turkish dialect, and they distinguish themselves from the Moslems of North China who, except for their religion, have been almost totally assimilated by the Chinese.

The Chinese Moslems are a much more courageous people than the local Han Chinese. The Kansu men of this area are considered the most timid of the sturdy North China stock. It is said that the Kansu men never have ambition, while the other Northerners are never without it.

/Turks of Sinkiang/

fication of a non-Moslem is not likely to be a very spontaneous movement on the part of the Turkic people, nor is it conceivable that they "deeply love and warmly support the Central People's Government." To most of them it is a remote government in a foreign country - China - to which most of them have never been, and it is very difficult for them to visualize it as the government to whom they owe supreme allegiance.

Direct authority is represented by the local government bodies. Although composed of many Chinese officials, the representatives of the local population fill prominent positions in the local government also. There is a certain amount of pride felt by the local people owing to the fact that some of the important leaders are Turkic Moslems, who have achieved a position of importance in the government. It is quite likely that leaders like Burhhan and Saifuddin are quite popular among the Turks of Sinkiang. The Turkic refugees abroad and the strongly nationalistic-minded ones who still are in Sinkiang, look at these leaders participating in the Chinese Communist regime as traitors cooperating with the oppressive powers, rather than national heroes.

II. The Mongols of the Northwest

A. Introductory Remarks

Northwest China is the arena for some 150,000 Mongolian herdsmen. Although uniform in respect to their Buddhistic-nomadic culture and language (with the exception of the Monguors who speak a Mongolian-Tibetan mixed dialect) they do not constitute a political or areal unit, living as they do thousands of miles apart, in the northeastern area of Sinkiang, around the Tsaidam swamps area, in the Edzingol area, in the northern part of Kansu and even in some enclaves in Shensi. Since Chingis Khan, they have never constituted a political unit, although Legdan Khan united the major parts of them into a short-lived empire (see Historical Setting).

The reason for this lack of unity is first and above all, the fact that the Mongols of the Northwest area are outnumbered by Chinese (30 million) and Turks (4 million). The second reason is the treatment by the Manchus who shifted the Mongol banners from place to place in connection with the Manchu, Sibo, and Solon banners, who constituted the main and more reliable garrisons in the frontier area. The reliability of the Mongolian garrisons was partly due to the policy toward the banner and tribal leaders who were made wang (king) or nobles of various ranks.

B. Views of the People with Respect to their own Country

The average Mongol of the Northwest is fully aware of the fact that he belongs to a minority and that all he possesses are his

/Mongols of the Northwest/

pastures, but not a country. Nationalistic movements of recent times hardly reached the Mongols of the Northwest (see Political Dynamics) and serious attempts to join a greater Mongolian unit (Outer Mongolia) have never been made by the Mongols of Sinkiang. For most of the other Mongolian splinter groups of Chinghai, Kansu and Shensi, such an ambition would have been still more unrealistic due to their geographical separation from Inner and Outer Mongolia and due to their more progressed sinification, which is especially true for the Chinghai and Shensi Mongols. (Two heretofore isolated groups in Kansu, the Mongols of Alashan and Edzingol have recently been incorporated into the Inner Mongolian Autonomous Region.)

For the Mongols of the Northwest their country is China and their supreme representative, the court of the government in Peking. Their immediate superiors and chiefs were the banner leaders who observed a rather strict loyalty to China's court or government as they received a yearly apanage and, after having performed special, mostly military services for the court in Peking, were promoted to higher ranks which in turn meant an increase in their yearly presents received from Peking. This fact did not encourage them to make any attempts toward independence, self-determination or autonomy. The Mongols of the Northwest thus did not think of their country but of their domain. An important aspect of this view is also the cultural basis of the Northwest Mongols, Lamaism, whose realm is everywhere where Buddhists live and whose center is Lhasa (Tibetan: 'the city of gods') rather than Peking. For the religious world is the real and essential world to them, the Dalai Lama, the supreme spiritual leader of all Lama Buddhists, became more real and essential to them than the supreme political leader in Peking.

C. Traditional Attitudes of the Northwest Mongols

No matter where Mongols live, some trends are common to all of them: the pride of being a Mongol; the pride of speaking Mongolian, which is considered by them as melodious, sonorous, and full-toned in comparison with the 'chirping and cackling' of Chinese; and finally, the pride of being a free nomad, herding wherever he wants and riding wherever he wishes. Whenever Mongols meet each other they can communicate with each other as their dialects differ only slightly. They realize, too, that they have even more in common than only external appearance and language, something which is of utmost importance to all of them - their Lamaistic religion. In these respects they certainly feel that they constitute at least an ethnic unit, very different from the Chinese for whom they do not want to be mistaken.

/Mongols of the Northwest/

These feelings and emotional attitudes were hardly sufficient to arouse animosity or hatred toward the Chinese but rather an unjustified and unwarranted feeling of superiority. The progressive advancement of Chinese settlers, however, who gradually took over lot after lot of their pasture land led not only to hatred but resulted in petty uprisings, so that even the Manchu government several times issued laws against Chinese advancements, which were hardly ever observed. Complaints of the Mongol leaders did not help and they were numerically too weak for military action.

Only in the case of the sedentary Mongols of the Northwest, the Monguors, such problems never arose, as they had become so strongly sinified that their tribal leaders were considered by the Chinese themselves as Chinese officials with a reputation of absolute loyalty.

D. Attitudes toward the Communist Regime

Throughout the history of the Mongols, their pattern of living, internal and external, changed very little. Their families constituted auls, the auls clans and the clans, tribes. Besides this structural organization, there existed the military institutions of banners and leagues. The internal order was always strict and the laws and regulations hard. A leader who was not strict and hard would hardly be considered as a leader and the history of the Mongols shows that a strong leader always evoked their respect and found them to be submissive followers.

In view of this fact there is little doubt that the Mongols of the Northwest will respect the iron hand of Peking, even though probably with mixed emotions. The creation of autonomous chous (districts) populated only or overwhelmingly by Mongols might give them a certain feeling of self-determination and cultural autonomy. The organization of veterinarian stations which take care of their livestock will certainly be welcome to the nomads; the organization of a widespread educational system might be another asset for the Communists as it fosters Mongolian language and promotes literature written in Mongolian. The establishment of permanent winter sites, on the other hand, which is contradictory to Mongol customs and above all the threatening collectivization of their livestock, which is the Mongols' highest and greatest treasure, are negative aspects. This, of course, refers to the present generation only. The younger and youngest generation, subject to a very vivid and propagandistic education will undoubtedly change their attitude toward the present regime, a process for which the Khalkhas of Outer Mongolia are a classic example. (see also IMAR Handbook, same section).

III. The Chinese, Chinese Moslems and Sedentary Tibetans

An attempt at a cohesive description of popular attitudes among

/Chinese, Chinese Moslems and Sedentary Tibetans/

the Chinese in the Northwest meets with several obstacles. The one most difficult to overcome is the lack of attitudinal uniformity due to a multitude of historical, environmental and social factors which have molded the people's behavior in the Northwest. There is, to begin with, the difference between the urban and the rural situation, which even though prevalent all over China, has made for a specially pronounced diversity in the Northwest. Generally speaking, in centers like Sian or Lanchou attitudes are met with which do not differ too much from those prevalent in other cities of China. It has to be taken into account, though, that Sian has been the capital of the Chinese Empire for centuries up to about one thousand years ago, and this fact still shapes certain attitudes of the citizens of Sian today. Lanchou, on the other hand, is most definitely a frontier city, the last major outpost of Chinese civilization with an ostentatious pride in local traditions and relics of a cultural or esthetic nature, but open, on the other hand, to a colorful mixture of influences coming from a variety of peoples beyond the pale. The urban attitudes prevalent in Sian and Lanchou thus differ perceptively and both cities differ in certain respects from other Chinese metropolises. Their peculiarities influence in turn urban-rural and social tensions in a specific way.

The Chinese rural scene, on the other hand, displays a variety of factors accounting for attitudinal diversity. There are the differences of the loess-cave dwellers and the mud-hut dwellers, those of the irrigational farmer and the one on hills or mountain slopes; there are regions of compact minorities or dominant majorities of Moslems and finally, regions along the few great thoroughfares and regions of remote seclusion.

The picture gains in complexity in the real frontier areas, Western Kansu, Chinghai and Sinkiang, where the Chinese constitute a minority. Here the diversity of peoples with whom the Chinese have contact, the geographical differences, the professional differences, differences of the duration of stay, of the home province of the settlers account for attitudinal patterns which change from settlement to settlement.

What is attempted in the following pages is, in view of the difficulties, and furthermore, in view of the pitifully scanty coverage of the area in the literature, to present a few samples of pertinent observations, which might add up to some general notions. In the selection, stress has been laid on the frontier regions, as the regions within the pale, reference still can be made to the General Handbook.

In their book, The Gobi Desert (New York, 1944), Mildred Cable and Francesca French describe the Chinese people's life in the fortress of Chia-yu-kuan in Western Kansu, which they visited in the thirties: "Inside of the fortress, life was divided into three distinct sections, each of which had an existence quite

/Xinkiang, Chinese Nicknam and Sedentary Tibetans/

The old aristocracy of Ili, which had been in power since the days of the Khan was not always liked by the Moslems, but he and his family were respected by the Moslems and Chinese alike. The Provincial capital of Ili court had been appointed by the Turkis, and the Khan, by virtue of his hereditary title, was unquestionably accepted by them. There was immediate resentment among the populace at the suggested changes, and the resentment became more intense when a group of Chinese Communists appeared officially in Ili.

At the same time, the whole area of Hami was carefully surveyed and the land reduced. Three large administrative districts were arranged and given names which dated back to the Han Dynasty. The Moslem population of Hami, as in the rest of Sinkiang, acted the old Khanate's attitude toward the Communists. Chinese magistrates were appointed to have the law cases and Chinese tax-collectors were to levy the land taxes. These officials established the Communists. They would be allocated to the respective departments, and this would be followed by a period of "study" and "criticism" and this would proceed to the people an improved measures of justice, but the Moslems did not like them and had a great deal of suspicion about them. There was also the rumor that some inappropriated land which the Turki farmers would have liked to own. Many of the Chinese were to be settled on land which had been held by the Chinese were sent to the Communists from Eastern Sinkiang. Probably that dangerous thing as well known to the Oriental as a "Chinese" and they were hardly among men who had hitherto dealt only with their own Khan, and they unanimously determined on

N[illegible]-chiang, a Moslem who was not connected with the most influential Chinese daily Ta Kung Pao in the prewar period. He had now editor of the Provincial Party Committee's official newspaper in the Northwest in 1946 through Hsinking, Chinghai, and Sinkiang. Although he had a very high position in the Communist Party hierarchy, he had a very low position of the government. Because there were so many kinds of taxes, the people thought that the Communists were going to levy taxes on them to the maximum degree. The people did not trust the government. In regard to social customs, for example that the Chinese in Kansu are very conservative in matters what they have anything to do with their women. Even middle-aged women of respectable families can hardly have any communication with men. Even if they are relatives, they are not to see a relative's son or daughter. They dress most obscurely and be seen by strangers. Soldiers who have come from the coastal provinces could not adapt to these customs. The social relations between the two sexes were restricted by the local people because they were afraid of being criticized. Because of this understanding there was a misunderstanding between the people and their resentment toward the "outside" soldiers. So common Chinese in Kansu are

/Xinkiang, Chinese Nicknam and Sedentary Tibetans/

extremely obedient and timid toward the government officials. Anyone who has any connection with the government can command the service and materials of the small people. One who has the power to arrest people can also fine people. Consequently the common people in Hami communities are not much not ignorant to resent. The rural people in general are primarily concerned with their food problems. Their attitude toward anything is affected by this problem. Their attitude toward the coming of the Communists was not different from that of the city people. Their resistance to have law for the Communists were and how great the possibility are of their coming. When they were asked how they felt about the coming of the Communists, the answer was that when they feared mostly about the Communists was that the Communists would levy taxes on them. They were not much interested in politics. They seemed to believe that the Communists would not persecute them because they were just poor people. They had learned that the people in Kansu called the Communists the murderous foreigners. It meant that wherever the Communists went, they would kill people. Because the Hami people did not care how much the Communist provinces might be, if the Communists had to live off the province's scanty food supply, they would be starved to death. This does not mean, however, that the Hami people, as in other places, had great influence on the people's political attitudes.

However, this does not mean that the Chinese peasants in the Northwest care only about their stomach and overlook all else. The Chinese peasants in the Northwest have developed a very distinct gentry-looked down upon, and are treated them as a group of little value. It is reported that bad administration of the local government of Kansu, Ninghsia, and Chinghai is largely concentrated by a man named Liu Tzu-tan, were able to make considerable progress in the Northwest. Liu Tzu-tan, a native of Honan and a veteran of Borodin, Feng Yu-hsiang's Russian Communist gave the people many kinds of little or temporary advantages and made all sorts of big promises. At the moment they [illegible] much better than the local government officials and therefore they was the Communists' influence. Liu Tzu-tan's policy was to create a government head to call the people to the villages in a meeting so they might be enlightened about the government's policy, very low rates. But whenever Liu Tzu-tan wanted a mass meeting, the peasants swarmed into wherever the gathering was held. Liu Tzu-tan's policy was successful among the rural masses, and he was definitely placed three leaders in highways. Young students were his recruitment was very successful among the rural masses.

According to Fu Chi-ang-chang's report, the Chinese farmers in the areas between Hsenan, Kansu and Ninghsia were by and large landowners, not tenants. The areas were very thinly populated

/Xinkiang, Chinese Nicknam and Sedentary Tibetans/

and therefore land was abundant. Among the landowners there were quite a few with extremely large holdings. It is reported that the amount of farm and grazing land owned by a family was so big that it was not measured by acre or by any other unit but Chinese village community, although that community also owns considerable land in common.

The sedentary Tibetans in the Northwest, according to Ekvall, were quite friendly toward the Chinese. The Tibetan country with their land and pasture rights and farmers are quite different. The assumption is verified by the fact that the peasants in these areas would welcome the coming of the Communists. The manner was that when they feared mostly about the Communists was that the Communists would levy taxes on them. They were not much interested in politics. They seemed to believe that the Communists would not persecute them because they were just poor people. They had learned that the people in Kansu called the Communists the murderous foreigners. It meant that wherever the Communists went, they would kill people. Because the Hami people did not care how much the Communist provinces might be, if the Communists had to live off the province's scanty food supply, they would be starved to death. This does not mean, however, that the Hami people, as in other places, had great influence on the people's political attitudes.

However, this does not mean that the Chinese peasants in the Northwest care only about their stomach and overlook all else. The Chinese peasants in the Northwest have developed a very distinct gentry-looked down upon, and are treated them as a group of little value. It is reported that bad administration of the local government of Kansu, Ninghsia, and Chinghai is largely concentrated by a man named Liu Tzu-tan, were able to make considerable progress in the Northwest. According to Fu Chi-ang-chang's report, the Chinese farmers in the areas between Hsenan, Kansu and Ninghsia were by and large landowners, not tenants. The areas were very thinly populated

who are recalcitrant in maintaining their reactionary standing and military and governmental officials of the Kuomintang government still cling to the shameful and parasitical way of life without engaging in productive labor. Consequently, they are the objects of hatred and contempt of the people. Another group that is composed of unemployed workers, Some illegal prostitutes and professional gamblers connect their brothels and gambling houses into dens for robbers, thieves, and rufflers, and into hotbeds for smuggling crimes. Consequently, the people in the Chinese villages have a most effective police work in suppressing these social evils. Rapes of girls and rows are as chief planners of crimes. More serious still, a batch of habitual thieves who usually move around various places have established a band with one another to commit theft and robbery in an organized manner. Because of the above-mentioned reasons, the people in the villages refuse to report crimes committed by them and encourage them from jails to continue their crimes. Some burglarious elements who smashed into people's houses and committed robbery and theft have been arrested by the people's government and put in jail. They belonged to the category of professional criminals who carry out their criminal activities under subtle subterfuge. He joins his wife's family and changes his name to that of his wife's family name, takes her family name. He calls her relatives his own, and they call him by his family, and accepts all the duties and rights of a family member.

According to this above, the unit will include one or more additional families who will earn their own livelihood. If the husband is such enough, and if they do not get along together, divisions in the family will occur. Then the husband will leave his wife's family and the husband and his children will form a family. In this case, his wife (or wives) and the children who are all considered his offspring. Chinese families are not as large as in the Chinese. In rural areas they refer to their own separate dwelling, as soon as their eldest son is married. Because of the high cost of living and the responsibilities of raising children in such a difficult and hostile climate, some claim the desire to spend until their "no longer needs milk" (ca. 4 yrs), others claim the joys of parenthood and the solidary of a large portion of the male population.

[illegible] Chinese Communists on the one, who provide for the common people, and the Chinese Nationalists on the other, who provide for graft and permanency in the Tibetan family than there is in the Turkic family. Tibetans are also more conservative than the military service and tax collecting. They help to preserve evasion and

/The Tibetans/

Babies are arranged for guests. Barley is spread on the ground, sweets and drinks are placed in front of them, and the guests sit, in lord in waiting between her parents. The family retires to the background of friends and relatives by giving them beluga. Then the guests ride a horse or walk to her new home, accompanied by relatives of both families. The newlyweds sit together to go through the formality of a meal with wine and meat, then receive congratulations and beluga from the guests. The beluga given by elders and relatives is very valuable, and their presence of equal status are aligned inside the wife's home.

When the ceremony is complete, the husband entertains with a feast. Guests customarily take home meat or sweets after they have eaten their fill. On the following day, members of both families dress in their best and go for an outing. They visit the monasteries, but do not enter. The celebration usually lasts for three days, with feasting, drinking, singing and dancing.

The birth of a child is celebrated with a small party on the 30th day after the baby is born. The baby's name is usually already predecided. The moment a child is born, a very small amount of barley flour mixed with butter is put into his mouth to make him strong and tough. A tiny piece of butter is put on the skin of his crown to protect him from the wind, which, according to Tibetan doctors, is responsible for one-third of all human ailments. A thick solution of butter is given to the mother for the same reason, and also to encourage her to nurse their own babies.

The child receives a name when it is one month old. The name may be given by the parents, but usually it is given by a lama. With a few exceptions there seems to be no distinction between names for males and females. High lamas always give their own names to children as a blessing. Names of the lamas' predecessors or family are rarely taken on the first outing, to a temple to give offerings to Buddha. Birthdays are not commonly celebrated.

"Feeding the birds" is a common form of burial in mountainous areas of Tibet. The corpse is taken out for the vultures to eat, the idea being that the deceased then rises to heaven in the stomachs of the birds.

When a person falls ill, the lamas are summoned to chant prayers to drive away the evil spirits. If it appears that the patient has no chance of recovery, the lamas are asked to chant prayers to help the soul find its way to the land of the dead. Before the patient draws his last breath, he is bound into a bundle, and as soon as he is dead he is placed in a corner of the tent by the entrance. Both lamas and officials are placed on the inside him, and lamas keep vigil day and night, chanting incessant prayers.

Funeral rites are held on the third day after death. Women are not permitted to attend the rites.

/The Uighurs/

Uighurs eat a million purposes. They live mainly on rice - is not be formidable. No savage system of any kind exists; its place is taken by an old established guild of gentle folk who perform every conceivable function for members making their way through the streets. The casks or buckets which dangle from the bamboo poles across their shoulders smell no better than you would expect them to. They are always full to the brim and slopping over, and are normally said to truck gardens on the outskirts of the city. The constant threat to the legs of the passers-by.... The buckets contain night soil, which farmers will dress the hill are used, after being brutally mixed, to carry their water up."

Beacon-producing a very unpleasant picture, this description brings out the very serious problems connected with the lack of adequate sewerage systems. It give point on the many possibilities for the spreading of contagious deflagers and infections.

Tiberian doctors are well aware of the epidemic diseases which are common also, such as typhoid and paratyphoid fevers, cholera and smallpox. Malaria and the two kinds of dysenteries, amoebic and bacillary also are rampant. Both are children, both adults and mothers, in spite high, because of the lack of adequate sanitary precautions during and the period of childbirth and the early weeks, who do nothing to prevent infection of both mother and child.

Realizing that between one-fifth and two-fifths per cent of all deaths in China are due to preventable diseases that are under control in the West, they are trying to do battle-this battle, in China, of which 11, 750, 000 are due to preventable diseases." The Lord will be with the successful.

D. Medical Personnel

The Ministry of Warfare's medical doctors, nurses, pharmacists and dentists in the Northwest is an extremely serious problem. Most of these, because of the shortage, are who are forced to go to the local herb-doctors. (A full description of the traditional Chinese science of medicine appears in the General Handbook). In many less acute cases, people either neglect to do anything or attempt to treat themselves by unscientific methods.

E. Efforts of the Government

The Nationalist Government was aware of the serious shortage of medical personnel and equipment in all of China, including the Northwest. Two national organizations were established in the 1930's to deal with these problems. The Department of Public Health, which was a part of the Ministry of the Interior, which had a Northwestern Office for the Prevention of Epidemics, and the National Health Department under the National Economic Council, which also had an office in the Northwest.

Adoption	197 Infant feeding

The position of women is probably most clearly expressed in the fact that for forty days after a woman has given birth she is considered unclean. She may not leave her hut for ten days and may not even eat in her yard, for she is unworthy for the sun to shine upon. During the first ten days even the husband is considered impure and may not associate with anyone. If he is a shopkeeper, custom bars him to close his shop during this interval or, if he does not wish to do this, to hire a substitute for this period. (2&3) but he himself may not enter his shop or his place of business for this reason many Chinese husbands quickly set out on a journey when a birth in the family is imminent, in order to avoid the sundry ills of uncleanliness.

Only a few days after my return from the Gum horn monastery my landlord of whom upon this building; I had rented the third and last courtyard with its adjoining small house, died. His body was laid out for the next few days directly in front of my separate courtyard entrance, and there all the various funeral ceremonies took place so that I could view the entire proceeding at leisure. The family of the deceased had arranged with a few gong-players between them, and so they were still considered strangers, they came from "down below," as the people of Hsining say. Thus, there were not many relatives and the family was not wealthy, so that everything was relatively simple and was done as quickly as possible. The Lord will be with the successful. Many ceremonies common was tremendous.

The man had worked a rope old age and had then died very quickly. but his relatives had succeeded in observing the etiquette of putting on his shroud, a long, padded silk gown, while he was still alive and also in moving him from his bed beside the stove onto a small bench and laying him out in the corner room of the main house, so that his soul might more easily find its way out into the open. Thus, at the very last minute his sons had proved themselves pious children. Immediately after the man died money was placed in his mouth, so that he should not be mute when reborn, but he was neither washed nor were his eyelids closed. During the first few days he lay in the death chamber as though he had been forgotten, and the doors and windows of the room were wide open. All I heard during the day was the many lama being called and the words "father" and "grandfather," and on the first evening a long train of Taoist priests set out from the house, bearing many lanterns, and gongs, triangles and drums danced the music of the

848

V. The Tibetans of Chughai

A." The Family Organization

Among the Tibetans of Northwest China almost any form of marriage that will further the family interests is acceptable.- Property and the problems of serving it, avoiding its division, and increasing it are the chief concerns of the family. Love, romance, passion, polygamy, and fraternal polyandry are all common modifications, and the mother structure of the family differs accordingly. The most common and least complicated arrangement in this region is that of a husband, his wife, and their unmarried children. The family may include several grandchildren born to unwed daughters. Considerable freedom is allowed to young people before marriage. Premarital sex is not recognized without reservations. Sons and daughters usually marry and remain with the family and sons often bring their wives into the family and remain there. The parents, if alive, and the son may be regarded as heads of the family, but this occurs generally when the family has no sons. The Mog pa (herdsmen) have no dragons, the guns his wife's family, and if the family is unwilling to the extent of having a family council to settle disputes. He calls the relative his own if there is a separate and independent with his own family and assumes all the duties and rights of a son.

Where polygamy occurs, the one will include one or more additional wives, who will each live in her own tent, if the husband is rich enough, and if there is not get along harmoniously. This is not uncommon. In this case, the nuclear family includes the head of the household (the husband), his principal wife, his wife (or wives) and the children who are all considered his offspring. Polyandry is rare, but when it occurs, it is usually fraternal. The wife retire to their own separate tents when not with the husband who are reserves and leave him the authority and the responsibilities of the head of the family.

Tibetan families are not as large as either the Chinese or the Turkic. There are many attempts to explain this phenomenon, such as the prevalence of venereal diseases which have reduced the population, infanticide, abortion, the high rate of deaths in rearing children in such a difficult and hostile climate, some claim the desire to space until child 'no longer needs milk' [ie. 4 yrs], others blame the facts of polyandry and the celibacy of a large portion of the male population.

The focus of the family is on the sons, who provide for the continuity of the family . There is much greater degree of stability and permanency in the Tibetan family than in that of the Turkic family. Sons can fulfill obligations to the State, such as military service and tax collection, they can help to preserve estates and

852

/Chinese Moslems (Dungan)/

4. Customs

a. Religious rites

According to religious rules, the Moslems are supposed to pray five times daily (sunrise, noon, afternoon, sunset and midnight), facing in the direction of Mecca. Five of the Chinese Moslems besides the Hollahs and Ahongs adhere strictly, but the majority do not. Only the Ahongs and Hollahs are supposed to be performers in the mosque, but the mosque is open to all, and so the surrogate may pray wherever they are. The call to prayer (Adhan) is made by the Ahong from the top of the mosque at the appointed hour by his shouting or by the use of loudspeakers plus in saying the adhan. Daily noon prayer is popular, and the Friday service is the most fully attended.

Public worship cannot be performed by fewer than four persons. Women are not allowed to attend the mosque except on the anniversaries. Sons and daughters may not pray with their parents. Among to direct the prayers and Friday services. Women always worship as individuals and not as a group. Sometimes there may be a number of women gathered together.

The Moslems do not have any regular or elaborate any religious ceremony. Hands and face must be washed, and bathing before service is required. Only the Ahongs and Hollahs are supposed to have bathing places assigned. The Moslem becomes unclean by touching anything unclean, by sexual intercourse, by touching a dead body according to ritual, dogs, pigs, etc. Women are unclean and such things as smoking, drinking and sexual contact are also forbidden during this period. Menstruating women are unclean and quarters calling out the times for observing or breaking the fast, and the Ahong announces the time for the end of the fast by shouting loud before daybreak. The end of the fast is celebrated by a feast.

The aged, ill, insane, women during menstruation, and women nursing babies are allowed to break the fast. Medicine may be taken during the fast, but if no other time are in danger are exempt from the fast, but if no other they are able they must make up for it. The purpose of the fast is to help the believers possess pure and pious traits. Fasting is considered meritorious at other times too, except on Friday, the Moslem holy day.

b. Tattooing

Within seven days after the birth of a child, he must be given a Moslem name. At the time of circumcision, a name is also given. Circumcision is performed, and the poor are fed. If the child is a male and the husband is Moslem, female may be circumcised for the occasion. If the child is a girl, only one sheep is killed. To survive at the same time. Circumcision is done in the tent toward Mecca and requires a prayer in one ear of the child, then

/Chinese Moslems (Dungan)/

the other. Then he whispers the Islamic creed (Kalima) of the Koran, and the Ahong recites the Islamic creed in the ear of the seventh page. Gives the name. When a male child reaches his seventh birthday he is circumcised and taught to worship.

c. Marriage

The marriage customs of the Chinese Moslems, with the exception of the wedding ceremony itself, are the same as those of the Chinese. The ceremony is made by the Ahong at the home of the bride's family, where the ceremony is performed. The Ahong reads from the Koran, gives instructions to the couple, and the bride and groom exchange vows. Then the couple is declared by the Ahong to be united.

Polygamy is permissible to the extent that a man may marry four wives, while polygamy is not required by marriage it is become a Moslem. Before such a marriage the girl must accept Islam. Marriage between Moslems and Chinese has become a thing of the past because of her own home. The Ahong officiates at the wedding and the Chinese parents are present. The marriage feast is not considered the Chinese.

d. Funeral and burial

The funeral rites of the Chinese Moslems are more distinct from those of the Chinese. The dead body is washed ceremoniously, and the corpse is dressed in white clothes. The coffin is composed of the deceased for themselves. The body is then placed in the coffin and carried to the grave by the male relatives. Correct performance of the funeral rites is considered meritorious. The people sprinkle incense on the cloth used for bandages. The wealthy also place large quantities of musk and camphor in the grave. The corpse is placed upon a board under which are the hands necessary for burying it into the grave, then covered with a bottomless coffin for the trip to the cemetery. The coffin is then placed in the grave and the board removed. Earth is then placed on the coffin.

When the deceased is a woman, only members of the family may take part in the funeral. Male may be present, but they are not active participants. If the child is a girl, only one sheep is killed. To survive at the same time. Circumcision is done in the tent toward Mecca and requires a prayer in one ear of the child, then

853

/The Tibetans/

*563 are arranged for guests. Barley is spread on the ground, sweets
585 and fruits on a low table. The bride, fully dressed, is led in to
sit between her parents. The family returns the courtesy of
friends and relatives by giving them katags. Then the bride rides
a horse or walks to her new home, accompanied by relatives of
both families. The newlyweds sit together to go through the for-
mality of a meal with wine and meat, then receive congratula-
tions and katags from the guests. The katags given by elders
are worn around the neck; those from persons of equal status
are slipped inside the robe.

When the ceremony is complete, the husband entertains with
a feast. Guests customarily take home meat or sweets after they
have eaten their fill. On the following day, members of both
families dress in their best and go for an outing. They visit the
monasteries, but do not enter. The celebration usually lasts for
three days, with feasting, drinking, singing and dancing.

*563 The birth of a child is celebrated with a small party on the
846 third day. Though girls are not ill-received, boys are generally
852 preferred. The moment a child is born, a very small quantity
(562) of barley flour mixed with butter is put into his mouth to make
(951) him strong and tough. A tiny piece of butter is placed on the vein
of his crown to protect him from the wind, which, according to
Tibetan doctors, is responsible for one-third of all human ail-
(853) ments. A thick solution of bufter is given to the mother for the
same purpose. Tibetan women prefer to nurse their own babies.

The child receives a name when it is one month old. The
*563 name may be given by the parent, but preferably by a high lama.
552 With a few exceptions there seems to be no distinction between
852 names for males and females. High lamas always give their
(793) own names to children as a blessing. It is often on the name-
giving day that a baby is taken on its first outing, to a temple to
give offerings to Buddha. Birthdays are not ordinarily cele-
brated.

*563 "Feeding the birds" is a common form of burial in nomadic
764 areas of Tibet. The corpse is taken out for the vultures to eat,
the idea being that the deceased then rises to heaven in the
stomachs of the birds.

When a person falls ill, the lamas are summoned to chant
*563 sutras to drive away the evil spirits. If it appears that the pa-
(765) tient has no chance of recovery, the lamas are asked to chant
(793) sutras to assist him to be born again in the "land of purity."
*563 Before the patient draws his last breath, he is bound into a bun-
764 dle, and as soon as he is dead he is placed in a corner of the
765 tent by the entrance. Butter lamps and offerings are placed be-
side him, and lamas keep vigil day and night, chanting incessant
prayers.

*563 Funeral rites are held on the third day after death. Women
764 are not permitted to attend.
562

853) INFANT FEEDING--conception of lactation, milk, and colostrum; beliefs about sucking; initiation of suckling in newborn infants; stimulation of the flow of milk; routine of nursing (e.g., posture, intervals); feeding problems; treatment and behavior of the nursing mother (e.g., diet, sexual abstention); communal nursing; fosterage; adjustments to death of mother; supplementary feeding (e.g., age at beginning, appropriate foods and their preparation); method of feeding (e.g., bottle, cup, spoon); etc. See also:

endless. In vain I looked for a bit of driftwood on the shore, which 080
even the Arctic Ocean casts up along the coast. The long, salt waves
surge and break on a dead shore and the fresh blue that contrasts so
sharply with the fallow autumnal green of the detritus slopes of the
mountains /82/ is a delight only on the first day. The magic of the
Koko Nor lies only in its remoteness from the world, in the difficulty
involved in reaching it, in the danger that today lurks on its shores!

On the afternoon of November 8 I reached the east shore. We T
finally found life again near the place where my present path crossed 101
the route we took at the time of our sudden attack in January. This is
the land of the Tibdia-Tibetans. We stayed overnight with them.
There was snow on the ground and the air was damp and cold.

Early on the morning of November 9 we crossed the Lala pass 090
(3, 885), a narrow saddle in the rock mountains to the east of the lake.
The snow there was meters deep. From here the way led at once into
a steep valley overgrown with shrubs where around noon we already
found a few houses. By five in the afternoon I rode through the gate
of the western suburb of Dankar - the long, weary retreat had come to
an end. I felt as safe as though I were at home again.

Twelve kilometers from Dankar near a Tibetan town Lala, there
stands a lonely rock dating from the 51st year of the Emperor Kien
lung (1786), which marks the boundary between China and Tibet, but
the grass pastures on the slopes of the mountains reach almost up to the
walls of the city. Near the place where the border rock stands the air
grew noticeably dustier. A fine mist descended on the countryside
which lay glistening in the winter sun. In one corner of the valley we
came upon thick masses of loess and then a village of loess caves.
Finally we met Chinese, met a man dressed in indigo cotton clothes,
carrying a bird cage in which he was taking his beloved dicky bird
out for a walk.

The first question of my two companions was always: How was the
harvest? How expensive is wheat? How much are beans? The answer
was a happy one: We had a "ten-tenth" harvest. For a pound of wheat
we are paying only 15 cash (one and one-quarter Pfennig). It could
not be better. All at once I was in the midst of Chinese culture, sur-
rounded by purely Chinese traits and images. There was a peasant
with large round spectacles plowing by the wayside. Small, adorable
Chinese children played in the thick dust of the road just outside the
gate. Their mothers let them play around half-naked, defying the
winter cold. The boys had a little iron chain with a padlock around
their necks, to show that they were chained to the family and could

C 854 not be carried off by evil spirits. There were other boys whose parents had arranged their hair like that of girls in order to deceive the evil spirits, for in China not even the devil bothers about a poor little worthless mite of a girl. The important thing for humans and therefore also for the forces of evil is the son and heir who will offer prayers and sacrifices on the future grave of his still-living father.

C 718 We passed little wooden boxes that reminded us of European mail boxes. But nobody thought of mail at that time in Dankar. The boxes bore the label: "Remember paper with writing on it!" and were set up - as everywhere in the kingdom of 18 provinces - so that people would not commit the sin of stepping on printed or written paper which is sacred, as everyone knows. There was a huge proclamation
C 203 stuck to the first Chinese house we passed. It was signed by the ting of Dankar and proclaimed to the people that the Dalai Lama of Urga had moved to Gum bum. The people should willingly pay the required contributions /83/, and if the Fan tse accompanying the Lama should be impudent, they should not immediately pay them back in kind.

T 792 Life in the city of Dankar had changed very much. It was the time when the nomads were in the habit of trading in their year's supply of grain. Besides, at the news of the arrival of the Dalai Lama, hundreds and thousands of pilgrims had arrived who were following him to Gum bum. Day by day the largest yak- and camel-caravans arrived in the suburbs and again departed from the large market place as fast as they could. Once 60 camels marched by on the way to Lhasa, bearing gifts which the high priest had received in Mongolia. Most of the gifts consisted of silver, guns and cartridges. On the backs of the animals gay yellow flags fluttered, bearing the Chinese insignia of Hsi tien (western heaven), that is to say: Central Tibet, and with that everything crossed the border duty-free. The lofty lord seemed to have made good use of his time.

The Dalai Lama lived in the Gum bum monastery, but a large part of his retinue stayed in the city of Dankar where the Lhasa government in any case always had resident commissars. It is difficult to say whether the latter represent largely commercial or political interests.

T 766 Around this time a younger brother of the Dalai Lama died in the city of Dankar. His body was cremated in a desolate mountain gorge north of the city, and everything was carried out with the greatest luxury, fit for a real prince. He was bound together in a

855

Discipline and training	86	Preventive medicine	761
Family relationships	100	Medical care	768
Care of orphans	730		

745 If this law is fully implemented, it provides security for the
*463 workers and their families. However, we have no knowledge of
197 how close to the letter of the law the practice of the government
is. Nor do we know what percentage of the workers enjoy the
benefit of this law.

* 855 Child-welfare is highly valued in China, whose future rests
* 668 on the health and upbringing of its children. Therefore, extensive child-welfare programs have been adopted. Since the Communist society demands that women participate in industrial
197 and construction works and contributed to the economic development of the country, provisions had to be made to take adequate care of their children. For this purpose many nurseries were established which provide a place for the children during the day
730 time. Government orphanages were established as well, supplementing the already existing institutions. The aged, however,
739 * 668 are not given as much attention, mainly because in society since
1958 they are viewed as being of no productive value to the society.

87

87 EDUCATION--general statements dealing with several aspects of the more formal and institutionalized aspects to the educational process, especially instruction conducted in schools, by specialized tutors, or through formal apprenticeship. For informal education see 86.

*563 3. Kansu: The educational program was more advanced than
658 in the other provinces in the Northwest. The number of schools
871 and students as of 1945 was as follows:
*175

*(Ministry of Education, "Education in the Border Regions," 1946.)

II. Chinese Education in Pre-Communist Times

871 A. Education under the National Government
184 During recent decades, the education in Northwest China has been backward compared to that in the coastal provinces. The educational standards within Northwest China also differed greatly. Generally speaking, the farther the people lived from the big cities, the less they were educated.

Even though the general Chinese school system was introduced also to the Northwest, in remote places the so-called schools were scarcely different from the old-fashioned tutor system.

658 The provincial authorities were handicapped by the shortage
871 of funds as they struggled to set up schools with what little was
*175 appropriated to them by the Central Government. In 1935, the Central Government appropriated half a million dollars for border education, and within two years the following schools were established:

In Kansu: A training class for village teachers and fifty-five primary schools.

In Chinghai: A normal school for the teaching of Mongolian and Tibetan at Hsining, two middle schools, 143 primary

871

871 EDUCATIONAL SYSTEM--degree of development and elaboration of formal education; prevalent types of educational specialization (e.g., schools, tutors, apprenticeship); source of support of teachers and educational institutions (e.g., fees from students, ecclesiastical aid, private gifts and endowments); systematization of education (e.g., local school boards, state educational agencies, voluntary organizations of educational administrators); degree of standardization as to levels, policies, and curricula; primary objectives of formal education (e.g., piety, morality, citizenship, vocational skills, intellectual leadership); diffusion of education (e.g., educational statistics); etc. See also:

N *563 saw tremendous uprisings. But the Chinese shared in this violence,
195 When they defeated the Moslems, it was their custom to massacre
196 even women and children. (see section on Attitudes and Reactions)

b. Turks

The Chinese Moslems are on good terms with the Turks, and are reported to have feelings of kinship with them. Generally, this has been true evertthough the uprising of the 1930's ended in skirmishes between Chinese Moslems and the Turks.

B. History of Islam in Kansu

N There are no exact data on the introduction of Islam into
*563 Northwest China, but it is believed that the major conversion to
195 the religion of Islam took place during or after the Yüan dynasty
196 (1260-1368). It is unlikely that the first conversion appeared as early as the end of the Tang dynasty (618-906). Richard Wilhelm states, and it is true, that the first Moslem missionaries came to China at the end of the seventh century (Richard Wilhelm, Geschichte der chinesischen Kultures, München, 1928, 238 ff). Islam came to China by two routes, through Turkestan and then from Canton.

N *563 The first Moslem revolt took place in Kansu as early as 1648.
195 Two hundred years later Yaqub Beg (1865-1877) ruled the newly-
196 established Islamic empire from Kashgar. Russia, England, and Turkey officially recognized him. Yaqub Beg had an army of 50,000 men.

N The Moslems of Kansu tried to establish another Islamic empire
*563 (1861-1874). They conquered the western part of Mongolia, but
648 the T'ung-chih emperor (1861-1875) defeated them completely.

N Another uprising in 1895 was equally unsuccessful.
*563 When the Communists took over Northwest China in 1949-1950,
648 they granted the Chinese Moslems the rights of religious freedom
N and autonomy. (see section on Constitutional System)

*563 The communities of Chinese Moslems adopted the classical
563 Arabian educational system, i.e., each mosque has so-called
* 921 madrasa (Arabic) connected with it, where boys are taught to
921 read the Koran, etc. This is one reason why illiteracy is so
seldom found among Chinese Moslems.

VI. The Indo-Europeans of the Northwest

S 563 A. The Tajiks or Iranians or Sarikolis

1. General characteristics

S In the southwestern part of Sinkiang there lives a small Ira-
563 nian tribe called Tajiks, Iranians or Sarikolis, who are farmers,
131 merchants and traders. They have a reputation for being very
131 intelligent. They speak an Iranian dialect which is very closely
212 related to Persian. The Tajiks very often speak Turkish as a second language and the merchants even speak Chinese.

*563 and a certain degree of reproach. On the other hand, prompt ob-
652 servance of the rites at least creates a feeling of fellowship. It
762 is primarily a personal matter, but nevertheless, the entire community responds, just as in the case of the spring planting, and for the same reason. Each finds comradeship in working with the others in whatever concerns the welfare of the community.

There are farm villages in which live only Chinese Moslems.
*563 Physically, the community structure is similar to a Chinese vil-
652 lage. These Moslem villagers live in the same kind of houses and
762 do the same kind of farming. The streets of the villages also have a similar arrangement. But the Moslem people's way of communal life is distinctively different from that of a Chinese village. In every Moslem village there is a small public building that is used as a mosque. In the mosque the children of the village gather at regular periods to receive religious instruction. They learn the Arabic alphabet and phonetics so that they are able to read the sounds of necessary prayers and religious formulas, even if they cannot understand them. The Moslems are very faithful in
*563 their observance of the fast of Ramadan. During the fast, they
652 eat nothing between sunrise and sunset. At night they eat a com-
762 munal feast. The community fires blaze all night and people call and shout to each other. Before darkness falls, pious bearded men say their prayers in public places. One or two of the elders may preach the points of theology, quoting the Koran in oddly mutilated Arabic. On such an occasion the Moslems refer to themselves as "we" and to the Chinese in the nearby villages as "they" As in the case of the Chinese temple, the building and upkeep of the mosque is a communal matter. Assessments are made and cooperative effort is initiated; and, of course, as a project, it rivals and competes with the Chinese temple.

The Moslem villages are comparatively more organized, or show more community spirit, than the Chinese villages. Like their Chinese counterparts, the Moslem villages are administered by their village elders who always intervene in the meager relations between the villagers and the local or county government. The county government makes no distinction between Chinese and Chinese Moslem villages. The two types of villages have almost no
*563 relations with each other. There is always antagonism between
652 Chinese and Moslem villages. The two peoples have been and
762 still are mutually practicing segregation. Factors which are responsible for the antagonism or segregation are mostly religious habits and ideals. In addition, while the Chinese have a higher population gain, the Moslems are economically more successful. Both of these facts may be sources of jealousy.

However, in numerous economic activities, there is non-
*563 admitted cooperation or division of labor between the Chinese
652 and the Chinese Moslems. This has held true especially for
762 Moslem enterprises and Chinese skilli.

EDUCATION

I. Nationality Education in Pre-Communist Times

A. The Traditional Pattern

During the Manchu period, education in the Northwest was characterized by permissive and non-interfering policies of the government. This meant that the minorities were able to maintain and develop their own educational systems. During this period schools connected with the mosques, in the case of the Moslems, and the monasteries, in the case of the Buddhists, were the primary educational institutions. The minorities were allowed to formulate their own educational principles. It may be noteworthy that in the Manchu period, eighteen medrese, mosque schools, existed in Kashgar alone. Reading and writing were taught in these schools, and up to two thousand students were enrolled in the schools in any given year. The total number of medrese in the Northwest during the Manchu rule is unknown, but it is safe to say that each Moslem community had at least one educational institution.

1. Moslem schools

The Mohammedans have two kinds of school. The mekteb, elementary school for children, is administered by the local mosque. These schools provide education for all male children older than six. Since 1923 the Mohammedans have initiated the same educational provisions for girls.

The program of a mekteb comprises, first, the memorizing of a surprisingly high number of suras (chapters of the Koran), then the study of the Arabic alphabet, which is used by the Uighur. By memorizing various suras the pupils acquire some hundred Arabic words by the end of the first year, though their meanings do not become clear until the fifth year when the teaching of Arabian grammar is begun. Between the fifth and tenth years the curriculum covers advanced Koran exegesis, the history of Islam, geography and basic arithmetic.

The medrese, the institutions of higher learning, also teach such familiar subjects as al-mantik (logic), al-arithmāṭīḳī (arithmetic), al-handasa (geometry), al-hai'a (astronomy), al-ṭibb (medicine), al-falāḥa (agriculture); also some subjects which are specifically Islamic in nature, such as al-kalām (theology), al-taṣawwuf (ceremonies or practical theology), 'ilm al-ilāhiyāt (metaphysics), al-'arūḍ (metrics) and al-ḳāfiya (prosody).

As in elementary schools, the method of education consists primarily of learning by rote (talkin) and dictation. Those

Those students who go through six to ten years of continuous studies may become ahungs, mudarris (teachers) or ustāḏh (honorary title of recognized teachers). Generally, the erudition of these teachers does not seem to be very high. Hence idioms like "ahmaq min mu-allim kittāb" (more stupid than a school teacher).

Islamic laws regulate strictly the position and conduct of a teacher. He has to be married; he is permitted to teach only in public places (ḥānūt) with big windows, so the community can watch his activities; he is not allowed to use children as servants or engage them otherwise except in school work without the consent of their parents. Occasionally, however, parents have their children serve the teacher instead of paying the regular fees.

Kashgar has a fairly well-known school, the Wanglyq Medrese, whose fame was not confined to Sinkiang alone when Bohā'eddīn Makhdūm taught there, but spread as far as Istanbul and Cairo. Another famous Moslem scholar, Rāmetulla Akhun, the leading jurist ('ilmi fiqh) of his time, taught at Wanglyq. The Kichiq Orda (Little Castle) Medrese in Yarkand was also a well-known seat of higher learning. Also called Yeshil (Green) Medrese, it was founded by Baisi Bāk, the ḥākim (judge or physician) in 1820. While the quality of the medreses of Kashgar and Yarkand have steadily declined during the last decades, the medrese of Aqsu has maintained its reputation to the present because the core of its faculty are scholars from Afghanistan who received their training at the Al-Khazar University in Cairo.

2. Monastic academies of Lamaism

The high number of Buddhist monasteries all over Northwest China and their enormous monk population of course colored the whole educational system of the Northwest. These monasteries were not only institutions of higher learning, but they also served as libraries and printing houses.

Kumbum (Tib.: sKu-'bum-Byams-pa-gling; Chinese: T'a-erh-ssu) was the chief monastery in the Northwest. It was customary in Chinghai for every Tibetan family to send its second son to this monastery. At the age of eight the boy was admitted after a strange ceremony, which included questions like the following: Are you a debtor or a slave? Are you a hermaphrodite? Are you a demon or an all-knowing spirit? Did you ever treat your parents badly? Did you ever rob or steal? Did you ever belong to a heretic sect? After having answered these questions satisfactorily he received five objects, which henceforth were his only property: an alms-bowl, underwear, a tunic, a mattress and a water sieve. Then one of the ordained lamas was presented to him as his future tutor, whom his

family were to pay, and the boy's welfare depended largely upon the amount his parents were able to pay. Sons of poor families who could pay perhaps only one yak a year had to do menial work as water carriers, cow-dung collectors, straw and grass carriers, housekeepers and so forth, to pay for their lessons.

The years between eight and eighteen, the usual length of the novitiate, were given to attending an elementary school where the pupil learned to read, write and recite prayers. He was to learn forty chapters of the Kanjur from memory. During this time he was called a bande, or novice. Then he might enter the "Lamaistic college" to become a getsul, a stage between a novice and a fully ordained bLama. Or he might return to his home village or camp to become a house lama, of whom there are thousands, who are supported by a single family. If he chose to become a getsul he might continue to study and become a gelong, a fully ordained lama, entitled to wear the precious yellow tunic with a black collar.

Kumbum has four colleges: a philosophical college, a college of church service and occult sciences, a college of canonical literature and a school of medicine. One must go through the philosophical college before he may enroll in the college of church service and occult sciences, and must go through these two successfully before he may enter the college of canonical literature. The usual characteristics of those who enter the school of medicine are a pathological personality, epilepsy or other abnormality.

The philosophical college (Tib.: tsan-nyid) offers the study of the Kanjur. [The Kanjur consists of one hundred volumes subdivided into one thousand eighty-three chapters. Volumes one to thirteen contain the chapters about conversion and reclaiming (Tib.: dul-wa), the discipline and moral duties of the monks. The volumes from fourteen to thirty-four constitute the Prajñāpāramitā, which deals with the "road to virtue" leading to the "other shore," to Buddhahood and to that subtile and "transcendental wisdom" which is "without any characteristics," through which "all differences, contrasts, antagonisms, contraries, antithesis and contradistinctions" disappear, where all categories of thinking are empty, where heart and mind become silent like "the surface of a tranquil and placid sea." Volumes thirty-five to thirty-eight are called the Club of the Buddhas, volumes thirty-nine to forty-four are called Construction of the Precious Stones,' and the volumes forty-five to seventy-six contain narrations on how to gain the nirvana. The volumes seventy-seven to ninety-eight contain the tantras and dharanis, sentence of anathemas and magic formulas, and the last two volumes are the exegetics and exposition of the tantras and dharanis.]

The philosophical college does not procede according to the

arrangement of the Kanjur but starts, strangely enough, with the most difficult chapters, the abhidharma, metaphysics (Tib.: C'os-mnon-pa, clear doctrine), and difficult sutras. Each student gets an additional private tutor, who explains difficult passages of the matter under study.

When the weather permits, teaching is conducted in the open in the so-called chör-ra. Otherwise instruction takes place in a temple hall.

An important part of instruction is frequent disputations between the teacher-monks and the students, under the supervision of the abbot, khan-po. These loquatious duels give occasion for the students to show how much they know and how much they have memorized.

In the course of time the students are taught ts'ad (logic), bzo (technique), rtsis (astrology), snan nags (rhetoric), sgra (grammar) and adul-ba (monastic rules). After having mastered the whole material the student receives the degree of dka-bcu (a man who has passed the ten examinations).

To complete the work of the philosophical college takes more than a decade. Then the dka-bcu can either procede to the next college to gain the title of snags-rams-pa (master of the tantric sciences) or to another monastery where other famous teachers are found.

To receive the title of snags-rams-pa, the monk must study large parts of the Tanjur, a gigantic 225 volume collection of theological, philological, ethical, alchemistic tractates and a tremendous amount of occult tantras.

Another center of monastic studies was Labrang in Kansu, one of the foremost monasteries of the Yellow Sect. This monastery is divided into what might be called six different colleges. In the first, known as Wen-hsi-t'ang, five different sutras are taught. The second college is primarily concerned with the continuation of the studies in the first, but the difficulty of the curriculum increases. In the fifth and sixth colleges the esoteric sutras are taught. There are separate colleges for sciences of medicine. Most monks, however, never learned more than a few prayers. The Labrang monastery showed some concern with modern times by introducing courses in animal husbandry and the manufacture of agricultural by-products. Like other monastic academies, however, it has remained primarily a center of religious learning.

B. Nationality Education under the Republic

The period of the Republic was characterized by the fact that the government attempted to bring the Chinese educational system as far as possible into the area of the nationalities. Education became one factor in the general policy of assimilation.

The plan was to enforce four years of compulsory education in lower elementary schools, and a great effort was made to establish new schools in all the major centers of the nationalities. In Sinkiang, however, this development had not yet superseded the importance of the mosque schools. Figures (for 1941) on the number of schools and on school attendance are as follows:

Table 1

No. of Schools and Students in Sinkiang, 1941*

	Schools	Students		
		Male	Female	Total
Chinese Public Schools	236	9,461	1,979	11,430
Mosque Schools	1152	62,198	12,982	75,180
Total	1,388	71,659	14,961	86,610

* (Hsü Ch'ung-hao, Hsin-chiang chih-lüeh, 1944, pp. 232-233.)

According to another source, the schools were mostly established and operated by the cultural associations of various nationalities in Sinkiang. These cultural associations maintain offices in most of the cities of Sinkiang, with headquarters in Urumchi. They were supported by the ahungs, the village head men, living buddhas, princes and native chieftains, and they had a greater influence upon the promotion of education in Sinkiang than the provincial bureau of education. The number of schools operated by these cultural associations and the number of students enrolled in the schools in the year 1938 were as follows:

Table 2

Schools Operated by Cultural Associations in Sinkiang, 1938*

	Schools	Students
Uighur Cultural Associations	1,540	89,804
Kazakh Cultural Associations	275	14,322
Moslem Cultural Associations	1	44
Mongolian Cultural Associations	24	917
Total	1,840	105,087

*(Ch'en Chi-ying, Hsin-chiang Niao-k'an, Changsha, 1941, p. 36f.)

The Uzbeks, Tatars and Kuei-hua (White Russians) also have cultural associations which operate schools. Statistics about them, however, are not available. It is possible that there is a

CONTINUED ON NEXT FICHE

658 87 *175

schools.

In Ninghsia: Two training classes for Mongolian and Tibetan teachers and fourteen primary schools.

563 658 792 871

Special attention was paid to the education of the lamas in the great monastery of Labrang, at Hsia-ho in Kansu. The Mongolian and Tibetan Affairs Commission organized a Tibetan People's Cultural Association which helped to set up a vocational school and a political training class for young lamas. In the field of political instruction, the Central Political Institute also established a Mongolian-Tibetan School at Sining, in Chinghai, with a branch at Suchou, in Kansu.

*175 166 871 [648] [658]

During the war against Japan, with the migration of the coastal population inland, universities and middle schools from Peking and other places moved to the Northwest. When the war front was more or less stabilized after 1938, the Northwest enjoyed a comparatively stable peace. These "immigrants" built up cultural centers such as Ch'eng-ku, Ku-lu-pa in Shensi; and with the mass education movement promoted by the National Government, education in the northwest was greatly improved both in quantity and in quality.

658 872

Under the school system of the National Government, children started school when they were a full six years old. Before that age they might go to kindergarten if there were such facilities and if the parents could afford it. But at six the government required every child to attend the first grade. The free and compulsory education covered the first four grades, which were called junior primary school. The fifth and sixth grades were classified as senior primary school. A school with all six grades was called a complete or central primary school. In the Northwest, the National Government made a real effort during the war to push toward the goal of one junior primary school in every pao (approximately one hundred families) and one central primary school in every town or hsiang (administrative village). By the end of the war, all children with the exception of those in really remote areas had a chance to attend a junior primary school, even though some of these schools were of low caliber. As the central primary schools were limited in number, only the luckier ones who either lived close by or were financially better off could enter the fifth and sixth grades. After graduation from the sixth grade, there was quite a hurdle to clear before one could enter the secondary schools. Entrance examinations were difficult because the facilities were so limited that only selected children could be admitted. The secondary schools included three types: the middle schools; the vocational schools, and the normal schools. The middle schools were meant for a selected group, as preparation for more advanced studies. The vocational schools offered training in agriculture, industry, commerce

658 873

[874]

873 874

college level:

Hsining Normal College, Hsining, Chinghai
Northwest Normal College, Lin-hsia, Kansu
Su-chou Normal College, Chiu-ch'uan, Kansu
Sui-ning Normal College, Huang-ch'ü-ch'iao, Ninghsia
A T'ien-shan Normal College was being planned for Sinkiang.

874

The vocational schools that existed in 1946 were:

Ning-hsia Vocational School, Ninghsia City, Ninghsia
Chinghai Vocational School, Nieh-yuan, Chinghai
Labrang Young Lama Vocational School, Hsia-ho, Kansu
Yü-shu Vocational School, Yü-shu, Chinghai

[872] [563]

The Mongols in Ninghsia had two primary schools which served the purpose of vocational schools, both at Ting-yuan-ying for the Edsingol Banner. (Ministry of Information, Border Education, 1948).

B. Education in the Shen-Kan-Ning Border Area

871 *668 177

The Communists in the Shen-Kan-Ning border area had their own educational system. This is described by Edgar Snow as follows:

"It should be explained that under the emergency Soviet educational system there were three sections: institutional, military and social. The first was run more or less by the Soviets, the second by the Red Army, the third by Communist organizations. Emphasis in all of them was primarily political—even the littlest children learning their first characters in the shape of simple revolutionary slogans, and then working forward into stories of conflict between the Reds and the Kuomintang, landlords and peasants, capitalists and workers, and so on, with plenty of heroics about the Young Communists and the Red Army, and promises of an earthly paradise of the Soviet future.

"Under institutional education the Reds already claimed to have established about two hundred primary schools, and they had one normal school for primary teachers, one agricultural school, a textile school, a trade-union school of five grades, and a Party school, with some four hundred students. Courses in all these lasted only about six months.

"Greatest emphasis naturally was on military education, and here very much had been achieved in two years, despite all the handicaps of the little beleaguered State. There were the Red Army Academy, and the cavalry and infantry schools, already described. There was a radio school, and a medical school, which was really for training nurses. There was an engineering school, where the students actually got the rudimentary training of apprentices. Like the whole Soviet organization itself, everything was very provisional and designed primarily as a kind of

871 *668 177

rear-line activity to strengthen the Red Army and provide it with new cadres. Many of the teachers were not even middle-school graduates. What was interesting was the collective use of whatever knowledge they had. These schools were really Communist not only in ideology, but in the utilization of every scrap of technical experience they could mobilize, to 'raise the cultural level.'

"Even in social education the Soviet aims were primarily political. There was no time or occasion to be teaching farmers literature or flower arrangement. The Reds were practical people. To the Lenin Clubs, the Young Communist Leagues, the Partisans, and the village Soviets they sent simple, crudely illustrated Shih-tsu, or 'Know Characters,' texts, and helped mass organizations form self-study groups of their own, with some Communist or literate among them as a leader. When the youths, or sometimes even aged peasants, began droning off the short sentences, they found themselves absorbing ideas along with their ideographs. Thus, entering one of these little 'social education centres' in the mountains, you might hear these people catechizing themselves aloud:

"'What is this?'
"'This is the Red Flag.'
"'What is this?'
"'This is a poor man.'
"'What is the Red Flag?'
"'The Red Flag is the flag of the Red Army.'
"'What is the Red Army?'
"'The Red Army is the army of the poor men!'

"And so on, right up to the point where, if he knew the whole five hundred or six hundred characters before anyone else, the youth could collect the red tassel or pencil or whatever was promised." (Edgar Snow: Red Star Over China, 1938, pp. 254-257.)

[212]

Early attempts to promote education by making it compulsory and by replacing the Chinese script with a system of phonetic Latinization had to be abandoned again.

873 *668 177

In later years the Anti-Japanese University and the Lu-hsün Art College were their major institutions of higher learning. During the war several colleges were merged into Yenan University, which then was composed of a College of Administration, a College of Natural Sciences and a College of Art and Literature. The courses in the first two colleges took three years and the Art and Literature course, two years. Earlier attempts to duplicate the more formal curricula of Nationalist universities had been given up and education was "brought into harmony with the actual conditions of the people under the New Democracy." In the 1940's, Yenan University was one of the

graduated in four years a total of 11,000 students into the ranks of the cadres. Deserving boys of Mongol descent were also sent to study in the Inner Mongolia Autonomous Region, which was regarded as the model for the national minorities.

Short-term Training Classes: The first thing the Chinese Communists did upon entering Sinkiang was to set up twenty-five classes to train cadres in three-to-six month courses. By summer of 1951, these training classes graduated 3,600 cadres from 13 different nationalities.

Colleges: There were by 1955 thirteen institutions of higher education in the Northwest. The most important was the Northwest Revolutionary University located at Sian. Founded in 1950, it conducted courses on Marxism-Leninism and the writings of Mao Tse-tung with the aim of "reforming the intellectuals." (Ch'un-chung jih-pao, July 8, 1953). In 1953, after having graduated 12,000 cadres, its name was changed to Northwest Cadres School of Political and Legal Science. The Nationality College at Lanchou was under the direction of Wang Feng, who was head of the United Front Work Department of the Northwest Bureau of the CCP. The Sinkiang Nationality College at Urumchi, headed by provincial governor Burkhan, was distinguished by a faculty of 350 Soviet advisors who made up 43% of the teachers. It graduated 1,700 minority cadres in 1953. The Sinkiang People's Government and the Sinkiang Sub-bureau of the Chinese Communist Party each have a cadre school which, along with the training classes, turned out 10,000 cadres by the end of 1955. By the summer of 1955, these two cadre schools and the Sinkiang Nationality College trained a total of 396 teachers and 4,355 educational cadres.

The nationality autonomous areas were also used as nurseries for the incubation and training of nationality cadres. In Chinghai over a third of the native cadres were selected from activists in the people's governments.

The purpose of study in the cadre schools was to "enable the students to shake off the bad influences and to strengthen their patriotic ideology." The cadres were drawn from the ranks of the students and from "upper religious circles" and, "on returning to national minority areas, they were able to conduct propaganda in a correct manner, do work actively and promote solidarity among various nationalities in pushing forward political, economic and cultural enterprises." (Kuang-ming jih-pao, February 24, 1954).

Allowing for the possibility of some duplications in the figures, the number of national minority cadres trained may be estimated by adding the numbers mentioned in the Communist press (see Table 2).

Shensi, Graduates of the Northwest Nationality College at Sian, 1950-54			2,543
GRAND TOTAL FOR THE NORTHWEST			43,834

This figure, 43,834, is not far from the figure of "over 40,000 cadres of national minorities" cited by Wang Feng, chairman of the Commission of Nationality Affairs of the Northwest Military and Administrative Council and director of the Department of United Front Work of the Northwest Bureau of the Chinese Communist Party in December, 1953 (NCNA, January 6, 1954).

As to the total number of cadres in the Northwest, it is necessary to deduce from the statistics given in the Communist press to obtain an estimate. In September, 1955, Burkhan, governor of Sinkiang, claimed that there were 36,000 national minority

1: Washington S-4 (no date) 1956 AF13 Northwest China AF13

159 under the Ma family in Chinghai Province started with their
614 father, Ma Lin, who devoted his efforts toward the promotion
635 of education within the province. After Ma Lin died, his brother,
Ma Ch'i, took over the administration. But when the war with
[648] Japan began in 1937, Ma Pu-fang was given the position of governor of Chinghai, and at the same time he shouldered the tasks of leading the Kuomintang and commanding the troops within that province.

159 Ma Pu-fang was a career army officer. He started as a
[90] commanding officer of a batallion, and gradually climbed up to the post of commander of an army. When his uncle, Ma Ch'i,
[635] was governor of Chinghai before the Sino-Japanese War, he became a member of the provincial government. When he finally took over the administrative job in Chinghai in 1937, he was one of the youngest governors in China.

159 For more than thirteen years, 1937-1950, he held the posi-
635 tion of governorship. During his administration, particularly during the war years, he aimed at the following six main tasks:
185 First, he organized the Pao-chia system not only among the Chinese and Moslems, but also among the Mongols and Tibetans in his province. Second, he trained the local militia for the
[206] purpose of maintaining local order. Third, he was very strict in carrying out the policy of elimination of opium. Fourth, he
• [871] conducted the movement of compulsory education aiming at the total elimination of illiteracy within Chinghai. As a result of his policy, in a single year more than a hundred thousand people learned to read. In addition, there were 8 middle normal schools, 131 primary schools and 805 grade schools in that
[499] province. The fifth task was to construct highways, and during his administration, more than two thousand kilometers of highways were constructed. The sixth point was afforestation. Every person was compelled to plant five to ten trees a year, and as a result, more than seven million trees had been planted during those war years.

159 Being a Moslem himself and realizing the complexity of
77 religions in Chinghai, Ma Pu-fang was cautious in his handling
64 of different religious groups. On the whole he worked toward
635 religious harmony, and his policy was one of equal treatment toward all tribes. He chose his personnel regardless of religion or race, on the basis of capacity and personality. Thus he was generally trusted by all religious groups in his province.

159 When the Communists began their campaign in 1949, they
669 pushed their way to the Northwest. Ma Pu-fang was appointed director of the Administrative Headquarters of the Northwest, succeeding General Chang Chih-chung. Joining forces with Ma Hung-k'uei, he directed the defense of the Northwest. Unfortunately, all his attempts failed and by October, 1949, the

487 be any main roads leading anywhere from Lonan no diffi-
579 culties were raised except over the prevalence of brigandage. Brigands are of course almost universal in China nowadays, but they are always supposed to be worst in districts marching with a provincial border line, such as those we were now traversing. But our party was too formidable a one to have anything to fear from local brigands such as these.

487 A long day's march brought us to Shang Chou. The
133 track follows up the flat valley of one of the headwaters of the Lo Ho for 20 li, and then crossing a low rise, drops over the edge of the red plateau of Lonan into a narrow winding gorge hemmed in by bare mountains of red sandstone, which is followed until it debouches on to the valley of the Tan Chiang a little above Shang Chou.

634 Shang Chou is nowadays a decayed little place, though
487 formerly quite an important centre, a *Chou* in charge of four surrounding *Hsien*. After the Revolution of 1911 the former *Fu*, *Chou*, *T'ing*, etc. (Prefectures, sub-Prefectures, and so on) were all reduced to the rank of *Hsien*, or district, of the 1st, 2nd, and 3rd class, the class being determined largely, it seems, by the land-tax receipts, and, as many districts have been entirely renamed, most of the existing maps of China are in this respect out of date. Shang Chou, now called Shang Hsien, is a 1st class district. It lies in the valley of the Tan Chiang, an affluent of the Han River, on one of the most important trade routes in and out of Shensi, that from Hsian Fu to Lant'ien, across the Ch'inling Shan by two low passes, and down the valley of the Tan Chiang to the mart of Lungchuchai, whence boats ply *via* Chingtzu Kuan in Honan to the Han River, Laoho K'ou, and Hankow; though the importance of this route has somewhat declined since the railway from Honan u has reached to within three and a half days of T'ungkuan.

At Shang Chou we were in the basin of the Yangtzu, the insignificant rise on the edge of the plateau of Lonan being the Yangtzu Yellow River watershed.

• 871 We were here quartered in the local school, which, as we usually found to be the case, was easily the best and cleanest building in the place. The existence of a comparatively well-kept school house, with maps and educational

CONTINUED FROM PRECEDING FICHE

N *563 873 658 *175 • 871 N [69]

Government sponsored education of Mongols and Tibetans was already initiated in 1910, when the comptroller-general of Chinghai founded the Chinghai Mongolian Academy at Hsi-ning. This school was conceived for service to the Mongol Banners exclusively.

A somewhat peculiar situation existed in Chinghai after the revolution of 1911. Chinghai in this period was ruled by Moslem generals, who persued a rather fair policy toward ethnic groups. The activities of one of these Moslem generals, Ma-Ch'i, should be stressed. The goal he set for himself was the introduction of at least one primary school in every community of Chinghai, regardless of the ethnic composition of the particular community. His activities were marked by his insistence that all children should learn Chinese in addition to their own language. Besides, he developed and enlarged the training of the ahung (teacher or lowest priestly rank). His first act upon becoming vice-governor of the province was the establishment of

*563 873 658 *175 871

the first middle school in this area.

After the revolution of 1911, the Chinghai Mongolian Academy was renamed Ning-hai Mongolian and Native School, and was now open to other ethnic groups such as Tibetans, Chinese and Moslems. In 1919 this school added a department for the training of elementary school teachers. Since the enrollment of Mongol and Tibetan children steadily decreased after 1919, the government ordered the Mongol nobles to send the children under their jurisdiction to this school. In 1926 the school was again enlarged, and renamed the Planning School of Frontier Development. After the addition of a middle school to this institution, it became the center of secondary education in the area. The curriculum of this school comprised language training in Mongolian, Tibetan and Chinese. Otherwise the school program corresponded to that of other middle schools in China proper. In 1929 the department of vocational education was separated from the school and became the First Provincial Vocational School. The Planning School itself was then renamed First Provincial Middle School. About this time other schools, such as First Provincial Normal School, First Provincial Girls' Middle School and First Provincial Agricultural School, were founded.

*563 873 658 *175

In 1930 the First Middle School provided a Mongolian and Tibetan normal division as a course of study; this division became in 1937 an independent Tibetan and Mongolian Normal School under the supervision of the Chinghai Bureau of Education. The authorities of the Chinghai Moslem Association, to eliminate the differences between the various minorities, established also their own middle school.

*563 • 871 *175

There were three cultural organizations in Chinghai worthy of note, namely the Tibetan Language Study Association, which translated the Three Principles of the People into Tibetan, and provided Tibetan school children with Tibetan reading and grammar books; the Tibetan Culture Promotion Association, which was founded in 1931 and which was supported by military and political leaders. Its objectives were to propagate the Three Principles of the People in a manner that would awaken the Mongols and Tibetans from their so-called backward cultural condition. A further goal of this association was to unify Tibetan and Mongol culture, and to maintain the physical existence of these minorities. Third, there existed a "Moslem Promotion Association which was primarily concerned with promotion of general education among the Moslems of Chinghai and their indoctrination with the Three Principles of the People. A further objective was to overcome certain racial resentments that existed among various minority groups in the area. Branch associations were set up in all counties (hsien) where Moslems live. The headquarters for all branches was located at Hsi-ning.

and attached to these headquarters was a primary and a middle school. The Moslem Promotion Association, discussed here, operated a total of eighty-three primary schools, twelve of them senior primary schools. They had a total of 5,300 students and 201 teachers.

The main purpose of the government during wartime, in bringing educational facilities to the Northwest, was to unify and reconstruct the cultures of the ethnic minorities along Chinese principles with equal emphasis in primary education on citizenship training, language, vocation and hygiene. In secondary education, the Kuomintang government attempted to develop or initiate technical abilities.

During World War II the Kuomintang government showed some interest in the education of the nomadic Tibetans. Chiang Kai-shek induced some tribal leaders to carry a school tent with their tribes. These tents served as primary educational centers. This move was revolutionary, as it was the first type of education, or at least of organized education, to reach the nomadic Tibetans.

Up to 1945 the educational program sponsored by the provincial authorities was as follows:

1. In Chinghai: As of 1943, there were eleven nationality schools operated by the Mongolian-Tibetan Cultural Promotion Association. These eleven schools supplemented the forty-four Mongolian-Tibetan Nationality Schools already in existence. Following the transfer of the Chinghai headquarters of the Mongolian-Tibetan Cultural Promotion Association to Yü-shu in 1943, six more nationality schools were established, of which two were directly under the administration of the association. In addition, the association established two training classes for teachers of Mongolian and Tibetan, one at Ta-t'ung and one at Yü-shu. Hsi-jao-chia-tso, with the financial assistance of the Ministry of Education of the National Government, also established a training class for the teaching of Chinese language to the native teachers.

2. In Ninghsia: The educational program of the local authorities received a boost when the Yün-t'ing Educational-Cultural Fund of one million dollars was appropriated. The money, however, was in depreciated currency of the National Government and did not amount to much, but with it the provincial authorities were able to set up twelve Yun-t'ing Primary Schools which had a total of twenty-five hundred students. In Ninghsia the number of mosque schools was much fewer than in Sinkiang. Here there were, up to 1945, only twelve classes with a total of two hundred and forty students. There were two nationality schools, one at T'ao-yueh and one at T'eng-k'ou, one banner school and a teacher training class in the Alashan Banner.

II. Chinese Education in Pre-Communist Times

871 184 A. Education under the National Government

During recent decades, the education in Northwest China has been backward compared to that in the coastal provinces. The educational standards within Northwest China also differed greatly. Generally speaking, the farther the people lived from the big cities, the less they were educated.

Even though the general Chinese school system was introduced also to the Northwest, in remote places the so-called schools were scarcely different from the old-fashioned tutor system.

658 871 *175 The provincial authorities were handicapped by the shortage of funds as they struggled to set up schools with what little was appropriated to them by the Central Government. In 1935, the Central Government appropriated half a million dollars for border education, and within two years the following schools were established:

In Kansu: A training class for village teachers and fifty-five primary schools.

In Chinghai: A normal school for the teaching of Mongolian and Tibetan at Hsining, two middle schools, 143 primary

873 874 *268 179 September, 1955, is a place where cadres and students transferred into Sinkiang from other provinces receive their agricultural training. It is more of a training camp than a regular college.

B. Nationality Education

1. The general trend

• 871 *268 179 Under the Communist regime, educational activities among the ethnic minorities of the Northwest are reported to have increased sharply. The Communists recognized early that by emphasizing the issue of education among the some thirteen nationalities in the Northwest, they could further consolidate their hold over these minorities. In line with their policy of placating the Moslems (See Religion), educational developments in Sinkiang have been widely publicized. It is not easy to make sense of the different sets of figures given. The most meaningful are tabulated in Table 7. [1]

In this table, the figures of Burkhan's report of January 1, 1953, are so inconsistent with the rest that they probably have to be discarded; otherwise the figures appear mutually compatible. According to the percentages given, the number of schools in the years before 1949 should have been about two hundred, and the number of students slightly more than two hundred thousand. [114] These figures do not coincide with pre-Communist statistics. One fact emerges clearly from the figures of Table 3. All the mosque schools and their students must be included in them. In view of the shortage of educational personnel it is highly questionable whether staff and curriculum of these schools can be adjusted within a reasonable amount of time to the exigencies of Communist education. That this problem is realized is shown by reports that more than 130 middle and primary school teachers of all nationalities were inducted for special political training in the Sinkiang College, the Northwest People's Revolutionary University, and the Northwest Normal College in 1955 alone. In 1954, 126 teachers of all nationalities were given political indoctrination courses in so-called "spare-time improvement classes" in Urumchi, Kashgar, Sha-che and Khotan. Such classes were also operated in other areas, with particular emphasis upon the training of primary teachers. Schools of all levels are adopting advanced teaching methods and experiences and the teachers have reached the stage "of carrying out their work with preparation and planning" (Current Background, Oct. [875] 25, 1955). The number of politically reliable teachers might have increased somewhat through these measures. In view of the prevailing need, the figures given are still pitifully low. The basic question of whether the ahung can be entrusted with Communist education remains unsolved.

[1] [See p. 323--Analyst]

The Communists are, however, careful in giving the appearance of promoting the special characteristics of the different nationalities, and of using national forms in teaching. Where the nationalities have written languages, they are used in textbooks. In the last few years there have been compiled, translated, published and supplied more than four million copies of middle and primary school textbooks in Uighur, Kazakh, Russian, Mongolian, Uzbek, Tatar and Kirghiz. The new teaching material used has been as far as possible adapted to the actual living conditions of the different nationalities, and teaching methods have been adopted which are familiar to the different nationalities and suitable to their mentalities.

2. Higher education

Efforts to build up institutions of higher education for the nationalities have been particularly publicized. The Sinkiang Medical College and the August First Agricultural College have been mentioned earlier. Of particular importance, however, were the institutions for the training of nationality cadres. The foremost school in the country which serves this purpose is the Nationalities School in Peking (See IMAR Handbook, Education). The Northwest, however, has two institutions of its own, the Sinkiang Nationality College at Urumchi, Sinkiang, and the Northwest Nationality College at Lanchou, Kansu.

The Northwest Nationality College was reorganized in 1950 from the so-called Study Class on Problems of the Tibetans. Up to 1953, it had graduated more than 1,800 students and in 1953 it was attended by more than 1,300 students from 13 different nationalities. The school includes three sections:

(1) The training class of administrative cadres:

(2) The College, with four departments, namely, languages, political science, law, and animal husbandry and veterinary medicine. The students majoring in law or political science graduate in two years; those majoring in languages or animal husbandry and veterinary medicine graduate in three years.

(3) The sub-freshman.

On February 18, 1954, Jen-min jih-pao reported that up to then the Northwest Nationality College in Lanchou graduated 2,573 students; and that there were 786 students in attendance. These students came from thirteen nationalities, namely, Mongol, Tibetan, Uighur, Chinese Moslems, T'u-sin (Mongours), Tung-hsiang, Salar, Pao-an, Yü-ku, Kazakh, Uzbek, Manchu and Chinese. Teaching was offered in all these languages.

On January 10, 1955, the New China News Agency reported that the Northwest Nationality College graduated another 465 students of the various nationalities. Most of these were "positive elements" in the pastoral areas and minority cadres serving in the government above the ch'ü level in Kansu, Chinghai

792 the two monasteries there has been a total of five to seven thousand monks. These monks came not only from the immediate area, but were attracted by the prestige or teachings of the monasteries from Mongolia and other areas on the Chinese border.

792 871 Labrang prides itself on being one of the six major academic monasteries in all Tibet. Ma Ho-t'ien even claims for it more complete systems of education and organization than are to be found at the central Tibetan centers of Ganden, Sera and Tashihlumpo. But this pride is modified by the fact that an academic degree of Geshe from Labrang is not actually recognized in Tibet proper. The Labrang incarnations, Chia-mu-yang, have generally gone to Depung in Lhasa to receive instructions.

792 [708] [423] [651] Kumbum can rest on its laurels as a place of holy pilgrimage. Within its grounds is the rock associated with Tsong-kha-pa's birth; so too is there the famed tree that supposedly sprang from the shorn locks of the Great Reformer. Both monasteries own much land and represent great wealth. Some has come in the form of the accumulated gifts and donations of the pious. Still more is representative of taxes imposed over the years on their local subjects, for, like many of the smaller monasteries, these two are the seats of secular rule as well as religious reverence.

792 901 In return for the gifts and other revenue, however, the monasteries perform many functions for their subjects and believers. In the turbulent conflicts between Moslems, Chinese and Tibetans, the monasteries have represented the effective military force of the area. Rijnhart, Ekvall, Ma and others who have been present in crises have all reported the efficacy of the fighting monks. Their strongholds serve as banks for the wealth of all in danger from looting; their armed force stands for the safety of Chinese, Tibetans and foreigners who seek refuge. Nor is there any perceptible hesitancy about the prospects of taking life when the lama war cry, "Sha-sa, sha-sa" (Eat meat, eat meat!), summons the monks to arms. Sometimes these armies [669] were aroused by major crises, such as those of the Moslem rebellions in the late 1800's. They have also done battle against the Communists in the 1930's. And when no greater danger threatens, they are apt to do battle among themselves on an inter-sect or local rivalry basis.

792 795 But the hold of the monasteries cannot be measured solely in terms of the social and political roles they fulfill. The religion of Lamaism is a very tenacious one. The complete conversion of Tibetans to another faith, be it Christianity or Islam, remains on a very small scale. Within the Lamaist structure, the hold of the older sects is the strongest, especially in areas that have remained outside the control of Lhasa. And underneath

I: Washington S-4 (no date) 1956 AF13 Northwest China AF13
Sinkiang AJ1

LABOR

I. "Free Labor

N
464 Information on labor conditions in the Northwest is very scanty. However, there are indications that the Communists have faced a very serious problem of labor shortage in that N
[162] area. To begin with, the Northwest is a very sparsely populated area. It embraces about one third of China's territory, but its population is only about six percent of the national total. If any large scale reconstruction works are to be effected, N
it seems to be necessary to use outside labor supplies. More- • [871] over, educational standards in the Northwest have been relatively N
low. Consequently, the quality of native labor is also a problem.
464 To overcome these difficulties, the Communists have adopted
*668 several methods. One is to encourage or force skilled and
177 semi-skilled labor in other parts of the country to work in the
167 Northwest. For instance, the communication department of
[466] Sinkiang in May, 1955, absorbed some 409 automobile drivers S
and mechanics from among the demobilized servicemen in
[464] Shantung and Honan for reconstruction work in the border
[66] regions. In March, 1955, 200 cadres of Hui nationality of the People's Liberation Army Railway Corps have been transfered to work in the Hui-nationality areas in Kansu and Chinghai. Most of these cadres have passed through the Anti-Japanese "War of Liberation," land reform and Anti-U.S. and Aid-Korea campaigns. Of these ninety percent are party members or members of the Communist Youth League.

In late 1954, four thousand skilled building workers and technicians from other cities have signed up for work in Sian. They began to arrive from Shanghai, Wuhan, Canton and other places in early 1955, and they were warmly welcomed by the local authorities. All this shows that outside labor has played a very important part in the economic reconstruction in the Northwest (See also section Population).

II. Army Labor

S
464 Another method is to use the army as a labor force. This
701 has been particularly important in Sinkiang, in which the
908 People's Liberation Army have participated in many reconstruction
668 projects. To take 1955 as an example, they were engaged in
177 the following tasks:

A March 24, 1955, despatch reports: "The People's Liberation Army farming units in Sinkiang have started their afforestation program in the south of this province. This year they plan to plant trees on 1,200 hectares, mostly shelter belts to protect reclaimed farmland."

AF13 Northwest China AF13

distinct classes—the lamas, and the laity. These latter are a wholly uneducated, spontaneous, and trustful people. Many of them would sit with us for hours, and would return again and again, bringing small offerings which they exchanged for coloured pictures. The layman is accustomed undeviatingly to shelve all responsibility in matters deemed spiritual on to the shoulders of the priest, who is paid and kept solely for this purpose, with the result that the lamas' whole existence being dependent upon the populace, it is to his advantage that ignorance and gross superstition should be maintained. Yet even among the lamas some seem to have aspirations after better things. There is one Living Buddha who stands out in contrast with all his fellows. He made a pretext to visit our tent, where he sat, spellbound, listening to the story of the Prodigal Son.

'The forgiveness of that young man by his father is a thing I can understand,' he said; 'but what of the burden of sin of previous lives, which binds us to the Wheel of Life?' 'The Lord Jesus Christ is the Door *out* from all the past, as well as being the Entrance *into* a new and an Eternal Life,' was our answer. He listened thoughtfully, and when he left accepted a copy of the New Testament in Tibetan, which he carefully hid in the folds of his red shawl.

CHAPTER XII

IN THE VILLAGES

On our return to Kanchow we found the wheat-harvest almost over, and the season now suitable for conducting classes in village centres. These were very

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

largely attended, as many as eighty men and women registering in one locality. The majority were illiterate. We therefore considered it best to insist on all students becoming first of all proficient in the Government Phonetic Script, by means of which system an illiterate can be taught to read in twenty days. During the three years we spent in Kansu, five hundred and twenty-three pupils learnt this Script in our classes.

The villages of Kansu are often exceedingly poor, and in one of the places we visited the people had sunk so low as to be threatened with extinction by famine. A few miles away from this village the wide Heh ho—Black River—rushes out of a mountain gorge, its waters being then turned into the large irrigation-canals which convey them to the various districts. Quarrels, resulting in lawsuits between the principal villages, had led to the loss of their rights on the river by this settlement. For three years no water had been allowed to come that way, and as rain is so scarce in North-West Kansu no farming can be done without irrigation. As deep poverty seized these unfortunate people, opium-smoking became their only possible luxury, and they were soon plunged in unspeakable degradation. Dr. Kao, with a band of young Christian men, hearing of their miserable condition, paid them a visit. He found their irrigation-canal having been dry for three years was now completely choked with all kinds of débris. Apathy had fallen on the village elders, and the whole situation appeared hopeless. A meeting was convened to which all the men came, and was opened and addressed by Dr. Kao. He told them of the love of God for each one of them, and of the saving power of the Lord Jesus Christ to free them from even the craving for opium. 'You must repent, pray, and work,' he said. 'We will now together acknowledg

2: Teichman G-5 (1919) 1921 AF13 Northwest China AF13

pictures on the walls, in practically every district city throughout China (of which there are nearly 2000) evidences the excellence of the principles governing the administration of the country. In the middle schools English, the official "foreign" language, is taught. Unfortunately in too many cases the local school does little more than represent the principle of education. The Chinese have a well-known saying *Yu Ming Wu Shih*, which means "theory without practice"; this saying holds good of most things in China, especially those connected with the Government of the country.

The magistrate of Shang Chou at the time of our visit was rather a remarkable character, and a "Ta Ko" (lodge-master) in the notorious secret society called the Ko Lao Hui. It is improbable that any foreigner knows much about the secrets, the history, doings, and aims of the Ko Lao Hui, but during and since the Revolution it has been the great power in Western China, particularly in Shensi and Szechuan. Originally anti-dynastic, it worked very much in the dark in the days of the Manchus, and for a magistrate then to have been a member would have been an unheard-of scandal. With the overthrow of the Manchus the Ko Lao Hui came out more into the open. The revolution in the West was largely their work, and the bands of the T'ung Chih Hui who rose in Szechuan against Chao Erh-feng in August 1911, and whose rising brought about the military revolt at Hankow which ultimately swept away the Manchu Dynasty, were Ko Lao Hui partisans under another name. On the coast the revolution was to a large extent a matter of hoisting republican flags, and whole provinces joined the republican cause with their Generals and Governors at their heads. In the West, thanks to the Ko Lao Hui, the revolution was a real rising of the people, led by some of their least desirable representatives, against their rulers, and was accompanied by much more bloodshed, including the terrible massacre of the Manchus at Hsian Fu.

After the fall of the Manchus the Ko Lao Hui reckoned Yuan Shih-k'ai as their chief enemy, and perhaps this was not the least of the latter's many admirable qualities. After his death their power and influence rose almost unchallenged, and at present they are in many parts an absolute curse to

Hui Hsien to the Chialing Chiang, and the other *via* Hsiho Hsien, Chieh Chou, and P'ik'ou; these are all mule trails.

Ch'in Chou is the seat of a Taoyin, a General, and a magistrate, by whom we were most hospitably entertained, being lodged in the local middle school. The latter provided quite luxurious accommodation, consisting of remarkably fine spacious buildings. There were plenty of students too, and the popularity of the government schools was here, as elsewhere in this remote province, very apparent. English, nowadays the official foreign language of China, is taught. I am not in a position to give any opinion as to the standard of the work done in these middle schools in Kansu but it is evident that they are more popular than the missionary schools, which is perhaps hardly to be wondered at. Immensely beneficial as the educational work of the missionaries is to the Chinese, it has the disadvantage, from the Chinese point of view, of being adulterated with evangelistic effort; so that the student, athirst for Western knowledge, has to swallow the Christian powder skilfully hidden between layers of scientific jam. Then there is always the underlying feeling against the alien institution, and also the fact that all the missionaries who engage in educational work in China are not always well qualified to lead their pupils very far. In Kansu missionary schools exist in only a very small way; but in some provinces, notably Szechuan, large institutions have been established, including a university. These remain, however, like the Christian Church in China, purely foreign institutions for the Chinese under foreign management, and for that reason are not always appreciated by the Chinese as they doubtless deserve to be; the latter would probably prefer that the foreign teachers should offer their services in the government schools.

From Lanchou Fu we had so far been following one of the main trade routes of Kansu, but we now turned westwards *en route* for T'ao Chou on the Kokonor border, following a very rough mountain trail through the heart of the western extremity of the Ch'inling Shan. Our first objective was the little district city of Li Hsien, distant two days' march, lying on the headwaters of the Chialing Chiang and therefore in the basin of the Yangtzu.

Leaving Ch'in Chou the path runs up a bare valley

3:Cable & French M-5 (1926) 1927
AF13 Northwest China AF13

609 The mother's parting threat to her son, when he left
596 the house, was expressed in these words: 'The day you join that Church you may order my coffin, for I will not live to endure such a disgrace.' His answer was: 'There is a way of life and a way of death. If you *must* choose the way of death, I shall mourn for you. But as for me, my path is that of Life.'

799 On our next visit to Fuyi we were the guests of the
212 Mandarin for seventeen days, during which time, at
871 his request, we gave instruction in Phonetic Script to both boys' and girls' schools. Although the town is small, the schools are important, and supply a number of students to the Provincial College at Lanchow. This visit afforded us the opportunity, under particularly happy conditions, to hold evangelistic services for children and for adults. The first Christian worship in Fuyi was led by Mr. Tu, whose name was in the mouth of every man of the neighbourhood. 'What *shall* we see next?' they said. 'Tu ru tao has joined the Christians!'

CHAPTER XV

NEARING SUCHOW

244 THAT same evening we left Fuyi for the city of Kaotai, which is the next important centre between Suchow and Kanchow. The fertility of this district can be judged by the daily market, where splendid vegetables of every description are for sale. This was the melon season, and half-a-dozen varieties of excellent quality were displayed in abundance. In view of the lean days to come, we stocked ourselves well with them, as also with carrots, celery, potatoes, egg-plant, and, for the

N.W. China AF13

The greatest object of interest in Hsingan fu is an ancient museum, the Be ling, the forest of inscription stones, a small cypress wood with pavilions and temple-like buildings in which for many years already hundreds of stone slabs bearing inscriptions and classical paintings were gathered together for official reasons into a gold-mine for Sinology. A few months before my arrival the famous Nestorian tablet had been hastily brought there from its former place in the western part of the city by 50 coolies because it was in danger of being taken along by an American collector. It tells of the great dissemination of Nestorian Christianity in China during the eighth century. Besides that, every stranger is supposed to look at the old governor's yamen in which Emperor Kuang sü and Empress Tse hi had lived during the Boxer Rebellion. After the court left, this yamen remained unoccupied because no one else was considered worthy of dwelling in the imperial rooms. The rooms were very simply furnished. On the walls hung kakemonos, flowers and luck-bearing Chinese pictograms, many of which the Empress Dowager was said to have designed and painted herself. In the courtyard of the one-time imperial palace I was shown a walled cistern that was many meters deep. In it - my cicerone said - the unfortunate emperor attempted to commit suicide in order to escape the torments of his aunt. Much more entertaining, were two festivals which were celebrated in the city while I was waiting there. One of them was a large parade of the Manchu garrison which at that time with 3,900 families (about 15,000 souls) occupied the entire northeastern part of the city; the second festival was a pupil and student celebration that took place on the old Chinese parade ground in the northwest corner of the city. On the one hand, the class which was at that time still in control and the banner people, the mainstays of the ruling dynasty; on the other hand, Chinese youth who were celebrating the end of their annual examinations, those new educational methods which were supposed to lead the kingdom of the middle, the Chinese common people, into new paths, to new bloom. In place of the old state competitions in which calligraphy and poetry and essays, interlarded as much as possible with quotations from the classics, were the dominating factors and determined the maturity and dignity of the candidate for the highest posts in the state, /329/ and for which one prepared privately, the Manchu had set up schools in which mathematics, natural sciences, foreign languages and political science were taught and examined. Now a general sport festival ended the school year of the elementary schools, of the preparatory schools, and of the

217

701

871.

N.W.China AF13

•871 technical and cadet institutions, all of which together represented tremendous progress on the road toward modernization. Whereas, for reasons of state, an effort was being made to modernize Chinese youth and make it conform to Western ideas, whereas outside the west gate of Hsingan fu two permanent camps of two Chinese infantry regiments drilled in uniforms resembling those of the Japanese army, in leather boots with side-arms and modern repeater guns, the troops of the ruling Manchu group stood before their chief commander carrying the oldest kind of muzzle loader, the cannonaders brought medieval muzzle loader canons to the parade, which looked like playthings, and in the cavalry division which was scantily mounted, every other man, at least, carried a flag that covered him up completely and a quiver with a dozen bows. Besides, scarcely 1,000 men appeared for the parade. We are not surprised, therefore, that the Manchu who pursue such a short-sighted policy and equip their own people so poorly, should have meanwhile been overthrown from their privileged position and succumbed almost without a struggle. When in 1912 the news reached Europe that the entire banner garrison of Hsingan fu was overcome and massacred by the Chinese in one night, one could, strictly speaking, only marvel at the fact that this had not happened before; it only showed that the Manchu as such were not so very much hated by the Chinese people and that they were impediments only for a few ambitious young Chinese and officials. In the 260 years of their rule the Manchu had become too completely Chinese in their entire thinking and feeling. The small Manchu group - in 1912 it did not even number one and one-half million souls including women and children and the banner men - had forgotten its own language almost completely and had cultivated Chinese literature more than any national dynasty before it.

205 214 The greatest change in China has been brought about by the introduction of the postal system and, in connection with that, the Chinese press which became possible only through the postal system. Whereas in Lanchow fu a Chinese seldom took a letter to the post and there were no newspapers either in Tibet or in all of Kansu and wherever I had stayed during my journey, in Hsingan fu whole cart-loads of magazines and pamphlets arrived from Shanghai, Hankow and Tientsin. The people of the city pounced on new reading matter and all at once it had become a necessity for them. It was the post, the regular couriers introduced by the Europeans, who spread the new ideas and the changes throughout the country.

872

872 ELEMENTARY EDUCATION--tutorial education; primary schools (e.g., private, parochial, public); periods of instruction (e.g., terms, vacations, hours per day, days per week, weeks per year, years required for graduation); compulsory or voluntary attendance; objectives (e.g., universal literacy); curriculum (e.g., subjects and their progression); grading and advancement; educational aids (e.g., textbooks, stationery, blackboards); ceremonial (e.g., graduation); special institutions for very young children (e.g., nursery schools, kindergartens); etc. See also:

EDUCATION

1. Nationality Educatfon in Pre-Communist Times

+175 *563 871 794 [858] A. The Traditional Pattern

During the Manchu period, education in the Northwest was characterized by permissive and non-interfering policies of the government. This meant that the minorities were able to maintain and develop their own educational systems. During this period schools connected with the mosques, in the case of the Moslems, and the monasteries, in the case of the Buddhists, were the primary educational institutions. The minorities were allowed to formulate their own educational principles. It may be noteworthy that in the Manchu period, eighteen medrese, mosque schools, existed in Kashgar alone. Reading and writing were taught in these schools, and up to two thousand students were enrolled in the schools in any given year. The total number of medrese in the Northwest during the Manchu rule is unknown, but it is safe to say that each Moslem community had at least one educational institution.

• 872 794 1. Moslem schools

The Mohammedans have two kinds of school. The mekteb, elementary school for children, is administered by the local mosque. These schools provide education for all male children older than six. Since 1923 the Mohammedans have initiated the same educational provisions for girls.

The program of a mekteb comprises, first, the memorizing of a surprisingly high number of suras (chapters of the Koran), then the study of the Arabic alphabet, which is used by the [876] Uighur. By memorizing various suras the pupils acquire some hundred Arabic words by the end of the first year, though their meanings do not become clear until the fifth year when the teaching of Arabian grammar is begun. Between the fifth and tenth years the curriculum covers advanced Koran exegesis, the history of Islam, geography and basic arithmetic.

893 794 The medrese, the institutions of higher learning, also teach such familiar subjects as al-mantiḳ (logic), al-arithmāṭīḳī (arithmetic), al-handasa (geometry), al-hai'a (astronomy), al-ṭibb (medicine), al-falāḥa (agriculture); also some subjects which are specifically Islamic in nature, such as al-kalām (theology), al-taṣawwuf (ceremonies or practical theology), 'ilm al-ilāhīyāt (metaphysics), al-'arūḍ (metrics) and al-ḳāfiya (prosody).

[896] As in elementary schools, the method of education consists primarily of learning by rote (talkín) and dictation. Those

792 794 871 [875] family were to pay, and the boy's welfare depended largely upon the amount his parents were able to pay. Sons of poor families who could pay perhaps only one yak a year had to do menial work as water carriers, cow-dung collectors, straw and grass carriers, housekeepers and so forth, to pay for their lessons.

792 794 • 872 The years between eight and eighteen, the usual length of the novitiate, were given to attending an elementary school where the pupil learned to read, write and recite prayers. He was to learn forty chapters of the Kanjur from memory. During this time he was called a bande, or novice. Then he might enter

792 794 873 the "Lamaistic college" to become a getsul, a stage between a novice and a fully ordained bLama. Or he might return to his home village or camp to become a house lama, of whom there are thousands, who are supported by a single family. If he chose to become a getsul he might continue to study and become a gelong, a fully ordained lama, entitled to wear the precious yellow tunic with a black collar.

Kumbum has four colleges: a philosophical college, a college of church service and occult sciences, a college of canonical literature and a school of medicine. One must go through the philosophical college before he may enroll in the college of church service and occult sciences, and must go through these two successfully before he may enter the college of canonical literature. The usual characteristics of those who enter the [858] school of medicine are a pathological personality, epilepsy or other abnormality.

792 794 873 879 The philosophical college (Tib.: tsan-nyid) offers the study of the Kanjur. [The Kanjur consists of one hundred volumes subdivided into one thousand eighty-three chapters. Volumes one to thirteen contain the chapters about conversion and reclaiming (Tib.: dul-wa), the discipline and moral duties of the monks. The volumes from fourteen to thirty-four constitute the Prajñāpāramitā, which deals with the "road to virtue" leading to the "other shore," to Buddhahood and to that subtile and "transcendental wisdom" which is "without any characteristics," through which "all differences, contrasts, antagonisms, contraries, antithesis and contradistinctions" disappear, where all categories of thinking are empty, where heart and mind become silent like "the surface of a tranquil and placid sea." Volumes thirty-five to thirty-eight are called the Club of the Buddhas, volumes thirty-nine to forty-four are called Construction of the Precious Stones, and the volumes forty-five to seventy-six contain narrations on how to gain the nirvana. The volumes seventy-seven to ninety-eight contain the tantras and dharanis, sentence of anathemas and magic formulas, and the last two volumes are the exegetics and exposition of the tantras and dharanis.]

The philosophical college does not procede according to the

schools.

In Ninghsia: Two training classes for Mongolian and Tibetan teachers and fourteen primary schools.

Special attention was paid to the education of the lamas in the great monastery of Labrang, at Hsia-ho in Kansu. The Mongolian and Tibetan Affairs Commission organized a Tibetan People's Cultural Association which helped to set up a vocational school and a political training class for young lamas. In the field of political instruction, the Central Political Institute also established a Mongolian-Tibetan School at Sining, in Chinghai, with a branch at Suchou, in Kansu.

During the war against Japan, with the migration of the coastal population inland, universities and middle schools from Peking and other places moved to the Northwest. When the war front was more or less stabilized after 1938, the Northwest enjoyed a comparatively stable peace. These "immigrants" built up cultural centers such as Ch'eng-ku, Ku-lu-pa in Shensi; and with the mass education movement promoted by the National Government, education in the northwest was greatly improved both in quantity and in quality.

Under the school system of the National Government, children started school when they were a full six years old. Before that age they might go to kindergarten if there were such facilities and if the parents could afford it. But at six the government required every child to attend the first grade. The free and compulsory education covered the first four grades, which were called junior primary school. The fifth and sixth grades were classified as senior primary school. A school with all six grades was called a complete or central primary school. In the Northwest, the National Government made a real effort during the war to push toward the goal of one junior primary school in every pao (approximately one hundred families) and one central primary school in every town or hsiang (administrative village). By the end of the war, all children with the exception of those in really remote areas had a chance to attend a junior primary school, even though some of these schools were of low caliber. As the central primary schools were limited in number, only the luckier ones who either lived close by or were financially better off could enter the fifth and sixth grades. After graduation from the sixth grade, there was quite a hurdle to clear before one could enter the secondary schools. Entrance examinations were difficult because the facilities were so limited that only selected children could be admitted. The secondary schools included three types: the middle schools; the vocational schools, and the normal schools. The middle schools were meant for a selected group, as preparation for more advanced studies. The vocational schools offered training in agriculture, industry, commerce

college level:

Hsining Normal College, Hsining, Chinghai
Northwest Normal College, Lin-hsia, Kansu
Su-chou Normal College, Chiu-ch'uan, Kansu
Sui-ning Normal College, Huang-ch'ü-ch'iao, Ninghsia

A T'ien-shan Normal College was being planned for Sinkiang.

The vocational schools that existed in 1946 were:

Ning-hsia Vocational School, Ninghsia City, Ninghsia
Chinghai Vocational School, Nieh-yuan, Chinghai
Labrang Young Lama Vocational School, Hsia-ho, Kansu
Yü-shu Vocational School, Yü-shu, Chinghai

The Mongols in Ninghsia had two primary schools which served the purpose of vocational schools, both at Ting-yuan-ying for the Edsingol Banner. (Ministry of Information, Border Education, 1948).

B. Education in the Shen-Kan-Ning Border Area

The Communists in the Shen-Kan-Ning border area had their own educational system. This is described by Edgar Snow as follows:

"It should be explained that under the emergency Soviet educational system there were three sections: institutional, military and social. The first was run more or less by the Soviets, the second by the Red Army, the third by Communist organizations. Emphasis in all of them was primarily political—even the littlest children learning their first characters in the shape of simple revolutionary slogans, and then working forward into stories of conflict between the Reds and the Kuomintang, landlords and peasants, capitalists and workers, and so on, with plenty of heroics about the Young Communists and the Red Army, and promises of an earthly paradise of the Soviet future.

"Under institutional education the Reds already claimed to have established about two hundred primary schools, and they had one normal school for primary teachers, one agricultural school, a textile school, a trade-union school of five grades, and a Party school, with some four hundred students. Courses in all these lasted only about six months.

"Greatest emphasis naturally was on military education, and here very much had been achieved in two years, despite all the handicaps of the little beleaguered State. There were the Red Army Academy, and the cavalry and infantry schools, already described. There was a radio school, and a medical school, which was really for training nurses. There was an engineering school, where the students actually got the rudimentary training of apprentices. Like the whole Soviet organization itself, everything was very provisional and designed primarily as a kind of

of which the eastern suburb has become the centre of business with Turkestan merchants, who are all Moslems.

On approaching the city we passed a lovely temple retaining the old title of 'the Spring of Wine.' Its grounds still contain a reedy basin wherein sparkling waters continually bubble forth.

Through the great gate we entered this eastern suburb, a far more un-Chinese settlement than anything we had hitherto seen. At the inn doors stood groups of travellers clad in wadded coats of striped cotton, with loose trousers stuffed into high leather boots. They wore a species of turban, to which they owe the Chinese name of 'Chantow,' meaning 'Bound head.' Many had brown curly beards, but several were of a fair complexion with reddish hair and beard. They spoke a language utterly unknown to us, which we learned later was Turki, and has no resemblance to Chinese.

On the stalls cotton materials were on show, hand-woven in Turkestan, with patterns and colours totally unlike Chinese goods; rugs, too, and gorgeous saddle-bags, while many a Chantow sat by great mounds of dried sultanas, apricots, and plaited strips of dried melon.

The dome and crescent of a whitewashed mosque now appeared, and as we passed its doors a crowd of young Moslem schoolboys ran out. They had been studying Arabic and the Koran under the tuition of the 'Ahung.' All were strikingly goodlooking, but had an air of haughty arrogance never seen in Chinese scholars.

Every smithy was busy shoeing magnificent horses, and all the inns were overflowing, the east suburb being the halting-ground where every traveller rests himself and his beasts, provisions himself for the exacting journey ahead, and repairs his carts and changes their

between the Moslems and the Lamaists.

As a result of the aforesaid complexity of its geographic basis as well as its intricate historical and political background, the Northwest's population problems are as complicated as its intermingling ethnic composition. For many years, the extreme northwestern province of Sinkiang suffered from continual conflict between China and Russia, although with the introduction of the Communist regime, the conflict seems at least temporarily resolved.

The development of industrialization in present day China is concentrated in the Northwest. New towns have been emerging in barren mountains and in deserts, such as Shih-yu-ho (near Yü-men), Tu-shan-tzu, (south of Wu-su) and Shih-ho-tzu on the western highway of Urumchi between the towns of Manas (Sui-lai) and Ulan-Wusu. The first two sprang up because of the drilling of promising oil wells in the Chi-lien and Tien-shan mountains.

The China Academy of Sciences announced in December, 1955, that in 1956 a number of new research divisions will be established in the Northwest: a Petroleum Research Bureau in Lanchow of Kansu, an Agro-biology Bureau in Wu-kung, Shensi, an Archaeological Research Bureau in Sian, a Geo-physical Research Bureau and a Veterinary Research Bureau. (Jen-min jih-pao Dec. 16, 1955, NCNA. May 11, 1956).

Last November, the Northwest Branch of the China Academy of Sciences held a meeting at which, with the assistance of the Russian Korshekov an ambitious plan was formulated for the economic development of the Northwest in the coming fifteen years, with emphasis on survey of natural resources, study of petroleum and rare metals, exploitation of non-ferrous metals, agronomy, soil science and animal husbandry. In these discussions, the professors of three schools of higher education, the Northwest University, the Northwest Industrial College, and the Northwest Agricultural College, took an active part. (Kuang-ming jih-pao Dec. 13, 1955; NCNA: May 11, 1956).

B. General Distribution and Regional Characteristics.

The Northwest Region has an average density of 28.6 persons per square mile, as compared with the average density of 160 per square miles for the whole country. It has the smallest number in population among all the major regions of China, as the following shows:

Major Regions	Population (1953 Census)
North China	55,749,000
Northeast China	41,732,000
East China	162,682,000
Central and South China	176,331,000

EDUCATION

I. Nationality Education in Pre-Communist Times

A. The Traditional Pattern

During the Manchu period, education in the Northwest was characterized by permissive and non-interfering policies of the government. This meant that the minorities were able to maintain and develop their own educational systems. During this period schools connected with the mosques, in the case of the Moslems, and the monasteries, in the case of the Buddhists, were the primary educational institutions. The minorities were allowed to formulate their own educational principles. It may be noteworthy that in the Manchu period, eighteen medrese, mosque schools, existed in Kashgar alone. Reading and writing were taught in these schools, and up to two thousand students were enrolled in the schools in any given year. The total number of medrese in the Northwest during the Manchu rule is unknown, but it is safe to say that each Moslem community had at least one educational institution.

1. Moslem schools

The Mohammedans have two kinds of school. The mekteb, elementary school for children, is administered by the local mosque. These schools provide education for all male children older than six. Since 1923 the Mohammedans have initiated the same educational provisions for girls.

The program of a mekteb comprises, first, the memorizing of a surprisingly high number of suras (chapters of the Koran), then the study of the Arabic alphabet, which is used by the Uighur. By memorizing various suras the pupils acquire some hundred Arabic words by the end of the first year, though their meanings do not become clear until the fifth year when the teaching of Arabian grammar is begun. Between the fifth and tenth years the curriculum covers advanced Koran exegesis, the history of Islam, geography and basic arithmetic.

The medrese, the institutions of higher learning, also teach such familiar subjects as al-mantiḳ (logic), al-arithmāṭīḳī (arithmetic), al-handasa (geometry), al-haiʾa (astronomy), al-ṭibb (medicine), al-falāḥa (agriculture); also some subjects which are specifically Islamic in nature, such as al-kalām (theology), al-taṣawwuf (ceremonies or practical theology), ʿilm al-ilāhīyāt (metaphysics), al-ʿarūḍ (metrics) and al-ḳāfiya (prosody).

As in elementary schools, the method of education consists primarily of learning by rote (talkin) and dictation. Those

Those students who go through six to ten years of continuous studies may become ahungs, mudarris (teachers) or ustādh (honorary title of recognized teachers). Generally, the erudition of these teachers does not seem to be very high. Hence idioms like "ahmaq min mu-allim kittāb" (more stupid than a school teacher).

Islamic laws regulate strictly the position and conduct of a teacher. He has to be married; he is permitted to teach only in public places (hānūt) with big windows, so the community can watch his activities; he is not allowed to use children as servants or engage them otherwise except in school work without the consent of their parents. Occasionally, however, parents have their children serve the teacher instead of paying the regular fees.

Kashgar has a fairly well-known school, the Wanglyq Medrese, whose fame was not confined to Sinkiang alone when Bohā'eddīn Makhdūm taught there, but spread as far as Istanbul and Cairo. Another famous Moslem scholar, Rāmetulla Akhun, the leading jurist ('ilmi fiqh) of his time, taught at Wanglyq. The Kichiq Orda (Little Castle) Medrese in Yarkand was also a well-known seat of higher learning. Also called Yeshil (Green) Medrese, it was founded by Baisi Bīk, the hākim (judge or physician) in 1820. While the quality of the medreses of Kashgar and Yarkand have steadily declined during the last decades, the medrese of Aqsu has maintained its reputation to the present because the core of its faculty are scholars from Afghanistan who received their training at the Al-Khazar University in Cairo.

2. Monastic academies of Lamaism

The high number of Buddhist monasteries all over Northwest China and their enormous monk population of course colored the whole educational system of the Northwest. These monasteries were not only institutions of higher learning, but they also served as libraries and printing houses.

Kumbum (Tib.: sKu-'bum-Byams-pa-gling; Chinese: T'a-erh-ssu) was the chief monastery in the Northwest. It was customary in Chinghai for every Tibetan family to send its second son to this monastery. At the age of eight the boy was admitted after a strange ceremony, which included questions like the following: Are you a debtor or a slave? Are you a hermaphrodite? Are you a demon or an all-knowing spirit? Did you ever treat your parents badly? Did you ever rob or steal? Did you ever belong to a heretic sect? After having answered these questions satisfactorily he received five objects, which henceforth were his only property: an alms-bowl, underwear, a tunic, a mattress and a water sieve. Then one of the ordained lamas was presented to him as his future tutor, whom his

family were to pay, and the boy's welfare depended largely upon the amount his parents were able to pay. Sons of poor families who could pay perhaps only one yak a year had to do menial work as water carriers, cow-dung collectors, straw and grass carriers, housekeepers and so forth, to pay for their lessons.

The years between eight and eighteen, the usual length of the novitiate, were given to attending an elementary school where the pupil learned to read, write and recite prayers. He was to learn forty chapters of the Kanjur from memory. During this time he was called a bande, or novice. Then he might enter the "Lamaistic college" to become a getsul, a stage between a novice and a fully ordained bLama. Or he might return to his home village or camp to become a house lama, of whom there are thousands, who are supported by a single family. If he chose to become a getsul he might continue to study and become a gelong, a fully ordained lama, entitled to wear the precious yellow tunic with a black collar.

Kumbum has four colleges: a philosophical college, a college of church service and occult sciences, a college of canonical literature and a school of medicine. One must go through the philosophical college before he may enroll in the college of church service and occult sciences, and must go through these two successfully before he may enter the college of canonical literature. The usual characteristics of those who enter the school of medicine are a pathological personality, epilepsy or other abnormality.

The philosophical college (Tib.: tsan-nyid) offers the study of the Kanjur. [The Kanjur consists of one hundred volumes subdivided into one thousand eighty-three chapters. Volumes one to thirteen contain the chapters about conversion and reclaiming (Tib.: dul-wa), the discipline and moral duties of the monks. The volumes from fourteen to thirty-four constitute the Prajñāpāramitā, which deals with the "road to virtue" leading to the "other shore," to Buddhahood and to that subtile and "transcendental wisdom" which is "without any characteristics," through which "all differences, contrasts, antagonisms, contraries, antithesis and contradistinctions" disappear, where all categories of thinking are empty, where heart and mind become silent like "the surface of a tranquil and placid sea." Volumes thirty-five to thirty-eight are called the Club of the Buddhas, volumes thirty-nine to forty-four are called Construction of the Precious Stones, and the volumes forty-five to seventy-six contain narrations on how to gain the nirvana. The volumes seventy-seven to ninety-eight contain the tantras and dharanis, sentence of anathemas and magic formulas, and the last two volumes are the exegetics and exposition of the tantras and dharanis.]

The philosophical college does not procede according to the

arrangement of the Kanjur but starts, strangely enough, with the most difficult chapters, the abhidharma, metaphysics (Tib.: C'os-mnon-pa, clear doctrine), and difficult sutras. Each student gets an additional private tutor, who explains difficult passages of the matter under study.

When the weather permits, teaching is conducted in the open in the so-called chör-ra. Otherwise instruction takes place in a temple hall.

An important part of instruction is frequent disputations between the teacher-monks and the students, under the supervision of the abbot, khan-po. These loquatious duels give occasion for the students to show how much they know and how much they have memorized.

In the course of time the students are taught ts'ad (logic), bzo (technique), rtsis (astrology), snan nags (rhetoric), sgra (grammar) and adul-ba (monastic rules). After having mastered the whole material the student receives the degree of dka-bcu (a man who has passed the ten examinations).

To complete the work of the philosophical college takes more than a decade. Then the dka-bcu can either procede to the next college to gain the title of snags-rams-pa (master of the tantric sciences) or to another monastery where other famous teachers are found.

To receive the title of snags-rams-pa, the monk must study large parts of the Tanjur, a gigantic 225 volume collection of theological, philological, ethical, alchemistic tractates and a tremendous amount of occult tantras.

Another center of monastic studies was Labrang in Kansu, one of the foremost monasteries of the Yellow Sect. This monastery is divided into what might be called six different colleges. In the first, known as Wen-hsi-t'ang, five different sutras are taught. The second college is primarily concerned with the continuation of the studies in the first, but the difficulty of the curriculum increases. In the fifth and sixth colleges the esoteric sutras are taught. There are separate colleges for sciences of medicine. Most monks, however, never learned more than a few prayers. The Labrang monastery showed some concern with modern times by introducing courses in animal husbandry and the manufacture of agricultural by-products. Like other monastic academies, however, it has remained primarily a center of religious learning.

B. Nationality Education under the Republic

The period of the Republic was characterized by the fact that the government attempted to bring the Chinese educational system as far as possible into the area of the nationalities. Education became one factor in the general policy of assimilation.

certain amount of overlapping of the figures in Tables 1 and 2.

During the war years there was an expansion of schools in Sinkiang. By 1946 the number was as follows:

Table 3

Schools in Sinkiang in 1946 *

1. Schools under the Provincial Bureau of Education
   a. Higher Education: 2 (the Sinkiang College and the Sinkiang Women's College, both at Urumchi)
   b. Middle Grade Schools:

         Junior Grade: 4 (2 at Ining, one at Kashgar, one at Chuguchak)
      (2) Normal Schools
         Senior Grade: 2 (at Urumchi)
         Junior Grade: 5 (2 at Ining, one at Kashgar, one at Chugachak, one at Aksu)
   c. Vocational Schools
      Senior Grade: 2 (one at Ining, one at Chuguchak)
      Primary School Level: 4 (Urumchi, Kashgar, Khotan, Aksu)
   d. Public Schools, primary level: 580
2. Schools under the Cultural Associations:
   a. Primary Schools: 1,883.

*(Ministry of Information, "Education in the Border Regions," 1948.)

Government sponsored education of Mongols and Tibetans was already initiated in 1910, when the comptroller-general of Chinghai founded the Chinghai Mongolian Academy at Hsi-ning. This school was conceived for service to the Mongol Banners exclusively.

A somewhat peculiar situation existed in Chinghai after the revolution of 1911. Chinghai in this period was ruled by Moslem generals, who persued a rather fair policy toward ethnic groups. The activities of one of these Moslem generals, Ma-Ch'i, should be stressed. The goal he set for himself was the introduction of at least one primary school in every community of Chinghai, regardless of the ethnic composition of the particular community. His activities were marked by his insistence that all children should learn Chinese in addition to their own language. Besides, he developed and enlarged the training of the ahung (teacher or lowest priestly rank). His first act upon becoming vice-governor of the province was the establishment of

the first middle school in this area.

After the revolution of 1911, the Chinghai Mongolian Academy was renamed Ning-hai Mongolian and Native School, and was now open to other ethnic groups such as Tibetans, Chinese and Moslems. In 1919 this school added a department for the training of elementary school teachers. Since the enrollment of Mongol and Tibetan children steadily decreased after 1919, the government ordered the Mongol nobles to send the children under their jurisdiction to this school. In 1926 the school was again enlarged, and renamed the Planning School of Frontier Development. After the addition of a middle school to this institution, it became the center of secondary education in the area. The curriculum of this school comprised language training in Mongolian, Tibetan and Chinese. Otherwise the school program corresponded to that of other middle schools in China proper. In 1929 the department of vocational education was separated from the school and became the First Provincial Vocational School. The Planning School itself was then renamed First Provincial Middle School. About this time other schools, such as First Provincial Normal School, First Provincial Girls' Middle School and First Provincial Agricultural School, were founded.

In 1930 the First Middle School provided a Mongolian and Tibetan normal division as a course of study; this division became in 1937 an independent Tibetan and Mongolian Normal School under the supervision of the Chinghai Bureau of Education. The authorities of the Chinghai Moslem Association, to eliminate the differences between the various minorities, established also their own middle school.

There were three cultural organizations in Chinghai worthy of note, namely the Tibetan Language Study Association, which translated the Three Principles of the People into Tibetan, and provided Tibetan school children with Tibetan reading and grammar books; the Tibetan Culture Promotion Association, which was founded in 1931 and which was supported by military and political leaders. Its objectives were to propagate the Three Principles of the People in a manner that would awaken the Mongols and Tibetans from their so-called backward cultural condition. A further goal of this association was to unify Tibetan and Mongol culture, and to maintain the physical existence of these minorities. Third, there existed a "Moslem Promotion Association which was primarily concerned with promotion of general education among the Moslems of Chinghai and their indoctrination with the Three Principles of the People. A further objective was to overcome certain racial resentments that existed among various minority groups in the area. Branch associations were set up in all counties (hsien) where Moslems live. The headquarters for all branches was located at Hsi-ning,

872

Under the school system of the National Government, children started school when they were a full six years old. Before that age they might go to kindergarten if there were such facilities and if the parents could afford it. But at six the government required every child to attend the first grade. The free and compulsory education covered the first four grades, which were called junior primary school. The fifth and sixth grades were classified as senior primary school. A school with all six grades was called a complete or central primary school. In the Northwest, the National Government made a real effort during the war to push toward the goal of one junior primary school in every pao (approximately one hundred families) and one central primary school in every town or hsiang (administrative village). By the end of the war, all children with the exception of those in really remote areas had a chance to attend a junior primary school, even though some of these schools were of low caliber. As the central primary schools were limited in number, only the luckier ones who either lived close by or were financially better off could enter the fifth and sixth grades. After graduation from the sixth grade, there was quite a hurdle to clear before one could enter the secondary schools. Entrance examinations were difficult because the facilities were so limited that only selected children could be admitted. The secondary schools included three types: the middle schools; the vocational schools, and the normal schools. The middle schools were meant for a selected group, as preparation for more advanced studies. The vocational schools offered training in agriculture, industry, commerce

658
873
[874]

or other professions to those who would enter a profession immediately after graduation. The normal schools offered training for grade school teachers. Each of these three types of schools was divided into two periods of three years each, the junior and the senior. In the Northwest, the government pushed toward the goal of having at least one junior secondary school in each county, and a senior secondary school at every center of each of the provinces. Not only were the normal schools free of tuition, but the government supplied board, room, books and even pocket money against the obligation to teach for a certain number of years.

Of institutions of higher education before the war, there was a National Northwest Junior Agricultural College in Wu-kung, Shensi, with modern buildings, equipment and vast experimental farms. In Sian, Shensi, there was the National Northeast University which had moved from Mukden to Sian after the Japanese occupation of Manchuria. In Lanchou, Kansu, there was a college with very low standards. In Urumchi, Sinkiang, there was the Sinkiang College.

After the war broke out in 1937, the Northeast University moved from Sian into Szechwan. But three other important institutions moved into Shensi, the National Peking University (Peiping), the National Peiping Normal University and the National Peiyang University of Tientsin. These three were combined to form the Northwest United University (later called Northwest University) and stayed in Ch'eng-ku, Shensi. Later the engineering school was separated to form the Northwest Engineering College, with its campus at Ku-lu-pa, Shensi.

At the time the Communists took over, there were more institutions of higher education in the Northwest than ever before. The following list shows the increase of these schools during the war and post-war years:

1. Northwest University, Sian, Shensi
2. Lanchou University, Lanchou, Kansu
3. Northwest Normal College, Lanchou, Kansu
4. Northwest Engineering College, Hsien-yang, Shensi
5. Northwest Agricultural College, Wu-kung, Shensi
6. Sinkiang Provincial College, Urumchi, Sinkiang
7. Northwest Agricultural Junior College, Lanchou, Kansu
8. Shensi Provincial Junior Commercial College, Sian, Shensi
9. Shensi Provincial Junior Normal College, Sian, Shensi
10. Shensi Provincial Junior Medical College, Sian, Shensi
11. Private Northwest Pharmaceutic Junior College, Sian, Shensi

(Ministry of Education: Second Educational Year Book, 1948.)

In addition, in 1946, were the following institutions not of

1: Washington S-4 (no date) 1956 AF13 Northwest China AF13

873 college level:
874 Hsining Normal College, Hsining, Chinghai
Northwest Normal College, Lin-hsia, Kansu
Su-chou Normal College, Chiu-ch'uan, Kansu
Sui-ning Normal College, Huang-ch'ü-ch'iao, Ninghsia
A T'ien-shan Normal College was being planned for Sinkiang.

874 The vocational schools that existed in 1946 were:
Ning-hsia Vocational School, Ninghsia City, Ninghsia
Chinghai Vocational School, Nieh-yuan, Chinghai
Labrang Young Lama Vocational School, Hsia-ho, Kansu
Yü-shu Vocational School, Yü-shu, Chinghai

872 The Mongols in Ninghsia had two primary schools which
563 served the purpose of vocational schools, both at Ting-yuan-ying for the Edsingol Banner. (Ministry of Information, Border Education, 1948).

871 B. Education in the Shen-Kan-Ning Border Area
*668 The Communists in the Shen-Kan-Ning border area had their
1977 own educational system. This is described by Edgar Snow as follows:

"It should be explained that under the emergency Soviet educational system there were three sections: institutional, military and social. The first was run more or less by the Soviets, the second by the Red Army, the third by Communist organizations. Emphasis in all of them was primarily political—even the littlest children learning their first characters in the shape of simple revolutionary slogans, and then working forward into stories of conflict between the Reds and the Kuomintang, landlords and peasants, capitalists and workers, and so on, with plenty of heroics about the Young Communists and the Red Army, and promises of an earthly paradise of the Soviet future.

"Under institutional education the Reds already claimed to have established about two hundred primary schools, and they had one normal school for primary teachers, one agricultural school, a textile school, a trade-union school of five grades, and a Party school, with some four hundred students. Courses in all these lasted only about six months.

"Greatest emphasis naturally was on military education, and here very much had been achieved in two years, despite all the handicaps of the little beleaguered State. There were the Red Army Academy, and the cavalry and infantry schools, already described. There was a radio school, and a medical school, which was really for training nurses. There was an engineering school, where the students actually got the rudimentary training of apprentices. Like the whole Soviet organization itself, everything was very provisional and designed primarily as a kind of

rear-line activity to strengthen the Red Army and provide it with new cadres. Many of the teachers were not even middle-school graduates. What was interesting was the collective use of whatever knowledge they had. These schools were really Communist not only in ideology, but in the utilization of every scrap of technical experience they could mobilize, to 'raise the cultural level.'

"Even in social education the Soviet aims were primarily political. There was no time or occasion to be teaching farmers literature or flower arrangement. The Reds were practical people. To the Lenin Clubs, the Young Communist Leagues, the Partisans, and the village Soviets they sent simple, crudely illustrated Shih-tsu, or 'Know Characters,' texts, and helped mass organizations form self-study groups of their own, with some Communist or literate among them as a leader. When the youths, or sometimes even aged peasants, began droning off the short sentences, they found themselves absorbing ideas along with their ideographs. Thus, entering one of these little 'social education centres' in the mountains, you might hear these people catechizing themselves aloud:

"'What is this?'

"'This is the Red Flag.'

"'What is this?'

"'This is a poor man.'

"'What is the Red Flag?'

"'The Red Flag is the flag of the Red Army.'

"'What is the Red Army?'

"'The Red Army is the army of the poor men!'

"And so on, right up to the point where, if he knew the whole five hundred or six hundred characters before anyone else, the youth could collect the red tassel or pencil or whatever was promised." (Edgar Snow: Red Star Over China, 1938, pp. 254-257.)

Early attempts to promote education by making it compulsory and by replacing the Chinese script with a system of phonetic Latinization had to be abandoned again.

In later years the Anti-Japanese University and the Lu-hsün Art College were their major institutions of higher learning. During the war several colleges were merged into Yenan University, which then was composed of a College of Administration, a College of Natural Sciences and a College of Art and Literature. The courses in the first two colleges took three years and the Art and Literature course, two years. Earlier attempts to duplicate the more formal curricula of Nationalist universities had been given up and education was "brought into harmony with the actual conditions of the people under the New Democracy." In the 1940's, Yenan University was one of the

Northwest Animal Husbandry and Veterinary Medicine College, Lanchou, Kansu
Northwest Art College, Sian, Shensi
Northwest Medical College, Sian, Shensi
Northwest Russian Language Junior College
Tihua Russian Language School, Urumchi, Sinkiang
Kansu Industrial Junior College, Lanchou, Kansu

In July, 1952, these institutions held united entrance examinations at Sian and Nan-cheng, in Shensi; Lanchou and T'ien-shui in Kansu; Hsi-ning in Chinghai; Yin-ch'uan (Ninghsia); and Urumchi in Sinkiang. According to regulations, besides graduates from regular middle schools, candidates claiming to have "equivalent educational standards" were also admitted. Cadres were given special priority.

Subjects in the examinations were: Chinese, mathematics, chemistry, Chinese and foreign history and geography, physics, political common sense, biology and a foreign language (Russian or English). Cadres were exempted from the foreign language examination.

In 1952, the Communist government started a system of scholarships for every student in the institutions of higher education. This system was changed in October, 1955, and scholarships are now issued only selectively; children of party cadres and of the minority groups have priority.

In April, 1955, the Communists announced the establishment of Sinkiang Medical College at Urumchi. The professors were transferred there from the First Medical School in Shanghai. A New China News Agency report from Urumchi, dated April 19, 1955, reads:

"Sinkiang's new medical college has announced it is ready to enroll 250 students of various nationalities for the coming autumn term. A teaching staff of 100 including professors, lecturers and practicing physicians will arrive here from other parts of the country in June to take up their posts. The medical college is part of a scheme for building a medical center in this provincial capital of Sinkiang, where the inhabitants belong mostly to national minorities. The project includes a 600-bed hospital and a clinic able to treat 800 patients daily. Construction of this 240,000 square meters medical center was started in July last year. The college authorities have arranged for studies to begin this year while building continues."

The second group of schools includes the Yenan University in Yenan, Shensi, which became the Northwest People's Revolutionary University in 1949, and the Northwest School of Political and Legal Sciences in 1953. This kind of school is essentially a training center for cadres. The August First Agricultural College, the establishment of which was reported by Burkhan in

September, 1955, is a place where cadres and students transferred into Sinkiang from other provinces receive their agricultural training. It is more of a training camp than a regular college.

B. Nationality Education

1. The general trend

Under the Communist regime, educational activities among the ethnic minorities of the Northwest are reported to have increased sharply. The Communists recognized early that by emphasizing the issue of education among the some thirteen nationalities in the Northwest, they could further consolidate their hold over these minorities. In line with their policy of placating the Moslems (See Religion), educational developments in Sinkiang have been widely publicized. It is not easy to make sense of the different sets of figures given. The most meaningful are tabulated in Table 7. [1]

In this table, the figures of Burkhan's report of January 1, 1953, are so inconsistent with the rest that they probably have to be discarded; otherwise the figures appear mutually compatible. According to the percentages given, the number of schools in the years before 1949 should have been about two hundred, and the number of students slightly more than two hundred thousand. These figures do not coincide with pre-Communist statistics. One fact emerges clearly from the figures of Table 3. All the mosque schools and their students must be included in them. In view of the shortage of educational personnel it is highly questionable whether staff and curriculum of these schools can be adjusted within a reasonable amount of time to the exigencies of Communist education. That this problem is realized is shown by reports that more than 130 middle and primary school teachers of all nationalities were inducted for special political training in the Sinkiang College, the Northwest People's Revolutionary University, and the Northwest Normal College in 1955 alone. In 1954, 126 teachers of all nationalities were given political indoctrination courses in so-called "spare-time improvement classes" in Urumchi, Kashgar, Sha-che and Khotan. Such classes were also operated in other areas, with particular emphasis upon the training of primary teachers. Schools of all levels are adopting advanced teaching methods and experiences and the teachers have reached the stage "of carrying out their work with preparation and planning" (Current Background, Oct. 25, 1955). The number of politically reliable teachers might have increased somewhat through these measures. In view of the prevailing need, the figures given are still pitifully low. The basic question of whether the ahung can be entrusted with Communist education remains unsolved.

[1] [See p. 323--Analyst]

The Communists are, however, careful in giving the appearance of promoting the special characteristics of the different nationalities, and of using national forms in teaching. Where the nationalities have written languages, they are used in textbooks. In the last few years there have been compiled, translated, published and supplied more than four million copies of middle and primary school textbooks in Uighur, Kazakh, Russian, Mongolian, Uzbek, Tatar and Kirghiz. The new teaching material used has been as far as possible adapted to the actual living conditions of the different nationalities, and teaching methods have been adopted which are familiar to the different nationalities and suitable to their mentalities.

2. Higher education

Efforts to build up institutions of higher education for the nationalities have been particularly publicized. The Sinkiang Medical College and the August First Agricultural College have been mentioned earlier. Of particular importance, however, were the institutions for the training of nationality cadres. The foremost school in the country which serves this purpose is the Nationalities School in Peking (See IMAR Handbook, Education). The Northwest, however, has two institutions of its own, the Sinkiang Nationality College at Urumchi, Sinkiang, and the Northwest Nationality College at Lanchou, Kansu.

The Northwest Nationality College was reorganized in 1950 from the so-called Study Class on Problems of the Tibetans. Up to 1953, it had graduated more than 1,800 students and in 1953 it was attended by more than 1,300 students from 13 different nationalities. The school includes three sections:

(1) The training class of administrative cadres:

(2) The College, with four departments, namely, languages, political science, law, and animal husbandry and veterinary medicine. The students majoring in law or political science graduate in two years; those majoring in languages or animal husbandry and veterinary medicine graduate in three years.

(3) The sub-freshman.

On February 18, 1954, Jen-min jih-pao reported that up to then the Northwest Nationality College in Lanchou graduated 2,573 students; and that there were 786 students in attendance. These students came from thirteen nationalities, namely, Mongol, Tibetan, Uighur, Chinese Moslems, T'u-sin (Mongours), Tung-hsiang, Salar, Pao-an, Yü-ku, Kazakh, Uzbek, Manchu and Chinese. Teaching was offered in all these languages.

On January 10, 1955, the New China News Agency reported that the Northwest Nationality College graduated another 465 students of the various nationalities. Most of these were "positive elements" in the pastoral areas and minority cadres serving in the government above the ch'ü level in Kansu, Chinghai

PUBLIC INFORMATION

N I. Newspapers

175 During the past decades, Northwest China was lagging in cul-
204 tural development. There were very few newspapers before 1937.
167 After the war started, numerous people migrated from the coastal
N provinces into the Northwest. Among these there were a great
• (873) number of intelligentsia. Several universities moved from Peking into the Northwest and thousands of students poured into the area. With the coming of these people, the average of cultural standard
N was greatly raised and the demand for more and better newspapers
204 increased. A number of papers emerged and some stayed. Among these, some were supported by the Nationalist Party, such as the Hsi-ching jih-pao or the Western Capital Daily in Sian. Some were supported by the San-min-chu-i Youth Corps, such as Ch'ing-nien jih-pao or the Youth Daily, in the same city. Some were supported by churches, such as the I-shih-pao (Sian edition) in Sian, a Catholic paper. Some were supported by local influences, such as Ch'ing-feng jih-pao in Sian. After the war, there were even anti-government papers, such as Kung-shang jih-pao in Sian, organ of the Democratic League.

Some of these papers achieved an admirable standard of quality. In appearance, these papers were unattractive. Usually printed on the native newsprint, which was thin, dark and rough, the print
N was often unclear. Bad as it was, this kind of newsprint was ex-
(656) pensive and could be bought in quantity only through government rationing. In fact, the government did occasionally use this authority of rationing newsprint to practice a kind of indirect censorship on the papers. Papers were occasionally cut off their rations and found it necessary to buy on the black market at forbidding prices. The dailies usually had no more than four pages, with half of the space occupied by advertisements. About a page and a half would carry the national and world news, editorials, and articles, leaving about half of a page for local news and miscellaneous subjects. The news were mainly supplied by the Central News Agency, a Nationalist Party organ. Within these limitations, little could be done to give profile to a paper. This monotonous pattern was later broken by the anti-government papers, which carried a lot of the Communist news and views. The circulation of all the papers was limited among the intelligentsia, officials and merchants. Few, if any, of the papers exceeded a daily
S circulation of 10,000 copies. In Sinkiang, during the administra-
204 tion of Sheng Shih-tsai, there were editions of the Sinkiang jih-pao published in seven languages. (Lattimore, Pivot of Asia, p. 73.)

N After the Communists conquered the Northwest, they took over
204 all the former government papers. The private papers were dis-
*668 couraged to continue. According to the limited information avail-
179 able, the following papers have been or are being edited in the

strongholds of the movement for the remolding of ideology within the party (Cheng-feng Movement). Training of cadres was its main purpose. (G. Stein, The Challenge of Red China, 1945, 260-67)

Attached to the Anti-Japanese University at Yenan was the College of Nationalities to train youths of racial minorities from Inner Mongolia and the Northwest to be Communist cadres.

III. The Communist Period

A. Chinese Education in the Northwest

1. The general trend of changes

After the Communist take-over the educational system was initially left more or less untouched. Teachers and students, however, were constantly mobilized to participate in the movements led by the government and the party. This additional political activity meant not only an interruption of the regular educational program, but also an amount of overwork detrimental to the health of the students. [Hsüeh-hsi, Vol. 4, No. 11, (1951, September 16), p. 37, and 1952 Jen-min Shou-ts'e, p. 449. The latter quoted the resolution of the State Council on July 13, 1951, concerning the health condition of the students.]

Even after it was realized that this state of affairs conflicted with the purposes of education, it was never entirely remedied. As late as 1956, complaints were heard about the constant political interference in academic work.

By a resolution at the ninety-seventh meeting of the State Council on August 10, 1951, the old system of education was remolded (See General Handbook, Education). Within the new system much emphasis was given to Leisure Time and Short Course Schools on the primary and secondary levels for older students and adults. This program, however, has in the meantime come under heavy criticism, as it did not achieve its aims and absorbed the time of workers and peasants needed in production.

One significant aspect of the new system is that graduates of higher educational institutions do not have a free choice of professions, but are placed by the government wherever it deems fit. In fact, it is one part of the gigantic program of slave labor. The tendency of students, condoned and incited by the Communists in pre-Communist times, to behave in a "revolutionary" way has recently been curbed by a set of strict disciplinary rules, which have been called "New Confucianism" by one writer:

Basic Rules for the Middle School Student. (Promulgated by the Ministry of Education on May 13, 1955.)

1. Study diligently to make yourself strong in health, in class work and in character. Be ready to serve the fatherland

lished to pass out judgments. Cases of suicide among students thus treated have been reported.

Another factor which influenced education was the austerity movement, which cut deeply into the already meager equipment, facilities and supplies of the schools. For instance, in Shensi some schools had provided some teachers with single rooms with twenty square meters of floor space, or about thirteen by fifteen and one-half feet, to serve both as bedroom and office. This was criticized as luxurious and wasteful, and the size of a teacher's room was reduced to three and one-half square meters or less than six feet square. The size of campuses was also cut down mercilessly. A well-known educator, Feng Yu-lan, recently complained: "When a professor finds enough space to lay down his body, he would find no more room to lay down his books." (Jen-min Jih-pao, Peking, January 15, 1956.)

Claims that school attendance has greatly increased are numerous in the Communist press. The figures given, however, are either meaningless or contradictory, so no attempt has been made here to trace this increase.

Extra-curricular activities included a summer camp for the students in the Northwest, which took place at Mei-hsien, Shensi, from August 1 to 31, 1952. The participants were selected from students of different places, including 150 from Shensi, 110 from Kansu, 100 from Sian, 20 from Ninghsia, 20 from Chinghai, an indefinite number from Sinkiang and 80 from the colleges and universities. To be selected, a student had to be: progressive in thought; good in school work; active in all kinds of social activities inside and outside the school; healthy, without contagious diseases. Girl students and students of the minority groups had priority. The whole program of the camp was sponsored by the New Democratic Youth League.

Athletic competitions are also sponsored. From August 10 to 17, 1953, there was a Northwest China track and field meeting at Sian. Gathered for the competition were 351 athletes from 12 nationalities, representing 5 provinces and a municipality.

2. Higher education

Institutions of higher education in the Northwest under the Communists can be divided roughly into three groups. The first group includes universities and colleges in the normal sense. The second includes political trainjng institutes. The third includes the institutions for the minority nationalities.

The following institutions were listed in 1952:

Northwest University, Sian, Shensi
Lanchou University, Lanchou, Kansu
Northwest Engineering College, Hsien-yang, Shensi
Northwest Agricultural College, Wu-kung, Shensi
Northwest Normal College, Lanchou, Kansu

N
873 and Shensi. Of them 342 had attended the college to learn the
563 spoken and written languages of the Mongols, Tibetans and
668 Uighurs.
177

Sinkiang Nationality College has a different background. Before 1949 it had been a regular college, with about two hundred students, three-fourths of whom were Chinese and the rest minority nationalities. On October 1, 1950, the college was renamed as Sinkiang Nationality College and reorganized into five departments, namely, agriculture and forestry, animal husbandry, education, law and medicine. The number of students doubled, 89.3 per cent being of the minorities. Because of the shortage of faculty and equipment, the two classes of the department of medicine were transferred to Lanchou University and to the Physicians' School of the Provincial Public Health Bureau in 1951. Furthermore, because of the shortage of cadres in every field in Sinkiang, the students still in college were also called out to serve in the various branches of the government.

S
[874] In 1952, the college authorities proposed to add a two-year curriculum, with the aim of preparing teachers in the secondary schools in Sinkiang. The college was then divided into two parts, the college and the junior college. The college took in students at the level of a regular senior middle school and graduated them in two years. The junior college took in students at the level of a regular junior middle school and graduated them in one year. This included the re-education of middle school teachers already teaching.

This College of Education was organized into five departments, so together with the three original departments, agriculture and forestry, animal husbandry and law, and the newly added art and physical education department, there were now nine departments and thirty-two classes. The number of students increased to 878, including Uighur, Kazakh, Uzbek, Kirghiz, Tartar, Sibo, Solon, Mongol, Chinese, Manchu and Chinese Moslems. Nationality students outnumbered Chinese ten to one.

S
873 The college library had about fifty thousand volumes. The
217 shortage of faculty was serious. To solve the problem, the col-
563 lege depended upon students to teach students. Textbooks were
668 also a problem, which was partially solved by using textbooks
177 in Uzbek and Kazakh from the Soviet Union, and by re-editing and combining material from old Chinese textbooks and Soviet books. Up to August 1953, this college had graduated more than 250 cadres. In 1955 the college had eight departments and thirteen hundred students. Ninety-six per cent of the students were from the minority nationalities. Among the faculty were 350 Soviet Russians. (NCNA, November 1, 1955.)

C 641 668 771 829

in the Constitution of the People's Republic of China. There are many followers of religions in China. It would be unwise, the spokesman argued, to offend them all. He repeatedly emphasized, however, that the world outlook of the Marxists is in every way contradictory to that of religious believers. The solution is, "the religious believers must abide by the Constitution and the law. The policy of freedom of worship must not be allowed to be used as a pretext for carrying out counter-revolutionary activities,... We must publicize among the masses of the Youth the materialistic world outlook.... The youths should thus be given an ideological founcation.... to make them into...atheists and the heroic fighters of the Socialist construction undertaking." (Ibid., p. 28).

C 641 668 771

The Communists believe that by turning the young people against religion, all religion will eventually be eliminated when the present believers die. However, the Communists will tolerate or even participate in religious activities for reasons of expediency. In Northwest China where the influence of Islam and Lamaism is great, the Communists have gone all out to woo the Moslems and the lamas. For instance, when the Communist army marched into Ninghsia and Kansu, the commander of their First Field Army, P'eng Te-huai, issued a special order to the whole field army to honor the Moslem religious habits. Not only were the Mosques not to be damaged, but the order even demanded that every soldier wash his hands before he drew water from a well. In numerous cases, the Communists spent much money to repair the mosques and the lama temples. In the Soviet China stage the Communists had disqualified every monk as a citizen. (see above).

N 641 642 628

Obviously, the general civil rights promise in the Communist Constitution are restricted. Mao Tes-tung's statements in his "On People's Democratic Dictatorship" leave no doubt about this point.

C 641 642 628

E. Practices

N 668 423 578 803

Some instances of infractions of these rights may serve as examples. In 1951 some faculty members of the Provincial First Middle School at Sian, Shensi, grumbled in private talks about the "land reform." They said, "In the country, if you have two bowls of rice to eat, you will not have peace." Because of this, Vice-Commissioner Lu Ch'in-liang of the Bureau of Culture and Education of Shensi Province wrote a special article and published it in the local newspaper. He severely criticized the tolerance of the administrators and accused the school of being a hiding place for counter-revolutionary ideas and opinions. Special groups were organized by the Northwest People's Supervisory Committee and the Northwest Department of Education to investigate the school. A special criticism was published in the nation-wide Party magazine, Hsüeh-hsi. As usual, this would indicate that a serious purge took place.

graduated in four years a total of 11,000 students into the ranks of the cadres. Deserving boys of Mongol descent were also sent to study in the Inner Mongolia Autonomous Region, which was regarded as the model for the national minorities.

Short-term Training Classes: The first thing the Chinese Communists did upon entering Sinkiang was to set up twenty-five classes to train cadres in three-to-six month courses. By summer of 1951, these training classes graduated 3,600 cadres from 13 different nationalities.

Colleges: There were by 1955 thirteen institutions of higher education in the Northwest. The most important was the Northwest Revolutionary University located at Sian. Founded in 1950, it conducted courses on Marxism-Leninism and the writings of Mao Tse-tung with the aim of "reforming the intellectuals." (Ch'in-chung jih-pao, July 8, 1953). In 1953, after having graduated 12,000 cadres, its name was changed to Northwest Cadres School of Political and Legal Science. The Nationality College at Lanchou was under the direction of Wang Feng, who was head of the United Front Work Department of the Northwest Bureau of the CCP. The Sinkiang Nationality College at Urumchi, headed by provincial governor Burkhan, was distinguished by a faculty of 350 Soviet advisors who made up 43% of the teachers. It graduated 1,700 minority cadres in 1953. The Sinkiang People's Government and the Sinkiang Sub-bureau of the Chinese Communist Party each have a cadre school which, along with the training classes, turned out 10,000 cadres by the end of 1955. By the summer of 1955, these two cadre schools and the Sinkiang Nationality College trained a total of 396 teachers and 4,355 educational cadres.

The nationality autonomous areas were also used as nurseries for the incubation and training of nationality cadres. In Chinghai over a third of the native cadres were selected from activists in the people's governments.

The purpose of study in the cadre schools was to "enable the students to shake off the bad influences and to strengthen their patriotic ideology." The cadres were drawn from the ranks of the students and from "upper religious circles" and, "on returning to national minority areas, they were able to conduct propaganda in a correct manner, do work actively and promote solidarity among various nationalities in pushing forward political, economic and cultural enterprises." (Kuang-ming jih-pao, February 24, 1954).

Allowing for the possibility of some duplications in the figures, the number of national minority cadres trained may be estimated by adding the numbers mentioned in the Communist press (see Table 2).

in the Northwest reached the highwater mark of 27,000 (NCNA - January 8, 1952).

A large number of the cadres were sent out directly from training schools to low-ranking positions in the people's governments. Up to the summer of 1953 the Northwest Revolutionary University at Sian placed over 12,000 of its graduates in government service, the Northwest Nationality College 2,573, the Lanchou Nationality College 2,500, and the Northwest Cadre School 2,200. The areas of concentration in Sinkiang were the Ili and Kashgar Administrative Districts and three counties in Yarkand which had 6,907 native cadres employed as directors of departments, section chiefs, and heads of counties and ch'ü (districts).

B. Demoralization and Conflict of the Cadres

A compelling reason for the large-scale induction of cadres, both Chinese and from the national minorities, was not only because of the small number of veteran cadres, but also because these old cadres were no longer considered trustworthy and useful by the authorities. However, the authorities soon found that the new cadres were not any better and their absorption only heightened the conflict within the ranks of the cadres. The defects of the cadres were repeatedly pointed out in the series of conferences convened by the Department of United Front Work of the Northwest Bureau of the Chinese Communist Party in the fall of 1951 and in the spring of 1952. The main shortcomings of the cadres, as pointed out by the Communist leaders, were:

1. Lack of political consciousness and demoralization of the old party cadres. It was significant, and perhaps paradoxical, that the major criticisms against the cadres were directed against the veteran cadres who had been trained and who had seen service in the Shensi-Kansu-Ninghsia Border Region, which since 1935 had been the center of Communist activities and the showcase of Communist administration. As early as January, 1950, Ma Wen-jui, director of the Organization Department of the Northwest Bureau of the Chinese Communist Party, charged in a speech (JMJP January 4, 1950),that the old cadres showed restlessness, they wanted better jobs and were anxious to return home, they suffered from the ideological defects of individualism and jealousy of the new cadres, they were inefficient and careless in their work so that they lost important documents and often divulged state secrets, they lacked initiative and a sense of responsibility, and sought only enjoyment. Cases of graft were quite frequent.

Eighteen months later, at a conference of high-ranking cadres held at Sian in August, 1951, Ma Wen-jui charged that the old party cadres, due to their long stay in the rural villages and due to the demoralizing conditions of the war, lack education. "The degrees of political awakening of some of the party members is

625 *668 detain, punish or evict them... ("The Provisional Regulations Governing Organization of Security Committees" proclaimed on August 10, 1952 by the Ministry of Public Safety of the CPG, NCNA, Peking, August 10, 1952.)

Besides these auxiliary police forces, there are People's Supervision Correspondents and People's Denunciation Reception Rooms. People's Supervision Correspondents are recruited from every branch of government organs, enterprises and people's popular bodies in towns and villages. The members are selected from among the activists. "The tasks of the People's Supervision Correspondents are to investigate all cases of violation of laws and discipline and damage to the state and people's interest such as graft, waste, bureaucracy and dereliction of duty by government organs, enterprises and their personnel, as well as to canvass the opinions of the masses on the implementation of government policies and laws, report them to supervisory organs of a superior level and to leading officials of their own departments and to assist them in the disposal of cases. The methods for studying and discovering problems are: (1) to observe and discover problems through their own activities; (2) to regularly go deep into the masses to discover problems and listen to the views of the masses; (3) to collect accusations and appeals from the masses through people's opinion boxes; (4) to maintain close contacts with the People's Denunciation Reception Rooms, and to cooperate with the latter in work." (NCNA, Peking, August 25, 1952.)

The same source adds "The principal task of the People's Denunciation Reception Rooms is to receive and dispose of accusations and appeals from the masses."

701 625 *668 These police forces are supported by the regular People's Liberation Army and the militias. The militias are local self-defense corps who, according to Peking, Jen-min jih-pao, August 10, 1952, p. 18, cannot be separated from production. They are those who must engage in productive work, such as farming or handicraft, to make a living. They provide a powerful auxiliary force for the army and regular police.

*668 [674] Augmenting all these organizations is the persistent program of indoctrination. The Communists realize that every crime committed now is politically harmful to their regime, so they have instituted numerous programs in education and propaganda to fight against crime. Reading the "new" moral standards set up for high school students by the Communist Ministry of Education (The Ministry of Education of the People's Republic of China: Jen-min chiao-yu, or People's Education, monthly, July issue of 1955, p. 46. "The moral standard of the middle school students" promulgated by the Ministry of Education on May 13, 1955.) is like reading something from the past. Absolute loyalty to the government, strict obedience to authorities, extreme care not to

361 over the mountain slopes, and then a sudden bend of the valley reveals the gilt-roofed temples and huge barrack-like constructions of the great monastery. The buildings are, I should say, without parallel in the whole of China for magnificence, solidity, and size, and present a most startling appearance in that wild and sparsely populated region of mountains and grass-lands.

Labrang (Chinese Labalang Ssu) lies at an altitude of about 9000 feet in the valley of the Tahsia River just below the level of the grass-lands which commence immediately to the west. It is a regular town in itself containing over 3000 monks as well as a considerable floating population of visiting Tibetans, hundreds of whom were at the time of 792 our visit encamped in the neighbourhood. The monastery is the most important religious centre between Lassa and Urga, not excluding the better known establishment of [673] Kumbum (T'a-erh Ssu) near Hsining. It contains a university which attracts students from all parts of Tibet and Mongolia, and even Siberia. The monastic authorities exercise control over the neighbouring Tibetans and until recently over Chinese as well. Of late, however, the chief lama, a Reincarnation (referred to as a Hutukotu by the Chinese), has fallen much under the influence of the Mahomedans of Ho Chou, and the monks are no longer as unruly and hostile to foreigners as formerly; at the time of our visit they had even applied for the establishment of an agency of the Chinese Post Office at Labrang. All the same it is advisable for foreign visitors to be provided with an introduction from [443] some Tibetan or Mahomedan authority. A li or two from the monastery is the usual Chinese, or rather Mahomedan, 792 bazaar. These large monasteries on the Kokonor border are commercial as well as religious centres, and the Chinese 438 trading villages attached to them resemble in a way the foreign settlements attached to Chinese cities opened to foreign trade. This border trade is almost entirely in the hands of the Mahomedans, and even where the Chinese take a hand in it, it is through the agency of Mahomedan middlemen, called *Hsiehchia*, who travel amongst the Tibetans further west, and barter Chinese wares for their produce, especially wool. There are many queer tales about Labrang to be heard locally.

In Ninghsia: Two training classes for Mongolian and Tibetan teachers and fourteen primary schools.

563 658 792 871 Special attention was paid to the education of the lamas in the great monastery of Labrang, at Hsia-ho in Kansu. The Mongolian and Tibetan Affairs Commission organized a Tibetan People's Cultural Association which helped to set up a vocational school and a political training class for young lamas. In the field of political instruction, the Central Political Institute also established a Mongolian-Tibetan School at Sining, in Chinghai, with a branch at Suchou, in Kansu.

*175 166 871 [648] [658] During the war against Japan, with the migration of the coastal population inland, universities and middle schools from Peking and other places moved to the Northwest. When the war front was more or less stabilized after 1938, the Northwest enjoyed a comparatively stable peace. These "immigrants" built up cultural centers such as Ch'eng-ku, Ku-lu-pa in Shensi; and with the mass education movement promoted by the National Government, education in the northwest was greatly improved both in quantity and in quality.

658 872 Under the school system of the National Government, children started school when they were a full six years old. Before that age they might go to kindergarten if there were such facilities and if the parents could afford it. But at six the government required every child to attend the first grade. The free and compulsory education covered the first four grades, which were called junior primary school. The fifth and sixth grades were classified as senior primary school. A school with all six grades was called a complete or central primary school. In the Northwest, the National Government made a real effort during the war to push toward the goal of one junior primary school in every pao (approximately one hundred families) and one central primary school in every town or hsiang (administrative village). By the end of the war, all children with the exception of those in really remote areas had a chance to attend a junior primary school, even though some of these schools were of low caliber. As the central primary schools were limited in number, only the luckier ones who either lived close by or were financially better 658 off could enter the fifth and sixth grades. After graduation from 873 the sixth grade, there was quite a hurdle to clear before one could enter the secondary schools. Entrance examinations were difficult because the facilities were so limited that only selected children could be admitted. The secondary schools included three types: the middle schools; the vocational schools, and the normal schools. The middle schools were meant for a selected group, as preparation for more advanced studies. The vocational schools offered training in agriculture, industry, commerce [874]

or other professions to those who would enter a profession immediately after graduation. The normal schools offered training for grade school teachers. Each of these three types of schools was divided into two periods of three years each, the junior and the senior. In the Northwest, the government pushed toward the goal of having at least one junior secondary school in each county, and a senior secondary school at every center of each of the provinces. Not only were the normal schools free of tuition, but the government supplied board, room, books and even pocket money against the obligation to teach for a certain number of years.

Of institutions of higher education before the war, there was a National Northwest Junior Agricultural College in Wu-kung, Shensi, with modern buildings, equipment and vast experimental farms. In Sian, Shensi, there was the National Northeast University which had moved from Mukden to Sian after the Japanese occupation of Manchuria. In Lanchou, Kansu, there was a college with very low standards. In Urumchi, Sinkiang, there was the Sinkiang College.

After the war broke out in 1937, the Northeast University moved from Sian into Szechwan. But three other important institutions moved into Shensi, the National Peking University (Peiping), the National Peiping Normal University and the National Peiyang University of Tientsin. These three were combined to form the Northwest United University (later called Northwest University) and stayed in Ch'eng-ku, Shensi. Later the engineering school was separated to form the Northwest Engineering College, with its campus at Ku-lu-pa, Shensi.

At the time the Communists took over, there were more institutions of higher education in the Northwest than ever before. The following list shows the increase of these schools during the war and post-war years:

1. Northwest University, Sian, Shensi
2. Lanchou University, Lanchou, Kansu
3. Northwest Normal College, Lanchou, Kansu
4. Northwest Engineering College, Hsien-yang, Shensi
5. Northwest Agricultural College, Wu-kung, Shensi
6. Sinkiang Provincial College, Urumchi, Sinkiang
7. Northwest Agricultural Junior College, Lanchou, Kansu
8. Shensi Provincial Junior Commercial College, Sian, Shensi
9. Shensi Provincial Junior Normal College, Sian, Shensi
10. Shensi Provincial Junior Medical College, Sian, Shensi
11. Private Northwest Pharmaceutic Junior College, Sian, Shensi

Northwest Normal College, Lin-hsia, Kansu
Su-chou Normal College, Chiu-ch'uan, Kansu
Sui-ning Normal College, Huang-ch'ü-ch'iao, Ninghsia
A T'ien-shan Normal College was being planned for Sinkiang.

874 The vocational schools that existed in 1946 were:
Ning-hsia Vocational School, Ninghsia City, Ninghsia
Chinghai Vocational School, Nieh-yuan, Chinghai
Labrang Young Lama Vocational School, Hsia-ho, Kansu
Yü-shu Vocational School, Yü-shu, Chinghai

872 563 The Mongols in Ninghsia had two primary schools which served the purpose of vocational schools, both at Ting-yuan-ying for the Edsingol Banner. (Ministry of Information, Border Education, 1948).

871 B. Education in the Shen-Kan-Ning Border Area
*668 The Communists in the Shen-Kan-Ning border area had their own educational system. This is described by Edgar Snow as follows:
197

"It should be explained that under the emergency Soviet educational system there were three sections: institutional, military and social. The first was run more or less by the Soviets, the second by the Red Army, the third by Communist organizations. Emphasis in all of them was primarily political—even the littlest children learning their first characters in the shape of simple revolutionary slogans, and then working forward into stories of conflict between the Reds and the Kuomintang, landlords and peasants, capitalists and workers, and so on, with plenty of heroics about the Young Communists and the Red Army, and promises of an earthly paradise of the Soviet future.

"Under institutional education the Reds already claimed to have established about two hundred primary schools, and they had one normal school for primary teachers, one agricultural school, a textile school, a trade-union school of five grades, and a Party school, with some four hundred students. Courses in all these lasted only about six months.

"Greatest emphasis naturally was on military education, and here very much had been achieved in two years, despite all the handicaps of the little beleaguered State. There were the Red Army Academy, and the cavalry and infantry schools, already described. There was a radio school, and a medical school, which was really for training nurses. There was an engineering school, where the students actually got the rudimentary training of apprentices. Like the whole Soviet organization itself, everything was very provisional and designed primarily as a kind of

lished to pass out judgments. Cases of suicide among students thus treated have been reported.

Another factor which influenced education was the austerity movement, which cut deeply into the already meager equipment, facilities and supplies of the schools. For instance, in Shensi some schools had provided some teachers with single rooms with twenty square meters of floor space, or about thirteen by fifteen and one-half feet, to serve both as bedroom and office. This was criticized as luxurious and wasteful, and the size of a teacher's room was reduced to three and one-half square meters or less than six feet square. The size of campuses was also cut down mercilessly. A well-known educator, Feng Yu-lan, recently complained: "When a professor finds enough space to lay down his body, he would find no more room to lay down his books." (Jen-min Jih-pao, Peking, January 15, 1956.)

Claims that school attendance has greatly increased are numerous in the Communist press. The figures given, however, are either meaningless or contradictory, so no attempt has been made here to trace this increase.

Extra-curricular activities included a summer camp for the students in the Northwest, which took place at Mei-hsien, Shensi, from August 1 to 31, 1952. The participants were selected from students of different places, including 150 from Shensi, 110 from Kansu, 100 from Sian, 20 from Ninghsia, 20 from Chinghai, an indefinite number from Sinkiang and 80 from the colleges and universities. To be selected, a student had to be: progressive in thought; good in school work; active in all kinds of social activities inside and outside the school; healthy, without contagious diseases. Girl students and students of the minority groups had priority. The whole program of the camp was sponsored by the New Democratic Youth League.

Athletic competitions are also sponsored. From August 10 to 17, 1953, there was a Northwest China track and field meeting at Sian. Gathered for the competition were 351 athletes from 12 nationalities, representing 5 provinces and a municipality.

2. Higher education

Institutions of higher education in the Northwest under the Communists can be divided roughly into three groups. The first group includes universities and colleges in the normal sense. The second includes political training institutes. The third includes the institutions for the minority nationalities.

The following institutions were listed in 1952:

Northwest University, Sian, Shensi
Lanchou University, Lanchou, Kansu
Northwest Engineering College, Hsien-yang, Shensi
Northwest Agricultural College, Wu-kung, Shensi
Northwest Normal College, Lanchou, Kansu

Northwest Animal Husbandry and Veterinary Medicine College, Lanchou, Kansu
Northwest Art College, Sian, Shensi
Northwest Medical College, Sian, Shensi
Northwest Russian Language Junior College
Tihua Russian Language School, Urumchi, Sinkiang
Kansu Industrial Junior College, Lanchou, Kansu

In July, 1952, these institutions held united entrance examinations at Sian and Nan-cheng, in Shensi; Lanchou and T'ien-shui in Kansu; Hsi-ning in Chinghai; Yin-ch'uan (Ninghsia); and Urumchi in Sinkiang. According to regulations, besides graduates from regular middle schools, candidates claiming to have "equivalent educational standards" were also admitted. Cadres were given special priority.

Subjects in the examinations were: Chinese, mathematics, chemistry, Chinese and foreign history and geography, physics, political common sense, biology and a foreign language (Russian or English). Cadres were exempted from the foreign language examination.

In 1952, the Communist government started a system of scholarships for every student in the institutions of higher education. This system was changed in October, 1955, and scholarships are now issued only selectively; children of party cadres and of the minority groups have priority.

S
874
668
177

In April, 1955, the Communists announced the establishment of Sinkiang Medical College at Urumchi. The professors were transferred there from the First Medical School in Shanghai. A New China News Agency report from Urumchi, dated April 19, 1955, reads:

"Sinkiang's new medical college has announced it is ready to enroll 250 students of various nationalities for the coming autumn term. A teaching staff of 100 including professors, lecturers and practicing physicians will arrive here from other parts of the country in June to take up their posts. The medical college is part of a scheme for building a medical center in this provincial capital of Sinkiang, where the inhabitants belong

S
[743]

mostly to national minorities. The project includes a 600-bed hospital and a clinic able to treat 800 patients daily. Construction of this 240,000 square meters medical center was started in July last year. The college authorities have arranged for studies to begin this year while building continues."

N
873
874
*668
177

The second group of schools includes the Yenan University in Yenan, Shensi, which became the Northwest People's Revolutionary University in 1949, and the Northwest School of Political and Legal Sciences in 1953. This kind of school is essentially a training center for cadres. The August First Agricultural College, the establishment of which was reported by Burkhan in

873
• 874
*668
177

September, 1955, is a place where cadres and students transferred into Sinkiang from other provinces receive their agricultural training. It is more of a training camp than a regular college.

B. Nationality Education

1. The general trend

871
*668
177

Under the Communist regime, educational activities among the ethnic minorities of the Northwest are reported to have increased sharply. The Communists recognized early that by emphasizing the issue of education among the some thirteen nationalities in the Northwest, they could further consolidate their hold over these minorities. In line with their policy of placating the Moslems (See Religion), educational developments in Sinkiang have been widely publicized. It is not easy to make sense of the different sets of figures given. The most meaningful are tabulated in Table 7.

In this table, the figures of Burkhan's report of January 1, 1953, are so inconsistent with the rest that they probably have to be discarded; otherwise the figures appear mutually compatible. According to the percentages given, the number of schools in the years before 1949 should have been about two hundred, and the number of students slightly more than two hundred thousand.

[114]

These figures do not coincide with pre-Communist statistics. One fact emerges clearly from the figures of Table 3. All the mosque schools and their students must be included in them. In view of the shortage of educational personnel it is highly questionable whether staff and curriculum of these schools can be adjusted within a reasonable amount of time to the exigencies of Communist education. That this problem is realized is shown by reports that more than 130 middle and primary school teachers of all nationalities were inducted for special political training in the Sinkiang College, the Northwest People's Revolutionary University, and the Northwest Normal College in 1955 alone. In 1954, 126 teachers of all nationalities were given political indoctrination courses in so-called "spare-time improvement classes" in Urumchi, Kashgar, Sha-che and Khotan. Such classes were also operated in other areas, with particular emphasis upon the training of primary teachers. Schools of all levels are adopting advanced teaching methods and experiences and the teachers have reached the stage "of carrying out their work with preparation and planning" (Current Background, Oct.

[895]

25, 1955). The number of politically reliable teachers might have increased somewhat through these measures. In view of the prevailing need, the figures given are still pitifully low. The basic question of whether the ahung can be entrusted with Communist education remains unsolved.

[See p. 323--Analyst]

(Ministry of Education: The Second Educational Year Book, 1948.)

1: Washington S-4 (no date) 1956 AF13 Northwest China AF13

The first department devoted most of its time to preventing epidemics, innoculating people against possible epidemics (such as typhoid, typhus, smallpox, cholera) and preventing animal diseases. The National Department of Health was concerned with the promotion of regional health and sanitation institutes. Experimental stations for public health were opened in Kansu. In the Northwest the health programs of the Nationalist Government were launched in the last part of the 1930's. The numbers of hospitals recorded in the Northwest during 1936 are as follows:

	Hospitals	Beds
Shensi	7	263
Kansu	10	124
Chinghai	3	22

The Sino-Japanese war interfered with the progress of the health programs in the Northwest. However, some of the war results proved beneficial. During the war two medical schools were transferred to the Northwest. Sian has had a medical school since 1940 when the famous Medical School of National Peiping University was transferred there. It was not retransferred to Peiping after the war. A medical school was started in Lanchow after the war as part of the National Lanchow University. In 1942 the Northwest Hospital was established at Lanchow, where, in 1944, over 30,000 outpatients and over a thousand inpatients were treated. Much medical field work was done during the war and a few army hospitals were opened in the Northwest. Hsi-ning also started a school hospital and a city-hospital during the war. A special health center was opened at Ting-yüan-ying for the Alashan Mongols.

V. Health and Sanitation Under the Communists

The necessity to extend the work done in the medical field in the Northwest was clearly recognized by the Communist Government. According to the Chinese Communist reports from Peking, Northwest China, included in the overall program adopted by the Party to improve health and sanitation, has made relative progress in the field of public health.

The overall health policies of the Communist Government were adopted in 1950 by the First All-China Health Conference. This Conference stressed the following three principles as the guiding lines: (1) concentration on the health of the workers, farmers and soldiers; (2) emphasis on the means of prevention rather than cure of disease; and (3) uniting the modern and old-style doctors. The latter measure was decided upon because of the tremendous shortage of qualified doctors trained in modern methods to meet the needs of the huge population of China, the problem being more acute in remote regions.

A special conference entitled "The All-China Conference on the

in the Northwest reached the highwater mark of 27,000 (NCNA January 8, 1952).

A large number of the cadres were sent out directly from training schools to low-ranking positions in the people's governments. Up to the summer of 1953 the Northwest Revolutionary University at Sian placed over 12,000 of its graduates in government service, the Northwest Nationality College 2,573, the Lanchou Nationality College 2,500, and the Northwest Cadre School 2,200. The areas of concentration in Sinkiang were the Ili and Kashgar Administrative Districts and three counties in Yarkand which had 6,907 native cadres employed as directors of departments, section chiefs, and heads of counties and ch'ü (districts).

B. Demoralization and Conflict of the Cadres

A compelling reason for the large-scale induction of cadres, both Chinese and from the national minorities, was not only because of the small number of veteran cadres, but also because these old cadres were no longer considered trustworthy and useful by the authorities. However, the authorities soon found that the new cadres were not any better and their absorption only heightened the conflict within the ranks of the cadres. The defects of the cadres were repeatedly pointed out in the series of conferences convened by the Department of United Front Work of the Northwest Bureau of the Chinese Communist Party in the fall of 1951 and in the spring of 1952. The main shortcomings of the cadres, as pointed out by the Communist leaders, were:

1. Lack of political consciousness and demoralization of the old party cadres. It was significant, and perhaps paradoxical, that the major criticisms against the cadres were directed against the veteran cadres who had been trained and who had seen service in the Shensi-Kansu-Ninghsia Border Region, which since 1935 had been the center of Communist activities and the showcase of Communist administration. As early as January, 1950, Ma Wen-jui, director of the Organization Department of the Northwest Bureau of the Chinese Communist Party, charged in a speech (JMJP January 4, 1950), that the old cadres showed restlessness, they wanted better jobs and were anxious to return home, they suffered from the ideological defects of individualism and jealousy of the new cadres, they were inefficient and careless in their work so that they lost important documents and often divulged state secrets, they lacked initiative and a sense of responsibility, and sought only enjoyment. Cases of graft were quite frequent.

Eighteen months later, at a conference of high-ranking cadres held at Sian in August, 1951, Ma Wen-jui charged that the old party cadres, due to their long stay in the rural villages and due to the demoralizing conditions of the war, lack education. "The degrees of political awakening of some of the party members is

875

875 TEACHERS--number of general and specialized teachers; degree of training and proficiency; social status of teachers (e.g., prerogatives, disabilities); mode of selection; fees and salaries; tenure and advancement; degree of academic freedom; organization (e.g., associations, unions); extracurricular activities (e.g., research, community activities); etc. See also:
Government pensions . . . . . 657 Normal schools 874

Those students who go through six to ten years of continuous studies may become ahunds, mudarris (teachers) or ustāds (honorary title of recognized teachers). Generally, the erudition of these teachers does not seem to be very high. Hence idioms like "ahmaq min mu-allim kittāb" (more stupid than a school teacher).

Islamic laws regulate strictly the position and conduct of a teacher. He has to be married; he is permitted to teach only in public places (ḥānūt) with big windows, so the community can watch his activities; he is not allowed to use children as servants or engage them otherwise except in school work without the consent of their parents. Occasionally, however, parents have their children serve the teacher instead of paying the regular fees.

Kashgar has a fairly well-known school, the Wanglyq Medrese, whose fame was not confined to Sinkiang alone when Bohā'eddīn Makhdūm taught there, but spread as far as Istanbul and Cairo. Another famous Moslem scholar, Rāmctulla Akhun, the leading jurist ('ilmi fiqh) of his time, taught at Wanglyq. The Kichiq Orda (Little Castle) Medrese in Yarkand was also a well-known seat of higher learning. Also called Yeshil (Green) Medrese, it was founded by Baisi Bēk, the hākim (judge or physician) in 1820. While the quality of the medreses of Kashgar and Yarkand have steadily declined during the last decades, the medrese of Aqsu has maintained its reputation to the present because the core of its faculty are scholars from Afghanistan who received their training at the Al-Khazar University in Cairo.

2. Monastic academies of Lamaism

The high number of Buddhist monasteries all over Northwest China and their enormous monk population of course colored the whole educational system of the Northwest. These monasteries were not only institutions of higher learning, but they also served as libraries and printing houses.

Kumbum (Tib.: sKu-'bum-Byams-pa-gling; Chinese: T'a-erh-ssu) was the chief monastery in the Northwest. It was customary in Chinghai for every Tibetan family to send its second son to this monastery. At the age of eight the boy was admitted after a strange ceremony, which included questions like the following: Are you a debtor or a slave? Are you a hermaphrodite? Are you a demon or an all-knowing spirit? Did you ever treat your parents badly? Did you ever rob or steal? Did you ever belong to a heretic sect? After having answered these questions satisfactorily he received five objects, which henceforth were his only property: an alms-bowl, underwear, a tunic, a mattress and a water sieve. Then one of the ordained lamas was presented to him as his future tutor, whom his

family were to pay, and the boy's welfare depended largely upon the amount his parents were able to pay. Sons of poor families who could pay perhaps only one yak a year had to do menial work as water carriers, cow-dung collectors, straw and grass carriers, housekeepers and so forth, to pay for their lessons.

The years between eight and eighteen, the usual length of the novitiate, were given to attending an elementary school where the pupil learned to read, write and recite prayers. He was to learn forty chapters of the Kanjur from memory. During this time he was called a bande, or novice. Then he might enter the "Lamastic college" to become a getsul, a stage between a novice and a fully ordained bLama. Or he might return to his home village or camp to become a house lama, of whom there are thousands, who are supported by a single family. If he chose to become a getsul he might continue to study and become a gelong, a fully ordained lama, entitled to wear the precious yellow tunic with a black collar.

Kumbum has four colleges: a philosophical college, a college of church service and occult sciences, a college of canonical literature and a school of medicine. One must go through the philosophical college before he may enroll in the college of church service and occult sciences, and must go through these two successfully before he may enter the college of canonical literature. The usual characteristics of those who enter the school of medicine are a pathological personality, epilepsy or other abnormality.

The philosophical college (Tib.: tsan-nyid) offers the study of the Kanjur. [The Kanjur consists of one hundred volumes subdivided into one thousand eighty-three chapters. Volumes one to thirteen contain the chapters about conversion and reclaiming (Tib.: dul-wa), the discipline and moral duties of the monks. The volumes from fourteen to thirty-four constitute the Prajñāpāramitā, which deals with the "road to virtue" leading to the "other shore," to Buddhahood and to that subtile and "transcendental wisdom" which is "without any characteristics," through which "all differences, contrasts, antagonisms, contraries, antithesis and contradistinctions" disappear, where all categories of thinking are empty, where heart and mind become silent like "the surface of a tranquil and placid sea." Volumes thirty-five to thirty-eight are called the Club of the Buddhas, volumes thirty-nine to forty-four are called Construction of the Precious Stones, and the volumes forty-five to seventy-six contain narrations on how to gain the nirvana. The volumes seventy-seven to ninety-eight contain the tantras and dharanis, sentence of anathemas and magic formulas, and the last two volumes are the exegetics and exposition of the tantras and dharanis.]

The philosophical college does not procede according to the

lished to pass out judgments. Cases of suicide among students thus treated have been reported.

Another factor which influenced education was the austerity movement, which cut deeply into the already meager equipment, facilities and supplies of the schools. For instance, in Shensi some schools had provided some teachers with single rooms with twenty square meters of floor space, or about thirteen by fifteen and one-half feet, to serve both as bedroom and office. This was criticized as luxurious and wasteful, and the size of a teacher's room was reduced to three and one-half square meters or less than six feet square. The size of campuses was also cut down mercilessly. A well-known educator, Feng Yu-lan, recently complained: "When a professor finds enough space to lay down his body, he would find no more room to lay down his books." (Jen-min Jih-pao, Peking, January 15, 1956.)

Claims that school attendance has greatly increased are numerous in the Communist press. The figures given, however, are either meaningless or contradictory, so no attempt has been made here to trace this increase.

Extra-curricular activities included a summer camp for the students in the Northwest, which took place at Mei-hsien, Shensi, from August 1 to 31, 1952. The participants were selected from students of different places, including 150 from Shensi, 110 from Kansu, 100 from Sian, 20 from Ninghsia, 20 from Chinghai, an indefinite number from Sinkiang and 80 from the colleges and universities. To be selected, a student had to be: progressive in thought; good in school work; active in all kinds of social activities inside and outside the school; healthy, without contagious diseases. Girl students and students of the minority groups had priority. The whole program of the camp was sponsored by the New Democratic Youth League.

Athletic competitions are also sponsored. From August 10 to 17, 1953, there was a Northwest China track and field meeting at Sian. Gathered for the competition were 351 athletes from 12 nationalities, representing 5 provinces and a municipality.

2. Higher education

Institutions of higher education in the Northwest under the Communists can be divided roughly into three groups. The first group includes universities and colleges in the normal sense. The second includes political training institutes. The third includes the institutions for the minority nationalities.

The following institutions were listed in 1952:
Northwest University, Sian, Shensi
Lanchou University, Lanchou, Kansu
Northwest Engineering College, Hsien-yang, Shensi
Northwest Agricultural College, Wu-kung, Shensi
Northwest Normal College, Lanchou, Kansu

1: Washington S-4 (no date) 1956 AF13 Northwest China AF13

873 September, 1955, is a place where cadres and students transferred into Sinkiang from other provinces receive their agricultural training. It is more of a training camp than a regular college.

B. Nationality Education

1. The general trend

871 Under the Communist regime, educational activities among the ethnic minorities of the Northwest are reported to have increased sharply. The Communists recognized early that by emphasizing the issue of education among the some thirteen nationalities in the Northwest, they could further consolidate their hold over these minorities. In line with their policy of placating the Moslems (See Religion), educational developments in Sinkiang have been widely publicized. It is not easy to make sense of the different sets of figures given. The most meaningful are tabulated in Table 7. [1]

In this table, the figures of Burkhan's report of January 1, 1953, are so inconsistent with the rest that they probably have to be discarded; otherwise the figures appear mutually compatible. According to the percentages given, the number of schools in the years before 1949 should have been about two hundred, and the number of students slightly more than two hundred thousand. [114] These figures do not coincide with pre-Communist statistics. *One fact emerges clearly from the figures of Table 3. All the* mosque schools and their students must be included in them. In view of the shortage of educational personnel it is highly questionable whether staff and curriculum of these schools can be adjusted within a reasonable amount of time to the exigencies of Communist education. That this problem is realized is shown by reports that more than 130 middle and primary school teachers of all nationalities were inducted for special political training in the Sinkiang College, the Northwest People's Revolutionary University, and the Northwest Normal College in 1955 alone. In 1954, 126 teachers of all nationalities were given political indoctrination courses in so-called "spare-time improvement classes" in Urumchi, Kashgar, Sha-che and Khotan. Such classes were also operated in other areas, with particular emphasis upon the training of primary teachers. Schools of all levels are adopting advanced teaching methods and experiences and the teachers have reached the stage "of carrying out their work with preparation and planning" (Current Background, Oct. 25, 1955). [875] The number of politically reliable teachers might have increased somewhat through these measures. In view of the prevailing need, the figures given are still pitifully low. The basic question of whether the ahung can be entrusted with Communist education remains unsolved.

[1] [See p. 323--Analyst]

876

876 EDUCATIONAL THEORY AND METHODS--dominant and alternative theories of education; favored methods of instruction (e.g., collective recitation, rote memorizing, systematic classification, case analysis); system of rewards (e.g., praise, prizes); prevalent and eschewed methods of punishment (e.g., ridicule, corporal punishment, deprivation of privileges); special techniques for handicapped and backward pupils; educational psychology; examining and testing methods; use of visual and auditory aids, degree of individuation in instruction (e.g., cultivation of uniformity, encouragement of independence and initiative); educational experiments and innovations (e.g., progressive education); etc. See also:

Informal techniques of instruction 86
Evidence on habit formation 153
Educational motion pictures 546
Social control 626
Ethnopsychology 828

*563 574 576 right side. The honored seat is the one farthest from the door After the guests are seated the hostess will brew tea, place a wooden box in front of the guests, and serve tsamba and butter The guests take their eating bowls out of their robes.

[521] At dinner parties, conversation takes place before the meal. It is proper and right for the guests to say farewell and leave immediately after dinner.

c. Position of women

*563 562 796 The position of women in Tibetan society is very low. They have no place in matters of religion, and are permitted to participate in few religious rituals. They are permitted to enter the monastery on the Memorial Day of Sakyamuni, which occurs on the fifteenth day of the fourth month. At sunrise, all women put on their best clothing with all their trimmings and ornaments, and gather outside the monastery. The women of each village form into a group, and the groups take turns going inside the temple and turning the prayer wheel. Men and boys stand by to witness the spectacle. On this day, women fast until sundown.

d. Customs

*563 527 • 88 [302] [292] [574] [431] On the third day of the first month each year, a coming-of-age festival is held for all girls of fifteen or sixteen. Girls do their hair in the adult style, dress in their best, and visit the households of relatives and friends, who present them with gifts. After a ceremony, the girls may participate in all mixed social functions, and they may also have any sort of relationship with men. After the coming-of-age ceremony, a girl may ask any man she likes to spend the night in her tent.

*563 584 [787] [675] Tibetan marriage follows much the same customs as in traditional China. Proposals are made through go-betweens, who are usually relatives of the families. It is important that the horoscopes of bride and bridegroom be in harmony. When the parents and the young couple give consent, gifts of wine and katags are exchanged and a contract is drawn up giving the terms on which the alliance is to be made.

*563 583 584 The family receiving a bride or a "male bride" (The male bride is a man who marries into the bride's family, leaving his own home and joining hers.) pays the family for the bride in money or jewels, and also pays a sum to meet the expenses of the engagement party. Katags are exchanged between the relatives of the two families to signify mutual consent and wishes for a happy union. The bride usually has a dowry in cash or in livestock, land and goods, depending upon the means of the family.

*563 585 Before the wedding day, the families of the bride and bridegroom prepare a feast to entertain relatives and friends, who bring gifts for the couple. The bride's family builds a tent for the ceremony, decorating it with pillows and comfortable seats

EDUCATION

I. Nationality Education in Pre-Communist Times

*175 *563 87 794 [658] A. The Traditional Pattern

During the Manchu period, education in the Northwest was characterized by permissive and non-interfering policies of the government. This meant that the minorities were able to maintain and develop their own educational systems. During this period schools connected with the mosques, in the case of the Moslems, and the monasteries, in the case of the Buddhists, were the primary educational institutions. The minorities were allowed to formulate their own educational principles. It may be noteworthy that in the Manchu period, eighteen medrese, mosque schools, existed in Kashgar alone. Reading and writing were taught in these schools, and up to two thousand students were enrolled in the schools in any given year. The total number of medrese in the Northwest during the Manchu rule is unknown, but it is safe to say that each Moslem community had at least one educational institution.

1. Moslem schools

872 794 The Mohammedans have two kinds of school. The mekteb, elementary school for children, is administered by the local mosque. These schools provide education for all male children older than six. Since 1923 the Mohammedans have initiated the same educational provisions for girls.

The program of a mekteb comprises, first, the memorizing of a surprisingly high number of suras (chapters of the Koran), then the study of the Arabic alphabet, which is used by the • [896] Uighur. By memorizing various suras the pupils acquire some hundred Arabic words by the end of the first year, though their meanings do not become clear until the fifth year when the teaching of Arabian grammar is begun. Between the fifth and tenth years the curriculum covers advanced Koran exegesis, the history of Islam, geography and basic arithmetic.

873 794 The medrese, the institutions of higher learning, also teach such familiar subjects as al-mantik (logic), al-arithmāṭīḳī (arithmetic), al-handasa (geometry), al-hai'a (astronomy), al-ṭibb (medicine), al-falāḥa (agriculture); also some subjects which are specifically Islamic in nature, such as al-kalām (theology), al-taṣawwuf (ceremonies or practical theology), 'ilm al-ilāhīyāt (metaphysics), al-'arūḍ (metrics) and al-ḳāfiya (prosody).

[896] As in elementary schools, the method of education consists primarily of learning by rote (talkīn) and dictation. Those

arrangement of the Kanjur but starts, strangely enough, with the most difficult chapters, the abhidharma, metaphysics (Tib.: C'os-mnon-pa, clear doctrine), and difficult sutras. Each student gets an additional private tutor, who explains difficult passages of the matter under study.

When the weather permits, teaching is conducted in the open in the so-called chör-ra. Otherwise instruction takes place in a temple hall.

An important part of instruction is frequent disputations between the teacher-monks and the students, under the supervision of the abbot, khan-po. These loquatious duels give occasion for the students to show how much they know and how much they have memorized.

In the course of time the students are taught ts'ad (logic), bzo (technique), rtsis (astrology), snan nags (rhetoric), sgra (grammar) and adul-ba (monastic rules). After having mastered the whole material the student receives the degree of dka-bcu (a man who has passed the ten examinations).

To complete the work of the philosophical college takes more than a decade. Then the dka-bcu can either procede to the next college to gain the title of snags-rams-pa (master of the tantric sciences) or to another monastery where other famous teachers are found.

To receive the title of snags-rams-pa, the monk must study large parts of the Tanjur, a gigantic 225 volume collection of theological, philological, ethical, alchemistic tractates and a tremendous amount of occult tantras.

Another center of monastic studies was Labrang in Kansu, one of the foremost monasteries of the Yellow Sect. This monastery is divided into what might be called six different colleges. In the first, known as Wen-hsi-t'ang, five different sutras are taught. The second college is primarily concerned with the continuation of the studies in the first, but the difficulty of the curriculum increases. In the fifth and sixth colleges the esoteric sutras are taught. There are separate colleges for sciences of medicine. Most monks, however, never learned more than a few prayers. The Labrang monastery showed some concern with modern times by introducing courses in animal husbandry and the manufacture of agricultural by-products. Like other monastic academies, however, it has remained primarily a center of religious learning.

B. Nationality Education under the Republic

The period of the Republic was characterized by the fact that the government attempted to bring the Chinese educational system as far as possible into the area of the nationalities. Education became one factor in the general policy of assimilation.

and the people.

2. Honor the national flag. Love warmly your fatherland and the people's leader.

3. Obey the school rules, follow the instruction and guidance of the principal and the teachers.

4. Arrive at school on time. Attend classes on time. Never be tardy, nor leave early, nor be absent without a good reason.

5. Bring all necessary books and supplies to school every day. Have ready all necessary articles for each class.

6. Sit straight and square at classes, concentrate on listening to the lecture. Never talk freely or do anything on your own. Never enter or leave the classroom without permission of the teacher.

7. To answer the teacher's question you must stand up. Only when you have the teacher's permission may you sit down. To ask the teacher a question you must first raise your hand.

8. Review diligently, and finish on time all home work.

9. Respect the principal and teacher. When the class starts you must stand up to show your respect to the teacher. Do the same thing when the class is dismissed. When you meet the principal or the teacher outside the school you must salute him.

10. Love your schoolmates earnestly. Help one another and be united.

11. Respect and love your parents. Love and protect your brothers and sisters. Help your folks in housework.

12. Respect the older generation, and old people. Love children and care for the weak and the sick. Yield your seat on a train and your right of way on the street.

13. Be earnest, humble and polite. Do not lie, do not curse, do not fight. Do not disturb other people's work, study or sleep.

14. Do not smoke, do not drink liquor, do not gamble, do not take other people's articles without their permission. Do not do things harmful to yourself and others.

15. Positively drill and strengthen your body. Keep your body, clothes, room and the public places clean.

16. Obey public orders. Love and protect public property.

17. Love and defend the honor of your class and school.

18. Carry your student card with you all the time and take care not to lose it.

Discipline in schools had tended to become harsh before the promulgation of these rules. For instance, in Tso-shui, Shensi, a grade school teacher ordered tardy students to kneel on the floor and to carry bowls of water on their heads. In Ling-t'an, Kansu, a grade school principal ordered all the children of his school to line up and spit in the face of a child he wished to punish. In some schools, the teachers organized "accusation meetings" to punish the children. In some, "courts" were established to pass out judgments. Cases of suicide among students thus treated have been reported.

Another factor which influenced education was the austerity movement, which cut deeply into the already meager equipment, facilities and supplies of the schools. For instance, in Shensi some schools had provided some teachers with single rooms with twenty square meters of floor space, or about thirteen by fifteen and one-half feet, to serve both as bedroom and office. This was criticized as luxurious and wasteful, and the size of a teacher's room was reduced to three and one-half square meters or less than six feet square. The size of campuses was also cut down mercilessly. A well-known educator, Feng Yu-lan, recently complained: "When a professor finds enough space to lay down his body, he would find no more room to lay down his books." (Jen-min Jih-pao, Peking, January 15, 1956.)

Claims that school attendance has greatly increased are numerous in the Communist press. The figures given, however, are either meaningless or contradictory, so no attempt has been made here to trace this increase.

Extra-curricular activities included a summer camp for the students in the Northwest, which took place at Mei-hsien, Shensi, from August 1 to 31, 1952. The participants were selected from students of different places, including 150 from Shensi, 110 from Kansu, 100 from Sian, 20 from Ninghsia, 20 from Chinghai, an indefinite number from Sinkiang and 80 from the colleges and universities. To be selected, a student had to be: progressive in thought; good in school work; active in all kinds of social activities inside and outside the school; healthy, without contagious diseases. Girl students and students of the minority groups had priority. The whole program of the camp was sponsored by the New Democratic Youth League.

Athletic competitions are also sponsored. From August 10 to 17, 1953, there was a Northwest China track and field meeting at Sian. Gathered for the competition were 351 athletes from 12 nationalities, representing 5 provinces and a municipality.

2. Higher education

Institutions of higher education in the Northwest under the Communists can be divided roughly into three groups. The first group includes universities and colleges in the normal sense. The second includes political training institutes. The third includes the institutions for the minority nationalities.

The following institutions were listed in 1952:

Northwest University, Sian, Shensi
Lanchou University, Lanchou, Kansu
Northwest Engineering College, Hsien-yang, Shensi
Northwest Agricultural College, Wu-kung, Shensi
Northwest Normal College, Lanchou, Kansu

*668 796 656 Further-more, in places where restrictions are exercised over the slaughter of cattle and sheep, these restrictions may be relaxed.

*668 484 648 *563 B. Guided Tours

Representatives of national minorities from northwest China are invited to visit Peking and other urban centers of north and east China. They are guided to see the factories, schools and palaces of historical interest. After being deeply impressed they are sent back to their homes. They often become good native propagandists for the Party.

*668 208 • 876 C. School Programs

In local schools, the pupils are not spared from propaganda. For instance, in the Mongol schools in the province of Chinghai:

"In mathematics, the number of American and bandit Rhee's troops annihilated by the Chinese and Korean people's armies in Korea and the construction figures in Chinghai were made into questions for the students and the masses to solve. By this way, they not only learned mathematics but they also retained in their minds the victorious results of our war and the great achievements in construction following the liberation." (Sian, Ch'un-chung jih-pao, March 30, 1952.)

*668 208 D. Other Methods

The whole propaganda system generally functions as follows. When the Party central committee decides to promote certain propaganda, it orders the reporter at every level of the Party organization to report the party line to the people inside as well as outside the Party. Then the propagandists and activists all go out to do the work. This can be done in various ways, according to the situation. In factories, it may be a kind of question and answer. The workers might be asked to check each other with these questions until all got the right answers. In streets, it might be in the form of door-to-door visits and "casual chats." While these were going on, the people would be bombarded daily with the same theme in newspapers, blackboard newspapers, wall newspapers, periodicals, books, pamphlets, pictures, cartoons, radio broadcasts, concerts, lantern slides, movies, plays, operas, story-tellers, picture-story books, street meetings, signature drives, production competitions, challenges, counter-challenges.. and a lot of other devices to drive the point home.

V. The Campaigns and Contents of Propaganda.

A. Campaigns

1. Destruction of organized resistance

The contents of propaganda follow the shifts in the Party line.

877

877 STUDENTS--composition of the student body; number of general and specialized students in an academic institution; organizations and associations (e.g., student unions); leadership; social status of students; sources of financial support (e.g., private funds, scholarships, fellowships, etc.); degree of academic freedom; extracurricular activities; living and dining accommodations (e.g., dormitories, off-campus housing, sororities and fraternities, etc.); student-community relations; student-faculty relationships; group values and behavior characteristics (e.g., political and social activism, etc.); etc.

873 *668 177 strongholds of the movement for the remolding of ideology within the party (Cheng-feng Movement). Training of cadres was its main purpose. (G. Stein, The Challenge of Red China, 1945, 260-67)

Attached to the Anti-Japanese University at Yenan was the College of Nationalities to train youths of racial minorities from Inner Mongolia and the Northwest to be Communist cadres.

871 *668 177 III. The Communist Period

A. Chinese Education in the Northwest

1. The general trend of changes

After the Communist take-over the educational system was initially left more or less untouched. Teachers and students, however, were constantly mobilized to participate in the movements led by the government and the party. This additional political activity meant not only an interruption of the regular educational program, but also an amount of overwork detrimental to the health of the students. [Hsüeh-hsi, Vol. 4, No. 11, (1951, September 16), p. 37, and 1952 Jen-min Shou-ts'e, p. 449. The latter quoted the resolution of the State Council on July 13, 1951, concerning the health condition of the students.]

Even after it was realized that this state of affairs conflicted with the purposes of education, it was never entirely remedied. As late as 1956, complaints were heard about the constant political interference in academic work.

By a resolution at the ninety-seventh meeting of the State Council on August 10, 1951, the old system of education was remolded (See General Handbook, Education). Within the new system much emphasis was given to Leisure Time and Short Course Schools on the primary and secondary levels for older students and adults. This program, however, has in the meantime come under heavy criticism, as it did not achieve its aims and absorbed the time of workers and peasants needed in production.

One significant aspect of the new system is that graduates of higher educational institutions do not have a free choice of professions, but are placed by the government wherever it deems fit. In fact, it is one part of the gigantic program of slave labor.

• 877 577 *668 177 The tendency of students, condoned and incited by the Communists in pre-Communist times, to behave in a "revolutionary" way has recently been curbed by a set of strict disciplinary rules, which have been called "New Confucianism" by one writer:

Basic Rules for the Middle School Student. (Promulgated by the Ministry of Education on May 13, 1955.)

1. Study diligently to make yourself strong in health, in class work and in character. Be ready to serve the fatherland

and the people.

2. Honor the national flag. Love warmly your fatherland and the people's leader.

3. Obey the school rules, follow the instruction and guidance of the principal and the teachers.

4. Arrive at school on time. Attend classes on time. Never be tardy, nor leave early, nor be absent without a good reason.

5. Bring all necessary books and supplies to school every day. Have ready all necessary articles for each class.

6. Sit straight and square at classes, concentrate on listening to the lecture. Never talk freely or do anything on your own. Never enter or leave the classroom without permission of the teacher.

7. To answer the teacher's question you must stand up. Only when you have the teacher's permission may you sit down. To ask the teacher a question you must first raise your hand.

8. Review diligently, and finish on time all home work.

9. Respect the principal and teacher. When the class starts you must stand up to show your respect to the teacher. Do the same thing when the class is dismissed. When you meet the principal or the teacher outside the school you must salute him.

10. Love your schoolmates earnestly. Help one another and be united.

11. Respect and love your parents. Love and protect your brothers and sisters. Help your folks in housework.

12. Respect the older generation, and old people. Love children and care for the weak and the sick. Yield your seat on a train and your right of way on the street.

13. Be earnest, humble and polite. Do not lie, do not curse, do not fight. Do not disturb other people's work, study or sleep.

14. Do not smoke, do not drink liquor, do not gamble, do not take other people's articles without their permission. Do not do things harmful to yourself and others.

15. Positively drill and strengthen your body. Keep your body, clothes, room and the public places clean.

16. Obey public orders. Love and protect public property.

17. Love and defend the honor of your class and school.

18. Carry your student card with you all the time and take care not to lose it.

Discipline in schools had tended to become harsh before the promulgation of these rules. For instance, in Tso-shui, Shensi, a grade school teacher ordered tardy students to kneel on the floor and to carry bowls of water on their heads. In Ling-t'an, Kansu, a grade school principal ordered all the children of his school to line up and spit in the face of a child he wished to punish. In some schools, the teachers organized "accusation meetings" to punish the children. In some, "courts" were estab-

lished to pass out judgments. Cases of suicide among students thus treated have been reported.

Another factor which influenced education was the austerity movement, which cut deeply into the already meager equipment, facilities and supplies of the schools. For instance, in Shensi some schools had provided some teachers with single rooms with twenty square meters of floor space, or about thirteen by fifteen and one-half feet, to serve both as bedroom and office. This was criticized as luxurious and wasteful, and the size of a teacher's room was reduced to three and one-half square meters or less than six feet square. The size of campuses was also cut down mercilessly. A well-known educator, Feng Yu-lan, recently complained: "When a professor finds enough space to lay down his body, he would find no more room to lay down his books." (Jen-min Jih-pao, Peking, January 15, 1956.)

Claims that school attendance has greatly increased are numerous in the Communist press. The figures given, however, are either meaningless or contradictory, so no attempt has been made here to trace this increase.

Extra-curricular activities included a summer camp for the students in the Northwest, which took place at Mei-hsien, Shensi, from August 1 to 31, 1952. The participants were selected from students of different places, including 150 from Shensi, 110 from Kansu, 100 from Sian, 20 from Ninghsia, 20 from Chinghai, an indefinite number from Sinkiang and 80 from the colleges and universities. To be selected, a student had to be: progressive in thought; good in school work; active in all kinds of social activities inside and outside the school; healthy, without contagious diseases. Girl students and students of the minority groups had priority. The whole program of the camp was sponsored by the New Democratic Youth League.

Athletic competitions are also sponsored. From August 10 to 17, 1953, there was a Northwest China track and field meeting at Sian. Gathered for the competition were 351 athletes from 12 nationalities, representing 5 provinces and a municipality.

2. Higher education

Institutions of higher education in the Northwest under the Communists can be divided roughly into three groups. The first group includes universities and colleges in the normal sense. The second includes political training institutes. The third includes the institutions for the minority nationalities.

The following institutions were listed in 1952:

Northwest University, Sian, Shensi
Lanchou University, Lanchou, Kansu
Northwest Engineering College, Hsien-yang, Shensi
Northwest Agricultural College, Wu-kung, Shensi
Northwest Normal College, Lanchou, Kansu

and the black rectangular tents of nomad Tibetans, the usual hinterland of *Ts'ao Ti* (Grass Lands), which everywhere in the north and west lie behind the border ranges of China. Apart from the nomads and their ponies, yak, and cattle, the only sign of life were the huge vultures, which were extraordinarily abundant. The final ascent to the pass is by easy gradients, and a similar descent of about 10 li brings one to Êpo, a dot of a place lying in a sea of grass.

Êpo (this is the regular romanisation of the Chinese characters, pronounced Obaw) is a small walled village and former fort situated in a shallow valley sloping from east to west, surrounded by grassy downs and backed by rocky snow capped mountains. The elevation is probably between 11,000 and 12,000 feet, and there is no cultivation, the necessary grain being brought up from below. The entire community, composed of a few Mahomedan Chinese, seemed to be engaged in the collection of wool, with occasional purchases of musk and deer horns. The latter (wapiti antlers) when old are quite cheap and are collected and sent down to China for the manufacture of glue; when in velvet they are extremely valuable and are ground up to form the well-known Chinese medicine for revivifying the old. This medicine is said to be very powerful, and I was informed by a member of our party, who here purchased a pair for a friend, that care must be exercised in taking a dose to see that the powder comes equally from both antlers, otherwise there is a grave danger that the patient may be revivified on one side only! Musk may also be profitably purchased at Êpo, and for some days afterwards our caravan was redolent with it. Wherever one may pack a pod of musk it is guaranteed to make its presence widely known. The advantage of buying musk at a place like Êpo, apart from its cheapness, is that one is pretty certain to get the genuine article, adulteration being widely practised in the trade in China.

Êpo appears to lie actually on the Kansu-Kokonor border (though boundaries are vague in those parts), and its position is of some strategic importance as commanding one of the few routes from Kansu and Mongolia up to the Kokonor, north of Hsining. We were met here by some Mahomedan braves sent up from the Hsining and Tatung

with material or cooking utensils. The suspicious atmosphere created was always most irksome to us, feeling as we did that our cleanliness much exceeded the demands made by these self-righteous Pharisees.

The *kang* on which we slept was of a different construction from those we had met with elsewhere, this being due to the fact that the only fuel obtainable on this journey is animal droppings. These *kangs* were covered with movable boards, under which a hollow space is left for piling up the dry horse-dung, which, once set alight, will smoulder for hours. The fumes are laden with a nauseating smell, which so permeates the traveller's bedding and clothing as to be noticeable for weeks. These same fumes produce an extraordinary effect on the woodwork of the room, which rapidly gains a surface equal in colour and polish to the best old oak. The clothes of the people had now changed from indigo-dyed cotton to undyed sheep's wool. In every hamlet the older men sat in the sun spinning yarn, or knitting socks for themselves on two needles; this is accomplished by means of a diagonal down the centre of the foot and a seam at the back. The better-dressed boys wore garments of white felt. No seam was necessary in the whole coat, as it was shaped in the making to the size and form of the wearer. The felt is home-made, and many times we saw men treading out the macerated wool which is moulded to the shape required and dried in the sun. Shoes, coats and hats are made in this way, and whole villages are given up to the industry.

Lanchow, the capital of Kansu, is reached through a maze of narrow gullies. It is beautifully situated on the swift-flowing Yellow River, and is backed by the Blue Lotus Hills. Its streets are wide and crowded, and its population cosmopolitan. A splendid iron

888

888 STATUS AND TREATMENT OF THE AGED--cultural definition and explanations of old age; idealized and derogatory evaluations of old age; conception of the ideal old man and old woman; symbols and synonyms for age and longevity; prerogatives and disabilities of the aged; special exemptions (e.g., from legal sanctions, from taboos); etiquette toward the aged; treatment of the aged (e.g., exploitation, neglect, obedience, respect); support of the aged (e.g., investments, fees for services, annuities, pensions, assistance from relatives); care of the aged; customs of abandoning and killing the aged; etc. See also:

the Piedmont gravel and the salt swamps north of this.

From the Dsun yurts where we first met people again, we took an easterly course and after two more travel-days we came to Barun kurä. In the belt of meadowland which we followed there stood yurts in groups of three and four of first Dsun- and then Barun- Mongols. Like the old Jew who sold ribbons in the market of my home town, I extolled my wares in the tents. I exchanged butter, barley and sheep for my hardware and my silver. The people were always friendly to us. We slept and ate in their dwellings. At first they seemed sullen, but they warmed up after closer contact and they laughed and sang with Han and Tsch'eng. Most of the men spoke Tibetan as well as Mongolian. I became acquainted with their happy-go-lucky way of living. Their liquor plays a great part in their lives, and they make it from mare's milk. The men travel from one tent to another, drink and sing, while the women have the duty of taking care of the work and of the herd animals. But although the women are obliged to shoulder the burden of the household, and increase the fortunes of the family, they are by no means the slaves of the men. One old man who wanted to sell me a few sheep on my visit from yurt to yurt was given such a severe lecture by his wife who did not agree to the sale, the lecture even being punctuated by a raised stick, that my companions were forever cured of their initial great enthusiasm for Mongol women. The Mongol woman, it is true, enjoys great freedom compared to the Chinese woman. The women of the Dam Mongols have an astonishing amount of authority for Asiatic women!

The Tsaidam Mongols (Chinese: Dam men gu) do not have high moral standards. As in many other parts of Tibet, the son, when he has reached his majority, gets the family property even though the father is still living and the parents get a certain share set aside for them. This is a very old custom. It was said to have arisen during the times when people still set out on wars of conquest. The men capable of bearing arms, who set out to war and who were able actively to protect their families, were also /349/ the owners of the family property. Now, however, the young Dam Mongols try to shirk their responsibilities as much as possible. Today they are little more than warriors and, besides, they give their old parents barely enough to live on. I often saw two old people behind a protective wall that was full of holes and squatting on a dung heap like beggars while their son lived beside them in a fine yurt.

Marriages of the Dam Mongols seem to be entered upon as casually as they are dissolved. After a couple has lived together for a while
